This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 82

Shelby Blecker
da_kidd@pacbell.net

Comment No. 82-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 82-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 83

Jeff Blum
429 1/2 N. Gardener St.
Los Angeles, CA 90036-5733

Comment No. 83-1

Somehow the traffic section of the Draft EIR takes up 87 pages but doesn't really explain how tens of thousands of trucks, many of them 18-wheelers, are supposed to get through the streets without dedicated right turn lanes to get on-site.

Response to Comment No. 83-1

The comment incorrectly implies that the number of trucks expected at the Project Site on a daily basis would be in the tens of thousands. Topical Response No. 10, Trip Generation, discusses the actual number of trucks expected at the Project Site during operations, which is approximately 83 trucks per day, or approximately 30,000 per year (assuming the maximum number of trucks expected would occur every day), of which approximately 18 would be semi-trucks.

The movement of trucks into and out of the Project Site would be focused on the three Project driveways controlled by traffic signals, which are the locations where pedestrians on the sidewalks are more likely to expect heavier concentrations of traffic. The Project is not proposing additional right-turn lanes to get trucks onto the Project Site, as this would not improve the quality of the pedestrian environment and safety of the pedestrians using the sidewalks adjacent to the Project. The presence of the right-turn lanes allows turns into the Project Site to be made at higher speeds, to the detriment of pedestrians along the sidewalk, and, therefore, such turn lanes are not proposed.

The traffic operations analysis in the Transportation Assessment (included in Appendix M.1 of the Draft EIR) already accounts for the operations of the Project driveways without the additional right turn lanes. Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Once inside the Project Site, trucks would be able to maneuver throughout the Project Site to reach their destination regardless of which side of the Project Site they entered.

Comment No. 83-2

Considering the construction is expected to take 20 years, figuring out dedicated turn-lanes for construction, production and delivery trucks should have been a key feature of the original conceptual plan, and clearly needs more analysis.

Response to Comment No. 83-2

The Draft EIR analyzes a construction buildout scenario of approximately 32 months, as well as a long-term buildout scenario. As stated on page II-36 in Section II, Project Description, of the Draft EIR, and throughout the Draft EIR, the Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043. In a long-term buildout scenario, the Project would be constructed in multiple, non-consecutive phases. As such, the construction of the Project Site would not occur continually over 20 years.

See Response to Comment No. 83-1 above for the rationale for not providing right-turn lanes at all Project driveways. Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering. Further analysis of the driveways and turn lanes would be conducted during the regulatory building permit process as part of the Project's construction drawing set, which would be thoroughly reviewed by the City, including LADOT, for compliance with regulatory standards, including standards that ensure safe operations.

Comment No. 83-3

And beyond the trucks, will be a massive increase of passenger vehicles coming to the site every day, many commuting from San Fernando Valley and Burbank. And it's clear that traffic won't just be during rush hour, if there are studio performances every night. This traffic plan needs to be reconsidered.

Response to Comment No. 83-3

Refer to Topical Response No. 10, Trip Generation, regarding the Project's trip generation estimates. Please note that, as discussed in Topical Response No. 8, Vehicle Miles Traveled, the Project would not attract regional trips.

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

In addition, studio performances every night are not anticipated. The schedule for audience shows and studio events are expected to be similar to today's conditions. Refer to Sections B, Visitor Trips, and C, Special Events, of Topical Response No. 10, Trip Generation.

Comment Letter No. 84

Avi Blumenstein
411 S. Orange Dr.
Los Angeles, CA 90036-3509

Comment No. 84-1

I am writing about the proposed development for Television City. I have more questions than there is space in this letter, but suffice it to say the draft Environmental Impact Report reveals the many inconsistencies and gaps in information about the project.

Response to Comment No. 84-1

This comment introductory comment claims the Draft EIR includes inconsistencies and gaps in information, but provides no examples. The Draft EIR was prepared in accordance with the requirements of CEQA and fulfills CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the potential environmental impacts of the Project. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 84-2

The project is required to be consistent with the Mobility Plan. Among the many concerns and question I have are:

The draft EIR refers to building a 3-ft wide public sidewalk easement, in addition to a 7-ft public right-of-way, to provide a 10-ft sidewalk. The plan then acknowledges the 10-ft wide sidewalk would be narrower than the 13-ft wide standard in the Mobility Plan, but it would increase the existing 9-ft sidewalk width. Why would it be acceptable that the developer is not meeting the 13-ft wide sidewalk standard in the mobility plan, using the rationale that he is at least increasing the existing sidewalk width by one foot? Does the city find it acceptable that the standard of 13-ft wide sidewalk, set forth as a standard in the mobility plan, is not met? On what basis would the city allow the standard to not be met? Does the city expect that the community would be ok with a standard not being met because at least it improves an existing condition or situation?

And to drive the point home even more clearly, we are talking about a requirement not being met to at least improve a sidewalk width that current is already not compliant! Please explain if there is any other way to view what I am gleaned regarding this situation.

Yet another example is the developer's request for a waiver of dedication for the additional width of Grove Drive when proposing to widen the 30-ft width of the current right-of-way by 2 feet, though it would still not meet the 33-ft requirement in the Mobility Plan.

Is this the kind of substandard and nonconforming planning the city is willing to accept, to go along with? If so, you are implicitly expecting the community to do so as well. Otherwise, you either aren't paying attention or are hoping that we are not. On what basis can the city approve standards not being met?

Response to Comment No. 84-2

Refer to Response to Comment Nos. 26-133 and 26-E.4-7 regarding sidewalk width on The Grove Drive and the waiver of dedication request included with the Project's Vesting Tentative Tract Map application.

Comment No. 84-3

The community should be aware that approval of requested waivers by the developer is what will allow the developer to meet the intent of the Mobility Plan, not by actually meeting the requirements of that plan. This is not acceptable.

Response to Comment No. 84-3

Refer to Response to Comment No. 84-2. The waiver of dedication is also analyzed where appropriate in the Draft EIR. Refer to the discussion of the Project's consistency with Policy 2.17, Street Widening, within Table IV.K-1 on page IV.K-50 of Section IV.K, Transportation, of the Draft EIR. As discussed therein, the Project would be consistent with the intent of the Mobility Plan with approval of the requested waiver.

Comment Letter No. 85

Kanyne Boese
905 N. Genesse [sic] Ave.
West Hollywood, CA 90046-7319

Comment No. 85-1

I've been in the area for 2005 and for a city that already has a major lack of parking space, I am having a lot of trouble comprehending where these extra 5,000+ parking spots will be for the proposed Television City site. The EIR says the spots may be offsite. Does that mean offsite parking spots will be in my neighborhood? I don't understand why the location of these spots are not disclosed. Are they going to be parking garages or parking lots? Is this going to mean I won't be able to park in my own neighborhood or will be an obstacle getting places?

Response to Comment No. 85-1

Project parking is located in three primary locations in the Conceptual Site Plan: an above-grade parking garage in the southeast corner of the Project Site adjacent to the parking structure serving The Grove shopping center, surface parking, and underground parking structures in the west, north and southeast portions of the Project Site. Project parking is shown in the architectural plans that are available on the Department of City Planning website.

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply.

Comment No. 85-2

My community is full of families, and I know they will not feel comfortable having speeding cars rushing to get to work. How will speeding issues of so many more cars commuting to the new development be handled? What about those commuters using side streets and neighborhood streets to get to the property to avoid the gridlock on the main streets? We already see that happening now, even without the proposed development.

Response to Comment No. 85-2

The issue of speeding cars on the arterial street system is not a CEQA issue, but a matter of law enforcement and roadway design. Nevertheless, development of an NTMP would include consideration of affected neighbors and create strategies to reduce both cut-through traffic and speeding inside the neighborhoods. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for additional information. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 85-3

I feel like this adds a ton of safety issues too concerning the impact on air quality and pedestrian safety. What will this surplus of cars do to LA's already damaged ozone? Thousands of additional cars on the road cannot be healthy or be acceptable in terms of traffic. Please address this in more detail before the plan is approved. The Television City project is failing to address potential environmental factors. Not only this, but it has failed to acknowledge that the increased congestion will pose health and safety concerns. The city is already extremely overcrowded, and traffic poses an everyday issue. When will the draft EIR be revised to address these concerns in more detail than was provided? The public can barely get through such a long and technical document, especially to be able to make sure we are being given real answers about the expected impacts to our neighborhood. When will you be holding community meetings to explain in layman terms what is being planned and what the consequences will be?

Response to Comment No. 85-3

The EIR comprehensively analyzed the Project's impacts in accordance with CEQA, based on the thresholds in Appendix G of the CEQA Guidelines. Thus, revisions and additional analysis are not required.

The Project's Transportation Assessment included as Appendix M.1 of the Draft EIR includes an analysis of traffic safety as part of its non-CEQA transportation analysis; refer to pages 141–150. Refer also to Topical Response No. 12, Safety and Congestion, concerning pedestrian safety.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

With respect to air quality, operational emissions were determined to be less than significant. Refer to Section IV.A, Air Quality, of the Draft EIR, pages IV.A-69 through IV.A-73.

With respect to public outreach, this Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeded the required 45-day Draft EIR public comment period. Following the publication of this Final EIR, a finalized draft of the Specific Plan and the Project's other requested entitlements will be considered during several public hearings and meetings before City decision-makers prior to any decision made on the Project. The public will have additional opportunities to comment on the Project at public hearings and meetings, including, but not limited to, City Planning Commission and City Council meetings, the dates of which will be provided to the public in accordance with the City's noticing requirements.

Comment No. 85-4

Parking garages and lots are the third most common location for violent crimes in the US. How is this supposed to make me feel knowing there will be multiple added within walking distance of my home? What measures are going to [sic] implemented to ensure the children of our community are safe?

Response to Comment No. 85-4

As discussed in detail on pages IV.J.2-12 and IV.J.2-13 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR, the Project would include a number of security features including security cameras and 24-hour security personnel. These security features would be used to monitor the on-site parking areas. In addition, these parking areas would not be open to the public and would only be accessible by first entering through a security gate. As such, the parking areas would not impact the safety of the community. Refer also to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 for a discussion of the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 85-5

What has the city done to assess the noise concerns?

Response to Comment No. 85-5

The Draft EIR, which was prepared by the Department of City Planning as lead agency, comprehensively analyzed the Project's potential noise impacts during

construction and operation based on conservative assumptions and substantial evidence in accordance with CEQA. A mitigation measure and a number of PDFs have been included as part of the Project to address noise. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR for a listing of the mitigation measures and PDFs.

Comment No. 85-6

Was the nearly 2 million square feet of space not enough for this project since now there is a need for offsite parking? These parking garages and spots are likely to tarnish and possibly even take over spots that make LA a community.

Response to Comment No. 85-6

As discussed throughout the Draft EIR, the Specific Plan would permit a maximum of approximately 1,874,000 square feet of floor area.

Refer to Response to Comment No. 85-1, above, and Section B, Off-Site Parking, of Topical Response No. 13, Parking. As discussed therein, no off-site parking is proposed.

This comment discusses non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 85-7

This is known as a historic district, but our neighborhood will not be nearly as desirable when havoc takes over. What did your studies show about the effects on property values? What about the impacts on rents? And on home prices? How can you put a price on the impacts to the historic district?

Response to Comment No. 85-7

Potential impacts to historical resources located in the vicinity of the Project Site, including the Beverly Fairfax Historic District, were considered and analyzed in the Draft EIR. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10.

Regarding property values, rents, and home prices, these comments do not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. However, the comment is noted

for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 86

Robert Bonner
8318 W. Fourth St.
Los Angeles, CA 90048-4203

Comment No. 86-1

I am writing to comment on the CBS Television City expansion. As a 50 year resident of the neighborhood, I have seen a lot of change. This one is the largest and most serious to date.

Response to Comment No. 86-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 86-2

I would love to provide feedback on the project, but the draft EIR says the plan is still conceptual and the applicant would be given flexibility. My understanding is this is why the applicant is asking for a 20-year development agreement. I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

When will the detailed plan be provided? When will the community be allowed to give public input and weigh in on the actual design, not a plan that says things like the company "may make improvements" or could be two decades of construction?

How much further will the project progress before we are provided the detailed information we deserve?

Response to Comment No. 86-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, and 9-13 with regard to the accurate, stable, and finite Project Description that fully complies with CEQA and disclosed and analyzed all physical elements of the Project; how all plans in an EIR are inherently conceptual; how CEQA and City policy do not require a draft Specific Plan to be included in the EIR; the limited flexibility that would be permitted under the proposed land use exchange, consistent with adopted studio specific plans and other specific plans; and the

regulatory process under the proposed Specific Plan. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Refer to Response to Comment Nos. 28-13 and 32-3. As discussed therein, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 87

Joey Bothwell
313 N. Ogden Dr.
Los Angeles, CA 0036-2130

Comment No. 87-1

The conceptual plan shows dozens of big 18 wheeler trucks on the site, hauling dirt out and materials in, week after week, for years. Have the impacts of the trucks been fully analyzed? Does the Air Quality analysis show that there could be as many as 200 production trucks spewing diesel particulates in the community for years to come? If so, how could the city have approved such an impact on our community?

Response to Comment No. 87-1

Tables IV.A-6 and IV.A-8 in Section IV.A, Air Quality, of the Draft EIR present, respectively, the unmitigated and mitigated regional criteria air pollutant emissions associated with construction activity, including construction truck trips and any associated vehicle idling. As shown on page 32 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, the excavation/foundation construction phase would include approximately 640 daily truck trips over 185 working days. Refer to Topical Response No. 14, Construction Vehicle Impacts.

Refer to Response to Comment Nos. 9-24 and 26-E.1-24 for a discussion of the buildout timeline.

Contrary to what is stated in this comment, the air quality analysis does not show as many as 200 production trucks per day during operation of the Project. Please refer to Response to Comment No. 26-E.1-16 regarding the number of Project-related operational trucks accessing the Project Site per day. As discussed therein, the truck trips during Project operation (approximately 31 total net new diesel trucks) are substantially less than the 100 trucks criteria cited in the Draft EIR that would trigger the need for a mobile air toxics HRA (see page IV.A-72 of the Draft EIR). Thus, the Draft EIR correctly concluded that Project-related TAC emission impacts during operations would be less than significant and consequently not result in a potential health risk impact.

A discussion as to why the Project is being proposed notwithstanding significant and unavoidable impacts is presented in Section VI, Other CEQA Considerations, of the Draft EIR. Please note that the Project has not been approved. Following the publication of this Final EIR, the Project and EIR will be considered during several public hearings before City decision-makers prior to any approval.

Comment No. 87-2

I'm also really concerned about parking. Thousands of people will be coming to the community every day and it's clear that not enough parking will be available—the overflow will be into our streets. And beyond parking is the impact on our community—did the EIR study all of the traffic, noise and air pollution from the buses, shuttles and ride share cars?

Response to Comment No. 87-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nevertheless, Topical Response No. 13, Parking, has been prepared for informational purposes. Refer to Topical Response No. 13 and Response to Comment No. 78-3 for a detailed discussion of the adequacy of the on-site parking supply to meet the peak parking demands of the Project and prevent spillover parking.

With respect to traffic congestion, as discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

With respect to traffic noise, refer to the analysis of off-site noise on pages IV.I-48 through IV.I-54 of Section IV.I, Noise, of the Draft EIR. As demonstrated therein, impacts would be less than significant. Refer to Response to Comment No. 35-129 regarding the less-than-significant noise impacts associated with operation of the Mobility Hub.

With respect to the effect of traffic on air quality, refer to page IV.A-71 of Section IV.A, Air Quality, of the Draft EIR. As demonstrated therein, impacts would be less than significant. However, as part of this Final EIR, the Mobility Hub was further evaluated within the Confirmatory Air Quality, GHG, and Energy Analyses included as Appendix FEIR-9. As shown in these confirmatory analyses, air quality impacts attributable to the Mobility Hub, which confirmed that impacts associated with the Mobility Hub were accounted for, and there is no changed conclusion or new significant impact as to those impact areas.

Comment Letter No. 88

Hope Bowhay
hope.bowhay@tvcityla.com

Comment No. 88-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 88-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 89

Julianne Braden
333 S. Citrus Ave.
Los Angeles, CA 90036-3035

Comment No. 89-1

Having moved in just one week ago, I was totally horrified to learn that my new neighborhood is about to have hundreds of large 18 wheeler trucks, spewing diesel emissions and thousands of cars all pouring in for the next 20 years. And further, that the plan allows for the excavation of 45 feet of dirt, which will release huge amounts of methane gases from the removal of more than 700,000 cubic yards of dirt.

Response to Comment No. 89-1

Refer to Response to Comment No. 9-24 regarding the Project timeline. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the impacts of Project construction and hauling. Topical Response No. 14 also includes a discussion of air quality impacts as a result of hauling, and as discussed therein, localized air quality impacts as a result of hauling activities would be less than significant with implementation of mitigation.

With regard to methane, as discussed on pages IV.F-50 through IV.F-54 in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, the Project would implement Mitigation Measure HAZ-MM-2, which requires the installation of controls during Project construction to mitigate the effects of subsurface gases on workers and the public. These measures would include monitoring devices for methane and benzene to alert workers of elevated gas concentrations, contingency procedures if elevated gas concentrations are detected, worker training to identify exposure symptoms and implement alarm response actions, and the minimization of soil and groundwater during excavations. Implementation of Mitigation Measure HAZ-MM-2 would ensure potential impacts related to subsurface gases and associated potential impacts to soil and groundwater would be less than significant.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 89-2

Methane is super-dangerous, as you can see from this link about the 1985 methane explosion: <https://web.stanford.edu/~meehan/class/ce2942001/rosspaper.htm>:

“Late in the afternoon of March 24, 1985, methane gas that had been accumulating ignited in an auxiliary room of the Ross Dress-For-Less Department Store located on Third Street, in the Wilshire-Fairfax District of Los Angeles. The resulting explosion blew out the windows and partially collapsed the roof of the structure, reduced the store interior to a heap of twisted metal and resulted in injuries requiring hospital treatment of twenty-three people. Police closed off four blocks around an eerie scene of spouting gas flames that continued through the night.

In the following days, a drill rig brought to the site was used to test for possible gas accumulations in the alluvial soil beneath the store. A “pocket” of pressurized gas was encountered at a depth of 42 feet beneath the parking lot between the store building and Third Street. Gas was also encountered in several other borings at the site in smaller quantities and at lower pressures. Pressure gauges, control valves, and, on the hole where the high pressure pocket was encountered, a valved flare pipe, were installed. Following a brief period during which gas was flared and bled off into the air, the anomalous gas condition at the Ross Store site gradually declined to the normal gas concentrations characteristic of the local area. In 1989 another venting incident occurred, this time at several sites on the north side of Third Street. This second venting fortunately was detected in time, and did not ignite. In this case, water and silt were ejected from outdoor vents along with the gas, in addition to accumulation of dangerous levels of gas in several buildings. A blow-out crater several feet deep, from which dirt and small stones were ejected several feet into the air was formed during this episode which lasted about 24 hours.

The setting of the accident—an old-world Levantine market place a few miles from Hollywood; the famed tarry graveyard of the sabre-toothed tigers; pillars of fire dancing in the darkened streets—these biblical images attracted attention of the press, the bar, and local politicians. And yet, three months later when a hastily convened panel of experts announced that the event was caused by digestive rumblings of an ancient and invisible swamp the whole thing had been mostly forgotten, the explanation accepted as yet another production of Los Angeles’ quirky environment.

Outside of a lawsuit that was settled quietly in 1990, the possibility that the accident was caused by the knowing agency of Los Angeles’ lesser known industry or that the official report of the experts, rather than being a serious statement of the scientific community, was a heavily edited script with a happily blameless ending, was not made known to the public, as we shall proceed to do here.”

Can methane build up and risk an explosion in my neighborhood like that Ross did?

Response to Comment No. 89-2

Refer to Response to Comment No. 13-6 regarding methane and methane explosions.

Comment Letter No. 90

Aaron Braun
364 S. Citrus Ave.
Los Angeles, CA 90036-3036

Comment No. 90-1

As I read the draft EIR for the TVC 2050 project, the people who are building this monstrosity are trying to convince us traffic will not be all that bad if the project is approved. Who are they kidding?

Response to Comment No. 90-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

This comment is nevertheless noted for the record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 90-2

They claim that large numbers of people will start using mass transit in the Beverly-Fairfax area, both tourists and residents alike, rather than deal with the traffic headaches caused by decades of high-rise construction and the arrival and departure of production trailers. I have no idea how they arrived at their numbers for transit users, but I can guess they have very little understanding of Angelenos and their love of cars. Can you please explain how it was determined that a large number of people will start using mass transit? Do you know the average number of people that are expected to switch to mass transit? How were these numbers determined? How will these numbers be adjusted when studies are done of the actual transportation used of people working and visiting there? How will the impacts that are being stated as not significant be re-analyzed for actual transit use, not some projections? If the project is approved based on these kinds of assumptions, then how can we go back once it's shown that the transit use numbers are just not happening? What happens then?

Response to Comment No. 90-2

Refer to Sections A, TDM Effects on Trip Generation, and B, Transit and TDM Effectiveness, of Topical Response No. 11, Transportation Demand Management, for a discussion of the 15-percent trip adjustment and the success of transit and TDM programs in similar studio and entertainment campuses. As discussed therein, there are several examples of major studio and entertainment campuses that have successfully implemented TDM programs for employees and visitors that have far exceeded the 15-percent trip adjustment estimated in the Draft EIR and even exceeded the estimated 20- to 30-percent reductions from the TDM Program.

Any updates to the TDM Ordinance of the City of Los Angeles will require a monitoring program to measure the continuing effectiveness of the Project's TDM Program. If the TDM Program is not meeting its goals, additional TDM strategies will have to be implemented until the Project meets the effectiveness levels discussed in the Draft EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 90-3

All of these construction trucks and production trucks and the re-routed commuter traffic is going to be in very close proximity to residential properties and apartments. I fear an increase in traffic accidents, injuries and worse. Where are the estimates of the increase in accidents, injuries and deaths resulting from all of the additional cars and trucks? You know that Beverly and Fairfax are two of the highest injury streets, right? How can this huge development be considered in that situation, for that location? How do you plan to mitigate traffic accidents or injuries? Who will be responsible for these accidents?

Response to Comment No. 90-3

Pages 141–150 of the Project's Transportation Assessment included as Appendix M.1 of the Draft EIR present an analysis of Project safety as part of its non-CEQA transportation analysis.

The Draft EIR and the Transportation Assessment acknowledge that the Beverly and the Fairfax corridors are on the City's High Injury Network. The Project's Transportation Improvement Program includes vehicular and pedestrian improvements to address the City's Vision Zero traffic safety programs; refer to Topical Response No. 15, Transportation Improvement Program. Refer to Topical Response No. 12, Safety and Congestion, regarding measures that have been included in the Project's transportation

improvement program in the form of TDM strategies and traffic signal and operational improvements along the High Injury Network corridors that would advance the traffic safety goals of the City's Vision Zero Program and would include LOS benefits.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 90-4

Please pump the brakes on TVC 2050 and ask the developer to provide a lot more detail to their plans. Neighborhood residents deserve details.

Response to Comment No. 90-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 90-2 and 90-3.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR has been prepared in full compliance with CEQA and fulfils CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the potential environmental impacts of the Project. Refer to Response to Comment No. 32-3 regarding the noticing of the Project in accordance with CEQA.

Comment Letter No. 91

Touch of Kindness, Inc.
345 N. La Brea Ave., Ste. 208
Los Angeles, CA 90036-2539

Comment No. 91-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 91-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 92

Patricia Breen
118 N. La Jolla Ave.
Los Angeles, CA 90048-3528

Comment No. 92-1

Traffic is already impossible in our community and will get much worse with all the construction.

Response to Comment No. 92-1

This comment provides a general statement about the condition of traffic in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The CTMP governing construction of the Project is aimed at addressing the concerns regarding safety during construction. Refer to Topical Response No. 12, Safety and Congestion.

Comment No. 92-2

And the number of parking spaces make no sense! The [sic] Draft EIR states there will be almost 8,000 employees on the site. I understand that anywhere between 3,000 to 5,000 people every day to the site to as audience members.

The project will have 5,300 parking spaces—only a fraction what will clearly be needed.

How will this work? Where will the overflow park?

Response to Comment No. 92-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, and Response to Comment No. 78-3 for a detailed discussion of the adequacy of the on-site parking supply to meet the peak parking demands of the Project and prevent spillover parking.

The comment regarding the number of audience members per day is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, regarding the number of audience members and audience trips under existing and future Project conditions.

Comment No. 92-3

This project will have a terrible impact on our daily lives. I am not opposed to the development but want to ensure that the community [sic] needs are researched and addressed.

Response to Comment No. 92-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 92-1 and 92-2.

Comment No. 95-1

I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I'm devastated as a resident of 39 years, [sic] My husband Jeff and I continue to learn about the details (although not many have been provided to the public) about this development right in our neighborhood.

Response to Comment No. 95-1

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 95-2

We have so many questions as neighbors: How do you expect all these new employees to get to work? Where do they park? How am I, as a neighbor, supposed to navigate this new congestion on the streets? How will this affect our walkability, safety and parking? Do any of you all live this area? Are you not concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Response to Comment No. 95-2

The Draft EIR and the Transportation Assessment (included in Appendix M.1 of the Draft EIR) detail the trip generation of the Project's employees and visitors; also refer to Topical Response No. 10, Trip Generation. While the Transportation Assessment only takes into account 15 percent of the employees getting to/from work via a mode other than the automobile, the TDM Program for the Project has been designed to reduce the single-occupant vehicle by approximately 20 to 30 percent.

Under SB 743, traffic congestion and the adequacy of a new development's parking are not CEQA considerations. A project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer

applicable for the purposes of identifying a project's CEQA transportation-related impacts. As discussed on pages IV.K-72 through IV.K-78 of the Draft EIR, impacts related to VMT would be less than significant. Notwithstanding, upon the Project's anticipated completion in 2026, several intersections on arterial streets would operate at LOS E or F, before and after the addition of Project trips. The Project would not cause any location to change from LOS D or better to LOS E or F during morning or afternoon peak hours. The transportation analysis in the Draft EIR is based on a conservative (i.e., high) estimate of Project trips. The Project is implementing a TDM program intended to reduce the drive-alone automobile trips in favor of transit and carpool trips with the goal of decreasing the Project's traffic impact. A shuttle bus link between the Project Site and the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction could remove as many as 1,500 auto trips per day from the area roadways. A similar reduction in auto trips could be achieved through incentives to form and operate carpools among Project employees.

With regard to parking, as discussed on page II-30 of Section II, Project Description, of the Draft EIR, the Project would provide a sitewide total of approximately 5,300 parking spaces based on parking ratios set forth in the Specific Plan. Vehicles may be parked in tandem or by valet, depending on the specific parking layout. In addition, the Specific Plan would set forth a process for the approval and implementation of a reduced/shared parking plan, so long as an adequate parking supply is maintained. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. With the parking supply on the Project Site sufficient to accommodate the peak parking demands of the Project, spillover parking into the neighborhoods is not anticipated. Off-site parking is not needed to meet the Project's peak parking demands, and the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Pedestrian and safety hazards are discussed in Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3. In addition, the Project intends to improve sidewalks and the landscape parkways along its west and north boundaries to improve the pedestrian environment.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 95-3

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information

needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Response to Comment No. 95-3

The Draft EIR was completed in accordance with the requirements of CEQA. Under CEQA, EIRs are informational documents intended to inform the public and decision-makers about the potential environmental impacts of a project. The Draft EIR disclosed all of the elements of the Project required by CEQA and comprehensively analyzed all potential environmental impacts associated with the Project.

Comment No. 95-4

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I pray and hope that you do the same with this development. We need more leaders fighting for a better future, not just fighting for a big check.

Response to Comment No. 95-4

Refer to Response to Comment 32-3 for a discussion of public hearings and opportunities for the public to voice their opinions on the Project. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 96

Khalam Bridger
561 N. Orlando Ave., Apt. 7
Los Angeles, CA 90048-2534

Comment No. 96-1

As a long-time resident of the Beverly Fairfax community, I am writing to you today with great concern and many questions. Specifically, I feel led to give my thoughts on Television City's Draft Environmental Impact Report. This DEIR has left the community with more questions than answers.

Response to Comment No. 96-1

The introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 96-2 through 96-5.

Comment No. 96-2

Personally, I am primarily concerned about the potential conflicts caused by this project in relation to the city's Mobility Plan, the Wilshire Community Plan, and the Plan for a Healthy Los Angeles.

I understand that the proposed project is only required to not conflict with the plans I have mentioned above. I, however, believe that the project not being found to conflict with these plans does not mean the project is right for the community. As a result, I have several questions for the city and the developer:

Response to Comment No. 96-2

The comments regarding whether the Project is right for the community do not raise environmental issues specific to CEQA or the Draft EIR and the environmental impacts addressed therein. No decision has been made for the Project. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 96-3

- Can you please outline how this plan will not conflict with the city's Mobility Plan? Specifically, how will the increased construction not compromise the plan's

promise to ensure the mobility safety of Angelenos? What about once construction is complete—during the many active uses of this development? Please give details.

Response to Comment No. 96-3

Refer to Response to Comment No. 26-165 regarding the Project's consistency with the Mobility Plan. Pages IV.K-46 through IV.K-57 in Section IV.K, Transportation, of the Draft EIR include a thorough analysis of the Project's potential to conflict with the Mobility Plan. As discussed therein, the Mobility Plan has many different goals and objectives as part of the Plan. The Project planning begins with taking its primary access off the adjacent arterial and collector streets and designing its entrances so that inbound traffic will not backup onto the adjacent public streets, consistent with the Mobility Plan.

Construction of the Project would include safety features as part of the CTMP described in Section IV.K, Transportation, of the Draft EIR and Topical Response No. 14, Construction Vehicle Impacts. These include a detailed haul route plan approved by LADOT, an ingress/egress plan for trucks depending on the construction phase of the Project (also to be approved by LADOT), notification of upcoming construction activity to nearby residents and businesses, a designated construction manager to field concerns from neighbors, sidewalk protective barriers, and field traffic managers to control construction vehicles to minimize impacts on adjacent street vehicles and pedestrian flow.

Table 18 on pages 162 and 163 of the Transportation Assessment (Appendix M.1 of the Draft EIR) summarizes the operating conditions of the roadway system in the area under Future Base Conditions both with and without the Project vehicles. The addition of Project vehicles does not cause any of the 31 study intersections currently operating at LOS D or better to degrade to LOS E or F.

Comment No. 96-4

- Can you please also outline how this plan will not conflict with the city's Plan for a Healthy Los Angeles? What effects will the continued construction and operational traffic have on the physical health of Beverly Fairfax residents and the environmental health of the neighborhood? Please give details and cite relevant data. What assumptions were made in determining the findings?

Response to Comment No. 96-4

Project construction would not be continuous. Refer to Response to Comment No. 9-24 regarding the Project timeline.

With respect to operational traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 100-3 and 114-3.

With respect to air quality, as discussed on page IV.A-20 in Section IV.A, Air Quality, of the Draft EIR, the City's Plan for a Healthy Los Angeles, adopted in 2015 and updated in 2021, includes various implementation programs to achieve the plan's health objectives. Among the listed implementation programs, the use of cool roofing where feasible and the following of the plan's Healthy Building Design Guidelines are the most applicable programs to the Project. Each of these measures is covered by Project Design Feature GHG-PDF-1, which requires the Project to meet LEED Gold v4 or equivalent standards, encompassing the applicable environment-related recommendations of the Healthy Building Design Guidelines and including cool roofing requirements. Thus, the Project will not conflict with the Plan for a Healthy Los Angeles.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. On May 5, 2023, SCAQMD concluded that the HRA protocol adequately addresses health risk impacts related to the Project. A comprehensive description of sources and assumptions included in the HRA is provided in the Health Risk Assessment Protocol included in Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased truck trips associated with future operations, would be below SCAQMD's risk thresholds, further affirming the statements on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Comment No. 96-5

- What about the Wilshire Community Plan? In the plan's "Issues" section, the first thing listed is "avoiding encroachment from other uses, commercial off-street parking, and 'spillover' traffic from adjacent development." Can you please explain specifically how Television City, its construction, and its operations would not directly conflict with all these issues? What loopholes exist that allow for such a clear conflict to exist? Please be specific in your answer.

Response to Comment No. 96-5

An analysis of the Project's potential to conflict with the Wilshire Community Plan is provided on pages IV.H-43 through IV.H-44 in Section IV.H, Land Use and Planning, and in

pages 17 through 25 of Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR.

There is no encroachment associated with the Project and all development would occur within the boundaries of the Project Site.

As discussed on pages IV.K-36 to IV.K-37 in Section IV.K, Transportation, of the Draft EIR, the Project would include a CTMP (Project Design Feature TR-PDF-1), which will formalize how Project construction will be carried out and identify specific actions that will reduce effects on the surrounding community. As stated therein, a detailed CTMP, including street closure information, a detour plan, haul routes, and a staging plan, will be prepared and submitted to the City for review and approval prior to commencing construction. Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction trips. Project Design Feature TR-PDF-1 explicitly prohibits construction worker or equipment parking on adjacent streets or in predominantly residentially zoned areas. In addition, the two off-site construction staging areas have been eliminated, (i.e., all construction staging would occur on-site) and no off-site parking is proposed; refer to Figure 1 of Appendix FEIR-8, Details of Buildout and Construction of the Final EIR. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for a discussion of the proposed NTMP. In addition, refer to Topical Response No. 12, Safety and Congestion, regarding traffic and to Topical Response No. 13, Parking, with regard to the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

There are no “loopholes” as suggested by the commenter and the Draft EIR was prepared in accordance with the CEQA Guidelines and City policy.

Comment No. 96-6

These plans are designed to protect the integrity of our neighborhoods, the health of Angelenos, and the mobility of our city. I fear that Television City would compromise the hard work put into these plans. As of now, I do not support this project. I hope the city and the developer will take the time to answer my above questions with the same thoughtfulness I put into them.

Response to Comment No. 96-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 96-2 through 96-5.

Comment Letter No. 97

Aron Bross
167 N. Detroit St.
Los Angeles, CA 90036-2915

Comment No. 97-1

I am concerned that the project description for the proposed TVC project does not describe what will end up being built. It presents a set of almost an unlimited number of development options.

Response to Comment No. 97-1

Section II, Project Description, includes a detailed description of the Project, and the Draft EIR disclosed all elements of the Project required by CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR analyzed the proposed development program described in Section II, Project Description, of the Draft EIR (refer to pages II-12 through II-35 of the Draft EIR and specifically Table II-2, Proposed Development Program). Future Project changes that are substantially different than the proposed Project or are beyond the scope of impacts evaluated in the EIR would require additional City review and approval, as well as CEQA compliance review.

Comment No. 97-2

What is actually going to be built? What parts of the plan are considered conceptual? How can a project be considered for approval when the area that will be most affected cannot be told exactly what is going to be put on the site?

It seems like the developer is trying to preserve every option. But the community has no idea of what will actually be built and has no way to evaluate the impacts of the project. Why does the developer get to have flexibility for along the way? How does that make sense when, from what I can tell, this is going to be an enormous complex with many different uses? So why can't the developer tell the community exactly what will be built?

Response to Comment No. 97-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and Conceptual Site Plan; the level of detail required in an EIR for a specific plan project; how Section II, Project Description, of the Draft EIR complies with

CEQA and includes sufficient information to evaluate the environmental impacts of the Project; and the required discretionary process (which includes subsequent CEQA compliance review) for future Project changes that are substantially different than the Project that was analyzed in the EIR. Refer to Topical Response No. 3, Permitted On-Site Uses, with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed in Topical Response No. 1, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 97-3

With so many different uses referenced as options in the plan, I don't have a clear understanding of the impact of those uses on traffic. Did you study the impact of the warehouses, facilities, theaters, offices, conferences, etc.? Were all the uses closely examined? Including for when they would end up being built? The first things built, it would seem, would have a longer period of time for any impacts to be experienced, correct?

A use, such as a warehouse or conference, could bring a lot of traffic to the area. I do not want this level of traffic in my community. Will you restrict the uses in this project? Are you going to allow events of all sizes? If you do restrict the uses, how will you implement and enforce those restrictions? How can you ensure the developer abides by the restrictions you put in place?

Response to Comment No. 97-3

The Project is the continuation and expansion of an existing studio use. As discussed in Topical Response No. 3, Permitted On-Site Uses, in response to comments on the Draft EIR, the list of permitted uses was refined to correspond with the proposed uses outlined in the Preliminary Draft Specific Plan (i.e., sound stage, production support, production office, general office, and retail) and the ancillary sitewide uses that support the studio and the five permitted land uses. These uses are consistent with the studio use of the Project Site and are fully accounted for in the transportation analysis in the Draft EIR.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Nevertheless, the Transportation Assessment (Appendix M.1 of the Draft EIR) investigated the peak activity of the land uses that would have the greatest

transportation impact, so a combination of land uses with lesser impacts would already be covered by the Draft EIR analysis. For example, the proposed development program includes up to 20,000 square feet of retail use. The Transportation Assessment conservatively assumed that the retail space would all be occupied by restaurant uses which generate a higher amount of trips.

As stated above, uses that fit within and are consistent with the five permitted studio land uses are accounted for in the EIR's analyses. Refer to Response to Comment Nos. 26-14 and 28-6 regarding the uses discussed in this comment. The trip generation of the production support spaces and other permitted uses have been included in the analysis.

Trip generation and parking demand from special events related to onsite production activities (crew parties, small movie screenings, neighborhood meetings, etc.) are already included in the trip generation estimates used in the Transportation Assessment. Refer to Topical Response No. 10, Trip Generation, regarding how large special events (not related to the studio) would not be regulated by the Project's Specific Plan and would continue to be regulated on a case-by-case basis by City departments consistent with existing conditions.

Comment No. 97-4

Please provide a clear development program so we can understand the project and its impacts. I appreciate the transparency.

Response to Comment No. 97-4

Refer to Response to Comment No. 97-1.

Comment Letter No. 98

Andrea Bucci

Comment No. 98-1

It's nice to see a project that not only creates jobs and benefits the economy, but also moves Los Angeles into a less vehicle-centric city. Traffic congestion is nearly every Angeleno's chief complaint. And with each new development project, we hear about how increased traffic will be handled.

TVC 2050 has gone the extra mile in addressing this issue. In addition to the impressive mobility hub for buses, shuttles, rideshares, scooters and bikes, the Television City campus will be utilizing all its property edges for ingress and egress. This will get visitors and production vehicles off streets and onto the studio lot in an efficient manner.

Physical improvements focus on key commercial corridors including Fairfax Avenue, Beverly Boulevard and The Grove Drive. Left-turn signal phases will be installed at key 3rd Street intersections. Six new driveways will facilitate traffic flow and the enhanced design and function of the main gate will facilitate efficient queuing on site.

I whole-heartedly support this project and I look forward to seeing the improvements in the neighborhood.

Response to Comment No. 98-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 99

Fradel Bukiat
343 N. Formosa Ave.
Los Angeles, CA 90036-2526

Comment No. 99-1

As a 40 year resident, I am very upset about the CBS expansion.

Response to Comment No. 99-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 99-2

There are numerous primary streets and intersections impacted. Do you know the exact number of primary streets and intersections that will be impacted by the project? What are those streets? What community members will be the most impacted on these streets?

Response to Comment No. 99-2

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (included in Appendix M.1 of the Draft EIR). Figure 21 on page 77 of the Transportation Assessment shows the assignment of Project trips through the street system serving the Project Site. Table 18 on page 162 of the Transportation Assessment shows the effect of the Project trips on the 31 study intersections in terms of changes in the LOS of each intersection.

Comment No. 99-3

What was the process for getting input from these community members in deciding where a project like this would be located?

Response to Comment No. 99-3

CEQA does not require public consultation regarding the choice of a Project Site. However, as discussed in Section V, Alternatives, of the Draft EIR, an alternative site was considered but rejected. Refer to Topical Response No. 16, Project Alternatives Analysis. The objectives of the proposed Project are closely tied to the need to improve existing

operations on the currently underutilized Project Site by creating a cohesive and integrated studio campus environment with new technologically advanced facilities. An alternative site would not meet these objectives. Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 99-4

How can the DEIR not acknowledge any details or review potential impacts? There are definitely significant impacts. Why does the development try to claim that the only significant impacts will be during construction? Do you plan to acknowledge and release these details?

Response to Comment No. 99-4

This comment incorrectly claims that the Draft EIR did not acknowledge any details or review potential impacts. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the Project elements required by CEQA, and all potential impacts are comprehensively analyzed throughout the Draft EIR in accordance with CEQA. The Project's impacts are summarized in Section I, Executive Summary, and in Section VI, Other CEQA Considerations, of the Draft EIR.

Comment No. 99-5

LADOT has spent \$50.6 million so far this year for Vision Zero projects, and we shouldn't allow plans that are only in concept to threaten the future of safe roads. How will this project affect that program in the Beverly Fairfax neighborhood? What will the spending be for the rest of the year? What will the spending be for the following year? What specifically will the impact be on our Vision Zero goals?

Thank you for your time.

Response to Comment No. 99-5

The comment does not provide any substantial evidence of how the Project would negatively affect Vision Zero spending or conflict with the program's implementation. Topical Response No. 15, Transportation Improvement Program, details the traffic safety spending anticipated by the Project as a requirement of its development.

Comment Letter No. 100

Kathryn Bundy
katbuns@gmail.com

Comment No. 100-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 100-1

Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR. Refer to Response to Comment No. 32-3 regarding the 60-day public comment period, which exceeds the typical 45-day period required under CEQA.

The Draft EIR was prepared in accordance with CEQA, adequately analyzes potential impacts, and includes all feasible mitigation for all identified impacts.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 100-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 100-2

Refer to Response to Comment No. 11-3 regarding the scope of the Project. Potential impacts to infrastructure and public services were thoroughly analyzed in the Draft EIR. Section IV.J.1, Public Services—Fire Protection, and Section IV.J.2, Public Services—Police Protection, of the Draft EIR addressed impacts with respect to fire protection and police protection, respectively. The analysis contained in these sections concluded that the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain

acceptable service ratios, response times, or other performance objectives related to fire and police protection. Therefore, impacts with respect to fire and police protection were determined to be less than significant. With regard to the adequacy of LAFD fire and LAPD police protection services and infrastructure, refer to Response to Comment Nos. 16-5 and 16-10. With regard to potential impacts to parks, refer to Response to Comment No. 35-135. With regard to potential impacts to schools, refer to Response to Comment No. 600-2.

An analysis of Project impacts with respect to utilities and infrastructure is provided in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, Section IV.M.2, Utilities and Service Systems—Wastewater, and Section IV.M.3 Utilities—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR, as well as in pages 70–72 of the Initial Study (included as Appendix A of the Draft EIR). This analysis concluded that the Project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects, and therefore, impacts were determined to be less than significant.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 100-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 100-3

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Regarding cut-through traffic, refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Response to Comment No. 9-24 regarding the buildout timeline t.

Comment No. 100-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 100-4

Refer to Response to Comment No. 32-7 regarding the provision of housing and the consideration of economic and social effects under CEQA.

Comment No. 100-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 100-5

The Project is not anticipated to result in significant soil destabilization. Refer to Response to Comment Nos. 11-25 and 26-69 with regard to this topic.

Comment No. 100-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 100-6

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation for the Project Site.

Refer to Response to Comment Nos. 11-3 and 9-16 regarding the Project’s size and scale.

Regarding the construction timeline, refer to Response to Comment No. 9-24.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Refer also to Topical Response No. 8, Vehicle Miles Traveled, and Topical Response No. 14, Construction Vehicle Impacts.

Refer to Response to Comment No. 11-5 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts. As discussed therein, temporary dewatering activities are anticipated during construction. Due to the temporary nature of dewatering and the compliance with all applicable regulatory requirements, impacts with respect to dewatering and subsidence would be less than significant. Also refer to the Dewatering Report in Appendix FEIR-13 of this Final EIR, which confirms the less-than-significant impact conclusion in the Draft EIR.

The Draft EIR comprehensively analyzed the Project's potential air quality impacts during construction in accordance with CEQA. Refer to Section IV.A, Air Quality, and Appendix B of the Draft EIR. Refer also to the quantitative HRA included as Appendix FEIR-10 of this Final EIR, which was prepared in response to comments on the Draft EIR and confirms the Draft EIR's conclusion that potential health risk impacts would be less than significant.

Comment No. 100-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a "conceptual" site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site "a regional center" that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 100-7

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-16, which discuss how the Draft EIR disclosed all of the elements of the Project required by CEQA and provided a comprehensive analysis of the Project; all plans in an EIR are inherently conceptual; the purpose of a specific plan and the limited flexibility that would be permitted under the

proposed land use exchange, consistent with adopted studio specific plans and other specific plans; and the regulatory process under the proposed Specific Plan.

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The EIR comprehensively analyzed the Project's impacts in accordance with CEQA, and additional environmental review is not required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 101

Ashley Burgess
234 S. Figueroa St.
Los Angeles, CA 90012-2541

Comment No. 101-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 101-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 102

Andrea C.
349 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 102-1

The safety impacts of the Television City project will be tremendous and I feel the EIR does not adequately address all of them and how they will be mitigated.

Response to Comment No. 102-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 102-2 through 102-7.

The comment generally references safety impacts but does not specify a CEQA impact being referred to. Safety associated with CEQA impacts is analyzed throughout relevant sections of the Draft EIR, including Section IV.F, Hazards and Hazardous Materials; Section IV.H, Land Use and Planning; Section IV.K, Transportation; Section IV.J.1, Public Services—Fire Protection; and Section IV.J.2, Public Services—Police Protection, of the Draft EIR.

Comment No. 102-2

1. There will be special events held at the site. What limits have been determined for special events in terms of the number of people and does it depend on the kind of event? How often will these events be held, weekly, monthly? And what days of the week and hours will these special events be held? Will specific or different equipment be brought in and for what purpose? Are there any special events that will not be allowed there, if so what are those?

Response to Comment No. 102-2

Special events would not be regulated by the proposed Specific Plan, do not regularly occur on-site, and would be subject to existing City permitting regulations. Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 102-3

Where will guests attending these events be directed to park?

Response to Comment No. 102-3

All guests will have the ability to park at the Project Site. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 102-4

How has the additional noise from these events been analyzed and how will it impact not only those attending but the neighbors? The potential impacts of increased noise levels are often overlooked.

Response to Comment No. 102-4

Refer to Topical Response No. 3, Permitted On-Site Uses, Section C, Special Events, of Topical Response No. 10, Trip Generation, and Response to Comment No. 66-5 regarding special events.

Comment No. 102-5

2. I understand the construction will take 20 or more years. What are all of the different kinds of construction activity that will take place? And should we expect to be the different kinds of noise—jackhammering? blasting or explosions? What about the excavation/digging? Loading dump trucks and truck driving on site? I want to have a much clearer understanding of what all the sources and decibels of noise will be.

Response to Comment No. 102-5

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

A description of the types of equipment that could be used during the demolition, grading, excavation, grading, mat foundation, building construction, paving, and application of architectural coatings is summarized on pages IV.I-37 and IV.I-38 in Section IV.I, Noise, of the Draft EIR. A detailed list of the construction equipment and construction noise and vibration calculations are included in Appendix J of the Draft EIR. Table IV.I-9 of the Draft

EIR summarizes the potential noise levels from representative construction equipment that could be used.

Project Design Feature NOI-PDF-2 prohibits pile driving (refer to page IV.I-34 in Section IV.I, Noise, of the Draft EIR). Instead, pile installation for shoring and foundation would use drilling methods to minimize vibration impacts. Blasting and explosions would not occur.

Noise associated with excavation/grading and truck trips are analyzed in Section IV.I, Noise, of the Draft EIR. Refer to Table IV.I-10 of the Draft EIR for pre-mitigation construction noise levels including during the excavation and grading phase and Table IV.I-11 of the Draft EIR for construction truck noise levels. Refer to Response to Comment Nos. 26-136 and 35-120 regarding noise impacts associated with off-site truck trips. Projected noise levels during all phases of construction are provided in Section IV.I, Noise, of the Draft EIR. Refer to Table IV.I-10 of the Draft EIR for projected noise levels at each of the sensitive receptor locations prior to mitigation and Table IV.I-19 of the Draft EIR for noise levels with mitigation incorporated.

Comment No. 102-6

3. The signage is not described in enough detail. It seems billboards were mentioned but what about lighting of those and any other signs? Light pollution is a real thing. How will this lighting impact residents? How much energy will the signs use? What about any signage planned for on the property? Finally, the impact of visual distraction with numerous signs could be problematic.

Response to Comment No. 102-6

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described in the Draft EIR. Also refer to Response to Comment Nos. 26-129 and 213-2 regarding off-site signs and billboards, which would not be permitted under the Sign District.

The Project's electricity usage was estimated using SCAQMD's recommended CalEEMod 2020.4.0 software by inputting the floor area of the five proposed studio land uses and the electrical demand factors for each land use. To the extent that signage is used for these types of land uses, the CalEEMod default electrical demand factors addresses electricity for signage. In addition, electricity associated with signage was specifically analyzed in response to this comment on the Draft EIR and the calculations are provided in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). This clarification does not change any of the impact conclusions in the Draft EIR. Overall, electricity usage associated with

signage would represent less than one percent of the total electricity usage from the Project.

With respect to light pollution, refer to Response to Comment No. 26-E.1-76. As discussed therein, pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic impacts, including light and glare, shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only.

Comment No. 102-7

4. Methane is prevalent in this area. What is the risk of methane build-up and possible explosions like the Ross in the 1980s? This is a particularly frightening safety hazard.

Response to Comment No. 102-7

As concluded in the Draft EIR, potential impacts related to subsurface gases and associated potential impacts to soil and groundwater would be less than significant. Refer to Response to Comment No. 13-6 with regard to risks associated with methane.

Comment No. 102-8

Another major concern is the portion of the EIR that states a goal for this Television City project is to make money for the developer. The city has no reason to state this. Why was that included? Is the city working for the developer or the people who live here?

Response to Comment No. 102-8

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective.

Comment Letter No. 103

Mamata C.
626 S. Orange Dr.
Los Angeles, CA 90036-2006

Comment No. 103-1

I am a resident of the Fairfax area, and I have a few concerns about the TVC proposal. I fear that my daily life is going to be impacted a great deal, and I want some clarification.

Response to Comment No. 103-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 103-2 through 103-5.

Comment No. 103-2

My first question has to do with all of the parking that is going to be required. It seems clear that there will not be enough parking on the property itself. Why else would the plan refer to off-site parking? So, what is considered off-site parking? Where would temporary off-site parking be? What streets do you plan on designating for off-site parking? Which neighborhoods are going to be designated as off-site parking areas? How many cars will be allowed in off-site parking areas? Will truck need to be parked in off-site parking areas? How many trucks are we talking about?

Response to Comment No. 103-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nonetheless, regarding parking, as discussed on page II-30 of Section II, Project Description, of the Draft EIR, the Project would provide a sitewide total of approximately 5,300 parking spaces based on parking ratios set forth in the Specific Plan. Vehicles may be parked in tandem or by valet, depending on the specific parking layout. In addition, the Specific Plan would set forth a process for the approval and implementation of a reduced/shared parking plan, so long as an adequate parking supply is maintained. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 103-3

How are you going to make sure that our neighborhoods maintain the same level of safety if more cars are going through them to park? Do you have people to monitor these areas to make sure that children can still walk and play around our streets safely?

Response to Comment No. 103-3

This comment does not relate to the Draft EIR's analysis of the Project's potential environmental impacts. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding pedestrian safety. Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 for a discussion of the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security. Refer also to Topical Response No. 9, Neighborhood Traffic Management Plan, for a discussion of the NTMP which addresses off-site parking.

Comment No. 103-4

What were the findings about cars or trucks in off-site parking areas emitting exhaust, which will be dangerous to residents nearby? Have there been any studies you have conducted to make sure that air pollution as a result of off-site parking doesn't hurt residents? Please provide as much detail as you can with respect to the health of residents nearby off-site parking zones.

Response to Comment No. 103-4

Refer to Topical Response No. 13, Parking, for a discussion of the parking proposed for the Project, which will be fully accommodated on-site, the adequacy of the proposed on-site parking supply, and that the Project does not propose any off-site parking. This clarification is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Additionally, as discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips associated with the Project would not approach the screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects.

Comment No. 103-5

I am also curious about who would be displaced by production and filming related activities, something mentioned in the plan, and why would they be? How many people do you think will be displaced? Over what timeframe do you think they will be displaced? Is the draft EIR referring to employees at the site being displaced? If this is the case, where would they be able to park? Would this flow into our neighborhoods? If so, how many cars will be parking in our neighborhoods? How do we ensure that we are able to park near our houses instead of far away?

Response to Comment No. 103-5

It is unclear what displacement the commenter is referencing. All proposed uses would be located within the Project Site and, as discussed on page 69 of the Initial Study included as Appendix A of the Draft EIR. No housing currently exists on the Project Site, and the Project would not cause the displacement of any persons, housing, or require the construction of housing elsewhere.

Refer to Response to Comment No. 103-2, above, for a discussion of parking.

Comment No. 103-6

The Draft EIR does not go into nearly enough detail about any of the points made above. It would be unfair to the Fairfax community if we became one large parking site. We have a safe and peaceful area now. However, this will change if we become one large parking lot. I look forward to receiving your answers to the concerns and questions I have posed.

Response to Comment No. 103-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 103-2 through 103-5.

Comment Letter No. 104

Johnathan Cahill
4125 S. Figueroa St.
Los Angeles, CA 90037-2092

Comment No. 104-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 104-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 105

Christopher Callon
7947 W. Fourth St.
Los Angeles, CA 90048-4412

Comment No. 105-1

I am worried about the environmental impacts implicated in the TVC 2050 expansion.

Response to Comment No. 105-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 105-2 through 105-5.

Comment No. 105-2

The plan says that there could be 20 years of construction and hundreds of trucks on the site. Have you studied the impacts on air quality this will cause? Have you considered all the greenhouse emissions that will be caused by decades of construction?

Response to Comment No. 105-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 9-24 and 26-E.1-24 regarding the number of construction trucks and buildout timeline and analysis. The Draft EIR comprehensively analyzed the Project's construction impacts under the anticipated 32-month buildout schedule, as well as under a long-term buildout scenario.

Refer to pages IV.A-74 through IV.A-77 of Section IV.A, Air Quality, of the Draft EIR and to pages 25 through 76 and 128 through 227 of Appendix B of the Draft EIR regarding the analysis of Project impacts during long-term buildout for air quality.

Refer to pages IV.E-85 through IV.E-86 of Section IV.E, Greenhouse Gas Emissions, of the Draft EIR and to pages 310 through 324 of Appendix B of the Draft EIR regarding the analysis of Project GHG emissions during long-term buildout.

Comment No. 105-3

This project is set to be located right next to Pan Pacific Park. How will this impact the air quality of the park?

Response to Comment No. 105-3

As discussed in Response to Comment Nos. 26-26 and 26-28, the SCAQMD's LST methodology employed in the Draft EIR's air quality analysis defines sensitive receptors as a receptor, such as residence, hospital, convalescent facility, where it is possible that an individual could remain for 24 hours, and, thus, Pan Pacific Park is not considered a sensitive receptor. However, the methodology utilizes conservative assumptions and pollutant dispersion factors such that any receptor farther from the Project Site than an analyzed receptor would be expected to have lower impacts than the analyzed receptors. The Project LST analysis assumed the minimum distance under the LST methodology (25 meters) for the analysis of sensitive receptor impacts. As shown in Tables IV.A-10 and IV.A-11 of the Draft EIR, after the application of mitigation, localized air quality impacts would not exceed LST thresholds, and impacts would be less than significant. Since Pan Pacific Park is farther from the Project Site than the closest receptor analyzed, localized impacts to air quality in Pan Pacific Park, even if considered hypothetically as a sensitive receptor, would also be less than significant.

Comment No. 105-4

Furthermore, this project is proposing tons of excavation right next to the La Brea Tar Pits. Will this cause a health risk or impact air quality? Has this issue been looked into?

Response to Comment No. 105-4

Refer to Response to Comment Nos. 13-4, 16-64, and 26-80 regarding the tar collection system and the testing and disposal requirements for any impacted soil.

Comment No. 105-5

It seems like excavating right next to the tar pits would pollute groundwater and release tar and methane. Is the city going to do a ground water study to make sure our water won't be polluted?

Response to Comment No. 105-5

Refer to Response to Comment Nos. 13-4, 13-6, 16-64, and 26-80 regarding excavation as it relates to the tar pits, groundwater pollution, and the release of tar and

methane. The Draft EIR comprehensively analyzed impacts associated with excavation, and an additional groundwater study is not required by CEQA or the City.

Comment No. 105-6

I think it would be irresponsible to approve this project without addressing these issues. Please address the above comments and questions and consider the environmental impacts this project would have on our neighborhood.

Response to Comment No. 105-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 105-2 through 105-5.

Comment Letter No. 106

Reululd Campbell
636 N. Spaulding Ave.
Los Angeles, CA 90036-1869

Comment No. 106-1

I am writing to you today with my thoughts on the recently released Draft Environmental Report for the Television City Project. As a long-time Beverly Fairfax community member, I feel that I have a stake in the outcome of this project. As a result, I would like to express my concerns and ask questions about the DEIR. I hope that you all take the time to address each of my questions and concerns in detail.

Response to Comment No. 106-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 106-2 through 106-4.

Comment No. 106-2

As we all know, Beverly Fairfax is already a highly populated area. With 14 proposed stages, many of which will house audiences, thousands of additional people could be onsite each day! Has the public been given a solid number on how many people can be on-site? Will all of the stages be used at the same time? What happens when audience members and employees try to park for shows? From the [sic] it seems there will only be 5,300 parking spaces for potentially 13,300 people. Aren't those parking spaces for employees also? How exactly will that work? Can someone please outline this for me?

Response to Comment No. 106-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for information regarding audience visitors and trips. The stage areas could be used concurrently for various studio-related activities.

For informational purposes, Table II-33 on page II-1640 shows the effects of mode of arrival and time of day on the total parking demand generated based on the anticipated future parking and travel patterns with the Project.

The various groups of people traveling to the Project Site would include:

- **Employees**—Arrivals by car total approximately 75 percent of the employees, but not all of these employees are driving alone. This estimate assumes that, once the TDM Program is in effect with its carpool incentives, 20 percent of the employee vehicles would carry more than one person to the campus. Approximately 20 percent of the employees would take a mode other than the automobile to the Project Site. The Draft EIR Transportation Assessment analysis is based on a TDM Program that would see 15 percent of the Project trips arriving at and departing the Project Site via a mode other than driving alone to the Project Site. The Project Site's proximity to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction, the proposed shuttle bus connecting the subway station to the on-site Mobility Hub, and incentives for the formation and operation of employee carpools will all help support this goal. The Project's TDM Program is expected to exceed the 15% multimodal target.
- **Office Visitors**—The industry standard for office assumes that approximately 10 percent of the trips to/from an employment center are visitor trips.¹⁵¹ These are people coming to the office uses for meetings, salespeople, etc. Likewise, the sound stages and production offices would have visitors arriving at the Project Site associated with the production itself. Because these visitors would represent infrequent trips to the Project Site, it was assumed that 85 percent of them would arrive by automobile, consistent with LADOT estimates relative to the amount of transit available nearby. To be conservative, it was assumed that all visitors arriving via automobile would drive alone.
- **Audience Members**—As with existing conditions, audience shows would continue to occur on the Project Site on weekdays and on weekends. The busiest day would be a weekday that served all audience shows with daytime filming (i.e., the *Late Late Show*, *Real Time*, and *The Price is Right*). As discussed in Topical Response No. 10, the trip generation estimates for the Project Site took into account the propensity of audience members to travel together in groups of two or more people, with a relatively small percentage of them (10 percent) arriving by transit/walk-in/drop off.

¹⁵¹ National Parking Association and Urban Land Institute (ULI), Shared Parking, 3rd Edition, 2020, Shared Parking Model.

Table II-33
Weekday Peak Parking Demand by Population

Group	Peak Population ^a	Travel Mode		Daytime Parking Demand		Evening Parking Demand	
		Description	Percent	Percent of Peak	Demand	Percent of Peak	Demand
Employee	7,832	Drive Alone	55%	100%	4,308	20%	862
		Carpool Passenger	20%				
		Transit/Rideshare	17%				
		Bike/Walk	3%				
		Vacation/Sick	5%				
Office Visitor ^b	783	Drive Alone	85%	100%	666	10%	67
		Transit/Rideshare	15%				
Daytime Audience ^c	375	Driver	40%	100%	150	0%	0
		Passenger	50%				
		Transit/Rideshare	10%				
Evening Audience ^d	450	Driver	45%	0%	0	45%	91
		Passenger	45%				
		Transit/Rideshare	10%				
Retail/Restaurant Customer	200	Driver	70%	85%	119	100%	140
		Passenger	25%			0%	
		Transit/Rideshare	5%			0%	
Total					5,242		1,159

^a The maximum number of people that may be on-site at a given time in the identified category.

^b Assumes 10 percent of total employees.

^c Based on audience totals from Table II-4 from Topical Response No. 10, Trip Generation. Assumes simultaneous filming of Late Late Show, Real Time, and The Price is Right.

^d Based on audience totals from Table II-4 from Topical Response No. 10, Trip Generation. Assumes filming of Dancing with the Stars.

Source: Gibson Transportation Consulting, Inc., 2023.

- **Retail Customers**—These types of trips typically have high automobile occupancy levels as shopping and dining are social trips. The amount of retail on the Project Site would be small (20,000 square feet, which is slightly over 1 percent of the total permitted floor area), and many of the customers to the retail space are anticipated to be studio employees. The retail parking demand generated by customers outside of the Project Site is accounted for in the overall parking demand.

Table II-33 shows that the Project could be fully served by the proposed parking supply of approximately 5,300 spaces on a peak weekday. On a weekday evening, the parking demand would be approximately 1,160 spaces, or approximately one-quarter of the weekday daytime demand because of the substantial reduction in employee evening parking demand. Similarly, the weekend parking demand at the Project Site would be

dramatically lower than weekday demand because most of the studio and office space would be lightly used on weekends.

Comment No. 106-3

With more people comes more crime. What does the evaluation show about expected increases in crimes? What kinds of crimes in particular? What measures will be taken to ensure the safety of our children with more people being in the neighborhood? Additionally, more people means an increased opportunity for crimes in Beverly Fairfax at night, when it seems most of the shows will be taking place. What will be done to combat this increased crime rate? Will the city deploy more police officers to Beverly Fairfax on nights with shows? More cars speeding through our neighborhoods can be detrimental to their health and safety. Has an analysis on this been done? If so, what were the findings? If not, when and how will it be conducted?

Response to Comment No. 106-3

Regarding the comments about crime, refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

With regard to pedestrian safety, refer to Topical Response No. 12, Safety and Congestion.

With regard to cut-through trips, refer to Topical Response No. 9, Neighborhood Traffic Management Plan.

Comment No. 106-4

Additionally, we are fortunate to have multiple historic structures and an entire historic district in Beverly Fairfax. I don't think the DEIR did a good enough job of evaluating the impacts of a potentially extra hundred thousand people on our history. Will the project overwhelm the Adobe and Farmers Market? Please explain your claim in detail. I would like to see the study and hard data that backs up your claim. What about the historic district itself—what will happen to it if thousands of cars drive through it every single day? What about parking in the historic district, will there be any restrictions? Will people be allowed to park in the historic district?

Response to Comment No. 106-4

Potential impacts to historical resources located in the vicinity of the Project Site, including the Gilmore Adobe, The Original Farmers Market, and the Beverly Fairfax Historic District, were considered and analyzed in the Draft EIR. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13, 26-E.2-10, and 363-1 regarding how the Project would not result in significant impacts to the Gilmore Adobe, The Original Farmers Market, or the Beverly Fairfax Historic District. Section E of Topical Response No. 5 also discusses how vehicle trips from the Project would not significantly impact the Beverly Fairfax Historic District.

The comment about the number of people is incorrect. As discussed in Section IV.K, Transportation, of the Draft EIR, the Project would include a total of approximately 7,832 employees upon full buildout. As discussed in Topical Response No. 13, Parking, the Project would provide adequate on-site parking to ensure that there is no parking spillover in surrounding residential neighborhoods.

Comment No. 106-5

Again, I really hope you all take time to answer each of my questions in detail. I'm really concerned about the outcome of this project, and I feel like as a resident, I have the right to know how it will actually impact my life.

Response to Comment No. 106-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 106-2 through 106-4.

Comment Letter No. 107

Gialiamp Carmassi
342 1/2 N. Stanley Ave.
Los Angeles, CA 90036-2397

Comment No. 107-1

I live in the Beverly Fairfax neighborhood, and I am deeply concerned about the TVC 2050 project. There are a few concerns and question I have, and I'm listing them below.

Response to Comment No. 107-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 107-2 through 107-4.

Comment No. 107-2

- I'm unclear about the routes for vehicles hauling materials to and from the sites. It looks like the routes are still undetermined. Why aren't these routes included in the draft EIR? When will these routes be established and communicated with community members? I'm sure residents of this community would be upset to learn that the truck routes are through their neighborhood. I can't even imagine dirt and debris being hauled near my home. What happens if routes are established and then truck drivers don't stick to them? Will the routes be enforced, and how? Will there be certain routes that trucks will be completely prohibited from driving on? Which are those? What about restrictions about driving on any neighborhoods streets?

Response to Comment No. 107-2

The three haul routes are disclosed in various sections of the Draft EIR, including Section II, Project Description, of the Draft EIR (pages II-34 to II-35). The proposed haul routes are further explained in Topical Response No. 14, Construction Vehicle Impacts. These proposed haul routes have been reviewed tentatively and approved by LADOT (see the LADOT Haul Route Approval Letter included in Appendix M.5 of the Draft EIR), and all haul trucks would be granted a permit that only allows travel on these roadways. Final approval of the proposed haul routes would require additional departmental approvals, including LADOT, the Bureau of Street Services, and the Department of City Planning.

Trucks would not be allowed on residential streets. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD. A construction manager would be appointed by the Project and his/her phone number would be advertised on the Project website and communicated to the neighbors so that trucks on the local streets could be reported to the construction manager, who, in turn, could call for targeted enforcement.

Additionally, the Project would include a CTMP pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 and IV.K-37 of the Draft EIR), which would include provisions to limit the amount of construction-related trips during peak hours to the extent feasible, as well as a prohibition of construction worker or equipment parking offsite. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the CTMP.

Comment No. 107-3

- The TVC 2050 project seems very similar to the Millennium project in Hollywood. That project is a disaster, and there never seemed to be a clear plan throughout the entire planning process. I thought city officials would have learned their lesson with the Millennium project. Have there been comparisons made between the Millennium project and TVC 2050? Did city officials use studies from the Millennium project to draft the EIR for TVC 2050?

Response to Comment No. 107-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13. As discussed therein, the *Millennium* case is not applicable to the Project, and the Project Description is distinguishable from the project description at issue in *Millennium*.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 107-4

- Finally, I'm concerned about the suggestion that residents and visitors will be taking public transportation. Almost everyone I know that lives in this area drives their cars. Why is the city under the impression that residents will use public transportation? Did you poll the surrounding residents to see if they were willing to ride the bus or subway?

Response to Comment No. 107-4

The transit assumptions in the Project's Draft EIR apply only to the Project's employees and visitors and not to the area residents as suggested in the comment.

Refer to Section B, Transit and TDM Effectiveness, of Topical Response No. 11, Transportation Demand Management, for a discussion on the success of transit and TDM programs in similar studio and entertainment campuses. As discussed therein, there are several examples of major studio and entertainment campuses that have successfully implemented TDM programs for employees and visitors that have far exceeded the 15-percent automobile reductions estimated in the Draft EIR and even exceeded the estimated 20- to 30-percent reductions from the TDM Program. The proposed TDM Ordinance currently under consideration by the City of Los Angeles will require a monitoring program to measure the continuing effectiveness of the Project's TDM Program. If the TDM Program is not meeting its goals, additional TDM strategies will have to be implemented until the Project meets the effectiveness levels discussed in the Draft EIR. Refer also to Response to Comment No. 90-2.

Comment No. 107-5

I'm unable to support this project in its current state. I am anxious to hear your answers to my questions and concerns.

Response to Comment No. 107-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 107-2 through 107-4.

Comment Letter No. 108

Marian Carr
104 S. Formosa Ave.
Los Angeles, CA 90036-2816

Comment No. 108-1

I am a long-time resident of Beverly Fairfax. Recently, I read over the Draft Environmental Impact Report for the Television City Project. I find this draft EIR to be really concerning and found myself with more questions than answers.

Response to Comment No. 108-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 108-2 and 108-3, below.

Comment No. 108-2

In this letter, I am going to outline several of my questions related to the DEIR's alternative mobility plan, specifically. I hope the City and the developer take time to read each of my questions and respond with thorough answers.

Response to Comment No. 108-2

This comment provides a general introductory statement about the alternative mobility plan and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 108-3

Currently, this development proposes that employees and visitors will use alternative means of transportation for live shows. While I concede that (in theory) this would help reduce traffic, I do not see how this plan is feasible in application. What is the plan if Television City is hosting live shows before the future Metro purple line is finished? The Wilshire/Fairfax stop is not expected to be operational until 2024. Will employees and audience members need to use the parking available to residents until the Metro stop is operational? What happens when track maintenance on the purple line is happening? These estimates seem inflated. What additional studies can be conducted to give realistic alternative mobility estimates?

Response to Comment No. 108-3

Refer to Topical Response No. 11, Transportation Demand Management, regarding the effectiveness of TDM programs.

As discussed on page IV.K-38 in Section IV.K, Transportation, of the Draft EIR, the Project's TDM Program would include a shuttle service between the proposed Metro D (Purple) Line Wilshire/Fairfax Station currently under construction and the Project Site, and the shuttle will operate during typical commuter peak periods. Importantly, to be conservative, the Draft EIR's transportation analysis did not account for any trip reductions in connection with the proposed shuttle and/or the Metro D (Purple) Line Wilshire/Fairfax Station. Thus, the commenter's statement regarding inflated estimates is incorrect. It is anticipated that buildout of the Project would occur after the opening of the Metro D (Purple) Line Wilshire/Fairfax Station.

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, and Response to Comment No. 106-2 regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 108-4

Ultimately, I want to make sure this project makes sense for all Beverly Fairfax residents. In its current state, I do not see that being possible. When will the city release a revised DEIR with reflections of the community's wants and needs?

Response to Comment No. 108-4

The Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 108-5

I look forward to hearing your response.

Response to Comment No. 108-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 109

Ty Carrington
421 1/2 Sierra Bonita Ave.
Los Angeles, CA 90036-2464

Comment No. 109-1

I have only lived her one month but I'm not sure that I would have signed the lease if I had known that there was a plan for massive, noisy, polluting construction to take place for the next 20 years.

Response to Comment No. 109-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 109-2.

Comment No. 109-2

I'm curious about the impact of the deep excavation that's part of the plan—the project site is just down the road from the La Brea Tar Pits, where dinosaurs once roamed. It seems obvious that digging down 45 feet across a 25-acre site will reveal many interesting geologic finds in this sensitive area.

Have paleontologists been consulted about where special care should be exercised for the dig? It seems to me that paleontologists and other scientists should be on-site, so the digging can be stopped if bones or fossils are uncovered.

A detailed plan for this element of excavation should be provided for the public to comment on.

Response to Comment No. 109-2

Pursuant to Appendix G of the CEQA Guidelines, Section IV.D, Geology and Soils, of the Draft EIR included an analysis of the Project's potential to impact paleontological resources. Refer to Response to Comment No. 35-90 for a detailed summary of the analysis contained in the Draft EIR and Paleontological Resources Review Memorandum (Appendix F of the Draft EIR). To address potential impacts to paleontological resources, Mitigation Measure GEO-MM-1 requires that a paleontologist be retained to prepare a Paleontological Resource Mitigation and Treatment Plan for the Project. Additionally,

paleontological monitoring would be required during ground disturbance activities within high sensitivity deposits (e.g., Pleistocene age deposits), per Mitigation Measure GEO-MM-1 and as revised (refer to Response to Comment No. 35-91). The monitoring program would follow the guidelines outlined by the Society of Vertebrate Paleontology and include sediment sampling protocols for microfossil recovery. No monitoring would be required during excavation within artificial fill, as these deposits do not contain paleontological resources in their original stratigraphic context and thus have a low sensitivity. In the event of a find, the monitor has the authority to divert and/or re-direct ground-disturbing activities in the area of the find, and rope off a protective barrier of at least 50 feet to evaluate the unanticipated find. Refer to Response to Comment No. 35-91 for a discussion of the revised Mitigation Measure GEO-MM-1. As stated in the Draft EIR, with the implementation of Mitigation Measure GEO-MM-1, impacts to unique paleontological resources would be reduced to a less-than-significant level.

With respect to the commenter's request for an opportunity to provide comment on such plans as the grading and excavation plan for the Project and the Paleontological Resource Mitigation and Treatment Plan, those plans would be submitted as part of the Project's building permit process and would be included as part of the administrative case file for public review.

Comment Letter No. 110

Jean Claude Carron
438 N. Edinburgh Ave.
Los Angeles, CA 90048-2308

Comment No. 110-1

This project is trying to do way too much on this property that is in an already congested area. It needs to be scaled back substantially.

Response to Comment No. 110-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 110-2

I am all for maintaining the existing studio use, but this location is not appropriate for 1.4 million square feet of office and 225' buildings. There is no support in the EIR for why a studio needs this amount and size of office uses to supposedly maintain the studio.

Response to Comment No. 110-2

Refer to Response to Comment No. 11-3 regarding the size and scale of the Project. Refer to Response to Comment No. 26-16 regarding the ratio of the studio land uses. Refer to Response to Comment No. 110-3 below regarding Project objectives.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 110-3

Office space attached to and at the height of the stages should be enough, like the applicant showed at the Neighborhood Council meeting. The height is out of character with this area which consists mainly of 1 and 2 story commercial and residential buildings. If the applicant wants to develop a high-rise office project, it should look to the nearby Wilshire corridor which is planned for tall office towers.

Response to Comment No. 110-3

Refer to Response to Comment No. 11-3 regarding the height of the Project and its relationship to surrounding buildings.

As stated on page II-11 in Section II, Project Description, of the Draft EIR, one of the objectives of the Project is to “complement the neighboring community through design elements that would be compatible with surrounding uses, concentrate building mass and height towards the center of the Project Site, and provide an enhanced public realm to promote walkability, foster connectivity and safety, and better integrate on- and off-site uses.” To achieve this objective, the Project incorporates site planning and design and architectural elements to complement the scale and character of the surrounding neighborhood, as discussed in Section IV.H, Land Use and Planning, and Appendix I of the Draft EIR. Refer to Response to Comment No. 26-19 for the discussion of the Project’s height zone, frontage, and stepback requirements and how the Project achieves the objective to concentrate height towards the center of the Project Site. Although the maximum height limits are taller than existing buildings in the immediate vicinity, the Project would not be out of character with the area, given that the Project is an infill project located in a highly-urbanized and dense area of the City. In accordance with CEQA and the L.A. CEQA Thresholds Guide, the land use compatibility analysis in Section IV.H, Land Use and Planning, of the Draft EIR considers the uses and density of surrounding development and other physical and operational factors in addition to height.

The comment that the Applicant wants to develop a high-rise office project is incorrect. As discussed throughout the Draft EIR, the Project is a studio project, and the proposed Specific Plan would allow five land uses (i.e., sound stage, production support, production office, general office, and retail). Further, the proposed Specific Plan would limit general office and production office floor area to a maximum of 700,000 square feet each. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-6, and 5-15 regarding the purpose of the Project.

Further, the neighborhood council presentation was an informational presentation to explain modern production needs. The rise of digital media has created the need for larger and taller sound stage volumes, as well as enhanced technological infrastructure and

production office, and the studio eco-system requires office to be located close to sound stages and production support. The industry has changed and become more digitized, which requires much more office space co-located on a campus setting than traditional studios. The proposed development program includes an operationally feasible balance of studio uses to meet modern production needs.

Comment Letter No. 111

Mychael Carter
8261 W. Fourth St.
Los Angeles, CA 90048-4401

Comment No. 111-1

What is the project, exactly? The EIR repeatedly says the plan is “conceptual?” but how are people supposed to comment when the actual specific plan is not provided?

My understanding is this is why the applicant is asking for a 20-year development agreement. I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

Response to Comment No. 111-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description in the Draft EIR, which adequately described the Project and disclosed all elements of the Project required by CEQA; how all plans in an EIR are inherently conceptual; and that CEQA and City policy do not require a draft Specific Plan to be included in an EIR.

The second paragraph of this comment is identical to a portion of Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment No. 111-2

The proposal only has 5,300 parking spaces. This facility will be staffed by 8,000 employees and will also bring with it and thousands of audience members as well, where will the overflow parking be and has that even been studied?

Response to Comment No. 111-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, and Response to Comment No. 106-2 regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 111-3

The EIR makes it clear that there is a draft in the City's files. The Specific Plan should have been given to us to see and review

Response to Comment No. 111-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3. As discussed therein, neither CEQA nor City policy requires a specific plan to be included in either the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment Letter No. 112

Madi Cash
358 S. Mansfield Ave.
Los Angeles, CA 90036-3057

Comment No. 112-1

As a resident of the Fairfax community, I think it is important to raise the issues I have with this plan. There are things across the board that I will outline below to express my concerns.

Response to Comment No. 112-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 112-2 through 112-4.

Comment No. 112-2

First, why is the City so sure that people are going to ride the bus and subway? I have worked in this area for my entire working life, and people drive their cars. So, why does the City have this hunch? Is there any evidence that people are really going to ride public transportation? Have there been any polls? Surveys? Interviews? I am trying to understand why this assumption has been made. Please explain how these assumptions are being made? And why does the city consider the assumptions to be correct? What if the assumptions are actually just incorrect?

Response to Comment No. 112-2

Refer to Topical Response No. 11, Transportation Demand Management, for a discussion of transit and auto reduction experience in other comparable employment projects.

Comment No. 112-3

Second, in the Draft EIR, it is stated that as a result of this project, water use would be six times more than it is now. Why is this not being given more attention or being flagged as having a significant impact? California is in a severe drought, and drought conditions are likely to continue or even worsen. Please give us more detail and address the concerns above.

Response to Comment No. 112-3

Refer to Response to Comment No. 16-66 with regard to the adequacy of water supply and consideration of drought conditions. Refer to Response to Comment No. 26-175 regarding the Project's water demand and impact analysis. Refer to Response to Comment No. 292-2 with regard to the significance threshold for water supply impacts under CEQA.

Comment No. 112-4

And lastly, it is stated that there can be special events at the property. What exactly is a special event? Is that a concert? A play? And outdoor movie screening? How many people are expected to go to special events? How many special events are going to occur per year? Are they going to occur during the weekdays or weekends? How much construction is going to be necessary to set-up and take down special events? During what hours are these special events going to occur? Will loud concerts be allowed at night? Will certain kinds of events be restricted to certain days of the week and specific hours? As a resident with children, I want to gain a better understanding of exactly what these special events are and when they are going to occur to see how they will impact my life.

Response to Comment No. 112-4

Special events would not be regulated by the proposed Specific Plan, do not regularly occur on-site, and would be subject to existing City permitting regulations. Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 112-5

As you see in the above, I have concerns relating to different things with the project as it stands. In order for me to feel even remotely comfortable with considering whether I would support this development or not, I need detailed responses to all of the above!

Response to Comment No. 112-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 112-2 through 112-4.

Comment Letter No. 113

Pedro Castro
518 N. Spaulding Ave.
Los Angeles CA 90036-1845

Comment No. 113-1

As a resident of the neighborhood, I am worried about the addition of office space, studio facilities, a huge parking garage, and more on the Television City site. I understand that living in an urban area means there will be change and growth, but this proposed expansion seems unreasonable for this community, which is already maxed out.

Response to Comment No. 113-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 5-8 regarding the proposed Regional Commercial land use designation and its relation to the size of the Project.

Comment No. 113-2

The Draft EIR for Television City 2050 includes information about special events. I would like more information about what this means. If they are allowed, what are the specifics? When will special events be allowed? At what times and days of the week? Where on the property will special events occur? Are live performances and parties acceptable? What kinds of extended set-up and tear-down is permitted? How will parking be handled when we already have extremely limited resources for that? What is known about how these events will impact the people who live in the area?

Response to Comment No. 113-2

Special events would not be regulated by the proposed Specific Plan, do not regularly occur on-site, and would be subject to existing City permitting regulations. Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 113-3

Another noise-related concern is construction. The EIR seems to state that construction is likely to take two decades. This amount of time could mean the community will have to

bear the burden of trucks, jackhammering, excavation, dumping, clanging materials, and many, many other sounds for a generation. How will this affect the neighborhood? I can't imagine the horror of living through construction sounds like those for that many years.

Response to Comment No. 113-3

Refer to Section IV.I, Noise, of the Draft EIR for a detailed analysis of noise associated with Project construction activities. Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

Comment No. 113-4

A third noise-related problem is the actual productions once the project is complete. The making of movies or television can be incredibly loud, and recording takes place at all hours. What is the plan for communicating such disruptions to the community? How were the production noise impacts determined for the EIR? How will these events affect the quality of life of the nearby neighbors? This information is pertinent to the people who live and work near the facility.

Response to Comment No. 113-4

Noise impacts during operation of the Project were analyzed based on the thresholds in Appendix G of the CEQA Guidelines and were determined to be less than significant. Refer to pages IV.I-43 through IV.I-56 of Section IV.I, Noise, of the Draft EIR. The Project would include a number of PDFs that would reduce noise during operations. Refer to page IV.I-34 of the Draft EIR.

Refer also to Response to Comment Nos. 26-146 regarding noise associated with outdoor production activities during both daytime hours (7:00 A.M. to 10:00 P.M.) and nighttime hours (10:00 P.M. to 7:00 A.M.).

Please note that quality of life is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 113-5

I am appalled that the EIR included information about an objective of the project is to make money for the developer. That is an obvious reason, but for what purpose would the city include that information? How is it the city's business what a private business does? Why

is the developer's financial status a concern of the city? Implied in such a statement is that there is a connection between the developer and the city. If there is, please explain.

Response to Comment No. 113-5

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

This comment raises non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 114

Catherine Ceccola
464 N. Hayworth Ave.
Los Angeles, CA 90048-2704

Comment No. 114-1

I have lived here for 29 years.

Response to Comment No. 114-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 114-2 through 114-5.

Comment No. 114-2

I am very concerned about the impact this will have on our already impacted public parking.

Response to Comment No. 114-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 114-3

We do not need anymore traffic for what looks like will be the next 20 years for the buildout.

Response to Comment No. 114-3

Under SB 743, the CEQA transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). The Draft EIR and the Transportation Assessment analyzed the potential transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would have less than significant transportation impacts.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 114-4

The amount of trucks in the area will create more emissions as well.

Response to Comment No. 114-4

Refer to Sections IV.A, Air Quality, and IV.E, Greenhouse Gas Emissions, of the Draft EIR and Appendix B of the Draft EIR regarding the air quality and GHG analyses, which accounted for construction trucks and operational trucks.

Comment No. 114-5

If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with the consequences of the increased pollution, noise and traffic, the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 114-5

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective.

It is unclear what pollution the commenter is referring to, but air pollution is analyzed in Section IV.A, Air Quality, of the Draft EIR, and pollution associated with hazards and hazardous materials is analyzed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR.

Refer to Section IV.E, Greenhouse Gas Emissions for the analysis of climate change impacts, Section IV.I, Noise, for the analysis of noise impacts, and Section IV.M.1, Utilities and Service Systems – Water Supply and Infrastructure, Section IV.M.2, Utilities and Service Systems – Wastewater, and Section IV.M.3, Utilities and Service Systems – Energy Infrastructure for the analysis of infrastructure.

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 115

Tera Cederquist
406 N. Gardner St.
Los Angeles, CA 90036-5728

Comment No. 115-1

I have many questions regarding the proposed Television City project. What is the distance of the venue to the three nearest airports? What types of public transit will be available along those routes?

Response to Comment No. 115-1

The Project's proximity to airports is addressed in the Initial Study included as Appendix A of the Draft EIR, as well as in Section VI, Other CEQA Considerations, of the Draft EIR. Refer to pages VI-25 and VI-28 of Section VI, Other CEQA Considerations, of the Draft EIR. As discussed therein, the nearest airport is the Santa Monica Airport located approximately 8.4 miles southwest of the Project Site. The Project Site is also approximately 11 miles to the northeast and southwest, respectively, from both Los Angeles International Airport (LAX) and the Hollywood Burbank International Airport (BUR). It is approximately 46 miles west of the Ontario International Airport (ONT). Note that Long Beach Airport (LGB) is approximately 30 miles southeast from the Project Site but is not an international airport.

Public transit options to/from these airports are unrelated to the CEQA analysis for the Project. Nevertheless, the requested information is provided below for informational purposes.

Public transit connections between the Project Site and the airports above involve multiple seat rides. The travel time to LAX is anywhere between approximately 1.5 and 2.5 hours via shuttle, bus, and/or rail, 1.5 hours to BUR (bus and rail), and 3 hours to ONT (bus and rail). Note that once completed, the Metro D (Purple) Line Wilshire/Fairfax Station, the Metro K (Crenshaw) Line LAX/Metro Transit Center Station, and the LAX Automated People Mover has the potential to provide a quicker connection to BUR and LAX.

The transit services adjacent to and surrounding the Project Site are shown in Figure 12 on page 43 of the Transportation Assessment included in Appendix M.1 of the Draft EIR. In addition to the bus lines and rail stations shown in Figure 12, the Project would include a shuttle bus service between the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction and the Project's Mobility Hub.

Comment No. 115-2

The entertainment venue as proposed in the EIR seems massive... fourteen stages is too many for this community, along with everything else being proposed for the location.

How will it work having fourteen stages? Can multiple stages be used at the same time? Please provide me with specific information regarding the logistics of this multi-stage concert venue. I am confused on why California needs another concert venue. Between Staples Center, Banc of California Stadium, Oracle Arena, and SAP Center, I am concerned about oversaturating the market. What studies were done that show the need for this capacity?

Response to Comment No. 115-2

The Project does not include a concert venue. Refer to Topical Response No. 3, Permitted On-Site Uses, regarding the five land uses that would be allowed under the proposed Specific Plan.

Comment No. 115-3

The draft EIR refers to large projects that could have a negative impact on nearby businesses. What will be those negative impacts? What large projects are being referred to? What have nearby businesses been told about the proposed projects? We cannot leave behind the businesses that are essential and have an important role in the community.

Response to Comment No. 115-3

An analysis of impacts to business is outside of the scope of CEQA. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 115-4

The Farmers Market and the Grove are two of Beverly Fairfax's most popular destinations for people in surrounding areas. These parking lots are typically full, and I am concerned about the impact the venue with fourteen stages and all the other operations of the development will have on these locations. How many parking spaces will be reserved at

the Farmers Market and the Grove for people attending a concert at the proposed venue? What about for the other events mentioned?

Response to Comment No. 115-4

There is no concert venue planned at the Project Site, and this use would not be permitted under the Specific Plan; refer to Topical Response No. 3, Permitted On-Site Uses. Refer to Topical Response No. 3; Section C, Special Events, of Topical Response No. 10, Trip Generation; and Response to Comment No. 66-5 regarding special events.

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking and, thus, is not reserving any parking spaces in The Original Farmers Market or The Grove parking lots. As discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Refer to Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking, for a discussion of the Project's potential parking effects on parking at The Original Farmers Market and The Grove.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 115-5

Both of these locations also have valet parking available from 10AM–10PM. [sic] Will valet parking be offered at the concert venue? If not, what specific measures will be taken to ensure that parking for the Farmers Market and the Grove are reserved for Farmers Market and the Grove customers? The Beverly Fairfax Historic District includes several attractions, and it is essential that the voices of these businesses are heard.

Response to Comment No. 115-5

Refer to Response to Comment Nos. 115-3 and 115-4, above.

Comment No. 115-6

Please provide me with all information regarding plans for the concert venue, use of the fourteen stages, and use of the other development features that will bring many people to the site.

Response to Comment No. 115-6

The Project does not include a concert venue, and a concert venue would not be permitted. Refer to Topical Response No. 3, Permitted On-Site Uses. Section II, Project Description, of the Draft EIR includes a detailed description of the proposed development program. Refer specifically to pages II-12 through II-17 for a description of the proposed development program and Table II-2 on page II-13. Also refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Refer to Topical Response No. 10, Trip Generation, for a discussion of the number of employees and visitors the Project is anticipated to generate.

Comment Letter No. 116

Chris Cedize
8211 Blackburn Ave., Apt. 8
Los Angeles, CA 90048-4229

Comment No. 116-1

I live next to this proposed project, and I am really worried about parking. Our neighborhood is already full with people parking when the nearby shopping parking lots, meters, and businesses have no parking available. It's already frustrating enough not being able to park in my own neighborhood.

From what I understand this project would add 6,000 more employees. That's 6,000 people commuting every day to work. Plus, all of the different kinds of trucks for construction. Why does the DEIR say the project will have 5,300 parking spaces when there could be 6,000 cars. Where will the overflow go?

Response to Comment No. 116-1

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language has been deleted from the Draft EIR.

Topical Response No. 13, Parking, and Response to Comment No. 106-2 explain how the proposed 5,300 parking spaces would be adequate to accommodate all 7,832 employees. This primarily occurs because every individual employee does not drive his/her own car to the Project Site. Many employees ride to work together, while others take transit, walk, or bike to work. When all these alternate modes are taken into account, 5,300 spaces serve the Project without spillover parking.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 107-2 regarding construction trucks and the proposed CTMP.

Comment No. 116-2

The DEIR says that the average employee only commutes 6.7 miles a day. This doesn't seem right. Where did this data come from? How can the applicant already know where the new employees will be coming from to get to and from work there?

Response to Comment No. 116-2

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 26-156 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths and the provision of empirical data in support of the subject analysis. As substantiated therein, the approach to, and assumptions for, using the City's VMT Calculator tool to analyze the Project's VMT impacts were appropriate, as acknowledged by LADOT in the Assessment Letter that is presented in Appendix M.2 of the Draft EIR.

Comment No. 116-3

Has the city considered the additional traffic during events? What about when there is a live audience during filming? Have they considered all the additional people that will bring?

Response to Comment No. 116-3

The transportation analysis in the Draft EIR fully accounted for all trips generated by the Project (employees, visitors, audience members, production vehicles, deliveries, etc.).

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for a discussion of audience and visitor trips to the Project Site. As concluded therein, audience trips represent a small percentage of total daily Project trip generation.

Comment No. 116-4

I see people parking on my street all the time to go to the farmers market and the Grove. I'm sure this will bring even more traffic. People always use our streets when they don't want to pay for parking. The plan does not provide actual solutions to what all of us who live here know will be actual consequences if the project gets built.

Response to Comment No. 116-4

Also refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project, and Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13 for a discussion of how the adequacy of the on-site parking supply will prevent spillover parking into nearby public parking spaces. Unlike The Original Farmers Market and The Grove, employees and visitors to the Project Site will not be required to pay for on-site parking as part of their entry to the Project Site. Parking would be available at no cost to visitors and audience members, who would therefore have no incentive or reason to search for parking in the adjacent neighborhoods.

Additionally, the provision of neighborhood on-street parking permitting is available to residents through LADOT's Parking Permits Division.

Comment Letter No. 117

Sue Chang
7957 1/2 Blackburn Ave.
Los Angeles, CA 90048-4461

Comment No. 117-1

Before you make decisions about allowing the Television City expansion project, I want to make my concerns known. I am a resident whose voice should be heard.

Response to Comment No. 117-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 117-2 through 117-5.

Comment No. 117-2

The Television City expansion Draft EIR is confusing and unclear. When is the city going to hold public hearings so that the community can really understand what the project will do? Why is there no specific plan required, a plan that provides details rather than general descriptions? How are we supposed to understand impacts of a development that lacks specifics about what is going to be built and the effects? What does getting a Specific Plan mean and why can it lack specifics? Seems contradictory. Please explain exactly how the current codes or zoning for this building and for the property would be changed from what is in place now for this proposed project?

Response to Comment No. 117-2

This comment is identical to Comment No. 57-2. Refer to Response to Comment No. 57-2, above.

Comment No. 117-3

Another concern about this project is that it will lead to more development. If Television City's expansion happens, then the general plan for the community will change, won't it? Will this change open the door to more development? What kinds of development would then be allowed? How does the EIR address how this development will lead to even more? Does that mean that future projects wouldn't have to be approved? It is not acceptable that the Television City project would be an umbrella project for other projects and development, but is that what would happen?

Response to Comment No. 117-3

This comment is identical to Comment No. 57-3. Refer to Response to Comment No. 57-3, above.

Comment No. 117-4

Parking for the tremendous increase of workers at a new, larger facility will be a problem. The EIR says there are more than 5,000 spaces to be added at the site with more located offsite. That number of parking spaces doesn't even match the expected number of new employees, so what about those that can't park on site? What does offsite mean? And where is offsite? Will more parking spaces be created in other parts of the neighborhood? If so, how will that impact the area surrounding the project?

Response to Comment No. 117-4

As discussed in Section II, Project Description, of the Draft EIR, there are currently 1,510 parking spaces on the Project Site, and the Project is proposing 5,300 total parking spaces. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language has been deleted from the Draft EIR.

Comment No. 117-5

I believe Television City should not increase in size because of the potential for even more development and quality of life impacts for the community.

Response to Comment No. 117-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 118

Tessa Chapman
537 N. Orlando Ave., Apt. 5
Los Angeles, CA 90048-2530

Comment No. 118-1

I am a resident of the Beverly Fairfax area, and I am incredibly concerned about the potential impact of the proposed studio development.

Response to Comment No. 118-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 118-2

My main concerns include traffic, parking, safety, and the environmental impact.

Response to Comment No. 118-2

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Regarding parking, under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, employees and visitors of the Project would not require off-site parking.

Refer to Section IV of the Draft EIR, which contains a comprehensive analysis of the potential environmental impacts of the Project.

Comment No. 118-3

It is almost certain that this project will bring thousands of commuter vehicles and delivery trucks. I have deep concerns about trucks and cars obstructing the lanes and thruways for

emergency vehicles that respond to patients at the Cedars for emergency services. I worry that with increased traffic and parking on the nearby streets will only hinder the ability of medical personal to perform their duties and meet the needs of patients and residents. How do you plan to manage the traffic so emergency vehicles won't be affected by construction traffic? Who will be responsible if a citizen isn't able to make it to the hospital in time?

Has there been a traffic study on the impacts of this project during construction and when it is complete? Do they know how many additional trucks and cars will be placed on the neighboring roads as a result of this proposed construction? Do they know what parking looks like around the Cedars? How far from the Cedars will the trucks be parking? Will there ever be periods where they are blocking access to emergency vehicles?

Response to Comment No. 118-3

This comment discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-19 for a discussion of emergency vehicle response in the area. As described therein, the Project would not increase the number of LOS E or F intersections along the key corridors within the Study Area, including the arterial streets serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles (police, paramedics, ambulances) are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

The comment is correct that there would be additional traffic on the area roadway system as a result of the Project. Accordingly, a Transportation Assessment (Appendix K.1 of the Draft EIR) was prepared to analyze the effects of additional Project vehicles on the operation of the street system. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 regarding trips generated by construction. The off-site staging and parking for construction vehicles referred to in the comment are no longer part of the Project. All construction haul truck staging will take place on the Project Site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 118-4

It's unclear exactly how long it will take the developer to build this project, but I know it will be a very long time. My understanding is that it will take at least 20 years. If there is a traffic study, did the study look at how the traffic and thru-traffic will change over almost two decades? Do you know how the neighborhood will change over the next two decades to be able to produce an accurate study? Since this project will take at least 20 years, does that mean we will have thousands and thousands of trucks driving through our community during this entire time?

Response to Comment No. 118-4

Refer to Response to Comment No. 9-24 regarding the buildout timeline. Refer to pages IV.K-80 to IV.K-81 in Section IV.K, Transportation, of the Draft EIR for an analysis of potential impacts under a long-term buildout scenario. As stated therein, the Project's impact analyses per the CEQA Guidelines Appendix G transportation thresholds and the TAG are not dependent upon the Project buildout date, and, therefore, the results and conclusions presented in Section IV.K of the Draft EIR are applicable to a long-term completion date. As verification of the analysis, the traffic growth assumed for the year 2026 (using the conservative methodology of adding all related project traffic to an ambient growth rate of 1 percent per year) was compared to the SCAG regional model's project of traffic growth in the area, and the SCAG model actually projected less growth by year 2040 than is assumed for the 2026 volumes used in the Project transportation analysis. As such, a later buildout date would not affect the Draft EIR's transportation analysis and less-than-significant impact conclusions.

The LADOT TAG outlines a methodology for evaluating the potential for traffic to cut through residential streets. That methodology was followed, and two areas were identified as potential cut-through trip locations. These areas will be the subject of a neighborhood traffic study through the NTMP process, which is part of the Project's Transportation Improvement Program.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA cut-through analysis.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 above for a discussion of construction trips. The Applicant intends to build the Project in one phase which would mean that the construction would be completed in a 32-month time period.

Comment No. 118-5

I don't understand how any resident that calls the Beverly Fairfax neighborhood can be okay with this.

Response to Comment No. 118-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 118-6

Our quality of life will greatly diminish if we have thousands of construction and dump trucks driving through our community almost every day for the next twenty years. Not to mention, the impact that construction will have on air quality, community safety, walkability of our neighborhood, and noise levels. How do you plan to protect the quality of life of the residents that have called this neighborhood home for so long? How is the city going to manage this project to ensure our roads, communities, and residents aren't severely burdened in the process?

Response to Comment No. 118-6

The assertion about thousands of construction trucks is incorrect. Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding the number of construction trucks, the construction timeline, and safety and pedestrian access during construction.

With respect to air quality, as discussed on pages IV.A-63 through IV.A-66 of Section IV.A, Air Quality, of the Draft EIR, construction of the Project would not result in any significant localized air quality impacts.

With respect to safety, refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the ability of LAPD to accommodate the demand for police protection services associated with the Project.

With respect to noise, as discussed on page IV.I-57 and IV.I-58 of Section IV.I, Noise, of the Draft EIR, construction activities would result in short-term noise impacts to the Broadcast Center Apartments (Receptor R1), which is adjacent to the Project Site. Impacts at receptors further away from the Project Site would be less than significant with mitigation.

Note that the comments regarding walkability, quality of life, and unspecified burdens are not environmental issues specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 119

Ed Chau
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 119-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 119-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 120

Aida Chazar
132 N. Detroit St.
Los Angeles, CA 90036-2916

Comment No. 120-1

I am writing regarding the Draft EIR (ENV-2021-4091) TVC 2050 Project. Please see my concerns below:

Response to Comment No. 120-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 120-2

I am concerned that it appears the developer can build a cornucopia of different projects on the site. The Draft EIR identifies a “conceptual” site plan but it can be modified at the developer’s whim. How is this possible? The project must be clearly defined in an EIR so the public has the opportunity to know exactly what is being proposed. A nebulous project description must be modified to provide specifics about a project. The public cannot comment on a chameleon project as any comments specific to what is conceptual in nature become meaningless. The Draft EIR has failed in this regard. It must provide a clear and concrete project description and recirculated for proper project review and comment.

Response to Comment No. 120-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Conceptual Site Plan that was analyzed in the Draft EIR; how all plans in an EIR are inherently conceptual; the level of detail required in an EIR for a specific plan project; how Section II, Project Description, of the Draft EIR complies with CEQA and includes sufficient information to evaluate the environmental impacts of the Project; and the required discretionary process (which includes subsequent CEQA compliance review) for future changes that are substantially different than the Project that was analyzed in the EIR. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 120-3

It also appears that the uses permitted by the absent Specific Plan will be limitless. The Draft EIR indicates that any use in the C2 zone would be permitted, and then some. What are the specific uses permitted? How can the public know what impacts these uses will have on the community if they are not specifically identified. The Specific Plan should have been included as part of the Draft EIR wherein the public could see the various uses permitted by the Specific Plan. However, the Draft EIR was released sans the Specific Plan—not helpful.

Response to Comment No. 120-3

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the permitted on-site land uses set forth in the proposed Specific Plan. As discussed therein, based on comments received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project, including the removal of the C2 zone text referenced by the commenter; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses (i.e., sound stage, production support, production office, general office, and retail) as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the EIR. Please note that the proposed Specific Plan includes the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of the Final EIR.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and in Response to Comment No. 5-3, CEQA and City policy do not require a draft Specific Plan to be included in a Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning’s website prior to the publication of this Final EIR.

Comment No. 120-4

I was taken aback by some of the objectives of the Draft EIR. Specifically, the objective wherein the developer informs that public that financial risks are involved with the development of the project. Please explain why this objective is relevant to the environmental review process. There is an inherent financial risk with all projects and this

information is not relevant to the public's review of the potential environmental impacts of a project. This objective has no business being included in the Draft EIR.

Response to Comment No. 120-4

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 120-5

The Draft EIR indicates the project could be built in 32 months or 20 years. That is quite a time difference. When will the public be informed of the actual build-out date of the project? Please explain how each impact area of the Draft EIR took into consideration the difference between these two timeframes and their relevant environmental impacts

Response to Comment No. 120-5

Refer to Response to Comment No. 9-24 regarding the construction timeline.

Comment Letter No. 121

Julietta Chemian
230 S. Detroit St.
Los Angeles, CA 90036-3034

Comment No. 121-1

As a 42 year resident the proposed TVC 2050 plan raises numerous concerns and questions, some of which I attempt to outline in this letter.

Response to Comment No. 121-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 121-2 through 121-7.

Comment No. 121-2

Parking is a huge issue for the residents, business patrons, and visitors to the Beverly Fairfax community, and there is limited parking throughout the area. Our local post office can attest to how challenging it is just to monitor and control the non-post office parking that occurs in that parking lot. All of the perimeter streets have parking spots that are always full and always at a premium.

Response to Comment No. 121-2

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

This comment discusses non-CEQA parking issues that are not specific to the Project. Nevertheless, this comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment No. 121-3

Yet, this plan calls for the replacement of existing on-street metered parking spaces by commercial landing zones. On what basis was that decision made? Which metered spaces on what streets will be affected? How many on street parking spaces will be removed? How were these amounts determined? Will the large parking structure being

proposed, with the addition of more than 5,000 spaces, be available for public parking since the project will remove metered spaces that are available now?

Response to Comment No. 121-3

With respect to metered parking, the Project does not propose to remove any such parking spaces.

Refer to Topical Response No. 13, Parking, and Response to Comment No. 117-4 above for a discussion of parking.

Comment No. 121-4

Parking in the nearby streets of the surrounding neighborhoods is going to be a problem. It already is a problem. So what is an off-site parking agreement or covenant? What terms are provided for in that kind of an agreement? Is it between the development and the city? If so, what about those who live and work there who will be impacted by what the agreement states? What constitutes an agreement or covenant being deemed “satisfactory” to the Planning Director? When is the opportunity for the community and affected residents and businesses to know about and provide input into the agreement or covenant?

Response to Comment No. 121-4

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language referenced above has been deleted from the Draft EIR. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 121-5

Where would temporary off-site parking be? What constitutes temporary? Who would be displaced by production filming and related activities? What are the related activities? Is the draft EIR referring to employees at the site being displaced? What does that entail, when and for what reasons? So where would they park temporarily? In our neighborhoods? In the parking lots of nearby businesses, like the Grove and Farmer’s Market, or Whole Foods lot?

Response to Comment No. 121-5

Refer to Response to Comment No. 121-4.

Comment No. 121-6

There is a considerable amount of information that has simply not been shared with the community. Even with a comment period, this project is much too complex and large for most members of the public to understand details and know all the questions to ask to find out more.

Response to Comment No. 121-6

The Draft EIR was completed in accordance with the requirements of CEQA. Under CEQA, EIRs are informational documents intended to inform the public and decision-makers about the potential environmental impacts of a project. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

As discussed in Response to Comment No. 32-3, the 60-day comment period exceeded the typical 45-day period required under CEQA. Following the publication of this Final EIR, the Project approvals and EIR will be considered during public hearings and meetings before City decision-makers prior to any. The public will have additional opportunities to comment on the Project at upcoming meetings and hearings, the dates of which will be published in accordance with the City's noticing requirements.

Comment No. 121-7

When is the city's public hearing going to be held before the EIR moves so far down the process that the community's input will be too late?

Response to Comment No. 121-7

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day period required under CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during public hearings and meetings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings. Noticing for hearings will be sent in accordance with state law. Notices will be sent to everyone who commented on the Draft EIR.

Comment Letter No. 122

Cliff Cheng
our.neighborhood@gmail.com

Comment No. 122-1

I have lived within 500ft. [sic] of CBS-TV City since 5th grade, which was at Hancock Park ES, 3 doors from CBS TV City. Further up Fairfax is where I went to high school. Our family is against the Hackman CBS TV City project.

Response to Comment No. 122-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 122-2 through 122-7.

Comment No. 122-2

Its [sic] too big and will adversely impact the neighborhood.

Response to Comment No. 122-2

Refer to Response to Comment No. 11-3 regarding the size of the Project and its compatibility with the surrounding area.

This commenter's opinion on the Project does not raise a specific comment on the analysis of environmental impacts contained in the Draft EIR. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 122-3

The infrastructure in the neighborhood is inadequate.

Response to Comment No. 122-3

It is not clear precisely what infrastructure the commenter is referring to. The Draft EIR adequately analyzed the Project's potential impacts to surrounding infrastructure; refer to Section IV.K, Transportation; IV.M.1 Utilities and Service Systems—Water Supply and Infrastructure; IV.M.2, Utilities and Service Systems—Wastewater; and IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure.

Section IV.H, Land Use and Planning, of the Draft EIR also includes a discussion of infrastructure as it relates to land use planning.

Comment No. 122-4

I worked in film as a young man. This is not an industry amenable to taking mass transit, even after the Purple Line is finished. The hours are very long. If you are a 2nd or 3rd Assistant Director you are the last to leave. The lighting and grip crew may get done around 1 or 2 am. If your show is using prosthetic makeup, the makeup people and actors may have to start at 3 am. People who would have to commute during those hours would be afraid of the crime on trains and buses at that hour.

Response to Comment No. 122-4

The primary expectation of transit usage by Project employees would be for those employees who work hours closer to a typical office commuter shift. If the employees described in the comment did not use transit, it would not affect the overall conclusions of the Transportation Assessment included as Appendix M.1 of the Draft EIR. Additionally, if employees with vehicles were working during the hours suggested by the commenter, their trips would occur outside of normal business hours and peak commuting periods.

The calculation of the VMT by Project employees would be far more influenced by the vast majority of the employees that work daytime shifts than by the far fewer number of employees who work the hours described in the comment.

With respect to crime on public transportation, this is the responsibility of the transit agency and not an individual project.

Comment No. 122-5

Production requires many heavy truck trips at all hours. This industrial use is incompatible with our residential neighborhood.

Response to Comment No. 122-5

Production truck activities occur primarily during business hours, and almost exclusively outside of overnight hours. Based on the data provided in the truck trip memo included as Appendix FEIR-6 of this Final EIR, based on three days of truck data collected at the Project Site under existing operations, nearly 90 percent of all truck activity occurred between the hours of 7 A.M. and 8 P.M., and nearly 95 percent occurred between 6 A.M. and 9 P.M. The remaining 5 percent of truck trips, equating to low single-digit numbers of trips, arrived or departed after 9 P.M. and before 6 A.M.

Media production activities are not considered industrial uses under the LAMC and the Project would continue the existing studio uses that are already permitted by the City at this location. The Project Site is surrounded by a diverse mix of commercial uses, and the apartment building directly northeast of the Project Site is the only adjacent residential use. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the compatibility of the proposed uses with surrounding land uses, and concluded that impacts would be less than significant.

As shown in Table IV.I-17 of the Draft EIR, the Project's transportation noise impacts would be less than significant. Also, refer to Response to Comment No. 26-141 for a discussion of noise from trucks during operation, including off-site roadway and on-site vehicle noise.

Comment No. 122-6

Why does LA City not widen 1-lane Fairfax between Olympic and Venice as it did widen Overland about 20 years ago? How are you going to increase the capacity of the already overcrowded streets in Fairfax District to handle Hackman's additional traffic?

Just in-case [sic] anyone wants to remove 1 of the 2 lanes which are already jammed in Fairfax District and give it over to able bodied bikers, at the expense of the majority who is [sic] trying to get to work. I oppose removing traffic lanes for bike lanes. It is ableist and ageist. It favors the young at the expense of older and disabled people who can not ride bikes. Bikes are not mass transit. Build more train lines and parking structures to go with them.

Response to Comment No. 122-6

The comment about roadway widening on Fairfax Avenue between Olympic Boulevard and Venice Boulevard is not specific to the Project, and no further response is required. Nevertheless, this comment has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Under SB 743, roadway capacity and congestion are no longer considered in the evaluation of transportation impacts under CEQA. As described in Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, State¹⁵² and City¹⁵³ CEQA guidelines discourage the addition of roadway capacity to deal with increased congestion

¹⁵² Governor's Office of Planning & Research, Technical Advisory on Evaluating Transportation Impacts in CEQA, Appendix 2, December 2018.

¹⁵³ LADOT, Transportation Assessment Guidelines, August 2022, p. 2-12.

because it generally leads to increased VMT. The Project proposes Project Design Feature TR-PDF-2, described on pages IV.K-37 to IV.K-40 of the Draft EIR, which consists of a comprehensive TDM Program to reduce single-occupant vehicle trips and promote alternative modes of travel. Refer to Topical Response No. 11, Transportation Demand Management.

Project Design Feature TR-PDF-2 includes a contribution toward the implementation of bicycle facilities within the Study Area in accordance with the City's Mobility Plan, to be used as needed by the City. The Project does not propose removing vehicle lanes to install bicycle lanes.

Comment No. 122-7

The window dressing plans on parking and traffic is [sic] PR fluff. When the Gilmore Station project came in, Fairfax and 3rd, 2 doors from CBS TV City and across the street. There was no requirement to have employee parking. Trader Joes [sic] does not provide employee parking. LADOT said that there will be no traffic and parking change on the 100 S. block of Hayworth. People use Hayworth to get to and from Trader Joes [sic] counter to LADOT's plan. LADoT [sic] allows people to print out at home day parking passes. Apt. renters on Hayworth are selling these passes to employees of Trader Joes [sic] and other businesses. LADoT [sic] says it does not have enough manpower to deal with illegally sold parking permits. The Hackman Project will many times magnify the existing problems.

Response to Comment No. 122-7

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

The Project includes the development of a NTMP, which could include strategies to prevent cut-through trips in the neighborhoods and enforcement of residential parking permits. For further discussion on the NTMP, refer to Topical Response No. 9, Neighborhood Traffic Management Plan.

This comment discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment No. 122-8

You may contact me via email if you have any questions regarding our concerns. NO ONE ELSE IS AUTHORIZED TO CONTACT US.

Response to Comment No. 122-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 123

Carol Chin
419 N. Flores St.
Los Angeles CA 90048-2611

Comment No. 123-1

I am writing to voice my strong opposition to the proposed CBS building development in the Beverly Fairfax area. I feel I speak for most of the residents who feel that this project will be hazardous, disruptive, and overall, a bad deal for neighbors and members of the community.

Response to Comment No. 123-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 123-2 and 123-3.

Refer to Section IV.F, Hazards and Hazardous Materials, of the Draft EIR. As concluded therein, the Project's impacts related to hazards would be less than significant.

The remainder of this comment discusses a number of non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 123-2

While the project is being constructed, we see are [sic] expecting large trucks driving through are neighborhood each morning and evening. What hours of the day and how many days a week will those trucks be allowed to enter and exit the site? Are there any kinds of trucks that will not be able to enter the site and have to park on the street, with a lane being closed as a result? Where is that expected to occur? There are some trucks, maybe those carrying large equipment, that will not be able to negotiate a turn from a lane into one of the access driveways, so are those the trucks that will have to park in the street? How long will they be allowed to take up a lane?

Response to Comment No. 123-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 for information about the trips generated by construction.

Refer to Response to Comment No. 26-E.4-15 regarding truck maneuvers and access.

Comment No. 123-3

Also, these trucks will create lots of noise and spew lots of exhaust. What are the thresholds for how much exhaust can be emitted? Will the trucks be gas or diesel? At a time when smog levels are on the rise, I can only imagine the added noxious fumes our kids and family members will have to breath. Will any of the trucks be carrying hazardous materials? What kind? What are the restrictions as to truck travel with hazardous materials in our neighborhood?

Response to Comment No. 123-3

Tables IV.A-6 and IV.A-8 in Section IV.A, Air Quality, of the Draft EIR present, respectively, the unmitigated and mitigated regional criteria air pollutant emissions associated with construction activity, including construction truck trips and any associated vehicle idling. These tables provide the SCAQMD significance thresholds. As shown on page 32 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, the excavation/foundation construction phase would include approximately 640 daily truck trips over 185 working days and the trucks would be diesel. Please refer to Response to Comment No. 26-30 for a discussion of the Project's CalEEMod model accounting for all Project-related hauling. As discussed therein, potential impacts were evaluated at the closest off-site sensitive receptor, which is the residential use located directly east of the Project Site boundary. The localized impact analysis included both off-road (e.g., bulldozers, loaders, and excavators) and on-site on-road vehicles (e.g., haul and delivery truck travel and idle time). As shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with the incorporation of mitigation measures. Refer to Topical Response No. 14, Construction Vehicle Impacts.

As discussed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, the Project would be in full compliance with all applicable federal, state, and local regulatory requirements concerning the transport, use, storage, management, and disposal of hazardous materials. Additionally, as discussed in Section II, Project Description, of the Draft EIR, it is conservatively assumed that an estimated 60,000 cubic yards of soil export may include hazardous soil materials which would be exported to Buttonwillow Landfill in Kern County. All haul trucks would be required to follow haul routes approved by LADOT.

As such, as concluded in the Draft EIR, Project construction activities would not create a significant hazard to the public or the environment through the use, handling, transport, or disposal of hazardous materials during construction. Refer to Response to Comment No. 26-83 regarding hazardous soil.

Comment No. 123-4

Before, you rubber stamp this proposal, I strongly encourage you to listen the voices of those living here and to hear our needs. We cannot be disregarded in this matter.

Response to Comment No. 123-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 123-2 and 123-3.

Comment Letter No. 124

Yoonha Choi
119 N. Kilkea Dr.
Los Angeles, CA 90048-3523

Comment No. 124-1

I am writing to express concerns about the proposed Television City project. This explosive growth to the area will have a profound impact on traffic, parking, and noise for the neighborhood surrounding Television City, which is home to thousands of LA residents. I have some concerns and questions that I would like to share with you.

Response to Comment No. 124-1

This introductory comment expresses concerns that are addressed in Response to Comment Nos. 124-2 through 124-7.

Comment No. 124-2

- 1.) I am concerned that increased traffic from this new expansion will spill over from the main streets around the project onto the residential streets where so many of us live. This increase in traffic will make our neighborhoods louder and more unsafe. What study has been done to determine how much drive-through traffic is expected? What neighborhood streets does the study indicate will be most impacted? What the study done during both when schools are in session and during the summer months? Because there is already so much drive-through traffic in the mornings and afternoons when schools are back in session.

Response to Comment No. 124-2

Refer to Section B, Cut-Through Effects on Adjacent Neighborhoods, of Topical Response No. 9, Neighborhood Traffic Management Plan, for a discussion of the potential effects of spillover trips into the adjacent neighborhoods. As part of the non-CEQA analysis, the Transportation Assessment included in Appendix M.1 of the Draft EIR identifies the neighborhood streets most likely to be affected by Project trips and it estimates the potential maximum quantity of cut-through trips.

Regarding safety, refer to Topical Response No. 12, Safety and Congestion.

The Transportation Assessment is based on traffic counts taken when schools were in session, which is required by LADOT because, as described in the comment, this represents the time of the year when traffic levels are at their highest.

Traffic noise was included in the CEQA operational noise analysis provided on pages IV.I-48 through IV.I-54 in Section IV.I, Noise, of the Draft EIR. As demonstrated therein, impacts with respect to traffic noise would be less than significant.

Comment No. 124-3

- 2.) The increased traffic will also increase air pollution in the area, when air quality is already a concern for those of us who live here. What studies have taken place to identify and understand the impact of all the increased traffic on air quality? What about all the increased idling that will happen because of more congestion? What do the studies say about worsening air quality that will result from even more idling cars and trucks?

Response to Comment No. 124-3

The Draft EIR comprehensively analyzed the Project's potential air quality impacts during construction, including impacts from construction vehicles, in Section IV.A, Air Quality, and Appendix B of the Draft EIR in accordance with CEQA. Table IV.A-8 in Section IV.A, Air Quality, of the Draft EIR presents the mitigated regional criteria air pollutant emissions associated with construction activity, including construction truck trips and any associated vehicle idling. Table IV.A-7 in Section IV.A, Air Quality, of the Draft EIR presents the regional criteria air pollutant emissions associated with operations. Table IV.A-12 in Section IV.A, Air Quality, of the Draft EIR presents the mitigated overlapping construction and operational regional emissions under the long-term buildout scenario. These tables compare the Project's emissions against the applicable SCAQMD regional significance thresholds. As discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips (idling cars and trucks) associated with the Project, combined with background roadway trips, would not approach the screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects resulting from increased trips.

Refer also to Response to Comment No. 53-2 regarding localized impacts related to construction trips.

Comment No. 124-4

- 3.) How will the noise and road safety be affected in our neighborhoods when more cars are driving through? I would also like to ask how this will be addressed to make sure our neighborhood streets remain safe?

Response to Comment No. 124-4

Traffic safety in the neighborhoods is a critical focus of the NTMP process described in Topical Response No. 9, Neighborhood Traffic Management Plan. The affected neighbors will work with the Applicant and with LADOT to develop a plan to monitor and respond to cut-through trips along the neighborhood streets in the affected neighborhood areas. Refer also to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 16-5. With respect to noise, traffic noise was included in the CEQA operational noise analysis provided on pages IV.I-48 through IV.I-54 in Section IV.I, Noise, of the Draft EIR. As demonstrated therein, impacts with respect to traffic noise would be less than significant.

Comment No. 124-5

- 4.) I am also concerned that with thousands of additional people coming into our neighborhood every day, it will make it even harder for us residents to find parking spaces. Visitors to Television City already often park in our neighborhoods. What is going to be done to make sure that the additional workers, personnel and visitors don't park in the neighborhoods? Has the city looked at how parking will be impacted? What steps will be taken to monitor the parking situation?

Response to Comment No. 124-5

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 124-6

- 5.) The project is going to being [sic] so many large, noisy and polluting construction vehicles into the area. Will there be specific places these vehicles have to come and go from? Or will I find them in my neighborhood? Is the city going to study how the construction vehicles will impact air quality for the residents? What about all the dirt and dust that gets blown around from the construction trucks—how much is expected and what will be done to address those issues?

Response to Comment No. 124-6

Refer to Response to Comment No. 107-2 regarding the haul routes and trips. LADOT has approved three haul routes for the trucks moving dirt and debris from the Project Site to the Irwindale landfill. Those three routes are explained in Topical Response No. 14, Construction Vehicle Impacts, and are:

- Fairfax to I-10 to Irwindale
- Fairfax to San Vicente to La Brea to I-10 to Irwindale
- Beverly to La Brea to I-10 to Irwindale

Three routes were selected to minimize the impacts on any one route.

Trucks would not be allowed on residential streets. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD. A construction manager would be appointed by the Project and his/her phone number would be advertised on the Project website and communicated to the neighbors so that trucks on the local streets could be reported to the construction manager who in turn could call for targeted enforcement.

The CTMP prepared pursuant to Project Design Feature TR-PDF-1 would address tarps and covers on haul trucks and watering on the site itself to reduce blowing dust and dirt. The Project is also subject to SCAQMD Rule 403 regarding fugitive dust. Refer also to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust.

The Draft EIR comprehensively analyzed the Project's potential air quality impacts during construction, including impacts from construction vehicles, in Section IV.A, Air Quality, and Appendix B of the Draft EIR, in accordance with CEQA. Table IV.A-8 in Section IV.A, Air Quality, of the Draft EIR presents the mitigated regional criteria air pollutant emissions associated with construction activity, including construction truck trips. Mitigation Measure AIR-MM-3 requires construction staging to be located away from residential uses. Additionally, SCAQMD Rule 403—Fugitive Dust, as described on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, requires the use of dust control measures, including anti-trackout measures and watering of disturbed construction areas.

Noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.I, Noise, of the Draft EIR. As discussed in Section IV.I, Noise, of the Draft EIR, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. All other noise impacts would be less than significant.

Comment No. 124-7

- 6.) What steps are going to be taken to ensure traffic safety with all those trucks during the construction period, and even after construction when so many more people will be driving in and out of the site?

Response to Comment No. 124-7

The CTMP required pursuant to Project Design Feature TR-PDF-1 would specifically address the movement of construction trucks in and out of the Project Site during the various stages of Project construction. Turning movement restrictions at the key driveways will play a big part in the overall safety strategy for construction trucks as will the development and enforcement of truck haul routes which will limit the roadways that Project haul trucks can utilize to/from the Project Site.

Construction trucks would be staged on-site so that no roadway travel lanes would be blocked by a line of waiting trucks. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Post construction, during the day-to-day operation of the Project Site, the vast majority of the trips in and out of the Project Site will occur at the three driveways controlled by traffic signals. Refer to Topical Response No. 12, Safety and Congestion.

Comment No. 124-8

I do not believe this project is right for the community, and I hope you will oppose it. I also hope that you will take steps to better explain how this project might impact residents, because the EIR certainly leaves me with more questions than answers.

Response to Comment No. 124-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 124-2 through 124-7.

Comment Letter No. 125

Mateo Ciarlo
748 N. Detroit St.
Los Angeles, CA 90046-7606

Comment No. 125-1

I hope this letter finds you well. I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I'm devastated as I continue to learn about the details (although not many have been provided to the public) about this development right in my back yard.

I can't fathom how city leaders, like you all, would allow for something like this.

Response to Comment No. 125-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 125-2

We have so many questions as neighbors: How do you expect all these new employees to get to work? Where do they park? How am I, as a neighbor, supposed to navigate this new congestion on the streets? Do any of you all live this area? Are you not concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Response to Comment No. 125-2

This comment is identical to Comment No. 95-2. Refer to Response to Comment No. 95-2, above.

Comment No. 125-3

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Response to Comment No. 125-3

This comment is identical to Comment 95-3. Refer to Response to Comment No. 95-3, above.

Comment No. 125-4

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I pray and hope that you do the same with this development. We need more leaders fighting for a better future, not just fighting for a big check.

Response to Comment No. 125-4

This comment is identical to Comment 95-4. Refer to Response to Comment No. 95-4, above.

Comment Letter No. 126

Sylvester Civauro
6521 Drexel Ave.
Los Angeles CA 90048-4707

Comment No. 126-1

The proposed Television City Project is a bad deal for the residents who live in the neighborhoods in and around Beverly Fairfax and for our environment. Allowing increased traffic and commuter delays directly leads to road congestion with increasing idling by more cars not able to move and by the construction and dump trucks that will be needed for the project.

Response to Comment No. 126-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not transportation impacts under CEQA. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction trucks.

Section 3.d in Section IV.A, Air Quality, of the Draft EIR also analyzed air quality impacts associated with Project vehicle trips related to traffic congestion and idling at intersections within the Project vicinity. Consistent with the carbon monoxide (CO) methodology discussed on page IV.A-45 in Section IV.A, Air Quality, of the Draft EIR, if a project intersection does not exceed 400,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis. At Project buildout, the highest average number of daily trips at an intersection would be approximately 65,260 trips at La Brea Avenue and Beverly Boulevard, which is substantially below the daily traffic volumes expected to generate CO exceedances as evaluated in the 2003 AQMP. Therefore, the Draft EIR correctly concluded that the Project does not trigger the need for a detailed CO hotspots model and would not cause any new or exacerbate any existing CO hotspots, and impacts related to localized mobile source CO emissions would be less than significant. Thus, no sensitive receptors would be impacted by Project-related vehicular air emissions due to the Project.

Comment No. 126-2

Idling is the worst thing you can do for the planet as a driver and to at-risk populations who already suffer from asthma and breathing issues. What is the applicant for this project actually going to be able to do to make sure there is no more idling related to the project than currently occurs with the traffic we already have? Because of the applicant cannot ensure this, then the project should not be approved.

Traffic idling also creates unhealthy air and will add the already unbreathable air quality in our area. Our air quality is already terrible. Please consider the health of residents.

Response to Comment No. 126-2

The Draft EIR comprehensively analyzed the Project's potential air quality impacts during construction, including impacts from construction vehicles and any associated vehicle idling, in Section IV.A, Air Quality, and Appendix B of the Draft EIR based on the significance thresholds in Appendix G of the CEQA Guidelines. All haul truck staging would occur on-site, so no haul truck idling would occur off-site. As stated on page IV.A-72 in Section IV.A, Air Quality, of the Draft EIR, Project trucks would be limited by CARB-mandated airborne toxic control measures requirements to idle no more than five minutes at any given time. A PDF, included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, requires the installation of electrical tie-ins at basecamp locations to reduce vehicle idling on-site during operations. Pursuant to CEQA, a Mitigation Monitoring Program will be implemented, including reporting and/or monitoring and enforcement procedures, to support the implementation of the PDFs and mitigation measures included in the EIR.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds, and impacts would be less than significant.

Comment Letter No. 127

James Clark
606 N. Fuller Ave.
Los Angeles, CA 90036-1939

Comment No. 127-1

I have concerns with the proposed Television City construction project. As a local, I want to know what is potentially going to be built and how it will change my neighborhood.

Response to Comment No. 127-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 127-2 through 127-7.

Comment No. 127-2

I'm concerned about the amount of traffic in our already congested area.

Response to Comment No. 127-2

This comment provides a general statement about the condition of traffic in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 127-3

I am also very concerned about increased water usage and the stress it will bring to our water table.

Response to Comment No. 127-3

Refer to Response to Comment Nos. 16-66, 26-175, and 26-176 with regard to the adequacy of water supply.

Refer to Responses to Comment Nos. 3-7, 11-25, 16-85, and 26-69 for a detailed discussion of the groundwater hydrology and groundwater resources.

Comment No. 127-4

The site is right in the middle of a neighborhood with schools, religious organizations, museums and Pan Pacific Park. How will the increased car and truck traffic for construction and then the increased traffic for employees in the enlarged Television City impact the health of residents?, of the school children? and of visitors to the park? How will increased exhaust from diesel trucks negatively affect these people, particularly people at risk? What is the analysis of the impacts to the most at-risk populations such as children, people with asthma, seniors, and what were the conclusions? How many different at-risk groups live in this area? And how close are they to the project site?

Response to Comment No. 127-4

Refer to Section IV.A, Air Quality, and Appendix B of the Draft EIR for a comprehensive analysis of the Project's potential air quality impacts in accordance with CEQA. As discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips associated with the Project would not approach screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects resulting from increased trips. Refer also to Response to Comment No. 53-2 regarding localized impacts related to construction trips. Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. On May 5, 2023, SCAQMD concluded that the HRA protocol adequately addresses health risk impacts related to the Project. The HRA utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children and seniors. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased truck trips associated with future operations, would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact. A comprehensive description of assumptions and receptors analyzed in the HRA is included as Appendix FEIR-10 of this Final EIR.

Comment No. 127-5

Another impact that needs to be further explained in the EIR is noise from all those trucks and from the construction itself. During construction, how much increased sound will occur? [sic] and what will be the impacts of the different sources of noise to the residents 'and others 'hearing? [sic] If construction takes two decades or more, how much does that increase the impact on people's hearing? How much does it impact quality of life? Construction noise is annoying at best and harmful at worst.

Response to Comment No. 127-5

Construction noise, including noise associated with construction trucks, is fully analyzed in the Draft EIR. Refer to pages IV.I-35 through IV.I-59 of Section IV.I, Noise, of the Draft EIR.

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise. Response to Comment No. 26-138 also includes a discussion of noise exposure and hearing loss.

Please note that quality of life is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 127-6

It seems irresponsible given the housing crisis that this huge expansion would not include residential development. Why did the developer choose not to include housing? Why isn't he required to include any housing, especially affordable housing? Is there a possibility to add it to the plan for development? Doesn't the city have a responsibility to offer more housing to workers given the need?

Response to Comment No. 127-6

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment Letter No. 128

Dana Claudat
danaclaudat@yahoo.com

Comment No. 128-1

Following a review of the letter sent and due to the fact that I can't be present in person to any of the venues to view the complete draft EIR for the TVC 2050 Project I wanted to reach out to state my strong opposition based solely on what is in this letter that I believe represents only a fraction of the true environment [sic] impacts.

Response to Comment No. 128-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 128-2

This project will be developed essentially DIRECTLY across the street from me as I am nearly at the corner of Genesee Ave.

Response to Comment No. 128-2

This comment describing the commenter's location relative to the Project Site is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 128-3

I am so sensitive to VOCs that I can't even be exposed to "naturally formulated" house-paints. This would systematically and as stated, "unavoidably" destroy my health and the health of my animals and family.

Response to Comment No. 128-3

Refer to Section IV.A, Air Quality, and Appendix B of the Draft EIR for a comprehensive analysis of the Project's potential air quality impacts in accordance with CEQA. Table IV.A-12 in Section IV.A, Air Quality, of the Draft EIR presents the mitigated overlapping construction and operational regional emissions under the long-term buildout. This table compares the Project's emissions against the applicable SCAQMD regional significance thresholds. As discussed in Response to Comment No. 26-E.1-2, in response

to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. On May 5, 2023, SCAQMD concluded that the HRA protocol adequately addresses health risk impacts related to the Project. The HRA utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children and seniors. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for the use of architectural coatings (VOC emissions) and increased truck trips associated with future operations, would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 128-4

In addition, it's already been insanely noisy and plagued with intense crime in this specific neighborhood. Added shaking ground and noise would make my daily work which must be done at home absolutely and completely impossible.

Response to Comment No. 128-4

Noise and vibration during both construction and operation are fully analyzed in Section IV.I, Noise, of the Draft EIR. Also refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR regarding police protection and the security measures that would be implemented by the Project.

Comment No. 128-5

I've already spoken to people who assured me this would be environmentally friendly and also wouldn't begin until 2024 at the soonest. I'm not sure if either thing I was told is the actual case at the moment.

Response to Comment No. 128-5

Page II-33 of Section II, Project Description, of the Draft EIR states that “[c]onstruction could begin as soon as 2023 and end as soon as 2026.” As of the publication of this Final EIR, the soonest construction could begin is 2024. Refer to Response to Comment No. 9-24 regarding the Project timeframe.

As discussed on page II-33 in Section II, Project Description, of the Draft EIR, the Project would support environmental sustainability by incorporating sustainable building features and construction protocols required by the Los Angeles Green Building Code (LAMC Chapter IX, Article 9), the California Green Building Standards Code (California Code of Regulations, Title 24, Part 11; referred to as the CALGreen Code), and the California Building Energy Efficiency Standards (California Code of Regulations, Title 24, Part 6; California Energy Code), and pursuing U.S. Green Building Council's LEED Gold certification or equivalent green building standards.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 128-6

I will lead, if necessary, a large community movement against this project. I can not be forced out of my home or have my health and work decimated.

What does one do who is severely immunocompromised in this situation? What does one do who will be unable to lead their career, step foot out of the house, breathe the air or even walk in her own neighborhood?

Response to Comment No. 128-6

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 128-3 regarding air quality and the HRA.

Comment No. 128-7

I appreciate and look forward to your response.

Response to Comment No. 128-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 129

Meir Cohen
539 N. Harper Ave.
Los Angeles CA 90048-2222

Comment No. 129-1

As a resident of the Mid City West area, I am very concerned about the proposed increase in the size of the Television City studio. While the Environmental Impact Report is filled with the benefits of the project, homeowners like me have no idea what disruptions and hazards will occur in my neighborhood.

Response to Comment No. 129-1

The Draft EIR was completed in accordance with the requirements of CEQA and Section IV, Environmental Impact Analysis, contains a comprehensive analysis of the Project's environmental impacts during both construction and operation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 129-2

What does the construction period mean for my neighborhood? What kinds of disruptions to traffic will take place? On all streets surrounding the studio? More disruptions on some streets than on others? How the community supposed to keep track? What notifications will be sent out as to the disruptions, what they will be and when they will be scheduled? How far in advance will the area be told? Does it depend on what kind of disruption it is, such as a lane closure, or a sidewalk being torn up, or parking spaces being blocked?

What does the increase in studio space and employees mean for traffic? What days of the week will be-affected, and by how much traffic? What kind of traffic—cars, trucks, both? What will the expected traffic patterns be during construction? What about once the development is done?

The EIR doesn't tell me where the construction trucks are going to travel. Can trucks use any route? Will neighbors be consulted? Will churches and synagogues be consulted? Will schools be consulted? Two sisters walking home from school were killed recently in South Los Angeles by a dump truck.

This is a pedestrian heavy neighborhood with residents and students, and it should get easier to walk and bike, not harder. How will walkability in the neighborhood be affected? What about bicycling—how will the safety of bicyclists be ensured? What measures are going to be taken. It's not enough to be told that improvements may be made. What will those improvements be? And when will they be implemented? My concern is that construction and increased studio traffic will certainly increase traffic and create safety hazards for pedestrians and bicyclists.

The project developers owe it to the residents of and visitors to this area to designate a specific route for truck drivers to follow instead of them deciding their own path through the neighborhood. What will those routes be? Will truck traffic be limited to certain times of the day and days of the week? Will the truck routes be determined prior to the EIR being finalized and project possibly approved, not after? Because otherwise how are the public, city planners, and council members (who will be voting on the project) be fully informed, if these kinds of important pieces of information are not known beforehand?

Response to Comment No. 129-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 for information about the trips generated by construction.

The preferred construction schedule by the Applicant is a one-phase construction project that would take approximately 32 months to complete. That schedule as well as a long-term buildout schedule are the construction schedules studied in the Draft EIR and in Section 5D beginning on page 179 of the Transportation Assessment (Appendix M.1 of the Draft EIR).

The CTMP would include a notification system to allow the Project's construction manager to communicate with neighbors and businesses so that they know what is happening in the near-term horizon. The notification system will likely include emails and a website.

The Project construction plans do not anticipate any long-term travel lane or sidewalk closures. Sidewalks surrounding the Project Site would be improved as part of the Project, but while these improvements are made, alternate pedestrian paths would be provided.

Figure 21 on page 77 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the assignment of Project trips under full buildout of the Project through each of the 31 study intersections in the Study Area. Figure 22 on page 80 of the Transportation Assessment shows Project trips in and out of each of the Project driveways. These traffic assignments depict the traffic pattern information requested in the comment. Construction

workers would follow a similar pattern to the Figure 21 assignments. The traffic patterns shown in these figures reflect weekday conditions because these would be the busiest days of the week. A reduced activity would occur on weekends with no construction activity occurring on Sundays.

Refer to Response to Comment Nos. 107-2 and 124-6 regarding the haul routes and trips. The construction truck haul routes have been approved by LADOT.

Project trucks during the operation of the Project would come in and out of the Project Site throughout the day, but there is no intent to assign trucks through local residential streets. The NTMP could consider adding weight restrictions to residential streets within neighborhoods as a means to prohibit trucks from using these streets.

Pedestrian and bicycle considerations have been included in the transportation plan for the Project. Pedestrian connections would be enhanced with better sidewalks surrounding the Project and improved crosswalks on the corners of the Project and at the two new traffic signalized locations. Refer to Response to Comment Nos. 16-72 and 26-E.4-3 regarding pedestrian safety. Refer to Response to Comment No. 9-29 regarding hazards.

Comment No. 129-3

I would appreciate responses to all of my questions and concerns.

Response to Comment No. 129-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 129-2.

Comment Letter No. 130

Susan Collette
6357 Drexel Ave.
Los Angeles CA 90048-4703

Comment No. 130-1

I am writing this to express my dire concern about the proposed Television City project. Our community does not want this development, and even if it did, our infrastructure cannot handle the amount of traffic that this will produce both during construction and once it opens. The process of constructing this huge project and sheer volume of people who will need to commute to it will have devastating impacts to the Beverly Fairfax area.

Response to Comment No. 130-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 130-2 through 130-4.

Comment No. 130-2

The city has changed how it measures a project's traffic impacts and has not communicated how or why this change was made. Analysis of traffic impacts is challenging enough for a resident to understand. The EIR says that the average commute will be 3 miles but offers no data to back this claim up. How is that average derived?

Response to Comment No. 130-2

The change from LOS to VMT was done at the State of California level. Cities and counties in the State were mandated to adopt and implement this change. The origin of, and basis for, requiring transportation analyses in CEQA documents to be based on VMT is discussed on pages IV.K-4 through IV.K-6 in Section IV.K, Transportation, of the Draft EIR. SB 743 directed the Governor's Office of Planning and Research to develop revisions to the CEQA Guidelines by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics for traffic LOS (i.e., traffic congestion). Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. The rationale behind this change was that reducing the miles traveled by automobiles associated with new development would be more effective than continuing to widen

roadways to accommodate the additional travel demand. In addition, the theory behind VMT is that by locating jobs and residents closer to each other and closer to investments already made in transit systems, the overall travel needs (especially by single occupant automobiles) would decrease, which would, in turn, decrease congestion and air pollution. As discussed on pages IV.K-72 through IV.K-78 in Section IV.K, Transportation, of the Draft EIR, the Project's potential impacts related to VMT would be less than significant. The location of the Project Site meets the VMT reduction targets for this area of Los Angeles by creating jobs closer to residents, thereby reducing overall VMT. Refer to Topical Response No. 8, Vehicle Miles Traveled, for additional information regarding the VMT analysis.

The work VMT per employee, the metric used to measure VMT adherence, is not a simple measure of the distance from home to work so it is incorrect to convert a work VMT per employee of 6.7 to an average commute of 3.35 miles. The calculation of work VMT per employee takes into account the percentage of single occupant automobiles, carpool riders, transit riders, bicyclists, and walkers to calculate the resulting one-way VMT per employee. Refer to Topical Response No. 8 for an explanation and an example of the calculation of work VMT per employee and Response to Comment No. 26-156 regarding employee trip lengths.

Comment No. 130-3

And when was the analysis done? Because the past two and a half years have been a very different commute situation for many people. But things are going back to a pre-pandemic time as so many people are returning to work on-site. If the traffic analysis is not redone more recently, then it shouldn't be considered valid.

Response to Comment No. 130-3

The Transportation Assessment included as Appendix M.1 of the Draft EIR is based on pre-pandemic traffic levels, which were factored to represent current traffic levels assuming typical growth patterns in non-pandemic times. Since Los Angeles experienced almost two years of little or no traffic growth, the traffic volumes forecast for Year 2026 conditions in the Transportation Assessment represent conservative (i.e., high) estimates of future traffic levels and, therefore, are still valid. It should be noted that traffic count levels today in 2023 have still not reached the pre-pandemic 2019 levels. Thus, the transportation analysis does not need to be redone as incorrectly stated in this comment.

Comment No. 130-4

This project benefits no one but the developer. A million square feet of television studios with no affordable housing for the people who build and operate it is absurd.

Response to Comment No. 130-4

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment No. 130-5

This project creates an enormous traffic and environmental footprint with no tangible benefit for the community and I would ask that this project be rejected.

Response to Comment No. 130-5

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 130-2 through 130-4.

Comment Letter No. 131

Mercedes Connor
455 N. Orange Grove Ave.
Los Angeles, CA 90036-1718

Comment No. 131-1

I'm writing to comment on the draft EIR for the proposed project at the Television studios. I have lived here for over 15 years with my beautiful dog Sasha and son.

Response to Comment No. 131-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 131-2

What are they building? I've heard there will be new studios, new stages and a lot of offices. But then I heard about some kind of mobility hub, which sounds like a bus or transit station. So which is it—are they going to have studios and stages, or will it be an office building, or is it going to some kind of transit center? I heard there will be outdoor events too? So it is going to be concert venue? What else are they planning to do with the property?

What is going to be the effect in the surrounding neighborhoods of all those different things going onto the site? All this information needs to be made clear to residents and businesses. They are ones that will be affected by this project.

There are too many unknowns for those of us in the community to really understand and weigh in on this plan.

Will they be allowed to build anything taller than what is there now? What are the height requirements? Is there a limit to how big any of the buildings can be?

Response to Comment No. 131-2

The Project is the continuation and expansion of an existing studio use. Section II, Project Description, of the Draft EIR includes a detailed description of the uses proposed by the Project. Refer to Topical Response No. 3, Permitted On-Site Uses. The proposed Specific Plan would permit five land uses: sound stages, production support, production

offices, general offices, and retail. A concert venue is not proposed. Further, the proposed Specific Plan would limit general office and production office floor area to a maximum of 700,000 square feet each. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

As discussed in Section IV.K, Transportation, of the Draft EIR, the Project would include a Mobility Hub, which will serve shuttle buses and rideshare vehicles in an effort to encourage non-automobile travel to/from the Project Site. Topical Response No. 7, Mobility Hub, provides a detailed description of the components and the operation of the proposed Mobility Hub. It is not intended to be a public bus station but, rather, an integrated support facility for the Project, controlled by the Project and serving Project employees and visitors.

As part of the Specific Plan, height zones with specified height limits would be established to regulate building heights throughout the Project Site. Refer to the discussion of height zones in Section II, Project Description, of the Draft EIR, pages II-17 through II-20. As discussed therein, maximum heights would vary by zone, but the maximum height within the Project Site would be 225 feet. For comparison, the tallest building on the Project Site today is approximately 88 feet high. As discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 131-3

They need to narrow down what it is they are doing and then send the plan to go through the process again. When will that process happen? If the plan is updated with more detailed information, will you recirculate to the community?

Response to Comment No. 131-3

A detailed description of the Project is included on pages II-12 to II-35 of the Draft EIR, and the potential impacts are discussed throughout Section IV of the Draft EIR. In addition, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, with regard to review of the Specific Plan as it relates to the Draft EIR. As discussed therein, the Draft EIR disclosed all of the elements required by CEQA and comprehensively

analyzed the potential impacts of the Project. Thus, recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 131-4

This is a massive project, and more information is needed.

Response to Comment No. 131-4

As noted above in Response to Comment No. 131-3, Section II, Project Description, of the Draft EIR includes a detailed discussion of the Project's proposed development program. The analysis in the Draft EIR was prepared in accordance with CEQA.

Comment Letter No. 132

Selena Cornish
1115 N. Flores St., Apt. 8
West Hollywood, CA 90069-2998

Comment No. 132-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 132-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 133

Rich Cox
919 N. Genesse [sic] Ave.
West Hollywood, CA 90046-7350

Comment No. 133-1

I am extremely concerned with the intentions behind the Television City project. I can completely understand the importance of adding new jobs and cultivating growth in the area. But does LA really have this much more room to grow?

Response to Comment No. 133-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 133-2 through 133-4.

Comment No. 133-2

Please consider the congestion that we as residents deal with on a daily basis. Now, imagine it with 8,000+ people. Think of the traffic, the parking, the congestion, and the noise that will consume and overwhelm the area.

Response to Comment No. 133-2

This comment provides a general statement about the condition of traffic, parking, and noise in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Section IV.K, Transportation, of the Draft EIR for an analysis of transportation impacts and Section IV.I, Noise, of the Draft EIR for an analysis of noise and vibration impacts. Refer also to Topical Response No. 13, Parking, and Topical Response No. 12, Safety and Congestion.

Comment No. 133-3

I'm not even fully convinced of the city's intentions with this project after trying to read through the EIR. It seems to me that that the developer's return on investment is a project objective. Why would this be the case? Please provide and circulate to the public the developer's proforma. Since the developer has included it as an objective, the financial information must be made available. If the city is prioritizing the developer's profitability, there must be something in return for the city. What is it?

Why would this be a project objective when there are countless other critical needs and people with great needs to consider? The City should care about the health and welfare of its residents.

Response to Comment No. 133-3

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. In addition, as discussed on pages II-10 to II-11 in Section II, Project Description, of the Draft EIR, there are 11 additional objectives for the Project, including optimizing the currently underutilized studio and maximizing studio production capabilities by providing new technologically advanced sound stages combined with an adequate and complementary mix of state-of-the-art production support facilities, production office, and general office.

The City has fully disclosed impacts to human health and safety of its residents and the environment and the EIR has been prepared in accordance with CEQA.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 133-4

There are countless neighborhoods and families that will be directly affected by this project. By LA law, there will have to be 1.3 million homes built by 2029 to comply with the city's housing quota. There already is not nearly a sufficient number of homes and rentals in the area. The project adds to that needs thousands more people. Where will they go?

Response to Comment No. 133-4

Refer to Response to Comment No. 32-7 with regard to housing.

Comment Letter No. 134

Vicki Crawford
6553 Colgate Ave.
Los Angeles, CA 90048-4410

Comment No. 134-1

I am writing to you today to discuss the many issues with the EIR for the Television City Project. I used to work for Lt's make a deal, I know this site very well. Below I have listed some of the many concerns that my neighbors and I have:

Response to Comment No. 134-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 134-2 through 134-8.

Comment No. 134-2

1. The EIR states that there will be no impact on the historic district in the Beverly Fairfax neighborhood. That is just not true. What sidewalk closures during construction are being planned? Where will pedestrians be able to walk when sidewalks are closed? How long with closures be in effect?

Response to Comment No. 134-2

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, for a discussion of why potential cut-through trips would not result in a significant CEQA impact on the Beverly Fairfax Historic District.

In terms of sidewalk closures, the Project would provide new sidewalks and landscape parkway area improvements along the north, east, and west boundaries of the Project Site, which will necessitate the temporary closures of sidewalks while the new facilities are being constructed. Consistent with City policies, alternate pedestrian pathways would be provided, such that no pedestrian access along the Project frontage would be closed.

Comment No. 134-3

What about traffic that will wind its way through our historic district? How many cars are estimated to flow onto our neighborhood streets to the north of the project?

Response to Comment No. 134-3

The Transportation Assessment included as Appendix M.1 of the Draft EIR provides a full discussion of the potential impacts of cut-through trips on the north side of the Project Site in Chapter 5, Section 5C—Residential Street Cut-Through Analysis, including an estimate of the maximum number of vehicles that would potentially use the local streets. Refer to pages 167–173 of the Transportation Assessment.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, for a discussion of why potential cut-through trips would not result in a significant CEQA impact on the Beverly Fairfax Historic District.

Comment No. 134-4

What about parking? Did you do a study that looks at how many more cars are going to try and park in the streets within the historic district?

Response to Comment No. 134-4

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, for a discussion of why potential cut-through trips would not result in a significant CEQA impact on the Beverly Fairfax Historic District.

Comment No. 134-5

2. There is no Specific Plan to be found in the EIR. The Specific Plan is referenced, so what is that? When will the community see the Specific Plan? Does that have to get approved along with the project being approved? Why can a Specific Plan be mentioned but then the plan is not available to review? Nothing is concrete or specific. Why can't we know more about what is going on?

Response to Comment No. 134-5

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3. As discussed therein, all of the physical aspects of the Project that will be implemented by the proposed Specific Plan were fully disclosed and analyzed in the Draft EIR in accordance with CEQA, and neither CEQA nor City policy requires a draft Specific Plan to be included in a Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR. Following the publication of this Final EIR, the Project approvals, including the proposed Specific Plan, among others, will be considered during several public hearings and meetings before City decision-makers prior to any approval.

Comment No. 134-6

3. One of the last and major concerns I have is the addition of almost 2 million square feet of development to an area that is already very urbanized. There are so many consequences of such an enormous build: that scale of development will bring an almost inconceivable number of people to the site, for all kinds of reasons such as for work, to visit, construction works.

Response to Comment No. 134-6

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

With respect to the number of employees, refer to pages 67 through 69 of the Initial Study included as Appendix A of the Draft EIR. As discussed therein, the Project is expected to generate approximately 5,702 net new employees.

Comment No. 134-7

Where are all those people going to go?—like actually get around, drive around and move around? The area is incredibly dense and busy now: what is the plan for the area to accommodate all those people? Not just parking with all those planned parking spaces. But actually commuting on our local streets from all over LA., walking to get lunch, running errands? Where is this examined, like the actual information that says this is what it's going to be like on a daily basis during construction? That says this is what it's going to be like on a daily basis once the development begins to be used?

Response to Comment No. 134-7

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 for information about the trips generated by construction.

With respect to operational traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer also to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 100-3 and 114-3.

Comment No. 134-8

These points are just a few of many concerns that my neighbors and I have about this project. A lot of work and communication with the community still needs to happen, and I implore you to take your time during this process.

Response to Comment No. 134-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 135

Fred Croci
527 N. Orlando Ave.
Los Angeles, CA 90048-2562

Comment No. 135-1

I live nearby to Television City and the proposed Television City 2050 project and frankly I am a little scared of what it is going to do to the area I live in.

Response to Comment No. 135-1

This introductory comment expressing concern about the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 135-2 through 135-5.

Comment No. 135-2

The construction for this project is going to bring so many trucks to the area and then once it is completed there will be many more people and cars than the area is used to. How many cars and trucks did your studies find will be coming to the area during each of the years of construction? And when is the community going to know if construction will be 3 years or up to the 20 years? We should know that before the project gets approved, because other wise are you going to tell the community “we’ll let you know down the road at some point?” What about all the additional cars during all the years when construction is done and the new development starts being used, how many then?

Response to Comment No. 135-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 for information about the trips generated during construction.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, for a discussion of the roadway operating conditions once the Project is complete and in full operation.

The Applicant would prefer to construct the Project in one phase, which would result in a construction sequence lasting approximately 32 months. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Topical Response No. 14, Construction Vehicle Impacts, details the construction activity during the 32-month construction schedule. As discussed therein, the estimated number of trips during three of the busiest subphases is as follows:

Excavation and Foundation:

- 640 truck trips per day
- 490 construction worker car trips per day

Foundation Pour (Five Days):

- 1,000 truck trips per day
- 100 construction worker car trips per day

Building Finishes:

- 60 truck trips per day
- 1,840 construction worker car trips per day

Table 13 on page 123 of the Transportation Assessment shows that the completed Project would generate a total of approximately 9,733 net new vehicle trips per day.

Comment No. 135-3

Most of us in the neighborhood have no idea what a Regional Center is, so please explain what that is, why it's being considered to be put here, and what that will mean for our community? What if we don't want a Regional Center here? Don't the residents and businesses here have a say in that? Does it mean the property will always be a Regional Center? Is that something that goes into the city general plan? If so, can it be taken out of the general plan?

Response to Comment No. 135-3

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

As discussed in Response to Comment Nos. 28-31 and 32-3, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project. Following the publication of this Final EIR, the Project approvals, including the proposed General Plan Amendment, among others, will be considered during several public hearings and meetings before City decision-makers prior to taking any action on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 135-4

One of the assumptions being made about traffic and parking is that many of the people coming to the site are going to use public transportation. However, public transportation is used only minimally in this area now and can only serve so many people. Are more bus routes going to be provided? Will more frequent buses be running? There is no metro stop close by, so why would people take that only to still have to get to the building. What are the reasons that the city believes that public transportation will solve the problems this project creates? Even if you have a place for ride share, that still means someone is driving. So what other public transportation options are there going to be?

Response to Comment No. 135-4

The analysis in the Transportation Assessment included as Appendix M.1 of the Draft EIR is based on the assumption that 15 percent of the employees to/from the Project Site will use transit or bike or walk into the Project Site. Refer to Topical Response No. 11, Transportation Demand Management, regarding the effectiveness of TDM programs.

The Project includes a major commitment to provide a direct shuttle bus service connecting the Project Site's Mobility Hub to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction. The shuttle bus program alone is projected to carry over 1,600 transit passengers per day to/from the Project Site which is greater than the 15-percent mode split assumed in the Transportation Assessment analysis.

Comment No. 135-5

I am wondering what is going to happen with all of the trucks that will be hauling away debris and waste from the construction site? How often will they be leaving the site to haul loads? What times of day and which days? What routes will these trucks be taking? Traffic gets backed up badly now on Fairfax, on Beverly and on West 3rd, so why do you

expect all those trucks won't make the situation even worse? How do we know they will they be kept out of our neighborhoods? What enforcement will be done to make sure that trucks are not idling in the area damaging the already bad air quality?

Response to Comment No. 135-5

As described in Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6, haul trucks associated with the Project would be limited to the use of one of three haul routes:

- Fairfax to I-10 to Irwindale
- Fairfax to San Vicente to La Brea to I-10 to Irwindale
- Beverly to La Brea to I-10 to Irwindale

Haul trucks on any other street would be subject to ticketing by LAPD.

Subject to approval by the Bureau of Engineering District Engineer, trucks would be allowed to operate from 7 A.M. to 4 P.M. on weekdays and from 8 A.M. to 4 P.M. on Saturdays.

The Project would stage all haul trucks on the Project Site itself. No offsite staging of haul trucks is proposed. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Air quality impacts, including those associated with construction trucks, are analyzed in Section IV.A, Air Quality, of the Draft EIR.

Comment No. 135-6

I hope that there are good answers to all these questions! This project really worries me, and I am sure it worries many of my neighbors as well!

Response to Comment No. 135-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 135-2 through 135-5.

Comment Letter No. 136

Anna Culp
130 N. Sweetzer Ave.
Los Angeles, CA 90048-3508

Comment No. 136-1

I live nearby the proposed site and am very concerned the proposed TVC project.

Response to Comment No. 136-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 136-2 through 136-5.

Comment No. 136-2

I am very concerned about the parking problems that will arise from the new development. The project has production facilities in the basement parking garage. The plans on the developer's website show all these production uses down in the garage. Exactly what are those uses? When will that area be used? How will the cars be able to get through those areas? This won't work. The analysis needs to show that cars and trucks will be 100% using only the gates on Beverly and on Grove Drive; where is the analysis that shows the breakdown of where cars will enter and exit to get to the parking? Please provide the additional analysis showing what will happen if cars and trucks cannot get to parking except through Beverly and Grove gates.

Response to Comment No. 136-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Figure 22 in the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the inbound and outbound vehicle flow at every driveway on the Project Site during both the morning and afternoon peak hours of the day.

Please note that no active production activities or uses would occur in the parking and basecamp areas below Project Grade. Refer to Figure II-4(e) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The Project does not intend to limit the Project Site access to only the Beverly Boulevard and The Grove Drive gates. Instead, three signalized driveways—one each on Fairfax Avenue, Beverly Boulevard, and The Grove Drive—will serve the majority of the inbound and outbound traffic flows to the Project Site. Inbound vehicles entering at any of these three gates would be able to access any of the on-site parking areas. As discussed on pages II-25 to II-26 in Section II, Project Description, of the Draft EIR, the Project would include a multi-level internal circulation system that provides efficient and safe access and circulation for both automobiles and trucks throughout the Project Site. Refer to Figure II-4 on page II-14 of the Draft EIR, which shows the Conceptual Site Plan, including the internal circulation system within the Project Site. Refer also to Response to Comment No. 35-23 and Topical Response No. 12, Safety and Congestion.

Comment No. 136-3

With almost all the parking located on Grove Drive, most if not virtually all the people trying to get to the site will use Grove Drive. That seems like it will be a disaster. Please describe to me what will happen if 50% or 75% of the traffic tries to use the Grove Gate? What about other access points?

Response to Comment No. 136-3

See Response to Comment No. 136-2. The comments that almost all the parking is located on The Grove Drive and most if not virtually all of the people trying to get to the Project Site will use The Grove Drive are incorrect. As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site.

Comment No. 136-4

Furthermore, if there is not enough parking on or around the site for workers, staff, and cast members and people attending shows and events, those people will park their cars on the streets in the neighborhoods or try to park in the parking lots of the businesses that line our streets. What assumptions were made when evaluating how much of a problem this will be? Where is that evaluation? This would create risks for kids playing nearby, for residents, and for customers of those businesses. What does the city plan to require of the developer to monitor that situation?

Response to Comment No. 136-4

The Project no longer proposes offsite parking. Refer to Section B, Off-Site Parking, of Topical Response No. 13, Parking, and Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Topical Response No. 13 also includes a discussion of the adequacy of the proposed on-site parking supply and spillover parking.

Comment No. 136-5

Please clearly communicate with us about how the parking issues in the proposed development that will impact neighborhoods and streets nearby.

Response to Comment No. 136-5

Refer to Response to Comment No. 136-2.

Comment Letter No. 137

Christina D.
123 N. La Jolla Ave.
Los Angeles, CA 90048-3527

Comment No. 137-1

One of the reasons I moved into the neighborhood 18 months ago was walking access to nearby attractions like the Farmers Market.

Response to Comment No. 137-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 137-2

This massive project will create massive traffic headaches and doesn't provide nearly enough parking—thousands of additional cars from audience and employees will swamp the community and undoubtedly park at the Farmers Market, displacing customers.

Losing the Farmers would be a major loss for the city. The Draft EIR should analyze the potential deterioration and loss of Farmers Market.

Response to Comment No. 137-2

Refer to Response to Comment No. 5-8 regarding the size of the Project and compatibility of the Project with surrounding uses.

Under SB 743, traffic congestion and the adequacy of a new development's parking supply are not CEQA considerations. A project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is not needed to meet the Project's peak parking

demands and an off-site parking agreement is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The commenter has provided no specifics or evidence regarding their claim about the “potential deterioration and loss of Farmers Market.” Accordingly, no response can be provided.

This comment also discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 138

Nadine Danziger
467 N. Gardner St.
Los Angeles, CA 90036-5708

Comment No. 138-1

I have lived in this community for more than 30 years and am so dismayed: These plans will severely impact our daily lives for the next two decades in ways that are both very unhealthy (air and water pollution) and stressful (tons of traffic, lack of parking, constant noise from the construction and then from the shows and concerts at the studio).

Response to Comment No. 138-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

All of the CEQA environmental issues were fully addressed in the Draft EIR. As summarized in Table I-1 in Section I, Executive Summary, of the Draft EIR, air quality impacts would be significant and unavoidable for construction and less than significant for operation, water quality impacts would be less than significant, noise impacts would be significant and unavoidable for construction and less than significant for operation, and transportation impacts would be less than significant. It should be noted that all of the Project's significant and unavoidable impacts would be temporary and cease when construction is complete. No significant and unavoidable operational impacts were identified.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is not needed to meet the Project's peak parking demands and an off-site parking agreement is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 138-2

If the City wants community support for a new project, it should be more transparent about the long-term impacts on the people who live here, and then show a range of the mitigating factors that would help people adjust and actually feel an improvement in their lives—not dread.

Response to Comment No. 138-2

Section IV, Environmental Impact Analysis, of the Draft EIR contains a comprehensive analysis of the Project's environmental impacts. Moreover, pursuant to Section 15097 of the CEQA Guidelines, Section IV, Mitigation Monitoring Program, of this Final EIR includes all mitigation measures and PDFs discussed in the Draft and Final EIR, along with details about implementation and enforcement.

Comment Letter No. 139

Katherine Darbreloff
541 Edinburgh Ave.
Los Angeles, CA 90048-2309

Comment No. 139-1

If this is really about maintaining studio uses, why is the project REDUCING studio production space? How can it have 250,000 square foot increase in sound stages and a 220,000 sf decrease in production support. And at the same time a 1.4 million square foot increase in office? Is this really just an office project masked as a studio project? Or are they just not counting all of the production support space? With a tripling of sound stages you would expect there to be 600,000 sf of production support not 100,000. That makes no sense. Something is wrong in the calculation of the production support. Either this isn't going to operate as a production studio, the production support will be offsite or they are hiding the production support. In any of those scenarios the Draft EIR is misleading as to what is the project and its impacts.

Response to Comment No. 139-1

Refer to Response to Comment Nos. 5-6 and 5-15 regarding the underlying purpose of the Project to maintain Television City as a studio. Television City has been a studio for over 70 years, and the proposed Specific Plan will ensure that the Project Site will continue to operate as a studio in the future. As discussed throughout all sections in the Draft EIR, the Project is a studio project that will include sound stage, production support, production office, general office, and retail uses. Refer to Response to Comment No. 26-16 regarding the ratio and size of the proposed studio uses.

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 regarding how the Draft EIR does not underestimate the size of the Project; how all of the proposed uses, areas, and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area; and how no active production activities would be located in the parking and basecamp areas below Project Grade.

Comment No. 139-2

I am very concerned, [sic]

Response to Comment No. 139-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 140

Tammy Davis
326 S. Mansfield Ave.
Los Angeles, CA 90036-3057

Comment No. 140-1

The community is outraged with the proposed development of the Television Studio Project. The EIR has left us with many concerns and questions.

Response to Comment No. 140-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 140-2

The construction industry faces a skilled labor shortage. As a result, this shortage causes an inflow of inexperienced workers. This could be an issue because it can increase the injuries and accidents on job sites. What skills will be required for the various construction activities that the project will entail? How are you planning on preventing accidents from taking place? What mechanism is set in place to address the issue of the workplace shortage? Will the project take longer because of a shortage of the skilled workers needed? If the project is using union labor, what happens if the workers go on strike? Will the project be delayed, causing the construction timeline to be delayed even more?

Response to Comment No. 140-2

This comment does not raise an environmental issue specific to CEQA, the Draft EIR, or the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 140-3

Any construction project inherently assumes a lot of financial risks. What financial plan is in place to avoid these risks? What amount of funds are set aside as a backup for mishaps that may occur during construction?

Response to Comment No. 140-3

This comment does not raise an environmental issue specific to CEQA, the Draft EIR, or the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 140-4

Large scale shut-downs, businesses shuttering, people working from home, and more conditions and effects of the covid pandemic all would affect any traffic study done during that time. How can you demonstrate that the traffic findings from a study done in October 2021 during the pandemic were not artificial rather than being based on usual, typical commuting and driving? Is the traffic study going to be redone during a more normal period?

Response to Comment No. 140-4

The Transportation Assessment for the Project (Appendix M.1 of the Draft EIR) is based on traffic counts taken before the pandemic. To be conservative, the historic traffic growth rate for the City was applied even to the COVID years when traffic levels did not grow because of the pandemic. Since the traffic growth in 2021 and 2022 did not reach the levels of typical pre-pandemic years, the 2026 traffic projections in the Transportation Assessment are conservative (i.e., high) and the analysis in the Transportation Assessment is valid. Thus, the transportation analysis does not need to be redone.

Comment No. 140-5

The increased traffic and congestion during years of construction are likely to impact local businesses. How are you going to address and remedy losses and disruptions experienced by impacted businesses?

Response to Comment No. 140-5

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 32-6 for information about the trips generated by construction.

The remainder of this comment discusses non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 140-6

Respectfully, we look to see these concerns be addressed.

Response to Comment No. 140-6

Refer to Response to Comment Nos. 140-1 through 140-5. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 141

Rocky Deangelis
132 N. La Jolla Ave.
Los Angeles, CA 90048-3528

Comment No. 141-1

One of the things I enjoy about living here is the neighborhood feeling—I have been here 20 years and have always felt comfortable.

Response to Comment No. 141-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 141-2

But I've looked at this project and don't think that it is good for our neighborhood—a truck road and studio buildings are being put right next to apartments. That will create health issues for the residents.

Response to Comment No. 141-2

As stated on pages IV.A-69 and IV.A-72 in section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 141-3

Also there is a school across the street—what about the parents and kids ability to walk to school and their safety?

Response to Comment No. 141-3

With regard to pedestrian safety, refer to Sections C, Traffic Safety vs. Congestion, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion. This comment does not concern the Draft EIR's analysis of the Project's potential environmental impacts, and no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 141-4

I would feel better if there was a health study of the noise and fumes on the residents of the apartments and the teachers and students.

Response to Comment No. 141-4

Refer to Response to Comment No. 26-138 for a discussion of noise exposure and hearing loss.

As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptor locations. The HRA was conducted following conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children. For detailed HRA modeling assumptions, refer to the Health Risk Assessment Protocol included as Appendix FEIR-10 of this Final EIR.

Comment Letter No. 142

Jewel M. Debah
6767 Drexel Ave.
Los Angeles, CA 90048-4210

Comment No. 142-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 142-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 142-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 142-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 142-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 142-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 142-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 142-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 142-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 142-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 142-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 142-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 142-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 142-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 143

Jan-Michael Del Mundo
521 1/2 N. Gardener St.
Los Angeles, CA 90036-5710

Comment No. 143-1

How can something called a draft “Environmental Impact Report” have favorably been issued for a project that envisions 60,000 diesel trucks idling and driving near a high school, Pan Park, a hospital, a recreation center, and fragile cultural and historic places? Why weren’t public transportation options better explored, like a metro station?

Response to Comment No. 143-1

Under CEQA, an EIR is an informational document intended to inform the public and decision-makers about the potential environmental impacts of a project and is not intended to make the case for or against any proposed development. Following the publication of this Final EIR, the finalized draft of the Specific Plan and the Project’s other requested entitlements will be considered during several public hearings and meetings before City decision-makers prior to any decision made on the Project. The public will have additional opportunities to comment on the Project at public hearings and meetings, including, but not limited to, City Planning Commission and City Council meetings, the dates of which will be provided to the public in accordance with the City’s noticing requirements.

All construction haul trucks would be staged on the Project Site, and, thus, off-site haul truck staging would not be required; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Per CARB-mandated limits, diesel-fueled commercial vehicles (delivery trucks) are not allowed to idle for more than 5 minutes at any given time, which would further limit diesel particulate emissions. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Page 181 of the Transportation Assessment (Appendix M.1 of the Draft EIR) explains the number of trucks anticipated during the excavation/foundation phase of construction—one of the busiest truck activity time periods. That peak day would see approximately 320 trucks enter the Project Site over the course of the entire day.

The location of a Metro station is a regional decision made by Metro and not by a single developer. While the Applicant does not have the authority to determine where Metro stations will be located, the Project takes advantage of the closest subway station by directly connecting the Metro D (Purple) Line Wilshire/Fairfax Station currently under

construction to the Project's Mobility Hub through a dedicated shuttle bus connection. The Project has also located its Mobility Hub to support an additional Metro station along the Metro K (Crenshaw) Line extension.

Comment No. 143-2

Why is the project planning to use natural gas? I thought that new buildings in Los Angeles are supposed to be fully electric to address global warming.

Response to Comment No. 143-2

Please refer to Response to Comment Nos. 26-51 and 45-1 regarding natural gas usage and the City's new all-electric buildings ordinance.

Comment No. 143-3

It seems like massive electric billboards will cover the entire exterior of the site. How much energy will these signs use? Was an analysis of energy from signs included in the EIR? What will be impact of night-light pollution on bird and bat species?

Response to Comment No. 143-3

Refer to Response to Comment Nos. 5-10 and 26-129 regarding signage. Also refer to Response to Comment Nos. 26-129 and 213-2 regarding off-site signs and billboards, which would not be permitted under the proposed Sign District.

Refer to Response to Comment No. 102-6 regarding energy usage for signage.

With regard to lighting impacts to wildlife associated with signage, the area surrounding the Project Site is fully developed and urbanized, and nighttime illumination is characteristic of most urban land uses, including the Project area. As discussed in Section I, Aesthetics, of the Initial Study (included in Appendix A of the Draft EIR), uses considered sensitive to nighttime lighting include, but are not limited to, natural (i.e., non-developed) areas. However, as discussed in Section IV, Biological Resources, of the Initial Study and in Response to Comment No. 26-E.1-68 above, the Project Site lacks habitat for special status species and is not located in or adjacent to a Biological Resource Area as defined by the City. Because wildlife species likely to occur on-site are those typically found in urbanized settings (i.e., small, common terrestrial and avian species), any lighted signage included in the Project would not adversely affect these species. Furthermore, the Project does not propose any billboards and illuminated signage would primarily be located within the Project Site interior. As discussed in Section I, Aesthetics, of the Initial Study included as Appendix A of the Draft EIR, illumination for Project signage would comply with the light

intensities set forth in LAMC Section 93.0117 and would be directed towards the signs to avoid creating off-site glare.

Comment No. 143-4

All of these compounded environmental impacts need to be considered.

Response to Comment No. 143-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 143-1 through 143-3.

Comment Letter No. 144

Daniel Delmrade
461 Vista St.
Los Angeles, CA 90036-5742

Comment No. 144-1

I am submitting comments about the plan for Television City. Though much of the information in the Draft Environmental Impact Report the city wrote is very technical and hard to understand, there are several concerns that stand out.

Response to Comment No. 144-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 144-2

The document clearly refers to the project construction having significant and unavoidable impacts related to NO_x emissions, even with mitigation! Furthermore, the report states that in the longer term buildout of the project, construction and operational activities will result in significant and unavoidable impacts from VOC and NO_x emissions. Nitrous oxides are the main source of air pollution, so it really does not matter [sic] their release is considered a temporary situation or not.

Response to Comment No. 144-2

The commenter correctly states the Draft EIR's finding that there is a significant and unavoidable impact for NO_x during construction and that there is a significant and unavoidable impact for VOC and NO_x during concurrent construction and operations. Refer to the discussion in Section VI, Other CEQA Considerations, of the Draft EIR as to why the Project is being proposed notwithstanding significant and unavoidable impacts.

Comment No. 144-3

The fact is the report finds that the project will result in significant and unavoidable impacts from these emissions. What are the significant and unavoidable impacts, please make clear? What will be the impacts to sensitive populations? To birds and animals? What about to plants and flowers?

Response to Comment No. 144-3

Section VI, Other CEQA Considerations, of the Draft EIR summarizes all significant unavoidable impacts associated with the Project. Specifically, implementation of the Project would result in significant impacts that cannot be feasibly mitigated impacts with respect to regional construction-related emissions of NO_x; on- and off-site noise during construction; and on- and off-site vibration during construction (based on the significance threshold for human annoyance). Cumulative impacts associated with regional construction-related NO_x emissions, on- and off-site noise during construction, and off-site vibration during construction (based on the significance threshold for human annoyance) would also be significant and unavoidable. In addition, both Project-level and cumulative impacts associated with emissions of NO_x and VOC would be significant and unavoidable under a long-term buildout scenario due to concurrent construction and operations. Section VI, Other CEQA Considerations, of the Draft EIR also discusses the reasons why the Project is being proposed, notwithstanding those impacts. Pages 44 through 48 of the Initial Study, included as Appendix A of the Draft EIR, present the Project's impacts to biological resources, such as animals including birds and plants, which would be less than significant.

Comment No. 144-4

Why would the city, knowing that the project will worsen our air quality and cause adverse health impacts, consider permitting it? What is [sic] about this project that would justify putting at risk the public health, the health of the members of this community?

Response to Comment No. 144-4

Section VI, Other CEQA Considerations, of the Draft EIR summarizes all significant unavoidable impacts associated with the Project and discusses the reasons why the Project is being proposed, notwithstanding those impacts. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptor locations.

Comment No. 144-5

The only project alternative the plan considers as a true alternative is Alternative 5. That alternative states it reduce project level and cumulative significant and unavoidable construction-related NO_x impacts to a less-than-significant level with mitigation. However, even that alternative “would not avoid significant and unavoidable regional NO_x and VOX emissions associated with concurrent construction and operations...” Why wouldn't this alternative be seriously considered if it would at least be able to reduce NO_x impacts to a

less-than-significant level with mitigation? Just the fact that mitigation would be required to even get emissions to less than significant impacts should make it clear how impactful this project is. Under what basis can the city rationalize this kind of a project?

Response to Comment No. 144-5

As set forth in CEQA Guidelines Section 15126.6(c), the range of potential alternatives to the proposed Project shall include those that could feasibly accomplish most of the basic objectives of the Project and could avoid or substantially lessen one or more of the significant impacts. As acknowledged by the commenter, Alternative 5 would reduce the Project-level and cumulative significant and unavoidable construction related regional air quality NO_x impacts to a less-than-significant level with mitigation by eliminating subterranean parking in order to reduce excavation and the export of soil. However, as discussed in Section V, Alternatives, of the Draft EIR, while Alternative 5 would generally meet the underlying purpose of the Project and five of its objectives, it would only partially meet or not meet seven of its objectives. As discussed in Topical Response No. 16, Project Alternatives Analysis, the Project alternatives analysis in Section V, Alternatives, of the Draft EIR fully complies with CEQA. Refer to Section VI, Other CEQA Considerations, of the Draft EIR for a discussion of why the Project is being proposed despite the temporary significant and unavoidable impacts during construction. Refer also to Response to Comment No. 53-2.

The commenter's preference for Alternative 5 is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. However, as stated on pages V-158 to V-160 in Section V, Alternatives, of the Draft EIR, Alternative 5, the Above-Ground Parking Alternative, would not fulfill the underlying purpose of the Project and meet the Project's objectives. Further, Alternative 5 would not eliminate all of the Project's significant and unavoidable impacts.

Comment Letter No. 145

Ryan and Laura DeNardo
109 S. Kilkea Dr.
Los Angeles, CA 90048-3525

Comment No. 145-1

We have lived here for 22 years and are horrified by these plans to totally change our community.

Response to Comment No. 145-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 145-2

Our quality of life is at stake—being able to safely walk along our streets is one of the things we like about living in our neighborhood—

Response to Comment No. 145-2

With regard to pedestrian safety, refer to Sections C, Traffic Safety vs. Congestion, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion. Note that quality of life is not an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 145-3

we are very concerned about parking (already tight) and traffic (already bad).

Where are all these people going to park? The EIR says more than 5,000 parking spaces are needed, but then says that the parking spaces may be offsite. Will they be in my neighborhood? If the parking is offsite, what are the air quality impacts, noise impacts, safety issues from people speeding in the community, pedestrian impacts, and other impacts of off-site parking? These impacts need to be analyzed.

Response to Comment No. 145-3

Under SB 743, traffic congestion and the adequacy of a new development's parking are not CEQA considerations. A project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is not needed to meet the Project's peak parking demands, and the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 145-4

And assuming that people are going to ride the bus and the subway seems like wishful thinking. We've lived here more than two decades and virtually everybody drives in their cars, all alone. Is there any actual evidence that people at this project are going to ride transit?

Response to Comment No. 145-4

Refer to Topical Response No. 11, Transportation Demand Management, regarding the effectiveness of TDM programs.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 146

Kathleen De-Nicola
368 N. Gardner St.
Los Angeles, CA 90036-5751

Comment No. 146-1

The draft EIR simply fails to give the public enough information about Television City's potential impacts to the city. My neighbors and I feel extremely worried and unheard during this time.

Response to Comment No. 146-1

The Draft EIR was completed in accordance with the requirements of CEQA and Section IV, Environmental Impact Analysis, contains a comprehensive analysis of the Project's environmental impacts during both construction and operation.

Comment No. 146-2

Yes, I understand we were provided with a conceptual plan. However, this plan gives no insight or quantitative data as to what the project's motivators are or how the project is going to benefit the city as a whole. Why is a conceptual plan being distributed? How does that allow residents to know what the actual development is going to be and what all the actual impacts will be? How are we expected to be in support of something that contradicts itself, changes standard City rules, excludes square footage from analysis and jumbles the analysis so that no one can actually understand what is attempting to say?

Response to Comment No. 146-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-16 for a discussion of how the Draft EIR disclosed all of the elements of the Project required by CEQA and provided a comprehensive analysis of the Project; how all plans in an EIR are inherently conceptual; the purpose and function of a specific plan; and the regulatory process under the proposed Specific Plan. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 5-7 with regard to the definition of floor area under the proposed Specific Plan and how all of the proposed uses, areas and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area. As demonstrated therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Please note that the comment regarding the benefit of the Project does not relate to the CEQA analysis. The Project does, however, include improvements to the public realm. Refer to page II-30 of Section II, Project Description, of the Draft EIR. Further, the general comments criticizing the Draft EIR's analysis are not supported by any evidence and are incorrect. Nevertheless, these comments are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 146-3

The EIR states that the developer can build whatever they want anywhere they want. What does this mean in terms of onsite construction and offsite construction? We deserve to know what exactly is going to be built and where. Presented is a set of an unlimited number of development options. None of which may actually be constructed. The community has no idea what is in store for this area and hence, no assessment of how this is going to affect their livelihood.

Response to Comment No. 146-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan and Topical Response No. 3, Permitted On-Site Uses, with regard to the permitted on-site land uses in the proposed Specific Plan. Refer also to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 9-12 regarding the proposed development program that was evaluated in the Draft EIR and the regulatory framework under the proposed Specific Plan. As demonstrated therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. The Project's potential impacts during construction were analyzed in Section IV of the Draft EIR. Note that no off-site construction is proposed other than that limited to utility connections within adjacent streets. As discussed in Topical Response No. 1, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 146-4

To top off that confusion, I read that a main objective of the project is the developer's return on investment. Please provide and circulate to the public the developers pro forma. The public deserves to know what is in return for the city. We need to know what the financials underlying this objective are. This information must be provided. Otherwise, residents do not feel that the city planners have the best interest of the citizens. The alternatives appear to be written by the developer. The city needs to be protecting the people of LA, rather than supporting a greedy real-estate developer.

Response to Comment No. 146-4

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project, and the information requested in this comment is not required to be provided. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective. Please note that the Draft EIR was prepared by the Los Angeles Department of City Planning, as Lead Agency, in accordance with CEQA and the CEQA Guidelines.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 146-5

Yes, the plan implies that for the regulations that will govern the project, but it does not include the draft specific plan. How many hundreds of variations of the project will there be? What will the impacts be? When will we be told?

Response to Comment No. 146-5

Refer to Response to Comment Nos. 146-2 and 146-3 regarding the Specific Plan. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, although CEQA and City policy do not require a draft Specific Plan to be included in the EIR, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR.

A summary of the Project's environmental impacts is included in Section I, Executive Summary, of the Draft EIR.

Comment No. 146-6

The EIR needs to be circulated to the community for further review.

Response to Comment No. 146-6

This comment concludes the letter and asserts that the Draft EIR needs to be recirculated. Specific issues raised by the commenter are addressed in Response to Comment Nos. 146-2 through 146-5. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. It is also noted that in response to community feedback and at the request of Councilman Paul Koretz's office, the Department of City Planning extended the comment period by 15 days, for a

total of 60 days concluding on September 13, 2022, which exceeds CEQA requirements. Refer to Response to Comment No. 32-3 regarding public outreach and noticing.

Comment Letter No. 147

Derek
368 N. Orlando Ave.
Los Angeles, CA 90048-2516

Comment No. 147-1

I'm concerned about the constant noise levels from operations. What prevents outdoor gatherings like concerts and dances with loud music from being right across from homes? Why is there a prohibition of outdoor studio production within 200 feet of the apartments? The EIR should have assumed loudest activities at property lines—noise obviously carries further than 200 feet.

Response to Comment No. 147-1

Noise impacts associated with Project operations are analyzed in Section IV.I, Noise, of the Draft EIR. As discussed therein, impacts would be less than significant. It should also be noted that a concert venue is not proposed. Refer also to Response to Comment No. 26-146 for additional discussion of outdoor production activity noise. As discussed therein, the Project would reduce the amount of outdoor production activity areas as compared to existing conditions. Also refer to Topical Response No. 3, Permitted On-Site Uses, regarding the five studio uses that would be permitted within the Project Site.

Refer to Response to Comment No. 26-E.1-40 regarding amplified sound.

Project Design Feature NOI-PDF-5, which prohibits outdoor studio production within 200 feet of the Shared Eastern Property Line between 10 P.M. and 7 A.M., is an existing operational restriction on the Project Site that would be continued by the Project. Given that the Draft EIR concluded that operational noise impacts would be less than significant, additional measures are not required under CEQA.

Refer to Response to Comment No. 26-135 regarding the conservative assumptions used in the noise analysis.

Comment No. 147-2

And how about for the other sides of the site? How far away will outdoor studio production occur from the motel, residences and the park?

Response to Comment No. 147-2

The noise analysis in Section IV.I, Noise, of the Draft EIR analyzed noise impacts at eight nearby sensitive receptors (refer to Table IV.I-5) including the nearest residence (Receptor R1) adjacent to the Project Site, the nearest park (Receptor R2) at a distance of 75 feet from the Project Site, and the nearest motel (Receptor R3) at a distance of 95 feet from the Project Site. Distances are measured from the edge of the Project Site to the receptor. With regard to the locations of existing and proposed outdoor production activity areas, refer to Figures II-4(c) and II-3(d) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 147-3

How do we know that the EIR correctly calculated noise impacts—making movies and television shows with sound effects can be extremely loud. And because there is no set plan of development, noisy activities can happen anywhere. Will there be loud activities at any time of day or night?

Response to Comment No. 147-3

Section IV.I, Noise, of the Draft EIR includes a detailed methodology section explaining how the analysis was conducted. Refer to pages IV.I-32 and IV.I-33 of the Draft EIR; also refer to Response to Comment No. 26-135. The noise analysis conforms to the requirements of CEQA and the City. Also refer to Response to Comment Nos. 26-140, 26-135, and 26-E.1-44 regarding noise from outdoor production activities, including the existing and proposed locations of outdoor production activities.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Project that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan.

Comment Letter No. 148

Joanna Dewberry
2401 S. Sycamore Ave.
Los Angeles, CA 90016-2136

Comment No. 148-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 148-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 149

Erica Diamond
903 N. Genesee Ave.
West Hollywood, CA 90046-7319

Comment No. 149-1

I have been a resident of the area for many years. I love the city for its many opportunities, landmarks and entertainment. I have been proud to call this place my home.. Wil [sic] feel as if there is a disconnect with you (the city planners) and the LA community when it comes to the TVC 2050 plan.

Response to Comment No. 149-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 149-2

The impact of where and how that is done must be considered. In reality, it can take 20 minutes to travel a mile in LA rush hour traffic as is. The EIR does not provide any explanation for how the city is going to handle this volume of people in the neighborhood, nor does it address this as a concern. Where is the city addressing the many effects of an influx of all those cars and people into the community? And why isn't the city seeing this as a major concern?

Response to Comment No. 149-2

Under SB 743, traffic congestion is not a CEQA impact. A project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

This comment also discusses non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 149-3

The daily onslaught of construction trucks alone will cause major congestion on the roads even more. The EIR promised a detailed construction traffic management plan, but where is it? How long will it take to be released to the public? What will the plan cover? When the community be able to give input into that plan?

Response to Comment No. 149-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, and pages IV.K-36 and IV.K-37 in Section IV.K, Transportation, of the Draft EIR for a discussion of the CTMP (Project Design Feature TR-PDF-1), including the elements covered by the plan. The community was provided an opportunity to provide input into the CTMP as a part of the Draft EIR comment period. In addition, the public will have an opportunity to provide comments on the CTMP during the entitlement hearing process for this Project. The CTMP would be prepared as part of the regulatory building permit process and would be reviewed and approved by LADOT prior to Project construction.

Comment No. 149-4

I understand there will be a large amount of parking being added near our houses, not only for new employees but also people traveling to Television City for events. This is greatly increasing the amount of strangers my children will encounter in our community on a daily basis. How many cops are going to be available for this events? Will additional officers be available if something does happen? Is the city willing to take the extra steps to fund protection of our families? What is going to happen when ambulances, police cars, fire trucks and any other emergency vehicles need to get through to the site and there is absolutely no way for them to because of being stuck in traffic?

Response to Comment No. 149-4

With regard to parking, refer to Topical Response No. 13, Parking. Please note also that parking is not proposed outside of the Project Site and any on-site Project parking would not be open to the public. Off-site parking is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

As discussed in Response to Comment No. 16-5, through Project Design Features POL-PDF-2 through POL-PDF-7, the Project would include numerous operational design features to enhance safety within and immediately surrounding the Project Site, thereby reducing the demand for police services.

With regard to special events, refer to Topical Response No. 3, Permitted On-Site Uses, regarding how special events would continue to be governed by the LAMC,

consistent with existing conditions. As discussed on page IV.J.2-13 of the Draft EIR, the Applicant currently provides advance notice to and coordinates with LAPD regarding large special events that take place on the Project Site. As under existing conditions, on-site security and safety measures would continue to be implemented as part of future operations within the Project Site to reduce the demand for LAPD services, pursuant to Project Design Feature POL-PDF-2.

With regard to emergency access and response, refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-35, 26-147, and 35-134.

The question regarding City funding is outside the scope of this Project and EIR. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 150

Josh Diaz
Rachel Giron
437 N. Curson Ave.
Los Angeles, CA 90036-2353

Comment No. 150-1

I am a long-time resident of Beverly Fairfax, and I have recently seen the Draft Environmental Impact Report for the Television City project. Like many of my neighbors, I am left with several questions after reading through the DEIR and learning more about the project. Specifically, I fear that this project, and its potential 20-year construction period, might have devastating effects on my neighborhood. In order to fully form my opinion, I need answers to the questions outlined below.

Response to Comment No. 150-1

The Draft EIR was completed in accordance with the requirements of CEQA and Section IV, Environmental Impact Analysis, contains a comprehensive analysis of the Project's environmental impacts during both construction and operation. Refer to Response to Comment No. 150-3, below, for a discussion of the construction timeline.

Comment No. 150-2

- Why are mitigation measures only applied to the project's operational phase? Won't the project's construction have "more than significant" project level impacts? Is there a law that limits this rule to the operational phase of the project? If so, what is it? Please explain why mitigation measures only apply to the project's operational phase.

Response to Comment No. 150-2

The commenter is incorrect. The Draft EIR did not identify any significant impacts during operation and, as such, no mitigation measures were included. Mitigation measures are included only for the construction phase of the Project. Refer to Section I, Executive Summary, of the Draft EIR for a brief summary of the mitigation measures proposed as part of the Project, or the respective sections of the Draft EIR for a more detailed discussion of potential impacts and the effects of mitigation measures.

Comment No. 150-3

- How long does the city and the developer estimate the project's construction to last? The DEIR says it may take up to 20 years but that seems inflated? What studies was this estimate based on? The current estimate concerns me because 20 years of zero mitigation measures is unacceptable.

Response to Comment No. 150-3

Refer to Response to Comment No. 9-24 regarding the duration of construction activities. Additionally, the Project would not involve "20 years of zero mitigation measures" as incorrectly asserted by the commenter. As discussed on page I-29 through I-36 of Section I, Executive Summary, of the Draft EIR, the Project would include a number of mitigation measures and PDFs, all of which would be implemented through the Mitigation Monitoring Program, including during the construction period. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR.

Comment No. 150-4

- How is the city and the developer defining "significant impacts?" The claim the project would have a "less than significant" impact is misleading and does not represent the devastation this project could cause. Why is the developer allowed to misrepresent that impacts are not significant because they may occur "only" during certain phases of the project?

Response to Comment No. 150-4

Each section of the Draft EIR includes a detailed discussion of the thresholds of significance used in that analysis. The City's thresholds are based on Appendix G of the CEQA Guidelines. As an example, refer to pages IV.A-32 through IV.A-39 in Section IV.A, Air Quality, of the Draft EIR for a discussion of the thresholds of significance used in the air quality analysis. The analysis in the Draft EIR has been completed in full compliance with CEQA. Because the commenter did not provide any specific examples, no further response can be provided.

Comment No. 150-5

- Can you please elaborate on what criteria determines "consistency-with-other-plans?" Can you also please explain why this metric is the best for our neighborhood? Do all other development plans have potential construction periods that last 20 years? How does the scale of each project impact the "consistency-with-other-plans" metric? This project seems like it will be significantly larger than any other project in our neighborhood.

Response to Comment No. 150-5

CEQA requires that an EIR “discuss any inconsistencies between the proposed project and applicable general plans, specific plans, and regional plans.” An “applicable” plan is a plan that has already been adopted and, thus, legally applies to a project; draft plans need not be evaluated. Refer to Topical Response No. 6, Wilshire Community Plan Update, for further details regarding the applicability of the respective plans.

The adoption of a General Plan, Community Plan, and any applicable specific plan is intended to provide coherent, long-term land use regulations applicable to properties within their respective boundaries. Over time, properties within these plans develop; redevelop; undergo alterations, demolitions, and changes of use, all over varying spans of time. As the Project involves the creation of the proposed Specific Plan, the Project Site will experience the same evolution expected in an urbanized area over the course of many decades, as has occurred with the Television City complex over the past 70 years.

In the Draft EIR, a total of 68 related projects have been identified within the vicinity of the Project Site. The size and scope of these projects vary, from small apartment buildings to projects similarly scaled to the Project. The related projects are listed in Table III-2 beginning on page III-9 of the Draft EIR, which identifies the location of each related project along with the types of land uses proposed. The locations of the related projects are shown in Figure III-1 on page III-15 of the Draft EIR. The analysis of cumulative construction impacts conservatively assumes concurrent construction with the Project and all related projects. As such, the specific construction timelines of each related project are not relevant.

Refer to pages IV.H-57 and IV.H-58 of Section IV.H, Land Use and Planning, of the Draft EIR regarding cumulative impacts related to potential conflicts with plans.

Refer to Response to Comment No. 11-3 regarding the size of the Project and its compatibility with the surrounding area.

Finally, refer to the Response to Comment No. 9-24 regarding the Project construction timeline.

Comment No. 150-6

Ultimately, I do not think it’s fair to use a one-size-fits-all approach with the mitigation measures created for this project. The scale of this project is significantly larger and therefore will have a much longer construction period proposed. The claim that this project is consistent with others or will have “less than significant” impacts is misleading and unfair

to our community. I hope the city and the developer will take the time to answer each of my above questions.

Response to Comment No. 150-6

The Project does not use a “one size fits all” approach to mitigation. While many of the mitigation measures are similar to those used in other Projects, they have been tailored for this Project. As an example, Mitigation Measure NOI-MM-1 requires sound barriers be installed at specific locations based on the location of sensitive receptors near the Project Site. Refer to Response to Comment No. 150-4 for a discussion of the significance thresholds used in the Draft EIR.

Comment Letter No. 151

Silvio Diaz
2714 Ivan Ct.
Los Angeles, CA 90039-2601

Comment No. 151-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 151-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 152

Karen Diehl
115 N. Doheny Dr., Apt. 307
Los Angeles, CA 90048-2829

Comment No. 152-1

The CBS TV Studio lot redevelopment plan, the TV2050 Project, will add more than one million square feet of commercial development that has ramifications not just the immediate community but the entire region. I believe the process should be halted while additional outreach and review is conducted covering a greatly expanded area. While this may not occur, my comments with regard to the DEIR are as follows.

Response to Comment No. 152-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 152-2

Traffic apocalypse. The unprecedented traffic increase that will be a direct result of the commercial development, office and studio uses, will not just clog nearby streets but have a ripple effect throughout the region. The typical traffic evaluation does not take this into account. Beverly and Fairfax are already challenged and adding such enormous amounts of new traffic to the area does not serve existing businesses, residents or the CBS TV studio. People will avoid the area when there are other options for shopping and dining as well as other studio options that are not as difficult to access. The nearby neighborhood streets are mostly narrow and barely accommodate the local resident traffic let alone what will inevitably be a dramatic rise in cut through traffic.

Response to Comment No. 152-2

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for

the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

With respect to neighborhood intrusion, the Transportation Assessment included as Appendix M.1 of the Draft EIR provides a residential street cut-through analysis as part of its non-CEQA transportation analysis. Refer to pages 167–173 of Appendix M.1 of the Draft EIR. Additionally, the Project calls for the development of an NTMP. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for more information.

Comment No. 152-3

Lack of housing. There are rare opportunities in Los Angeles to do in-fill housing, putting residents near business centers, shopping, dining, schools, etc. That this developer has not allowed for any housing on the site flies in the face of logic. Workers on entertainment projects commute from the far flung reaches of Los Angeles County or beyond where there are more affordable housing options. The developer could carve out a portion of the lot to add workforce housing to accommodate some of these workers, or teachers and public servants.

Response to Comment No. 152-3

The underlying purpose of the Project is to maintain Television City as a studio use and to modernize and enhance production facilities within the Project Site to meet both the existing unmet and anticipated future demands of the entertainment industry, keep production activities and jobs in Los Angeles, upgrade utility and technology infrastructure, and create a cohesive studio lot. Notwithstanding the Project's underlying purpose, Section V, Alternatives, of the Draft EIR included an analysis of a mixed-use alternative. Refer to pages V-91 through V-126 of the Draft EIR. Nevertheless, the commenter's suggestion that housing be included is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 152-4

Extraordinary increase in density. The developer seems to be requesting approval to add an enormous amount of new commercial and studio uses without providing an actual plan for the site. Everything is conceptual, or proposed. But when you evaluate the amount of development it is clear that it is not possible to add all of this on the site without overwhelming the community and the region.

Response to Comment No. 152-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, and 9-12 with regard to the accurate, stable, and finite Project Description that fully complies with CEQA and the conceptual nature of any plans within an EIR. Refer to Response to Comment Nos. 11-3 and 152-6 regarding the size of the Project and its compatibility with the surrounding area.

Comment No. 152-5

Not only is the CBS TV lot historic, so is the Original Farmers Market. It seems that the developer believes that building looming, massive developments encroaching on historic buildings is acceptable.

Response to Comment No. 152-5

The analysis in Section IV.B, Cultural Resources, of the Draft EIR and the Historic Report (Appendix C.1 of the Draft EIR) demonstrate that the Project would not result in any significant impacts to on- or off-site historical resources. Also refer to the entirety of Topical Response No. 5, Historical Resources, regarding the preservation of the Primary Studio Complex.

Regarding the comment about the size of the Project, refer to Response to Comment Nos. 5-13, 11-3 26-7, and 209-3. As stated throughout the Draft EIR, the proposed Specific Plan would permit a maximum of 1,874,000 square feet of floor area within the Project Site. The Project's proposed FAR of 1.75:1 is an approximately 17-percent increase from the 1.5:1 FAR currently permitted by existing zoning. Further, a 1.75:1 FAR is compatible with the surrounding neighborhood and is much smaller than the FAR permitted for surrounding properties. The permitted FAR for The Grove and The Original Farmers Market is 3:1 to 6:1 for individual parcels (1.5:1 FAR sitewide). Also refer to Response to Comment No. 110-3 for a discussion of the height of surrounding uses.

Comment No. 152-6

Community character/ancillary growth. Throughout all of the evolution and change in the Beverly/Fairfax area this is still a community with character, an eclectic mix of uses. This level of massive commercial development will forever alter the community and likely presage further dramatic change as other developers may seek to tear down existing, nearby buildings and provide offices for studio related businesses.

Response to Comment No. 152-6

Refer to Response to Comment No. 11-3 regarding the size of the Project and its compatibility with the surrounding area. As also demonstrated in the analysis provided on pages IV.H-39 through IV.H-57 of Section IV.H, Land Use and Planning, of the Draft EIR, the Project would not conflict with applicable land use plans and policies, including those that specifically address compatibility with surrounding land uses.

The comment provides the commenter's opinions about the Project, which are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 152-7

Regional center designation. Not enough consideration or review has been given to what changing this to a regional center means not just to the nearby neighbors but the region. I believe this is another reason that broader community outreach should be conducted. For instance, what does city of West Hollywood think about this proposal? It is folly to think that West Hollywood will not be impacted.

Response to Comment No. 152-7

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Refer to Response to Comment Nos. 28-13 and 32-3 regarding community outreach. As discussed therein, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project.

Comment No. 152-8

Public transportation. The developer doesn't seem to understand the workforce engaged in studio productions. The idea that these workers will be able to use public transportation to access the studio is a leap of faith. I would ask that existing studio operators be surveyed regarding the typical traffic in and out of their studio campuses. It is my understanding that the nature of the work, the long and ever-changing work schedules, make it next to impossible for these people to rely on public transportation. If they actually believe people will use their multimodal transit hub they wouldn't be proposing the enormous amount of parking.

Response to Comment No. 152-8

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

As one of the largest operators of sound stages in the world, the Applicant understands the workforce of a studio campus. The comment is correct that the typical studio employee work schedule might make transit usage difficult, but the Project also includes up to 1.4 million square feet of office buildings where the employees will work on a much more regular schedule that is more conducive to transit travel.

Refer to Topical Response No. 11, Transportation Demand Management, regarding the effectiveness of TDM programs.

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 152-9

Parking. Is there below grade parking? If not, there should be as there are multiple opportunities to place parking below buildings that they might develop.

Response to Comment No. 152-9

The proposed development program includes below-grade parking. As discussed in Section II, Project Description, of the Draft EIR, parking may be provided in a combination of above-ground structures, subterranean structures, and/or surface spaces and may be designed to accommodate semi-automated or fully automated parking operations. Refer to the architectural plans for the Project which are publicly available on the Department of City Planning's website, which shows the proposed subterranean parking located in the west, north and southeast portions of the Project Site.

Comment No. 152-10

Lack of meaningful community outreach. The developer may have met the letter of the law in terms of outreach should have been greatly expanded. The typical radius drawn around a project that defines those who should be notified is woefully inadequate in this case. I live approximately two miles from the site. Beverly is my main street where I frequent local businesses and it serves as the thoroughfare connecting me to the greater Los Angeles area including downtown and Hollywood. I was shocked to learn just a few

weeks ago about the size of this proposed development and that the DEIR was completed and circulating.

This is a massive proposal that, if approved, will forever alter not just this corner of Los Angeles, but the region. There are regional impacts. I have a perception that this developer has attempted to stay under the radar, hiding under the “cover of COVID” in an attempt to bypass meaningful input and dialogue about this important development opportunity. Something should be done on the site, but the scope of what is being proposed is untenable.

Response to Comment No. 152-10

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment Letter No. 153

Steve Dixon
343 N. Sierra Bonita Ave.
Los Angeles, CA 0036-2452

Comment No. 153-1

Los Angeles needs more housing, of all kinds—apartment buildings (preferably not too high and dense), single family residences, condos and townhouses. Instead, this project is mostly office space, entertainment space, and warehouse space!

Response to Comment No. 153-1

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

The comment regarding housing needs in the City is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment No. 153-2

And it seems appalling that the community is being asked to deal with constant construction, traffic, diesel emissions, parking hassles, neon- bright signage and loud noise for a duration of 20 years. Why wasn't the public brought in a long time ago to give our opinions about this project?

Response to Comment No. 153-2

The construction of the Project Site is not expected to take 20 years. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Air quality and noise analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. With respect to the environmental impact of lighting, pursuant to Public Resources Code Section 21099, because the Project is an employment center project located on an infill site, the Project's aesthetic impacts shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 38–40 of the Initial Study for a discussion of lighting. Also refer to Response to Comment No. 102-6.

With respect to parking during construction, the Project includes a CTMP pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 to IV.K-37 of the Draft EIR), which would include a prohibition of construction worker or equipment parking off-site.

Refer to Topical Response No. 13, Parking, regarding the adequacy of the Project's onsite parking supply.

With respect to public outreach, this Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeded the required 45-day Draft EIR public comment period. Following the publication of this Final EIR, a finalized draft of the Specific Plan and the Project's other requested entitlements will be considered during several public hearings before City decision-makers prior to any decision made on the Project. The public will have additional opportunities to comment on the Project at public hearings and meetings, including, but not limited to, City Planning Commission and City Council meetings, the dates of which will be provided to the public in accordance with the City's noticing requirements.

Comment Letter No. 154

Bosko Dobiic
315 N. Stanley Ave.
Los Angeles, CA 90036-2328

Comment No. 154-1

As a loyal community member for several years, I am bothered by the EIR that was sent out about the Television Studio Project.

Response to Comment No. 154-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 154-2 through 154-6.

Comment No. 154-2

The EIR appears to be vague in description, leaving out important information the community needs.

Response to Comment No. 154-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-12, and 9-13 for a discussion of how the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 154-3

Invoicing is a part of construction that ensures the finances are accurate. Occasionally, payments can fall behind and negatively impact a company's cashflow. This interruption can turn into a drywall and cause delays within the project. What financial system and plan do you have in place to ensure the financial team is working efficiently to prohibit construction delays? It would be heartbreaking for the finances to cause the construction time to be extended. We don't want to have a developer walk away from a project with no accountability.

"According to a study, 98% of construction projects come in over budget and 77% of them suffer significant delays." The EIR outlines many expectations and goals for the project. These goals appear to be unattainable within the set timeframe. With construction, there

are usually challenges that arise that nearly almost interfere with the work getting completed. What crisis plan is there to address issues that may arise during construction? What efforts are designed to make the community more comfortable when their respective area is disturbed?

Response to Comment No. 154-3

Refer to Response to Comment No. 9-24 regarding construction duration. Any extension of the Development Agreement beyond 20 years would require subsequent CEQA review and approval by the City.

As discussed on pages IV.K-36 and IV.K-37 in Section IV.K, Transportation, of the Draft EIR, in accordance with Project Design Feature TR-PDF-1, the Project will include a CTMP that will include a provision that the Applicant will designate a construction relations officer to serve as a liaison with the surrounding community and respond to any construction-related inquiries.

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 154-4

Construction is a reputation-based business, where people tend to work with those they know and trust. How are the thousands of workers and people taking part in this project being vetted before starting work? What system do you have to address delinquent workers? What about union workers? What happens if the workers go on strike?

Response to Comment No. 154-4

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 154-5

There is no information regarding what existing rules regarding the development and use of the property are changing. What is a Specific Plan? How does it differ from the current code requirements for the property? Please detail the differences.

Response to Comment No. 154-5

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Draft EIR disclosed all of the physical elements of the Project that would be implemented by the proposed Specific Plan. Refer to Response to Comment No. 26-22 regarding the relationship of the Specific Plan to the LAMC and the Draft EIR's CEQA analysis of the Project's consistency with the LAMC.

Comment No. 154-6

Those in the area should constantly be aware of what is occurring during construction. What means of communication will you take to ensure people who do not have access to technology, the disabled, the elderly, and community members and aware of what is taking place?

Response to Comment No. 154-6

The Project's CTMP prepared pursuant to Project Design Feature TR-PDF-1 requires that the Applicant designate a construction manager to serve as a liaison with the surrounding community and respond to any construction-related inquiries. Refer to pages IV.K-36 to IV.K-37 of Section IV.K of the Draft EIR.

Comment No. 154-7

These issues are important and deserve answers. The community should not be left in the dark, questioning the construction process, and is a success.

Response to Comment No. 154-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 154-2 through 154-6.

Comment Letter No. 155

Adam Dominic
351 N. Ogden Dr., Apt. 1
Los Angeles, CA 90036-2125

Comment No. 155-1

As a resident of a neighborhood near Television City, I feel that the large project to expand it will be problematic. The environmental review excludes some important information that we as citizens deserve to know since its building will impact our quality of life, not to mention safety.

Response to Comment No. 155-1

Refer to Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security. With regard to pedestrian safety, refer to Sections C, Traffic Safety vs. Congestion, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion.

The claim that the environmental review excludes important information is not supported by evidence. Further, quality of life is not an environmental impact specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Additional issues raised by the commenter are addressed in Response to Comment Nos. 155-2 through 155-4.

Comment No. 155-2

Both during construction and when the supposed studios are active, there will be many, many additional vehicles, workers, and audience members in this area. What does the increase in traffic mean in terms of parking? I understand that there will be 5,300 parking spaces on site but also some parking offsite. What does offsite parking mean for our streets in the neighborhood?

Response to Comment No. 155-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the onsite parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. In addition, the Project no longer proposes offsite parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the offsite parking agreement language was deleted from the Draft EIR.

Comment No. 155-3

What about pedestrian traffic? This is a huge walking community. What about the rights and safety of all the different pedestrians when the traffic increases significantly, with more drivers in the area trying to get through backed up intersections? It is already hard to cross at crosswalks now, to cross from one side of the street to another when it isn't at an intersection, but this will make traffic issues practically impossible. Has the city gone out to each intersection to measure traffic? And to measure traffic, at different times of the day, and different days of the week? Have you done pedestrian counts along all the major streets around the project area? What have those studies concluded? Or were estimates and actuarial data used, not real numbers? If not, why not?

Response to Comment No. 155-3

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The Transportation Assessment (Appendix M.1 of the Draft EIR) is based on actual traffic counts at the key intersections in the Study Area. These traffic counts were conducted during the morning and afternoon peak commute hours, which are when the streets are the busiest. The counts were conducted during pre-pandemic conditions with schools in full operation and each intersection count included pedestrian counts across all four corners of each intersection. Refer to Topical Response No. 10, Trip Generation.

The Project's Transportation Assessment included as Appendix M.1 of the Draft EIR provides an analysis of traffic safety as part of its non-CEQA transportation analysis. Refer to pages 141–150 therein. Refer also to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 for an additional discussion of safety and congestion and a discussion of pedestrian safety.

The Project intends to widen the sidewalks and improve the landscape parkways along the Fairfax and Beverly frontages of the Project Site to enhance the pedestrian

environment. The Grove Drive pedestrian crosswalk near the Holocaust Museum would be relocated slightly and incorporated into the proposed traffic signal at the Project entrance.

Comment No. 155-4

The plan for construction includes basecamps that will use power generators. Do these run on diesel fuel? This huge polluter of air and cause of increased noise is unacceptable. This project, if approved, should run completely on electric power, both during construction and when the expanded facility is in regular use. New buildings are supposed to run on electric, so this should qualify. What hours will power generators be used, 24/7? What if the generators break down?

Another source of air pollution will be the many trucks going to and coming from the site for years. It appears that there is not a defined truck route to the site. Please confirm that the trucks carrying construction debris will not be idling and lining up along our residential streets. I can't imagine the stress the additional noise, odors, and activity would cause everyone in this neighborhood. Does the Draft EIR analyze these impacts on the community? What were the conclusions of that analysis? And, does the whole community know what may happen if this project moves forward?

Response to Comment No. 155-4

The comment regarding basecamp power is similar to Comment No. 26-36. Refer to Response to Comment No. 26-36.

After the NOC/NOA was published and Draft EIR for the Project was publicly circulated, the City of Los Angeles passed Ordinance No. 187714, which requires all new buildings to be all-electric with a few exceptions. The City's all-electric buildings ordinance applies to any development where an application for a building permit is submitted after April 1, 2023. The Project would comply with the all-electric ordinance. Further, new PDFs have been added to Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the use of all electric off-road operational equipment and to provide electrical tie-ins at basecamps to remove the need for portable generators.

Project haul routes for both loaded and empty construction trucks and hours and days of operation are disclosed throughout the Draft EIR and in LADOT's approval letter dated June 30, 2022, available in Appendix M.5 of the Draft EIR. All haul truck staging would occur on-site, so no haul truck idling would occur off-site. Project Design Feature TR-PDF-1 requires a detailed CTMP to be developed to manage the flow of construction vehicles and minimize impacts to the community as detailed in pages IV.K-36 through IV.K-37 in Section IV.K, Transportation, of the Draft EIR. The Draft EIR comprehensively analyzed the Project's potential air quality impacts during construction, including impacts

from construction vehicles and associated idling, in Section IV.A, Air Quality, and Appendix B of the Draft EIR, in accordance with CEQA. Refer to Section IV.I, Noise, of the Draft EIR regarding the Project's potential noise impacts. Refer to pages 43 to 44 of the Initial Study (Appendix A of the Draft EIR) regarding the Project's less-than-significant impacts with respect to odor impacts.

The Draft EIR and this Final EIR constitute public disclosure for the Project and its environmental impacts as required under CEQA. Refer to Response to Comment No. 32-3 regarding public noticing.

Comment No. 155-5

People need to be kept informed in multiple ways so they can express their concerns before this project moves forward.

Response to Comment No. 155-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 155-2 through 155-4.

Comment Letter No. 156

Michael Douglas
mdendsis@gmail.com

Comment No. 156-1

I am concerned about crime in my neighborhood and the impact the TVC 2050 project will have on it. A couple months ago, someone was shot near where I lived. I could hear the gun shot from my home. That was unheard of ten years ago.

Now they want to bring thousands of new people here with their mobility hub. How will that impact the safety of our community? Will it attract and add to crime in our neighborhoods? Where has this been studied and projected? What is a mobility hub anyway?

Did the city consider and look at whether the project and hub will lead to an increase in the number of transient people, because it seems a center like this will be a place they could seek shelter? I really feel for our homeless and transient populations. Will the city provide a place to direct them so that police aren't being called to "move them along"?, because that would be terrible.

I am afraid this will be fuel on the fire for our crime problem. Does the EIR talk about new security or police presence to keep us safe? Can the city or developer estimate what kind of impact this development might have on safety in the immediate neighborhoods? If not, why is this not a city requirement? Isn't the developer required to mitigate impacts like increases in crime that the project brings?

Would the increased crime impact the likelihood of people taking public transit or using the mobility hub? How does the city or developer calculate the number of people who use public transit to commute to the site, and does it factor in safety at all?

I also know that they are going to be doing more tapings here, and that will attract large crowds of visitors. Won't that be a magnet for criminals looking for targets? Could that have a negative impact on our local retail and other neighborhood businesses? Where is the information from the city evaluating impacts to our small and family owned businesses? Safety needs to be considered in this project before it can move forward, and that the developer needs to explain how they will mitigate this impact on our community.

Response to Comment No. 156-1

With regard to the Mobility Hub and safety, refer to Topical Response No. 7, Mobility Hub. The Mobility Hub would not impact crime or safety. Refer to Section IV.J.2, Public

Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security. With regard to homelessness, refer to Response to Comment No. 16-8. With regard to special events, refer to Topical Response No. 3, Permitted On-Site Uses, regarding how special events would continue to be governed by the LAMC, consistent with existing conditions. With regard to audiences, as discussed in Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, audience members would represent a small fraction of the on-site population, with a weekday daytime average approximately 427 audience members. As such, the comment that the Project would include large crowds of visitors is incorrect. These audience members would park on-site, would enter the Project Site through a security gate and would be monitored by on-site security staff. As such, audiences would not be a source of crimes. With regard to the Project's use of public transit, as discussed in Section B, Transit and TDM Effectiveness, of Topical Response No. 11, Transportation Demand Management, the Project is anticipated to attract 15 percent of its employees and less of its visitors via transit, bike and walk modes. Given the Project Site's security features, the Project would not result in crime that would affect use of the Mobility Hub or public transit.

Regarding the comments about mitigation, the Draft EIR fully analyzed the Project's potential impacts on police services and concluded that impacts would be less than significant. Thus, mitigation is not required.

The comments regarding homeless and transient people and impacts on local businesses are not environmental issues specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 157

Thomas Drescher
443 N. Harper Ave.
Los Angeles, CA 90048-2220

Comment No. 157-1

I am very concerned about the development plan for the Television City location.

Response to Comment No. 157-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 157-2 through 157-4.

Comment No. 157-2

The plan talks about many dozens of large 18 wheeler trucks driving to and being on the site. Is there any analysis of the environmental impacts that so many 18 wheelers will have on the community? I worry that no consideration has been given to how these trucks will affect air quality and am very curious if this has been considered at all. If it has been examined, what did the city find out? Those findings should be shared with the public. How often will this particular kind of truck traffic be driving to the property, and from where? Will they park on the property? For how long?

Response to Comment No. 157-2

Air quality analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, of the Draft EIR. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. All other air quality impacts would be less than significant or less than significant with mitigation. Refer to Response to Comment No. 26-E.1-2 and the quantitative HRA included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips. Construction haul trucks will stage on-site (refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR), and the length of time spent on the Project Site will depend on the time it takes

to load the haul trucks and unload the delivery trucks. These are both expected to be relatively short time periods.

Comment No. 157-3

What about when they are exiting the property? They will have to turn into the huge amount of traffic on the streets that lie all around the perimeter of the property, so how will that be done?

There are no dedicated lanes to get cars and trucks on the street. If there were dedicated turn lanes where vehicles could turn onto the project the traffic and congestion would still be very bad—but without dedicated turn lanes, it's going to be a huge mess. This community will not be able to accommodate this type of additional consequences for the traffic situation in that vicinity. What is going to be done about this?

Response to Comment No. 157-3

Construction trucks entering or exiting the property making left turns may need the assistance of flag persons to complete their turn. Temporary traffic controls, including flagmen, are included as part of the CTMP to be prepared for the Project pursuant to Project Design Feature TR-PDF-1. Refer to pages IV.K-36 and IV.K-37 of the Draft EIR.

Refer to Response to Comment No. 83-1 regarding turn lanes. The Project frontage along Fairfax Avenue already has a wide right lane that can be used as a right-turn lane. The frontage along Beverly Boulevard has a parking lane that would serve as a de facto right-turn lane, allowing traffic to get out of the through lane to make their turn into the Project Site. Additional widening to provide separate right-turn lanes would encourage higher speed right-turns, which, in turn, would sacrifice the safety of pedestrians along the sidewalks.

Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Refer to Response to Comment No. 157-2 for a general discussion of construction traffic.

Comment No. 157-4

Additionally, having all the parking on Grove Drive makes no sense. Grove Drive is not able to accommodate that many cars. I feel like this process is rushed and the EIR has been rushed and all these details have not been fully thought through. What alternative routes or streets were considered?

What is the overall parking plan for the development? Aren't they required to have something like a parking management plan? Does it include the implications for the neighborhood?

Response to Comment No. 157-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project, prevent spillover parking, and access and use of The Grove Drive. The Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site.

Comment No. 157-5

Unless these measures are addressed I strongly oppose this project.

Response to Comment No. 157-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 157-2 through 157-4.

Comment Letter No. 158

Tom Drew
2714 Ivan Ct.
Los Angeles, CA 90039-2601

Comment No. 158-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 158-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 159

Helen Duffy
129 N. Detroit St.
Los Angeles, CA 90036-2915

Comment No. 159-1

I am a 38 year resident of this neighborhood with my cat Marlene. I have several issues and concerns with the proposed TVC 2050 Draft EIR as follows:

Response to Comment No. 159-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 159-2 through 159-5.

Comment No. 159-2

- I don't understand the square footage referenced in the Draft EIR and how that differs from the definition of square footage based on the LAMC. What is the true square footage? Why is it necessary to have a differing definition? It appears that it is advantageous to the developer to create a new definition in order to minimize the amount of square footage proposed on the project site. If the definition of square footage based on the LAMC was utilized, would that change any of the impact results? Please explain.

Response to Comment No. 159-2

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 5-7 with regard to the definition of floor area and how all of the proposed uses, areas, and activities have been accounted for in the impact analyses in the Draft EIR regardless of whether they meet the definition of floor area. As discussed in Topical Response No. 2, the Project's definition of floor area included in Section II, Project Description, of the Draft EIR and in the proposed Specific Plan is based on the LAMC definition, with a few additional clarifications to account for the unique nature of studio uses and functions, as was done in the Paramount Pictures Specific Plan (Ordinance No. 184,539), which is the most recent and direct precedent for this Project. As discussed in Response to Comment No. 16-21, the Project includes the creation of a specific plan, which is a land use ordinance enacted by the City Council superseding standard LAMC regulations. Citywide, specific plans and other overlays are used to prescribe land use and zoning regulations that differ from standard LAMC provisions.

Comment No. 159-3

- What is the actual project? The Draft EIR references a “conceptual project” but based on the land use exchange, it could be any combination of uses which could be located anywhere on the project site. Why was an unfeasible land use exchange scenario used in the Draft EIR in the Transportation Section where studios would not be built? Why would an entertainment studio not build studios? This is completely unrealistic. What was the purpose of doing this?

Response to Comment No. 159-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 5-6, 9-12, 9-13, and 9-14 with regard to the Project’s studio objective, the Conceptual Site Plan that was analyzed in the Draft EIR, the conceptual nature of all plans in an EIR, the Project’s limited Land Use Exchange Program, and the regulatory framework under the proposed Specific Plan.

With respect to the transportation analysis, the Draft EIR analyzes the maximum impact scenario (i.e., the development scenario under the limited land use exchange program that would generate the greatest environmental impact). Refer to Appendix FEIR-3 of this Final EIR, which discusses the maximum impact scenarios that were analyzed for each environmental topic, as applicable, in addition to the proposed development program as set forth in Table II-2 of Section II, Project Description, of the Draft EIR.

Comment No. 159-4

- The anticipated employees at the project site are projected to be around 8,000. Why wasn’t an alternative proposed that included affordable housing for its employees and other members of the community? There is housing available in Los Angeles, but it is not affordable.

Response to Comment No. 159-4

Section V, Alternatives, of the Draft EIR includes a range of reasonable alternatives to the proposed Project. Included among the alternatives analyzed is Alternative 4, the Mixed-Use Alternative, which includes 3,680 residential units, of which 14 percent (516 units) would be affordable units for Very Low-Income households. Refer to pages V-91 through V-126 of Section V, Alternatives, of the Draft EIR for more information on Alternative 4.

Refer also to Topical Response No. 16, Project Alternatives Analysis, for a discussion of alternatives suggested during public comment.

Comment No. 159-5

Many studio employees must drive long distances to secure jobs at studios. Providing affordable housing on-site would reduce vehicle miles traveled and improve the quality of life for such employees. Further, the vehicle miles traveled of 3.5 miles is woefully inadequate. As stated, many employees must travel long distances to secure jobs at studios. How did the project arrive at 3.5 vehicle miles traveled?

Response to Comment No. 159-5

The Draft EIR makes no claim that the average travel distance to the Project Site is only 3.5 miles. The commenter mistakenly assumed the 6.7 miles result of the work VMT per employee analysis to be a round-trip and approximated the one-way trip distance to be 3.5 miles; that analysis and conclusion are incorrect. Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156 and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. Please see Response to Comment No. 16-2 regarding housing.

Comment No. 159-6

I have [sic] you will thoughtfully consider my concerns and provide the information requested.

Response to Comment No. 159-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 159-2 through 158-5.

Comment Letter No. 160

Cassandra Duran
427 1/4 N. Sierra Bonita Ave.
Los Angeles, CA 90036-2460

Comment No. 160-1

I am deeply concerned about the environmental impact of this project—LA air is already dirty but this project puts a truck road and studio buildings right next to apartments, schools, health clinics and retirement homes where vulnerable people live. Please show a health study.

Response to Comment No. 160-1

This comment is similar to Comment No. 141-2. Refer to Response to Comment No. 141-2. In addition, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds and impacts would be less than significant.

Comment No. 160-2

And what about noise levels for these residents, students, and patients—it's pretty clear that constant noise is exhausting for the human body.

Response to Comment No. 160-2

Refer to Response to Comment No. 26-138 for a discussion of noise exposure and hearing loss.

Comment No. 160-3

My other concerns is that this project has no housing. When people live in a neighborhood, they invest in the community and take care of it—our community doesn't need more office space and daily commuters; we are in desperate need of all kinds of housing. Please show an alternative with housing as part of this project.

Response to Comment No. 160-3

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Refer to Response to Comment No. 159-4 regarding the analysis of Alternative 4, which is a mixed-use alternative with an affordable housing component.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 161

Dylan
634 N. Orlando Ave.
West Hollywood, CA 90048-2112

Comment No. 161-1

I am writing to express my concerns regarding the proposal for the TV City expansion. I am concerned about the lack of specifics contained within the plan, particularly when it comes to noise during the construction phase and after the construction is complete.

Response to Comment No. 161-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 161-2 and 161-3.

Comment No. 161-2

Construction obviously produces all types of noise: noise from the trucks driving in and out of and on the construction site, from the construction equipment itself, and from the construction activities. What kinds of construction trucks and equipment will be entering the property? What times of day will there be construction activities and which days of the week? Are there certain days and times of the day that we will not have to deal with construction vehicles driving into and out of the area? What permits do these vehicles need, and are they different for the different kinds of equipment? It doesn't seem there has been any acknowledgement of how all this noise and hours of construction will impact residents.

Where is the information about what kinds of noise, from what sources, and which streets and neighbors are going to be impacted the most and the least? Please don't just tell me where to find the information, as I can't make my way through some long and complicated report. Please respond to those questions above when you respond to this letter. And I want to know how this information was derived—what are the thresholds for noise pollution? Who decides what those thresholds are?

Response to Comment No. 161-2

Refer to Response to Comment No. 26-E.1-48 for a discussion of noise impacts from construction truck trips. The construction schedule is included on pdf page 30 in

Appendix B of the Draft EIR and is also discussed further in Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR. The types of construction equipment and vehicles used for each phase of construction are provided in pdf pages 52–57 of Appendix J of the Draft EIR and summarized in Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR. All equipment and vehicles will be operated in accordance with applicable regulatory requirements. Note that haul routes have been analyzed in the Draft EIR and approved by LADOT. Refer to pages II-34 and II-35 of the Draft EIR, Appendix B of the Draft EIR and Topical Response No. 14, Construction Vehicle Impacts, for a detailed description of the haul routes and the number and type of construction trucks during each phase of construction.

Construction hours are provided in Section II, Project Description, of the Draft EIR. As stated on pages II-33 and II-34 therein, “[i]n accordance with Los Angeles Municipal Code (LAMC) requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between 8:00 A.M. and 6:00 P.M. on Saturday or national holidays, or outside of these hours if a temporary noise variance is approved by the Los Angeles Board of Police Commissioners.... Hauling activities are anticipated to occur between the hours of 7:00 A.M. and 4:00 P.M. with approval from the Bureau of Engineering District Engineer as well as between 8:00 A.M. and 4:00 P.M. on Saturdays.”

The noise assumptions for each piece of construction equipment are provided in Table IV.I-9 of Section IV.I, Noise, of the Draft EIR, and the resulting noise levels at each receptor location are provided in Table IV.I-10 of the Draft EIR. Noise levels with mitigation measures included are provided in Table IV.I-19 of the Draft EIR. Off-site vehicle noise levels are provided in Table IV.I-16 (Future Plus Project) and Table IV.I-17 of the Draft EIR.

Thresholds of significance for the noise analysis were determined by the Department of City Planning and are discussed on pages IV.I-29 through IV.I-31 of Section IV.I, Noise, of the Draft EIR. As stated therein, the CEQA Appendix G thresholds are relied upon for the analysis, with specific criteria established by the 2006 L.A. CEQA Thresholds Guide.

Comment No. 161-3

How was it determined when construction can occur? Are all of the other activities that are happening in the area at the same time taken into account when any analysis of noise levels was done—noise from daily commuting, weekends when more shoppers and visitors may visit the area?

Response to Comment No. 161-3

Construction hours are established by LAMC Section 41.40.

Construction would occur in accordance with the hours permitted by the LAMC. Refer to Response to Comment No. 161-2. The noise analysis included in Section IV.I, Noise, of the Draft EIR is based on the increase in noise over ambient conditions. Refer to Response to Comment Nos. 26-E.1-5 and 26-E.1-43 for a discussion of the City's noise measurement standards and ambient noise levels.

Comment No. 161-4

The community needs specifics about what the plan is and what the impacts will be. People who live here need clarity and to know exactly how they will be impacted. Telling residents that there will be no impacts is just true. Thank you for responding to these questions and concerns.

Response to Comment No. 161-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 161-2 and 161-3. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

The Project's impacts are summarized in Table I-1 of Section I, Executive Summary, of the Draft EIR.

Comment Letter No. 162

Tommy Edery
106 N. Fuller Ave.
Los Angeles, CA 90036-2812

Comment No. 162-1

As a lifetime LA. resident, I have spent my fair share of time over by Beverly Blvd. and Fairfax Ave.

Response to Comment No. 162-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 162-2

Driving on these streets, it is not uncommon to see regular car crashes, some quite severe. These crashes have become so problematic that the Los Angeles Department of Traffic went so far as to identify these streets as “High Injury Network” streets. This means that these streets have a higher incidence of “severe and fatal collisions” than the average street in LA.. [sic] Now you want to build a huge development right on these streets, which will only lead to more traffic and potential collisions? How can that be justified? How can a development of that scale and scope be approved for that intersection, given the HIN? What is going to be done to ensure all of the construction from the development does not make these streets even more dangerous than they already are? Why not build somewhere where the streets are safer and drivers are less likely to get into accidents? Before I support this project, I want to know how the city is going to make this project and these streets safer.

Response to Comment No. 162-2

Refer to pages 74-75 of the Project’s Initial Study included as Appendix A of the Draft EIR; pages 124–128 and 141–150 of the Project’s Transportation Assessment included as Appendix M.1 of the Draft EIR; and Topical Response No. 12, Safety and Congestion, for a discussion of traffic safety in the vicinity of the Project. The Transportation Assessment for the Project acknowledges that the Project Site is located on roadways that are part of the High Injury Network in the City. The Project’s Transportation Improvement Program, summarized in Table 23 of the Transportation Assessment, includes improvements aimed at traffic safety along the HIN corridors, including Vision Zero and Transportation System Management improvements, that will improve both pedestrian

and vehicular safety. In addition, refer to Topical Response No. 12, Safety and Congestion, regarding measures that have been included in the Project's transportation improvement program in the form of TDM strategies and traffic signal and operational improvements along the HIN corridors that would advance the traffic safety goals of the City's Vision Zero Program and would include LOS benefits. Refer also to Topical Response No. 11, Transportation Demand Management.

Regarding the scale and scope of the Project and compatibility of the Project with surrounding uses, refer to Response to Comment Nos. 5-8 and 11-3.

Appendix M.1, Transportation Assessment, of the Draft EIR includes a complete Project construction assessment (refer to Section 5D, pages 179 through 184). As discussed therein, while construction-related activities associated with the Project would result in varying levels of truck and worker trips to and from the Project Site on a daily basis, such trips would be far less than operational Project-related trips. Additionally, the Project includes a CTMP pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 to IV.K-37 of the Draft EIR), which would include provisions to limit the amount of construction-related trips during peak hours to the extent feasible, as well as a prohibition of construction worker or equipment parking offsite. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Comment No. 162-3

Also, let's not ignore the fact that these streets are filled with traffic. Not only will the construction make this worse but the draft report says rideshares such as Ubers and Lyfts will be picking people up and dropping them off along Beverly Blvd and Fairfax Ave. Where will that take place? Will they pull over right along these extremely busy streets? How many stops will there be and located where? It is simply insane to me that the city thinks this is acceptable. Traffic is already bad enough on these roads and the construction will make it worse and now you want to add people getting in and out of cars? It takes people a few minutes to find their driver. They have to look at the license plate, ask them who the car is for, and then actually get into the car. This is going to make traffic on these streets worse than it already is. Frankly, I will not be spending time over in the Beverly Fairfax area if this is a case.

Response to Comment No. 162-3

The bulk of the rideshare pick-up and drop off will take place in the Mobility Hub, which is planned as an off-street facility near Fairfax Avenue and 1st Street. For more information on the location and operations of the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. Additional rideshare areas will be provided on-site near the Genesee

gate and near the southeast parking structure. These off-street rideshare areas have been designed and integrated into the Project Site to minimize effects on traffic driving past the Project.

Comment No. 162-4

I believe the city has some serious concerns to take into account when it comes to this project and I hope they do so before moving forward with something that will ruin this neighborhood in Los Angeles.

Response to Comment No. 162-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 162-2 and 162-3.

Comment Letter No. 163

Edward P. Edward
25 S. Oak Knoll Ave., Apt. 331
Pasadena, CA 91101-2169

Comment No. 163-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 163-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 164

Bob Eisele
359 S. Citrus Ave.
Los Angeles, CA 90036-3035

Comment No. 164-1

I am writing to express my concerns about many aspects of this proposed plan for Television City. These concerns demand major reconsideration of this project.

Response to Comment No. 164-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 164-2 through 164-4.

Comment No. 164-2

To start, what is the route that trucks will take while traveling to the project site and then when moving away demolition, debris and dirt from the project site? Why have routes not been confirmed? Will the routes vary depending upon the day and time of day? What if an accident shuts down one of the routes or causes a long delay? Will the trucks take different detours then? I think that this is crucial and it must be clarified.

Response to Comment No. 164-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 9-22, 107-2, and 124-6 regarding construction haul routes and construction traffic impacts. As discussed therein, three routes were selected to comprehensively analyze the potential haul routes and ensure all associated environmental impacts were evaluated in the Draft EIR.

Comment No. 164-3

How much demolition debris and dirt is expected, on a weekly basis? What are previous studies on environmental impacts of debris and dirt on nearby properties? What about studies on the health impacts of debris and dirt on nearby residents? Why are there different options for the trucks? How is it determined which trucks get which options? Are these trucks going to line up and be idling outside of my house choking me and my children with exhaust? Even if you do clarify the truck routes, how are they going to be enforced? Will it be the local authorities, or are you hiring people to do it? Please answer the

questions above in enough detail for anyone to have a clear understanding of your plan and potential impacts in might have on our environment, and more importantly, health.

Response to Comment No. 164-3

The Draft EIR provides the number of truck trips that would be required for and associated with the demolition of 495,860 square feet of buildings and export of 772,000 cubic yards of export. As shown on pdf page 32 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, approximately 80 daily truck trips over 65 working days were evaluated for demolition and approximately 640 daily truck trips over 185 working days were evaluated for potential excavation/export impacts. All haul truck staging would occur onsite per LADOT's haul route approval letter dated June 30, 2022. Project haul routes for both loaded and empty construction trucks and hours/days of operation are also disclosed in LADOT's approval letter, available in Appendix M.5 of the Draft EIR. Project Design Feature TR-PDF-1 requires a detailed CTMP to be developed to manage the flow of construction vehicles and minimize impacts to the community as detailed on pages IV.K-36 through IV.K-37 in Section IV.K, Transportation, of the Draft EIR. Moreover, idling would be restricted to no more than 5 minutes at any given time consistent with CARB airborne toxic control measure (ATCM) requirements. Pursuant to CEQA, a Mitigation Monitoring Program would be implemented, including reporting and/or monitoring and enforcement procedures, to support the implementation of the Project's environmental commitments as detailed in this Final EIR; refer to Section IV, Mitigation Monitoring Program.

A quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The health risk assessment demonstrates that construction risk estimates and incremental operational risk estimates at the points of maximum impact (PMIs), even after accounting for increased truck traffic associated with future operations, would be below SCAQMD's risk thresholds, further affirming the statements on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of toxic air contaminants would result in a less-than-significant impact.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 for a discussion of the overall construction schedule, the estimate of the construction trip generation, construction traffic safety, haul routes, and the CTMP. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD.

The Project Site is large enough that all haul truck staging will occur on-site, thus no idling outside of the Project Site would occur. There are no plans for long-term closures of travel lanes along the streets adjacent to the Project Site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Per CARB-mandated limits, diesel-fueled

commercial vehicles (delivery trucks) are not allowed to idle for more than 5 minutes at any given time, which would further limit diesel particulate emissions.

Comment No. 164-4

Similarly, what are the working hours and under what timeline is this project going to take place? I'd imagine that with demolition debris and dirt, there must be loud things that are going to occur. How will this noise not going to [sic] make it unbearable to live in the neighborhood? Can you assure the neighborhood of that? Specifically, how loud do you expect these actions to be? Will anything take place during the nighttime, making it harder for me to put my children to bed? Are we going to be woken up early in the morning with the sound of loud explosions?

Response to Comment No. 164-4

Refer to Response to Comment No. 161-2 for a discussion of permitted construction hours, including hours for hauling. Construction hours would occur within daytime hours with the exception of nighttime activities necessary for mat pour activities that would occur for a maximum of five days.

Anticipated noise levels during both construction and operation of the Project are fully analyzed in Section IV.I, Noise, of the Draft EIR. Refer to Table IV.I-19 of the Draft EIR regarding construction noise levels from on-site construction activities and Table IV.I-11 of the Draft EIR regarding noise levels from hauling activities. No explosions would occur during construction activities.

Comment No. 164-5

I feel entitled to a thorough response to all of the above. These are questions that directly relate to the quality of life of Beverly Fairfax residents, and it is important to consider that! Please answer the above and include any additional detail that you think is important for us to have a better understanding.

Response to Comment No. 164-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 164-2 through 164-4.

Comment Letter No. 165

Diana Elizalde
7100 Hillside Ave., Apt. 102
Los Angeles, CA 90046-2339

Comment No. 165-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. Comment Letter No. 166

Jeremy Elkaim
413 N. Ogden Dr.
Los Angeles, CA 90036-1710

Comment No. 166-1

I am very concerned about the development plan for the Television City location. I am concerned about the increase in traffic. I am [sic] heard that this could take 20 years or more with the construction of this development. Also, the amount of 18 wheel trucks and the cueing in our area.

The plan talks about many dozens of large 18 wheeler trucks driving to and being on the site. Is there any analysis of the environmental impacts that so many 18 wheelers will have on the community? I worry that no consideration has been given to how these trucks will affect air quality and am very curious if this has been considered at all. If it has been examined, what did the city find out? Those findings should be shared with the public. How often will this particular kind of truck traffic be driving to the property, and from where? Will they park on the property? For how long?

Response to Comment No. 166-1

Refer to Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR) for a discussion of the effects of adding Project vehicles to the street system serving the area. The addition of Project vehicles does not cause any of the 31 study intersections to change from an LOS D or better to an LOS E or F condition. A detailed discussion of truck and auto trips during construction may be found in Topical Response No. 14, Construction Vehicle Impacts. The preferred construction program would build the entire Project in one phase which would complete the construction in a 32-month time period.

This second paragraph of this comment is identical to Comment No. 157-2. Refer to Response to Comment No. 157-2, above.

Comment No. 166-2

What about when they are exiting the property? They will have to turn into the huge amount of traffic on the streets that lie all around the perimeter of the property, so how will that be done?

There are no dedicated lanes to get cars and trucks on the street. If there were dedicated turn lanes where vehicles could turn onto the project the traffic and congestion would still be very bad—but without dedicated turn lanes, it's going to be a huge mess. This community will not be able to accommodate this type of additional consequences for the traffic situation in that vicinity. What is going to be done about this?

Response to Comment No. 166-2

This comment is identical to Comment No. 157-3. Refer to Response to Comment No. 157-3, above.

Comment No. 166-3

Additionally, having all the parking on Grove Drive makes no sense. Grove Drive is not able to accommodate that many cars. I feel like this process is rushed and the EIR has been rushed and all these details have not been fully thought through. What alternative routes or streets were considered?

What is the overall parking plan for the development? Aren't they required to have something like a parking management plan? Does it include the implications for the neighborhood?

Response to Comment No. 166-3

This comment is identical to Comment No. 157-4. Refer to Response to Comment No. 157-4, above.

Comment No. 166-4

Unless these measures are addressed I strongly oppose this project.

Response to Comment No. 166-4

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 166-1 through 166-3.

Comment Letter No. 167

Holly Fader

Comment No. 167-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 167-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 167-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 167-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 167-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut-through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 167-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 167-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 167-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 167-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 167-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 167-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20 years which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 167-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 167-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 167-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 168

Nina Fales

Comment No. 168-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 168-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 168-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 168-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut-through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 168-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 168-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 168-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 168-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 168-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 168-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20 years which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 168-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 168-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 168-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 169

Rainbow Fang
1211 Graynold Ave.
Glendale, CA 91202-2020

Comment No. 169-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 169-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 170

Julia Farman
128 N. La Jolla Ave.
Los Angeles, CA 90048-3528

Comment No. 170-1

I don't like anything about this project, starting with what it's going to look like and where are the buildings going to be actually located!

Response to Comment No. 170-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 170-2.

Comment No. 170-2

The height maps allow buildings up to 20 stories (225 feet) in some areas and 15 stories in other areas (160 feet).

But it is not clear where any of these buildings will be actually built and how big they will be. Our community has no idea of what will actually be built and has no way to evaluate the impacts of the project—we don't want this in our neighborhood!

Please provide clarity as to what will be built and where.

Response to Comment No. 170-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. See also Topical Response No. 3, Permitted On-Site Uses, with regard to the land uses that would be permitted in the proposed Specific Plan Ordinance. Regarding the height of the Project, refer to Response to Comment Nos. 11-3 and 26-7. Lastly, the massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 171

Nosson Fasman
239 S. Formosa Ave.
Los Angeles, CA 90036-2813

Comment No. 171-1

I am a long-time resident of Beverly Fairfax. Recently, I read over the Draft Environmental Impact Report for the Television City Project. I find this draft EIR to be really concerning and found myself with more questions than answers. In this letter, I am going to outline several of my questions related to the DEIR's alternative mobility plan, specifically. I hope the City and the developer take time to read each of my questions and respond with thorough answers.

Response to Comment No. 171-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 171-2 and 171-3.

Comment No. 171-2

Currently, this development proposes that employees and visitors will use alternative means of transportation for live shows. While I concede that (in theory) this would help reduce traffic, I do not see how this plan is feasible in application. What is the plan if Television City is hosting live shows before the future Metro purple line is finished? The Wilshire/Fairfax stop is not expected to be operational until 2024. Will employees and audience members need to use the parking available to residents until the Metro stop is operational? What happens when track maintenance on the purple line is happening? These estimates seem inflated. What additional studies can be conducted to give realistic alternative mobility estimates?

Response to Comment No. 171-2

This comment is identical to Comment No. 108-3. Refer to Response to Comment No. 108-3, above.

Comment No. 171-3

Furthermore, I am concerned that this alternative mobility plan is ableist. The future Wilshire/Fairfax stop is 0.8 miles away from Television City. Are high-quality sidewalks in

place for those who may use a wheelchair? If so, where are they located and when were they last determined to be ADA-approved? Will the crosswalk signals be adapted so that blind employees and visitors can safely walk the 0.8 miles to the studio? If they have not already been adapted, when will these critical changes be made?

Response to Comment No. 171-3

The transportation plan for connecting the subway station to the Project Site includes a direct shuttle system that would carry Project employees and visitors between the subway station and the Project Site's Mobility Hub to be located on-site near the signalized intersection of Fairfax Avenue and 1st Street. Refer to Topical Response No. 7, Mobility Hub. This shuttle would be capable of accommodating blind, wheelchair, and ADA visitors and employees. Overall, the Project would be ADA compliant.

Comment No. 171-4

Ultimately, I want to make sure this project makes sense for all Beverly Fairfax residents. In its current state, I do not see that being possible. When will the city release a revised DEIR with reflections of the community's wants and needs?

Response to Comment No. 171-4

This comment is identical to Comment No. 108-4. Refer to Response to Comment No. 108-4, above.

Comment No. 171-5

I look forward to hearing your response.

Response to Comment No. 171-5

Refer to Response to Comment Nos. 171-1 through 171-4. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 172

Michael Fazie
7957 W. Fourth St.
Los Angeles CA 90048-4412

Comment No. 172-1

When I learned of the Television City Studio project, traffic was the first thing to come to my mind. With this new development will come more cars driving through my residential area. Noise will increase. Air quality will be impacted for sure.

Response to Comment No. 172-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

With respect to neighborhood intrusion, the Transportation Assessment, included as Appendix M.1 of the Draft EIR, includes a residential street cut-through analysis as part of its non-CEQA transportation analysis. Refer to pages 167–173 of the Transportation Assessment. Additionally, the Project calls for the development of a NTMP to minimize potential cut-through trips. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for more information.

Refer to pages IV.I-48 through IV.I-54 of Section IV.I, Noise, of the Draft EIR for an evaluation of transportation noise. As discussed therein, Project impacts associated with transportation noise would be less than significant.

Air quality impacts are fully analyzed in Section IV.A, Air Quality, of the Draft EIR. Refer to Table IV.A-7 on page IV.A-64 of the Draft EIR. As discussed therein, impacts associated with mobile emissions associated with operation of the Project would be less than significant.

Comment No. 172-2

Safety is going to be an issue with even more drivers driving on main streets and driving through neighborhood streets to bypass the backed up traffic on the main streets. What

streets are going to be affected? How did you identify those streets and what was studied and where? What did those studies show about more cars cutting through our neighborhoods to avoid congestion?

Response to Comment No. 172-2

As part of the non-CEQA cut-through analysis, the Project's Transportation Assessment, included as Appendix M.1 of the Draft EIR, details the nearby streets that are the most likely to be affected by potential cut-through trips. Figure 6 in the Transportation Assessment shows the 31 key intersections in the Study Area that were studied in detail, while Figure 21 shows the amount of Project trips assigned to each street in the area. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan.

In terms of traffic safety, Table 23 in the Transportation Assessment shows the traffic safety improvements that are included in the Project's Transportation Improvement Program, including both Vision Zero and Transportation Systems Management improvements, aimed at improving traffic safety in the area. Refer also to Topical Response No. 12, Safety and Congestion.

Comment No. 172-3

I heard that this project will be 2 million square feet. Have you thought about how this will impact the community? The current Television City is embedded in our community. What standards are you applying to determine whether a proposed development fits, or doesn't fit, well in a neighborhood. The neighborhood is long established, with a lot of character and the historic district just to the north. So how was it determined that a huge, modern, tall building would somehow be a good fit? When is a new development determined to not fit well into a community, due to size, scale, proposed uses, too many people coming and going, etc.?

Response to Comment No. 172-3

Refer to Response to Comment No. 11-3 regarding the size of the Project and its compatibility with the surrounding area. The Project would not permit the development of 2 million square feet, as incorrectly stated in the comment. As discussed on page II-12 of Section II, Project Description, of the Draft EIR and throughout the Draft EIR, at full buildout, the proposed Specific Plan would permit a total of up to a maximum of 1,874,000 square feet of floor area within the Project Site, which is a modest, approximately 17-percent increase in permitted floor area compared to existing zoning. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 regarding the Project Description and proposed Specific Plan.

As discussed in Section I, Executive Summary, of the Draft EIR, the Department of City Planning relied upon the thresholds in Appendix G of the CEQA Guidelines, which are discussed in each impact analysis in Section IV of the Draft EIR. Therefore, the assessment of the Project's impacts for each environmental topic studied in the Draft EIR is measured against the thresholds of significance for that topic in accordance with CEQA.

In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's potential to conflict with applicable plans, policies, and regulations that regulate land use on the Project Site, as well as the compatibility of the Project with surrounding land uses, and concluded that impacts would be less than significant. As discussed therein and in Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR, the Project would retain the Project Site's land use as a studio facility, which has operated in the neighborhood since the 1950s. With the exception of the six-story Broadcast Center Apartments located immediately to the east, surrounding residential areas are separated from the Project Site by major thoroughfares, such as Beverly Boulevard and Fairfax Avenue, and the retail uses that line them. The Project would complement the neighboring community through design elements that would be compatible with surrounding uses; concentrate building height and mass towards the center and rear of the Project Site; and provide an enhanced public realm to promote walkability, foster connectivity and safety, and better integrate on- and off-site uses. The proposed Specific Plan would include height zones with specified maximum height limits to regulate building heights throughout the Project Site, with taller maximum heights concentrated in the center and rear of the Project Site, away from Project Site edges. In particular, as shown in Figure II-5 in Section II, Project Description, of the Draft EIR, buildings in Height Zone C in the northeastern corner of the Project Site near the Broadcast Center Apartments would be subject to a base height limit of 88 feet, with a maximum height limit of 160 feet within up to 40 percent of the Height Zone C area. Along the Shared Eastern Property Line, a 30-foot frontage area would provide a transitional buffer between the on-site and off-site uses. Overall, with the exception of the HCM Protection Zone (Height Zone F) where no new occupiable structures could be constructed, the maximum height limits of the proposed height zones would vary from 58 feet to 225 feet, with a base height limit of 88 feet in Height Zones C and D, consistent with the height of the HCM. Frontage areas varying in depth between 5 feet and 30 feet would also be provided on all edges of the Project Site and would function as buffers and transitional space around the Project Site perimeter. Within these areas, features, such as sidewalks, landscaping, security kiosks, fences, walls, projections, stairs, balconies, and parking would be permitted. Additionally, building stepbacks, varying between 10 feet and 20 feet would be provided along Fairfax Avenue, Beverly Boulevard, and the southern property line/Southern Shared Access Drive to reduce building massing and vary building forms by pulling the façade of upper stories back from the building edge at a predetermined elevation. Building stepbacks would apply to those portions of buildings in Height Zones C and D greater than 88 feet in height above Project

Grade. Refer to Response to Comment Nos. 9-16, 11-3, 16-56, 26-8, and 26-19 regarding the proposed height zones and frontage areas.

Furthermore, the Project would enhance the public realm through streetscape improvements to enhance the pedestrian experience. Visual screening and fencing would be provided around the entire Project Site perimeter within a softened, landscaped edge condition. The Project, with its landscaped open space areas, contemporary design, and integration of historic uses that help define the character of the Project Site and surrounding area, would represent a positive contribution to the urban elements of the surrounding cityscape. Refer to Response to Comment No. 16-72 regarding the Project's pedestrian-oriented design and public realm improvements.

As discussed in Section IV.B, Cultural Resources, of the Draft EIR and Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, the Project does not have the potential to directly or indirectly impact the Beverly Fairfax Historic District due to the distance between the Historic District and the Project Site.

Comment No. 172-4

What consideration was given to the impacts of the project on local schools nearby? There are factors to consider given children represent a different, more vulnerable population. Where is the analysis of the impacts on schools and students? What were the findings? How are those impacts going to be addressed? What measures are going to be taken to reduce the impacts on them? Will those impacts and measures be monitored? By whom?

Response to Comment No. 172-4

As stated on pages IV.A-69 and IV.A-72 in section IV.A, Air Quality, of the Draft EIR, and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations, including schools. The HRA was conducted following conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children. For detailed HRA modeling assumptions, refer to Appendix FEIR-10 of this Final EIR.

Pursuant to CEQA, a Mitigation Monitoring Program will be implemented, including reporting and/or monitoring and enforcement procedures, to support the implementation of the Projects environmental commitments (i.e., PDFs and mitigation measures). Refer to Section IV, Mitigation Monitoring Program, of this Final EIR.

Comment No. 172-5

I understand that my neighborhood will never be void of noise or traffic. I understood that when I moved here, but I moved into a residential community. This is a neighborhood and should not be congested with fast cars, heavy trucks, and nighttime traffic.

Please consider these concerns and tell the community how this project is going to respond to those concerns.

Response to Comment No. 172-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 172-1 through 172-4.

Comment Letter No. 173

Joe Ferreri
454 N. Curson Ave.
Los Angeles, CA 90036-2371

Comment No. 173-1

I have lived in Beverly Fairfax for 24 years. As a member of this community, I would like to share my questions and concerns about the Television City Project's draft Environmental Impact Report.

Response to Comment No. 173-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 173-2.

Comment No. 173-2

When will the public learn more about the project's specific plan? Primarily, I am concerned about the lack of information around each building's location. The height map you provided allows 15-20 story buildings, with no real plan for where they'll be located. While it might not make much of a difference for the developer's operation, it could make a big difference on how I feel about this project. Until I see the specific plan, I will struggle to support this project. When will the city re-circulate the DEIR to include this plan? More importantly, did the city and developer ever draft the specific plan? If so, why did it not make it in the DEIR?

Response to Comment No. 173-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, the proposed development program that was analyzed in the Draft EIR, and the level of detail required for a specific plan project EIR. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. As further discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 173-3

Again, I will not be able to support this project until I see its specific plans. Additionally, I will struggle to support this if my questions above go unanswered.

Response to Comment No. 173-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 173-2.

Comment Letter No. 174

Ryan Fey
460 Harper Ave.
Los Angeles CA 90048-2221

Comment No. 174-1

I cannot believe that someone would submit a draft EIR this vague and the city would seriously consider moving forward. This is an almost 2,000,000 square foot immense project that will bring thousands of new people into our neighborhood and we know almost NOTHING about it.

Response to Comment No. 174-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 174-2 through 174-4.

Comment No. 174-2

1. What is a specific plan and where is the specific plan? It isn't in the EIR. Why isn't it circulated with the EIR? When will we get to see it? What if there are details and specifics about the project in the specific plan that would be problematic for the community, but the community does not see those details before the project gets approved? How does that make any sense?

Response to Comment No. 174-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, including how the Specific Plan was not required to be included as part of the EIR and how the physical aspects of the Specific Plan are fully accounted for in Section II, Project Description, of the Draft EIR and in the associated impact analyses throughout the Draft EIR. Although not required by CEQA or a City policy, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR. Please note that the Preliminary Draft Specific Plan incorporates the same Project elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of the Final EIR.

Comment No. 174-3

2. What new buildings are being constructed on the property? Where are they, exactly? How tall and what size are they? And what will those buildings be used for? What if what the buildings are going to be used for is not compatible with the nearby residential area? Please give us specifics.

Response to Comment No. 174-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, the Conceptual Site Plan that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan. As discussed therein, the massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Refer to Response to Comment No. 5-9 with regard to building heights and height zones. Refer to Topical Response No. 3, Permitted On-Site Uses, with regard to the studio land uses that would be permitted in the proposed Specific Plan Ordinance. Regarding the height of the Project, including with respect to surrounding uses, refer to Response to Comment Nos. 11-3 and 26-7. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's potential to conflict with applicable plans, policies, and regulations that regulate land use on the Project Site, including the LAMC, among others, as well as the compatibility of the proposed uses with surrounding land uses, and concluded that impacts would be less than significant.

Comment No. 174-4

3. There are historic buildings in this neighborhood. We care about the character of our neighborhood and want to see that character maintained. How is the impact on those buildings considered by the developer? What about the historic buildings on the lot? Which are historic? How old does a building have to be to be considered historic and why? If a building is important to the character of our neighborhood and is part of our city's history, shouldn't the project's impact on the building be preserved? Why or why not?

Response to Comment No. 174-4

The Draft EIR fully evaluated the Project's potential impacts on historical resources on the Project Site and in the vicinity in Section IV.B, Cultural Resources, of the Draft EIR and the Historic Report (Appendix C.1 of the Draft EIR), and concluded that impacts would be less than significant (see pages IV.B-41 to IV.B-59 of the Draft EIR). Also refer to Sections D, Analysis of Impacts to the Primary Studio Complex, and E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5,

Historical Resources, regarding how impacts to the Primary Studio Complex were analyzed in the Draft EIR. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5 regarding the portions of the Primary Studio Complex that are designated as an HCM. In addition, refer to Subsection IV.B.2.a in Section IV.B, Cultural Resources, of the Draft EIR for a comprehensive explanation of the criteria to be considered a historical resource.

Comment No. 174-5

We live here. We want answers and this project should NOT move forward until the developer spells out the full details of what this project actually is.

Response to Comment No. 174-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 174-2 through 174-4.

Comment Letter No. 175

Lisa Field

Comment No. 175-1

As a nearby resident, I am concerned about this proposed Television City studio development. Unfettered growth in the area is only causing more pollution from increased vehicle traffic. Inevitably we will witness an increase in pedestrian injury and death caused by the influx of new vehicles on the road, and the confusion that a huge construction project like this will create in the area for walkers and cyclists.

We have a duty to safeguard all resident's health and wellbeing, but I feel particularly fearful for our children at Fairfax High School as they walk to and from their place of learning through the mess the project is going to create.

Response to Comment No. 175-1

Air quality analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, of the Draft EIR. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. All other air quality impacts would be less than significant or less than significant with mitigation. Refer to Response to Comment No. 26-E.1-2 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant.

Pedestrian hazards and safety are discussed in Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3. As discussed in detail therein, the design of each driveway would be reviewed and approved by LADOT as part of the design, regulatory permitting and construction process, and safety issues, such as safe sight distance and pedestrian control across the signalized locations, would be confirmed in the detailed driveway design approval process. Much of the Project's Transportation Improvement Program is focused on Vision Zero improvements aimed at pedestrian safety and bus stop enhancements. The Project would also implement improved pedestrian crosswalks, a pedestrian crossing beacon, left-turn arrows, and traffic signal improvements, which would all contribute to area-wide pedestrian safety.

Furthermore, a CTMP would be required pursuant to Project Design Feature TR-PDF-1, which will address many of the comment's concerns regarding pedestrian safety during construction. No sidewalks adjacent to the Project Site would be closed

during construction for anything but very temporary occurrences such as utility connections from the street to the Project Site. In the event of a temporary sidewalk closure, a safe temporary alternative would be provided.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 175-2

And if we must build, why don't we build more affordable housing for the poor and lower middle-class folks that already live right here in the neighborhood or nearby? If we must increase the number of vehicles in the area, let it be because we have opened our doors to residents priced out of adjacent areas. We can serve as a good neighbor, and I strongly recommend we do just that. L.A. and L.A. County have a wonderful opportunity to act boldly—and acting boldly means standing up to useless development in favor of development that helps everyone instead of the wealthy few. With rent prices rising astronomically, and the dream of homeownership out of reach for all but the most privileged among us, we must set the example for the rest of the city of Los Angeles and reject this proposed development.

Response to Comment No. 175-2

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, the provision of housing, and the consideration of economic and social effects under CEQA.

Comment No. 175-3

As a lifelong Angeleno, I urge you to reject this pointless project, but I also challenge you to push harder to encourage the right kinds of development to make the city we all love more livable.

Response to Comment No. 175-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 175-1 and 175-2.

Comment Letter No. 176

Allen Fineman
614 S. Orange Dr.
Los Angeles, CA 90036-3508

Comment No. 176-1

This letter is in reference to the TVC 2050 project. In the Environmental Setting section of the Land Use and Planning chapter, the developer states that the land use chapter of the City's General Plan included policies that shape the scale and intensity of proposed uses with the purpose of supporting the vitality of the City's residential neighborhoods and commercial districts. My question is: How will this proposed project support the vitality of the City's residential neighborhoods and commercial districts? What criteria was applied in what constitutes vitality? That is a sweeping statement, please explain specifically. Also, were residents asked about whether they want this project that will supposedly support the vitality of this area?

Response to Comment No. 176-1

The discussion referenced by the commenter is part of the regulatory framework section of Section IV.H, Land Use and Planning, of the Draft EIR, which generally describes the Land Use Chapter of the General Plan Framework Element and is not a specific objective or policy contained therein. While the text discussed by the commenter is not a specific objective or policy, the Draft EIR analyzed the potential for a significant impact related to land use based upon the Appendix G thresholds in the CEQA Guidelines, which states that the Project would have a significant impact related to land use if it would cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. As discussed on pages 1–8 of Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR, the Project would not conflict with the applicable objectives and policies of the General Plan Framework's Land Use Chapter that were adopted for the purpose of avoiding or mitigating an environmental effect, and impacts would be less than significant. Note the term vitality is intended to convey the ability for an area to endure. Refer to Response to Comment No. 11-3 regarding the Project's scale and compatibility with the surrounding area. Also refer to Response to Comment No. 172-3 with regard to the Project as it relates to the surrounding community and to Response to Comment Nos. 28-13 and 32-3 regarding the public outreach that has been conducted for the Project and the noticing of the Project in compliance with CEQA.

Comment No. 176-2

The residential neighborhoods that are directly adjacent to this bustling area have already been struggling with serious traffic concerns, lack of parking, lack of accessibility when it comes to sidewalks/bus stops/benches, and crime. Beverly Fairfax is a very established historic district. Given that the size of a project would take years to fully complete, it would require the surrounding community to adjust for years-long inconvenient construction. What benefits will come to the residential neighborhoods if this project is approved? Not benefits to other organizations and programs, but what are the community benefits directly to the residential neighborhoods that will be most impacted by the project?

Response to Comment No. 176-2

This comment, expressing generalized concern about existing conditions in the Project vicinity and construction, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

With respect to congestion during construction, as discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, congestion is not a CEQA impact. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment.

As discussed in Topical Response No. 13, Parking, the proposed onsite parking supply would be sufficient to accommodate the peak parking demands of the Project and would prevent spillover parking. Please note that the adequacy of a project's parking supply is not an environmental impact under CEQA.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding access and safety.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, for a discussion of why potential cut-through trips would not result in a significant CEQA impact on the Beverly Fairfax Historic District.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 176-3

There are many schools in the Beverly Fairfax district where many students use our sidewalks, bike lanes, and bus stops daily. With everything that I've read about the project, it seems like a project where they have to include very long-term adjustments for the nearby neighborhood for this project to be completed. Do we have any indication that this project is the appropriate scale for the neighborhood that Television City resides in? What leads the city to conclude that, if so? Where is scale, size, character, fit in the neighborhood considered? Please explain the details of that analysis.

Response to Comment No. 176-3

The existing schools near the Project Site were considered throughout the Draft EIR, including the transportation analysis included in Section IV.K, Transportation, and Appendix M.

With respect to the scale and character of the Project, pursuant to Public Resources Code Section 21099, because the Project is an employment center project located on an infill site, the Project's aesthetic impacts shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 31–40 of the Initial Study.

Refer to Response to Comment No. 131-2 regarding the Project's height and scale.

Comment Letter No. 177

Julie Finger
156 S. Gardner St.
Los Angeles, CA 90036-2718

Comment No. 177-1

I am wondering if the Draft EIR actually took into account those of us who live adjacent to the proposed projects who have been working from home since the start of the pandemic. Many of us will continue to work from home as the new normal. As 55 year resident this has changed the complexion of the community.

Response to Comment No. 177-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 177-2

According to the Draft EIR, there will be significant impacts from noise. Based on Appendix M of the Draft EIR, the hauling of material is estimated at 772,000 cubic yards. However, Footnote 11 indicates that this number is just an estimate and that the amount is actually 822,000 cubic yards of material. Why the difference? Further, the hauling of this material is anticipated to take 9 months. Does that mean residents who live adjacent to Beverly Boulevard (the anticipated route) will have to endure the noise of haul trucks for 9 months? The Draft EIR is identifying 640 daily truck trips during that time period. What is the applicant doing to mitigate this impact on residents?

If the project's proposed development agreement is approved by the decision-makers, does that mean that residents will have to endure a relentless bombardment of noise during the construction of a 20-year period? If this is the case, will the construction have any interim periods of "no-build" so the community can have some relief from the construction noise?

Please explain how your methodology took into consideration the project's noise impacts on those of us working from home in the adjacent residential properties.

Response to Comment No. 177-2

As stated in the Project Description and throughout the Draft EIR, the Project would include an estimated 772,000 cubic yards of cut, potentially 50,000 cubic yards of imported fill and up to 772,000 cubic yards of export, and all earthwork volumes include estimates for both rough grading and over-excavation. As stated in footnote 11 on page 181 of the Transportation Assessment (Appendix M.1 of the Draft EIR), the 772,000 cubic yards of excavated material represents the estimated quantity of export, and a total of 822,000 (772,000 + 50,000) cubic yards of total import/export material is anticipated during excavation. The Draft EIR analyzed potential impacts related to hauling and import/export in the relevant environmental topic areas.

As shown in Table IV.I-11 on page IV.I-42 of Section IV.I, Noise, of the Draft EIR, off-site noise impacts from haul truck trips along Beverly Boulevard would be less than significant. As discussed in Section II, Project Description, of the Draft EIR, hauling activities would occur between the hours of 7:00 A.M. and 4:00 P.M. with approval from the Bureau of Engineering District Engineer as well as between 8:00 A.M. and 4:00 P.M. on Saturdays.

Refer to Response to Comment No. 9-24 regarding the construction timeline and proposed Development Agreement and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

The noise analysis included in Section IV.I, Noise, of the Draft EIR is based on the increase in noise over ambient conditions. Refer to Response to Comment No. 26-E.1-5 for a discussion of noise measurement standards and to pages IV.I-32 through IV.I-33 of the Draft EIR for a detailed description of the methodology used to evaluate noise impacts.

Comment Letter No. 178

Brian Finke
6367 Drexel Ave.
Los Angeles, CA 90048-4703

Comment No. 178-1

I have many qualms with this project, so I'll try to be concise. Here are my issues:

Response to Comment No. 178-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 178-2 through 178-6.

Comment No. 178-2

- The project applicant is trying to put a massive parking lot right next to the homes of working people. Grove Street can't handle the cars that already park there, let alone a swarm of TVC employees that will come. How is this going to be dealt with?

Response to Comment No. 178-2

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. The parking areas being constructed along the north and west boundaries of the Project Site (i.e., the areas closest to existing residential neighborhoods) are proposed to be underground parking structures in order to minimize noise and visual impacts on the residents.

The traffic capacity analyses presented in Table 18 on page 162 in the Project's Transportation Assessment (Appendix M.1 of the Draft EIR) showed that The Grove Drive had more available capacity than either Fairfax Avenue or Beverly Boulevard and is capable of handling the Project trips.

Comment No. 178-3

- More traffic next to Loyola High School?? Really?? Loyola is in a relatively low-income neighborhood. Way to show what kind of people you care about.

Response to Comment No. 178-3

Loyola High School is located more than 4 miles away from the Project Site. Less than 10 percent of Project trips is anticipated to approach the Project Site from the southeast, and, therefore, the Project's impact on the streets in the vicinity of the school would be minimal. Further, all construction haul truck staging would occur on-site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 178-4

- The traffic this project would produce on all of the surrounding streets and beyond is astronomical! I'll spare you the normal complaints about traffic. I'm more worried about what these extra idling vehicles would do to our environment! LA is already covered in smog every day. This project would just make this worse.

Response to Comment No. 178-4

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project.

Air quality impacts are fully analyzed in Section IV.A, Air Quality, of the Draft EIR. Operational emissions, including those associated with traffic, were determined to be less than significant. Refer to Section IV.A, Air Quality, of the Draft EIR, pages IV.A-69 through IV.A-73. Furthermore, all construction haul truck staging locations would be located on-site, so no haul trucks would be idling off-site. Per CARB-mandated limits, diesel-fueled commercial vehicles (delivery trucks) are not allowed to idle for more than 5 minutes at any given time, which would further limit diesel particulate emissions.

Comment No. 178-5

- The EIR is clearly written to keep residents like me in the dark. How am I supposed to comment on a "conceptual" plan? How am I supposed to read and understand technical studies and analyses? The impacts this project would have on my life are not conceptual. They're very real. I want an honest chance to see real plans, so I can give my real opinion.

Response to Comment No. 178-5

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, how the Project Description discloses all of the elements of the Project required by

CEQA, and the required discretionary process (which includes subsequent CEQA compliance review) for future changes that are substantially different than the Project that was analyzed in the EIR. As discussed therein, the massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, CPC-2021-4089-AD-GPA-ZC-SN-SP. As also discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Refer to Response to Comment Nos. 28-13 and 32-3 regarding the public outreach that has been conducted and the noticing of the Project in compliance with CEQA. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day period required under CEQA. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Comment No. 178-6

All in all, can someone please explain to me what's actually happening here? They say they will accompany the "general plan" with a "specific plan." That sounds like developer garbage to me. If they actually cared about Beverly Fairfax, they would make sure residents and community members get to voice their opinions. Until I have ample opportunities to voice my opinion and see proof that developers care, I think this project should be rejected.

Response to Comment No. 178-6

Refer to Response to Comment No. 178-5 regarding the adequacy of the Project Description.

The remainder of this comment does not raise an environmental issue specific to CEQA, the Draft EIR, or the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 178-7

Thank you. I look forward to seeing how the City of LA responds.

Response to Comment No. 178-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 179

Miriam Fishman
135 S. Formosa Ave.
Los Angeles, CA 90036-2815

Comment No. 179-1

The proposal to reconstruct Television City and add various buildings is not only a change to one specific area, but it will transform the Beverly Fairfax neighborhood and Beverly Fairfax Historic District into an urban center we will not recognize anymore.

Response to Comment No. 179-1

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project would not result in any significant impacts to the Beverly Fairfax Historic District.

The comment regarding transformation of the Beverly Fairfax neighborhood and Beverly Fairfax Historic District into an urban center does not concern the Draft EIR's analysis of environmental impacts, and no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 179-2

The plan details are confusing and unspecific. The draft Environmental Impact Review seems to explain that changing the zoning would allow the developers to build a variety of types of buildings. This gives way too much flexibility to the developers, leaving the community with no information about the potential impacts of the different possible development scenarios. For instance, the proposal could allow for a building over twenty stories to be constructed right near the Adobe and the Farmers Market. When would the community know if that is actually going to be built? What about the impacts to the Adobe and Farmers Market if that happens? What about the impacts if a different scale building and location are built? What is the expected loss of revenue for the Adobe and Farmers Market during construction?

Response to Comment No. 179-2

As discussed throughout the Draft EIR, the Project is a studio project, and the proposed Specific Plan will permit five land uses (i.e., sound stage, production support, production office, general office, and retail). Refer to Topical Response No. 1, Clearly

Defined Project Description and Specific Plan, and Topical Response No. 3, Permitted On-Site Uses. As discussed therein, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the Project. The Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website for informational purposes prior to the release of this Final EIR. Please note that this draft is not final and has not been reviewed or approved by City decision-makers (it will be reviewed by City decision-makers following the publication of this Final EIR). Please note that the Preliminary Draft Specific Plan incorporates the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of the Final EIR. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. Following the publication of this Final EIR, a finalized draft of the Specific Plan and the Project's other requested approvals will be considered during several public hearings and meetings before City decision-makers prior to any approval.

With regard to building heights, new buildings would be constructed in accordance with the Height Zone Map provided in Figure II-5 of the Draft EIR.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project would not result in significant impacts to the Gilmore Adobe or The Original Farmers Market.

The comment regarding loss of revenue does not relate to the Draft EIR's analysis of environmental impacts. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 179-3

Will parking at either of these sites be removed or limited during any of the construction stages?

Response to Comment No. 179-3

Neither the parking supply nor the operation of the parking on The Original Farmers Market or The Grove would be affected by the construction on the Project Site.

Comment No. 179-4

From what sides will the Original Farmers Market sign be blocked? This sign is a long recognized part of our community.

Response to Comment No. 179-4

The Project Site is located north of substantial existing commercial development associated with The Grove shopping and entertainment center. No interruption of existing views of The Original Farmers Market sign from the public right-of-way is anticipated as a result of the Project. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comments Nos. 5-13 and 363-1 regarding impacts to The Original Farmers Market.

Comment No. 179-5

Will construction of the project impact access and parking at Farmers Market? Where will customers and employees park at the Farmers Market park during construction? If they have to park far away from the site, will the developers provide a shuttle service and how frequently will it run?

Response to Comment No. 179-5

Project construction would not affect access or parking at The Original Farmers Market.

Comment No. 179-6

Has there been an analysis on the impact of vibration frequencies to the Adobe, and what were the findings? This site dates back to the 18th century. Is there a study on the impacts of ground shaking activities, blasting and vibrations on an 18th century building? Please provide a complete analysis before beginning any construction. This is a historic district. We need to preserve our historic landmarks.

Response to Comment No. 179-6

Refer to Response to Comment Nos. 26-139 and 363-2 for a discussion of vibration impacts to the Gilmore Adobe. As discussed therein and demonstrated on page IV.I-60 of the Draft EIR, vibration impacts to the Gilmore Adobe would be less than significant. Further, as concluded in Section IV.B, Cultural Resources, of the Draft EIR and discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, historic impacts to the Gilmore Adobe would be less than significant.

Comment No. 179-7

I am asking the Los Angeles city planners and the developers of this project to revise the draft EIR with specific information on project details and planning stages. I worry for my community and my neighbors. Thank you for your consideration on these important issues.

Response to Comment No. 179-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 179-1 through 179-6.

Comment Letter No. 180

Joanne Floro
152 S. Hayworth Ave., Apt. 5
Los Angeles, CA 90048-3616

Comment No. 180-1

If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with the consequences of the increased pollution, noise and traffic, the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 180-1

This comment is identical to Comment No. 114-5. Refer to Response to Comment No. 114-5, above.

Comment Letter No. 181

Victoria Floro
152 S. Hayworth Ave., Apt. 5
Los Angeles, CA 90048-3616

Comment No. 181-1

If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with, as well as consequences of the increased pollution, noise and the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 181-1

This comment is identical to Comment No. 114-5. Refer to Response to Comment No. 114-5, above.

Comment Letter No. 182

Stephen J. Ford
941 N. Genesee Ave., Apt. 3
West Hollywood, CA 90046-7347

Comment No. 182-1

I have been a resident of the Fairfax area for 9 years, and I have a concerns about the TVC proposal. I fear that my daily life is going to be impacted a great deal, and I want some clarification.

Response to Comment No. 182-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 182-2 through 182-4.

Comment No. 182-2

My first question has to do with all of the parking that is going to be required. It seems clear that there will not be enough parking on the property itself. Why else would the plan refer to off-site parking? So, what is considered off-site parking? Where would temporary off-site parking be? What streets do you plan on designating for off-site parking? Which neighborhoods are going to be designated as off-site parking areas? How many cars will be allowed in off-site parking areas? Will truck need to be parked in off-site parking areas? How many trucks are we talking about?

How are you going to make sure that our neighborhoods maintain the same level of safety if more cars are going through them to park? Do you have people to monitor these areas to make sure that children can still walk and play around our streets safely?

Response to Comment No. 182-2

The first paragraph of this comment is identical to Comment No. 103-2. Refer to Response to Comment No. 103-2, above.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as

discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

With respect to neighborhood intrusion, the Transportation Assessment included as Appendix M.1 of the Draft EIR includes a residential street cut-through analysis as part of its non-CEQA transportation analysis. Refer to pages 167–173 of the Transportation Assessment. Additionally, the Project calls for the development of a NTMP to protect the neighborhoods most susceptible to cut-through effects from the Project. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for more information.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Comment No. 182-3

What were the findings about cars or trucks in off-site parking areas emitting exhaust, which will be dangerous to residents nearby? Have there been any studies you have conducted to make sure that air pollution as a result of off-site parking doesn't hurt residents? Please provide as much detail as you can with respect to the health of residents nearby off-site parking zones.

Response to Comment No. 182-3

This comment is identical to Comment No. 103-4. Refer to Response to Comment No. 103-4, above.

Comment No. 182-4

I am also curious about who would be displaced by production and filming related activities, something mentioned in the plan, and why would they be? How many people do you think will be displaced? Over what timeframe do you think they will be displaced? Is the draft EIR referring to employees at the site being displaced? If this is the case, where would they be able to park? Would this flow into our neighborhoods? If so, how many cars will be parking in our neighborhoods? How do we ensure that we are able to park near our houses instead of far away?

Response to Comment No. 182-4

This comment is identical to Comment No. 103-5. Refer to Response to Comment No. 103-5, above.

Comment No. 182-5

The Draft EIR does not go into nearly enough detail about any of the points made above. It would be unfair to the Fairfax community if we became one large parking site. We have a safe and peaceful area now. However, this will change if we become on large parking lot. I look forward to receiving your answers to the concerns and questions I have posed.

Response to Comment No. 182-5

This comment is identical to Comment No. 103-6. Please refer to Response to Comment No. 103-6, above.

Comment Letter No. 183

Austin Fomme
112 S. Hayworth Ave., Apt. 5
Los Angeles, CA 90048-3623

Comment No. 183-1

I am very concerned about the walkability and safety issues about this proposed project. Also, the possible 20 years of emissions, traffic and lack of parking. As well as a hundred thousand or more trucks going to go up and down Fairfax to build this project. What is an accurate count of all the trucks needed?? What will be the physical impact to Fairfax from these massive trucks going up and down Fairfax. Can you tell me how many schools, churches, temples, homes and apartments on Fairfax will be impacted? Someone should actually count the numbers of these uses along Fairfax. And isn't Fairfax a single lane in each direction for portions? And you want to bring a hundred thousand or two hundred thousand trucks through this area? Have these people and businesses along this corridor been told what is going to happen to them?? Did you mail notices to these people? And you want to park thousands of trucks over by Loyola High School?? And by the Kaiser Hospital.

Have you notified the High School and the hospital of this?? The noise, air quality, safety issues through this area will be tremendous. Where is the analysis of all this? And why did the developer pick a lower income area to park these trucks in?? Can you provide the demographic information for these communities where the developer wants to park tens of thousands of trucks and polluting these communities?? Were these communities mailed notices of the Draft EIR??

Response to Comment No. 183-1

First, construction of the Project is not expected to take 20 years. The Draft EIR analyzes a construction schedule of approximately 32 months. In addition, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is also included for each of the environmental topics studied in the Draft EIR. The Development Agreement would be valid for a 20-year time frame, and the Project is requesting the opportunity to construct portions of the Project over that time period. Refer to Response to Comment No. 9-24 regarding the construction timeline.

Refer to Response to Comment No. 162-2 regarding the construction assessment included in Appendix M.1, Transportation Assessment, of the Draft EIR. Refer to Topical

Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

The reference to “a hundred thousand or more trucks going to go up and down Fairfax to build this project” is incorrect. Page 180 of the Transportation Assessment (Appendix M.1 of the Draft EIR) explains the truck movements on one of the busiest construction days of the year, and it shows that a total of approximately 320 trucks per day will enter the Project Site. As also described in Topical Response No. 14, there would be three haul routes used by the construction trucks serving the Project Site. Not all of the Project construction trucks will use Fairfax Avenue and especially not the two-lane section of Fairfax Avenue. There is no longer a plan to stage haul trucks near Kaiser Hospital or Loyola High School. All haul trucks would be staged on the Project Site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Pedestrian hazards and safety are discussed in Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3. As discussed in detail therein, the design of each driveway would be reviewed and approved by LADOT as part of the design, regulatory permitting and construction process, and safety issues, such as safe sight distance and pedestrian control across the signalized locations, would be confirmed in the detailed driveway design approval process.

Noticing for the Project has been conducted in accordance with CEQA. Refer to Response to Comment No. 28-13 regarding the comprehensive public outreach that has occurred and to Response to Comment No. 32-3 regarding noticing for the Project.

Air quality and noise analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. All other air quality impacts would be less than significant or less than significant with mitigation. As discussed in Section IV.I, Noise, of the Draft EIR, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. All other noise impacts would be less than significant.

Comment Letter No. 184

Tamar Frankiel
435 N. Alta Vista Blvd.
Los Angeles, CA 90036-2540

Comment No. 184-1

I am a resident of the Beverly-Fairfax area and have lived here for over 30 years. I state as a disclaimer that I am not a supporter of nor have any financial connections with the Grove, Farmers Market (“Original” or later), or any political alliances related to the upcoming Los Angeles mayoral election.

Response to Comment No. 184-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 184-2

First, let me say I am not opposed to commercial development of the former CBS Television property or to continuing its primary use for entertainment production.

Response to Comment No. 184-2

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 184-3

However, I am opposed to the size of the project—not out of purely aesthetic concerns such as high towers, but the demands this will place on the City government, the neighborhood, and the residents to accommodate the density of occupancy.

Response to Comment No. 184-3

Refer to Response to Comment No. 11-3 regarding the size of the Project. With regard to the demands the Project would place on the City government, refer to Section IV.J.1, Public Services—Fire Protection, and Section IV.J.2 Public Services—Police Protection, of the Draft EIR regarding the less-than-significant impacts of the Project related to fire and police protection services. With regard to other governmental services,

such as parks and libraries, impacts to these services were determined to be less than significant in the Initial Study (Appendix A of the Draft EIR). Refer to Response to Comment No. 100-2 for further discussion with regard to the Project's impact upon infrastructure and public services. Also refer to Response to Comment No. 172-3 with regard to the Project as it relates to the surrounding community.

Comment No. 184-4

Of the main details involved in such a huge project, I have chosen to focus on transportation and parking.

Response to Comment No. 184-4

Refer to Response to Comment Nos. 184-7 through 184-9 with regard to transportation and parking.

Comment No. 184-5

I will also state objections to the rezoning question (Regional Center designation).

Response to Comment No. 184-5

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 184-6

Further, because of the massive size of the project, I will state an objection to the process, which has not included enough citizen input or given enough time for same.

Response to Comment No. 184-6

Documented outreach efforts have occurred with regard to the Project. As discussed in Response to Comment Nos. 28-13 and 32-3, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 184-7

Transportation and Traffic:

The_Wilshire [sic] Community Plan states in section 16-2.1:

No increase in density shall be effected by zone change, plan amendment, subdivision or any other discretionary action, **unless** the Decision-makers make the following findings or a statement of overriding considerations, [namely, that]:

The transportation infrastructure serving the project site and surrounding area, presently serving the affected area within the Wilshire Community Plan, have adequate capacity to accommodate the existing traffic flow volumes, and any additional traffic volume which would be generated from projects enabled by such discretionary actions.

For the City to affirm the above, the Planning Department should demonstrate that (1) the estimated 4000 workers on the project during construction will be accommodated by the transportation hub at Beverly and Fairfax; **and** (2) after construction when the property is in regular use, the number of workers estimated to be on the property daily would not generate traffic volume beyond capacity; **and** (3) that existing parking in the community will not be reduced by employees on the property, as TVC2050 has affirmed.

The TVC2050 plan argues that there will be no conflict with this section of the Wilshire Community Plan. This is based on complicated calculations that result in a VMT (Vehicle Miles Traveled) assessment, joined to claims that studio production is on different schedules than normal office work, *and* adding numerous promises for future improvement by the Project developers or by the City (not clear which). This argument depends on hypothesis and hope. Notwithstanding the optimism, the plan certainly is in conflict with the ability of the infrastructure **presently serving the affected area** to accommodate the existing and future-generated project and not negatively affect either the site **or the surrounding area**.

We have to face the facts: The only mass transit currently serving the area is a few bus lines. I will not spell out the details, but a straightforward layman's accounting, based on current bus sizes, number of lines, and a conservative estimate of current riders on the buses at Fairfax/Beverly and Fairfax/West 3rd intersections, is that in either 3-hour 'rush'

segment, morning or evening, 600 bus seats might be available in any given direction. Not enough for thousands of construction workers now, nor thousands of office workers later.

Response to Comment No. 184-7

As discussed on pages IV-K-65 and IV.K-66 of Section IV.K, Transportation, of the Draft EIR, the Project would not conflict with Objective 16-2 and related Policy 16-2.1 of the Wilshire Community Plan.

Refer to Response to Comment No. 162-2 regarding the construction assessment included in Appendix M.1, Transportation Assessment, of the Draft EIR. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Under SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, impact thresholds relative to changes in driver delay are no longer applicable to identify transportation-related significant impacts under CEQA, and “conflicts” with LOS policies under the Wilshire Community Plan are not significant under CEQA. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). Nevertheless, the Project would implement a comprehensive TDM Program that would encourage visitors and employees to reduce vehicular traffic on the adjacent streets during the peak hours by promoting carpooling and non-auto travel through pedestrian-friendly designs and orientation that facilitates transit use. Although Project trips could be further reduced with implementation of TDM Program, no additional trip reductions were assumed in the operational LOS evaluation. As stated in LADOT’s Assessment Letter provided in Appendix M.2 of the Draft EIR, LADOT has reviewed the non-CEQA operational evaluation and determined it adequately discloses operational effects. Thus, the Draft EIR and Transportation Assessment fully evaluated and disclosed the operating conditions of the street system in accordance with the City’s guidelines. Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 regarding the effectiveness of TDM programs.

Regarding the comments that the “only mass transit currently serving the area is a few bus lines,” that comment is incorrect. If constructed in a single phase on a 32-month timeline, by the time that Project construction is completed, the Metro D (Purple) Line Wilshire/Fairfax Station is expected to be completed, and the Project’s Mobility Hub would include by a dedicated shuttle bus system that connects Project employees, visitors, and audience members directly to the Wilshire/Fairfax Station.

Also, pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the onsite parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 184-8

Also, TVC 2050's assessment of streets affected by through traffic includes only a few blocks across Beverly Blvd, and across Fairfax. All of us who drive in the area know that any traffic increases on Beverly have impacts as far north as Willoughby, as far east as La Brea, and as far west as Crescent Heights. The east-west streets to the south, from 6th to Pico, are already maxed out at rush hours.

Response to Comment No. 184-8

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR), and in particular Section C, Boundaries of the NTMP Areas. As stated therein, a project's effect on congestion and automobile delay, including cut-through trips, are not transportation impacts under CEQA. Nevertheless, as discussed in Topical Response No. 9, the Project would include an NTMP to minimize potential cut-through trips on the residential streets surrounding the Project Site. In addition, refer to Topical Response No. 11, Transportation Demand Management, which discusses the Project's robust TDM Program aimed at reducing vehicle trips and promoting public transit usage.

Comment No. 184-9

Parking: The TVC2050 project promises parking for 5,300 cars (obviously, after construction is complete). Is this truly enough to accommodate employees working in the 1,800,000 sq ft project? The project touts its ability to "create" 14,000+ jobs, but that includes jobs throughout the city, not only on the property. So, ignoring that promotional advertising, how many people might be working on the property?

There is an industry standard to calculate square feet per person: On [sic] person per 125 square feet of office space.

The TVC2050 plan says that of the more than 1,800,000 square feet, 25% per cent [sic] will be dedicated to sound-stage production and 75% to office space in 4 tower buildings. Thus office space could be 1,325,000 sq ft. Just to operate with round figures, let's knock off 7-1/2% of that for executive suites and conference rooms, and say 1,250,000 sq ft is simply "offices." At 125 sq ft per worker that is 10,000 office workers.

TVC2050 has certainly not contemplated providing parking for that many people, and instead uses a different calculation, namely: 1 to 3 parking spaces per 1000 square feet of floor area. This is not adequate for the percentage of office space planned, for it amounts to 1 to 3 spaces for 8 employees in the office portions (1,350,000 square feet), and none for employees in the sound production buildings. Their way of calculating parking assumes uniformity throughout the property, and as their own evidence indicates, many fewer people work per square feet in the production buildings than in the offices.

All this points to a central problem with massive office buildings with high density worker population. It's unrealistic to manage the vehicle traffic, it's impossible to provide enough parking. Not to mention the many other projects in the city that could have additional impact.

None of this includes the people TVC2050 describes as “guests”—presumably those who have appointments on the property, or studio audiences, all of whom will have to find parking on nearby streets. The Draft EIR describes many local streets where “unmetered parking with permit exemptions” is “generally available” (IV.K-16-28). While technically that's true, permit exemptions are, of course, intended for residents, their guests, or the disabled; and the reality is that street parking is tight for other visitors and retail customers. No one should be misled by the Draft EIR into thinking that TVC guests will find easy parking within a few blocks!

Response to Comment No. 184-9

Although the adequacy of a development's parking supply is not a CEQA impact per SB 743, a response to this comment is included for informational purposes. Refer to Topical Response No. 13, Parking, for a discussion of the Project's proposed on-site parking supply, the parking ratios in the proposed Specific Plan, the adequacy of the proposed on-site parking supply to meet the peak parking demand of the Project and prevent spillover parking, and the results of the shared parking analysis.

The comment describes an “industry standard” employee density of one person per 125 square feet of office space but provides no citation. As shown in Table IV.K-5 of the Draft EIR, the Project would employ approximately 7,832 people on-site, including approximately 7,752 non-retail employees. These estimates include one employee per 250 square feet of office space (5,600 employees in 1,400,000 square feet of general and production office allowed under the Specific Plan) in accordance with the ratios identified in Table 1 of *City of Los Angeles VMT Calculator Documentation* (City of Los Angeles, May 2020). The remainder of the employee estimates were identified in Table 3 of the Project's Initial Study, provided as Appendix A.1 of the Draft EIR. There would not be 10,000 office workers at the Project Site, as incorrectly stated in the comment. Refer to Response to Comment No. 26-167 for further discussion of the calculation of employees.

The sufficiency of the Specific Plan parking ratios of two to three spaces per 1,000 square feet is described in detail in Topical Response No. 13. Contrary to the comment's claim, the parking ratios are not applied uniformly throughout the property, as different ratios apply to different Project land uses. It should be noted that the LAMC parking requirement for office space is two spaces per 1,000 square feet and the Specific Plan ratio is three spaces per 1,000 square feet for the general and production office uses.

While the management of vehicle traffic is not an environmental impact category under CEQA, the Project's Transportation Assessment (Appendix M.1 of the Draft EIR) included a comprehensive non-CEQA analysis of traffic conditions within the Study Area and at the Project access points with the addition of Project trips as well as trips from related projects in the vicinity. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion.

As discussed in Topical Response No. 13, off-site parking would not be needed to support the Project, as the proposed parking supply would enable all Project employees and visitors to park on-site.

Comment No. 184-10

Objections to the process:

The original proposal was required to be sent in 2021 only to the people and businesses within 550 feet of the boundaries of the project. This is patently outrageous for a project of such magnitude and wide scope, not to mention hundreds of pages of documentation in the Draft EIR.

Response to Comment No. 184-10

Refer to Response to Comment No. 28-13 regarding the comprehensive public outreach that has occurred and to Response to Comment No. 32-3 regarding noticing for the Project.

Comment No. 184-11

The city owes it to the residents of this area to allow much more time for citizens to educate themselves about the proposal and its alternatives.

Response to Comment No. 184-11

Refer to Response to Comment No. 32-3 regarding the public comment period.

Comment No. 184-12

I hope I do not need to say that it would be highly inappropriate to move this project any further, in any way, before the November city elections.

Response to Comment No. 184-12

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 184-13

Objections to rezoning / change [sic] of designation:

TVC2050 does not qualify for designation of this property as a Regional Center.

The Regional Center designation is well described in the Wilshire–Crescent Heights Environmental report as "a focal point of regional commerce, identity and activity and containing a diversity of uses such as corporate and professional offices, residential, retail commercial malls, government buildings, major health facilities, major entertainment and cultural facilities and supporting services" (page 3).

While a Regional Center's structures including high-rise buildings can be commercial/professional only (not necessarily residential), the idea is clearly to emphasize diversity and easy integration of various aspects of community life. Regional Centers are supposed to include many "non-work destinations." TVC2050 is an entertainment production center with additional (rentable) work spaces. "Retail" facilities are alluded to but not clear in the plan. No other non-work destinations are mentioned. Other than adding a few gates, it does not encourage pedestrian activity.

Response to Comment No. 184-13

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation.

Comment No. 184-14

Instead of changing the overall designation, the City should allow modest exceptions to the height limits on buildings in the Project area: 7–10 stories for all buildings on the property. The center could continue with its present identity, enhanced.

Response to Comment No. 184-14

This comment does not raise an environmental issue specific to the Draft EIR and the environmental impacts addressed therein. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 185

Tamar Frankiel
435 N. Alta Vista Blvd.
Los Angeles, CA 90036-2540

Comment No. 185-1

Two more questions:

In the DEIR project description, a note on the “Proposed Development Program” table (II-13) says “The proposed approximately 1.874 million square feet of floor area per the Specific Plan definition is equivalent to approximately 1.984 million square feet based on the LAMC definition and approximately 2.103 million gross square feet.” I take it that this means 100000–120000 [sic] square feet would be considered floor area by the Metropolitan Code. Can the builders decide to exempt some of their work to reduce floor area calculations? Or is this an option included in the early planning process?

Second, for this project, office space is divided into two types: “production office” (635,000 sq ft) and “general office” (594,000 sq ft), either of which might be increased to 700,000 sq ft. I understand that production offices support the main industry, media and studio production and their auxiliaries listed previously. Is it correct that the “general” category can be rented out to anyone? And is there any difference, from the City Planning Department’s point of view, between the two categories?—are they both regarded as just commercial office space with no special considerations or exemptions, tax or land use or other, for either type?

Response to Comment No. 185-1

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 5-7 with regard to the definition of floor area under the proposed Specific Plan that was disclosed in the Draft EIR. As discussed in therein, the Draft EIR does not underestimate the size of the Project, and all proposed uses, areas, and activities have been accounted for in the Draft EIR. Table II-2 of the Draft EIR shows the existing floor area, as well as the floor area of the proposed development program illustrated in the Conceptual Site Plan. As shown therein, the proposed development program includes 635,400 square feet of new construction of production office (700,000 square feet total when accounting for existing floor area to remain), and 594,070 square feet of new construction of general office (700,000 square feet total when accounting for existing floor area to remain).

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-12 with regard to the Project Description and proposed Specific Plan, the Conceptual Site Plan that was analyzed in the Draft EIR, and the regulatory process under the proposed Specific Plan.

With regard to the difference between production office and general office uses, refer to Response to Comment Nos. 26-122, which discuss the definitions of the permitted uses in the Preliminary Draft. Generally speaking, production office is specifically related to production activity and general office refers to all office uses, inclusive of production office. Definitions have been added in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 185-2

I would like the FEIR to clarify the differences, in the developers' viewpoint, between the two office types and the rationale for their relative proportions.

Response to Comment No. 185-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 185-1.

Comment Letter No. 186

Yosef Freedman
611 N. Poinsettia Pl.
Los Angeles, CA 90036-1926

Comment No. 186-1

I am very concerned about the TVC 2050 project and its impact on the city's history.

Los Angeles is incredibly storied and millions of people visit every year to see parts of the entertainment industry's past. My understanding is that only a part of this historic CBS building is going to be protected. Why isn't more of the complex going also going to be protected?

The historic part is designated as a Historical-Cultural Monument. If the project were to be approved, the developer changes what gets built from what was approved, does that put the designation at risk? I understand that the designation was based on certain aspects of the iconic building meeting certain criteria. But it seems that some of what is being proposed in the development does not maintain the integrity of the designation, so please explain fully how the integrity of this proposed modern, state of the art development maintains that historic integrity?

Is there a process for ensuring that what led to the protected parts of the site getting the designation in the first place is not going to be compromised? Who is responsibility for overseeing that? What is the process for appealing changes to other older parts of the building that also are historic?

Since there are so many aspects of the development that lack detail, and the developer is asking for flexibility in developing the site, how can we be sure that that flexibility doesn't mean changes to what has been promised regarding the protected part? How can we even know that when changes could be made to aspects of the project?

The city needs to make sure that more of this iconic, legendary building is preserved, as it has a unique and irreplaceable role in the city's television history.

Response to Comment No. 186-1

As discussed in Response to Comment No. 28-25, one of the Project objectives is to "[r]ehabilitate and preserve the integrity of the Primary Studio Complex consistent with the HCM designation and restore the currently obstructed public views of the HCM consistent with the HCM designation, while building upon Pereira & Luckman's master plan for a

flexible and expandable studio campus.” Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the Project Parameters and the rehabilitation and preservation of the Primary Studio Complex.

The Draft EIR included a comprehensive analysis of the Project’s potential impacts to the Primary Studio Complex, which is a designated HCM, in Section IV.B, Cultural Resources, of the Draft EIR and the Historic Report (Appendix C.1 of the Draft EIR). As discussed in Response to Comment No. 26-46, the Primary Studio Complex would retain sufficient integrity to maintain its historic significance, and the Project would have a less than significant impact on the Primary Studio Complex (see pages IV.B-41 to IV.B-55 of the Draft EIR and pages 50 to 64 of the Historic Report).

Refer to Sections A, Existing Evaluation and Designation of the Primary Studio Complex, B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding how the impacts to the Primary Studio Complex were analyzed in the Draft EIR.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. The Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning’s website for informational purposes prior to the release of this Final EIR. Please note that this draft is not final and has not been reviewed or approved by City decision-makers (it will be reviewed by City decision-makers following the publication of this Final EIR). As discussed in Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, any substantial alteration to a designated HCM would require OHR review and compliance with the Rehabilitation Standards pursuant to Section 22.171.14 of the Cultural Heritage Ordinance.

Comment Letter No. 187

Alek Friedman
alek3773@gmail.com

Comment No. 187-1

I am a nearby resident (living just walking distance from the project), and am also an advocate for Smart Urban Growth, Gentrification, and Revitalization. I've also been on the CHNC's Beautification Committee (prior to the pandemic). As such, I would like to express my STRONG SUPPORT for the project.

The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

*As an advocate for Urban development, I also strongly suggest for this project to include *Decorative Sidewalks/ Pavers* on all adjacent pedestrian right-of-ways [sic]. As I'm sure you agree, currently L.A. presents a bleak picture of an endless "Concrete Jungle", due to the prevalence of naked concrete & cement. Time to get rid of it, and upgrade our sidewalks to pedestrian-friendly Pavers. This will undoubtedly make a world of difference!

Please move TVC 2050 forward for approval, and endorse the project. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan will create thousands of production jobs, and will transform the (currently outdated) studio and its appearance—into a 21st century modern, sustainable, family-friendly, and aesthetically rich environment!

Response to Comment No. 187-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 188

Mark Friedman
503 N. Fuller Ave.
Los Angeles, CA 90036-1940

Comment No. 188-1

Thank you in advance for taking the time to answer these questions. I have several concerns about the proposed TVC 2050 expansion.

Response to Comment No. 188-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 188-2

First, what exactly does the EIR mean by fueling stations and vehicle repair? Will there be a gas station (one or more) or mechanic shop on the site—is that what is being referred to? Has there been analysis of having a fueling station next to residences? What safety issues have been identified? Aren't these considered hazardous activities? Does the project need particular permits for those activities or services? What safety measures will be required and implemented? Are they required for the project to get those permits?

Response to Comment No. 188-2

The Project would not include a fueling station, vehicle repair, gas station, or mechanic shop, and these uses would not be permitted under the Specific Plan; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Refer to Topical Response No. 3, Permitted On-Site Uses.

Comment No. 188-3

Second, why is the project planning to use natural gas? I thought new buildings were supposed to be electric? What is allowing the project to use natural gas? What will natural gas be used to power?

Response to Comment No. 188-3

Please refer to Response to Comment Nos. 26-51 and 45-1 regarding natural gas usage and the City's new all-electric buildings ordinance.

Comment No. 188-4

Third, will the power generators used on the site run on diesel? Why would this not be electrified? Has there been any impact studies on the use of diesel and its emissions? What health and safety risks are there with the use of diesel?

Response to Comment No. 188-4

The Project will use electricity from power poles, if available, and/or solar generators, rather than temporary diesel or gasoline generators during construction per Project Design Feature AIR-PDF-1 (see page IV.A-47 of the Draft EIR). Refer to Response to Comment No. 26-36 regarding power generators. During operation of the Project, emergency generators will be included for emergency use during a power outage and regularly tested for maintenance purposes but otherwise will not be used to provide power to the basecamps, which will be outfitted with electric tie-ins consistent with the PDFs included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, which reflect the City's new all-electric buildings ordinance (refer to Response to Comment Nos. 26-E.1-21 and 155-4).

As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations. The HRA was conducted following conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population. All Project-related emission sources, including diesel-fueled emergency generators, were analyzed in the HRA. For detailed HRA modeling assumptions, refer to Appendix FEIR-10 of this Final EIR.

Comment Letter No. 189

Sharon Friedman
503 N. Fuller Ave.
Los Angeles, CA 90036-1940

Comment No. 189-1

As a 45 year resident, I am concerned about my quality of life for my remaining years. If the construction can take up to 20 years, will our neighborhood be subject to constant noises for that entire duration? What about the use of lights outside? What hours will we hear those constant noises and what will be the sources of the noise? And what about bright lights during construction and then for the outdoor events—where will they come from and what hours will use of lights be allowed? I live in the Beverly Fairfax neighborhood, and I know how loud construction can be, especially with excavation. Will there be anything mitigating the noise impacts if the project is being built over two decades? Or even in the short term, what steps are going to be taken right away?

Response to Comment No. 189-1

Please note that quality of life is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise. Construction noise impacts were comprehensively analyzed in Section IV.I, Noise, of the Draft EIR; refer to pages IV.I-35 to IV.I-43 therein.

Refer to Response to Comment No. 161-2 regarding construction hours and noise sources. As discussed therein and within the Draft EIR, construction would occur between the hours of 7:00 A.M. and 9:00 P.M., and thus construction lighting would not occur after 9:00 P.M., with the exception of up to five days where mat pour activities could occur during nighttime hours. Any lighting during construction and operation of the Project would be directed toward the Project Site away from residential uses as required by the LAMC. In addition, as described in the Initial Study provided in Appendix A of the Draft EIR, the Project is an employment center project located on an infill site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2452, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact.” Therefore, an evaluation of aesthetic impacts related to lighting is not required under CEQA.

Refer to Topical Response No. 3, Permitted On-Site Uses, Section C, Special Events, of Topical Response No. 10, Trip Generation, and Response to Comment No. 66-5 regarding special events.

Refer to pages IV.I-34 and IV.I-56 of the Draft EIR, which includes PDFs and Mitigation Measure NOI-MM-1 to reduce construction noise. Also refer to Response to Comment No. 26-136 regarding additional measures added to Mitigation Measure NOI-MM-1.

Comment No. 189-2

It seems like the analysis for how many people will be driving or commuting on public transportation depended on people using buses and ride the subway, is that correct? How were those estimates derived? What assumptions were made that went into what the plan says about how many people will commute on some kind of transit vs how many people will drive? I work in the area and everybody I know drives their cars. Is there any evidence people working at this project site will actually use public transportation?

Response to Comment No. 189-2

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 regarding the effectiveness of TDM programs.

Comment Letter No. 190

Steve Friedman
455 N. Edinburgh Ave.
Los Angeles, CA 0048-2307

Comment No. 190-1

Why is the City planning a large entrance on the Grove Drive? It's the narrowest street around the project site. The Grove Drive serves as the access for the apartments, post office and the Grove. There's NO studio car access on it now. It should stay that way—no studio cars or trucks on Grove Dr! Why would you put all that studio traffic and production trucks right next to the park, museum and residences? Why would you want to make it nearly impossible to access the apartment building?. [sic] The Draft EIR shows that the street will be clogged up and backup in front of the apt driveways. Why would you want to make it hard for people to access the retail stores—do you want to completely kill brick & mortar shops? This is just poor planning. From a quick look at the project plans it's clear that only about 15% of the Television City property fronts the Grove Drive. It makes no sense to make that the main entrance for all the cars and trucks and direct most of the traffic through the Grove Drive. And it's not like those cars and trucks don't already have to go on Fairfax, Beverly and 3rd Street—there's no other way to get to Grove Drive. The access and circulation for this project needs to be redone and any access from the Grove Drive be more in line with the extent to which this property actual fronts the Grove Dr.

Response to Comment No. 190-1

The traffic capacity analyses presented in Table 18 on page 162 of the Project's Transportation Assessment (Appendix M.1 of the Draft EIR) showed that The Grove Drive had more available capacity than either Fairfax Avenue or Beverly Boulevard and has capacity for the Project trips. The Grove Drive is classified as a Collector Street in the Mobility Plan and "collecting" trips from a commercial development and taking those trips to the arterial street system is the proper function of a Collector Street. See Topical Response No. 12, Safety and Congestion, regarding access and use of The Grove Drive.

Comment No. 191-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 191-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 192

David Frishberg
118 S. Laurel Ave.
Los Angeles, CA 90048-3514

Comment No. 192-1

Having lived in the neighborhood for 15 years, I can attest that traffic and parking are already a problem.

Response to Comment No. 192-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 192-2 through 192-4.

Comment No. 192-2

But the Draft Environmental Impact Reports traffic section (83 pages!) is very confusing: Is the EIR really saying that an average employee only commutes 6.7 miles per day (buried on page 75 of the traffic section).

Response to Comment No. 192-2

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths and the provision of empirical data in support of the subject analysis. As substantiated therein, the approach to, and assumptions for, using the City's VMT Calculator tool to analyze the Project's VMT impacts were appropriate, as acknowledged by LADOT in the Assessment Letter that is presented in Appendix M.2 of the Draft EIR.

Comment No. 192-3

Do the people who wrote this actually live in LA? That is completely unrealistic. People commute to work here from Santa Clarita, the San Fernando Valley and Orange County every day—has the City asked people at the existing study where they travel from?

Response to Comment No. 192-3

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 192-4

More broadly, the project description does not describe what will actually be built. It presents a set of almost an unlimited number of development options, none of which may actually be constructed. But the community has no idea of what will actually be built and has no way to evaluate the impacts of the project.

Response to Comment No. 192-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-12 with regard to the Project Description and proposed Specific Plan, the proposed development program that was analyzed in the Draft EIR, and the regulatory framework under the proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. See also Topical Response No. 3, Permitted On-Site Uses, with regard to the uses that would be permitted in the proposed Specific Plan, which were fully disclosed and analyzed in the EIR.

Comment No. 192-5

Please provide a clear and definite development program so we can understand the project and its impacts.

Response to Comment No. 192-5

A clear development program for the Project is discussed in page II-12 through page II-17 of Section II, Project Description, of the Draft EIR and the potential impacts are discussed throughout Section IV of the Draft EIR. In addition, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

G. A.

Comment No. 194-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 194-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 194-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 194-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 194-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 194-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 194-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 194-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 194-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 194-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 194-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 194-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 194-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 194-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 196

Shavinder Galtere
8137 Blackburn Ave.
Los Angeles, CA 90048-4423

Comment No. 196-1

This letter is in reference to the TVC 2050 project. After reading the Transportation Assessment of the Draft Environmental Impact Analysis, I have questions about the public amenities that the applicant mentions in the project design features. In the subsection of Project Design Feature TR-PDF-2, the applicant states that the project “will incorporate features for pedestrians such as landscaping improvements, exclusive access points, upgraded pedestrian facilities, and bus stops”. [sic] Are those the only “features” being planned? How was it decided to include those features? Were other features considered but won’t be used?

Will these upgraded pedestrian features be incorporated during the construction process of the project? If not, why not? Are they planned to be incorporated after construction is finished? Or will some of them be part of the construction process, while others will be added later? What benefits are those features supposed to offer? Will installing them result in other impacts that actually are harmful, such as blocking sidewalks for long periods of time making them unusable while being put in?

For many who live in the Beverly Fairfax area, unrestricted pedestrian access is a critical point. There is a large Orthodox Jewish community in the area and on the Jewish Shabbat, many Jews do walk only get to synagogue. This, in practice, means that there are many groups of families walking to their synagogues on Fridays (and during other yamim tovim). When will these upgrades be made, what time of day and what days? How will they impact those who regularly walk on our area sidewalks and don’t drive at all? Where have the impacts been considered?. [sic]

Response to Comment No. 196-1

Refer to Response to Comment Nos. 16-72 and 16-76 regarding sidewalk widths and consistency with the Mobility Plan.

If construction requires the temporary closure of a section of a public sidewalk, a temporary alternate sidewalk will be provided. Accordingly, access to public sidewalks would be maintained at all times and would not affect pedestrian activities in the Project area. Refer to Topical Response No. 12, Safety and Congestion, and Response to

Comment Nos. 16-72 and 26-E.4-3 regarding the Project's public realm improvements and pedestrian safety and access.

The pedestrian features that are included as PDFs will be enforced through their inclusion in the Mitigation Monitoring Program, which is included as Section IV of this Final EIR. The Mitigation Monitoring Program also lists the timing for these improvements.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 196-2

Additionally in the introductory paragraph of the Project Design Feature section, it says that the features proposed in the document "are not required to reduce any significant transportation impact resulting from the project". [sic] What does this mean exactly? So features to improve some of the design aspects have no relation to reducing the many significant transportation impacts that will come from the project? That is like saying the applicant will incorporate an exclusive access point for pedestrians but he is not required to have that feature help to reduce the serious traffic impacts we can expect from the project, is that right?

Response to Comment No. 196-2

PDFs are commitments by the Applicant to include certain elements in the Project. They are not intended to mitigate impacts but are beneficial features above regulatory requirements. PDFs are fully enforceable and included in Section IV, Mitigation Monitoring Program, of this Final EIR. Refer to Response to Comment No. 9-34 for further discussion.

Comment Letter No. 197

Comment Letter No. 199

Ann Gaskin
628 N. Laurel Ave.
Los Angeles, CA 90048-2321

Comment No. 199-1

Thank you for the opportunity to express my opinion as a resident of the Beverly Fairfax neighborhood. I am concerned about the proposed expansion of Television City.

Response to Comment No. 199-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 199-2

This is a historic area, and we are proud of and need to honor that history. Television City has been around a long time, and while it is true that production technology has changed, that doesn't mean a huge new office building needs to be constructed in this neighborhood. Stages can be upgraded without enlarging them. This addition is unnecessary and unacceptable as proposed. It is important to preserve the integrity of this iconic landmark in our community.

Response to Comment No. 199-2

As demonstrated by the analysis included in Section IV.B, Cultural Resources, of the Draft EIR, the integrity of the Primary Studio Complex would be retained with implementation of the Project and the Project would not result in significant impacts associated with historical resources. Also refer to Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-46 regarding the rehabilitation and preservation of the integrity of the Primary Studio Complex. Refer also to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding how the Project would not diminish the integrity of the Primary Studio Complex.

As discussed in Response to Comment No. 110-3, the rise of digital media has created the need for larger and taller sound stage volumes as well as enhanced technological infrastructure and production office, and the studio ecosystem requires office

to be located close to sound stages and production support. The industry has changed and become more digitized which requires much more office space co-located on a campus setting than traditional studios. The proposed development program includes an operationally feasible balance of studio uses to meet modern production needs. The comments regarding the need for office buildings and the enlargement of sound stages do not raise any environmental issues under CEQA, and no further response is required. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 199-3

Does the developer of this proposed monstrosity believe that new office space is going to benefit the community? Also, bringing more audience members to the site is not what my neighbors and I want. What we need is housing and to protect the fabric of this wonderful community, neither of which will happen with the addition of this development.

Response to Comment No. 199-3

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment No. 199-4

Thank you for your attention. Please do not allow this change to our community.

Response to Comment No. 199-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 199-2 and 199-3.

Comment Letter No. 201

Karen Gerst
kgerst@earthlink.net

Comment No. 201-1

Please don't allow this massive project to move forward. It is a bad idea for a busy neighborhood that brings community members, Angelenos and tourists together to enjoy the Farmer's Market and the Grove.

Response to Comment No. 201-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 201-2 through 201-7.

Comment No. 201-2

The traffic will be horrendous during the construction and afterwards. This megamonstrousity [sic] will clog the streets with commuting employees who most likely will never be able to live in the area.

Response to Comment No. 201-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 201-3

I'm sure there are more appropriate locations where TVC can build studios. In fact, the company does own other studio locations that might be a better fit for expansion and less disruptive to an already busy neighborhood.

Response to Comment No. 201-3

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the range of alternatives selected and why an alternative site alternative was deemed infeasible.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 201-4

In addition, Television City is an historic structure with unique charm that should be protected.

Response to Comment No. 201-4

The historical resource on-site would be preserved as part of the Project. Potential impacts to historical resources are discussed on pages IV.B-41 through IV.B-55 of Section IV.B, Cultural Resources, of the Draft EIR. As demonstrated therein, impacts would be less than significant. Refer also to Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, with regard to how this historic structure will be protected.

Comment No. 201-5

With all the new studios being built, is there really a need for this project?

Response to Comment No. 201-5

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 201-6

The idea of building so many offices on-site seems crazy when the work-from-home trend will likely continue.

Response to Comment No. 201-6

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 201-7

What we really need is housing.

Response to Comment No. 201-7

Refer to Response to Comment No. 159-4.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 201-8

Please put your efforts towards what L.A. needs and not what a corporation wants to build its brand and make more money.

Response to Comment No. 201-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 201-2 through 201-7.

Comment Letter No. 202

Ewing Gillespy
341 Fuller Ave.
Los Angeles, CA 90036-2522

Comment No. 202-1

This project is expected to bring in close to 7,000 new workers regularly and countless other tourists, increasing traffic and congestion and making it harder for us to stroll pleasantly with our family.

Response to Comment No. 202-1

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The Project is a studio project and, given the security needs of a studio, will not be open to the public. Therefore, the comment regarding tourists is incorrect. Audience members will visit the Project Site and these trips, along with the trips generated by the anticipated 7,832 employees and other visitor trips, have been accounted for in the Project transportation analysis (refer to Topical Response No. 10, Trip Generation).

Refer to Topical Response No. 12, Safety and Congestion. Refer to Response to Comment No. 16-72 for a discussion of the Project's pedestrian-oriented design.

Comment No. 202-2

Rena and I have lived here for over 30 years; the Grove was built the year we moved.

Response to Comment No. 202-2

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 202-3

What is the city going to do about ensuring the enjoyment of our community is not altered dramatically? There must be measures that will be taken because there is no way we won't be impacted? Is the city basically saying to the residents of our wonderful community too bad, we just have to live with the impacts?

Response to Comment No. 202-3

All feasible mitigation measures have been incorporated into the Project in accordance with CEQA. The mitigation measures included in the Project are discussed in Section I, Executive Summary, of the Draft EIR; each respective section of the Draft EIR; and Section IV, Mitigation Monitoring Program, of this Final EIR. As discussed in Section VI, Other CEQA Considerations, of the Draft EIR, while the Project would have significant and unavoidable impacts with regard to construction-related regional emissions, noise, and vibration, such impacts would only occur during temporary and periodic construction activities, similar to those occurring at other development sites in urban areas, particularly within infill locations. As such, the benefits of the Project would outweigh the effects of its temporary significant and unavoidable impacts.

Comment No. 202-4

What about the increased risk that safety in our neighborhood will be compromised, where walking is a major part of what goes on there?

Response to Comment No. 202-4

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 202-5

In the years that the project is being built, there will be sidewalk closures and other pedestrian obstacles, according to the EIR's transportation section. I want to know which sidewalks will be closed and for how long, given the pedestrian aspect of our community and culture? The community's ability to get to the synagogue and other significant cultural events can be severely hampered by the closure of a sidewalk.

Response to Comment No. 202-5

There is no plan for any long-term sidewalk closures as part of the construction process. As discussed in the Draft EIR, there are some utility upgrades that will require new or revised connections between the Project Site and utilities that currently run under the streets. For these connections, sidewalks would have to be closed temporarily, but the CTMP prepared pursuant to Project Design Feature TR-PDF-1 would require that temporary sidewalks be provided to maintain pedestrian access past the Project Site.

Comment No. 202-6

I'm hoping that the City would consider how the project will affect our lives, our cultural history, and our safety before making a decision. Please inform me of any city actions about this project.

Response to Comment No. 202-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 202-2 through 202-5. All commenters are added to the notification list for the Project.

Comment Letter No. 203

Jane Gilman
janelarch@icloud.com

Comment No. 203-1

I am writing to express my concerns about the mammoth Television City 2050 Project.

Response to Comment No. 203-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 203-2 through 203-3.

Comment No. 203-2

The magnitude of the project would overwhelm the surrounding community with its two million square feet of development and 1.4 million square feet of offices. This represents an enormous increase from the current site.

Response to Comment No. 203-2

This comment is substantively similar to Comment No. 172-3. Refer to Response to Comment No. 172-3 regarding the size of the Project. This comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 203-3

This expansion will bring traffic, gridlock, and more cars into neighborhood streets than we have ever experienced.

Response to Comment No. 203-3

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis. Refer to Topical Response No. 10, Trip Generation, for information regarding Project trips.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for a discussion of the non-CEQA cut-through analysis and proposed NTMP.

Comment No. 203-4

The Planning Department's goal should be in preserving and enhancing neighborhoods. This is not the right project for this community. Please work with our neighbors and the developers to come up with a reduced version of the present plan.

Response to Comment No. 203-4

This comment, which concludes the comment letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 204

Chana Ginsberg
145 N. Fuller Ave.
Los Angeles, CA 90036-2811

Comment No. 204-1

This letter is in reference to the TVC 2050 project and how the project would affect the historical resources around the studio. This project has to adhere to the California Environmental Quality Act (CEQA), and under CEQA this project has to determine that the proposed project would not have a “significant effect” on the environment and to historical or archaeological resources of the site. A significant effect is defined as “if a project results in a substantial adverse change in the significance of a historical resource.” CEQA defines a substantial adverse change as the “physical demolition, distraction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired”. [sic] First, it seems the entire project will have impacts that will cause impairment to the significance of the iconic, historic CBS studios. Even if the developer is required to protect one part that is the Historic Cultural designation, how can it be acceptable to dramatically alter all of the surrounding portions of the site? How does a monstrous, modern development still protect what earned the designation back in 2018? Please explain how this could be considered by the city?

Response to Comment No. 204-1

As discussed in Response to Comment No. 28-29, the Draft EIR fully and adequately analyzed potential impacts to historical resources in the Project Site vicinity based upon the thresholds in Appendix G of the CEQA Guidelines, and concluded that impacts to the Primary Studio Complex would be less than significant.

Refer to Sections A, Existing Evaluation and Designation of the Primary Studio Complex, B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, as well as Response to Comment Nos. 26-46, 26-E.2-2, and 26-E.2-6 regarding the Draft EIR’s analysis of impacts from new construction adjacent to the Primary Studio Complex and buildout of the Project and the rehabilitation and preservation of the integrity of the Primary Studio Complex.

Refer to Response to Comment Nos. 5-13, 11-3 26-7, and 209-3 regarding the size of the Project.

Comment No. 204-2

As well, what about the indirect impacts of this project on the other adjacent historic resources in the area? The report recognizes the Beverly Fairfax district as a historic one, categorized both by its association with Los Angeles' Jewish population and the area's collection of earlier styles of architecture. However, the developer claims that "existing and future development within the project site does not have the potential to directly or indirectly impact the Beverly Fairfax Historic District...". [sic] How can that claim be true when the only thing separating television city from the Beverly-Fairfax historic district is Beverly Boulevard itself and when all of the streets that make up the historic district are part of the neighborhood which will be impacted so much by the increased traffic, parking on our neighborhood streets, drivers using our streets, and other effects?

The only thing separating the historic district from Television City is one 4-lane road. Given the huge size of the project, and years of construction, sidewalk blocks, road closures, and drilling, it is hard to believe that there will be no potential indirect impacts on the historic district which starts only a street away. Does the city plan to implement any barrier to protect the historic district? If there is substantial damage to the historic district, how will the city correct any mistakes?

As a resident of 25 years this area has a robust Jewish population, and weekly during the Shabbat, many families walk using Beverly Boulevard and the Beverly-Fairfax district to go to their services. Many Orthodox families do not use any electrical devices on the Shabbat and will simply walk or bike to the synagogues in the area. How would sidewalk blocks, road closures, and drilling not affect synagogue-goers? You must consider how the neighborhood's historical significance has been associated with the Jewish traditions of generations of people that have lived in this district. Has this been seriously considered? Where? Wouldn't all these impediments to accessibility not only impact the residents of the district but have a "substantial adverse change" to the historical significance that led the Beverly-Fairfax to be recognized in the National Register, to begin with?

Awaiting a response.

Response to Comment No. 204-2

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the Draft EIR's analysis of potential impacts to historical resources in the vicinity of the Project Site, including impacts to the Beverly Fairfax Historic District. Also refer to Response to Comment Nos. 26-E.2-10 and 43-2 regarding the Beverly Fairfax Historic District. As discussed therein, the Beverly Fairfax Historic District does not include any parcels on Beverly Boulevard directly across the street from the Project Site, and therefore it is not located within the Project Site Vicinity

for the purposes of the historical resources analysis, as discussed in the Historic Report (Appendix C.1 of the Draft EIR) and Section IV.B, Cultural Resources, of the Draft EIR. More importantly, existing and future development within the Project Site do not have the potential to directly or indirectly impact the Beverly Fairfax Historic District due to the distance between the Beverly Fairfax Historic District and the Project Site. Nevertheless, for informational purposes, a discussion of the Beverly Fairfax Historic District is included on page IV.B-31 of the Draft EIR and pages 41 to 42 of the Historic Report.

As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10, historic impacts and transportation impacts are analyzed separately and have different thresholds. The comment provides no explanation as to how increased trips through the Beverly Fairfax Historic District, sidewalk blocks, road closures, drilling or barriers/accessibility might translate to physical demolition, destruction, relocation, or alteration such that the significance of the Beverly Fairfax Historic District would be materially impaired, which is the threshold for significant impacts on historical resources in Appendix G of the CEQA Guidelines.

There is no plan for any long-term sidewalk closures as part of the construction process. There are some utility upgrades that will require new or revised connections between the Project Site and utilities that currently run under the streets. For these connections, sidewalks would have to be closed temporarily, but the CTMP prepared pursuant to Project Design Feature TR-PDF-1 would require that temporary sidewalks be provided to maintain pedestrian access past the Project Site.

Refer to Response to Comment Nos. 5-13, 11-3 26-7, and 209-3 regarding the size of the Project.

Also note that the EIR is the independent analysis and determination of the City, not the Applicant.

Comment Letter No. 205

Deborah Glass
8261 W. Fourth St.
Los Angeles, CA 90048-4401

Comment No. 205-1

Mr. Caporaso, I am concerned about the effect this project will have on L.A.'s cultural and historic landmarks. Given the importance of the Holocaust Museum to our city, how could you build a 130 foot tall parking structure with 5,000 cars right across the street where thousands of children come every year? How will the school buses be able to drop children off to visit the Holocaust Museum when you are adding thousands of cars to Grove Drive?

Response to Comment No. 205-1

This comment is substantially similar to Comment No. 41-4. Refer to Response to Comment No. 41-4, above.

Comment No. 205-2

This project will overwhelm the Adobe, one of the most important structures in the region dating back to the 1800s. Not only will a 20-story building, as permitted by the project, ruin the feel of the adobe, but construction near the historic structure could badly damage it—there should be a complete analysis of the vibration impacts to the adobe.

Response to Comment No. 205-2

The assertion that construction activity would “badly damage” the Gilmore Adobe is the opinion of the commenter and is not supported by the evidence. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13, 28-29, and 363-1 regarding the Draft EIR’s analysis of impacts to the Gilmore Adobe. As discussed therein, the visibility of a new building, structure, or feature from various vantage points alone would not result in a significant impact to the Gilmore Adobe. For a significant impact to occur, the integrity of the historical resource would have to be diminished to the degree that it would no longer be able to convey its significance. The Draft EIR and Historic Report (Appendix C.1 of the Draft EIR) correctly considered the impact the Project could have on the integrity of the Gilmore Adobe, including its integrity of *setting*, and concluded that any impacts would be less than significant (refer to Draft EIR page IV.B-55 and Historic Report pages 87–88).

This comment does not provide any explanation as to what aspects of the immediate surroundings are instrumental in conveying the historic significance of this historical resource or how new construction located north of the Gilmore Adobe would diminish its integrity. As demonstrated in the Draft EIR, the Gilmore Adobe, including its component buildings, structures and associated outdoor spaces, would remain physically unchanged after implementation of the Project and it would continue to convey its historic significance. Therefore, impacts to the Gilmore Adobe would be less than significant as defined by CEQA.

In addition, page IV.I-60 of Section IV.I, Noise, of the Draft EIR evaluates potential vibration impacts to the Gilmore Adobe associated with construction of the Project and concludes that no significant impacts would occur. Also refer to Response to Comment No. 363-2 regarding construction vibration in the vicinity of the Gilmore Adobe.

Refer to Response to Comment No. 5-13 regarding the height limits under the proposed Specific Plan in relation to the Gilmore Adobe.

Comment Letter No. 206

Spencer Glesby
333 1/2 N. Ogden Dr.
Los Angeles, CA 90036-2137

Comment No. 206-1

How did this project ever get a green light from the city?

Response to Comment No. 206-1

The Project has not been approved by the City. Following publication of the Final EIR, the Project will be considered at public hearings and meetings before City decision-makers.

Comment No. 206-2

It seems appalling that our community is expected to deal with constant construction, thousands of trucks and cars, parking and traffic gridlock, air pollution, and noise and light pollution for a duration of 3 to 20 years.

Response to Comment No. 206-2

With respect to traffic and parking, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. In addition, while parking impacts are also no longer CEQA impacts under SB 743, in accordance with the CTMP (refer to Project Design Feature TR-PDF-1 on page IV.K-36 of the Draft EIR), Project construction workers would be prohibited from parking on adjacent streets or in predominantly residentially zoned areas.

It is unclear what pollution the commenter is referring to, but air pollution is analyzed in Section IV.A, Air Quality, of the Draft EIR. As demonstrated therein, no localized air quality impacts would occur as a result of construction or operation of the Project.

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise. Construction noise impacts were comprehensively analyzed in Section IV.I, Noise, of the Draft EIR; refer to pages IV.I-35 to IV.I-43 therein.

With regard to lighting, refer to Response to Comment No. 26-E.1-76 regarding how based on SB 743 aesthetic impacts of the Project (including those related to lighting) are determined to be less than significant.

Comment No. 206-3

I want each year laid out with number of trips and vehicles per month.

Response to Comment No. 206-3

It is impossible to respond to this comment because the construction plan for the Project has not been developed to this level of detail. Instead, the Transportation Assessment (Appendix M.1 of the Draft EIR) on pages 180–182 details the truck and auto trips during the two busiest construction phases of the Project. The level of detail requested in the comment would be developed as part of the CTMP prepared before each major construction phase of the Project. Refer to Response to Comment No. 162-2 regarding the construction assessment included in Appendix M.1, Transportation Assessment, of the Draft EIR. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Comment No. 206-4

I am totally opposed.

Response to Comment No. 206-4

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 207

Carmella and Deborah Glezer
419 N. Sweetzer Ave.
Los Angeles, CA 90048-2603

Comment No. 207-1

Having lived in the neighborhood for 38 years, we are totally opposed to this project [sic]

Response to Comment No. 207-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 207-2

It is completely outrageous that the residents are expected to meekly accept 20 years of construction, noise, traffic disruptions and pollution, so that the developer can build a massive studio.

Response to Comment No. 207-2

First, construction of the Project is not expected to take 20 years. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Refer to Response to Comment No. 162-2 regarding the construction assessment included in Appendix M.1, Transportation Assessment, of the Draft EIR. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Under SB 743, traffic congestion is not a CEQA consideration. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Air quality and noise analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively.

Comment No. 207-3

The City should care about the health and welfare of its residents, not whether the developer's investments achieve their anticipated return.

Response to Comment No. 207-3

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective.

Comment No. 207-4

The EIR wildly understates the project's impacts on people's lives—the analysis needs to be redone and recirculated.

Response to Comment No. 207-4

Refer to Response to Comment Nos. 207-2 and 207-3. As demonstrated therein, the Draft EIR has been completed in accordance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 208

Bruce Gold
P.O. Box 1656
Studio City, CA 91614-0656

Comment No. 208-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 208-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 209

Joel Gold
530 N. Fuller Ave.
Los Angeles, CA 90036-1941

Comment No. 209-1

I hope you will seriously reconsider the proposed Television City expansion project. I have been a resident here for 5 years, I have many concerns about this project, Emissions? Traffic? Parking? 20 years of construction? The EIR is confusing and incomplete. There are so many concerns with this proposed huge facility for a neighborhood that is historic. Please address these issues not explained in the EIR.

Response to Comment No. 209-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 209-2 through 209-3. As demonstrated therein, all of the issues raised by the commenter are addressed in the Draft EIR.

Comment No. 209-2

The Television City proposes improvements that will increase the height of some buildings by many stories. How will 20-story buildings appear behind our Farmer's Market and the Avila Adobe? The adobe has historical significance and has been around since 1818. How will the developer protect it from damage during all the construction? How close will the construction be to the edges of the adobe and market property? How will the increased traffic impact business at the Farmer's Market?

Response to Comment No. 209-2

It is assumed that the commenter is referring to the Gilmore Adobe and not the "Avila Adobe." Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13, 28-29, and 363-1 regarding the Draft EIR's analysis of impacts to The Original Farmers Market and Gilmore Adobe. As discussed therein, impacts to The Original Farmers Market and Gilmore Adobe would be less than significant.

Regarding the comment about damage to the Gilmore Adobe from construction, refer to Response to Comment Nos. 26-139 and 363-2 regarding how construction of the Project would not generate vibration that would result in damage to the Gilmore Adobe.

As discussed in Response to Comment No. 5-13, the nearest buildings within the Project Site would be located approximately 167 feet from the Gilmore Adobe building, and the nearest construction activities within the Project Site would be approximately 125 feet from the Gilmore Adobe. In addition, The Original Farmers Market is located approximately 640 feet from the property line and approximately 670 feet from new construction.

As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-47, historic impacts and transportation impacts are analyzed separately and have different thresholds and no substantial evidence has been presented to demonstrate that traffic would result in impacts to a historical resource. In addition, construction and operation of the Project would not affect physical access to The Original Farmers Market. Furthermore, as discussed in Topical Response No. 13, Parking, the Project would not result in spillover parking and as such would not affect parking at The Original Farmers Market. Nonetheless, it should be noted that under CEQA, impact to a business is not an environmental topic that needs to be addressed.

Comment No. 209-3

Also, it seems those tall buildings even fit into the neighborhood, was this even considered? The drawings show a mammoth sized complex. How could that kind of development fit into our community? What will happen to any views that residents in apartments have now?

Response to Comment No. 209-3

Refer to Response to Comment Nos. 11-3, 26-7, and 172-3 regarding the height of the Project, including with respect to surrounding uses.

The remainder of the comment discusses information related to aesthetic impacts (views). As described in Section 4.I on pages 30–31 in the Initial Study, provided in Appendix A of the Draft EIR, the Project is an employment center project located on an infill site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2542, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact,” unless evaluation is required under other land use regulations in the LAMC. An evaluation of aesthetic impacts is not required under the LAMC. As such, no further

analysis was required in the Draft EIR for this topic. Nevertheless, the Initial Study included a discussion of aesthetic impacts for informational purposes. Refer to pages 32–40 of the Initial Study, in particular the discussion of scenic views on pages 32–36. As discussed therein, the Project would not have a substantial adverse effect on a publicly available scenic vista. However, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 209-4

With construction, residents need to know the schedule. How is the project construction going to be mapped out? Neighbors need to know the phases of the project, so please provide a plan.

During construction there will be so many trucks, coming and going. Why is the route for this traffic pattern not confirmed already?

Response to Comment No. 209-4

Regarding the Project timeline, refer to Response to Comment No. 9-24.

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction traffic impacts and Response to Comment Nos. 9-22, 107-2, and 124-6 regarding construction haul routes. As discussed therein, three routes were selected to comprehensively analyze the potential haul routes and ensure all associated environmental impacts were evaluated in the Draft EIR. Refer also to Response to Comment No. 73-2 regarding the proposed CTMP which includes street closure information, a detour plan, haul routes, and a staging plan.

Comment No. 209-5

The digging required for this project will impact the groundwater. How will the nearby homes and businesses be affected by this change in the ground? Will foundations be shifted due to subsidence? Have the potentially affected owners of property been notified of these groundwater issues?

Response to Comment No. 209-5

Refer to Response to Comment Nos. 11-25 16-74, 16-85, and 26-69 for further discussion regarding settlement and subsidence effects. As described in the Dewatering Report in Appendix FEIR-13 of this Final EIR, impacts related to subsidence would be less than significant.

With regard to outreach, refer to Response to Comment No. 28-13.

Comment No. 209-6

Has the developer partnered with the LA Conservancy in this development? It seems there has been a settlement of some kind. What is this settlement, and is it included in the EIR? Why does the LA Conservancy speak for our community? How does the settlement agreement affect the goals of the expansion project? How can the community know the limitations agreed to if it is not available to the public?

Response to Comment No. 209-6

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

Comment No. 209-7

In the EIR, the Vehicle Miles Travelled analysis is difficult to understand. Please explain what vehicle miles travelled is and why is that used rather than number of cars and number of trips. The distance people drive in LA is greater than the averages you used; when are you going to correct those mileage numbers? The information does not seem to align with what are the typical transportation modes of Angelenos. For example, the VMT analysis makes assumptions about people traveling via public transportation, but most people's experience says otherwise. What data was used to create the analysis? If it showed a high percentage of people travelling via bus and metro, etc., then please provide that data.

Response to Comment No. 209-7

VMT is the combination of the number of vehicle trips and travel distance per trip. As a simple example, 10 vehicle trips with a travel distance of 8 miles per trip would result in a total VMT of 80. The assessment of VMT impacts typically focuses on the work VMT per capita, such as in the evaluation of the Project, where impacts are measured in terms of work VMT per employee. The evaluation of work VMT per employee takes into account the travel mode of each employee. For example, if there are 10 employees each of which has a travel distance of 8 miles between home and work, and six of the employees drove alone while the other four employees used an alternative mode of transportation, such as taking public transit, carpooling as a passenger with another employee, or walking/biking, the *average work VMT per employee* would be 4.8 (i.e., six employees that drove alone times 8 miles per trip equals 48 miles, divided by 10 total employees equals an average work VMT per employee of 4.8). Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. That topical response includes additional details and another example regarding how VMT per

employee is calculated, and also provides empirical data in support of the employee trip length assumptions used in the VMT analysis.

Regarding transit assumptions, refer to Topical Response No. 11, Transportation Demand Management Plan, and Response to Comment No. 107-4.

Comment Letter No. 210

Beth Goldberg
7974 W. Fourth St.
Los Angeles, CA 90048-4413

Comment No. 210-1

I am a long-time resident of the Beverly Fairfax community. I am also among those who would be most affected by the proposed changes to the CBS Television City property.

Response to Comment No. 210-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 210-2 through 210-4.

Comment No. 210-2

I spend almost two hours per day stuck in traffic in the community and Los Angeles. We all know it can at least 45 minutes just to get from the highway into the neighborhood at times during the day. Anyone driving north or south on Fairfax or coming over Beverly Blvd sits in traffic, trying to get through intersections and the line of bottlenecked cars. As of now, I will miss out on almost 153 days with my family over the next five years because of my commute.

Response to Comment No. 210-2

This comment discusses non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 210-3

This proposed expansion would only make this worse. Specifically, the DEIR states this project could take up to 20 years to complete. Imagine the time lost as a result of this project! I can't get these days, weeks, months, YEARS of my life back!

Response to Comment No. 210-3

Regarding the Project timeframe, refer to Response to Comment No. 9-24.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 210-4

To make matters worse, I don't even have the chance to fully understand the technicalities of this project. Why won't the city be holding a public hearing on the project? How can the city rationalize not having one? Wouldn't the city want to ensure that residents are truly informed? I want to learn more about this if I'm potentially going to be greatly affected by all of its impacts.

It's clear this project does not have the Beverly Fairfax community members centered in its plans. Apparently, there was a meeting in July 2021 where we could comment, but it was so poorly publicized that I, a relatively engaged neighbor, didn't know about it until August 2022.

My main concern is that if this project does take 20 years to complete, my kids will be adults by then, and I will have lost precious time with them because of the even longer time it will take me to get home from work every day. I would like to be able to learn more about it and have my voice heard. I'm not opposed to creating opportunity in my neighborhood. I am opposed to the city approving a project when there are impacts that cannot be mitigated; why should we accept devastating impacts on a community, its residents and businesses? And I'm opposed to letting developers significantly impact my life without having a real say during the process.

Response to Comment No. 210-4

The assertion that the City will not hold a public hearing on the Project is incorrect. Following publication of the Final EIR, the Project will be considered at public hearings and meetings before City decision-makers. Refer to Response to Comment No. 28-13

regarding public outreach and Response to Comment No. 32-3 regarding noticing and public hearings.

Comment No. 210-5

I'm urging you to reject this project. I don't want to lose more time due to developments that have already made LA what it is.

Response to Comment No. 210-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 211

Etti Goldstein
221 S. Alta Vista Blvd.
Los Angeles CA 90036-2821

Comment No. 211-1

I am submitting comments and questions about the plan to modernize and develop Television City.

Response to Comment No. 211-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 211-2

I have several questions about the extent of the excavation. The La Brea Tar Pits are very close by.

- *Will the excavation release gases into the environment? What gases are going to be released, and what is the city and the developer going to do about that risk? What about the effects to the public, to visitors, and to those who live in the area?*
- *Did the EIR study how much gas would be released? What were those findings? Where is that located?*

Response to Comment No. 211-2

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, and 26-87 with regard to the La Brea Tar Pits and methane and subsurface gases.

Comment No. 211-3

I am also really concerned this excavation will have a negative impact on the groundwater and drinking water.

- *Did you study the impact of any excavation on water? What was the result of that study?*

- *Will my property in the Beverly Fairfax neighborhood be impacted by removing groundwater?*
- *Will I be notified if my property is impacted? What will be done to ensure no damage to my property?*
- *How much groundwater will you be removing? Where will it be pumped to?*

Response to Comment No. 211-3

Refer to Response to Comment No. 3-7 regarding potential impacts to groundwater quality and potential usage of extracted groundwater, Response to Comment No. 11-5 regarding the quantity of groundwater to be extracted and additional information regarding compliance with discharge permits, and Response to Comment No. 26-69 regarding potential impacts to groundwater levels and associated subsidence. Refer to Response to Comment No. 16-64 for a summary of how the extracted groundwater would be chemically analyzed to determine contamination and the appropriate treatment and/or disposal method.

Comment No. 211-4

I am also wondering why the EIR says that what is being planned for below ground is not part of the floor area? Construction and operations below ground will have impacts.

- *Can you define floor area in the context of this project? Why would basement and below ground areas not be considered floor space? That doesn't make any sense, but does sound as though it allows the developer to not disclose the impacts.*
- *What will the operation and construction impacts be from any buildings, area, and space that the EIR says are not considered part of the square footage?*

Response to Comment No. 211-4

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 with regard to the definition of floor area under the proposed Specific Plan. As discussed therein, the EIR's analysis accounted for the potential physical environmental impacts of all proposed uses, areas, and activities, regardless of whether they are considered to be within the definition of floor area, and no active production activities would be located in the parking and basecamp areas below Project Grade.

Comment No. 211-5

I look forward to reviewing your response.

Response to Comment No. 211-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 212

Kymn Goldstein
kymngoldstein@gmail.com

Comment No. 212-1

first of all thank you for everything you've done for our community over the years.

I've been a resident and homeowner of the Beverly Grove area since 1999. As a first time homeowner, I chose this place instead of a bigger property in the valley because of the richness and diversity of the community and area. I've benefited from the growth and been impacted by the changes that come with growth—quality of life, crime, lagging infrastructure.

While I wholeheartedly support well-planned projects that move our community and city forward, I do not support TVC 2050 in its current proposed scope.

Response to Comment No. 212-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 212-2 through 212-5.

Comment No. 212-2

Our neighborhood and quality of life will be negatively impacted by the size of this project and duration of the construction.

Response to Comment No. 212-2

Refer to Response to Comment No. 11-3 regarding the size of the Project. Refer to Response to Comment No. 9-24 regarding the construction timeline. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 212-3

It will impact Beverly Blvd which is already bumper-to-bumper most hours of the day.

Response to Comment No. 212-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. LOS methodology is no longer applicable for the purposes of identifying a project's CEQA transportation-related impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 212-4

The Regional Center designation is grossly inappropriate.

Response to Comment No. 212-4

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 212-5

We should have more time to review the draft EIR.

Response to Comment No. 212-5

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing and the extended public review period.

Comment No. 212-6

It's not accurate or fair for business interests to characterize resident concerns as being anti-progress. The CBS studio property is historic and special. That said, smart environment-conscious development is possible. This project as stated is not that.

Response to Comment No. 212-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 213

Zev Goldstein
122 N. Alta Vista Blvd.
Los Angeles, CA 90036-2826

Comment No. 213-1

I am writing with questions and concerns about the proposed TVC development plan. As a resident of the Beverly Fairfax area, I think the community deserves more transparency about what signage is going to stem from this project.

Response to Comment No. 213-1

Section II, Project Description, of the Draft EIR includes a detailed discussion of the proposed sign program. Refer to pages II-31 and II-32 of the Draft EIR.

Comment No. 213-2

I understand that Television City is an entertainment studio, but this does not discount the fact that LA is a residential area as well. I do not want advertisements to be all that I see when I walk out of my house. Where are billboards expected to be installed? I have read that living near a billboard can lower your home value. I am not okay with this. Can you please provide research on whether signage from this proposed project would affect surrounding home values? The EIR needs to disclose where the signs will be onsite and offsite. Please explain how these offsite signs won't be a disturbance to community members?

How many signs are there going to be? Does the city realize that using Television City's promotion for these billboards is going to take away from local businesses' marketing opportunities? If there are additional billboards built, has the city taken into consideration the safety hazards that accompany them? Will these be billboards that light up? If so, not only is this an environmental detriment, but also a major disturbance. Are they going to shine through our windows at late hours? This form of advertising can't be turned off and would be a constant distraction and annoyance. What messages are going to be put on the billboards? Will they be changing all the time?

Response to Comment No. 213-2

The EIR analyzed all physical elements of the proposed Sign District in accordance with CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-10 and 26-129 regarding the signage

proposed as part of the Project, how the components of the proposed Sign District were adequately described in the Draft EIR, and the availability of the proposed Sign District for public review although not required by CEQA or City policy. Please also see pages II-30 through II-32 in Section II, Project Description, of the Draft EIR regarding proposed signage and lighting for the Project.

Further, additional elaboration on technical signage typology is provided here for the commenter's edification. A billboard that displays any message directing attention to a business, product, service, profession, commodity, activity, event, person, institution or any other commercial message, which is generally conducted, sold, manufactured, produced, offered or occurs elsewhere than on the premises where the sign is located is an off-site sign. The Project does not propose and would not permit off-site signs in any manner.

A project's economic and social effects, including potential impacts on property values, are not effects on the environment under CEQA (see Section 15131(a) of the CEQA Guidelines). Although factors other than environmental impacts may be considered by the decision-makers, the purpose of an EIR is to focus on a project's physical environmental effects as required by CEQA. Accordingly, CEQA does not require an analysis of project impacts on property values.

This comment also discusses a number of non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 213-3

Has the city even considered the environmental effects these billboards have? I read that one billboard uses the electricity to power 11 homes. This will be way too much electricity being consumed and way too much light pollution being distributed.

Response to Comment No. 213-3

Refer to Response to Comment No. 102-6 regarding energy usage for signage.

With respect to light pollution, pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic impacts (including impacts with respect to lighting) shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only.

Comment No. 213-4

Is it possible that the light from the billboards will impact wildlife such as birds and bats? What does that mean for our ecosystem?

Response to Comment No. 213-4

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described and analyzed in the Draft EIR. Please note that billboards would not be permitted under the proposed Sign District.

With regard to lighting impacts to wildlife associated with signage, the area surrounding the Project Site is fully developed and urbanized, and nighttime illumination is characteristic of most urban land uses, including the Project area. As discussed in Section I, Aesthetics, of the Initial Study (included in Appendix A of the Draft EIR), uses considered sensitive to nighttime lighting include, but are not limited to, natural (i.e., non-developed) areas. However, as discussed in Section IV, Biological Resources, of the Initial Study and in Response to Comment No. 26-E.1-68, the Project Site lacks habitat for special status species and is not located in or adjacent to a Biological Resource Area as defined by the City. Because wildlife species likely to occur on-site are those typically found in urbanized settings (i.e., small, common terrestrial and avian species), any lighted signage included in the Project would not adversely affect these species. Furthermore, the Project does not propose any billboards and illuminated signage would primarily be located within the Project Site interior. As discussed in Section I, Aesthetics, of the Initial Study included as Appendix A of the Draft EIR, illumination for Project signage would comply with the light intensities set forth in LAMC Section 93.0117 and would be directed towards the signs to avoid creating off-site glare.

Comment No. 213-5

Can you please provide the definition of an off-site sign? Is Sign District changing the usual definition? Where is the signage district plan? We need a full analysis of these issues. Is the city really willing to make LA a physical embodiment of an advertisement?

Response to Comment No. 213-5

Refer to Response to Comment No. 213-2 regarding the Project Description and proposed Sign District.

The proposed Sign District will not alter, change, or modify the definition of an “off-site” sign under the LAMC, and, as stated on page IV.H-31 of the Draft EIR, off-site signage would be prohibited within the proposed Sign District.

Comment Letter No. 214

Ethan Goodwin
353 1/2 N. Curson Ave.
Los Angeles, CA 90036-2365

Comment No. 214-1

Please address my concerns with the proposed Television City construction project. As a local, I want to know what is potentially going to be built and how it will change my neighborhood.

Response to Comment No. 214-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 214-2 through 214-4.

Comment No. 214-2

The site is right in the middle of a neighborhood with schools, religious organizations, museums and Pan Pacific Park. How will the increased car and truck traffic for construction and then the increased traffic for employees in the enlarged Television City impact the health of residents?, of the school children? and of visitors to the park? How will increased exhaust from diesel trucks negatively affect these people, particularly people at risk? What is the analysis of the impacts to the most at-risk populations such as children, people with asthma, seniors, and what were the conclusions? How many different at-risk groups live in this area? And how close are they to the project site?

Response to Comment No. 214-2

This comment is identical to Comment No. 127-4. Please refer to Response to Comment No. 127-4.

Comment No. 214-3

Another impact that needs to be further explained in the EIR is noise from all those trucks and from the construction itself. During construction, how much increased sound will occur? and what will be the impacts of the different sources of noise to the residents' and others' hearing? If construction takes two decades or more, how much does that increase the impact on people's hearing? How much does it impact quality of life? Construction noise is annoying at best and harmful at worst.

Response to Comment No. 214-3

This comment is substantively identical to Comment No. 127-5. Please refer to Response to Comment No. 127-5, above.

Comment No. 214-4

The Adobe and Farmers Market are true community landmarks and important to the community. How will the expansion of Television City affect the Adobe? During construction, it seems they would be impacted by construction noise, dust, and debris, so what will those impacts be? How much blasting, drilling, and other construction activity will there be to impact it? Won't visitor to the Farmers Market be impacted by the noise, traffic and daily construction? What steps are being taken to ensure the increased traffic and people coming into the area does not displace regular customers and visitors?

Response to Comment No. 214-4

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project would not impact off-site historical resources including The Original Farmers Market and the Gilmore Adobe.

Refer to Response to Comment No. 26-139 regarding how construction of the Project would not result in significant noise or vibration impacts to the Gilmore Adobe or The Original Farmers Market. Also refer to Response to Comment No. 363-2 regarding construction vibration in the vicinity of the Gilmore Adobe.

With regard to increased traffic during construction and the measures that would be taken to ensure adequate vehicular and pedestrian access in the area, refer to Topical Response No. 14, Construction Vehicle Impacts.

As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-47, historic impacts and transportation impacts are analyzed separately and have different thresholds and no substantial evidence has been presented to demonstrate that traffic would result in impacts to a historical resource. In addition, construction and operation of the Project would not affect physical access to The Original Farmers Market. Furthermore, as discussed in Topical Response No. 13, Parking, the Project would not result in spillover parking and as such would not affect parking at The Original Farmers Market. Nonetheless, it should be noted that under CEQA, displacement of customers is not an environmental topic that needs to be addressed.

Comment No. 214-5

I understand there will be power generators at the basecamps. Since generators often run on diesel fuel, how will the pollution, both air and noise, be handled? How often will the generators be used? What will be they be used for? What about safety and hazard concerns?

Response to Comment No. 214-5

This comment is similar to Comment No. 188-4. Refer to Response to Comment No. 188-4. As discussed therein, during operation of the Project, emergency generators will be included for emergency use during a power outage and regularly tested for maintenance purposes but otherwise will not be used to provide power to the basecamps, which will be outfitted with electric tie-ins. As such, the routine operation of the Project would not result in noise from generators. Hazards and air quality impacts related to emergency generators are analyzed in Section IV.F, Hazards and Hazardous Materials, and Section IV.A, Air Quality, of the Draft EIR, respectively.

Comment No. 214-6

It seems irresponsible given the housing crisis that this huge expansion would not include residential development. Why did the developer choose not to include housing? Why isn't he required to include any housing, especially affordable housing? Is there a possibility to add it to the plan for development? Doesn't the city have a responsibility to offer more housing to workers given the need?

Response to Comment No. 214-6

This comment is identical to Comment No. 127-6. Refer to Response to Comment No. 127-6, above.

Comment Letter No. 215

Jerzy Gorczyca
jgorczyca@tvcityla.com

Comment No. 215-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 215-1

Comment Letter No. 217

Patrick Gorman
536 N. Croft Ave.
Los Angeles, CA 90048-2511

Comment No. 217-1

The conceptual plan shows something like 100 big 18 wheeled trucks on the site—that seems like a massive transportation hub, and completely at odds with our community. Is that the maximum number permitted to be on site? If not, what is the total number of trucks permitted? Are the trucks all diesel? Will there be a gas station and a truck repair shop on site?

Response to Comment No. 217-1

Refer to Topical Response No. 14, Construction Vehicle Impacts, for the estimate of the construction trip generation and the busiest times for trucks. As shown therein, the heaviest truck usage would be during five days of the foundation pour when up to 500 concrete trucks could be on-site over the course of a day. Under no circumstances would there be 100 concrete trucks on-site simultaneously.

Likewise, Topical Response No. 10, Trip Generation, contains a discussion of Project truck trips during Project operations. When the Project is completed, the number of trucks per day is expected to be 83 of which only 18 would be semi-trucks. So, it is not likely that 100 18-wheelers would be parked or moving on the Project Site at one time.

There is no maximum number of trucks allowed on-site at any given time, but the numbers quoted above represent the experience of other studio and entertainment campuses.

As truck technology advances, fewer and fewer of the fleet would be diesel. Electric and natural gas-powered trucks will likely increase in terms of the proportion of the truck fleet.

The Project does not include a gas station or a truck repair shop, and these uses would not be permitted under the Specific Plan. The uses allowed under the proposed Specific Plan have been clarified in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Refer to Topical Response No. 3, Permitted On-Site Uses.

Comment No. 217-2

I'm also concerned about pollution. Will trucks be allowed to idle in our neighborhood and at the construction sites? Does the Air Quality analysis show the impacts of the trucks and diesel particulates in the community for years to come? This project needs to be reconsidered, from top to bottom.

Response to Comment No. 217-2

Refer to Sections IV.A, Air Quality, and IV.E, Greenhouse Gas Emissions, of the Draft EIR, regarding emissions.

Refer to Response to Comment No. 126-2 regarding truck idling.

The third sentence of this comment is similar to that in Comment No. 87-1. Refer to Response to Comment No. 87-1. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations. The HRA was conducted following conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population. All Project-related emission sources, including diesel-fueled emergency generators, were analyzed in the HRA. For detailed HRA modeling assumptions, refer to Appendix FEIR-10 of this Final EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 218

Lori Grapes
6684 Colgate Ave.
Los Angeles, CA 90048-4205

Comment No. 218-1

We're already experiencing unmitigated growth and nonstop traffic congestion. I'm concerned that moving on this new Television City Project application is too much, too fast.

Response to Comment No. 218-1

The comment is identical to Comment No. 67-1. Refer to Response to Comment No. 67-1, above.

Comment No. 218-2

We need more time to understand the long-term community and environmental impacts. A decision of this magnitude should be made with extreme caution and not rushed.

Our community should have time to review the information and provide appropriate feedback. The project will be so impactful to our neighborhood that residents and businesses should be given the opportunity to really understand what is being proposed. Why is there no public hearing scheduled to go along with the recent environmental report that came out? I'm respectfully asking you to delay approval and hold public hearings now, not later when the process is farther along.

Response to Comment No. 218-2

The comment is identical to Comment No. 67-2. Refer to Response to Comment No. 67-2, above.

Comment Letter No. 219

Tandi and Ethan Greenberg
461 N. Orange Grove Ave.
Los Angeles, CA 90036-1757

Comment No. 219-1

I heard that the “Mobility Hub” will be something like a bus depot—seriously? A studio is one thing, but a bus depot brings in constant noise and air pollution and random, transient people who might decide just to hang out in our neighborhood all day. Are there any rules that will control the Hub’s operations? Will the City oversee the usage long-term? There needs to be more information, analysis and rules around the whole mobility hub element.

Response to Comment No. 219-1

The Mobility Hub is not a bus depot. It is a purpose-built transfer center to be used by Project employees, visitors, and audience members to offer Project staff and visitors an alternate to driving to the Project. Mobility Hub functions would be located on-site to support first/last mile connections; encourage employee and visitor use of public transit through the provision of a shuttle service, carpooling, vanpooling, and biking/scooter to work; and to support other modes of travel and TDM strategies that are likely to evolve over time. These features would be promoted and incentivized through programs administered by an on-site TDM coordinator and one or more transportation information kiosks, including within the Mobility Hub itself. Refer to Topical Response No. 7, Mobility Hub, for more details on the function and the operation of the Mobility Hub.

Refer to Response to Comment No. 35-129 regarding the noise analysis associated with the Mobility Hub. As discussed therein, noise impacts associated with the Mobility Hub would be less than significant.

Refer to Response to Comment No. 26-E.1-28 for a discussion of the Mobility Hub and air quality. As discussed therein, the Mobility Hub is already accounted for in the air quality analysis.

Comment No. 219-2

But even aside from the Mobility Hub, building the project will require thousands of trucks, all using Beverly and on Grove Drive. Traffic gridlock is certain. And what happens if a truck carrying hazardous materials has an accident or catches on fire? How far away is the fire department? Has the EIR analyzed safety issues?

Response to Comment No. 219-2

Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, regarding the number of truck trips during Project operation.

Section IV.F, Hazards and Hazardous Materials, of the Draft EIR includes a detailed analysis of potential impacts associated with hazardous materials. As discussed therein beginning on page IV.F-35, Project impacts related to the routine transport, use, or disposal of hazardous materials would be less than significant.

There are two LAFD Stations within the vicinity of the Project Site. The Primary Response Station would be Fire Station No. 61 located on 3rd Street, approximately 1.2 miles from the Project Site. A second station, which could provide support, is located on Gardner Street, approximately 2.2 miles away. Refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding traffic safety and congestion and the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Thus, the EIR has adequately analyzed potential safety issues.

Comment Letter No. 220

Ron Greenwood
637 S. Dunsmuir Ave., Apt. 11
Los Angeles, CA 90036-5915

Comment No. 220-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 220-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 221

Leo Grifka
Grifka Group
Short Stories Hotel
115 S. Fairfax Ave.
Los Angeles, CA 90036-2106

Comment No. 221-1

I understand that the Draft Environmental Impact Report prepared by the City of Los Angeles, determined that there were no significant long-term operational environmental impacts associated with the proposed TVC 2050 project. However, the report did identify two short-term temporary impacts (1—air quality and 2—noise and vibration) during the construction phase. I believe that the proposed project has measures in place to minimize these impacts.

The following measures will be implemented to minimize air quality impacts during construction:

- Use clean diesel technology for off-road engines and equipment known as Tier 4
- Dampen areas onsite to suppress dust
- Suspend activities during high-wind periods
- Monitor the implementation of air quality-related measures through direct inspections, record reviews and compliance investigations

As well, the project will limit hours of construction and constrain construction activity within the project site boundaries to minimize noise and vibration issues. Temporary sound barriers will be installed along the project property lines, which I feel is extremely important along with haul trucks being routed away from residential streets when possible.

As a nearby property owner, I feel confident that these measures will minimize the environmental impacts. The jobs that this project will create, and the economic benefits far outweigh any negative impacts.

Response to Comment No. 221-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. A full list of mitigation measures

included in the Project is provided in Section I, Executive Summary, of the Draft EIR, pages I-29 through I-36.

Comment Letter No. 222

Sue Grishman
112 N. Hayworth Ave., Apt. 6
Los Angeles, CA 90048-3631

Comment No. 222-1

This project sounds like a nightmare—why wasn't the "specific plan" provided in the Draft EIR?

Response to Comment No. 222-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, all of the physical aspects of the Project that will be implemented by the proposed Specific Plan were fully disclosed and analyzed in the Draft EIR in accordance with CEQA, and although neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 222-2

It's completely unclear what is going to be built, where, and when! How are people supposed to know what's to come re: traffic and parking and neighborhood disruptions and displacements, for the NEXT TWENTY YEARS??

Response to Comment No. 222-2

As discussed throughout the Draft EIR, the Project is the continuation and expansion of an existing studio use. Refer to Section II, Project Description, of the Draft EIR for a detailed description of the proposed development program. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

As described in Topical Response No. 14, Construction Vehicle Impacts, construction activity would not be constant for 20 years. The Draft EIR analyzes an approximately 32-month construction timeline, which would occur if the entire Project were

constructed in one phase. This is the preferred construction schedule by the Applicant. In addition, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is also included for each of the environmental topics studied in the Draft EIR. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 222-3

The Draft EIR should be recirculated with the proposed specific plan—otherwise we have no idea of what this project is.

Response to Comment No. 222-3

Refer to Response to Comment No. 222-1 regarding the Specific Plan.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 223

Kathy Gronau
448 N. Kilkea Dr.
Los Angeles, CA 90048-2229

Comment No. 223-1

I'm writing regarding the draft EIR for the CBS Television Studios project.

Response to Comment No. 223-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 223-2

The application says the project will use 6x the current water use. One of my priorities is water use and water supply. I am a strong proponent of water conservation. So what is the current water use of the existing facility? Will the project actually use 6x the amount of current consumption or is that what will be allowed? What will that amount of water be used for? Does that mean 6x the amount of water on an annual basis, on a monthly basis? Like what does that mean? Will there be any restrictions in place in case it turns out that all that planned new office, studio and stage space even more than 6x the amount?

Where is that water going to come from? Won't that affect the availability of water for other needs the city and the actual community here needs? What is the impact on water use? How is that use calculated and determined from the City's perspective?

Response to Comment No. 223-2

As stated on page IV.M.1-28 in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the total existing demand at the Project Site is approximately 44,662 gpd. The EIR analyzed an estimated maximum new water demand of up to 302,424 gpd for the proposed studio-related uses, and anything beyond that would require further CEQA review and approval by the City. Refer to Response to Comment No. 16-66 with regard to the adequacy of water supply. Refer to Response to Comment No. 26-175 regarding the Project's water demand and impact analysis.

With regard to where the water supply for the Project would come from, as discussed on pages IV.M.1-15 to IV.M.1-27 in Section IV.M.1, Utilities and Service

Systems—Water Supply and Infrastructure, of the Draft EIR, water is supplied to the City from four primary sources: the Los Angeles Aqueducts, local groundwater, purchased water from MWD, and recycled water. LADWP pumps groundwater from the San Fernando Basin and, to a lesser extent, the Central Basin and Sylmar Basin. With regard to the types of water demand associated with the Project, such demand during construction would include, but would not be limited to, dust control, cleaning of equipment, and excavation and grading/recompaction activities. Water demand associated with operation would include that associated with the various uses on-site, including sound stages, production support, production office, general office, retail, basecamp, and the Mobility Hub, as well as landscaping, covered parking, and cooling towers.

Comment No. 223-3

What if the property uses change over time? How are those future potential impacts calculated since there are no specifics listed?

Response to Comment No. 223-3

The Draft EIR analyzed the proposed development program described in Section II, Project Description, of the Draft EIR (refer to Table II-2, Proposed Development Program, on page II-13 and Figure II-4, Conceptual Site Plan, on page II-14 of the Draft EIR). For each environmental topic, as applicable, in addition to analyzing the impacts of the proposed development program, the Draft EIR also analyzed the maximum impact scenario; i.e., the development scenario under the Land Use Exchange Program that would generate the greatest environmental impact. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Any substantial changes from the Project (including a proposal that involves a land use exchange) would be subject to further discretionary review and CEQA compliance review per the proposed Specific Plan.

Comment No. 223-4

What internal guidelines and policies will be put in place to keep track with the water usage? And who or what agency is responsible for monitoring it? Where will the information be posted for the community about how much water ultimately gets used?

Response to Comment No. 223-4

As discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the Project would be subject to state and local laws related to water conservation including, but not limited to, the CALGreen Code, California Plumbing Code, and the applicable provisions of the LAMC. In addition, the Project's voluntary commitments above code are included in the Project as Project Design Feature

WAT-PDF-1. Details regarding timing and enforcement of this measure are included in Section IV, Mitigation Monitoring Program, of this Final EIR.

With regard to water usage monitoring, LADWP monitors water usage within the City. The Project would implement water conservation features as required by applicable City Ordinances and Codes. Compliance with these requirements would be ensured as part of the City's plan check process. The Project would also implement additional specific water conservation commitments that were made to LADWP and are included as Project Design Feature WAT-PDF-1, which has been included as part of Section IV, Mitigation Monitoring Program, of this Final EIR. Water usage for private properties is not typically posted publicly.

Comment No. 223-5

How can the development be allowed to increase the amount of water usage that much during a drought? I'm wondering, what are the regulations that apply to water usage during a drought? It seems irresponsible that a development would be able to justify using so much water during a drought.

Response to Comment No. 223-5

Refer to page IV.M.1-14 of Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR for a discussion of the applicable regulations that apply to water usage, and to Response to Comment No. 16-66 with regard to the adequacy of water supply to serve the Project and the consideration of drought conditions.

Comment No. 223-6

What water conservation steps are going to be taken if this development even gets approved? Will those steps be ongoing?

Response to Comment No. 223-6

As discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the Project would implement all applicable water conservation measures required by City Ordinances and Codes through the life of the Project. In addition, the Project has committed to additional water conservation features above and beyond those required by the City as part of Project Design Feature WAT-PDF-1 that would be implemented for the life of the Project. These water conservation features include High-Efficiency Toilets with a flush volume of 1.1 gallons per flush or less; showerheads with a flow rate of 1.5 gallons per minute or less; ENERGY STAR—Certified Residential Dishwashers—standard with 3.0 gallons/cycle or less; Drip/

Subsurface Irrigation (Micro-Irrigation); and Proper Hydro-Zoning/Zoned Irrigation (group plants with similar water requirements together).

Comment No. 223-7

Additionally, it looks like the project will extract groundwater during the construction. How will the property be impacted by groundwater extraction, and where on the property will that excavation be happening? Will the extraction cause sinking of the ground?

Response to Comment No. 223-7

Refer to Response to Comment No. 11-25 with regard to the quantity and location of dewatering that would occur and Response to Comment No. 26-69 regarding subsidence.

Comment No. 223-8

Thanks for responding to my questions.

Response to Comment No. 223-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 223-2 through 223-7.

Comment Letter No. 224

Meir Gul
429 N. Formosa Ave.
Los Angeles, CA 0036-2524

Comment No. 224-1

The Draft Environmental Impact Report says **any use in the C2 zones** will be permitted

But more than 100 uses are permitted in the C2 zone, including department stores, auditoriums that accommodate up to 3,000 people, museums, hotels, car washes, schools, circus, auto repair facilities, building material stores, hospitals, nursing facilities, medical laboratories, and dozens of different kinds of retail stores and other establishments.

Many of these uses and their related impacts have not been analyzed. Please provide an analysis of the potential impacts associated with this range of uses.

For example, what would the traffic impacts be if the project includes a hospital, with racing ambulances, huge staff rotating in and out throughout the day and nights, and an untold number of daily visitors?

I look forward to hearing from you.

Response to Comment No. 224-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan and Topical Response No. 3, Permitted On-Site Uses, with regard to the land uses that would be permitted in the proposed Specific Plan.

As discussed in Topical Response No. 3, the permitted uses are fully accounted for in the impact analyses in the EIR. Further, as discussed in Topical Response No. 1, the Draft EIR analyzed the proposed development program, as well as the maximum impact scenarios to account for the full range of impacts under the Project. As discussed therein, based on comments received in response to the Draft EIR, the list of permitted uses was clarified to reflect the studio objective of the Project, including, among other things, removing the C2 zone text referenced in this comment; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses—sound stage, production support, production office, general office, and retail—as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the EIR. The Project would not include department stores,

hotels, car washes, schools, circus, auto repair facilities, hospitals or medical laboratories, and such uses would not be permitted under the proposed Specific Plan. Refer to Response to Comment No. 28-6 for further discussion of the permitted uses. The proposed Specific Plan would permit up to 20,000 square feet of neighborhood-serving retail uses. Refer to Topical Response No. 1 regarding the regulatory process under the proposed Specific Plan. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Refer to Topical Response No. 10, Trip Generation, regarding the visitor trips that were accounted for in the EIR.

Comment Letter No. 225

Mia Hagerty
miahagerty@gmail.com

Comment No. 225-1

My name is Mia Hagerty and I am a resident of the Fairfax community. I am concerned about TVC 2050.

Response to Comment No. 225-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 225-2

A “Regional Center” designation is inappropriate and I would like for you to take more time to review the Draft EIR so our community can understand this massive project.

Response to Comment No. 225-2

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Refer to Response to Comment No. 32-3 regarding the noticing of the Project in compliance with CEQA. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day period for most EIRs. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 225-3

I am concerned that our voice is not being heard, [sic]

Response to Comment No. 225-3

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing, the Draft EIR public comment period, and public hearings.

Comment Letter No. 226

Jenny Haghtton
355 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 226-1

As a concerned member of the community, I am completely confused about the proposed TVC 2050. I'm specifically concerned how traffic issues will be resolved along with the current parking problem we already have.

Response to Comment No. 226-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 226-2 through 226-4.

Comment No. 226-2

Being a 1 million+ square foot entertainment studio, what are we supposed to expect in terms of outdoor events and events in general? Are we going to be bombarded with loud noises and constant filming outdoors? Where are the 8,000 employees expected to park? How are they expected to fit into the already congested streets of LA? None of these concerns are even being slightly addressed in the EIR.

Is it true that most of the parking located on Grove Drive? There is no way this many cars can use Grove Drive. Please show an alternative with parking distributed around the property. Why is there a large parking structure being placed on Grove Drive? This is a small street, and it is right across from Pan Pacific Park where small children play. Is no one concerned about the potential health risks at play here from the diesel exhaust that will be emitted? The air quality analysis and other analysis should include this issue.

Where are the hundreds or thousands of audience participants supposed to park? Was this issue even included in the vehicle miles travelled analysis? Has the city considered that these people will most likely be traveling from all over the region? Has the city considered that these people could even be traveling from all over the world for these events? What is the average distance that people travel to visit this area?

Response to Comment No. 226-2

Section IV.I, Noise, of the Draft EIR includes a thorough analysis of Project operations, including outdoor activities. Refer to pages IV.I-43 through IV.I-48 of the Draft EIR. As discussed therein, impacts would be less than significant.

With respect to parking, pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, off-site parking is not needed to meet the Project's peak parking demands, and the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The topical response also includes a detailed shared parking analysis that includes the parking demand associated with audience sound stages and Project Site visitors; refer also to Response to Comment No. 106-2, which discusses the weekday peak parking demand by population.

The Project is treated as an employment center in the VMT analysis because the vast majority of the trips to/from the Project Site are generated by Project employees. A small percentage of the total daily trips are generated by audience visitors. Therefore, the appropriate metric to evaluate VMT for the Project is work VMT per employee, which is the metric used in the Draft EIR.

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for information regarding audience visitors and trips.

Regarding the location of parking, it is incorrect that most of the parking is located on The Grove Drive. As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, regarding access and use of The Grove Drive. The parking structure in the southeastern portion of the Project Site was designed as an above grade parking structure because it is located immediately adjacent to the above grade structure for The Grove shopping center and away from the residential neighborhoods to the north and west of the Project Site. The Draft EIR analyzed the noise and air quality impacts from this parking structure on the adjacent Pan Pacific Park in Sections IV.I, Noise, and IV.A, Air Quality, respectively, and the analyses found no significant impacts on the park.

The health risk impacts, including impacts related to Project-related emissions of diesel particulate matter, are analyzed in Section IV.A, Air Quality, of the Draft EIR and in the quantitative HRA, included as Appendix FEIR-10 of this Final EIR. As shown therein,

impacts related to human health risks would be lower than the applicable health risk thresholds at sensitive receptor locations.

Comment No. 226-3

When the additional 8,000 employee spots are occupied, what does this leave for additional visitors? This is no different than Staples, which is an enormous entertainment venue. LA does not have the capacity and is not prepared for the impact that is to come. Is the new development basically going to bring a huge entertainment venue into our Beverly Fairfax neighborhood? If that is what is being planned, then the developer should just be honest about that. Were the analyses done on the basis of it being a huge venue like that?

Response to Comment No. 226-3

Refer to Response to Comment No. 226-2 for a discussion of parking. The Project parking supply will not include 8,000 parking spaces for employees because there will only be 7,832 employees on-site, and not every one of them will drive individual cars to park on-site. The proposed 5,300 parking spaces would be enough to accommodate the employees and visitors to the Project Site, as described in Topical Response No. 13, Parking.

The Project will not include an entertainment venue or multiscreen cinema that would be open to the public and generate outside traffic and parking demands, so any comparison to Staples Center, currently known as Crypto.Com Arena, is inappropriate. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 226-4

There is absolutely not enough information being distributed to the public and as a result we are left fearing for the worst in terms of disturbance in our neighborhoods and even more congestion than we can bear. The EIR has given us no word on how this will be dealt with or how this is going to affect us.

Response to Comment No. 226-4

The Draft EIR was completed in accordance with the requirements of CEQA, and Section IV, Environmental Impact Analysis, of the Draft EIR contains a comprehensive

analysis of the Project's environmental impacts during both construction and operation. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and fulfilled CEQA's informational purpose.

Regarding congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment Letter No. 227

Ray Hahn
329 S. Mansfield Ave.
Los Angeles, CA 90036-3058

Comment No. 227-1

As a community member, I feel completely in the dark about the Television City project.

Response to Comment No. 227-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 227-2 through 227-5.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 227-2

LA is undoubtably already extremely congested. Most of us sit in traffic every day that takes as many as 20 minutes just to travel one mile.

Response to Comment No. 227-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 227-3

Available parking in relation to the population is extremely disproportionate. I understand that this project is projected to bring 8,000+ new jobs. That is 8,000+ more people than the neighborhood can bear. In terms of housing and parking, I do not understand how this is reasonable.

The draft EIR proposes that there will be 5,300 staff parking spaces. The number does not make sense given the estimated number of 8K + new employees and expected visitors and attendees to events. Please explain. The projections of how many of those employees

and visitors will take public transit is completely unrealistic. Where did the assumptions being made come from? Where will all the employees park?

The project proposes 14 stages many of which will be audience stages. An entertainment studio of this scale is likely to bring thousands of people from all over. Where are these people supposed to park? How will this work? Where will the overflow park? Will we be notified of what times will audience members will come to the site? What happens when they park in the community?

Response to Comment No. 227-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the hour-by-hour parking demand for the entire Project Site includes employees, visitors, and audience members.

The Project's Transportation Improvement Program, summarized in Topical Response No. 15, Transportation Improvement Program, includes an NTMP that will allow the neighbors to work with the Applicant and the City to identify measures and strategies to deter Project parking in the neighborhoods. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for a description of the NTMP.

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 regarding the effectiveness of TDM programs.

Refer to Topical Response No. 10, Trip Generation, regarding audience and visitor trips.

Comment No. 227-4

There will be a major noise concern in our neighborhoods. Please provide an analysis of these impacts.

Response to Comment No. 227-4

Noise and vibration during both construction and operation are fully analyzed in Section IV.I, Noise, of the Draft EIR.

Comment No. 227-5

From a risk standpoint, how is this safe at all? This point of congestion would make it nearly impossible for emergency responders to be able to make it anywhere in the city in a timely manner. What is the plan for this? What are the risks from a security standpoint for the community? Speeding in the community could raise a big problem for our children. I also understand the project is taking away certain crosswalks, sidewalks and bike lanes. How is the community supposed to maneuver around the city if this is true? And what police coverage will be provide for our communities if hundreds or thousands of people parking in our community.

Response to Comment No. 227-5

Refer to Topical Response No. 12, Safety and Congestion, for information regarding emergency response times. As described therein, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

The Project is not taking away any crosswalks, sidewalks, or bike lanes. To the contrary, the Project includes improvements to pedestrian infrastructure in the vicinity of the Project Site. Refer to Response to Comment 9-29 for a summary of the proposed improvements.

Refer to Topical Response No. 12, Safety and Congestion, regarding pedestrian and vehicular safety.

Refer to Response to Comment No. 227-3 above for a discussion of parking. The onsite parking supply is adequate to meet demand and parking in adjacent neighborhoods is not anticipated.

Comment No. 227-6

Please provide the public with a detailed analysis of these issues. The analysis needs to be circulated and reviewed so that we can voice our concerns.

Response to Comment No. 227-6

This comment concludes the comment letter. Specific issues raised by the commenter are addressed in Response to Comment Nos. 227-2 through 227-5. As demonstrated therein, the Draft EIR has been completed in accordance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 228

Daryl Hairson
6000 Comey Ave.
Los Angeles, CA 90034-2204

Comment No. 228-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 228-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 231

Alexa Hand
560 N. Flores St.
West Hollywood, CA 90048-6004

Comment No. 231-1

I am a long-time resident of the Beverly Fairfax community. I am writing to you today in response to the Draft Environmental Impact Report. After reading through it, I am left with many questions and even more concerns.

Response to Comment No. 231-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 231-2 through 231-4.

Comment No. 231-2

As someone who commutes to and from work by car, I am primarily concerned with the impact the Television City project would have on traffic in my neighborhood. Have you analyzed the impacts to those of us who drive in and out of the neighborhood for work, not just those you expect to drive here for work at the new site?

The plan drawings show several semi-trucks onsite. These trucks will consistently have to make left turns into oncoming traffic. Have studies been conducted to analyze how much extra traffic this would create? If so, can that please be outlined to me in a response to my letter? How will some of those trucks access the site, from other points as well? Furthermore, the plan fails to specify how many trucks would be on-site and when. Can you please specify? There's a big difference in the amount of traffic created by 50, 100, 200, and so on trucks.

Response to Comment No. 231-2

First, as discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, impact thresholds relative to changes in driver delay are no longer applicable to identify transportation-related impacts under CEQA. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to

Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

The level of truck trips is also included in the Transportation Assessment both during construction and during typical operations upon completion of the Project. Refer to Topical Response No. 10, Trip Generation, for a discussion of truck activity during Project operations and Topical Response No. 14, Construction Vehicle Impacts, for a discussion of trucks during construction. Access to the Project Site along the arterial streets serving the Project Site, turns into and out of the Project Site, queuing at the Project driveways, and truck movements within the Project Site have all been studied and the driveways designed accordingly. Refer also to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-E.4-15 and 83-1.

During the construction phase of the Project, the busiest time for truck activity would be the excavation of the underground parking structures and the foundation work for the underground parking and the buildings. This excavation and foundation activity is anticipated to last approximately 8.5 months and would generate a maximum of approximately 300 haul trucks per day and approximately 20 delivery trucks per day. Unless extended hours of operation were approved by the Bureau of Engineering District Engineer, the movement of these trucks would occur between 9 A.M. and 3:30 P.M. Refer to Topical Response No. 14, Construction Vehicle Impacts.

During the operation of the fully built out Project, the net increase in trips to/from the Project Site would be approximately 787 trips in the morning peak hour and approximately 855 trips in the afternoon peak hour as described in Table 6 of the Transportation Assessment. Less than approximately 2 percent of the Project's total daily trips would be truck trips. Refer also to Section E, Truck Trips, of Topical Response No. 10, Trip Generation.

Comment No. 231-3

Additionally, I am extremely concerned about the negative health impacts this project could have. Since you are putting a truck road and studio building next to apartments, negative health impacts will undoubtedly occur. What kind of health studies have been conducted to evaluate the impact of noise and fumes on the residents? Did your health analysis, if one was conducted, include the impacts of students at the nearby schools? Which schools were shown to be most affected? What kind of health effects should I be worried about as a resident of Beverly Fairfax?

I understand that there will also be a large parking structure located on Grove Drive. The concerns I have above apply to this parking structure as well. Can you please draft an alternative in which parking is put somewhere else besides Grove Drive? And can you

please avoid residential areas for such parking structures? Additionally, I am concerned about the children and seniors that use Grove Drive. Has a health impact analysis been conducted for these two groups as well? How will the exhaust emitted from the vehicles using the parking structure impact these groups?

Response to Comment No. 231-3

The first portion of this comment is similar to Comment Nos. 141-2, 160-1, and 172-4. Refer to Response to Comment Nos. 141-2, 160-1, and 172-4.

As discussed in Topical Response No. 13, Parking, and Response to Comment No. 226-2, parking will be spread out across the entire Project Site, and all parking areas will be accessible from any of the three signalized entrances to the Project Site. In addition, the Project does not propose off-site parking. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access and use of The Grove Drive.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. On May 5, 2023, SCAQMD concluded that the HRA protocol adequately addresses health risk impacts related to the Project. A comprehensive description of sources and assumptions included in the HRA is included Appendix FEIR-10 of this Final EIR. The HRA was conducted following conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased vehicle and truck trips and parking associated with future operations, would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Comment No. 231-4

Furthermore, this project proposes to stage thousands of trucks next to a hospital. What measures has the city taken to inform nearby residents and hospital employees that 60,000 trucks will be creating traffic nearby? What happens when the trucks are creating traffic and an ambulance needs to get to the emergency room? Can the public please see your plans for this?

Response to Comment No. 231-4

The Project has been modified to eliminate the off-site staging of haul trucks along streets serving the Project Site. All haul truck staging would be accommodated within the Project Site itself. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 231-5

Until we receive real information about the extra traffic created by this project and the real impacts expected, I cannot support this. Please respond to my letter with thorough responses to each of my questions. With more information, I can better form my opinion.

Response to Comment No. 231-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 231-2 through 231-4.

Comment Letter No. 232

Rita and Michael Hand
362 N. Flores St.
Los Angeles, CA 90048-2610

Comment No. 232-1

As a resident who lives near the proposed Television City project I need to share a few of my concerns and ask some questions about the project.

Response to Comment No. 232-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 232-2 through 232-9.

Comment No. 232-2

There are many ways this new construction could negatively impact the community here from standpoints of environment, safety, and traffic.

Response to Comment No. 232-2

This comment is similar to Comment No. 118-2. Refer to Response to Comment No. 118-2. Please refer to the respective analyses in Section IV of the Draft EIR for the CEQA-required analysis of Project-related impacts to environmental topics. Refer to Sections IV.J.1 and IV.J.2, Public Services, and IV.K, Transportation, of the Draft EIR for the Project's analysis of fire protection, police protection, and transportation.

Comment No. 232-3

However, it also is going to negatively impact the character of the community. So much Los Angeles history exists in this community and this project fails most of it.

Response to Comment No. 232-3

This comment expresses the opinion of the commenter and does not relate to the Draft EIR's analysis of the Project's environmental impacts, and no further response is required. As discussed in detail in Section IV.B, Cultural Resources, of the Draft EIR, the Project would not result in any significant impacts associated with historical resources. This comment is noted for the administrative record and has been incorporated into this

Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 232-4

- A development that includes 20 story tall office buildings and a massive modern expansion will change the character of this neighborhood forever, and not in a good way. Where is any analysis that was conducted that found that what is being proposed would actually fit in the neighborhood? Fit into the community with its surrounding neighborhoods? The neighborhood has nothing like this huge and tall complex. How can the city consider a project that would so change our neighborhood?

Response to Comment No. 232-4

The comments regarding whether the Project is a good fit for the neighborhood do not raise environmental issues specific to CEQA or the Draft EIR and the environmental impacts addressed therein.

Refer to Response to Comment Nos. 11-3 and 26-7 regarding the size and height of the Project, including as it relates to surrounding uses.

In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's consistency with applicable plans, policies, and regulations that regulate land use on the Project Site, as well as the compatibility of the proposed uses with surrounding land uses, and concluded that impacts would be less than significant.

The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 232-5

- The Adobe is 170 years old and should be protected as the important historic property it is. Where is an analysis of how this construction will impact the Adobe? More importantly has anybody thought of how this construction will destroy the historic context of the Adobe? What about an analysis of the cultural impact of losing this important piece of history?

Response to Comment No. 232-5

The assertion that the Gilmore Adobe will be "lost" is the opinion of the commenter and not supported by substantial evidence. Refer to Section E, Impacts to Historical

Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13, 28-29, and 363-1 regarding the Draft EIR's analysis of impacts to the Gilmore Adobe and its integrity of *setting*. As discussed on page IV.B-55 in Section IV.B, Cultural Resources, of the Draft EIR, the Project does not include the demolition, relocation, rehabilitation, alteration or conversion of the Gilmore Adobe. All of the aspects of integrity for the Gilmore Adobe would be unaffected by the Project, and the historic integrity of this historical resource would be retained (with the exception of *setting*, which is no longer intact since construction of The Grove). After construction of the Project, the Gilmore Adobe would remain intact and continue to convey its historic significance. For these reasons, the historic significance and integrity of the Gilmore Adobe would not be impaired by the Project. After construction of the Project, the Gilmore Adobe would retain its eligibility for listing as an HCM, and the Project would not result in an adverse impact to this historical resource. Thus, impacts would be less than significant.

Also refer to Response to Comment Nos. 26-139 and 363-2 regarding how construction of the Project would not result in significant vibration impacts to the Gilmore Adobe.

Comment No. 232-6

- There will be significant and frequent vibrations and earth movement during the construction process. Were the impacts of the expected earth vibration and movement on nearby homes and apartments analyzed? Over what period of time should residents expect that ground shaking to take place and what times of the day? Are there thresholds for how powerful explosive and movement activity can be?

Response to Comment No. 232-6

Section IV.I, Noise, of the Draft EIR analyzed how construction activities could generate groundborne vibration resulting in impacts related to building damage and human annoyance. Refer to pages IV.I-59 through IV.I-67 of the Draft EIR.

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

Refer to Response to Comment No. 161-2 for a discussion of construction hours.

The thresholds of significance used in the vibration analysis are provided on page IV.I-31 of Section IV.I, Noise, of the Draft EIR. Note that no explosive activities would occur during construction.

Comment No. 232-7

What steps will be taken to make sure that the Adobe, the nearby shopping center, local homes and apartments, and local businesses are kept safe and functional during and after the construction process?

Response to Comment No. 232-7

This comment does not relate to the Draft EIR's analysis of the Project's potential environmental impacts. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding Project construction and the proposed CTMP that will include measures to ensure adequate vehicular and pedestrian access, and pedestrian safety during construction. Refer to Response to Comment No. 16-5 and Section IV.J.2, Public Services—Police Protection, of the Draft EIR regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 232-8

- My other concern from a historic perspective is the Farmer's Market. The Farmer's Market is a Los Angeles institution that ought to be protected and considered before any major construction is done in the surrounding area. What does expert analysis show on the impact this project could have to the customer base of the Farmer's Market? Was a poll done to see if people who currently go there would still do so if construction, increased traffic in the area and parking became issues that could drive customers away? What does the analysis show of how non-customer use of Farmer's Market parking will impact visitor numbers to the farmer's market? How will the city make sure that the Farmer's Market parking lot does not become overflow parking for Television City?

Response to Comment No. 232-8

Construction of the Project would not affect physical access to The Original Farmers Market. Furthermore, as discussed in Topical Response No. 13, Parking, the Project would not result in spillover parking and as such would not affect parking at The Original

Farmers Market. Nonetheless, it should be noted that under CEQA, displacement of customers is not an environmental topic that needs to be addressed.

Comment No. 232-9

As I said at the outset a lot can go wrong for our community with this project and I am sure other people have brought up many of the ways that can happen. I wanted to look at the historic impact because that is too often forgotten in the name of progress here in Los Angeles. I hope you will take time to consider these concerns before you approve this project. The things we could lose cannot be gotten back if this not done right!

Response to Comment No. 232-9

Potential impacts to historical resources are fully analyzed in Section IV.B, Cultural Resources, of the Draft EIR. As discussed therein, impacts would be less than significant. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 233

Greg Hansen
439 1/2 N. Gardner St.
Los Angeles, CA 90036-5753

Comment No. 233-1

I am wondering if the Draft EIR actually took into account those of us who live adjacent to the proposed project who have been working from home since the start of the pandemic. Many of us will continue to work from home as the new normal.

According to the Draft EIR, there will be significant impacts from noise. Based on Appendix M of the Draft EIR, the hauling of material is estimated at 772,000 cubic yards. However, Footnote 11 indicates that this number is just an estimate and that the amount is actually 822,000 cubic yards of material. Why the difference? Further, the hauling of this material is anticipated to take 9 months. Does that mean residents who live adjacent to Beverly Boulevard (the anticipated route) will have to endure the noise of haul trucks for 9 months? The Draft EIR is identifying 640 daily truck trips during that time period. What is the applicant doing to mitigate this impact on residents?

Response to Comment No. 233-1

Refer to pages IV.I-18 to IV.I-19 and Figure IV.I-3 on page IV.I-20 in Section IV.I, Noise, of the Draft EIR regarding the sensitive receptors that were analyzed.

The second paragraph of this comment is identical to the first paragraph of Comment No. 177-2. Refer to Response to Comment No. 177-2, above.

Comment No. 233-2

If the project's proposed development agreement is approved by the decision-makers, does that mean that residents will have to endure a relentless bombardment of noise during the construction of a 20-year period? If this is the case, will the construction have any interim periods of "no-build" so the community can have some relief from the construction noise?

Response to Comment No. 233-2

This comment is identical to the second paragraph of Comment No. 177-2. Refer to Response to Comment No. 177-2, above.

Comment No. 233-3

Please explain how your methodology took into consideration the project's noise impacts on those of us working from home in the adjacent residential properties.

Response to Comment No. 233-3

This comment is identical to the third paragraph of Comment No. 177-2. Refer to Response to Comment No. 177-2, above.

Comment Letter No. 234

Greg Hansen
439 1/2 N. Gardner St.
Los Angeles, CA 90036-5753

Comment No. 234-1

I have significant concerns with the TVC 2050 project and how it will impact access to public transit and non-vehicle access in the Beverly-Fairfax area.

Los Angeles is a car-intensive community and walking or biking in our city can be perilous at times. I'm concerned that the intensity of the construction work for TVC 2050 and the length of time construction will be ongoing will make my neighborhood practically unlivable.

Response to Comment No. 234-1

The Project would improve access to public transit, pedestrian safety, and multi-modal access around the Project Site. Refer to Topical Response No. 7, Mobility Hub, and Topical Response No. 15, Transportation Improvement Program. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 16-72 and 26-E.4-3 regarding pedestrian safety and the Project's pedestrian-oriented design.

Comment No. 234-2

The draft EIR for this project calls for the excavation of 700,000 cubic yards of dirt. That means a tremendous number of trucks entering and leaving the site to remove not just soil but demolition debris as well. How is this going to impact the air quality of the neighborhood? What are the plans for making sure all the dust from this project doesn't find its way into our lungs?

Response to Comment No. 234-2

As shown in Tables IV.A-10 and IV.A-11 of the Draft EIR, after the application of mitigation, localized air quality impacts, including particulate (i.e., dust) impacts, would not exceed SCAQMD LST thresholds, and impacts would be less than significant. Refer to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust.

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, which

includes mandatory control actions and dust control contingency measures to control fugitive dust.

Comment No. 234-3

Will blasting be required during any of the phases of construction? When during construction and how much blasting? What days and times? How will neighborhood residents be notified?

Response to Comment No. 234-3

Project construction does not require blasting.

Comment No. 234-4

The draft EIR also seems to suggest a significant portion of the visitors to TVC 2050 once production starts will take mass transit to get there. How do they arrive at their projections? Will this increase in the number of mass transit users crowd out neighborhood residents who use mass transit for commuting and errands? If visitors to TVC park on residential streets or at the Farmer's Market, will neighborhood residents be inconvenienced?

Response to Comment No. 234-4

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 regarding the effectiveness of TDM programs. As described in Topical Response No. 11, the Draft EIR only assumed a combined transit, bicycle, and pedestrian reduction of 15 percent in the trip generation estimates used in the Draft EIR transportation analysis. This level of auto reduction is based on LADOT analyses of projects located in similar urbanized areas of the City of Los Angeles with comparable transit service. The examples shown in Topical Response No. 11 show that the Project should have no trouble meeting the 15 percent trip reduction levels shown in the Draft EIR. In addition, the Topical Response explains a more extensive TDM Program proposed by the Project which would exceed the trip reduction levels tested in the Draft EIR.

In reference to the question of transit capacity availability to serve the Project transit trips, Tables 4A and 4B on pages 58 and 59 of the Transportation Assessment (Appendix M.1 of the Draft EIR) show that the current transit system has approximately 2,000 empty seats on the bus lines serving the Project Site in both the morning and afternoon peak hours, which is well more than the anticipated Project transit trips to be added to the system. These transit capacity totals do not include the additional transit seats that will be made available to the area when the Metro D (Purple) Line Wilshire/Fairfax Station opens. The opening of the Metro D (Purple) Line Wilshire/Fairfax Station is scheduled to occur before the buildout of the Project.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking.

Comment No. 234-5

Please provide more detailed answers and information.

Response to Comment No. 234-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 234-1 through 234-4.

Comment Letter No. 235

Robert Hansen
263 Norumbega Dr.
Monrovia, CA 91016-2415

Comment No. 235-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 235-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 236

Sam Hansen
402 N. Vista St.
Los Angeles, CA 90036-5741

Comment No. 236-1

Even with being thousands of pages long, the EIR you came out with for the Television City plan raises more questions and concerns than it answers.

Response to Comment No. 236-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 236-2 through 236-7.

Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

Comment No. 236-2

The EIR says the average employee will commute 6.7 miles per day. What is considered an average employee? Where does that commuter mileage come from? Everyone knows very few people have a commute in Los Angeles of only 6.7 miles. Does that even make sense to the planning department? In the already terrible traffic in the Beverly Fairfax area, even 6.7 miles can take more than 45 minutes depending upon the time of day. Has the city recently timed the trip from the intersection of Beverly Fairfax heading down Fairfax to the 10? Are the people that wrote this from LA?

Response to Comment No. 236-2

A full discussion of the trip length and other assumptions that went into the VMT analysis is found in Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 26-156. As substantiated therein, the approach to, and assumptions for, using the City's VMT Calculator tool to analyze the Project's VMT impacts were appropriate, as acknowledged by LADOT in its Assessment Letter that is included as Appendix M.2 of the Draft EIR.

Comment No. 236-3

Have you considered taking a poll on where people commute from in this area to see if this is possible or if it's completely unimaginable? The city should know much more about who

the expected commuters are who will be working there, where they are traveling to and from, and not use unrealistic assumptions when calculating impacts of all that traffic. Have you done this?

Response to Comment No. 236-3

Refer to Response to Comment No. 236-2 and Topical Response No. 10, Trip Generation, for a discussion of the validity of the assumptions used to calculate the average employee VMT.

Comment No. 236-4

Additionally, there will be hundreds of additional trucks along Fairfax as a result of the project and yet the EIR has not really analyze [sic] the noise and air quality changes that will result from this traffic. I did not find information about that, where is it? Have they even notified the people along Fairfax who will be impacted?!

Response to Comment No. 236-4

The comment regarding the number of additional trucks along Fairfax is incorrect. Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation.

It is not clear whether the commenter is referring to noise from trucks during construction or operation of the Project. Construction noise associated with truck trips was analyzed in Section IV.I, Noise, of the Draft EIR; refer to pages IV.I-35 to IV.I-43 and Table IV.I-11 therein.

Section IV.I, Noise, of the Draft EIR also analyzed the Project's operational impacts related to off-site vehicle noise on Fairfax Avenue, Beverly Boulevard, 3rd Street, Crescent Heights Boulevard, The Grove Drive, and Gardner Street; refer to pages IV.I-48 to IV.I-54 and Table IV.I-17 therein. As shown in Table IV.I-17, the Project's impact on Fairfax Avenue would be less than significant.

Refer to Sections IV.A, Air Quality, and IV.E, Greenhouse Gas Emissions, and Appendix B of the Draft EIR, which analyze the air quality and GHG impacts associated with trucks. Refer also to Response to Comment No. 231-3 for a detailed response regarding potential health risk impacts related to diesel trucks; Response to Comment No. 87-1 regarding pollutant emissions related to production trucks; and Response to Comment No. 26-E.1-16 regarding the number of operational trucks.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing that has occurred as part of the CEQA process for the Project.

Comment No. 236-5

We have not seen a concrete description of what the project actually is. We need to see the specific plan to truly understand its impact. I found the EIR plan [sic] and to be very confusing and contradictory, and that is coming from someone who reads a lot and cares about Los Angeles politics. People who do not have this knowledge will be even more confused than I am!

Response to Comment No. 236-5

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, all of the physical aspects of the Project that will be implemented by the proposed Specific Plan were fully disclosed and analyzed in the EIR in accordance with CEQA, and although neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 236-6

The EIR says that there will be special events held at the property. This may be a distraction to the neighborhood. Were the impacts from these special events truly analyzed in the EIR? If so, how were the special events included and considered? When will they be held? Mostly at night? If the project knows what special events will be held, why hasn't that information made available to the community in the plan?

Response to Comment No. 236-6

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 66-5 with regard to special events. As discussed therein, the proposed Specific Plan would not regulate special events; rather, special events would continue to be governed by the LAMC, consistent with existing conditions.

Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 236-7

If not included, how does the City know what impacts there may be to our community from the increased people attending these events, including traffic, security, and noise? Will there be lanes blocked off for limos and special bright lights, like at celebrity events? All of that sounds awful for our neighborhood.

Response to Comment No. 236-7

The transportation analysis in the Draft EIR fully accounted for all trips generated by the Project (employees, visitors, audience members, production vehicles, deliveries, etc.). Trip generation and parking demand from special events related to onsite production activities are already included in the trip generation estimates used in the Transportation Assessment (Appendix M.1 of the Draft EIR). Refer to Section C, Special Events, of Topical Response No. 10, Trip Generation, regarding how special events (not related to the studio) would not be regulated by the Project's Specific Plan and would continue to be regulated on a case-by-case basis by City departments consistent with existing conditions.

With respect to security, the Project includes Project Design Feature POL-PDF-2 which requires a 24/7 security plan. This plan would cover special events. Refer to page IV.J.2-12 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR.

There are pick-up/drop off areas planned within the Mobility Hub, and the Project would have numerous entrances linked to potential pick-up/drop off areas within the Project Site. Therefore, the blockage of travel lanes by limos and celebrity vehicles is not anticipated.

The Project's operational noise analysis included in Section IV.I, Noise, of the Draft EIR accounts for production events and outdoor activities. Refer to pages IV.I-43 through IV.I-48 therein.

With respect to the environmental impact of lighting, pursuant to Public Resources Code Section 21099, because the Project is an employment center project located on an infill site, the Project's aesthetic impacts shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 38–40 of the Initial Study for a discussion of lighting.

Comment Letter No. 237

Gale Harlow
457 1/2 N. Hayworth Ave.
Los Angeles, CA 90048-2703

Comment No. 237-1

I [sic] I am a resident of 22 years.

Response to Comment No. 237-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 237-2

I am concerned about the traffic and lack of public parking. If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with the consequences of the increased pollution, noise and traffic, the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 237-2

With respect to traffic and parking, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). In addition, while parking impacts are also no longer CEQA impacts under SB 743, refer to Topical Response No. 13, Parking, regarding the adequacy of the proposed parking supply to meet the demands of the Project and prevent spillover parking.

The remainder of this comment is identical to Comment No. 114-5. Refer to Response to Comment No. 114-5, above.

Comment Letter No. 238

Kathleen Harper
522 N. Edinburgh Ave.
Los Angeles, CA 90048-2310

Comment No. 238-1

The traffic section very confusing. Why do members of the public need to wade through an 83-pages [sic] just to see that we can expect gridlock and congestion? There is no way that thousands of trucks and thousands of cars will orderly come in and out of our community and have no profound impact.

Response to Comment No. 238-1

The analysis included in Section IV.K, Transportation, and Appendix M.1, Transportation Assessment, of the Draft EIR meets the requirements of CEQA. The Draft EIR and the Transportation Assessment analyzed the potential transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would have less-than-significant transportation impacts. Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Topical Response No. 10, Trip Generation, regarding the truck and automobile trip generation estimates during Project operation.

Comment No. 238-2

This project falls very short in providing enough parking for the thousands of cars that will be pouring in every day and it's obvious that a lot of people won't bother to park in the garage, but instead park in the nearby streets, which will affect our neighborhood's walkability and safety.

Response to Comment No. 238-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the onsite parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment Letter No. 239

Susan Harrington
6351 Drexel Ave.
Los Angeles, CA 90048-4703

Comment No. 239-1

As a nearby resident, I am concerned about this proposed Television City studio development. Unfettered growth in the area is only causing more pollution from increased vehicle traffic.

Response to Comment No. 239-1

Refer to Sections IV.A, Air Quality; IV.E, Greenhouse Gas Emissions; and IV.K, Transportation, of the Draft EIR for the analyses of the air quality, GHG and transportation impacts of the Project.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 239-2

Inevitably we will witness an increase in pedestrian injury and death caused by the influx of new vehicles on the road, and the confusion that a huge construction project like this will create in the area for walkers and cyclists.

Response to Comment No. 239-2

This comment is identical to a portion of Comment No. 175-1. Refer to Response to Comment No. 175-1, above.

Comment No. 239-3

I can hardly park my car now. What will it be like for years of construction to come? The EIR says 3 years of construction, but you can't tell me that a project of this magnitude will be completed in 3 years. To me, we are talking about 10+ years of ridiculous traffic, detours on our already loaded streets, and public safety issues that nobody has even considered. But yes, the almighty dollar reigns again.

Response to Comment No. 239-3

The most intense construction impacts would occur if the Project were constructed in one phase and that single-phase construction plan is anticipated to last approximately 32 months. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

With respect to parking, construction worker parking will also be provided on-site. The Project Site is large enough that construction workers in the early phases of construction can park on the surface parking lots on one portion of the Project Site while the excavation is taking place on the other portions of the Project Site.

Regarding public safety and traffic, refer to Topical Response No. 12, Safety and Congestion.

Comment No. 239-4

I am requesting that the city hold a public hearing regarding TVC 2050 with posted public notices and full presentation given to our community members. There should be an opportunity for all concerned members of the community to ask as many questions as needed and get their questions answered.

Response to Comment No. 239-4

Refer to Response to Comment No. 32-3. As discussed therein, the Applicant has actively engaged with stakeholders and shared information about the Project beginning in 2019, and the Project has complied with and exceeded CEQA's noticing requirements. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day required under CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during public hearings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings.

Comment Letter No. 240

James Harris
jh3312@pacbell.net

Comment No. 240-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 240-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 241

Monique Hart
624 S. Citrus Ave.
Los Angeles, CA 90036-3535

Comment No. 241-1

The EIR for the Television City 2050 project leaves me with many questions about construction of the project and the impacts it will have on the community.

Response to Comment No. 241-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The Draft EIR comprehensively analyzed the Project's potential impacts during both construction and operation; refer to Section IV of the Draft EIR.

Comment No. 241-2

Where are the details about the length of the anticipated construction? Will it last for a couple of years, or 20 years? This is a concern. If it will last three years, this sounds awful, and hard to imagine all the needed excavation and building of 20-story buildings would only take three years. Why does the city believe it could be done in that timeframe? Is the developer actually being realistic and honest about the whole project being done in three years? With a three-year timeline, the traffic, air quality, dewatering, safety, and other impacts will be intense enough. We in the community will all feel those effects.

Response to Comment No. 241-2

The construction schedule is included in Appendix B of the Draft EIR (pdf page 32) and is discussed further in Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

The Draft EIR fully evaluated impacts associated with transportation, air quality, dewatering, safety, and all other impacts that are required to be evaluated under CEQA. Refer to Table I-1 on page I-14 through page I-16 of Section I, Executive Summary, of the Draft EIR for a summary of impact conclusions.

Comment No. 241-3

But If [sic] it will last 20 years (or more), those impacts, [sic] would be how many more times as serious and adverse? Where in the EIR does it explain how these the differences in impacts between the different construction timelines were determined? Why isn't this made more clear to the community? It seems that the city is being pressured by the developer to glaze over this fact.

Response to Comment No. 241-3

Refer to Response to Comment No. 9-24 regarding the Project timeline. As discussed therein, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 32-month buildout and a 20-year buildout is included for each of the environmental topics studied in the Draft EIR.

Project impacts associated with a long-term buildout through 2043 are specifically addressed in the subsections titled "Project Impacts with Long-Term Buildout" within each of the impact analysis sections in Section IV of the Draft EIR. These are located on pages IV.A-74 through IV.A-77 of Section IV.A, Air Quality; page IV.B-59 of Section IV.B, Cultural Resources; pages IV.C-43 and IV.C-44 of Section IV.C, Energy; page IV.D-28 of Section IV.D, Geology and Soils; pages IV.E-85 and IV.E-86 of Section IV.E, Greenhouse Gas Emissions; pages IV.F-58 and IV.F-59 of Section IV.F, Hazards and Hazardous Materials; page IV.G-41 of Section IV.G, Hydrology and Water Quality; page IV.H-57 of Section IV.H, Land Use and Planning; page IV.I-68 of Section IV.I, Noise; page IV.J.1-28 of Section IV.J.1, Public Services—Fire Protection; pages IV.J.2-17 and IV.J.2-18 of Section IV.J.2, Public Services—Police Protection; pages IV.K-80 and IV.K-81 of Section IV.K, Transportation; page IV.L-17 of Section IV.L, Tribal Cultural Resources; pages IV.M.1-41 and IV.M.1-42 of Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure; page IV.M.2-19 of Section IV.M.2, Utilities and Service Systems—Wastewater; and page IV.M.3-14 of Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure.

Please note that the Draft and Final EIRs were prepared by the Los Angeles Department of City Planning as Lead Agency in accordance with CEQA and City policies.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 241-4

The scariest problem to me as a resident of LA are the safety impacts. What happens to residents when thousands of additional trucks are on the road in a fairly residential area? And what about the impacts to the local businesses? And impacts to their customers?

Response to Comment No. 241-4

The construction trucks that would be used for hauling dirt from the Project Site would be limited to three haul routes between the Project Site and I-10. These routes, described in Topical Response No. 14, Construction Vehicle Impacts, would be enforced by LAPD. No local residential streets would be used for any construction truck movement. Also refer to Topical Response No. 14 regarding the number of trucks during construction.

One of the elements of the CTMP is to schedule the trucks by route and by time of day to minimize the disruption of the Project truck movements on the area roadways, residents, and businesses. Note that potential impacts to customers of businesses are not CEQA impacts.

Comment No. 241-5

The people in this community include many students, visitors to the Holocaust Museum and other museums, family members visiting nursing home residents, visitors to Pan Pacific Park, and Jewish congregants attending events at the synagogue. Are the safety hazards to each of these potentially vulnerable groups included in the EIR? With all the additional traffic, car accidents will surely increase, including accidents involving pedestrians. What do the studies say about the impacts of the project on increased accidents and increased incidences involving cars and pedestrians? The city has a responsibility to seriously consider their safety and protect them as it studies the impacts of proposed projects.

Response to Comment No. 241-5

Refer to Response to Comment No. 41-4 for a discussion of pedestrian safety to the Holocaust Museum and Pan Pacific Park. As discussed therein, the Holocaust Museum drop off takes place on the east side of the roadway in a bus bay offset from the northbound through lanes. The school children are dropped off on a sidewalk adjacent to the Museum and they never have to cross The Grove Drive. For pedestrians approaching the Museum from the west side sidewalk, a protected marked crosswalk would be incorporated into the traffic signal controlling the entrance to the Project.

Regarding the general concern about increased accidents in the area, see Topical Response No. 12, Safety and Congestion. Note that congestion and car accidents are not

CEQA impacts. Refer to Response to Comment Nos. 9-29 and 26-E.4-3 regarding hazards and pedestrian safety.

Comment No. 241-6

And, again, how will the risks differ if the project lasts three or 20 years or somewhere in between? And, once Television City 2050 is up and running, where are those separate and different risks analyzed and included in the EIR? There will be thousands of additional employees and audience members in the community at that point. That means thousands more vehicles on the roads of the community.

Thank you for answering my questions about this proposed project.

Response to Comment No. 241-6

The 32-month construction schedule analyzed throughout the Draft EIR represents a conservative scenario because it includes more overlapping activities. In addition, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is also included for each of the environmental topics studied in the Draft EIR. Refer to Response to Comment No. 9-24 regarding the buildout timeline. Operational impacts, including transportation, are evaluated throughout the Draft EIR.

Refer to Topical Response No. 10, Trip Generation, regarding the trips that would be generated by the Project, including employee and audience trips.

This comment refers to generalized “risks” without specifying a concern, and has been noted for the administrative record.

Comment Letter No. 242

Carol Hayes
401 S. Detroit St., Apt. 216
Los Angeles, CA 90036-3693

Comment No. 242-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. Comment Letter No. 243

Brian Head
439 1/2 N. Stanley Ave.
Los Angeles, CA 90036-2301

Comment No. 243-1

I have many questions regarding the proposed Television City project. What is the distance of the venue to the three nearest airports? What types of public transit will be available along those routes? The entertainment venue as proposed in the EIR seems massive... fourteen stages is too many for this community, along with everything else being proposed for the location.

Response to Comment No. 243-1

Refer to Response to Comment No. 115-1 regarding the distance to airports and public transit.

The Project is not an entertainment venue but, rather, an employment project associated with the entertainment industry.

The comment about the size of the Project provides a general statement on the Project and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 243-2

How will it work having fourteen stages? Can multiple stages be used at the same time? Please provide me with specific information regarding the logistics of this multi-stage concert venue. I am confused on why California needs another concert venue. Between Staples Center, Banc of California Stadium, Oracle Arena, and SAP Center, I am concerned about oversaturating the market. What studies were done that show the need for this capacity?

The draft EIR refers to large projects that could have a negative impact on nearby businesses. What will be those negative impacts? What large projects are being referred to? What have nearby businesses been told about the proposed projects? We cannot leave behind the businesses that are essential and have an important role in the community.

Response to Comment No. 243-2

The first paragraph of this comment is identical to the second paragraph of Comment No. 115-2. Refer to Response to Comment No. 115-2, above. Note that the Project does not include a concert venue.

It is unknown what the first sentence of the second paragraph of this comment is referring to. Further, impact on businesses is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 243-3

The Farmers Market and the Grove are two of Beverly Fairfax's most popular destinations for people in surrounding areas. These parking lots are typically full, and I am concerned about the impact the venue with fourteen stages and all the other operations of the development will have on these locations. How many parking spaces will be reserved at the Farmers Market and the Grove for people attending a concert at the proposed venue? What about for the other events mentioned?

Response to Comment No. 243-3

This comment is identical to the first part of Comment No. 115-4. Refer to Response to Comment No. 115-4, above.

Comment No. 243-4

Both of these locations also have valet parking available from 10AM–10PM. Will valet parking be offered at the concert venue? If not, what specific measures will be taken to ensure that parking for the Farmers Market and the Grove are reserved for Farmers Market and the Grove customers? The Beverly Fairfax Historic District includes several attractions, and it is essential that the voices of these businesses are heard.

Response to Comment No. 243-4

This comment is identical to Comment No. 115-5. Refer to Response to Comment No. 115-5, above.

Comment No. 243-5

Please provide me with all information regarding plans for the concert venue, use of the fourteen stages, and use of the other development features that will bring many people to the site.

Response to Comment No. 243-5

This comment is identical to Comment No. 115-6. Refer to Response to Comment No. 115-6, above.

Comment Letter No. 244

Mendy Hecht
419 N. Poinsettia Pl.
Los Angeles, CA 90036-2504

Comment No. 244-1

I am a long-time resident of Beverly Fairfax.

Response to Comment No. 244-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 244-2

I also care deeply about access to alternative means of transportation. That's why when I learned what could happen to bike lanes and sidewalks as a result of the Television City 2050 project, I knew I had to submit my concerns and ask questions.

Response to Comment No. 244-2

There are no plans to reduce or eliminate any sidewalks or bike lanes as part of the Project. Likewise, the Project would not preclude any of the long-range bike facilities included in the City's plans.

The Project would promote access to alternative means of transportation through its Transportation Improvement Program; refer to Topical Response No. 15, Transportation Improvement Program.

Comment No. 244-3

The TVC 2050 project could take up to 20 years to complete. What will happen to bike lanes and sidewalks that people rely on for transportation during this construction period? What studies have been conducted to evaluate the negative impacts this disruption could have on lower income residents that rely exclusively on bikes and walking to get from point A to point B? What safety analyses have been conducted to show the negative impact sidewalk and bike lane disruption can have on bikers and walkers?

Response to Comment No. 244-3

Refer to Response to Comment No. 244-2. The Project would not implement any improvements that will interfere with the City's long-range bicycle lanes for the area. The pedestrian sidewalks would be maintained around the entire perimeter of the Project Site at all times. If construction requires the temporary closure of a section of public sidewalk, a temporary alternate sidewalk would be provided.

Comment No. 244-4

Additionally, this plan includes bike and pedestrian improvements that may be included but are not finalized. I am concerned that the project's construction will permanently damage the existing network of bike lanes and sidewalks instead of improving them. This would have a significant impact on the residents that rely on this means of transportation. Can you please outline what improvements will be made? Why are they not included in the final plan? When will the public be informed about the improvements and when will they be made? Have any studies been conducted on how much better these improvements will be than their original form? What preservation measures could be used as an alternative? The lack of commitment to finalizing and codifying these improvements concerns me deeply.

Response to Comment No. 244-4

The Project would enhance pedestrian safety within and surrounding the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 16-72 and 26-E.4-3 regarding the Project's pedestrian-oriented design and pedestrian safety. The Project would not implement any improvements that would interfere with the City's long-range bicycle lanes for the area. No sidewalks or bike lanes would be closed or reduced as part of this Project.

Comment No. 244-5

Alternative modes of transportation are extremely important to me and other residents of Beverly Fairfax. It is unacceptable that this project might permanently disrupt the existing network of bike lanes and sidewalks. I hope that the city will take my concerns seriously and answer each of my questions in detail.

Response to Comment No. 244-5

Refer to Response to Comment No. 244-2. No part of the Project would disrupt the existing network of bike lanes and sidewalks.

Comment Letter No. 245

Kelsey Hellenbrand
8217 Blackburn Ave., Apt. 5
Los Angeles CA 90048-4231

Comment No. 245-1

I am writing to oppose the Television City Project in the Beverly/Fairfax neighborhood. I am just really unsure how allowing this development could possibly be considered a good addition to the neighborhood. There are already so many developments in the area and adding a development with this size and number of employees just sounds like a terrible idea.

Response to Comment No. 245-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 245-2 and 245-3.

Comment No. 245-2

What are the combined effects of this project and other developments in the works? Where is the information that makes clear what additional impacts will result from yet another traffic-generating project being added to the mix of planned projects?

Besides the amount of traffic this project will bring, what about the construction? Added construction vehicles and road/lane closures around the site would make the everyday commute a nightmare for those who live in the area.

Response to Comment No. 245-2

Cumulative impacts are analyzed in each section of the Draft EIR, including the transportation analysis. Refer to Section III, Environmental Setting, of the Draft EIR, which describes in detail the cumulative study area. A total of 68 related development projects were included in the analysis.

Refer to Response to Comment No. 162-2 regarding the construction assessment included in Appendix M.1, Transportation Assessment, of the Draft EIR. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Regarding lane and sidewalk closures, while temporary closures may be necessary during construction, there would not be any long-term travel lane or sidewalk closures.

Comment No. 245-3

I heard that the developer is wanting to have some flexibility to build over a 20-year time frame. I am sorry... 20 YEARS? That is just unacceptable and would be a failure from the city to allow something so egregious. Clearly there isn't a need for this development if it is going to take 20 years to build. Do what is right and deny this project.

Response to Comment No. 245-3

The Project does not propose continuous construction for 20 years. Refer to Response to Comment No. 9-24 regarding the Project timeline.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 245-4

I just ask that you consider the people who live here and not the developer who does not. This is an unfriendly addition to the neighborhood, and WE DO NOT WANT IT.

Response to Comment No. 245-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 245-2 and 245-3.

Comment Letter No. 246

James Henly
804 S. Sherbourne Dr.
Los Angeles CA 90035

Comment No. 246-1

The ambiguity of the DEIR for the Television City project concerns me greatly.

Response to Comment No. 246-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 246-2 and 246-6.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Comment No. 246-2

The Beverly Fairfax Historic District and the neighborhood have existed just fine for a long time without an addition of a “mobility hub” and now is not the time to change that. Where is any analysis that supports the area needing a mobility hub? Where is the request from the community that we want this?

Response to Comment No. 246-2

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project would not impact the Beverly Fairfax Historic District. Refer to Topical Response No. 7, Mobility Hub, regarding the proposed Mobility Hub. The EIR analyzed all potential environmental impacts associated with the proposed Mobility Hub. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 246-3

What are the specific plans and details for the mobility hub? Will the mobility hub provide revenue to the city and how much? How many people will the mobility hub employ? Will these part of the employee numbers indicted in the DEIR?

Response to Comment No. 246-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the Conceptual Site Plan, including the Mobility Hub. The Transportation Assessment (Appendix M.1 of the Draft EIR) includes the Mobility Hub plan in Figure 4 (page 15). The Mobility Hub would be located on-site near the proposed signalized intersection of Fairfax Avenue and 1st Street to provide a connection between the Metro D (Purple) Line Wilshire/Fairfax Station and the Project Site. Refer to Topical Response No. 7, Mobility Hub.

No revenue would be generated by the Mobility Hub for either the Project or the City. Rather, the Mobility Hub would be an amenity provided by the Project to encourage and support non-auto travel to/from the Project Site.

The Mobility Hub would be supported by Project security staff, which is accounted for in the overall Project employee estimates.

Comment No. 246-4

I did not see an analysis of any sort over the traffic pollution that the mobility hub will cause and the impacts of those additional air quality issues. Where are the EIR findings about the impacts the inevitable influx of buses, trains, and cars will have in this area? What is planned to deal with all those impacts?

Response to Comment No. 246-4

Please see Response to Comment No. 16-80 for a discussion of the vehicle trip effects of the Mobility Hub, which would be expected to reduce vehicle trips associated with Project operations. As described on page IV.K-74 of Section IV.K, Transportation, of the Draft EIR, the Project's VMT analysis (and the operational transportation analysis) excludes (i.e., does not take credit for) most of the elements of the TDM Program and, therefore, represents a conservative (i.e., high) estimate of total Project trips. The Draft EIR's air quality analysis used the same conservative estimate of total Project trips. As shown in Table IV.A-7 (Estimated Maximum Regional Daily Operational Emissions at Project Buildout (2026)) in Section IV.A, Air Quality, of the Draft EIR, regional emissions resulting from operation of the Project would not exceed SCAQMD's daily regional operational thresholds.

As discussed in Topical Response No. 7, Mobility Hub, the Mobility Hub would reduce the number of Project trips and VMT below what was analyzed in the Draft EIR. Additional detail for informational purposes is provided in the Confirmatory Air Quality,

GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR) showing that the Mobility Hub would serve to reduce both vehicle trips and VMT.

Comment No. 246-5

In addition, I have seen an increase of scooters and bikes in the Los Angeles area. While these are energy efficient means of transportation, many residents and I agree that we do not want the sidewalks littered with scooters and bikes. Will the developers be adding bike or scooter lanes to any of these streets? What about disabled residents of Beverly Fairfax that use their wheelchair on the sidewalk? I do not see how this could be safe. What initiatives will the developers take to ensure that our sidewalks are not full of scooter and bike traffic and remain safe for pedestrians?

Response to Comment No. 246-5

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety. The Project is not proposing to add bike or scooter lanes. Scooter usage and scooter parking is managed by LADOT and their contractors on a citywide basis. This comment discusses issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 246-6

How close will the mobility hub be to each of the schools within the Beverly Fairfax Historic District? Are the developers even considering the increase of traffic in the area with an already high level of traffic during drop off and pick up of school children? It is essential that residents know what kind of disruption to their daily life there will be.

Response to Comment No. 246-6

The Mobility Hub would be located off-street completely within the Project Site near the corner of Fairfax Avenue and 1st Street. The purpose of the Mobility Hub is to support non-auto travel to/from the Project Site, thereby reducing auto travel levels on the streets within the Study Area. The residents and schools of the area would not experience any additional disruption because of the Mobility Hub.

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Project's Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 246-7

Please reach out to me with any questions about my concerns as well as update me on any additions or changes to the DEIR.

Response to Comment No. 246-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 246-2 and 246-6.

Comment Letter No. 247

Matt Hensley
matthensley@msn.com

Comment No. 247-1

I am upset and have questions about several things presented in the EIR for the Television City Project.

Response to Comment No. 247-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 247-2 through 247-6.

Comment No. 247-2

1. Will the project pump groundwater? How much groundwater? When during the project timeline will groundwater pumping occur and for how long? Won't that potentially cause contamination of the groundwater that we use? How will this groundwater be disposed of? How this crucial part of the project is going to be done needs to be made more clear.

Response to Comment No. 247-2

Construction dewatering is anticipated as part of the Project but such dewatering is not anticipated to result in significant impacts to groundwater. Refer to Response to Comment No. 11-25 regarding the quantity of groundwater to be extracted and the duration of dewatering. Refer to Response to Comment No. 16-64 for a summary of how the extracted groundwater would be chemically analyzed to determine contamination and the appropriate treatment and/or disposal method. Refer to Response to Comment No. 3-7 regarding potential impacts to groundwater quality and how groundwater would be discharged. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Draft EIR's analysis of groundwater quality. Refer to Response to Comment No. 26-E.3-10 regarding groundwater contamination.

Comment No. 247-3

2. This project is right nearby the La Brea Tar Pits. Any amateur paleontologist would tell you there could be a variety of fossils in the area. What will be the impact of project activities on resources in the ground such as fossils? Where is

the analysis to identify those potential resources, and what does were the findings? If fossils do end up being unearthed, what steps will be taken to handle those artifacts? Will construction be shut down so that a full and proper examination of the area be done?

Response to Comment No. 247-3

Refer to Response to Comment Nos. 35-90 and 35-91 regarding the Draft EIR's analysis of the Project's potential to impact paleontological resources and revisions to Mitigation Measure GEO-MM-1, which requires that a paleontologist be retained to prepare a Paleontological Resource Mitigation and Treatment Plan for the Project. The Paleontological Resource Mitigation and Treatment Plan shall include communication protocols during construction, fossil recovery protocols, sampling protocols for microfossils, laboratory procedures, reporting requirements, and curation provisions for any collected fossil specimens. Further, Mitigation Measure GEO-MM-1 has been revised to clarify that the paleontological monitor will have the authority to stop construction in an area where a significant paleontological resource is discovered. In addition, a worker environmental awareness program will be conducted at the preconstruction meeting for the Project in accordance with Mitigation Measure GEO-MM-1.

Comment No. 247-4

3. The EIR says that events and filming could be held outdoors. What kinds of events would be held? Do the different kinds of events require different permits or fall under different regulations? Different kinds of outdoor activities obviously can cause serious noise in the area, as well impact the community. How is outdoor activity handled differently from a safety and noise perspective? Will scenes with guns be filmed?

Will there be large audiences or casts if filming? Or large crowds attending if [sic] an event? What hours will events be allowed? What hours would filming be allowed to be done? It looks like the studio is going to be surrounded by houses, which seems dangerous at best, and definitely residents who will be affected. More analysis is needed; where is the detailed information about all these outdoor activities and the specifics about the impacts associated with the different kinds of outdoor events and outdoor filming?

Response to Comment No. 247-4

Television City has been an operating studio within the Project Site since 1952 and will continue to operate as a studio upon completion of the Project. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 66-5

with regard to special events. Topical Response No. 3 also provides a discussion of how special events would continue to be governed by the LAMC, consistent with existing conditions. Refer to Section B, Visitor Trips and Section C, Special Events of Topical Response No. 10, Trip Generation, for additional information regarding audience and special event visitors. Refer to pages IV.I-43 through IV.I-48 of Section IV.I, Noise, of the Draft EIR for an analysis of noise associated with operation of the Project, including noise from outdoor production activities and potential impacts to nearby sensitive receptors. As demonstrated therein, noise impacts associated with operation of the Project would be less than significant. With regard to safety, outdoor production activities would continue to occur in accordance with regulatory requirements, including those set forth by OSHA.

Contrary to this comment, the Project Site is not surrounded by houses; refer to pages III-3 to III-4 in Section III, Environmental Setting, of the Draft EIR. Potential impacts on nearby residential uses and other sensitive receptors were fully analyzed in the Draft EIR.

Refer to pages IV.I-43 through IV.I-48 of Section IV.I, Noise, of the Draft EIR for an analysis of noise associated with operation of the Project including noise from outdoor production activities and potential impacts to nearby sensitive receptors. As demonstrated therein, noise impacts associated with operation of the Project would be less than significant. In particular, as discussed in Response to Comment No. 26-140, outdoor production activities currently occur throughout the Project Site and would continue to occur with implementation of the Project. However, the noise levels associated with outdoor production activities would be expected to be lower than the existing conditions, due to the reduction in the outdoor area used for studio production activities, such as surface-level parking lots and other outdoor areas at ground level. Also refer to Response to Comment No. 26-146 regarding the noise analysis associated with outdoor production activities. In addition, note that the Project would implement Project Design Feature NOI-PDF-5, which prohibits outdoor production activities within 200 feet of the Shared Eastern Property Line adjacent to the Broadcast Center Apartments during nighttime hours.

Comment No. 247-5

4. What are all the project features it says in the EIR that the studio will use to keep bad things from happening?—everything from greenhouse gasses, to noise, and traffic are dealt with by these features. There doesn't seem to be master list of all of them in the EIR. Who at the city is responsible for keeping track of them? And how do we know they will actually be implemented. And shouldn't we know what the impacts are instead of being masked by something called project features? Please outline what those actual "features" are and what the impacts will be if the features aren't actually built or implemented.

Response to Comment No. 247-5

This comment appears to be discussing the PDFs. All of the proposed PDFs and mitigation measures are listed in Section I, Executive Summary, of the Draft EIR, as well as in each respective section. The PDFs, which are not intended to mitigate impacts, are included in the Mitigation Monitoring Program and are enforceable as conditions of approval for the Project. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR for details regarding timing, enforcement, and actions indicating compliance.

Comment No. 247-6

A lot of people promise a lot of things, but what is important are the mechanisms to make sure they are done. Please let me know what that is.

Response to Comment No. 247-6

Refer to Response to Comment No. 247-5 for a discussion of the enforceability of the PDFs and mitigation measures.

Comment Letter No. 248

Armanda Hernandez
6500 Aria Blvd.
Sandy Springs, GA 30328-3637

Comment No. 248-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 248-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 249

Jesus Hernandez
5830 Myrtle Ave.
Long Beach, CA 90805-4111

Comment No. 249-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. Comment Letter No. 250

M.E. Hernandez
8261 W. Fourth St.
Los Angeles, CA 90048-4401

Comment No. 250-1

The project just isn't realistic when it comes to public transit and parking. First of all, why does the City think people are going to ride the bus and the subway? You can just look at the cars on the highway and streets and see that virtually everybody drives in their cars alone.

Response to Comment No. 250-1

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

Comment No. 250-2

Secondly, where are all the people going to park? The EIR says more than 5,000 parking spaces are needed, but it's not clear where the overflow parking is going to be—if it's in our community, there should be analysis of the air quality impacts, noise impacts, speed zone impacts, safety impacts, pedestrian impacts, and so on.

Response to Comment No. 250-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is neither proposed for the Project nor is it needed to meet the Project's peak parking demands; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment Letter No. 251

Allen Hershberg
455 N. Formosa Ave.
Los Angeles CA 90036-2524

Comment No. 251-1

I am very concerned about the TVC 2050 project and its impact on the city's history.

Response to Comment No. 251-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 251-2.

Comment No. 251-2

Los Angeles is incredibly storied and millions of people visit every year to see parts of the entertainment industry's past. My understanding is that only a part of this historic CBS building is going to be protected. Why isn't more of the complex going also going to be protected?

The historic part is designated as a Historical-Cultural Monument. If the project were to be approved, the developer changes what gets built from what was approved, does that put the designation at risk? I understand that the designation was based on certain aspects of the iconic building meeting certain criteria. But it seems that some of what is being proposed in the development does not maintain the integrity of the designation, so please explain fully how the integrity of this proposed modern, state of the art development maintains that historic integrity?

Is there a process for ensuring that what led to the protected parts of the site getting the designation in the first place is not going to be compromised? Who is responsibility for overseeing that? What is the process for appealing changes to other older parts of the building that also are historic?

Since there are so many aspects of the development that lack detail, and the developer is asking for flexibility in developing the site, how can we be sure that that flexibility doesn't mean changes to what has been promised regarding the protected part? How can we even know that when changes could be made to aspects of the project?

The city needs to make sure that more of this iconic, legendary building is preserved, as it has a unique and irreplaceable role in the city's television history.

Response to Comment No. 251-2

This comment is nearly identical to Comment No. 186-1. Refer to Response to Comment No. 186-1, above.

Comment Letter No. 252

Maria Hershberg
455 N. Formosa Ave.
Los Angeles, CA 90036-2524

Comment No. 252-1

I didn't see that there was any housing included in this project at 7716–7860 West Beverly Boulevard. We have a huge homeless problem, and we desperately need more housing. Why isn't there any housing included in this project? Isn't the city required to make sure that if a development is proposing to add jobs, housing has to be addressed? Because if there isn't housing for workers who are going to work there, that will just add more cars commuting to work on all the roads in and around that block. Where information about how many people is/are expected to be driving to work there every day? What is going to be done about all the additional workers driving there for work who won't be able to live near where they work?

Response to Comment No. 252-1

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Vehicle trips anticipated to be generated by the Project and the associated impacts on the transportation system are addressed in Section IV.K, Transportation, of the Draft EIR.

Comment No. 252-2

I would appreciate you answering these important questions because the EIR and developer plan does not.

Response to Comment No. 252-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 253

Gabriel Hershoff
164 S. Detroit St.
Los Angeles, CA 90036-2914

Comment No. 253-1

I am writing today to express my deepest concerns about the proposed studio expansion project.

Response to Comment No. 253-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 253-2

My concerns specifically pertain to parking and traffic in the neighborhoods close to the project site.

Response to Comment No. 253-2

Under SB 743, traffic congestion and the adequacy of a new development's parking are not CEQA considerations. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Project's Transportation Assessment (Appendix M.1 of the Draft EIR). As discussed therein, cut-through effects are not environmental impacts under CEQA.

Comment No. 253-3

First of all, an expanded Television City will mean more commuter traffic from workers and cast members headed to the campus. How many are expected on a daily basis? How many days of the week? When will those additional commuters begin working and visiting there? What does your analysis find will be the additional number of cars overall weekly and monthly? Will they be arriving at any time of day? For example, will the site be used 24 hours a day, seven days a week? Will the volume of expected incoming and outgoing traffic differ depending on the day?

Response to Comment No. 253-3

Table 13 on page 123 of the Transportation Assessment shows that the trip generation of the completed Project is expected to generate approximately 9,733 net new vehicle trips over the course of the entire day. Of that total, Table 6 on page 81 of the Transportation Assessment shows that approximately 787 net new trips would occur in the morning peak hour and approximately 855 in the afternoon peak hour.

Trips in and out of the Project Site would occur throughout the day and the studio would operate 24 hours per day, but the nighttime hours and the weekends would be the least busy times. Weekday trips in and out of the Project Site would be comparable on Mondays through Thursdays with fewer trips on Fridays, and even fewer trips on weekends.

Comment No. 253-4

Secondly, the increase in traffic from cars and trucks passing through will mean more noise, more emissions, and more accidents. What does the noise study say will be the increase expected every day, over what it is now? What will the air quality impacts be? Won't this be affect our overall air quality indicators for our community? Please provide that evaluation. What is going to be the impacts on the number of car accidents, bicycle accidents, and pedestrian accidents in this area? The site is located at the intersection of two of the highest injury streets. Will the expected increase in accidents put Beverly and Fairfax in an even higher ranking for high injury streets? What measures are going to be taken to ensure this does not happen and that there will be no increase at all in the number of car, bike and pedestrian accidents, deaths and injuries. Please think about the children and families who call this place their home.

Response to Comment No. 253-4

Air quality and noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. As discussed in Section IV.I, Noise, of the Draft EIR, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. All other air quality and noise impacts, including those associated with Project vehicles, would be less than significant.

The Transportation Assessment acknowledges the location of the Project Site along two of the streets included in the City's High Injury Network, and, for that reason, much of

the Transportation Improvement Program for the Project, summarized in Topical Response No. 15, Transportation Improvement Program, is focused on traffic safety measures. Also refer to Topical Response No. 12, Safety and Congestion, for discussions of pedestrian and vehicle safety. Note however that congestion and collisions are not CEQA impacts.

Pedestrian hazards and traffic safety considerations are discussed in Section C, Traffic Safety vs. Congestion, and Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3. As discussed in detail therein, the Project would include several traffic safety improvements as part of its overall Transportation Improvement Program including traffic signal enhancements, pedestrian control improvements, and pedestrian crossing signals. In addition, the design of each driveway would be reviewed and approved by LADOT as part of the design, regulatory permitting and construction process, and safety issues like safe sight distance and pedestrian control across the signalized locations would be confirmed in the detailed driveway design approval process.

Comment No. 253-5

There has been little to no transparency or communication so far from the developer and their team. It is my sincerest hope that you will evaluate this project based on merit and impact for residents who live in the area, not just the people who commute to work at the studio.

Response to Comment No. 253-5

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment Letter No. 254

Shira Hershoff
164 S. Detroit St.
Los Angeles, CA 90036-2914

Comment No. 254-1

A friend of mine shared the Draft EIR report for the proposed development TVC 2050, or also known as Television City. I am very concerned about the safety and traffic plans for a development project in the Beverly-Fairfax area. Our area has a significant traffic problem and many pedestrians have been involved in unfortunate accidents. There are no specific traffic plans listed, nor what types of trucks will be used.

Response to Comment No. 254-1

Specific traffic safety plans are included in the Transportation Assessment for the Project (Appendix M.1 of the Draft EIR). Much of the Project's Transportation Improvement Program, summarized in Topical Response No. 15, Transportation Improvement Program, is focused on traffic safety measures, including improvements to support the Vision Zero traffic safety program and Transportation Systems Management improvements to upgrade traffic signals in the area. Also refer to Topical Response Nos. 7, Mobility Hub, and 11, Transportation Demand Management, regarding the Project's proposed Mobility Hub and TDM Program.

Pedestrian safety and general traffic safety issues are discussed in Section D, Traffic Safety vs. Congestion, and Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3. Regarding trucks, refer to Topical Response No. 14, Construction Vehicle Impacts, and Section E, Truck Trips, of Topical Response No. 10, Trip Generation.

Comment No. 254-2

The proposed timeline for the Television City project also has me and many other residents I have known since my childhood in the Beverly-Fairfax area incredibly concerned. Will this project take 3 years, 10 years, or 25 years to build? It isn't clear to me from the report.

Response to Comment No. 254-2

Refer to Response to Comment No. 9-24 regarding the Project timeline.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 254-3

What does the construction plan look like? Will there be a high volume of trucks? Exactly what kinds of trucks? These are not addressed in the report.

Response to Comment No. 254-3

The construction plans and construction traffic impacts are analyzed in Section 5D of the Transportation Assessment included as Appendix M.1 of the Draft EIR. The truck activity levels during the busiest construction activity periods are discussed in the Transportation Assessment on page 181 where it shows that up to approximately 640 truck trips per day could occur during the excavation and foundation phase of the Project construction. Further details on the construction trip generation for both trucks and cars may be found in Topical Response No. 14, Construction Vehicle Impacts.

Comment No. 254-4

This traffic problem in our area has been and will always be completely unaddressed by the Planning Department in Los Angeles. Does the planning department have a voice in this process? I cannot imagine that they would be impressed with the lack of information in this report.

Response to Comment No. 254-4

The Draft EIR was thoroughly reviewed by the Department of City Planning and the Transportation Assessment (Appendix M.1 of the Draft EIR) was reviewed and approved by LADOT.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project in accordance with CEQA.

Comment No. 254-5

The Television City project is everything that is wrong with development projects in our neighborhood; they increase traffic, pedestrians and children are at risk, and the volume of large trucks polluting the area. I pose the following questions and I would like answers:

Response to Comment No. 254-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 254-6 through 254-9.

Comment No. 254-6

- The project could be built in 3 years or over 20 years or anything in between. How does the city analyze the various impacts based on those wildly different time frames? We could have up to 100,000 delivery, hauling, and dump trucks coming through our already congested community for 25 years.

Response to Comment No. 254-6

Refer to Response to Comment No. 9-24 regarding the Project timeline. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the Project's construction traffic impacts under the 32-month and long-term buildout scenarios. Please note that construction would not occur for 25 years as incorrectly stated in this comment. The Draft EIR analyzed the potential impacts related to construction truck trips in the applicable impact analyses in Section IV.

Comment No. 254-7

- How do you plan to evaluate the noise and air quality over this very vague timeline? How will you plan to evaluate pedestrian safety over multiple decades?

Response to Comment No. 254-7

The comment regarding the timeline is incorrect, as the Draft EIR clearly and consistently discussed the construction timeline. Refer to Response to Comment No. 9-24.

Air quality and noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. These sections analyze air quality and noise impacts under both a 32-month and long-term buildout scenario.

Refer to Response to Comment No. 254-1 above for a discussion of pedestrian safety.

Comment No. 254-8

- How does the community deal with the thousands of construction workers parking in various areas in such a busy area? Where are construction workers going to park?

Response to Comment No. 254-8

The Project Site is large enough that all construction workers would be able to park on the Project Site itself. No off-site parking would be needed to accommodate the parking demands of the construction workers and vehicles. Construction workers would be prohibited from parking off-site as part of the required CTMP prepared pursuant to Project Design Feature TR-PDF-1.

Comment No. 254-9

- How will the site manage thousands of office and studio workers, hundreds of construction workers, thousands of audiences show guests and construction trucks and production trucks?

Response to Comment No. 254-9

This comment does not concern CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 254-10

I am disappointed by the lack of information and would appreciate clarity about Television City. My friends of many years would appreciate it as well.

Response to Comment No. 254-10

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 255

B. Herzhaft
327 1/2 Sierra Bonita Ave.
Los Angeles, CA 90036-2446

Comment No. 255-1

The traffic and parking assumptions in the Draft EIR need to be rethought from the beginning, because they don't even include metro. If this site had been a model for a dense urban area, it would have envisioned public transportation, with housing on-site, and built as much as possible as around the concept of a walkable, car-free space. There should be a new study based on such a concept, that is recirculated.

Response to Comment No. 255-1

Section IV.K, Transportation, of the Draft EIR comprehensively evaluated the potential transportation impacts of the Project using conservative assumptions and supporting evidence, and concluded that impacts would be less than significant. Refer to Topical Response No. 8, Vehicle Miles Traveled, in particular Section C, Assumptions in the VMT Analysis, regarding the specific assumptions used in the Project's VMT analysis in the Draft EIR. These assumptions were reviewed and approved by LADOT.

The location of a Metro station is a regional decision made by Los Angeles Metro and not by a single developer. While the Applicant does not have the authority to determine where Metro stations will be located, the Project would directly connect the proposed Mobility Hub and the Metro D (Purple) Line Wilshire/Fairfax Station, currently under construction, through a dedicated shuttle bus connection. The Project has also located its Mobility Hub to support an additional Metro station along the K (Crenshaw) Line extension. Refer to Topical Response No. 7, Mobility Hub. Refer to Topical Response No. 11, Transportation Demand Management, regarding the proposed TDM Program, which is aimed at reducing single-occupant vehicle trips and encouraging alternative modes of travel.

The underlying purpose of the Project is to maintain Television City as a studio use and to modernize and enhance production facilities within the Project Site to meet both the existing unmet and anticipated future demands of the entertainment industry, keep production activities and jobs in Los Angeles, upgrade utility and technology infrastructure, and create a cohesive studio lot. Thus, the Project does not propose housing. Nevertheless, the comment regarding housing is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment Nos. 16-72 and 16-76 regarding the Project's pedestrian-oriented design.

The Draft EIR comprehensively analyzed the Project in full compliance with CEQA. As such, recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 255-2

Instead, this project will just add to LA's congestion and pollution (emissions from diesel trucks, tens of thousands of commuter cars), a huge drain on already scarce water sources, and the source of even more noise and light pollution.

Response to Comment No. 255-2

Refer to Sections IV.A, Air Quality, IV.I, Noise, IV.K, Transportation, and IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR regarding the comprehensive analysis of the Project's impacts associated with air quality, noise, transportation and water supply. The analysis of air quality impacts included the emissions from trucks and cars and diesel emissions. Please note that, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion is not a CEQA impact. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment. The Project would comply with LAMC requirements regarding lighting that would ensure nearby residential uses would not be impacted by Project lighting.

Comment Letter No. 256

Alan Hirsch
329 N. Fuller Ave.
Los Angeles, CA 90036-2522

Comment No. 256-1

I am a resident of 20 years and I am very concerned with the proposed Television City expansion project. We have not been made aware of just what this project will entail and what the details are, but my understanding is that it will be developed over 20 years, significantly enlarging the current footprint of Television City.

Response to Comment No. 256-1

The Draft EIR analyzed the proposed development program (refer to Table II-2, Proposed Development Program, on page II-13 and Figure II-4, Conceptual Site Plan, on page II-14 of the Draft EIR). In addition, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 256-2

The neighborhood includes multiple schools and nursing facilities. Have these organizations and other types of businesses, not to mention residents, been notified of the increase in truck traffic and car traffic due to construction? What specific information have they been told about the impacts of those increases because someone told me the developer said there were no significant impacts, but there cannot be no impacts with a project like this? What impacts are considered by the city as not significant? Who determines what is significant or not for residents who are affected?

Response to Comment No. 256-2

Noticing for the Project has been conducted in accordance with CEQA. Refer to Response to Comment Nos. 78-2 and 85-3. The Draft EIR is publicly available on the Department of City Planning's website for this Project.

Refer to Section VI, Other CEQA Considerations, of the Draft EIR, which includes a discussion of significant unavoidable impacts, as well as impacts found not to be

significant. Refer to pages VI-20 through VI-35 of the Draft EIR. Appendix G of the CEQA Guidelines establishes the thresholds for analyzing significant impacts under CEQA.

Comment No. 256-3

Are the older buildings of Television City, from the 1960s and early 1970s, considered historic due to the definition of historical resource because that date is 1963. Please explain where that year of 1963 comes from in determining what part of the building is historic.

Response to Comment No. 256-3

Buildings and structures constructed after 1963 were not included in the HCM designation; these buildings were also analyzed as a part of the Draft EIR historical analysis and confirmed not to be historical resources. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance.

Comment Letter No. 257

Susan Hirschhaut
530 N. Harper Ave.
Los Angeles, CA 90048-2223

Comment No. 257-1

I live within the Beverly Fairfax Historic District. The fact that the project's EIR concludes there won't be any effects on our historic district worries me a lot.

Response to Comment No. 257-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 257-2 through 257-4.

Comment No. 257-2

The Project's construction years are discussed in the EIR, but not with any clarity. Is construction going to be for three years? What does it mean that construction could be up to 20 years? Does that mean construction could be going on for 20 years in our community? We are a community of pedestrians, and children and families frequently stroll around our neighborhoods to visit one another's homes and attend religious services. Does the city expect that our lives could be affected by noise, more traffic, trucks all week long, closures, more cars driving through our neighborhood—for up to 20 years?

Response to Comment No. 257-2

Refer to Response to Comment No. 9-24 regarding the Project timeline. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the Project's construction trips and construction traffic impacts under the 32-month and long-term buildout scenarios. Refer to pages IV.I-40 through IV.I-43 in Section IV.I, Noise, of the Draft EIR for an analysis of temporary noise impacts associated with construction haul trucks. Construction lane closures are temporary in nature and would be subject to the requirements of the CTMP prepared pursuant to Project Design Feature TR-PDF-1; see pages IV.K-36 to IV.K-37 in Section IV.K, Transportation, of the Draft EIR.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and

Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 257-3

In addition, it will ruin our way of life and interfere with the very cultural Importance that has made Beverly Fairfax a historic area. Did you evaluate the effect all the construction activities will have on visitors to the historic area boundaries? Where Is that analysis? Can you point to findings that construction trucks and employees are not going to be driving through our communities at all hours of the day and night? When and how will construction trucks will be routed? Will trucks being using an entrance that runs along Fairfax, pulling out into traffic to get to the freeway?

Response to Comment No. 257-3

The Draft EIR fully evaluated all potential environmental impacts associated with construction and operation of the Project in accordance with CEQA. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project would not result in significant impacts to the Beverly Fairfax Historic District or other historical resources in the Project Site vicinity.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes. Construction of the Project would also include safety features as part of the CTMP described in Topical Response No. 14. These include an ingress/egress plan for trucks depending on the construction phase of the Project (also to be reviewed and approved by LADOT), notification of upcoming construction activity to nearby residents and businesses, a designated construction manager to field concerns form neighbors, sidewalk protective barriers, and field traffic managers to control construction traffic to minimize impacts on adjacent street traffic and pedestrian flow. Refer to pages IV.K-36 and IV.K-37 in Section IV.K, Transportation, of the Draft EIR.

The routing of construction trucks does intend to utilize Project driveways along both Fairfax Avenue and Beverly Boulevard. Trucks turning in and out of the Beverly driveway would be assisted by the existing traffic signal. Trucks turning in and out of the Fairfax driveway may need to be assisted by flag persons to complete their turns during busy times

of the day. Note that existing, but unused, driveways along Beverly Boulevard would remain inoperable during construction.

Comment No. 257-4

This project is expected to bring in close to 7,000 new workers regularly and countless other tourists, increasing traffic and congestion and making it harder for us to stroll pleasantly with our family. What is the city going to do about ensuring the enjoyment of our community is not altered dramatically? There must be measures that will be taken because there is no way we won't be impacted? Is the city basically saying to the residents of our wonderful community too bad, we just have to live with the impacts? What about the increased risk that safety in our neighborhood will be compromised, where walking is a major part of what goes on there?

In the years that the project is being built, there will be sidewalk closures and other pedestrian obstacles, according to the EIR's transportation section. I want to know which sidewalks will be closed and for how long, given the pedestrian aspect of our community and culture? The community's ability to get to the synagogue and other significant cultural events can be severely hampered by the closure of a sidewalk.

Response to Comment No. 257-4

The first paragraph of this comment is identical to Comment Nos. 202-1 through 202-4. Refer to Response to Comment Nos. 202-1 through 202-4, above.

The second paragraph of this comment is identical to Comment No. 202-5. Refer to Response to Comment No. 202-5, above.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 257-5

I'm hoping that the City would consider how the project will affect our lives, our cultural history, and our safety before making a decision. Please inform me of any city actions about this project.

Response to Comment No. 257-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-

makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 257-2 through 257-4. All commenters are added to the notification list for the Project.

Comment Letter No. 258

Lisa Hoffman
119 S. Alta Vista Blvd.
Los Angeles, CA 90036-2823

Comment No. 258-1

I have lived in the Beverly-Fairfax neighborhood for years and I have never been so disappointed to be a resident of this community.

Response to Comment No. 258-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 258-2 through 258-4.

Comment No. 258-2

I understand that traffic comes with the territory as an L.A. resident and I have put up with this traffic for years, but I simply must draw the line at this absurd television city plan being presented to the city.

Response to Comment No. 258-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 258-3

It is not that I am opposed to all new developments, but I am opposed to construction without any sort of public report on the implications of this project. I know there will be lots of trucks on the streets, lane closures, and detours.

Why has the public not seen a report on this information? How are we supposed to support a project when we are missing the aforementioned important details? Why the lack of transparency? Probably because all of the construction will cause even more traffic than we already have, and the city knows that, which is why they are keeping important details from us. I am tired of sitting in my car in a traffic standstill because some developer says we need to build more. Enough with the construction if we want to actually make traffic better in Los Angeles.

Response to Comment No. 258-3

The Draft EIR is the public report disclosing the potential environmental impacts of the Project. Noticing for the Project has been conducted in accordance with CEQA. Refer to Response to Comment No. 32-3.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction. Refer to Topical Response No. 10, Trip Generation, regarding the trips generated by operation.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). The Draft EIR and the Transportation Assessment analyzed the potential transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would have less-than-significant transportation impacts.

Comment No. 258-4

However, this goes beyond my own personal dissatisfaction with L.A. traffic. The city is using unsubstantiated number to assert the benefits of this project. The city claims 15% of staff and visitors will be taking public transportation to the site instead of driving, making traffic less of a problem. Sure, 15% sounds nice but where did that number come from? How do we know that it is accurate? And if it is not 15%, what will the developer do to address that? Are we just supposed to say "oh well, they tried" if only 5% of people going to the site take public transit?

Response to Comment No. 258-4

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 regarding the 15-percent trip adjustment and the effectiveness of TDM programs.

Comment No. 258-5

The people of Los Angeles and Beverly-Fairfax will not be manipulated into believing numbers with no real backing or explanation. I am tired of the lack of transparency on the part of the city. Shame on you for allowing the possible permitting of this project before providing full information to the public. Shame on you for trying to trick the public by throwing out statistics with further explanation or basis. Shame on you for ignoring the interests of residents, commuters, and small business owners in the area could be heavily impacted by this project.

Response to Comment No. 258-5

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 259

Robert Hoffman
119 S. Alta Vista Blvd.
Los Angeles, CA 90036-2823

Comment No. 259-1

I have been reviewing the environmental impact report for the proposed plan to develop the Television City property. I have a number of questions and concerns with respect to the transportation and traffic aspects of the project.

Response to Comment No. 259-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 259-2 through 259-6.

Comment No. 259-2

It seems that the date you studied transportation and traffic for this project was October 2021. Traffic patterns during Covid were not typical, with so much business shut down and so many people still working from home. When will you be re-doing the traffic study? If not, why wouldn't the city be doing that? Did you compare October 2021 assumptions and findings with a period of time that was before the pandemic began, so that your baseline reflected a normal time for this area? Aren't the numbers you are using artificially low and different?

Response to Comment No. 259-2

The traffic counts used in the Transportation Assessment (Appendix M.1 of the Draft EIR) were conducted before the pandemic and, therefore, represent typical traffic flow conditions on the streets in the Study Area. Page 26 of the Transportation Assessment states that the existing conditions traffic levels were based on traffic counts conducted in September 2019, well before the pandemic began. An annual growth factor was applied to these 2019 counts to reflect 2021 conditions. The traffic counts used in the Transportation Assessment represent conservative (i.e., high) estimates of traffic conditions in 2021 because the traffic count levels today in 2023 have still not reached the pre-pandemic 2019 levels.

Comment No. 259-3

The transportation assessment you conducted appears to be based on the project being completed in a 30-month construction period, but why were impacts not analyzed for the possible construction timeline to 2043? How can the EIR not identify and evaluate all of the impacts for the entire potential timeline, on what basis is that alright and acceptable to do? The plan does not account for impacts that could, in fact, result from 20 years of construction, so when will a transportation analysis be done for the other 17 years of potential construction?

Response to Comment No. 259-3

The Transportation Assessment analyzed a 32-month construction period, which represents the worst-case condition in terms of construction traffic impacts, as well as a longer buildout to 2043. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

The long-range transportation impacts of the completed, operating Project are covered by the VMT analysis, which is provided on pages IV.K-73 through IV.K-78 in Section IV.K, Transportation, of the Draft EIR, and the Transportation Assessment included as Appendix M.1 of the Draft EIR.

Comment No. 259-4

The draft EIR references a .25 mile radius for the transportation analysis, but why would such a small radius be acceptable for the basis of a non-typical, highly traveled motorist project? The impacts of this project will be felt for a much greater distance than a ¼ of a mile. The project has far-reaching, major consequences for traffic in and around the area. While the study included 31 intersections, what about the intersections outside of the limited study area? The increased traffic associated with a project of this scale and size will impact intersections for a great distance from the site; traffic will get backed up and bottleneck at intersections.

Response to Comment No. 259-4

Refer to Response to Comment Nos. 28-12, 28-14, and 26-156 regarding the Study Area analyzed in the Transportation Assessment. The comment suggesting that the Study Area should have been larger and included analysis of more intersections is incorrect for many reasons. First, the intersection analysis is not a CEQA requirement. Second, the Study Area was identified in accordance with guidelines provided in the TAG. Third, Project trips disperse and have a diminishing effect on any single location the farther they are from the Project Site, and the Study Area was chosen to include locations with a concentration of Project trips (the TAG recommends including locations carrying at least

100 peak hour Project trips). The Study Area stretches from Melrose Avenue to Wilshire Boulevard and from Crescent Heights Boulevard to La Brea Avenue, an area of approximately 1.5 miles by 1.25 miles. Beyond this Study Area, Project trips would dissipate to the point that they would no longer create meaningful operational effects on nearby major intersections.

The Study Area for the VMT portion of the analysis includes the entire metropolitan area because it tracks employee trips from their home to the Project Site. The VMT analysis uses the Los Angeles General Plan transportation demand forecast model, which is, in turn, based on SCAG's transportation model. The SCAG long-range model is the basis for transportation planning in the Southern California multi-county region.

Comment No. 259-5

In addition to the 21 streets and highways that will provide regional and local access to the project site, what about the adjacent and peripheral streets outside of the study area that will be affected by the congestion and gridlock? How can you dismiss the widespread effects given what an already traffic-burdened area this is at and surrounding the project site?

Response to Comment No. 259-5

Refer to Response to Comment No. 9-29 regarding traffic hazards. As concluded in the Initial Study (included in Appendix A of the Draft EIR), the Project would have a less-than-significant impact related to increased hazards due to a design feature, and no further analysis of this topic was required in the Draft EIR. Nonetheless, a detailed analysis of the Project access plans as it relates to hazards due to geometric design features, including safety, operational, or capacity impacts under Threshold T-3, was provided in Section 4C of the Transportation Assessment. As detailed therein, all Project access points would be designed to provide adequate sight distance and, where necessary, pedestrian refuge areas to limit any potential vehicular-pedestrian and vehicular-bicycle conflicts. Two of the driveways on Beverly Boulevard would function as secondary vehicular access and limited to right-turn in/out only with minimal traffic usage. In addition to improvements surrounding the Project Site perimeter, the Project would contribute toward several offsite improvements that would benefit pedestrians, vehicles, and the surrounding neighborhood, including pedestrian safety improvements in the Study Area as part of Vision Zero, traffic calming measures and neighborhood bicycle features, traffic signal upgrades, etc. The Project access and improvements would not preclude or interfere with any City implementation of any future improvements.

Refer to Topical Response No. 15, Transportation Improvement Program, for a list of the improvements included in the Project's improvement program. Note that much of the

program is based on pedestrian and vehicular safety, including Vision Zero and Transportation Systems Management improvements.

Comment No. 259-6

What specific and additional mitigation is being proposed to address the more dangerous travel and intersections of the three High Injury Network streets of Beverly Blvd., Fairfax Ave., and West 3rd Street? The project site itself is located at the intersection of two of HIN streets! Is that even permitted to happen? It defies logic that the city would allow this kind of project at that kind of a location, one that is bringing thousands of workers, staff and visitors driving thousands of cars and trucks to the site.

Response to Comment No. 259-6

Refer to Response to Comment Nos. 9-29 and 259-5 regarding traffic hazards. As concluded in the Initial Study (included in Appendix A of the Draft EIR), the Project would have a less-than-significant impact related to increased hazards due to a design feature, and no mitigation measures were required. No further analysis of this topic was required in the Draft EIR.

Comment No. 259-7

Thank you for addressing my questions and concerns.

Response to Comment No. 259-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 259-2 through 259-6.

Comment Letter No. 260

Shawn Holden
101 N. Gardner St.
Los Angeles, CA 90036-2719

Comment No. 260-1

I am writing to you because I feel the Draft EIR did not adequately define “The Project.”

Response to Comment No. 260-1

The Project Description meets the requirements of CEQA. Refer to Response to Comment No. 5-3, and to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Comment No. 260-2

I reviewed the executive summary and then the project description but I still do not know what the project is. There are multiple caveats throughout the Draft EIR indicating that the project is only conceptual. How is the public supposed to comment on a “make-believe” project if it is subject to change. If the conceptual project changes, then our comments on the Draft EIR would be useless and a waste of time.

If the project is only conceptual, when will the public have an opportunity to comment on the “real” project and its environmental impacts? When will the community be advised of any modifications to the conceptual project? Will this information be posted on a website? Should the project’s proposed development agreement be approved, does that mean that the community may have to wait decades to be informed of the actual project?

Please define the project in concrete terms and recirculate the Draft EIR so the public has an opportunity to make productive comments on impacts to the community.

Response to Comment No. 260-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, the level of detail required in an EIR for a specific plan project, how all of the physical aspects of the Project were fully disclosed and analyzed in accordance with CEQA, and the required discretionary process (which includes subsequent CEQA compliance review) for future changes that are substantially different than the Project that was analyzed in the EIR. As discussed therein, the Project Description in the Draft EIR is

accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. Refer to Response to Comment No. 9-24 regarding the Project timeline.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 261

Monica Hong
242 S. Detroit St.
Los Angeles, CA 90036-3034

Comment No. 261-1

I am writing to you today with my thoughts on the recently released Draft Environmental Report for the Television City Project. As a long-time, 15 year resident of Beverly Fairfax community, I feel that I have a stake in the outcome of this project. As a result, I would like to express my concerns and ask questions about the DEIR. I hope that you all take the time to address each of my questions and concerns in detail.

Response to Comment No. 261-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 261-2 through 261-6.

Comment No. 261-2

As we all know, Beverly Fairfax is already a highly populated area. With 14 proposed stages, many of which will house audiences, thousands of additional people could be onsite each day! Has the public been given a solid number on how many people can be on-site? Will all of the stages be used at the same time?

Response to Comment No. 261-2

This comment is identical to a portion of Comment No. 106-2. Refer to Response to Comment No. 106-2.

Comment No. 261-3

What happens when audience members and employees try to park for shows? From the [sic] it seems there will only be 5,300 parking spaces for potentially 13,300 people. Aren't those parking spaces for employees also? How exactly will that work? Can someone please outline this for me?

Response to Comment No. 261-3

This comment is identical to a portion of Comment No. 106-2. Refer to Response to Comment No. 106-2, above.

Comment No. 261-4

With more people comes more crime. What does the evaluation show about expected increases in crimes? What kinds of crimes in particular? What measures will be taken to ensure the safety of our children with more people being in the neighborhood? Additionally, more people means an increased opportunity for crimes in Beverly Fairfax at night, when it seems most of the shows will be taking place. What will be done to combat this increased crime rate? Will the city deploy more police officers to Beverly Fairfax on nights with shows? More cars speeding through our neighborhoods can be detrimental to their health and safety. Has an analysis on this been done? If so, what were the findings? If not, when and how will it be conducted?

Response to Comment No. 261-4

This comment is identical to Comment No. 106-3. Refer to Response to Comment No. 106-3, above.

Comment No. 261-5

Additionally, we are fortunate to have multiple historic structures and an entire historic district in Beverly Fairfax. I don't think the DEIR did a good enough job of evaluating the impacts of a potentially extra hundred thousand people on our history. Will the project overwhelm the Adobe and Farmers Market? Please explain your claim in detail. I would like to see the study and hard data that backs up your claim.

Response to Comment No. 261-5

This comment is identical to a portion of Comment No. 106-4. Refer to Response to Comment No. 106-4, above.

Comment No. 261-6

What about the historic district itself—what will happen to it if thousands of cars drive through it every single day? What about parking in the historic district, will there be any restrictions? Will people be allowed to park in the historic district?

Response to Comment No. 261-6

This comment is identical to a portion of Comment No. 106-4. Refer to Response to Comment No. 106-4, above.

Comment No. 261-7

Again, I really hope you all take time to answer each of my questions in detail. I'm really concerned about the outcome of this project, and I feel like as a resident, I have the right to know how it will actually impact my life.

Response to Comment No. 261-7

This comment is identical to Comment No. 106-5. Refer to Response to Comment No. 106-5, above.

Comment Letter No. 262

Alexandra Hook
724 N. Spaulding Ave.
Los Angeles, CA 90046-7422

Comment No. 262-1

The project located at 7716–7860 West Beverly Boulevard, Los Angeles, California 90036 seems extreme.

Response to Comment No. 262-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 262-2 through 262-3.

Comment No. 262-2

So many schools, residences, and nursing homes along Fairfax will be impacted by constant traffic. And the project is proposing to stage thousands of trucks next to Loyola High, the recreation center right next to the high school, and Kaiser Hospital, which seems like the worse thing possible for young people and patients. Have these residents been told that there may be 60,000 trucks idling and driving through their communities? This area by Loyola in particular is a lower income community. Why are you putting trucks for your project in that community?

Please provide an analysis of all of the possible impacts on these communities, including a health risk analysis on the impacts to these communities, and please include the environmental impact.

Response to Comment No. 262-2

There is no longer a plan to stage haul trucks near Kaiser Hospital or Loyola High School. All haul trucks would be staged on the Project Site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 262-3

And why isn't housing included in the project? We desperately need more housing, and not all this new office and warehouse space.

Response to Comment No. 262-3

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment Letter No. 263

Ana Horzowitz
222 S. Formosa Ave.
Los Angeles, CA 90036-2814

Comment No. 263-1

The Television City Draft EIR is not clear. It does not show all the ways the construction project would affect residents of Beverly Fairfax and the surrounding neighborhoods, all of whom will be affected as well. Please help me understand these specifics.

Response to Comment No. 263-1

Section IV, Environmental Impact Analysis, of the Draft EIR contains a comprehensive analysis of the Project's environmental impacts during both construction and operation. The environmental impact conclusions in Section IV are summarized in Table I-1 in Section I, Executive Summary, of the Draft EIR.

This comment does not raise an environmental issue specific to CEQA or the Draft EIR. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 263-2

For example, the parking and traffic situation during construction is not fully explained. During construction, where will the many 18-wheelers go on their way into and out of the site? It seems they would have to line up along the residential streets in Beverly Fairfax. How will this work? How will they turn into traffic when exiting? And how will they be able to make wide enough turns to enter?

Response to Comment No. 263-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 26-E.4-15 for a discussion of truck movements at the Project Site. The primary entrance and exit for construction trucks would be from Fairfax Avenue and at the signalized intersection of Beverly and Genesee.

Construction trucks would not be allowed to use residential streets to stage or to travel. All haul truck staging will take place on the Project Site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Trucks turning in or out of the Project Site on Fairfax Avenue may need traffic flag persons to assist them in completing their turns during busy times of the day.

Comment No. 263-3

I am concerned about air pollution and poor air quality in the neighborhood. And the trucks will be carrying dirt and debris from excavation as well as construction materials, which carry additional risks to pedestrians and residents. What was found in the analysis of those risks and potential impacts?

Response to Comment No. 263-3

As shown in Tables IV.A-10 and IV.A-11 of the Draft EIR, after the application of mitigation, localized air quality impacts, including particulate (i.e., dust) impacts, would not exceed SCAQMD LST thresholds, and impacts would be less than significant. Refer to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust.

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, which includes mandatory control actions and dust control contingency measures to control fugitive dust.

Comment No. 263-4

If there are truck routes prescribed by the developer and city, what are they? And how will they be enforced?

Response to Comment No. 263-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Comment No. 263-5

Later, the development will be the workplace for thousands more employees than currently work there. I can see that the parking spaces in the plan number about 5,300. This does not match up with potentially 8000 employees plus the many audience members who will be visiting, which could be up to 5,000 additional people per day. How will the developer account for the thousands of additional vehicles? Are they also supposed to park on the street? Is the intention for them to park in the spaces being built? How does that impact the people who live in the neighborhood?

Response to Comment No. 263-5

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

While the Project is estimated to employ approximately 7,832 total employees based on the LADOT VMT Calculator as shown in Table IV.K-5 of the Draft EIR, the parking supply does not need to match the number of employees working on the Project Site for several reasons: (1) not every employee will be on-site on any given day; (2) not every employee will drive to work; and (3) not every employee who does drive to work will drive alone. Topical Response No. 11, Transportation Demand Management, explains the programs that the Project would implement to encourage Project employees, visitors, and audience members to travel via non-auto choices. Topical Response No. 7, Mobility Hub, explains the key role that the Mobility Hub would play in reducing automobile travel to/from the Project Site, thereby reducing the number of parking spaces needed on-site and reducing the number of auto trips on the roadways serving the area.

The comment regarding the number of audience visitors is incorrect. Refer to Topical Response No. 10, Trip Generation, regarding Project trips.

Comment No. 263-6

Besides parking, the many additional vehicles will potentially harm the residents, as well. With such a great increase in traffic, there will be increased safety risks and public health impacts due to the additional emissions. How does the EIR address these impacts? How was the analysis made? What are the impacts both during construction and upon the project's completion, based on the current and projected community population and workforce?

Response to Comment No. 263-6

The methodologies employed to address Project air quality impacts are presented in pages IV.A-39 through IV.A-47 in Section IV.A, Air Quality, of the Draft EIR. Impacts, after the application of applicable mitigations, are presented in Tables IV.A-7, IV.A-8, IV.A-10, IV.A-11, and IV.A-12 in Section IV.A, Air Quality, of the Draft EIR. As discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips associated with the Project would not approach screening levels in which localized CO levels might exceed 1-hour CO ambient concentration standards or result in health effects.

Refer to Response to Comment No. 9-29 regarding the Project's less-than-significant impacts related to traffic hazards.

Comment No. 263-7

I saw reference to a Mobility Hub. There are so few people who actually use public transit in this city, so why is this being proposed? What exactly is the plan for the Mobility Hub?

Response to Comment No. 263-7

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips. Mobility Hub functions would be located on-site to support first/last mile connections; encourage employee and visitor use of public transit through the provision of a shuttle service, carpooling, vanpooling, and biking/scooter to work; and to support other modes of travel and TDM strategies that are likely to evolve over time. These features would be promoted and incentivized through programs administered by an on-site TDM coordinator and one or more transportation information kiosks, including within the Mobility Hub itself.

Comment No. 263-8

How will it work, and who will police it? Will there be protections for the neighbors so that it does not become another safety risk with additional traffic and more people?

Response to Comment No. 263-8

With regard to the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 263-9

Thank you for your attention to my concerns.

Response to Comment No. 263-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 263-1 through 263-8.

Comment Letter No. 264

Mario Horzowitz
222 S. Formosa Ave.
Los Angeles, CA 90036-2814

Comment No. 264-1

I would like to submit comments about the plan for TVC 2050. It seems many elements of the plan lack specific information and details.

Response to Comment No. 264-1

The Project Description meets the requirements of CEQA. Refer to Response to Comment No. 5-3, and to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Comment No. 264-2

First, what are the phases of how this project will be built? What is the actual timeline? How can a project state it could be three years of construction, but then it could be twenty years of construction? How are impacts analyzed when the construction time is still not made clear? A detailed phase plan with a timeline is a necessity and needs to be provided for the residents and businesses in the area.

Response to Comment No. 264-2

Refer to Response to Comment No. 9-24 regarding the Project timeline. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and provided a comprehensive analysis of the Project.

Comment No. 264-3

I do not understand the difference between the project design features and mitigation measures. What are the differences? Why are some referenced as possibly to be done, as though it is up to the developer to do or not do? Please specify all of the known project design features. Then specify all of the mitigation measures the developer is agreeing to do. There is nothing that shows the real impacts after construction and then those mitigation measures.

Response to Comment No. 264-3

Refer to Response to Comment No. 9-34 regarding the difference between PDFs and mitigation measures, and that the PDFs in the Draft EIR are correctly identified as such. The PDFs and mitigation measures are listed on pages I-17 to I-37 in Section I, Executive Summary, of the Draft EIR. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR for details regarding implementation and enforcement.

The commenter's claim that the Project's impacts after construction are not disclosed is incorrect. Each section of the Draft EIR includes a thorough analysis of impacts during both construction and operation, as well as any required mitigation measures, and the level of significance after mitigation.

Comment No. 264-4

Next, does this project not have the same issues as the big project in Hollywood, the Millennium project? Can you please explain why you put out an EIR that went against what the court said in the Millennium project defining what can and cannot be done in the city?

Response to Comment No. 264-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13. As discussed therein, the *Millennium* case is not applicable to the Project, and the Project Description is distinguishable from the project description at issue in *Millennium*.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 264-5

Last, the circulation system that is currently planned makes no sense. It would seem no cars and trucks will be able to navigate the area in the basement, is that right? Or is that the ground floor of a parking structure? The analysis needs to show that cars and trucks will be able to use the gates on Beverly and Grove Drive. What will happen if the cars and trucks cannot navigate this area?

Response to Comment No. 264-5

Please note that internal circulation is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Figure 1 on page 11 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the overall site plan, and Figure 2B on page 13 of the Transportation Assessment shows the vehicular access system for the Project. Figure 22 on page 80 of the Transportation Assessment shows the volume of vehicles using each driveway on the Project Site.

Refer to Response to Comment No. 136-2 regarding the multi-level internal circulation system. The internal circulation plan would allow a vehicle to efficiently and safely enter the Project Site at any of the three signalized driveways and travel to any point in the Project Site. This would allow Project trips to leave the adjoining street system as soon as possible and circulate and maneuver within the Project Site. There would be a connection across the Project Site on the first underground level that would allow cars and trucks to move between the east and the west sides of the Project Site. In the Conceptual Site Plan, this connection is located to the north of the Primary Studio Complex. Connections between the ground level and the first underground level would be provided throughout the Project Site.

Comment No. 264-6

These are just a few of the many questions I have after doing further research on the project. Please respond to my questions and concerns, and please do not go through with the project.

Response to Comment No. 264-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 264-2 through 264-5.

Comment Letter No. 265

Donna Houston
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 265-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 265-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 266

Mary Huth
344 S. Sycamore Ave.
Los Angeles, CA 90036-3006

Comment No. 266-1

I am writing about the plans to alter the Television City Studios and make this area more “new and improved.” After trying to get through parts of the Draft EIR, I noted several potential issues with this project, but especially those involving the expected increase in cars to the area and traffic.

Response to Comment No. 266-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 266-2 through 266-5.

Comment No. 266-2

There is not enough adequate parking for the amount of people that will be in the area. One of the specific groups that requires ample parking is the audience members. What time are you planning for the audience members to arrive at and then leave the studio? Is parking being provided to audience members? Will it be paid parking? What happens when attendees just want to park for free in the neighborhood, how will that be monitored? If they need to arrive when employees are still there, and there already is not enough parking in the planned garage for even the total number of employees, what about audience members then having to find parking?

Response to Comment No. 266-2

Under SB 743, the adequacy of a new development’s parking supply is not a CEQA consideration. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Parking fees, if any, for on-site employees would be paid on a monthly basis by either the employee or the tenant. Visitor and audience parking would be paid by the company being visited or by the show producer. No parking fees would be collected at the inbound guard booths. Project parking in the neighborhoods would be controlled by time

limits and/or by Residential Parking Permits which would be developed/modified along with the neighbors as part of the NTMP.

Comment No. 266-3

Along with being a residential area, there is also a historic district just to the north of the project site. If the project gets built, there will be thousands upon thousands of cars and trucks traveling through the community. How is this going to impact the historic district? Has any thought been given to this? It is well known that cut-through traffic is a major problem in our neighborhoods. Where is the complete analysis about that through-traffic expected?

Response to Comment No. 266-3

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10 regarding impacts to the Beverly Fairfax Historic District and how the potential increase in trips will not affect the integrity of the Beverly Fairfax Historic District.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, in particular Section B in the Topical Response, regarding non-CEQA measures that would be implemented to address cut-through trips.

Comment No. 266-4

Why is there not a route for the trucks hauling away demolition debris, dirt and trash? I also noticed that there are many different options for the trucks. Will they be going through the residential areas? Having truck exhaust and fumes next to houses, apartments, condos, etc. is not ideal under any circumstances. Have you looked into the effect this will have on the health of those residents in the area? It also looks as if there is no way for the truck paths to be enforced. What are you going to do to ensure that they stay on the designated paths so that the citizens can continue living their normal lives?

Response to Comment No. 266-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 9-22, 107-2, and 124-6 regarding construction haul routes and construction traffic impacts. As discussed therein, three haul routes were selected to comprehensively analyze the potential haul routes and ensure all associated environmental impacts were evaluated in the Draft EIR. Topical Response No. 14 also includes a discussion of air quality impacts as a result of hauling, and, as discussed therein, localized air quality impacts as a result of hauling activities would be less than significant. Also refer to the quantitative HRA included as Appendix FEIR-10 of this Final EIR, which was prepared in

response to comments on the Draft EIR and confirms that construction and operation of the Project would not result in significant impacts associated with health risk. The haul truck routes would be enforced by LAPD and the City, contrary to the commenter's assertion. No local residential streets would be used for any construction truck movement.

Comment No. 266-5

I also don't understand the Vehicle Miles Traveled analysis. There are assumptions about people using transportation, but where can this information be confirmed? How many people took public transportation pre-COVID? I believe the best data can be drawn from these statistics. The Vehicle Miles Traveled also only takes into consideration the workers. Why did you not take into account the tourists that will be in the area? What about the delivery trucks?

Response to Comment No. 266-5

Refer to Response to Comment No. 209-7 for a discussion of VMT. Refer to Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions and data used in the VMT analysis for the Project. Refer also to Topical Response No. 11, Transportation Demand Management, regarding transit and TDM effectiveness.

The City of Los Angeles established work VMT per employee as the criterion against which to measure the transportation environmental impacts of a proposed employment project. This criterion is consistent with CEQA requirements. The City used its long-range travel demand forecast model to evaluate the distribution of existing and future jobs and homes in order to predict the travel distances for employees travelling to the Project Site. The existing onsite employee travel patterns, as well as the future travel patterns, were projected by the City's model, and, therefore, the current usage of public transit by the existing onsite employees is not a critical piece of information as suggested in the comment. The evaluation measure of work VMT per employee is based on vehicle miles of travel by the employees from their homes to the Project Site, and this criterion does not include visitor or truck trips. As discussed in Section A, Appropriateness of Using VMT Calculator, of Topical Response No. 8, visitor and studio audience trips would make up a small percentage of the total trips to/from the Project Site. A detailed discussion of truck trips may be found in Section E, Truck Trips, of Topical Response No. 10, Trip Generation. However, the definition of work VMT per employee specifically excludes truck trips from the calculation.

The Project is a studio project and, given the security needs of a studio, would not be open to the public. Therefore, the comment regarding tourists is incorrect. Additionally, the traffic counts used in the Transportation Assessment (Appendix M.1 of the Draft EIR) were conducted before the pandemic and therefore represent typical traffic flow conditions

on the streets in the Study Area, which would be generally inclusive of tourist activity in the area, although tourist vehicles are not differentiated. Refer to Appendix B, Intersection Traffic Volume Data, of the Transportation Assessment (Appendix M.1 of the Draft EIR) for further information regarding traffic counts.

Comment No. 266-6

These are just a few examples of issues that I see in this plan. You do not need to support this plan if you want what is best for the Beverly Fairfax area.

Response to Comment No. 266-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 266-2 through 266-5.

Comment Letter No. 267

Elizabeth Hutton
ehutton44@gmail.com

Comment No. 267-1

I'm writing to express my support for Television City's TVC 2050 project. The iconic studio needs an upgrade, and this modernization effort will do a lot to help the entertainment industry grow. For several years we've seen a decline in production activity in Los Angeles.

Having modern, state-of-the-art facilities right here in the center of LA will really help the business grow. Since so many of us are touched by the magic of the creative entertainment industry, this project really is a win-win for all Angelenos.

As a resident of the neighborhood, I hope to see this project move forward quickly since it will preserve the studio's legacy while keeping entertainment jobs in Los Angeles

Response to Comment No. 267-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 268

Jerry Ickovic
459 N. Poinsettia Pl.
Los Angeles, CA 90036-2504

Comment No. 268-1

If developed, the Television City plan will change our neighborhood and community in ways that we will not recover from. What is being proposed is something that will never fit into our community and onto that size of property. It will change the character, look and feel of a place that is iconic and has long been a part of our neighborhood.

Response to Comment No. 268-1

Refer to Response to Comment No. 5-8 regarding the size of the Project.

Pursuant to Public Resources Code Section 21099, because the Project is an employment center project located on an infill site, the Project's aesthetic impacts shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 31 through 40 of the Initial Study. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 268-2

How can the developer be saying that construction is estimated to take three years but then also be asking for a 20-year agreement? What is a development agreement? Isn't the plan the developer submitted the agreement to build? How is the community supposed to understand what all the impacts will be if the building of the project could go until 2043? Would construction start and then stop? Or is it possible that construction could be going on for actually 20 years? What other projects in the area are also planned during those 20 years? How are we supposed to know what the aggregate impacts of any multiple projects along with the Television City one are going to be? Where is that information available for us to review?

Response to Comment No. 268-2

Refer to Response to Comment Nos. 9-24 and 28-7 regarding the Project timeline and proposed Development Agreement. As discussed therein, as with most development

projects, market conditions will ultimately influence the buildout timeframe of the Project. As discussed throughout the Draft EIR, the Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043. However, the Project does not propose continuous construction for 20 years. A development agreement is a voluntary contract between a local municipality, such as a city or county, and a property owner whose land is located within the municipality's jurisdiction. The development agreement contains the obligations of both parties and lays out the various standards and conditions that will control development of the subject property. To be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is included for each of the environmental topics studied in Section IV the Draft EIR.

As stated throughout the Draft EIR, the Development Agreement would confer a vested right to develop the Project in accordance with the proposed Specific Plan and Mitigation Monitoring Program throughout the term of the Development Agreement. The proposed Specific Plan and Mitigation Monitoring Program would continue to regulate development of the Project Site and provide for the implementation of all applicable PDFs and mitigation measures associated with any development activities during and beyond the term of the Development Agreement. Please note that the Development Agreement would only allow for development consistent with the approved Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Other provisions of the Development Agreement would be contractual issues between the City and the Applicant which do not constitute physical impacts on the environment.

A list of development projects in the vicinity of the Project Site that were considered in the cumulative impact analyses for each environmental topic analyzed in the Draft EIR is provided in Table III-2 on pages III-9 through III-14 in Section III, Environmental Setting, of the Draft EIR. The locations of the development projects considered in the cumulative impact analyses are shown on Figure III-1 on page III-15 of the Draft EIR.

Comment No. 268-3

When will meetings be held in the area neighborhoods to help residents better understand what could be built and the effects? Is the city only going to hold what is a minimum required number of meetings? Why wouldn't you want the community to be really well informed? Why doesn't the city require the applicant to hold more public meetings in order to really get meaningful input?

Response to Comment No. 268-3

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment Letter No. 269

Jodi Jackson
523 N. Orlando Ave.
Los Angeles, CA 90048-2528

Comment No. 269-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 269-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 270

Lior Jacob
934 N. Genesee Ave.
West Hollywood, CA 90046-7346

Comment No. 270-1

For a city that already has a major lack of parking space, I am having a lot of trouble comprehending where these extra 5,000+ parking spots will be for the proposed Television City site. The EIR says the spots may be offsite. Does that mean offsite parking spots will be in my neighborhood? I don't understand why the location of these spots are not disclosed. Are they going to be parking garages or parking lots? Is this going to mean I won't be able to park in my own neighborhood or will be an obstacle getting places?

Response to Comment No. 270-1

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 270-2

My community is full of families, and I know they will not feel comfortable having speeding cars rushing to get to work. How will speeding issues of so many more cars commuting to the new development be handled? What about those commuters using side streets and neighborhood streets to get to the property to avoid the gridlock on the main streets? We already see that happening now, even without the proposed development.

Response to Comment No. 270-2

This comment is identical to Comment No. 85-2. Refer to Response to Comment No. 85-2, above.

Comment No. 270-3

I feel like this adds a ton of safety issues too concerning the impact on air quality and pedestrian safety. What will this surplus of cars do to LA's already damaged ozone? Thousands of additional cars on the road cannot be healthy or be acceptable in terms of traffic. Please address this in more detail before the plan is approved. The Television City project is failing to address potential environmental factors. Not only this, but it has failed to acknowledge that the increased congestion will pose health and safety concerns. The city is already extremely overcrowded, and traffic poses an everyday issue.

Response to Comment No. 270-3

This comment is identical to a portion of Comment No. 85-3. Refer to Response to Comment No. 85-3, above.

Comment No. 270-4

When will the draft EIR be revised to address these concerns in more detail than was provided? The public can barely get through such a long and technical document, especially to be able to make sure we are being given real answers about the expected impacts to our neighborhood. When will you be holding community meetings to explain in layman terms what is being planned and what the consequences will be?

Response to Comment No. 270-4

As demonstrated in Response to Comment Nos. 270-1 through 270-3, and 270-5 through 270-8, below, the Draft EIR and public noticing process meet the requirements of CEQA and recirculation is not required. Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

With respect to what is being proposed, as discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day required under CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during public hearings and meetings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings. Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

Comment No. 270-5

Parking garages and lots are the third most common location for violent crimes in the US. How is this supposed to make me feel knowing there will be multiple added within walking distance of my home? What measures are going to [sic] implemented to ensure the children of our community are safe?

Response to Comment No. 270-5

This comment is identical to Comment No. 85-4. Please see Response to Comment No. 85-4, above.

Comment No. 270-6

What has the city done to assess the noise concerns?

Response to Comment No. 270-6

This comment is identical to Comment No. 85-5. Refer to Response to Comment No. 85-5, above.

Comment No. 270-7

Was the nearly 2 million square feet of space not enough for this project since now there is a need for offsite parking? These parking garages and spots are likely to tarnish and possibly even take over spots that make LA a community.

Response to Comment No. 270-7

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR. Refer to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply.

Comment No. 270-8

This is known as a historic district, but our neighborhood will not be nearly as desirable when havoc takes over. What did your studies show about the effects on property values? What about the impacts on rents? And on home prices? How can you put a price on the impacts to the historic district?

Response to Comment No. 270-8

This comment is identical to Comment 85-7. Refer to Response to Comment No. 85-7, above.

Comment No. 270-9

Please consider these issues and draft an EIR that answers these questions. My community deserves to know what the future of our neighborhoods entail.

Response to Comment No. 270-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-

makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 270-1 through 270-8.

Comment Letter No. 271

Comment Letter No. 273

Tim Jones
336 N. Mansfield Ave.
Los Angeles CA 90036-2624

Comment No. 273-1

Is there absolutely no regard for the environment, sustainability or natural resources in our community and in the city of LA? California is supposed to serve as a leader for climate issues; however, we have the worst air pollution in the country. It is absolutely incomprehensible that the city would ever allow a project like TVC2050 that would directly negatively impact the environment and deplete the land of resources.

Response to Comment No. 273-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Discussions as to why the Project is being proposed notwithstanding significant and unavoidable impacts are presented in Section VI, Other CEQA Considerations, of the Draft EIR.

Comment No. 273-2

Our city struggles as it is in terms of water pollution and municipal water supply. What percentage of water is locally sourced in Los Angeles? How much of that water is already sourced from the Beverly Fairfax area? How much water is going to be required and used for the project?

Response to Comment No. 273-2

With regard to the percentage of water that is locally sourced in the City, as discussed on page IV.M.1-17 in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, local groundwater provided approximately eight percent of the total water supply for Los Angeles from fiscal year-end 2016 to fiscal year-end 2020. Regarding how much of that water is sourced from the Beverly Fairfax area, LADWP pumps groundwater from the San Fernando Basin and, to a lesser extent, the Central Basin and Sylmar Basin. As discussed in Section IV.G, Hydrology and Water Quality, of the Draft EIR, the Project Site is located within the Hollywood Basin. Per the 2020 LADWP UWMP, LADWP does not currently use groundwater from the Hollywood Basin. Therefore, none of the locally sourced water supply is sourced from the Beverly Fairfax area.

Refer to Response to Comment Nos. 16-66 and 26-175 with regard to the amount of water the Project would require and the adequacy of the water supply to serve the Project.

Comment No. 273-3

This project involves the pulling of immense groundwater—which is deeply concerning. What impact does taking that water have on the use of that groundwater for drinking water and why is there no discussion of this in the EIR?

Response to Comment No. 273-3

The Project is not anticipated to result in a significant impact related to groundwater supplies. Refer to Response to Comment No. 3-7 regarding groundwater quality and Response to Comment No. 26-112 regarding groundwater use. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Draft EIR's analysis of groundwater quality.

Comment No. 273-4

Our region regularly fails to meet federal air quality standards due to high levels of ozone pollution and smog. This project is bound to emit carbon dioxide, methane and other waste products that pollute the air and further damage the ozone. The thousands of additional trucks and cars are going to produce smog. Before the Television City project even begins, the construction sector contributes to 23% of air pollution, 50% of the climatic change, 40% of drinking water pollution, and 50% of landfill wastes. How do you plan to study how these percentages will change during the construction of this project?

Response to Comment No. 273-4

Table IV.A-1 (Ambient Air Quality Standards) on page IV.A-3 of the Draft EIR acknowledges that the Air Basin is non-attainment for ozone. This comment provides unsourced construction sector percentages of air pollution and climatic change. However, these percentages do not relate to the CEQA significance thresholds from Appendix G of the CEQA Guidelines used in the Draft EIR. The Project's air quality impacts and GHG impacts are analyzed as required by CEQA in Section IV.A, Air Quality, and Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, respectively.

Comment No. 273-5

A project of this scale is devastating to our environment and catastrophic to our health. In an area with such immense tar and methane, why is it necessary to go 45 feet into the ground? What is the point in building these underground studios that will risk build ups and

potentially even explosions? What is going to be uncovered in the soil and how do we know that we are safe? How regularly will you be testing the soil? We are told in the EIR that a plan will be provided, but where is it? The community needs to review it and ensure that we feel safe. What precautions are going to be enforced to make sure we are not harmed? Why is this information not disclosed in the EIR?

Response to Comment No. 273-5

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, and 26-87 with regard to the La Brea Tar Pits and subsurface gases.

Refer to Section II, Project Description, of the Draft EIR for a description of the Project analyzed in the Draft EIR.

Comment No. 273-6

This project's construction phase is subject to last 20 years. I understand that the city is trying to make up for lost revenue, but killing the climate and risking out health is not the answer.

Response to Comment No. 273-6

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 273-1 through 273-5.

Comment Letter No. 274

Kat Juda
katjuda@yahoo.com

Comment No. 274-1

Please help stop the Regional Center designation build.

Response to Comment No. 274-1

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 274-2

It would be a disaster for our community that is already filled with too much traffic, congestion and issues that need addressing in the area.

Response to Comment No. 274-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 274-3

This project needs to be stopped and come up with a plan that isn't as intrusive to the neighbors and community. Thank you!

Response to Comment No. 274-3

The comment, which concludes the comment letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 274-1 and 274-2.

Comment Letter No. 275

James K.
329 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 275-1

I have many questions regarding the proposed Television City Studio plan. I believe the current proposal has extremely poor planning and no reasoning or thought process whatsoever.

Response to Comment No. 275-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 275-2 through 275-4.

Comment No. 275-2

My first of many concerns is the close proximity of the proposed plan and the La Brea Tar Pits. Why would the development be considered when it is so close to the tar pits? It seems extremely obvious that digging 45 feet across a 25-acre site will uncover many finds. How was the 45 feet depth for digging determined? I have not seen a detailed plan for dealing with this issue once it arises. Do you have a plan for this? If so, what is it? Why has it not been released to the public? A detailed plan needs to be provided to the public.

Response to Comment No. 275-2

Section IV.D, Geology and Soils, of the Draft EIR included an analysis of the Project's potential to impact paleontological resources. Refer to Response to Comment No. 35-90 for a detailed summary of the analysis contained in the Draft EIR. As discussed on pages IV.D-15 and IV.D-16 of the Draft EIR, the Project Site is approximately 4,000 feet to the north of Hancock Park and the La Brea Tar Pits. Based on the analysis contained in the Draft EIR, the Project would implement Mitigation Measure GEO-MM-1, which requires that a paleontologist be retained to prepare a Paleontological Resource Mitigation and Treatment Plan for the Project. Refer to Response to Comment No. 35-91 for a discussion of Mitigation Measure GEO-MM-1.

The maximum depth of excavation of 45 feet is based on the Project analyzed in the Draft EIR, as discussed on pages II-1, II-15, and II-34; Table II-2, Proposed Development Program, on page II-13; and Figure II-4, Conceptual Site Plan, on page II-14 of Section II, Project Description. As discussed in Section IV.D, Geology and Soils, of the Draft EIR, excavations up to 45 feet in depth could potentially disturb previously undiscovered paleontological resources. To address potential impacts to paleontological resources, paleontological monitoring would be required during ground disturbance activities within high sensitivity deposits (e.g., Pleistocene age deposits), per Mitigation Measure GEO-MM-1 and as revised (refer to Response to Comment No. 35-91). The monitoring program would follow the guidelines outlined by the SVP and include sediment sampling protocols for microfossil recovery. No monitoring would be required during excavation within artificial fill, as these deposits do not contain paleontological resources in their original stratigraphic context and thus have a low sensitivity. With the implementation of Mitigation Measure GEO-MM-1, Project-level impacts to unique paleontological resources would be reduced to a less-than-significant level.

The comment regarding the consideration of the development does not relate to the Draft EIR's analysis of environmental impacts, and no further response is required. Nevertheless, this comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Refer to Response to Comment No. 109-2 for a discussion of the public availability of such plans as the Paleontological Resource Mitigation and Treatment Plan.

Comment No. 275-3

The La Brea Tar Pits are full of tar and methane, and it can be extremely risky and harmful to the environment if excavated. Did the EIR evaluate the amount of gas that will be released as a result of the excavation? If so, where is the analysis? What was the analysis based on? The excavation plan should be of concern to the entire community.

Response to Comment No. 275-3

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, and 26-87 regarding the La Brea Tar Pits and subsurface gases.

Comment No. 275-4

Another concern I have is where are all the people going to park? The EIR says 5,000+ parking spaces are being planned, but then it continues to say that the parking spaces may be off offsite. Where is offsite? Why is offsite parking of any kind needed if all those parking spaces are going to be added to the project? Will the offsite parking be in the

neighborhoods? Will they take away our parks? Let's say that parking offsite did proceed. Will offsite parking be done seven days a week and any hour of the day? Will there be a limit as to how long offsite parking is going to be permitted? Have you looked at what will happen to the air quality with the additional parking needed offsite? You also need to factor in pedestrians, speeding, and other impacts of off-site parking—have these been considered? There needs to be a detailed analysis over these issues.

Response to Comment No. 275-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 275-5

Please take all of the questions into consideration. Everyone's goal is for the betterment of the Beverly-Fairfax area. Do what you can to protect it and its citizens. Please do not support this project.

Response to Comment No. 275-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 275-2 through 275-4.

Comment Letter No. 276

Cheryl Kanekar
cherylkanekar@yahoo.com

Comment No. 276-1

My husband and I live 2 blocks from the CBS lot on Beverly Blvd. I'd like to share my thoughts and questions about the proposed development. I support high-density, mixed-use urban planning centered around public transit (trains, buses running at very high frequencies all day and night), walking and bicycling.

Response to Comment No. 276-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 276-2

I don't see any concrete plans to increase public transit in the area. If the development encourages car usage, then our already-clogged sluggish streets will slow down to a stop, and air pollution and noise pollution will be unbearable.

There are only 4 buses right around CBS (14, 217, 16, 218) and they run at low frequencies of 10 minutes or more, and they are even more infrequent after weekday hours. We need way more bus and tram/train lines connecting us to more parts of the region than just downtown (where most of the buses go). The buses need to run at 5 minutes or less, to be usable. The Purple Line extension is not remotely enough to meet this need.

Cars need to be strongly dis-incentivized. We should not be giving over our precious land for parking lots & garages, aiding the poisoning of our air.

Response to Comment No. 276-2

The Project does not propose any changes to public transit in the area. Any such changes are the responsibility of transit agencies. However, Figure 12 on page 43 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the location of the bus routes serving the Project Site. Transit service in the Project area includes six local Metro buses, one Rapid Bus line, one DASH line, and one CityRide line. Table 3 on page 57 of the Transportation Assessment shows the frequency of the various lines indicating service

frequency between 8 and 40 minutes. In addition, the Metro D (Purple) Line Wilshire/Fairfax Station would be open for service before the Project opens and will have a frequency of 10 minutes. This station would be connected to the Project Site by a shuttle bus system running between the subway station and the Project's Mobility Hub.

Tables 4A and 4B on pages 58 and 59 of the Transportation Assessment show that the current bus system has approximately 2,000 available bus seats in both the morning and afternoon peak hours that could serve Project transit trips.

Comment No. 276-3

Secondly, will there be any tree coverage mandated in this development? We have a pattern of developers in the area cutting down old shade trees and leaving blocks barren and desert-like. What does the city require of developers in this area?

Response to Comment No. 276-3

As discussed in Section II, Project Description, of the Draft EIR, a minimum of approximately 28,900 square feet of open space would be located along the Project Site boundaries and would include landscaping, such as trees and shrubs. Additionally, as discussed on page VI-23 of Section VI, Other CEQA Considerations, of the Draft EIR, a total of 181 trees were inventoried on and surrounding the Project Site, including 62 private property trees/palms, 88 off-site trees whose canopies overhang the Project Site, and 31 street trees. None of the trees within the Project Site are protected under the City of Los Angeles Native Tree Protection Ordinance. To allow for development of the Project Site, all 62 of the existing on-site trees and three street trees would be removed as part of the Project and replaced in compliance with applicable City requirements. All other trees would be avoided or preserved in place. The on-site trees are to be removed and replaced at a 1:1 ratio, and the street trees are to be removed and replaced at a 2:1 basis in accordance with City requirements.

Comment No. 276-4

I'd appreciate it if you could address these concerns.

Response to Comment No. 276-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 276-2 and 276-3.

Comment Letter No. 277

Ron Kaplan
445 N. Kilkea Dr.
Los Angeles, CA 90048-2228

Comment No. 277-1

Please explain how the Television City expansion project will be laid out. The Draft EIR lacks a lot of detail about the buildings, sound stages, parking, and other aspects of the proposal. I have some concerns I am requested that you address:

Response to Comment No. 277-1

The Project Description meets the requirements of CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR analyzed the proposed development program (refer to pages II-12 through II-35 of the Draft EIR and specifically Table II-2, Proposed Development Program, on page II-13). Future Project changes that are substantially different than the proposed Project or are beyond the scope of impacts evaluated in the EIR would require additional City review and approval, as well as CEQA compliance review. Refer also to Response to Comment No. 5-5 regarding the layout of the Project.

Comment No. 277-2

- I understand that many billboards will be placed throughout and surrounding the site. What size billboards and how many? Where will billboards be located? Please show where these will be located and how they will be lit? Nighttime signage could impact animals. The lighting and energy used for signs was not included in the report. Where is the analysis of those?

Response to Comment No. 277-2

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the signage proposed as part of the Project and how the physical components of the proposed Sign District were adequately described and analyzed in the EIR. Billboards displaying any message directing attention to a business, product, service, profession, commodity, activity, event, person, institution, or any other commercial message, which is generally conducted, sold, manufactured, produced, offered, or occurs elsewhere than on the premises where the sign is located are considered off-site signs, which would be prohibited by the proposed Sign District.

Regarding the energy use and calculations for the signage, refer to Response to Comment No. 102-6. Please also see pages II-30 through II-32 in Section II, Project Description, of the Draft EIR regarding proposed signage and lighting for the Project.

As discussed on pages 44–48 of the Initial Study included in Appendix A of the Draft EIR, the Project Site is located in an urbanized area and is currently developed with the Television City studio. Due to the urbanized and disturbed nature of the Project Site and the surrounding areas and the lack of habitat in the Project area, it is unlikely that any sensitive animal species would be present and affected by the Project.

Refer to Response to Comment No. 213-4 regarding the potential lighting impacts on wildlife.

This comment discusses information related to aesthetic impacts. As described in Section 4.I on pages 30–31 in the Initial Study, provided in Appendix A of the Draft EIR, the Project is an employment center project located on an infill site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2542, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact,” unless evaluation is required under other land use regulations in the LAMC. An evaluation of aesthetic impacts is not required under the LAMC. Therefore, no further analysis was required in the Draft EIR for this topic. However, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 277-3

- Outdoor gatherings are expected events and I would like more information about where Television City would allow these. Nighttime parties across from residences would be noisy and disruptive. How does the developer plan to approach this common occurrence and protect the people who live near the project? How often would they be held? What kinds of outdoor gatherings? Will there be a limit of what types of events would be allowed?

Response to Comment No. 277-3

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 66-5 with regard to special events. Topical Response No. 3 also provides a discussion of how special events would continue to be governed by the LAMC, consistent with existing conditions. Also refer to Response to Comment No. 26-146 regarding outdoor noise and the overall reduction in areas used for outdoor production activities.

Refer to pages IV.I-43 through IV.I-48 of Section IV.I, Noise, of the Draft EIR for an analysis of noise associated with operation of the Project including noise from outdoor gatherings. As demonstrated therein, noise impacts associated with operation of the Project would be less than significant.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 277-4

- The Mobility Hub mentioned is not something most people are familiar with. What is a Mobility Hub? It sounds as though it is more than a bus stop? Who is expected will use it? It sounds like it could be a very busy place, and there are many safety concerns for this ambiguous facility. Who decided a hub of this kind was needed in our neighborhood? Will buses, taxis and ride shares be a part of it? No one came to speak with me about it.

Response to Comment No. 277-4

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the function and the operation of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips. Mobility Hub functions would be located on-site to support first/last mile connections; encourage employee and visitor use of public transit through the provision of a shuttle service, carpooling, vanpooling, and biking/scooter to work; and to support other modes of travel and TDM strategies that are likely to evolve over time. These features would be promoted and incentivized through programs administered by an on-site TDM coordinator and one or more transportation information kiosks, including within the Mobility Hub itself.

The Mobility Hub would be a private facility serving the Project Site and it would be controlled by the Project's security personnel. Pursuant to Project Design Feature POL-PDF-2, the Project would be required to prepare a 24/7 security plan. Refer to page IV.J.2-12 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR.

Comment No. 277-5

- The streets that surround the property can't hold more people and more traffic, especially on Grove Dr., Beverly Blvd and Fairfax, and West 3rd. Was the fact that these main streets are already so busy considered? Wasn't the fact that the corner where Erewhon and the post office are located is a crazy busy intersection considered? Cars trying to turn in either direction onto Beverly from

Grove typically can't do that in one light. And drivers have a terrible time trying to get out of the post office parking lot, into traffic in both directions. What is going to be done about the gridlock there already? There will be potentially thousands of workers, visitors, audiences to the studios, and others driving trying to get through traffic to get to the site and then to the parking garage.

Response to Comment No. 277-5

This comment discusses the general traffic conditions in the area and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR) acknowledges that the area around the Project Site has intersections that perform at a poor LOS. That fact was considered in the evaluation of the VMT CEQA issues and the non-CEQA LOS operational evaluation. Table 18 in the Transportation Assessment shows that none of the 31 study intersections operating at LOS D or better experienced a downgrade to LOS E or F.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, for a more detailed description of the performance of the street system serving the area.

Comment No. 277-6

- Will the buildings for this expansion be 15 or 20 stories high, which? How was that height decided? Where will those tall buildings be located?

Response to Comment No. 277-6

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed in Topical Response No. 1 and Response to Comment Nos. 11-3 and 26-7, the Project includes height zone, stepback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. These requirements are not currently required under the existing zoning code. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, stepbacks, and frontage areas associated with the Project. The massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Refer also to Response to Comment No. 11-3 regarding the height of the Project.

Comment No. 277-7

With this imprecise information, it seems the developer is keeping so many options open for the project. This is not helpful for people in the community who want to understand what is proposed to be built in the neighborhood. The EIR needs to be cleaned up and more specific. It is unfair for Angelenos to be kept in the dark

Response to Comment No. 277-7

Refer to Response to Comment No. 277-1 above regarding the adequacy of the Project Description. Also, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, a ministerial process for implementation of the proposed development program, and a discretionary process for future Project changes that are materially different than the proposed Project. See the Preliminary Draft Specific Plan, which is publicly available on the Department of City Planning's website for this Project.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 278

Vikki Karan
422 N. Laurel Ave.
Los Angeles, CA 90048-2351

Comment No. 278-1

I know a shady deal when I see one, and by golly this fits the bill. This Draft EIR is insufficient in its transparency regarding project benefits and past agreements with the project developer. This needs to be recirculated in the community so people are aware of this, or rather, aware of all that this is missing.

I read about a settlement agreement between the LA Conservancy and the project's developer. This gave me a lot of pause. What is that agreement? Does it influence the deal they have made here? Is the developer paying the Conservancy? This just seems immensely unknown and potentially dangerous to me. If we are being asked to provide public comment, we need the whole truth, and right now we don't have a grain of it. How can the City and community understand what these issues are if no one has been provided the Settlement Agreement.

Response to Comment No. 278-1

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and fulfills CEQA's purpose as an informational document that allows for meaningful public participation. Furthermore, the Draft EIR reflects the independent judgment of the City.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 278-2

The Draft EIR has stated that the developer's return on investment is a project objective. What about the community the project is going to dramatically change? Since the Developer has included ROI as an objective, we should know how much that could be. If

this is about helping out the local area, I can't see how at this point, since no numbers have been given.

Response to Comment No. 278-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 278-3

This proposal is frankly incomplete and insufficient. There are so many unanswered questions provided here that just don't add up. I know the community needs more information before any sort of decision can be made. If this dramatic change is being proposed, we need to know all the implications and potential outcomes that could occur.

Response to Comment No. 278-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 278-1 and 278-2.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and comprehensively analyzed all potential environmental impacts associated with the Project.

Comment Letter No. 279

Shira Karsen
315 N. Gardener St.
Los Angeles, CA 90036-5713

Comment No. 279-1

This project sounds totally wrong for our community and I can't imagine that anyone who lives here would welcome it.

Response to Comment No. 279-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 279-2

We haven't even seen a timeline of the phases—when will excavation start and when will it end? How long should we expect huge trucks to be hauling out dirt? Is construction really planned to last for 20 years? That seems unbelievable. When does the construction phase start? What is the permissible noise level for construction? What time of day does construction start and end? Will the roads have to be widened to accommodate all of these trucks and influx of cars? If so, we deserve to see a master plan that clearly shows every phase.

Response to Comment No. 279-2

The Draft EIR studies the most intensive scenario for the construction of the Project—a one-phase construction program lasting approximately 32 months. The 32-month schedule would concentrate the construction activity in one phase and assume Project buildout in 2026 as opposed to a long-term buildout of the Project within the 20-year term of the Development Agreement, which was also analyzed in the Draft EIR. As discussed on page II-33 of Section II, Project Description, of the Draft EIR, construction could begin as soon as 2023 and end as soon as 2026. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

The construction schedule is included in Appendix B of the Draft EIR (pdf page 32), and is also discussed further in Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR. Television City is a working studio, and constant construction would not be operationally compatible.

The significance criteria for each sensitive noise receptor, along with existing and anticipated noise levels, are provided as part of the Project's noise analysis included in Section IV.I, Noise, of the Draft EIR. Refer specifically to Table IV.I-10 on page IV.I-39 of the Draft EIR for unmitigated noise levels and Table IV.I-19 on page IV.I-58 of the Draft EIR for mitigated noise levels.

In accordance with LAMC requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between 8:00 A.M. and 6:00 P.M. on Saturday or national holidays. Construction activities outside of these hours would be permitted only if a temporary noise variance is approved by the Los Angeles Board of Police Commissioners.

Topical Response No. 14, Construction Vehicle Impacts, details the number of trucks and employee vehicles expected on the busiest construction days. The number of construction-related vehicles on even the peak days would not be enough to require widening of the streets serving the Project Site.

The Project's Transportation Improvement Program, detailed in Tables 23 and 24 on pages 190 and 191 of the Transportation Assessment (Appendix M.1 of the Draft EIR) list the improvements to be made by the Project. There is no plan to do any widening of area streets to accommodate the Project beyond a two-foot-wide widening along The Grove Drive Project frontage to accommodate a left turn lane into the Project driveway. Instead, operational improvements and traffic signal enhancements would be implemented.

Comment Letter No. 280

Pearl Katz
175 S. Detroit St.
Los Angeles, CA 90036-2913

Comment No. 280-1

The Television City expansion project proposed is a big concern for me. As a member in this community, I am uncertain of the size and scope of this development and the EIR leaves significant information out, so I request further details on several areas of the project.

Response to Comment No. 280-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Regarding the scope and details of the proposed development of the Project Site, refer to Response to Comment No. 5-3 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Specific issues raised by the commenter are addressed in Response to Comment Nos. 280-2 through 280-6.

Comment No. 280-2

For example, the plan states that digging will be 45 feet deep. The EIR's analysis states that 700,000 cubic yards will be removed and that there will be limited dewatering. How is this possible, with such shallow groundwater levels in this area? The term "limited" seems inaccurate. With a construction timeline of two dozen years, dewatering seems highly likely to be significant. As water is removed, where will it be taken? Will the water contain contaminants? This area also contains oil, so what will happen to the chemicals and dangerous elements that will be disturbed in the process of excavation?

Response to Comment No. 280-2

As concluded in the Draft EIR, impacts related to temporary dewatering would be less than significant. Refer to Response to Comment Nos. 3-7 and 11-5 for a discussion of construction dewatering, including the potential to encounter groundwater contaminants and compliance with discharge permits. The proposed below grade parking structures will be designed to resist hydrostatic pressure, such that a permanent dewatering system (post-construction dewatering) will not be required. Refer also to Response to Comment No. 11-25 regarding the quantity of groundwater to be extracted and the duration of dewatering. Refer to Response to Comment No. 9-24 regarding the construction timeline. Refer to Response to Comment No. 16-64 for a summary of how the extracted

groundwater would be chemically analyzed to determine contamination and the appropriate treatment and/or disposal method.

Refer to Response to Comment Nos. 13-4, 16-64, and 26-80 regarding the tar collection system and the testing and disposal requirements for any impacted soil.

Comment No. 280-3

A major safety hazard not addressed is the potential for sink holes. With removal of groundwater and shifting soil, how likely is this? Groundwater is a precious resource in our state. What analysis of the impact to nearby homes was considered in the EIR?

Response to Comment No. 280-3

Refer to Response to Comment Nos. 16-74, 16-85 and 26-69 regarding dewatering as it relates to subsidence and to Response to Comment No. 11-25 regarding the quantity of groundwater to be extracted.

Comment No. 280-4

The EIR does not adequately address the construction timeframe. If the building takes up to 25 years, will the traffic, noise, and more disrupt life in this neighborhood for that long? Even if the construction only lasts a few years, which is still a long time in the life of a resident, how did the EIR demonstrate these impacts adequately for such a variance in the timing of the potential construction?

Response to Comment No. 280-4

Refer to Response to Comment No. 9-24 regarding the Project's buildout timeline and Response to Comment No. 26-138 regarding the construction timeline related to noise. Refer to pages IV.K-36 to IV.K-37 of Section IV.K, Transportation, of the Draft EIR regarding the CTMP that would be implemented as part of the Project to provide safe and efficient movement of construction vehicles.

Comment No. 280-5

The thousands of trucks driving with construction materials and debris, dump trucks, deliveries, and for other purposes are going to create traffic unlike any in this area. Such a huge project will require fleet upon fleet of trucks that will drive on our streets, causing delays, accidents, congestion, pollution, loud noise, and other negative impacts. How the traffic, pollution, safety, and noise analyzed were based on the lack of timeline/variance in possible construction?

Response to Comment No. 280-5

A complete analysis of construction traffic impacts was included in the Transportation Assessment included as Appendix M.1 of the Draft EIR. Refer to Section 5D, pages 179 through 184 therein. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the impacts of construction trucks and construction worker vehicles on the traffic conditions along the roadways serving the Project Site. As discussed therein, Project trip generation during construction would be less than the Project when fully operational and, thus, would have a lesser effect on traffic than the Project as analyzed in the Transportation Assessment and Draft EIR.

The Draft EIR analyzed the worst-case condition in terms of construction impacts (i.e., a one-phase construction effort in which the entire Project would be constructed in a 32-month time period) as well as a long-term buildout scenario. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, impact thresholds relative to changes in driver delay are no longer applicable to identify transportation-related impacts under CEQA. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

The Draft EIR CEQA analyses of transportation, pollution, safety, and noise are analyzed in Sections IV.K, Transportation; IV.A, Air Quality; IV.E, Greenhouse Gas Emissions; IV.J.1, Public Services—Fire Protection, and IV.J.2, Public Services—Police Protection; and IV.I, Noise, respectively.

Comment No. 280-6

Please explain the findings that states there will be no significant impact to the residents of this community?

Response to Comment No. 280-6

This comment incorrectly claims no significant impacts were identified in the Draft EIR. Refer to Section I, Executive Summary, and Section VI, Other CEQA Considerations, of the Draft EIR for summaries of the Project's significant and unavoidable impacts. Detailed analyses supporting these conclusions are provided throughout Section IV, Environmental Impact Analysis, of the Draft EIR.

Comment Letter No. 281

Shalom Katz
175 S. Detroit St.
Los Angeles, CA 90036-2913

Comment No. 281-1

I am writing to ask about the current planning and permitting regarding the TV City 2050 plan. I've looked through the materials that were made available to access, but I cannot seem to find many specifics on what the development will actually look like or entail.

Response to Comment No. 281-1

The Project Description meets the requirements of CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR analyzed the proposed development program (refer to pages II-12 through II-35 of the Draft EIR and specifically Table II-2, Proposed Development Program, on page II-13). Future Project changes that are substantially different than the proposed Project or are beyond the scope of impacts evaluated in the EIR would require additional City review and approval, as well as CEQA compliance review.

Comment No. 281-2

The EIR discusses a Specific Plan, which I would like to see. As far as I can tell though, there are no specifics. What will happen to existing zoning under this proposed plan? (which we have no way to see before it goes up for approval). What General Plan provisions apply to this development? What other local regulations are applicable for what is being proposed?

Response to Comment No. 281-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-15, and 9-16 with regard to the Project Description and proposed Specific Plan, how neither CEQA nor City policy requires the Specific Plan to be included in the EIR, the level of detail required for a specific plan project EIR, how the Draft EIR disclosed and analyzed all physical elements of the Project in accordance with CEQA, and the regulatory process under the Preliminary Draft Specific Plan, which has been made publicly available in response to comments on the Draft EIR prior to the publication of this Final EIR. Refer also to Response to Comment No. 281-4, below.

Refer to Response to Comment No. 26-22 regarding the relationship of the proposed Specific Plan to the LAMC and the Draft EIR's CEQA analysis of the Project's consistency with the LAMC, General Plan, and other applicable land use plans.

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Refer to Response to Comment Nos. 28-13 and 32-3 regarding the public outreach that has been conducted and the noticing of the Project in compliance with CEQA. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day period required under CEQA. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Comment No. 281-3

Is it true that there structures up to 20 stories tall will be allowed? How are we supposed to find out about the business uses that will be there? When will we know more specifics about what has been decided? I would like to know how the community is to provide input on this project if the developers do not even know what will it be developed? Is it expected that the community would support a development that is very general in nature? What about not knowing more details about the impacts?

Response to Comment No. 281-3

Refer to Response to Comment Nos. 281-2 and 281-4 regarding the Project Description. Refer also to Response to Comment Nos. 11-3 and 26-7 regarding the height of the Project.

Comment No. 281-4

That leads into another question; who does know what is being developed? My fear is that the developer can amend that plan as they please, which means the community will have no avenues for making their voices heard as development continues. So does the plan exist? Have you seen it? If so, then can you share some of the actual specifics with us? I feel that would do a lot to increase the trust in this project.

Response to Comment No. 281-4

Refer to Response to Comment No. 281-2 regarding the Project Description. As discussed throughout all sections in the Draft EIR, the Project is a studio project that would include sound stage, production support, production office, general office, and retail uses. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Topical Response No. 3, Permitted On-Site Uses. As discussed in Topical Response No. 1, the Draft EIR disclosed all of the elements of the Project required by CEQA and provided a comprehensive analysis of the Project. The proposed Specific Plan is not necessary for evaluation of the Project. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR. Please note that the proposed Specific Plan incorporates all of the same Project elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of the Final EIR. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 281-5

As it is, I cannot support it, as I do not even know what I would be supporting.

Response to Comment No. 281-5

Refer to Response to Comment No. 281-1 regarding adequacy of the Project Description. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 282

Daniel Kessons
6646 Drexel Ave.
Los Angeles, CA 90048-4209

Comment No. 282-1

I recently learned about some concerning details regarding the Television City renovations. My major concerns are the length of this project and the lack of transparency regarding its approval.

Response to Comment No. 282-1

Regarding the length of the Project, refer to Response to Comment No. 9-24 regarding the buildout timeline. Regarding transparency surrounding its potential approval, refer to Response to Comment No. 32-3, which discusses Project outreach, noticing, and future public hearings.

Comment No. 282-2

I had not received any notifications regarding the approval process for this project, and yet now I hear that it's being fast-tracked for approval. I think this is a gross breach of public trust, and any approvals should be delayed until the public has appropriate time to hear about the potential impacts of this project. After all, I understand the developer is asking for a 20-year timeframe for the project.

Why would the city approve a project that could cause impacts to the area for 20 years? Are the impacts going to be worse over that timeframe? How is the community supposed to understand exactly what the impacts are going to be for each of those and cumulatively over that period?

That is an incredible amount of time to be building something without proper oversight from the community. I have not heard about any community benefits offered to ensure the community will benefit, or at least not be harmed, by this development. I'd urge you to pause this plan until the community has an appropriate amount of time to actually understand how the neighborhood will change with this huge development. After all, you're here to represent us and not Hollywood elites, right?

Response to Comment No. 282-2

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing. Based on the commenter's address, they appear to be outside the required notification radius. However, as stated therein, the Applicant has engaged in an extensive public outreach program.

As stated throughout the Draft EIR, while Project buildout is anticipated in 2026, the Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043. Accordingly, in addition to analyzing the 32-month construction schedule, the Draft EIR analyzed the Project's impacts associated with a long-term buildout for each of the environmental impact areas analyzed in Section IV of the Draft EIR. Refer to Table I-1 in Section I, Executive Summary, of the Draft EIR for a summary of all of the environmental impact conclusions for the Project.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 283

Annette Kiene
531 Pier Ave., Spc. 32
Hermosa Beach, CA 90254-3830

Comment No. 283-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 283-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 284

Daniel Kim
418 S. Sycamore Ave.
Los Angeles, CA 90036-3506

Comment No. 284-1

I am reaching out in regards to the Environmental Impact Review and my concerns of the TVC project. Like many residents in the Beverly Fairfax area, I am very concerned about the transformation to my community from this massive development. This letter outlines a few of my concerns as well as raises questions to better understand the project's initiatives.

Response to Comment No. 284-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 284-2

After reading about what occurred between the Los Angeles Conservancy and the developers, I am confused. We need more transparency.

Response to Comment No. 284-2

Refer to Response to Comment No. 26-19. As discussed therein, pursuant to CEQA Guidelines Section 15002(c), the confidential agreement between the Applicant and the Los Angeles Conservancy is an agreement between private parties and is therefore not required by CEQA to be discussed or analyzed in the EIR.

Comment No. 284-3

- What happened in the agreement between the Los Angeles Conservancy and the developer for the project?
- What changes occurred for the project?
- Why is the Los Angeles Conservancy making deals with the project in advance of the EIR and input from the community? What if the community does not agree with the terms of their agreement?
- How much money will the developers be paying the Los Angeles Conservancy?

Response to Comment No. 284-3

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

Comment No. 284-4

The developers include information that their return on their investment is a “project objective.” This statement does not provide a comprehensive understanding to community members of what the project will contribute. I am requesting financial information about the project to be made available to the public.

- What are the expected returns of the development in 10 years? 20 years? And longer term?
- What does the return depend on? Full use of the different planned uses? What if the uses change because the developer is asking for flexibility?
- How much return is considered for the project to be viable? Where is the analysis of costs to the community of the impacts versus the return due to the developer? How and when does the city make the determination that the return outweighs the costs to the community?
- Who are the top five individual investors in the company? I believe it is important to know who these people are so that we are informed about who is “investing” in our community.
- Will and how much of the developers’ return will be invested back into the immediate community? I want to know how community members and low income residents could benefit from the project.

Response to Comment No. 284-4

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 284-5

It is important that this information is circulated to the public prior to approval and construction of the development. This project will transform our community and make Television City an almost unrecognizable site. It will inevitably disrupt the way of life of many residents. I would like to be kept informed on project updates and changes in addition to response to my concerns.

Response to Comment No. 284-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 284-2 through 284-4. All commenters are added to the notification list for the Project.

Comment Letter No. 285

Julie Kim
403 S. Orange Dr.
Los Angeles, CA 90036-3509

Comment No. 285-1

I am worried about the environmental consequences of this project. As a community resident, I need to know the plans to transform my community will not destroy it in the process.

Response to Comment No. 285-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 285-2 through 285-4.

Comment No. 285-2

In the DEIR, I read that the developers are planning to excavate down about 45 feet, removing over 700,000 cubic yards of dirt. I kept reading to see if there was any more information about any of the potential impacts, yet there are just two pages failing to provide a meaningful analysis.

Excavating down nearly 45 feet will likely lead to the discovery of historic resources. Archaeological excavation takes patience, and discovering dinosaur bones or other artifacts may occur. How will the developers plan on excavating all of this dirt while not damaging the resources in the ground? If anything is found, who will the artifacts be given to? What will be the chain of custody for anything found? Will the project construction be stopped until the affected area is thoroughly examined by archeologists? These details are essential to protecting the Beverly Fairfax Historic District.

Where will the dirt taken be disposed of and what research will be conducted to ensure that the dump site will not have any damage? I believe that it is important not only that the district's land will be okay but also that this does not raise environmental concerns for another area.

Response to Comment No. 285-2

Refer to Response to Comment No. 13-7 regarding the analysis of archaeological resources within the Project Site, and the process by which archaeological discoveries are evaluated and treated through implementation of Mitigation Measure CUL-MM-1. As specified in Section IV.B, Cultural Resources, of the Draft EIR, Mitigation Measure CUL-MM-1 requires that a Qualified Archaeologist be retained to prepare and implement a CRMTP using the SOI's Standards for Archaeological Documentation as a framework. These procedures provide an overall framework to ensure that any resources identified during excavation or other ground disturbing activities for the Project adhere to existing regulations and follow professional archaeological standards. Practical considerations prohibit defining specific details of the CRMTP and WEAP, but the steps to be followed in the event of a discovery and the collection and disposition of any collected materials are both standard elements of these procedures. The careful and controlled excavation of archaeological or paleontological materials may be conducted as part of this process, as described above in the Response to Comment No. 13-7. The Supplemental Cultural Memo, included as Appendix FEIR-14 of this Final EIR, provides additional detail and expert opinion addressing the methods used to assess the potential for buried resources and how the provisions of Mitigation Measure CUL-MM-1 provide a reasonable and feasible means of mitigating potentially significant impacts to archaeological resources that may be encountered, including those resources assessed as having the greatest likelihood of being present. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The transfer of any collected materials and several of the procedures that must be conducted to meet curation standards, including the identification of an appropriate curation facility, and maintaining a chain of custody during transfer of any materials, are all standard elements identified in a CRMTP. Thus, where any given artifact identified during the Project is retained would vary based on several factors that are defined in the CRMTP, but would ultimately be determined only once a discovery is made and through consultation with the appropriate parties. The parties who may ultimately retain all or part of an artifact collection and be consulted during the determination process include but are not limited to local Native American tribes, the Applicant, a curational facility, an individual or group with cultural or historical affiliations, and a public or private institution for educational purposes.

The sediments that compose the Project Site are not of the proper age to contain dinosaurs, but a paleontological assessment was completed for the Project and analyzes whether there is evidence of various prehistoric plants and animals preserved as fossils. The Paleontological Resources Review Memorandum provided in Appendix F of the Draft

EIR includes mitigation measures that would ensure that any paleontological resources that may be present would be adequately identified and treated in accordance following professional standards.

Regarding the sediments exported off-site, refer to Response to Comment No. 323-3.

Comment No. 285-3

On a more logistical note, what time of day will the excavation take place? And how many days per week? If the plan is agreed on, I will need to be waking up earlier in anticipation of the traffic so I am concerned that I could be spending a long time waking up to the digging.

Response to Comment No. 285-3

Refer to Response to Comment No. 73-2 regarding construction hours and the proposed CTMP.

Comment No. 285-4

For years, tar preserved the bones of trapped animals at La Brea Tar Pit yet the developers are not considering that this excavation could unveil the bones of ancient animals. How far will the excavation site be from this landmark? If the developers plan on using massive excavators, how long are they planning on spending on excavation while looking for resources? These excavators can carry 19 to 24 tons—spotting an ancient bone would be like finding a needle in a haystack.

Response to Comment No. 285-4

Section IV.D, Geology and Soils, of the Draft EIR included an analysis of the Project's potential to impact paleontological resources. Refer to Response to Comment No. 35-90 for a detailed summary of the analysis contained in the Draft EIR. As discussed on pages IV.D-15 and IV.D-16 of the Draft EIR, the Project Site is approximately 4,000 feet to the north of the Hancock Park and the La Brea Tar Pits.

Based on the analysis contained in the Draft EIR, the Project would implement Mitigation Measure GEO-MM-1, which requires that a paleontologist be retained to prepare a Paleontological Resource Mitigation and Treatment Plan for the Project. Refer to Response to Comment No. 35-91 for a discussion of Mitigation Measure GEO-MM-1. As provided in that measure (and as discussed in Response to Comment No. 35-91), a WEAP

is provided to the construction workers to educate and sensitize them to the potential presence of paleontological resources at the Project Site.

In addition to the paleontological monitor(s) on-site, construction crew members such as the operator of the excavator, the geotechnical consultant, and the grade depth checker may detect paleontological resources in the excavation area. Those construction crew members and the paleontological monitor will coordinate throughout the excavation of the native soil below the artificial fill at the Project Site. For example, the paleontological monitor will use different techniques to locate any paleontological resources, such as using hand signals to convey to the heavy equipment operator that they need to access the excavated area to look for fossils or depositional environments conducive to fossil preservation. As deeper depths are reached, exposed walls within native sedimentary deposits offer the monitor an exposure to view potential sedimentary layers, or strata, for paleontological resources. If there is a discovery, the potentially significant paleontological resource can be moved to the side for evaluation or if the resource cannot be moved, the monitor will direct the operator of the construction equipment work to temporarily work in another area so that the resources can be safely recovered.

Thus, if a potential resource is detected, the paleontological monitor has the authority to divert and/or re-direct ground-disturbing activities in the area of the find, and rope off a protective barrier of at least 50 feet to evaluate the unanticipated find. As provided in the revised Mitigation Measure GEO-MM-1, "If significantly disturbed deposits or younger deposits too recent to contain paleontological resources are encountered during construction, the Qualified Professional Paleontologist may reduce or curtail monitoring in those affected areas, after consultation with the Applicant and the Los Angeles Department of City Planning's Office of Historic Resources." Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 285-5

Until my concerns about Beverly Fairfax's historic and cultural resources are addressed, I will urge my neighbors to stand up against the project.

Response to Comment No. 285-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 285-2 through 285-4.

Comment Letter No. 286

London Kim
242 S. Detroit St.
Los Angeles, CA 90036-3034

Comment No. 286-1

The DEIR for this new studio coming into my neighborhood appears to be incomplete, since it is lacking very crucial information regarding trip generation. Why wasn't site-specific data included in this DEIR? How could impacts be analyzed accurately without using site-specific data? This project could have a huge impact to the community, and a project of this scale should have the ability to have its own studies and not piggyback off other studies that may or may not be closely related to this site.

Response to Comment No. 286-1

The Project does not represent a "new studio" development, but rather a continuation and expansion of an existing studio complex that has been on this site for more than 70 years.

Refer to Topical Response No. 10, Trip Generation, for a discussion on the validity of the empirical data used to estimate trip generation for sound stage, production support and production office uses at the Project Site, including a comparison of actual driveway counts of existing trips at the Project Site to estimates using those trip rates. It also includes a detailed discussion of trip generation for studio audience members.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project in accordance with CEQA.

Refer to Response to Comment Nos. 5-8 and 11-3 regarding the size of the Project and compatibility of the Project with surrounding uses.

Comment No. 286-2

Will any decision on this project be made before the community has more information about how this will specifically affect the people who live and work here? Don't let this studio skate by on just generalities.

Response to Comment No. 286-2

As demonstrated in Response to Comment Nos. 286-3 and 286-4, below, the Draft EIR was prepared in accordance with the requirements of CEQA. Following publication of the Final EIR, the Project will be subject to public hearings and meetings, City Planning Commission review, and ultimately review by the City Council.

Comment No. 286-3

I can understand why the DEIR would say that the trip generation for certain land uses is based on studies of other studio's trip generation. It appears as though the ITE trip general manual doesn't have data for studio-related uses (which appears to be something to look into!). However, saying it was just based on these things and not specifying what they actually are is a big problem. Saying these studies are empirical studies without actually providing those numbers doesn't provide a sense of trust and transparency, in fact it does the exact opposite. What were these studies? What kind of studios did they base them on? Were they bigger or smaller studios? Do these studios have the same conditions as this studio? I can't imagine man [sic] studios are located around residential areas, but do these studies show otherwise?

Response to Comment No. 286-3

As explained in Topical Response No. 10, Trip Generation, the trip generation for the Project Site was based on a combination of sources, using and prioritizing empirical data from local studio and entertainment campuses as much as possible. The strongest base data available was an extensive set of studio trip generation traffic counts conducted over multiple days of the week and times of the year at Universal Studios. This data set was so detailed that it allowed the various elements of the studio complex to be separated and trip rates for each type of studio-related land use to be separately identified—sound stages, production support areas, and both production offices and general offices. These trip rates were confirmed in detailed studies of Paramount Picture Studios and Sony Studios. All three of these studio complexes are adjacent to residential uses. All the studios cited are comparable studios to the Project and are located within Los Angeles or neighboring cities.

Comment No. 286-4

Additionally, there is talk of adjustments being used to calculate these estimates for trip generation. More shadiness! Where is the data supporting these kinds of adjustments? Is there any sort of basis for these adjustments to be made?

Response to Comment No. 286-4

Table 6 on page 81 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the trip rates used for each land use component in the Project Description—sound stage, production support, production office, general office, and retail. The only adjustments made to these empirical-based rates were adjustments to reflect the estimated percentage of transit/bike/walk-in modes in accordance with the TAG and CEQA.

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

Comment No. 286-5

It seems to me that there are still a LOT of questions to be answered, and this DEIR is just not enough to have the public feel comfortable.

Response to Comment No. 286-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 286-1 through 286-4.

Comment Letter No. 287

Noah Kistler
112 N.
Los Angeles, CA 90048

Comment No. 287-1

This project is not well-defined and doesn't even address the major long-term impacts to our community.

Response to Comment No. 287-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. As discussed in Response to Comment No. 9-24, the long-term buildout impacts of the Project were fully analyzed in the Draft EIR.

Comment No. 287-2

Obviously, it will result in a [sic] further development in the area. The Draft EIR needs to analyze the likely intensification of further development in the surrounding area as a result of this major change to the community plan.

Response to Comment No. 287-2

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation and the CEQA analysis of the proposed General Plan Amendment. Refer to Response to Comment No. 26-177 regarding the Project's growth-inducing impacts.

Comment No. 287-3

I'm also concerned about is the proposed "Mobility Hub." What is that? Will the general public be allowed to use it? Did the EIR study all of the traffic, noise and air pollution from the buses, shuttles and ride share cars going to and from this Mobility Hub? Will there be a police kiosk or other police presence at the mobility hub? People are not going to ride transit unless they feel safe and secure.

Where are those analyses? Are there any rules that will control the operations? Will the City oversee the usage long-term?

I don't want a bus depot in my neighborhood: this is supposed to be a studio—not a bus depot, that is a magnet for transient people and crime.

Response to Comment No. 287-3

With regard to the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. The Mobility Hub is accounted for in the analyses of transportation, noise, and air quality within Sections IV.K, Transportation, IV.I, Noise, and IV.A, Air Quality, of the Draft EIR, respectively; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As demonstrated therein, impacts associated with the Mobility Hub were accounted for in the analysis and there would be no new significant impacts as to those impact areas. Thus, there would be no change to the impact conclusions in the Draft EIR. Refer to Response to Comment No. 219-1 above regarding why the assertion that the Mobility Hub is a bus depot is incorrect. Also refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 287-4

There needs to be more information, analysis and rules around this whole mobility hub proposal.

Response to Comment No. 287-4

Refer to Topical Response No. 7, Mobility Hub, regarding the proposed Mobility Hub, which was described in Section II, Project Description, and Section IV.K, Transportation, of the Draft EIR. This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 287-1 through 287-3.

Comment Letter No. 288

Elijah Klapper
539 N. Formosa Ave.
Los Angeles, CA 90036-1944

Comment No. 288-1

The Television City proposed development should not be allowed. The intent is clear: it is a money-making endeavor for the developer and will not solve any problems in LA. It will simply create more problems.

Response to Comment No. 288-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 288-2

Where is the housing for all the additional employees, visitors and workers that are expected to be at Television City every day? How can the developer propose all of the new facilities and office space but not have to also address the housing that will be needed for all those people? The development looks to add a ton of office space. Exactly how many offices are going to be built? Will they all be occupied? What kinds of work will be done in those offices? What this community needs is more workforce housing. We need more people to continue to be able to work from home, not having to drive in their cars to get to offices. We already know that this worked well when so many had to work from home during covid. So why a developer would plan for more work spaces and not more homes?

Response to Comment No. 288-2

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

As discussed in Section II, Project Description, of the Draft EIR, the Project proposes the development of 635,400 square feet of production office space and 594,070 square feet of general office space, with a total of 700,000 square feet of production office space and 700,000 square feet of general office space permitted under the Specific Plan. Refer to Table II-2 on page II-13 of the Draft EIR.

The comment regarding workforce housing is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment Letter No. 289

Michael Klausman
1855 Kanola Rd.
La Habra Heights, CA 90631-8218

Comment No. 289-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 289-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 290

Jeff Kloehn
347 N. Ogden Dr.
Los Angeles, CA 90036-2142

Comment No. 290-1

I have lived in the area for 24 years. I'm writing to comment on TVC 2050 after my review of the Draft EIR.

Response to Comment No. 290-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 290-2

I have many critiques, my concerns are issues with the Grove Drive parking, and the project information requirements by the State of California in the Draft EIR process. Also, What will happen to the walkability, traffic and lack of parking. Will this really end up being a 20 year emission buildout for our community?

Response to Comment No. 290-2

Regarding walkability, refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Regarding parking, under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

The preferred construction program would see the Project completed in one phase so that the construction would be completed in the 32-month time frame evaluated in the Draft EIR. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 290-3

Please see more information on my research and project concerns below.

According to the Draft EIR, a large parking structure is being planned. Is that parking structure where all of the new 5,300 parking places will be housed? Why hasn't the developer considered spreading the parking around the project property instead? Because the traffic trying to get in and out of the parking structure is going to get extremely backed up.

Where is the analysis that shows the expected times for all those drivers to be able to get in and out of the structure and shows the impact on the entering and cross streets? Having the entry point of that structure on Grove seems poorly thought out and illogical. How and why was it decided to do that? What is the developer going to do about all that traffic and the back up of cars, which already happens now all day long?

That street borders a park frequented by families and children. Congestion from parking accessed on a small street next to a popular park filled with families has disaster written all over it.

Response to Comment No. 290-3

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-169 and 26-E.4-17 regarding access and use of The Grove Drive.

The effects of Project vehicles entering and exiting the Project Site is included in the non-CEQA operational analysis which is summarized in Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR). The results show that the three signalized intersections providing access to the Project Site would all operate at LOS B after full buildout of the Project. Refer also to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion.

Comment No. 290-4

How tall are the structures going to be in this project? How many tall buildings will there be? How is this going to impact Pan Pacific Park? How will any tall structures affect the views that nearby residents have now? The height zones in the land use plan are larger than what is presented in the conceptual plan. What are we going to have in this project? Why are those figures different? What is in it for the community?

I would like to see these issues addressed.

Response to Comment No. 290-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, the Conceptual Site Plan that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan. As discussed therein, the massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, CPC-2021-4089-AD-GPA-ZC-SN-SP. As discussed throughout the Draft EIR, the Project includes height zone, stepback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, stepbacks, and frontage areas associated with the Project. See also Response to Comment Nos. 11-3 and 26-7 regarding the height of the Project, including with respect to surrounding uses. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's consistency with applicable plans, policies, and regulations that regulate land use on the Project Site, including the LAMC, among others, as well as the compatibility of the proposed uses with surrounding land uses, including nearby residential uses and Pan Pacific Park, and concluded that impacts would be less than significant.

This comment also raises questions related to aesthetic impacts (views). As described in Section 4.I on pages 30–31 in the Initial Study, provided in Appendix A of the Draft EIR, the Project is an employment center project located on an infill site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2542, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact,” unless evaluation is required under other land use regulations in the LAMC. An evaluation of aesthetic impacts is not required under the LAMC. As such, no further analysis was

required in the Draft EIR for this topic. However, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 291

Gabrielle Knable
435 N. Croft Ave.
Los Angeles, CA 90048-2508

Comment No. 291-1

From what I can see, the project proposes 14 performance stages, which will attract thousands of cars to the site (audience members, performers, staff people, etc), [sic] presumably all day and into the night.

What will this mean for our community? Where are these people going to park? I doubt that anyone would want tons of police presence in our neighborhood, but what kind of security will be put in place to handle all this influx? Will the street lighting be upgraded so that there aren't inviting targets for car break-ins and robberies? What about the noise level in our neighborhood? Will there be loud concerts every night? Massive lights and/or fireworks?

Response to Comment No. 291-1

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nonetheless, with regard to parking, as discussed on page II-30 of Section II, Project Description, of the Draft EIR, the Project would provide a sitewide total of approximately 5,300 parking spaces based on parking ratios set forth in the Specific Plan. Vehicles may be parked in tandem (double or triple) or by valet, depending on the specific parking layout. In addition, the Specific Plan would set forth a process for the approval and implementation of a reduced/shared parking plan, so long as an adequate parking supply is maintained. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the parking supply to accommodate the peak parking demands of the Project. Off-site parking is not needed to meet the Project's peak parking demands and has been removed from the Project Description; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Traffic safety in the neighborhoods is a critical focus of the NTMP process described in Topical Response No. 9, Neighborhood Traffic Management Plan. The NTMP included as part of the Projects Transportation Improvement Program (see Topical Response No. 15, Transportation Improvement Program) would result in the affected neighbors working with the Applicant and LADOT to develop a plan to monitor and respond to cut-through traffic along the neighborhood streets in the affected neighborhoods. Traffic noise was included in the operational noise analysis provided in Section IV.I, Noise, of the Draft EIR.

Refer to pages IV.I-48 through IV.I-54 therein. As demonstrated therein, impacts with respect to traffic noise would be less than significant.

The Project Site would not include a multi-screen cinema or a concert venue that will attract traffic and parking demand from the public.

In regard to police presence, please refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

With respect to the environmental impact of lighting, pursuant to Public Resources Code Section 21099, because the Project is an employment center project located on an infill site, the Project's aesthetic impacts shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 38–40 of the Initial Study for a discussion of lighting.

In regard to street lighting, as part of the Project, street lighting would comply with applicable regulatory requirements. In addition, in accordance with LAMC requirements, on-site lighting would be shielded and directed away from off-site uses.

In regard to noise, refer to pages IV.I-48 through IV.I-54 of Section IV.I, Noise, of the Draft EIR regarding the Project's less than significant operational noise impacts. There would not be loud concerts every night, large lights or fireworks. A concert venue and fireworks are not permitted uses; refer to Topical Response No. 3, Permitted On-Site Uses.

Comment No. 291-2

This project will really impact our community and I don't see any benefit at all.

Response to Comment No. 291-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 291-1.

Comment Letter No. 292

Sascha Knopf
459 1/2 N. Gardener St.
Los Angeles, CA 90036-5708

Comment No. 292-1

As a 19 year resident of the Fairfax neighborhood, Television City 2050 seems like an unbelievably ambitious project that will for sure overwhelm our neighborhood. I am concerned with multiple aspects of the EIR. Information is missing, confusing, and conflicting.

Response to Comment No. 292-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. The Draft EIR was prepared in accordance with the requirements of CEQA. Specific issues raised by the commenter are addressed in Response to Comment Nos. 292-2 through 292-5.

Comment No. 292-2

One area of concern is with the water use. The EIR says this project will increase water use by 500%. This amount is staggering. What accounts for that extent of increase? How could that be acceptable in the midst of a statewide drought? I understand that the facility will be bigger, but such a huge increase is dramatic and seems like it should be included as a major impact analyzed in the EIR. What amount of increase would make it officially significant enough to include in the EIR? How is 500% not enough to meet this mark?

Response to Comment No. 292-2

With regard to water demand, as discussed on page IV.M.1-29 in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, in accordance with Appendix G of the CEQA Guidelines, the Project would have a less than significant impact related to water supply and infrastructure if it would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. As discussed in Response to Comment No. 26-175, LADWP and the Draft EIR correctly concluded that LADWP would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years, and, therefore, impacts on water supply would be less than significant. Refer to Response to Comment Nos. 16-66 and 26-175 with regard to the adequacy of water supply to serve the Project.

Comment No. 292-3

Another fear is that the city is being bullied by the developer. For what other reason would it be the developer's financial benefit be included as an objective? I read that a project objective was for the developer to make money. Why is this a part of the environmental impact report? What does that have to do with the city, its citizens, or the environment? What connection does the developer have that made this possible? The desires of a politically powerful developer who wants to grow Television City seem like a sketchy matter to include in a government document for the public's information.

Response to Comment No. 292-3

Please note that the Draft and Final EIR were prepared by the Los Angeles Department of City Planning as Lead Agency in accordance with CEQA and City policies. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment also raises non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 292-4

Why does the plan for development not include housing? We in LA need more housing, particularly affordable housing for workers. If the project could include this kind of residential use, it would be more palatable for the neighbors. It would reduce traffic because people could live and work in the same neighborhood. Why was this important need not addressed in the EIR? How can housing not be considered in a development of this size, especially when there is no available housing for the large number of employees?

Response to Comment No. 292-4

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Vehicle trips anticipated to be generated by the Project and the associated impacts on the transportation system are addressed in Section IV.K, Transportation, of the Draft EIR. As discussed in Section IV.K of the Draft EIR, Project impacts related to transportation would be less than significant, and no mitigation measures would be required.

Comment No. 292-5

I am frustrated by the onerous traffic section of the EIR, all 83 pages of it plus the appendix. Why couldn't the EIR be clear and concise, explaining the effects of this project on the neighborhood in language that the public could understand? I have some specifics I want to refute. For one, there is the wildly optimistic number of vehicle miles travelled listed as the average for workers at the site. As I understand the EIR, it states people drive 6.7 miles per day to get to and from the site. Is this a correct interpretation? And, if so, how is that number reasonable? Were there assumptions made about the employees, both now and in the future when the project is complete? What kind of information was used to obtain this number? How could it be that employees live so close on average? My experience is that the people who work in this area live all over LA, as well as Orange County, Santa Clarita, the San Fernando Valley, and other locations much farther than 3.35 miles one way.

Response to Comment No. 292-5

This comment is similar to Comment No. 47-7. Refer to Response to Comment No. 47-7.

Regarding the length of the EIR, the Department of City Planning has complied with CEQA in providing the public with the relevant information necessary to be informed on the potential environmental impacts of the Project. This information can often be voluminous but is, nonetheless, provided for the purposes of public disclosure.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 292-6

Thank you for your attention to my concerns.

Response to Comment No. 292-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 293

Jacob Koo
118 S. Kilkea Dr.
Los Angeles, CA 90048-3526

Comment No. 293-1

I am asking you to please save my neighborhood. The Television City 2050 plan is going to seriously harm the Beverly/Fairfax neighborhood and the lives of those of us who live here. Aside from the fact that none of us knows much about what the project really is, the EIR does not give any indication as to what the project will actually do to our neighborhood and I am very concerned about that.

I have a lot of concerns about the negative impacts that will come with such a huge planning project. Why do we need to develop such a massive project here in the Beverly/Fairfax neighborhood?

Response to Comment No. 293-1

The Project Description meets the requirements of CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description. The Draft EIR was prepared in accordance with the requirements of CEQA. The remainder of this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project

Comment No. 293-2

This is not an area that can handle all the horrendous additional traffic that will be caused by construction and then by when the project is completed. What traffic will be pouring into our neighborhood? How much additional car traffic is expected? During what phases of construction?

And what about once the project building phases are done—what will the traffic be given all the things they're proposing to use the property for? It should be required to show what traffic is expected due to offices being built, what traffic is expected due to all those new stages? What traffic is expected with the mobility hub the report references? Will there be thousands of additional cars daily? Coming from which directions? Will there be cars that come and park all day, or will there be traffic throughout the day from visitors?

I get that there will be all kinds of construction traffic. What part of the expected additional traffic will be a result of the trucks and equipment? Where is the breakdown of the sources, times, and expected impacts of the different kinds of traffic that our neighborhood is going to have to deal with?

Response to Comment No. 293-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, 124-6 and 162-2 regarding construction trips.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips. The direction of travel for the Project automobile and truck trips is shown in Figure 21 on page 77 of the Transportation Assessment which details the amount of Project vehicles through each of the 31 study intersections.

During operation, approximately 83 trucks per day are anticipated. The tables attached to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, show that the Project is expected to generate approximately 65 light trucks (single unit) per day and approximately 18 heavy trucks (semi-trucks) per day for a total of approximately 83 trucks per day entering the Project Site. Refer to Topical Response No. 10, Trip Generation, regarding the truck and automobile trip generation estimates during Project operation.

Traffic safety in the neighborhoods is a critical focus of the NTMP process described in Topical Response No. 9, Neighborhood Traffic Management Plan. The affected neighbors would work with the Applicant and with LADOT to develop a plan to minimize cut-through trips along the neighborhood streets in the affected neighborhood areas. Refer to Topical Response No. 9 regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment.

Comment No. 293-3

What are going to be the air quality impacts of thousands of vehicles on the road because of this project? Where have those impacts been studied? If any traffic and air quality impacts were studied during the pandemic, then those studies need to be done again now

that more people are out, more people have returned to their offices. When will updated studies be done? How will the neighborhood find out about any updated studies?

Response to Comment No. 293-3

The Project's air quality impacts, including impacts from vehicles, are analyzed as required by CEQA in Section IV.A, Air Quality, of the Draft EIR.

As stated on page IV.K-24 in Section IV.K, Transportation, of the Draft EIR, Project vehicle counts used for impact analyses were based on 2019 (i.e., pre-pandemic) traffic counts for all intersections, except for the intersection of Fairfax Avenue and West 1st Street, which were based on the latest available 2017 data. The pre-pandemic traffic levels were factored to represent current traffic levels assuming typical growth patterns in non-pandemic times. Since Los Angeles experienced almost two years of little or no traffic growth, the traffic volumes forecast for year 2026 conditions in the Transportation Assessment represent conservative (i.e., high) estimates of future traffic levels and, therefore, are considered valid. Thus, no revisions to the Draft EIR analyses due to the transportation effects of the pandemic are necessary.

Comment No. 293-4

Please let's slow down and rework things before moving forward with a potential detrimental development in the Beverly/Fairfax neighborhood.

Response to Comment No. 293-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 294

Robin Kopf
313 N. Stanley Ave.
Los Angeles, CA 90036-2328

Comment No. 294-1

I'm writing on behalf of my family and my neighbors that reside in the Beverly Fairfax area. We are extremely concerned about the TVC 2050 project, proposed to be in our backyard. We are troubled by the recent EIR that "details" this project and would like some clarity on a few things:

Response to Comment No. 294-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 294-2.

Comment No. 294-2

The EIR notes project design features are extremely confusing. What are all these design features? The EIR also doesn't note if they will be a part of the project or not, so will they be or not? It seems like an overarching theme in this EIR document is its vagueness. Please fill the community in about these design features on the TVC 2050 project. Do they also include any mitigation measures? How is it determined if mitigation measures will even make a difference? Impacts will still be experienced, even with mitigation.

In addition to the vagueness on these design features and its mitigation measures, we're also concerned about the enforcement of this entire project. How are the project design features going to be enforced? How will the entire EIR be enforced? It's concerning that it does not detail this in the document itself. It's important to understand the project with and without these design features, although they are vague. How was the project analyzed with these design features? How did the EIR analyze the project without these design features? It should be worth noting depending on the questions about how these changes with enforcement and mitigation measures.

Furthermore, is the EIR assuming the implementation of these design features? It's awfully confusing that the EIR analysis doesn't include it without those design features, that again, are incredibly vague. What is the impact of the analysis if it assumes these project design

features? These seem to be mitigation measures that should be imposed after the analysis is done.

Response to Comment No. 294-2

Refer to Response to Comment No. 9-34 for a detailed discussion of the roles of PDFs and mitigation measures, the proposed PDFs and how enforcement would be ensured by their inclusion in the Mitigation Monitoring Program. Enforcement of the EIR's PDFs and mitigation measures would be ensured through the City Council's adoption of the Mitigation Monitoring Program for the Project, which the City Council would be required to approve as part of the City Council's certification of the Project's EIR. Section 21081.6 of the Public Resources Code requires a Lead Agency to adopt a "reporting or monitoring program for changes to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." Therefore, if the Project is approved, there will be a detailed plan in place to ensure monitoring and enforcement of all of the EIR's PDFs and mitigation measures. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR.

Section IV of the Draft EIR includes a thorough analysis of impacts during both construction and operation, as well as any required mitigation measures, and the level of significance after mitigation.

Comment No. 294-3

Again, our community is incredibly concerned with this project and the EIR. I hope you all can help us understand some of these concerns we have. Please help us stop the development, enough is enough.

Response to Comment No. 294-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 295

Sharon Korr
160 S. Vista Dr.
Los Angeles, CA 90036-2708

Comment No. 295-1

The citizens of the Beverly Fairfax community are not interested in a gigantic new Television City towering over our homes. In looking at the EIR, I feel there is some important information the public deserves to know that was not included.

Response to Comment No. 295-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 295-2

I am interested in the traffic problems that will result from this long construction project, all of the people who will be commuting long distances, and the resulting expansion of the facility.

Response to Comment No. 295-2

A complete analysis of construction vehicle impacts was included in the Transportation Assessment included as Appendix M.1 of the Draft EIR. Refer to Section 5D, pages 179–184 therein. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the impacts of construction trucks and construction worker vehicles on the traffic conditions along the roadways serving the Project Site. As discussed therein, Project trip generation during construction would be less than the Project when fully operational and, thus, would have a lesser effect on traffic than the Project as analyzed in the Transportation Assessment and Draft EIR. Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. That topical response includes additional details and an example regarding how work VMT per employee is calculated in the VMT analysis.

Comment No. 295-3

The traffic portion of the EIR leaves much to be desired. I am overwhelmed by its 83 pages and the seeming lack of accurate analyses in there. For example, how were the

vehicle miles travelled observed and calculated? As I understand, it is estimated the average worker at the site will drive 3.35 miles each way to work. Employees in LA, in many sectors often do not live that close to their workplace. As I consider their commutes, they are much longer than 3.35 miles to and from work, as many as 40–60 miles. Did the EIR analysis take place during the pandemic and average in the miles not travelled due to work-at-home policies? Were the current employees surveyed about their commutes? It seems highly unlikely that the 3.35 miles is correct.

Response to Comment No. 295-3

The reference to a 3.35-mile one-way commute is a misinterpretation of the VMT analysis in the Draft EIR. The calculation comes from incorrectly assuming that the work VMT per employee of 6.7 means that each employees drives 3.35 miles to work and then 3.35 miles to return home at night. The work VMT per employee represents a one-way trip from home to work, not a round trip as cited in the comment. In addition, the work VMT per employee is more than a calculation of home-to-work travel distance. It also factors in the number of employees that use non-auto modes to travel to/from work. So, the basis for the math in the comment is incorrect and results in a number that is not comparable to the metric of work VMT per employee.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, for a detailed description of how the work VMT per employee is calculated and how the metric is used to measure the VMT of a project.

Comment No. 295-4

The business model of the developer also seems to be a part of the EIR, which seems unnecessary. Why should the city include one of the objectives of the project being the developer's financial gain? What connection does the developer have to the city that this is appropriate? That seems like a nefarious possibility. Is the purpose of the EIR not to protect the residents and quality of life in LA? We deserve to know what is going on behind closed doors.

Response to Comment No. 295-4

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project.

Comment No. 295-5

My neighbors and I do not appreciate being misled with an EIR that is confusing and indirect. Too many unnecessary words that ironically, leave a lot of information out. The

developer needs to provide better, more accurate information, and the city needs to only accept realistic and appropriate analyses of the impacts to our lives and city.

Thank you for your consideration.

Response to Comment No. 295-5

The Draft EIR was prepared in accordance with the requirements of CEQA and includes a thorough analysis of the Project's potential impacts during both construction and operation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 296

Rick Kosick
164 S. Hayworth Ave., Apt. 07
Los Angeles, CA 90048-3613

Comment No. 296-1

I'm very concerned about traffic, 20 years of construction, constant trucks in and out of the area, and where people will park.

Response to Comment No. 296-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips and haul routes.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nonetheless, refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 296-2

I'm also thinking about noise levels—making movies and television shows can be very loud and can happen anywhere onsite at all hours. And I understand that there will be 14 stages on the property—because there is no set plan of development, noisy activities can happen anywhere.

How do we know that the EIR correctly calculated noise impacts? The EIR didn't assume loudest activities at property lines. It should have done so, and this analysis needs to be provided

Response to Comment No. 296-2

The issues discussed in this comment are similar to those in Comment No. 147-3. Refer to Response to Comment No. 147-3, above.

Comment Letter No. 297

Shepard Koster
148 S. Hayworth Ave., Apt. 4
Los Angeles, CA 90048-3617

Comment No. 297-1

My concerns are about TRAFFIC and QUALITY OF LIFE in our neighborhood. Thousands of cars will be clogging our streets. And where are all the people going to park? The EIR says more than 5,000 parking spaces are needed, but then says that the parking spaces may be offsite—sounds like their plan is for thousands of cars to park in our neighborhood. If the parking is offsite, what are the air quality impacts, noise impacts, safety issues from people speeding in the community, pedestrian impacts, and other impacts of off-site parking?

These impacts on our quality of life need to be analyzed.

Response to Comment No. 297-1

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nonetheless, refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

With regard to traffic, refer to Response to Comment No. 47-3.

Please note that quality of life is not an environmental impact under CEQA. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 298

Douglas Kriete
908 S. Genesse [sic] Ave., #7
Los Angeles, CA 90036

Comment No. 298-1

As a resident of the area for 26 years, I am extremely concerned with the intentions behind the Television City project. I can completely understand the importance of adding new jobs and cultivating growth in the area. But does LA really have this much more room to grow?

Response to Comment No. 298-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 298-2 through 298-8.

Comment No. 298-2

Please consider the congestion that we as residents deal with on a daily basis. Now, imagine it with 8,000+ people. Think of the traffic, the parking, the congestion, and the noise that will consume and overwhelm the area.

Response to Comment No. 298-2

This comment is identical to Comment No. 133-2. Please see Response to Comment No. 133-2, above.

Comment No. 298-3

I'm not even fully convinced of the city's intentions with this project after trying to read through the EIR. It seems to me that that the developer's return on investment is a project objective. Why would this be the case? Please provide and circulate to the public the developer's proforma. Since the developer has included it as an objective, the financial information must be made available. If the city is prioritizing the developer's profitability, there must be something in return for the city. What is it?

Why would this be a project objective when there are countless other critical needs and people with great needs to consider? The City should care about the health and welfare of its residents.

Response to Comment No. 298-3

This comment is identical to Comment No. 133-3. Refer to Response to Comment No. 133-3, above.

Comment No. 298-4

There are countless neighborhoods and families that will be directly affected by this project. By LA law, there will have to be 1.3 million homes built by 2029 to comply with the city's housing quota. There already is not nearly a sufficient number of homes and rentals in the area. The project adds to that needs thousands more people. Where will they go?

Response to Comment No. 298-4

This comment is identical to Comment No. 133-4. Refer to Response to Comment No. 133-4, above.

Comment No. 298-5

There is a methane issue to consider, countless environmental factors and tons of safety hazards that will accompany this project.

Response to Comment No. 298-5

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane.

Comment No. 298-6

Along with the safety and legal problems, there also is the issue of over advertising the area with potentially many large and bright lit billboards.

Response to Comment No. 298-6

Refer to Response to Comment Nos. 5-10 and 26-21 regarding proposed signage, including how billboards would not be permitted and how the Project signage would comply with the illumination requirements specified in the LAMC.

Comment No. 298-7

I imagine an entertainment studio will also bring loud music and hollering at all times.

Response to Comment No. 298-7

This comment does not indicate specific issues with the noise analysis. Nevertheless, Section IV.I, Noise, of the Draft EIR fully analyzed potential noise impacts associated with the Project related on-site noise sources, including outdoor uses (people talking and amplified sound) and outdoor studio production activities. Refer to pages IV.I-44 through IV.I-46 in Section IV.I, Noise, of the Draft EIR.

Comment No. 298-8

From what I understand, parking will interfere with the farmers market and could likely take away business.

Response to Comment No. 298-8

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Project parking would not interfere with The Original Farmers Market. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 298-9

What sense does this make for the community? The EIR has to provide more of how this project is going to impact our neighborhoods. There simply is not enough detail and until we are given this, I do not believe the city's motives are in favor of the community.

Response to Comment No. 298-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 298-2 through 298-8.

Comment Letter No. 299

Tamara Krinsky
104 N. La Jolla Ave.
Los Angeles, CA 90048-3528

Comment No. 299-1

I live in the Beverly Fairfax district, and I would like to voice several concerns about the proposed TVC2050 plan.

Response to Comment No. 299-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 299-2 through 299-5.

Comment No. 299-2

- I am confused about what exactly the mobility hub is. Who is going to be allowed to use this? Is it for the neighborhood and general public? When will the hub be used, what hours of the day? Is it open all night? Once it is built, who will control the operations? How much traffic is expected will be created from this mobility hub? What kinds of traffic—cars, rideshare vehicles, buses? Has there been studies about the traffic that will be generated from cars, buses and ride shares going to this Hub?

Response to Comment No. 299-2

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips.

Comment No. 299-3

- I am also concerned about air pollution. Aside from air pollution that could be caused by the mobility hub, wouldn't there also be impacts from production trucks? Does the Air Quality analysis include the impacts of hundreds of production vehicles releasing diesel particles into our neighborhood? There are a lot of schools, nursing homes, and residents that will be impacted by these trucks. Have they been notified of the impacts these trucks will have? What steps are being taken to address air quality impacts of these activities? Are

those steps different for more sensitive groups like the elderly and young children? This information has not been made clear in the environmental report.

Response to Comment No. 299-3

Please refer to Response to Comment No. 26-E.1-16 regarding the number of Project-related operational trucks accessing the Project Site per day. As shown therein, the truck trips (approximately 31 total net new diesel trucks) are substantially less than the 100 trucks criteria cited in the Draft EIR that would trigger the need for a mobile air toxics HRA (see page IV.A-72 of the Draft EIR). Thus, the Draft EIR correctly concluded that Project-related TAC emission impacts during operations would be less than significant and consequently not result in a potential health risk impact.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. The HRA assesses all anticipated sources of DPM and other TACs which would occur on the Project Site during construction and operations. As shown therein, health risk impacts would be less than significant (including to the elderly and young children), confirming the conclusions of the Draft EIR.

Refer to Response to Comment No. 32-3 regarding the public noticing of the Project in accordance with CEQA.

Comment No. 299-4

- Third, I am concerned about noise levels. Studios can be very loud, and I did not see any defined plan of development. Did the environmental report assume the loudest activities would be in the middle of the project site or at the property lines? How far away will the different activities be heard? Where is that detail so the community knows what to expect if this thing is built? How do we know the report is accurate about noise impacts.

Response to Comment No. 299-4

Refer to pages IV.I-43 through IV.I-48 of Section IV.I, Noise, of the Draft EIR for an analysis of noise associated with operation of the Project including noise from outdoor production activities and potential impacts to nearby sensitive receptors. As demonstrated therein, noise impacts associated with operation of the Project would be less than significant. Refer to Response to Comment No. 26-135 regarding the conservative assumptions used in the noise analysis. Also refer to Response to Comment No. 26-146 regarding the analysis of outdoor production activities that was conducted for the Project. The noise analysis was completed in accordance with the City's requirements and CEQA.

Refer to Figure II-4 of Section II, Project Description, of the Draft EIR for the Conceptual Site Plan that was used as the basis for the noise analysis in the Draft EIR.

Comment No. 299-5

Additionally, I have concerns about the 18-wheeler trucks/turning radius, and how that will affect street traffic.

Response to Comment No. 299-5

Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering. Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, regarding the truck trip generation estimates during Project operation.

Comment No. 299-6

Please address these concerns before moving forward.

Response to Comment No. 299-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 299-2 through 299-5.

Comment Letter No. 300

Ken Kristensen
426 Vista St.
Los Angeles, CA 90036-5741

Comment No. 300-1

I live in the Beverly Fairfax community who is very uncomfortable with the TVC2050 plan it stands. There are many things that I take issue with, but there is one in particular which I think needs to be reconsidered immediately. Currently, the plan is to have a large parking structure placed on Grove Drive. I have many concerns and questions regarding this aspect of the plan.

Response to Comment No. 300-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 300-2 through 300-4.

Comment No. 300-2

To start, Grove Street is a small street and it's right across from a park. From a logistical point of view, how do you plan on building such a large parking structure on such a small street? This doesn't make sense to me, and it must be made clear to residents like myself how this is actually going to work. What will happen when cars are backed up trying to enter (and exit) the parking structure? Where will those cars backlog traffic to? Why would a large parking structure be proposed for that particular location? This seems illogical, unsafe and irresponsible—that street is hard to navigate as it is. Where will cars go if there is no space left in that structure and they have to all then drive down Grove Street to find other places? What other parking is going to be available?

Response to Comment No. 300-2

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access and use of The Grove Drive. Refer to Response to Comment No. 83-1 regarding turn lanes. Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion Regarding how the Project driveways are designed to minimize queuing out onto public streets.

Comment No. 300-3

Beyond logistics, let's talk about safety. I know that my children, as well as many of their friends spend time in that park. Children, adults, senior citizens, and many families spend time in this park. Did the EIR consider the health risks associated with this parking plan? What about all the additional cars that will take that street, idle waiting to get into the parking structure, and then have those additional cars driving in and around the structure—all of which places more cars near the park?

Response to Comment No. 300-3

As discussed in Topical Response No. 13, Parking, the parking supply for the Project Site would be spread out across the Project Site. The queuing areas for The Grove Drive entrance are set back 160 feet into the interior of the Project Site in order to minimize backups and congestion that would affect The Grove Drive. The projected 95 percentile queue for the busiest peak hour at The Grove Drive entrance is 100 feet, so the storage length provided would be more than adequate to accommodate the anticipated storage demand. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding queuing and pedestrian safety. Refer to Response to Comment Nos. 26-E.1-15 and 127-4 regarding potential localized and health risk impacts associated with Project-related parking and trips. As discussed therein, the quantitative HRA confirms the Draft EIR's conclusion that health risk impacts would be less than significant.

Comment No. 300-4

The plan as it stands means that trucks will be going on Grove Drive during all the necessary construction and emitting diesel exhaust right next to the park. How is this going to affect the air quality of the people that go to the park to relax and get a breath of fresh air? How many trucks will be driving through Grove Drive each day? Exactly how close will the trucks be to the park when they are emitting diesel exhaust? What are the health effects of breathing air that is polluted with diesel exhaust? Are there any specific studies? Does it impact children differently than senior citizens? How? What about children and adults who have asthma and other medical and breathing issues?

Response to Comment No. 300-4

Please refer to Response to Comment No. 164-3 regarding construction-related truck activity and impacts. All haul truck staging would occur on-site per LADOT's

recommendation letter dated June 30, 2022 included as Appendix M.5 of the Draft EIR. Project haul routes for both loaded and empty construction trucks and hours/days of operation are also disclosed in LADOT's recommendation letter, available in Appendix M.5 of the Draft EIR. The Grove Drive is not included in the haul route. In addition, Project Design Feature TR-PDF-1 requires a detailed CTMP to be developed to manage the flow of construction vehicles and minimize impacts to the community as detailed on pages IV.K-36 through IV.K-37 in Section IV.K, Transportation, of the Draft EIR.

Please refer to page IV.A-10 of Section IV.A, Air Quality, of the Draft EIR for a discussion of diesel exhaust (DPM), which is a TAC that causes lung cancer in humans. As further discussed on page IV.A-24 of the Draft EIR, SCAQMD has released the MATES-V study that provides an estimated cancer risk from toxic air emissions including DPM throughout the Air Basin. In 2015, OEHHA updated the calculation procedure to estimate cancer risks from air toxics exposures. While not specific to DPM, the revisions to the calculation methodology included accounting for higher risks attributable to early life exposures (up to age 16 years) and updates to the population distribution of breathing rates by age would be applicable. The health risk impacts, including impacts related to Project-related emissions of diesel particulate matter from construction and operational trucks, are analyzed in the quantitative HRA, included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant (including to the elderly and young children), confirming the conclusions of the Draft EIR. Refer to Response to Comment Nos. 105-3 and 127-4 regarding the air quality impacts to Pan Pacific Park, if considered hypothetically as a sensitive receptor.

Comment No. 300-5

The logistics of the parking plan make no sense, but more importantly, this poses a potential health risk to our community. We are entitled to be able to spend time in the park with our friends and family without the concern of breathing in diesel exhaust. I would appreciate you responding to my questions above with enough detail to make me confident that this is not a direct health threat to my children who go to this park every day!

Response to Comment No. 300-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 300-2 through 300-4.

Comment Letter No. 301

Rachel Kushner
rachelkushner@gmail.com

Comment No. 301-1

I urge you to reject the current proposal for the “Regional Center.”

Response to Comment No. 301-1

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 301-2

The current proposal will be utterly disastrous for those of us who live in the neighborhood. 3 years of massive construction with lane closures and noise will hurt the community and the historic Farmers Market.

Response to Comment No. 301-2

As described in Topical Response No. 14, Construction Vehicle Impacts, no long-term closures on travel lanes on the public streets adjacent to the Project Site are anticipated. Construction parking and haul truck staging would be accommodated within the Project Site. As such, Project construction would not affect the operation of The Original Farmers Market.

While temporary lane closures may be necessary during construction, there would not be any long-term travel lane closures.

The noise analysis during both construction and operation of the Project has been completed in accordance with CEQA and is included in Section IV.I, Noise, of the Draft EIR.

Comment No. 301-3

The attraction of both visitors to the city and current residents to the Farmers Market and The Grove will decrease, which will have negative effects on the stores (and those employed) there.

Response to Comment No. 301-3

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 301-4

Even after the Regional Center is built, the city will have to contend with severe congestion and an increase in noise.

Response to Comment No. 301-4

Refer to Response to Comment Nos. 5-8, 11-29 and 16-4 regarding the proposed Regional Commercial land use designation.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The Draft EIR comprehensively analyzed the Project's potential noise impacts during operation and concluded that impacts would be less than significant; refer to pages IV.I-43 to IV.I-54 in Section IV.I, Noise, of the Draft EIR.

Comment No. 301-5

Do NOT approve the current proposal.

Response to Comment No. 301-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 301-1 through 301-4.

Comment Letter No. 302

Kelge Laau
433 S. Mansfield Ave.
Los Angeles, CA 90036-3515

Comment No. 302-1

This letter is in reference to the TVC 2050 project.

Response to Comment No. 302-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 302-2

In the land use and planning chapter, the developer states that an inconsistency between the proposed project and the applicable plan is a legal determination and not a physical determination on the impact of the environment. If there are inconsistencies between the community plan for the area and this proposed development, which legal experts will be making that determination and when? Do city attorneys evaluate inconsistencies?

Response to Comment No. 302-2

This comment is referring to the following language included on pages IV.H-16 to IV.H-17 in Section IV.H, Land Use and Planning, of the Draft EIR, which explains a conflict under CEQA:

Importantly, a conflict between a project and an applicable plan is not necessarily a significant impact under CEQA unless the inconsistency will result in an adverse physical change to the environment that is a “significant environmental effect” as defined by CEQA Guidelines Section 15382. As provided in CEQA Guidelines Section 15126.2(a), “an EIR shall identify and focus on the significant effects of the proposed project on the environment.” An excerpt from the legal practice guide, Continuing Education of the Bar, Practice Under the California Environmental Quality Act, Section 12.34 illustrates the point:

An inconsistency between a proposed project and an applicable plan is a legal determination not a physical impact on the environment. ... [I]f a project affects a river corridor, one standard for determining whether the

impact is significant might be whether the project violates plan policies protecting the corridor; the environmental impact, however, is the physical impact on the river corridor.

A comprehensive analysis of the Project's potential to conflict with all applicable plans is included on pages IV.H-39 to IV.H-56 of the Draft EIR. The Draft EIR concluded that the Project would not conflict with the goals, policies, and objectives in local and regional plans that were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, the Project would not conflict with or impede the General Plan or Wilshire Community Plan, or the environmental policies in other applicable plans adopted for the purpose of avoiding or mitigating an environmental effect. As such, impacts related to conflicts with applicable plans, policies, and regulations would be less than significant.

The EIR was prepared by the Los Angeles Department of City Planning, as Lead Agency, and will be considered during several public hearings and meetings before City decision-makers, including the City Hearing Officer and Deputy Advisory Agency, the City Planning Commission, the Planning and Land Use Management Committee, and the City Council with input from the City Attorney's office.

Comment No. 302-3

Furthermore, the land use planning chapter also states that a proposed development does not have to be perfectly compatible with the general plan, but it has to adhere to the general plan intentions. Who determines whether a proposed project adheres to those intentions? Does the city Planning Department get involved with that? Are the intentions of the Wilshire Community plan also considered, or just the General Plan? How is it determined that intentions are adhered to? And what are intentions defined as? This seems like consistency and compatibility could be interpreted in different ways. How are these defined when evaluating a project? Where can people get that information?

Response to Comment No. 302-3

Refer to Response to Comment No. 302-2 above regarding land use conflicts. The analysis of potential land use impacts in Section IV.H, Land Use and Planning, of the Draft EIR considers the Project's potential to conflict with all applicable plans, policies, and regulations that regulate land use on the Project Site, as well as the compatibility of the proposed uses with the surrounding land uses, in accordance with Appendix G of the CEQA Guidelines and the L.A. CEQA Thresholds Guide. The methodology for analyzing consistency and compatibility is discussed on pages IV.H-16 to IV.H-17 of the Draft EIR. Regarding consistency, as stated on page IV.H-17 of the Draft EIR, under State Planning and Zoning Law (Government Code Section 65000, et seq.), strict conformity with all aspects of a plan is not required. Generally, plans reflect a range of competing interests,

and public agencies, such as the City of Los Angeles, are given great deference to determine consistency with their own plans. Per OPR's State of California General Plan Guidelines (2017), a proposed project should be considered consistent with a general plan or elements of a general plan if it furthers one or more policies and does not obstruct other policies. Generally, given that land use plans reflect a range of competing interests, a project should be compatible with a plan's overall intent but need not be in perfect conformity with every plan policy. As stated on page IV.H-17 of the Draft EIR: "More specifically, according to the ruling in *Sequoyah Hills Homeowners Association v. City of Oakland*, State law does not require an exact match between a project and the applicable general plan. Rather, to be 'consistent,' the project must be 'compatible with the objectives, policies, general land uses, and programs specified in the applicable plan,' meaning that a project must be in 'agreement or harmony' with the applicable land use plan to be consistent with that plan."¹⁵⁴ For this Project, the Draft EIR was prepared by the Los Angeles Department of City Planning, as Lead Agency, in accordance with CEQA and the CEQA Guidelines, and it is the authority and responsibility of elected City officials to examine the specifics of a proposed project to determine whether it would be in harmony with the applicable policies.

Regarding compatibility, as discussed on page IV.H-17 in Section IV.H, Land Use and Planning, of the Draft EIR, the intent of the compatibility analysis is to determine whether a project would be compatible with surrounding uses in relation to use, size, intensity, density, scale, and other physical and operational factors. The analysis is also intended to determine whether existing communities or land uses would be disrupted, divided, or isolated by a project, with consideration given to the duration of any disruptions. The compatibility analysis may be based on aerial photography, land use maps, and field surveys, in which surrounding uses have been identified and characterized. The analysis addresses general land use relationships and urban form based on a comparison of existing land use relationships in the vicinity of the Project Site under existing conditions, at the time the Notice of Preparation was issued.

The Project's potential land use impacts are analyzed on pages IV.H-39 to IV.H-57 and Appendix I of the Draft EIR, which included an analysis of the General Plan Framework Element (including the Land Use Chapter, Open Space and Conservation Chapter, Economic Development Chapter, Transportation Chapter, and Infrastructure and Public Services Chapter), General Plan Conservation Element, the Mobility Plan, Wilshire Community Plan, LAMC, Citywide Design Guidelines, and the 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy. Section IV.A, Air Quality, of the Draft EIR also includes an analysis of SCAQMD's Air Quality Management Plan. As analyzed therein, the Project would not conflict with the goals, policies, and objectives in

¹⁵⁴ *Sequoyah Hills Homeowners Association v. City of Oakland* (1993) 23 Cal.App.4th 704, 719.

local and regional plans that were adopted for the purpose of avoiding or mitigating an environmental effect. Accordingly, the Draft EIR concluded that impacts related to land use would be less than significant.

Comment Letter No. 303

Paul Lahn
332 N. Stanley Ave.
Los Angeles, CA 90036-2332

Comment No. 303-1

I recently heard about some of the plans for the TV City expansion and have a few questions about the development process. Specifically, I wanted to ask about the plans for power generation and fuel, both during the construction period and once the expansion is complete.

Response to Comment No. 303-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 303-2 through 303-4.

Comment No. 303-2

First, I am worried about the environmental impacts this project could have, based on my understanding of it. I heard there are plans to run the project on natural gas, even though we need to be emission free. How does that work? Is CBS buying carbon offsets, or planting an equivalent number of trees on the new property, or something to that effect? Are there plans for the site to transition purely to electricity in the coming years? When will that transition happen? Will the new studios at least be built to take advantage of natural solar, such that during the day there's less need for artificial lighting and A/C? Do we know how much the natural gas, and the emissions from cars and trucks coming to and from the site, will add to our community's carbon footprint? Answers to these questions must be considered before approving any new development, especially one going to 2050.

Response to Comment No. 303-2

Refer to Response to Comment No. 45-1 regarding the Project's compliance with the City's new all-electric buildings ordinance and new natural gas usage associated with the Project. Mobile source (e.g., cars and trucks) GHG emissions are provided in Table IV.E-11 (Annual Project GHG Emissions Summary) on page IV.E-78 of the Draft EIR.

As determined in the Draft EIR, the Project would have a less than significant impact with respect to GHG emissions. As such, mitigation measures (e.g., carbon offsets, planting additional trees) are not required under CEQA and were not considered further.

The buildout year included in this comment is incorrect. Refer to Response to Comment Nos. 9-24 and 26-E.1-24 for a discussion of the buildout timeline.

Comment No. 303-3

I also heard that there are plans to build fueling stations in the area. I am concerned that these fueling stations could prove harmful to the community if they are placed near living spaces—I doubt anyone here expected to living next to a new gas station. So I need to ask: how big are these fueling stations? How many pumps? Are they temporary for construction or permanent installations? What type of fuel will be used, and has its environmental impact been considered? How many fueling stations will there be, and how close or far will they be from living spaces? Couldn't these fueling stations be replaced with electric stations? Wouldn't electricity also be quieter for the public than loud diesel engines, if that is the fuel in question?

Response to Comment No. 303-3

The Project would not include fueling stations. This clarification is reflected in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Additionally, as discussed on page II-33 of Section II, Project Description, of the Draft EIR, the Project would include electric vehicle (EV) charging infrastructure.

Comment No. 303-4

Along the same lines, I have not heard anything about where the trucks for this project will be driving. Obviously trucks will be needed for construction, both to bring equipment and building materials as well as to take an excavations and waste away. There are two levels of concern I have with this. First, we should make sure the trucks take as efficient a route as they can, so as to reduce the amount of exhaust that will choke the skies. So what will those routes be? At the same time, will these trucks be driving near residential areas? Will the trucks get caught in the increased traffic near these residential areas, causing exhaust to pile up near someone's home? What about truck idling in the street while unloading or when stuck in the typical daily traffic we have? I would like confirmation on where these trucks will go so that we know exactly what kind of impact we are looking at. I would also prefer electric trucks, but I understand that may not be feasible at this time.

Thank you for your time. I look forward to hearing back about some of these questions.

Response to Comment No. 303-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 for a discussion of the overall construction schedule, the estimate of the construction trip generation, construction traffic safety, haul routes, and the CTMP.

The Project has been modified to eliminate the off-site staging of haul trucks along streets serving the Project Site. All haul truck staging locations would be provided onsite; as such, no haul trucks would be idling offsite. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The truck fleet is changing to electric and natural gas-powered vehicles, in part as a result of the CARB decision to phase out diesel trucks by 2036, but the majority of construction trucks were conservatively assumed in the Draft EIR to be diesel trucks.

Comment Letter No. 304

John Lambert
434 N. Laurel Ave.
Los Angeles CA 90048-2351

Comment No. 304-1

I am writing about the DEIR that was just released for the Television City Project in Beverly/Fairfax neighborhood. This is just nonsense city planning that does nothing but make the lives of those of those [sic] who actually live in the neighborhood more miserable. As if we don't have enough traffic and gridlock to deal with already, adding a development that would hold over 8,000 employees is gross negligence in dealing with traffic. Please think about the people who actually live here and not some big developer who is trying to make quick buck of the misery of others.

Response to Comment No. 304-1

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 304-2

Just examining what is out there about this project, the whole idea just does not make any sense to me.

Response to Comment No. 304-2

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 304-3

Developing a massive project by the Le [sic] Brea Tar Pits does not seem like a good idea, adding more traffic does not seem like a good idea, adding 8,000 employees who need a place to park and will fill up our streets does not seem like a good idea, so it just makes me wonder what part of this project is a good idea?

Response to Comment No. 304-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Also pursuant to SB 743, traffic congestion is not a CEQA impact. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 regarding the non-CEQA LOS analysis in the Transportation Assessment

This comment discussing the opinions of the commenter is noted for the record and will be forwarded to the decision-makers for their review and consideration prior to taking any action on the Project.

Comment No. 304-4

If you are going to add all of these people to the area why not include housing? It seems like the City cares more about the developer than the citizens in our community. All that I am asking is that you consider the neighbors and what is best for us, and this development is not it.

Response to Comment No. 304-4

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment Letter No. 305

Cecile Lamonte
7933 Blackburn Ave.
Los Angeles, CA 90048-4417

Comment No. 305-1

I'm writing on behalf the TVC 2050 application. The Draft EIR has zero details, and there needs to be an in-depth review of impacts to streets. The location of the planned project sits in one of the busiest intersections in one of the busiest areas of Los Angeles.

Response to Comment No. 305-1

The Draft EIR, and the Project Description therein, meet the requirements of CEQA and provide sufficient detail to evaluate impacts. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not transportation impacts under CEQA. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 305-2

How will the project—at the corner of what I understand have been deemed **two** high injury network streets, Beverly Blvd and Fairfax—impact safety? The draft EIR gives no specifics about what it means for a street to be in the high injury network, but it's no surprise that they are. So what determines a high injury street? What are the high injury statistics for those two streets? What are the findings on what the increase in high injury accidents will be when this project is being built? And when it is done? What is the project planner required to do as a result of his project being at the corner of two high injury network streets? I would expect different measure would have be taken, right? since going into the project, we all know those streets will be hugely affected.

There are numerous primary streets and intersections impacted. Do you know the exact number of primary streets and intersections that will be impacted by the project? What are those streets? What community members will be the most impacted on these streets? What was the process for getting input from these community members in deciding where a project like this would be located?

How can the DEIR not acknowledge any details or review potential impacts? There are definitely significant impacts. Why does the development try to claim that the only significant impacts will be during construction? Do you plan to acknowledge and release these details?

LADOT has spent \$50.6 million so far this year for Vision Zero projects, and we shouldn't allow plans that are only in concept to threaten the future of safe roads. How will this project affect that program in the Beverly Fairfax neighborhood? What will the spending be for the rest of the year? What will the spending be for the following year? What specifically will the impact be on our Vision Zero goals?

Response to Comment No. 305-2

Refer to Response to Comment No. 162-2 regarding the Project's location on roadways that are part of the High Injury Network (HIN) and Vision Zero improvements. Vision Zero is a national program aimed at reducing serious injuries and fatalities on the nation's transportation system. The City of Los Angeles joined this program and has been implementing traffic safety improvements with particular emphasis along the HIN, a collection of street segments within the City that has experienced the highest level of traffic injuries and fatalities. The HIN includes Beverly Boulevard from La Cienega Boulevard to La Brea Avenue and Fairfax Avenue from Melrose Avenue to Wilshire Boulevard. While these two roadway segments have experienced high incidents of injury accidents, there have been no pedestrian, bicycle, or vehicular fatalities in the area during the years 2018-2021 (the latest years for which data are available).

Refer to Topical Response No. 15, Transportation Improvement Program. As discussed therein, a primary component of the Project's Transportation Improvement Program is aimed at Vision Zero and Transportation Systems Management improvements that would focus on traffic safety measures in the Project vicinity. Thus, it is expected that expenditures on traffic safety improvements will increase in the Project area.

Refer to Topical Response No. 12, Safety and Congestion, for an additional discussion of the design and operations of the Project driveways and both vehicular and pedestrian safety in the area.

The non-CEQA portion of the Transportation Assessment (Appendix M.1 of the Draft EIR) summarizes the Project's potential impact on the streets and key intersections in the Study Area. Figure 6 on page 34 of the Transportation Assessment shows the Study Area main streets and the location of the 31 study intersections. Table 18 on page 162 summarizes the Project's effects on the LOS of the key study intersections.

The Draft EIR reviewed all impacts that are required to be reviewed under CEQA. Whether an impact was deemed significant or not was determined according to the thresholds prescribed by the CEQA Guidelines, published annually by the Office of Planning and Research. Analysis of each CEQA-related impact from the Project is provided in its respective section of the Draft EIR. The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 306

Jill Landsman
8148 W. Fourth St.
Los Angeles, CA 90048-4416

Comment No. 306-1

Thank you for the opportunity to express my opinion as a resident of the Beverly Fairfax neighborhood. I am concerned about the proposed expansion of Television City.

Response to Comment No. 306-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 306-2

I have lived here 30 years and this is a historic area, and we are proud of and need to honor that history. Television City has been around a long time, and while it is true that production technology has changed, that doesn't mean a huge new office building needs to be constructed in this neighborhood. Stages can be upgraded without enlarging them. This addition is unnecessary and unacceptable as proposed. It is important to preserve the integrity of this iconic landmark in our community.

Response to Comment No. 306-2

This comment is nearly identical to Comment No. 199-2. Refer to Response to Comment No. 199-2, above.

Comment No. 306-3

I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

Response to Comment No. 306-3

This comment is identical to the last sentence of the first paragraph in Comment No. 86-2 and the last sentence in Comment No. 111-1. Refer to Response to Comment Nos. 86-2 and 111-1, above.

Comment No. 306-4

Does the developer of this proposed monstrosity believe that new office space is going to benefit the community? Also, bringing more audience members to the site is not what my neighbors and I want. What we need is housing and to protect the fabric of this wonderful community, neither of which will happen with the addition of this development.

Response to Comment No. 306-4

This comment is identical to Comment No. 199-3. Refer to Response to Comment No. 199-3, above.

Comment No. 306-5

Thank you for your attention. Our community is important!

Response to Comment No. 306-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 307

Mark Landsman
8148 W. Fourth St.
Los Angeles, CA 90048-4416

Comment No. 307-1

Thank you for the opportunity to express my opinion as a resident of the Beverly Fairfax neighborhood. I am concerned about the proposed expansion of Television City.

Response to Comment No. 307-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 307-2

This is a historic area, and we are proud of and need to honor that history. Television City has been around a long time, and while it is true that production technology has changed, that doesn't mean a huge new office building needs to be constructed in this neighborhood. Stages can be upgraded without enlarging them. This addition is unnecessary and unacceptable as proposed. It is important to preserve the integrity of this iconic landmark in our community.

Response to Comment No. 307-2

This comment is identical to Comment No. 199-2. Refer to Response to Comment No. 199-2, above.

Comment No. 307-3

Does the developer of this proposed monstrosity believe that new office space is going to benefit the community? Also, bringing more audience members to the site is not what my neighbors and I want. What we need is housing and to protect the fabric of this wonderful community, neither of which will happen with the addition of this development.

Response to Comment No. 307-3

This comment is identical to Comment No. 199-3. Refer to Response to Comment No. 199-3, above.

Comment No. 307-4

Thank you for your attention. Please do not allow this change to our community.

Response to Comment No. 307-4

This comment, which concludes the comment letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 308

Eva Langer
361 N. Poinsettia Pl.
Los Angeles, CA 90036-2506

Comment No. 308-1

I am very concerned about the TVC 2050 Plan and what it will do to our Beverly Fairfax neighborhood and the neighborhood that surround the site.

Response to Comment No. 308-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 308-2

The plan for our area, the Wilshire Community Plan, provides for a Residential Neighborhood Protection Plan. Why doesn't the Draft EIR discuss how the proposed project will affect the Residential Neighborhood Protection Plan for our community? That plan addresses how to deal with impacts from traffic and parking, so what about inconsistencies and incongruencies of the proposed project with our neighborhood plan?

Response to Comment No. 308-2

The Project's consistency with applicable policies in the Wilshire Community Plan, including policies related to the Residential Neighborhood Protection Plan, was analyzed in Table IV.K-2 in Section IV.K, Transportation, of the Draft EIR. Specifically, refer to the analysis of Objective 14-1 and Policy 14-1.1 on pages IV.K-62 and IV.K-63 of the Draft EIR. As stated therein, the Project would contribute to and implement traffic-calming measures as part of an NTMP to address potential "cut-through" trips on surrounding residential streets. Further, the Project would include sufficient parking to meet the needs of employees and visitors at the Project Site, thereby ensuring that there would be no spillover parking. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for further discussion of the proposed NTMP. Refer also to Topical Response No. 13, Parking, regarding the adequacy of the proposed on-site parking supply to meet the peak parking demands of the Project and prevent spillover parking. It is also noted that off-site parking is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 308-3

Cut-through traffic and spillover parking from nearby commercial areas and businesses are supposed to be identified—including when a project as impactful as this one is being considered.

Response to Comment No. 308-3

Section 5C of the Transportation Assessment (Appendix M.1 of the Draft EIR), beginning on page 167, analyzes the potential non-CEQA transportation effects on the surrounding residential neighborhoods and identifies two neighborhood areas that meet LADOT's criteria for further study of potential cut-through traffic. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 308-4

There have been no neighborhood meetings held, as one of the objectives of the Wilshire Community Plan states, to discuss the impacts the project will have on our neighborhood and neighborhood streets. When will these meetings be held?

Response to Comment No. 308-4

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 308-5

Where have traffic calming programs and strategies been outlined for the community to view and give input to?

Response to Comment No. 308-5

Refer to the LADOT page on the City of Los Angeles website. See the LADOT "My Neighborhood" page (<https://ladot.lacity.org/residents/my-neighborhood>) for examples of the types of improvements being installed in neighborhoods across the City to increase safety and control cut-through traffic. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for information about the proposed NTMP.

Comment No. 308-6

The draft EIR refers to construction worker or equipment parking on adjacent streets or predominantly residentially zoned areas will be prohibited. How is the developer going to ensure that that doesn't happen? How would an on-site construction manager be able to ensure that from happening? How is "predominantly residentially zoned areas" defined? Does that mean parking in a surrounding neighborhood which has mixed uses, such as some neighborhood businesses with residential, is going to be allowed? Despite the repeated claim that sufficient parking to meet the needs of employees and visitors, the numbers don't add up—not with parking for 5,300 and the expected number of employees and visitors. Please explain the basis for that claim and make clear the numbers.

Response to Comment No. 308-6

As discussed in Response to Comment No. 254-8, construction workers would park on-site. Construction workers would be prohibited from parking off-site as part of the required CTMP prepared pursuant to Project Design Feature TR-PDF-1. Residents would have the name and contact information for the Project construction manager who could be called to report encroachment into the neighborhood. LADOT parking enforcement could then be deployed in those neighborhoods with Residential Parking Permits to respond to any encroachment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 308-7

How will the developer make up for the loss of some of the on-street metered parking spaces that are going to be removed? Where will parking that would normally use those spaces now park? On what streets and at which locations will the on-street parking be removed?

Response to Comment No. 308-7

With respect to on-street metered parking, the Project does not propose to remove any such parking.

Comment No. 308-8

Thank you for addressing my questions.

Response to Comment No. 308-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 309

Lois Lanyard
740 N. Kings Rd., Apt. 311
Los Angeles, CA 90069-5479

Comment No. 309-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 309-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 310

Nick Lapiana
141 N. Harper Ave.
Los Angeles, CA 90048-3503

Comment No. 310-1

I am writing to express my concerns regarding the proposal for the TV City expansion.

Response to Comment No. 310-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 310-2 through 310-8.

Comment No. 310-2

I am concerned about the lack of specifics contained within the plan, particularly when it comes to noise during the construction phase and after the-construction is complete.

Response to Comment No. 310-2

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. Refer to Response to Comment No. 9-24 regarding the buildout timeline and Response to Comment No. 26-138 regarding the construction timeline related to noise.

Noise during both construction and operation is fully analyzed in Section IV.I, Noise, of the Draft EIR.

Comment No. 310-3

Construction obviously produces all types of noise: noise from the trucks driving in and out of and on the construction site, from the construction equipment itself, and from the construction activities. What kinds of construction trucks and equipment will be entering the property? What times of day will there be construction activities and which days of the week? Are there certain days and times of the day that we will not have to deal with construction vehicles driving into and out of the area? What permits do these vehicles need, and are they different for the different kinds of equipment? It doesn't seem there has

been any acknowledgement of how all this noise and hours of construction will impact residents.

Response to Comment No. 310-3

This comment is identical to the first paragraph of Comment No. 161-2. Refer to Response to Comment No. 161-2, above.

Comment No. 310-4

Where is the information about what kinds of noise, from what sources, and which streets and neighbors are going to be impacted the most and the least? Please don't just tell me where to find the information, as I can't make my way through some long and complicated report. Please respond to those questions above when you respond to this letter. And I want to know how this information was derived—what are the thresholds for noise pollution? Who decides what those thresholds are?

Response to Comment No. 310-4

This comment is identical to the second paragraph of Comment No. 161-2. Refer to Response to Comment No. 161-2, above.

Comment No. 310-5

How was it determined when construction can occur? Are all of the other activities that are happening in the area at the same time taken into account when any analysis of noise levels was done—noise from daily commuting, weekends when more shoppers and visitors may visit the area?

Response to Comment No. 310-5

This comment is identical to Comment No. 161-3. Refer to Response to Comment No. 161-3, above.

Comment No. 310-6

What is going to be done to mitigate the different sources and times of noise? If the project could take three years or it could twenty years, that suggests construction could be ongoing for upwards of twenty years. What construction activities will occur in each of those years and generating what levels of noise? And what steps in each of those years will be taken to keep noise levels to a minimum?

Response to Comment No. 310-6

A comprehensive analysis of potential noise impacts is provided in Section IV.I, Noise, of the Draft EIR. Page IV.I-56 of the Draft EIR includes Mitigation Measure NOI-MM-1 to reduce construction noise impacts associated with the Project. Refer also to Response to Comment No. 26-136 regarding additional measures added to Mitigation Measure NOI-MM-1.

Refer to Response to Comment No. 161-2. As discussed therein, the noise assumptions for each piece of construction equipment are provided in Table IV.I-9 of Section IV.I, Noise, of the Draft EIR, and the resulting noise levels at each receptor location are provided in Table IV.I-10 of the Draft EIR. Noise levels with the implementation of mitigation are provided in Table IV.I-19 of the Draft EIR.

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

Comment No. 310-7

Furthermore, with the number of soundstages that will be added, including outdoor soundstages, what will be the sound dampening efforts to deal with the noise once in use? What days and hours will the outdoor soundstages be allowed to operate? On what basis is it determined what days and hours of the week those outdoor stages can be used?

Response to Comment No. 310-7

Refer to pages IV.I-43 through IV.I-48 of Section IV.I, Noise, of the Draft EIR for an analysis of noise associated with operation of the Project including noise from outdoor production activities and potential impacts to nearby sensitive receptors. As demonstrated therein, noise impacts associated with operation of the Project would be less than significant. Refer to Response to Comment No. 26-135 regarding the conservative assumptions used in the noise analysis. Also refer to Response to Comment No. 26-146 regarding the analysis of outdoor production activities that was conducted for the Project. In addition, as discussed on page IV.I-44 in Section IV.I, Noise, of the Draft EIR, the sound stage building shell would be designed to provide sound insulation to ensure that any noise would be contained within the sound-insulated stage. The Project Site would continue to operate on a 24-hour basis. Per Project Design Feature NOI-PDF-5, outdoor studio production activities will be prohibited within 200 feet of the Shared Eastern Property Line adjacent to the existing multi-family residence located immediately east of the Project Site (receptor location R1) between the hours of 10 P.M. and 7 A.M.

Comment No. 310-8

The community needs specifics about what the plan is and what the impacts will be. People who live here need clarity and to know exactly how they will be impacted. Telling residents that there will be no impacts is just true.

Response to Comment No. 310-8

This comment is identical to Comment No. 161-4. Refer to Response to Comment No. 161-4, above.

Comment No. 310-9

Thank you for responding to these questions and concerns.

Response to Comment No. 310-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 310-2 through 310-8.

Comment Letter No. 311

Sara Laskey
102 S. Detroit St.
Los Angeles, CA 90036-2914

Comment No. 311-1

I'm writing on behalf the TVC 2050 application. The Draft EIR has zero details, and there needs to be an in-depth review of impacts to streets. The location of the planned project sits in one of the busiest intersections in one of the busiest areas of Los Angeles.

Response to Comment No. 311-1

This comment is identical to Comment No. 305-1. Refer to Response to Comment No. 305-1, above.

Comment No. 311-2

How will the project—at the corner of what I understand have been deemed **two** high injury network streets, Beverly Blvd and Fairfax—impact safety? The draft EIR gives no specifics about what it means for a street to be in the high injury network, but it's no surprise that they are. So what determines a high injury street? What are the high injury statistics for those two streets? What are the findings on what the increase in high injury accidents will be when this project is being built? And when it is done? What is the project planner required to do as a result of his project being at the corner of two high injury network streets? I would expect different measure would have be taken, right? since going into the project, we all know those streets will be hugely affected.

Response to Comment No. 311-2

This comment is identical to a portion of Comment No. 305-2. Refer to Response to Comment No. 305-2, above.

Comment No. 311-3

There are numerous primary streets and intersections impacted. Do you know the exact number of primary streets and intersections that will be impacted by the project? What are those streets? What community members will be the most impacted on these streets?

Response to Comment No. 311-3

This comment is identical to a portion of Comment No. 305-2. Refer to Response to Comment No. 305-2, above.

Comment No. 311-4

What was the process for getting input from these community members in deciding where a project like this would be located?

Response to Comment No. 311-4

This comment is identical to Comment No. 99-3. Refer to Response to Comment No. 99-3, above.

Comment No. 311-5

How can the DEIR not acknowledge any details or review potential impacts? There are definitely significant impacts. Why does the development try to claim that the only significant impacts will be during construction? Do you plan to acknowledge and release these details?

Response to Comment No. 311-5

This comment is identical to Comment No. 99-4. Refer to Response to Comment No. 99-4, above.

Comment No. 311-6

LADOT has spent \$50.6 million so far this year for Vision Zero projects, and we shouldn't allow plans that are only in concept to threaten the future of safe roads. How will this project affect that program in the Beverly Fairfax neighborhood? What will the spending be for the rest of the year? What will the spending be for the following year? What specifically will the impact be on our Vision Zero goals?

Response to Comment No. 311-6

This comment is identical to a portion of Comment No. 99-5. Refer to Response to Comment No. 99-5, above.

Comment No. 311-7

Thank you for your time.

Response to Comment No. 311-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 312

Ariel Lawrence
439 N. Ogden Dr.
Los Angeles, CA 90036-1748

Comment No. 312-1

I hope this letter finds you well. I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I have lived in the area for the past 2 years and I'm devastated as I continue to learn about the details (although not many have been provided to the public) about this development right in my back yard.

Response to Comment No. 312-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 312-2.

Comment No. 312-2

We have so many questions as neighbors: How do you expect all these new employees to get to work? Where do they park? How am I, as a neighbor, supposed to navigate this new congestion on the streets? Do any of you all live this area? Are you not concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Response to Comment No. 312-2

This comment is identical to Comment No. 95-2. Refer to Response to Comment No. 95-2, above.

Comment No. 312-3

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I

pray and hope that you do the same with this development. We need more leaders fighting for a better future, not just fighting for a big check.

Thank you for your time.

Response to Comment No. 312-3

The first paragraph of this comment is identical to Comment No. 95-3, and the second paragraph is identical to Comment No. 95-4. Please refer to Response to Comment Nos. 95-3 and 95-4, above.

Comment Letter No. 313

Kristina Leach
506 N. Sweetzer Ave.
Los Angeles, CA 90048-2606

Comment No. 313-1

As an avid cyclist and walker, I'd like to express my deep concerns about the draft EIR submitted for the TVC 2050 project.

Response to Comment No. 313-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 313-2 and 313-3.

Comment No. 313-2

The construction management plan filed by the developer say he will "contribute" to the creation of bicycle and pedestrian improvements in the area but doesn't detail what those improvements will be. What does contribute mean? Does this mean the developer will simply cut the city a check and walk away from any requirement to provide a detailed plan? How can area residents be expected to support a massive construction project without knowing how traffic, pedestrians and cyclists will be impacted?

Response to Comment No. 313-2

An evaluation of the Project's impacts on transportation is included in Section IV.K, Transportation, of the Draft EIR. As concluded therein, impacts would be less than significant. Discussion, description, and illustration of proposed bicycle and pedestrian improvements associated with the Project are included in the following:

- Pages IV.K-37 through IV.K-40 (Project Design Features TR-PDF-2 and TR-PDF-3) in Section IV.K, Transportation, of the Draft EIR
- Pages II-26 and II-28 (Figure II-8) in Section II, Project Description, of the Draft EIR
- Pages IV.H-32 through IV.H-37 (including Figures IV.H-3 through IV.H-6) and pages IV.H-47 through IV.H-53 in Section IV.H, Land Use and Planning, of the Draft EIR

Refer to Topical Response No. 7, Mobility Hub, and Topical Response No. 15, Transportation Improvement Program, for further information regarding proposed pedestrian and bicycle improvements associated with the Project. Also refer to Response to Comment No. 557-3.

Comment No. 313-3

This project will affect the lives of many people on a daily basis. Trying to navigate this area on foot or on a bike is already dangerous. Now, the developer is planning on introducing hundreds of tractor trailers during the construction phase of the project and when occupied, hundreds more production trucks, all idling on the site, spewing diesel fumes and degrading air quality. How many will there be? Over how many months will we be dealing with them? What safety protocols have to be met? What measures will be taken to ensure pedestrian and bicycling safety when those trucks and equipment will be on our streets, maybe pulling over to the sidewalk and adding congestion to our street?

Response to Comment No. 313-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips and haul routes. The number of construction trucks during the busiest construction phases of the Project are detailed in Topical Response No. 14. Construction was analyzed over a 32-month period in order to provide a conservative analysis. In addition, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is also included for each of the environmental topics studied in the Draft EIR.

All haul truck staging locations would be provided onsite, so no haul trucks would be idling offsite. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The CTMP would govern the travel routes and entry/exit points for the construction trucks. Busy truck activity times would have flag personnel at the Project entrances to assist trucks entering and leaving the Project Site in order to improve safety for both vehicles passing the Project Site and pedestrians along the adjacent sidewalks.

As shown on pdf page 32 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, approximately 640 daily truck trips over 185 working days for the excavation/foundation phase were evaluated for potential impacts under the short-term buildout scenario. Under the long-term buildout scenario, substantially fewer daily truck trips would be expected since the same scope of construction (requiring the same total number of truck trips) would be spread over a longer period of time. Please refer to

Response to Comment No. 164-3 for additional discussion of traffic impacts and idling limitations.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Truck activity generated by the completed Project is expected to be approximately 36 semi-truck trips per day and 130 single unit truck and van trips per day. Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, regarding the truck trip estimates during Project operation.

Comment No. 313-4

I would ask that you hit “pause” on this project and tell the developer to provide a lot more detail to neighborhood residents before the EIR is approved. Traffic and air quality in Los Angeles are already bad enough. I can’t see how approving this project makes them any better.

Response to Comment No. 313-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 313-2 and 313-3.

Comment Letter No. 314

Leigh Leavitt
351 N. Ogden Dr., Apt. 3
Los Angeles, CA 90036-2124

Comment No. 314-1

The scope of this project is not at all clear. According to the Draft EIR, any use in the C2 zones will be permitted.

There are over 100 uses permitted in the C2 zone—virtually any kind of retail store, massive auditoriums, museums, hotels, car washes, schools, auto repair facilities, building material stores, hospitals, nursing facilities, medical laboratories, and even a circus.

Response to Comment No. 314-1

This comment is substantively similar to Comment Nos. 62-4 and 224-1. Refer to Response to Comment Nos. 62-4 and 224-1 regarding the proposed uses.

Comment No. 314-2

Making movies and television shows can be very loud and can happen anywhere onsite at all hours. Because there is no set plan of development, noisy activities can happen anywhere. How do we know that the EIR correctly calculated noise impacts? The EIR didn't assume loudest activities at property lines but it should have [sic] so now.

Response to Comment No. 314-2

The issues discussed in this comment are similar to those in Comment No. 147-3. Refer to Response to Comment No. 147-3, above.

Comment No. 314-3

Many of these uses and their related impacts have not been analyzed. Our community deserves to know what is planned for where we live—please provide an analysis of all of these likely and potential impacts.

Response to Comment No. 314-3

Section IV, Environmental Impact Analysis, of the Draft EIR, contains a comprehensive analysis of the Project's environmental impacts during both construction and operation. Refer to Topical Response No. 1, Clearly Defined Project Description and

Specific Plan, and Topical Response No. 3, Permitted On-Site Uses, for details of the proposed development program. Specific issues raised by the commenter are addressed in Response to Comment Nos. 314-1 and 314-2.

Comment Letter No. 315

Irvin Lebovics
8635 W. Third St., Ste. 580W
Los Angeles, CA 90048-6144

Comment No. 315-1

I found it very gratifying to learn that the Draft Environmental Impact Report for Television City's TVC 2050 project found no significant impacts during its operation. To me that means that a great deal of effort, along with a substantial financial commitment, went into planning the project's design.

The number one complaint that most everyone I know has with any new development is the potential impact on traffic. The TVC 2050 plan will invest millions in transportation improvements to create a multi-modal mobility hub. This hub will connect studio workers and the neighborhood to several nearby transit options, including the Metro D line's Wilshire/Fairfax station. This will encourage more efficient and sustainable ways to commute.

Additionally, Television City is committed to creating a robust Transportation Demand Management Plan for employees to encourage transit use. Plans also call for several types of offsite transportation improvements.

As a longtime resident and communal leader in the Beverly-Fairfax neighborhood, I have been especially impressed with the outreach to our community by TVC 2050. This plan will create jobs, and beautify the area, while paying special attention to environmental issues.

I support TVC 2050. It will greatly improve the neighborhood, while investing in our city's strongest economic industry.

Response to Comment No. 315-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 316

Jimmy Lee
143 S. Edinburgh Ave.
Los Angeles, CA 90048-3605

Comment No. 316-1

My concerns about this project are mainly about traffic and parking. Why doesn't the project have any dedicated lanes to get trucks and cars off the street? The project should provide dedicated lanes to make right turn lanes onto project. Please analyze the ability of the project to provide these lanes.

Response to Comment No. 316-1

The Project frontage along Fairfax Avenue already has a wide right lane that can be used as a right-turn lane. The frontage along Beverly Boulevard has a parking lane that would serve as a de facto right-turn lane allowing vehicles to get out of the through lane to make their turn into the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 83-1 regarding access and turn lanes.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nonetheless, refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 316-2

Also, why is most of the parking located on Grove Drive? There is no way that this many cars can use Grove Drive.

Response to Comment No. 316-2

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site.

Comment No. 316-3

Please show an alternative with parking distributed around the property and a more realistic plan for the 18 wheel trucks.

Response to Comment No. 316-3

Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of alternatives suggested during public comment. As discussed therein, while an EIR must describe a range of reasonable alternatives that avoid or reduce a project's significant impacts, it "need not consider every conceivable alternative to a project." (CEQA Guidelines Section 15126.6(a).) Because the Project will not have any significant impacts related to access and/or parking, consideration of the alternative suggested in this comment is not required under CEQA. Further, CEQA establishes no categorical legal imperative as to the scope of the alternatives to be analyzed in the EIR. This suggestion is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Truck access to the Project Site would primarily be through the three signalized driveways. Once on the site, trucks can reach anywhere on the Project Site. Each driveway has been designed to accommodate the required turning radii for the various size trucks that would use the Project Site.

Comment Letter No. 317

Kerry Lee
1401 Douglas St.
Los Angeles, CA 90026-3461

Comment No. 317-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 317-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 318

Alex Leeming
alexandraleeming@gmail.com

Comment No. 318-1

Reaching out regarding the TVC 2050 Project. I currently live on Genesee Street, I can see the CBS building and James Corden's face from my living room. I also work in the entertainment industry and understand that growth is good and means more jobs etc. However, I firmly disagree with the scale of this project.

Response to Comment No. 318-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 318-2 through 318-8.

Comment No. 318-2

The Beverly/Fairfax neighborhood is already overcrowded, most of the apartments and houses in the area require street parking which is already very difficult. During rush hour, it can take 10 minutes to drive one block as the roads are so congested. Bringing a construction job of this size to the neighborhood would further this issue, no doubt.

Response to Comment No. 318-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips and haul routes.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 318-3

I don't think I need to spell out why 30 years of construction seems like a nightmare.

Response to Comment No. 318-3

Refer to Response to Comment No. 9-24 regarding the Project timeline. Construction would not last for 30 years as incorrectly stated in this comment.

Comment No. 318-4

I do want to voice that any tall or high rise buildings would be an eyesore and disruption to the neighborhood and the views that we hold onto in our historic neighborhood.

Response to Comment No. 318-4

Refer to Response to Comment No. 11-3 regarding the compatibility of the Project's heights with the surrounding community.

Comment No. 318-5

If this were an affordable housing project, I would be able to get behind the construction and the tall buildings, however this project is not bringing positive change to the community at large.

Response to Comment No. 318-5

This comment, which does not raise a CEQA issue, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 318-6

I understand that construction will happen in some form, I just hope that the scale of the project is reduced and there can be a middle ground.

Response to Comment No. 318-6

Alternatives 2 and 3 represent a reduction in development compared to the Project. However, neither of these alternatives would avoid or substantially reduce the Project's significant and unavoidable impacts, and would not meet Project objectives to the same extent as the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 318-7

I am also very concerned about the environmental impact in a city that already has poor air quality.

Response to Comment No. 318-7

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please refer to Section IV.A, Air Quality, of the Draft EIR for an analysis of the Project's air quality impacts.

Comment No. 318-8

I just want to reiterate that a "regional center" designation is inappropriate.

Response to Comment No. 318-8

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 318-9

I encourage you to spend more time reviewing the draft EIR, and connecting with community members to understand the detriment this will cause in the neighborhood.

Response to Comment No. 318-9

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing, the public comment period, and future public hearings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 319

Linda Lena
435 N. Sierra Bonita Ave.
Los Angeles, CA 90036-2470

Comment No. 319-1

As a 20 year resident, I am concern with the Television City expansion. The project's Draft EIR leaves out a lot of information. Please provide further details to me, as a resident, so I can be aware of what is proposed.

Response to Comment No. 319-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 319-2 through 319-6.

Comment No. 319-2

1. The traffic situation is a concern. How have the residents of the neighborhood, families from the nearby schools, and nursing home residents (and their families) been notified of the potential additional traffic during 20+ years of construction? What are going to be the largest and most significant impacts of all that additional traffic? It's not as though you can make sure there is no additional traffic unless the project never happens, so what is going to be done to mitigate the impacts of all that traffic?

Response to Comment No. 319-2

Noticing for the Project has been conducted in accordance with CEQA. Refer to Response to Comment No. 32-3.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips and haul routes.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Thus, mitigation is not required.

Comment No. 319-3

2. Will vehicles be routed on particular roads? Where will the majority of traffic be directed and why? If the trucks are going to drive up and back on Fairfax toward the site, have all of the impacts of those truck trips been communicated to the affected people and businesses all along Fairfax?

Response to Comment No. 319-3

Refer to Response to Comment No. 9-31 regarding trip distribution. The routes affected by Project trips are shown in Figure 21 on page 77 of the Transportation Assessment (Appendix M.1 of the Draft EIR). Figure 19 on page 70 of that document shows that only six percent of the Project cars and trucks are projected to use Fairfax Avenue south of Wilshire Boulevard because most of the employees are likely to live northeast and northwest of the Project Site in the Hollywood area and in the San Fernando and San Gabriel Valleys. The distribution of employee residences is proprietary information held closely by other studios. As such, EIRs for previous studio projects are the only public sources of information for studio trip distribution.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding truck haul routes.

Comment No. 319-4

3. Please provide information about how the Vehicle Miles Travelled analysis was performed. How was it determined that workers at Television City will only drive an average of 3.5 miles? That's not realistic at all. There is little housing available, and none of it is affordable, so you must know that all those workers will be driving many more miles than that. How do you take into account those miles when the other kind of analysis was done?

Response to Comment No. 319-4

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 319-5

4. What safety measures will be taken to protect the neighbors, including school children, with all of the increased car and truck traffic? And of the increased driving that will happen on our neighborhood streets because we all know that is going to happen? Please provide information about additional police patrol presence; noise mitigation for during construction and when the facilities, once complete, are holding events; and air quality measures based on the anticipated additional traffic.

Response to Comment No. 319-5

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 35-146 and 26-E.4-3 regarding pedestrian safety.

Police protection would continue to be provided by LAPD. Potential impacts associated with police protection were fully analyzed in Section IV.J.2, Public Services—Police Protection, of the Draft EIR, and were determined to be less than significant.

Air quality and noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively.

Refer to Section C, Special Events, of Topical Response No. 10, Trip Generation, regarding special events.

Comment No. 319-6

5. The parking is listed as 5,300 spaces. How will overflow parking be handled?

Response to Comment No. 319-6

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is not needed to meet the Project's peak parking

demands and, therefore, is not proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment Letter No. 320

Don Leonard
1820 El Cerrito Pl., Apt. 105
Los Angeles, CA 90068-3701

Comment No. 320-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 320-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 321

Ronny Leroy
8108 W. Fourth St.
Los Angeles, CA 90048-4416

Comment No. 321-1

I am writing this letter to state my opposition to the proposed television City project. The lack of transparency around this project by both the city and applicant is concerning, and I have serious concerns about the impacts this project will have on our neighborhood. I do not agree that the claim of economic benefits outweighs all of the negative impacts this will have in my neighborhood and to the community.

Response to Comment No. 321-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

With respect to the claim regarding transparency, refer to Response to Comment No. 32-3.

Additional issues raised by the commenter are addressed in Response to Comment Nos. 321-2 through 321-8.

Comment No. 321-2

The community was not given the specific plan for this site and it is unclear if and when the city ever got a hold of the specific plan. How can you as elected officials render judgment on this project without that information? The alternative possibility is that the city had the specific plan and chose not to share it, which raises even more questions.

Response to Comment No. 321-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR. Refer to Topical Response No. 1 regarding the timing of environmental review.

Comment No. 321-3

Even without the specific plan, the reported facts are extremely concerning.

Response to Comment No. 321-3

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 321-4

Tens of thousands of trucks trips?

Response to Comment No. 321-4

The commenter's assertion about the number of truck trips is incorrect. Refer to Section E, Truck Trips, in Topical Response No. 10, Trip Generation, regarding the truck trip generation estimates during Project operation.

Comment No. 321-5

20 years of construction?

Response to Comment No. 321-5

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Comment No. 321-6

The city needs to make clear all of the specific impact! this will have to the quality of life in Beverly Fairfax neighborhood and what is going to be done about those impacts? Residents should not be forced to accept and live with a project that has "unavoidable impacts". [sic]

Response to Comment No. 321-6

Refer to Section I, Executive Summary, and Section VI, Other CEQA Considerations, of the Draft EIR for summaries of the Project's significant and unavoidable impacts. Detailed analyses supporting these conclusions are provided throughout Section IV, Environmental Impact Analysis, of the Draft EIR.

All of the proposed PDFs and mitigation measures are also listed in Section I, Executive Summary, of the Draft EIR, as well as in each respective section in Section IV, Environmental Impact Analysis. These measures are enforceable as conditions of approval for the Project. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR for details regarding timing, enforcement, and actions indicating compliance.

As discussed in Section VI, Other CEQA Considerations, of the Draft EIR, while the Project would have significant and unavoidable impacts with regard to construction-related regional emissions, noise, and vibration, such impacts would only occur during temporary and periodic construction activities, similar to those occurring at other development sites in urban areas, particularly within infill locations. As such, the benefits of the Project would outweigh the effects of its temporary significant and unavoidable impacts.

Please note that quality of life is not a CEQA impact. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 321-7

- How will our air quality be affected by construction and truck dust?

Response to Comment No. 321-7

As shown in Tables IV.A-10 and IV.A-11 of the Draft EIR, after the application of mitigation, localized air quality impacts, including particulate (i.e., dust) impacts, would not exceed SCAQMD LST thresholds, and impacts would be less than significant. Refer to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust.

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, which includes mandatory control actions and dust control contingency measures to control fugitive dust.

Comment No. 321-8

- How long will our commutes increase?
- How will 8,000 employees turning in and out of this site affect our traffic patterns?
- How will the city increase safety measures for pedestrians with all of these new trucks and commuters?

Response to Comment No. 321-8

Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the change in intersection delay as a result of the Project. Of the 31 study intersections, the addition of Project trips would not cause any intersection operating at LOS D or better to change to LOS E or F. Project trips did result in an increase in overall delay at the study intersections, but on average, the intersection delays increased by approximately 2.2 seconds per vehicle in the morning peak hour and approximately 2.4 seconds per vehicle in the afternoon peak hour. How long an individual's commute would increase would depend on the number of intersections the commute route took the driver through on the way from work to home.

The effects of the vehicle trips in and out of the Project Site during the peak hours of the day are summarized in Table 18 of the Transportation Assessment as described above.

Furthermore, driver delay (i.e., LOS) is no longer a CEQA-related impact under SB 743.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding access and pedestrian safety. Note that a large part of the Project's Transportation Improvement Program (summarized in Topical Response No. 15, Transportation Improvement Program) is aimed at traffic safety improvements for both vehicles and pedestrians.

The comment regarding the City's safety measures is not related to the Project's CEQA analysis. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 321-9

None of the above questions have been answered. I ask that until they are, this project not be allowed to move forward.

Response to Comment No. 321-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 321-2 through 321-8.

Comment Letter No. 322

Esther Lester
7815 Beverly Blvd.
Los Angeles, CA 90036-2111

Comment No. 322-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 323

Lauren Letherer
451 N. Stanley Ave.
Los Angeles, CA 90036-2396

Comment No. 323-1

I am worried about the environmental consequences of this project. As a community resident of 4-years, [sic] I need to know the plans to transform my community will not destroy it in the process. In the DEIR, I read that the developers are planning to excavate down about 45 feet, removing over 700,000 cubic yards of dirt. I kept reading to see if there was any more information about any of the potential impacts, yet there are just two pages failing to provide a meaningful analysis.

Response to Comment No. 323-1

Refer to Section I, Executive Summary, and Section VI, Other CEQA Considerations, of the Draft EIR, for summaries of the Project's impacts. Detailed analyses supporting these conclusions are provided throughout Section IV, Environmental Impact Analysis, of the Draft EIR. Specifically, impacts related to excavation are addressed in Sections IV.A, Air Quality, IV.B, Cultural Resources, IV.D, Geology and Soils, IV.E, Greenhouse Gas Emissions, IV.F, Hazards and Hazardous Materials, IV.I, Noise, and IV.L Tribal Cultural Resources, of the Draft EIR.

Comment No. 323-2

Excavating down nearly 45 feet will likely lead to the discovery of historic resources. Archaeological excavation takes patience, and discovering dinosaur bones or other artifacts may occur. How will the developers plan on excavating all of this dirt while not damaging the resources in the ground? If anything is found, who will the artifacts be given to? What will be the chain of custody for anything found? Will the project construction be stopped until the affected area is thoroughly examined by archeologists? These details are essential to protecting the Beverly Fairfax Historic District.

Response to Comment No. 323-2

Refer to Response to Comment Nos. 13-7 and 285-2 regarding the means by which archaeological and paleontological resources are assessed during the environmental review and addressed during Project implementation, including the ownership and disposition of any collected materials. Mitigation proposed for the Project includes plans that specify the process followed during the ground-disturbing activities for the Project.

CEQA requires that any discovered resources be evaluated for significance, which requires stopping construction to complete the evaluation.

Comment No. 323-3

Where will the dirt taken be disposed of and what research will be conducted to ensure that the dump site will not have any damage? I believe that it is important not only that the district's land will be okay but also that this does not raise environmental concerns for another area. On a more logistical note, what time of day will the excavation take place? And how many days per week? If the plan is agreed on, I will need to be waking up earlier in anticipation of the traffic so I am concerned that I could be spending a long time waking up to the digging.

Response to Comment No. 323-3

Contaminated soils will be disposed of at any of the many facilities available to accept impacted soils; any facility that accepts impacted soil must be permitted by the State of California and has specific soil disposal criteria to protect human health and the environment. While the chosen facility will be dependent on the facility capacity, soil acceptance criteria and projected volume, the Soil Management Plan (Appendix B of the Site Summary Report [Appendix G.1 of the Draft EIR]) noted the preferred disposal facility, which is Buttonwillow Landfill in Kern County.

Soil materials that are not contaminated would likely be disposed of at United Rock Products Landfill in Irwindale. As discussed in the Project's Initial Study (Appendix A of the Draft EIR), the landfills serving the County of Los Angeles have adequate capacity to serve the Project. Refer to pages 79 through 83 of the Initial Study for a discussion of solid waste. All soil would be disposed of in accordance with the requirements of the disposal facility and its operating permit, including requirements related to truck size, hours of disposal, and use of measures to control dust.

The Soil Management Plan provides information on soil testing procedures that will be used to develop the soil profile prior to off-site disposal. The hauling will take place within the hours approved by LADOT and the Bureau of Engineering, Monday through Friday, and occasionally Saturdays. Hauling activities would occur between the hours of 9:00 A.M. and 3:30 P.M. on weekdays, as well as between 8:00 A.M. and 4:00 P.M. on Saturdays with additional approvals from the Bureau of Engineering District Engineer. Hauling activities between 7:00 A.M. and 9:00 A.M. and 3:30 P.M. and 4:00 P.M. would require approval from the Bureau of Engineering District Engineer per LAMC Section 62.61.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 for a discussion of the overall construction schedule, the estimate of the construction trip generation, the approved haul routes, and hours of construction activities, including permitted hauling hours.

Comment No. 323-4

For years, tar preserved the bones of trapped animals at La Brea Tar Pit yet the developers are not considering that this excavation could unveil the bones of ancient animals. How far will the excavation site be from this landmark? If the developers plan on using massive excavators, how long are they planning on spending on excavation while looking for resources? These excavators can carry 19 to 24 tons—spotting an ancient bone would be like finding a needle in a haystack.

Response to Comment No. 323-4

This comment is identical to Comment No. 285-4. Refer to Response to Comment No. 285-4, above.

Comment No. 323-5

Until my concerns about Beverly Fairfax's historic and cultural resources are addressed, I will urge my neighbors to stand up against the project.

Response to Comment No. 323-5

This comment is identical to Comment No. 285-5. Refer to Response to Comment No. 285-5, above.

Comment Letter No. 324

Steven and Daniel Levenson
428 N. Sweetzer Ave.
Los Angeles, CA 90048-2604

Comment No. 324-1

Regarding the TVC 2050 expansion of the CBS studios, I would like you to address several concerns that I have.

Response to Comment No. 324-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 324-2 through 324-6.

Comment No. 324-2

Regarding traffic:

1. There will be a lot of car and truck traffic caused by this expansion. I think there needs to be turn lanes for traffic making right turns onto the project. Why aren't there going to be any dedicated turn lanes for trucks and cars? Were they considered? How is the problem of cars and trucks trying to make turns, darting across oncoming traffic going to be addressed?
2. Grove Drive is not a very large street. Why is the large parking garage going to be located on the Grove drive? Did you consider how many cars will have to drive on that street? Please explain the rationale for its use? Were alternative streets considered?
3. Grove Drive is also an access point for the Holocaust Museum with lots of school buses dropping kids off. How will the school buses be able to safely drop kids off with thousands of additional cars across the street? Will this be safe for school children? What measures are going to be taken so that safety remains a priority?

Response to Comment No. 324-2

Refer to Response to Comment No. 83-1 regarding turn lanes.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access to and use of The Grove Drive. The Grove Drive was selected as one of three major access driveways for the Project because The Grove Drive has substantially more available capacity than either Fairfax Avenue or Beverly Boulevard. Refer to Response to Comment No. 41-4 for a discussion of pedestrian safety to the Holocaust Museum.

Comment No. 324-3

Regarding zoning:

1. The DIER [sic] says that any use in the C2 zone will be allowed. What exactly is a C2 zone? From what I understand there are over 100 uses that could be allowed in the C2 zone. How will the community know what uses could [sic] are going to be proposed?

Response to Comment No. 324-3

As discussed on pages IV.H-8 to IV.H-9 and shown in Figure IV.H-2 in Section IV.H, Land Use and Planning, of the Draft EIR, the majority of the Project Site is currently zoned C2. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed therein, based on input received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project, including by deleting the reference to all C2 uses in the Draft EIR; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses (i.e., sound stage, production support, production office, general office, and retail) as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the Draft EIR.

Comment No. 324-4

How will the community be informed about when and if that happens?

Response to Comment No. 324-4

Public hearings and meetings will be held for the Project after the Final EIR is completed. All members of the public who provided a written comment in response to the Draft EIR, or who otherwise provides a written request to the City Planner assigned to the Project to be added to the Project's Interested Parties List, will receive notice for all public hearings and meetings. Refer to Response to Comment No. 32-3 regarding public noticing.

Comment No. 324-5

How are traffic impacts analyzed for the project for the variety of potential uses? Does that impacts analysis have to be done with potential uses are actual planned uses?

Response to Comment No. 324-5

Refer to Topical Response No. 8, Vehicle Miles Traveled, regarding the Draft EIR's CEQA transportation analysis. The proposed Specific Plan will limit the permitted land uses to those analyzed in the Draft EIR (i.e., sound stages, production support, production office, general office, and retail), and the transportation analysis accounts for all permitted land uses.

Comment No. 324-6

Regarding Vehicle Miles Traveled:

1. The analysis says the average travel distance is 3.5 miles. This does not make sense to me. Can you provide more details on how this number was reached and what it means?

Response to Comment No. 324-6

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment Letter No. 325

Devora Levin
360 N. Laurel Ave.
Los Angeles, CA 90048-2314

Comment No. 325-1

I am a resident for 45 years. I consider Television City is being considered for a mammoth development, and I have many concerns about what that project would mean for our community.

Response to Comment No. 325-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 325-2.

Comment No. 325-2

What does it mean that the site could be a Regional Center? A regional center that would do what? Are there other areas in the city that are also regional centers? Would the regional center be the same boundaries as the Television City site or expand beyond just that development?

Does that mean that other projects would fall under the category of the area being a regional center, not just the one for Television City? Would other projects then not have to go through a thorough review? Would they just get approved or be allowed because they are part of some regional center area?

Response to Comment No. 325-2

This comment is identical to a portion of Comment No. 80-2. Refer to Response to Comment No. 80-2, above.

Comment No. 325-3

I strongly urge you to oppose this development

Response to Comment No. 325-3

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 326

Tiffanie Levine
410 N. Alta Vista Blvd.
Los Angeles, CA 90036-2541

Comment No. 326-1

I am concerned that the project description for the proposed TVC project. I am a 20 year resident and I do not think the area can take any more cars.

Response to Comment No. 326-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 326-2 through 326-6.

Comment No. 326-2

Every [sic] Beverly is packed from the Beverly Center to Hancock Park from 1 to 8 every day.

Response to Comment No. 326-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 326-3

What is actually going to be built? What parts of the plan are considered conceptual? How can a project be considered for approval when the area that will be most affected cannot be told exactly what is going to be put on the site?

Response to Comment No. 326-3

This comment is identical to the first paragraph of Comment No. 97-2. Refer to Response to Comment No. 97-2, above.

Comment No. 326-4

It seems like the developer is working on every option available to them under City law. What is the actual plan? Why can't the developer tell the community exactly what will be built?

Response to Comment No. 326-4

This comment is substantively similar to the second paragraph of Comment No. 97-2. Refer to Response to Comment No. 97-2 regarding the Project Description and proposed Specific Plan.

Comment No. 326-5

Did you study the impact of the warehouses, facilities, theaters, offices, conferences, etc.? The first things built, it would seem, would have a longer period of time for any impacts to be experienced, correct?

Response to Comment No. 326-5

This comment is identical to a portion of Comment No. 97-3. Refer to Response to Comment No. 97-3, above.

Comment No. 326-6

Should the parking be doubled and built first?

Response to Comment No. 326-6

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 326-7

Please respond and I am against this development program until I can understand project and its impacts. I appreciate the transparency.

Response to Comment No. 326-7

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 326-2 through 326-6, above.

Comment Letter No. 327

Harriet Levins
412 N. Orlando Ave.
Los Angeles, CA 90048-2518

Comment No. 327-1

The project is proposing to stage thousands of trucks next to Loyola High School, the recreation center and Kaiser Hospital—sites that the City should be making a high priority for health considerations. This seems inappropriate to stick thousands of trucks in these communities.

Have the hospital, school and residents been told that there may be 60,000 trucks idling and driving through their communities?? The area by Loyola in particular is a lower income community—why are trucks for your project being pushed into that community?

Please provide an analysis of all of the possible impacts on these communities, including environmental justice issues. There should also be a health risk analysis on the impacts to these communities.

Response to Comment No. 327-1

All haul truck staging locations will be provided onsite, so no haul trucks will be idling offsite. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

An analysis of environmental justice is not required under CEQA. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the findings of the Draft EIR.

Comment Letter No. 328

Rosalind Levitt
122 S. Laurel Ave.
Los Angeles, CA 90048-3514

Comment No. 328-1

I am writing this letter to state my opposition to the proposed television City project. The lack of transparency around this project by both the city and applicant is concerning, and I have serious concerns about the impacts this project will have on our neighborhood; I do not agree that the claim of economic benefits outweigh all of the negative impacts this will have in my neighborhood and to the community.

Response to Comment No. 328-1

This comment is identical to Comment No. 321-1. Refer to Response to Comment No. 321-1, above.

Comment No. 328-2

The community was not given the specific plan for this site and it is unclear if and when the city ever got a hold of the specific plan. How can you as elected officials render judgment on this project without that information? The alternative possibility is that the city had the specific plan and chose not to share it, which raises even more questions.

Response to Comment No. 328-2

This comment is identical to Comment No. 321-2. Refer to Response to Comment No. 321-2, above.

Comment No. 328-3

Even without the specific plan, the reported facts are extremely concerning.

Response to Comment No. 328-3

This comment is identical to Comment No. 321-3. Refer to Response to Comment No. 321-3, above.

Comment No. 328-4

Tens of thousands of trucks trips?

Response to Comment No. 328-4

This comment is identical to Comment No. 321-4. Refer to Response to Comment No. 321-4, above.

Comment No. 328-5

20 years of construction?

Response to Comment No. 328-5

This comment is identical to Comment No. 321-5. Refer to Response to Comment No. 321-5, above.

Comment No. 328-6

The city needs to make clear all of the specific impacts this will have to the quality of life in Beverly Fairfax neighborhood and what is going to be done about those impacts? Residents should not be forced to accept and live with a project that has “unavoidable impacts”. [sic]

Response to Comment No. 328-6

This comment is identical to Comment No. 321-6. Refer to Response to Comment No. 321-6, above.

Comment No. 328-7

- How will our air quality be affected by construction and truck dust?

Response to Comment No. 328-7

This comment is identical to Comment No. 321-7. Refer to Response to Comment No. 321-7, above.

Comment No. 328-8

- How long will our commutes increase?
- How will 8,000 employees turning in and out of this site affect our traffic patterns?
- How will the city increase safety measures for pedestrians with all of these new trucks and commuters?

Response to Comment No. 328-8

This comment is identical to Comment No. 321-8. Refer to Response to Comment No. 321-8, above.

Comment No. 328-9

None of the above questions have been answered. I ask that until they are, this project not be allowed to move forward.

Response to Comment No. 328-9

This comment is identical to Comment No. 321-9. Refer to Response to Comment No. 321-9, above.

Comment Letter No. 329

L. Lewin
506 N. Fuller Ave.
Los Angeles, CA 90036-1941

Comment No. 329-1

I have been a resident in this area for 40 years. I hope you will seriously reconsider the proposed Television City expansion project. The EIR is confusing and incomplete. There are so many concerns with this proposed huge facility for a neighborhood that is historic. Please address these issues not explained in the EIR.

Response to Comment No. 329-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 329-2 through 329-7.

Comment No. 329-2

The Television City proposes improvements that will increase the height of some buildings by many stories. How will 20-story buildings appear behind our Farmer's Market and the Avila Adobe? The adobe has historical significance and has been around since 1818. How will the developer protect it from damage during all the construction? How close will the construction be to the edges of the adobe and market property?

Response to Comment No. 329-2

This comment is identical to a portion of Comment No. 209-2. Refer to Response to Comment No. 209-2, above.

Comment No. 329-3

How will the increased traffic impact business at the Farmer's Market?

Response to Comment No. 329-3

This comment is identical to a portion of Comment No. 209-2. Refer to Response to Comment No. 209-2, above.

Comment No. 329-4

Also, it seems those tall buildings even fit into the neighborhood, was this even considered? The drawings show a mammoth sized complex. How could that kind of development fit into our community? What will happen to any views that residents in apartments have now?

Response to Comment No. 329-4

This comment is identical to Comment No. 209-3. Refer to Response to Comment No. 209-3, above.

Comment No. 329-5

With construction, residents need to know the schedule. How is the project construction going to be mapped out? Neighbors need to know the phases of the project, so please provide a plan. During construction there will be so many trucks, coming and going. Why is the route for this traffic pattern not confirmed already?

Response to Comment No. 329-5

This comment is identical to Comment No. 209-4. Refer to Response to Comment No. 209-4, above.

Comment No. 329-6

Has the developer partnered with the LA Conservancy in this development? It seems there has been a settlement of some kind. What is this settlement, and is it included in the EIR? Why does the LA Conservancy speak for our community? How does the settlement agreement affect the goals of the expansion project? How can the community know the limitations agreed to if it is not available to the public?

Response to Comment No. 329-6

This comment is identical to Comment No. 209-6. Refer to Response to Comment No. 209-6, above.

Comment No. 329-7

In the EIR, the Vehicle Miles Travelled analysis is difficult to understand. Please explain what vehicle miles travelled is and why is that used rather than number of cars and number of trips. The distance people drive in LA is greater than the averages you used; when are you going to correct those mileage numbers? The information does not seem to align with

what are the typical transportation modes of Angelenos. For example, the VMT analysis makes assumptions about people traveling via public transportation, but most people's experience says otherwise. What data was used to create the analysis.

Response to Comment No. 329-7

This comment is identical to Comment No. 209-7. Please see Response to Comment No. 209-7, above.

Comment No. 329-8

Thank you for your time.

Response to Comment No. 329-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 330

Stephanie Lewis
8328 W. Fourth St.
Los Angeles, CA 90048-4203

Comment No. 330-1

Today we have before us the TVC 2050 project. On the surface, this development may seem harmless—it is a modernization with maybe even some merit. My problem with this major expansion of Television City is with the thoroughness of the application and process of informing the community about the project.

Response to Comment No. 330-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 330-2 through 330-6. Refer to Response to Comment No. 32-3 regarding noticing of the Project in compliance with CEQA.

Comment No. 330-2

I'm not a professional, but I know that for projects like these, different studies are to be done to determine that the project does not create risk in the areas of the environment, traffic, flooding, and in [sic] long term after its [sic] completed. How is a non-technical person supposed to be able to understand all of the information and analysis?

Response to Comment No. 330-2

The Draft EIR and its technical appendices were prepared in accordance with the requirements of CEQA. The Draft EIR was written to be as accessible to the general public as possible. Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

Comment No. 330-3

As a resident of this community, how can this process have been done in an almost behind-closed-doors manner? I understand that the only public meeting held so far about this project was more than a year ago, in July 2021, and that the environmental impact report was not even done at that time. If public workshops or community meetings are not held for the public to be able to ask questions and really understand what impact a project

is going to have, then are we just supposed to trust as accurate and true if the applicant states what the impacts are or says there are no impacts?

Response to Comment No. 330-3

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 330-4

If the applicant really cared about the community, then he wouldn't merely comply with the minimum requirements of state or local law—there is nothing stopping the developer from holding meetings in the community if he really wanted to work with residents and businesses. Also, why isn't a public hearing going to be held? I know this is regularly done after an environmental impact report is drafted and goes out for a comment period. Even if it is not required, the applicant and the city could definitely conduct one. It does not serve the applicant well if he is unwilling to face public scrutiny.

Response to Comment No. 330-4

Refer to Response to Comment No. 32-3 regarding future public hearings and meetings.

Comment No. 330-5

So where are the long-term impact answers? Is the developer trying to say that there will be no major impacts, including a huge increase in traffic and congestion during the building of this project? That just cannot be true.

Response to Comment No. 330-5

This comment incorrectly claims no significant impacts were identified in the Draft EIR. Refer to Section I, Executive Summary, and Section VI, Other CEQA Considerations, of the Draft EIR, for summaries of the Project's impacts.

Section IV.K, Transportation, of the Draft EIR comprehensively evaluated the potential transportation impacts of the Project and concluded that impacts would be less than significant. Regarding traffic and congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 330-6

One thing I found was inconsistent. I read something about construction being limited to times when the streets aren't busy. When exactly is that? But then I saw construction would be Monday through Friday 7:00 AM to 9:00 PM and Saturday 8:00 AM to 6:00 PM. So which is it? If Monday through Saturday construction is going to be permitted, then they should've simply stated basically ALL DAY EVERY DAY. How could that not be a serious impact on the already traffic filled streets and gridlock of that area all day every day?

Response to Comment No. 330-6

As stated on pages II-33 to II-34 in Section II, Project Description, of the Draft EIR, in accordance with LAMC requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between 8:00 A.M. and 6:00 P.M. on Saturday or national holidays, or outside of these hours if a temporary noise variance is approved by the Los Angeles Board of Police Commissioners. However, the CTMP prepared pursuant to Project Design Feature TR-PDF-1 does include a provision to schedule construction-related activities to reduce the effect on the surrounding roadways. Refer to pages IV.K-36 and IV.K-37 of the Draft EIR.

As discussed in Section IV.K, Transportation, of the Draft EIR, transportation impacts were comprehensively analyzed and determined to be less than significant during construction of the Project. Refer to Topical Response No. 12, Safety and Congestion. As discussed therein, congestion and driver delay are not CEQA impacts.

Comment No. 330-7

The plan and the process have not been thought through completely to the end.

Response to Comment No. 330-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 330-2 through 330-6.

Comment Letter No. 331

Gary Li
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 331-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 331-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 332

Theresa Li
327 N. Kilkea Dr.
Los Angeles, CA 90048-2226

Comment No. 332-1

I care deeply about economic justice, and I do not think the developers of this project have done enough to address this issue. It seems like a lot of rich guys came up with this without really considering how it would impact residents, particularly lower-income communities of color.

Response to Comment No. 332-1

This comment is substantially similar to Comment No. 40-1. Please refer to Response to Comment No. 40-1, above.

Comment No. 332-2

Why isn't there affordable housing with this project? We have a massive housing shortage in Los Angeles. The idea that you can just dump a project of this size on our community without housing seems ridiculous. How many new residents are projected to move into the Beverly Fairfax area and into the surrounding communities to be closer to their jobs? Is that info in the EIR? Where will those new residents live?

Response to Comment No. 332-2

This comment is identical to a portion of Comment No. 40-2. Refer to Response to Comment No. 40-2, above.

Comment No. 332-3

There are tons of renters near CBS Television City. Will their rents go up? How much? Why not include workforce housing in the draft EIR? Imagine how much lower the impact of this project would be on the local community if they had less office space and more housing.

Response to Comment No. 332-3

This comment is identical to a portion of Comment No. 40-2. Refer to Response to Comment No. 40-2, above.

Comment No. 332-4

And for that matter, what will the impact be on our local family-run businesses? Will their landlords raise their rents and run them out in favor of high-end stores?

Where have these possible consequences been identified and studied? If they haven't been yet, when are those studies going to be done?

Response to Comment No. 332-4

Refer to Response to Comment No. 332-3. This comment discusses non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 332-5

The EIR says there will be thousands of trucks staged near Loyola High School. Thousands. Idling trucks spewing pollution near teenagers with developing brains. Why will those trucks be in that community? What regulations would allow that to happen? There are lots of people living there that don't make a lot of money. Has anyone looked at the environmental justice issues? Is that in the EIR? Where is the information about the impacts on people's health, not only from the trucks staged near the school but from all the truck traffic that will be coming?

Response to Comment No. 332-5

Please see Response to Comment No. 26-24 for a discussion of haul truck staging areas. As discussed therein, all haul truck staging would occur on-site per LADOT's recommendation letter dated June 30, 2022.¹⁵⁵ The two off-site staging locations described and evaluated in the Draft EIR are no longer proposed. As such, an HRA is not warranted for sensitive receptors near the two removed off-site staging areas. The removal of the staging locations is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Response to Comment No. 26-E.1-21 for a discussion of the Draft EIR's analysis of localized air quality impacts. Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA was

¹⁵⁵ Refer to Appendix M.5 of the Draft EIR for the LADOT approval letter.

completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the findings of the Draft EIR.

An analysis of environmental justice is not required under CEQA. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 332-6

Is the city really thinking of permitting a billionaire developer to dump its pollution on the poor in order to make a few bucks? This should not go forward until health risks are studied at the very least and alternatives are seriously considered.

Response to Comment No. 332-6

Refer to Response to Comment No. 332-5 for a discussion of air quality and health concerns.

As required by CEQA, the Draft EIR analyzed a full range of alternatives. Refer to Section V, Alternatives, of the Draft EIR and Topical Response No. 16, Project Alternatives Analysis, for a discussion of alternatives considered in the Draft EIR.

Comment Letter No. 333

Nathan Licht
556 N. Croft Avenue, Apt. 3
West Hollywood, CA 90048-2542

Comment No. 333-1

Because the EIR doesn't include housing, it seems likely that huge numbers of people will be driving into to our community every day to work and visit the site. Where are they going to park? Clearly 5,300 parking spots in the plan will be insufficient because the plan refers to "offsite parking", [sic] which sounds like we should expect thousands of cars to be driving around our streets every single day looking for parking.

Response to Comment No. 333-1

Refer to Topical Response No. 13, Parking, regarding the adequacy of the onsite parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Off-site parking is not needed to meet the Project's peak parking demands, and, therefore, no such parking is proposed. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the offsite parking agreement language was deleted from the Draft EIR.

Comment No. 333-2

If it's true that cars [sic] be allowed to park anywhere in our neighborhood, there should be a study of the impacts of all this traffic, like air pollution, crime and car-break in [sic] incidents, constant noise, where pedestrian crosswalks will be installed, if they will have flashing lights and other protections for people with disabilities, kids walking to school, religious people walking to services.

Response to Comment No. 333-2

Refer to Topical Response No. 13, Parking, regarding how the on-site parking supply would be sufficient to serve the full parking demand of the Project. As such, no off-site spillover parking is anticipated to occur. Also refer to Sections C, Traffic Safety vs. Congestion, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding pedestrian safety.

Comment Letter No. 334

Ty Linegar
335 1/2 N. Gardener St.
Los Angeles, CA 90036-5706

Comment No. 334-1

I don't think that the traffic section of the Draft EIR is complete. Unless I'm reading it wrong, many different uses listed in the Draft EIR aren't accounted for in the traffic section, such as trips to/from warehouses, the theaters, educational facilities and conference facilities. Is there a supplemental study for this additional traffic?

Response to Comment No. 334-1

Refer to Topical Response No. 8, Vehicle Miles Traveled, regarding the Draft EIR's transportation analysis. The proposed Specific Plan will limit the permitted land uses to those analyzed in the Draft EIR (i.e., sound stage, production support, production office, general office, and retail), and the transportation analysis accounts for all permitted land uses.

Refer to Topical Response No. 3, Permitted On-Site Uses. As discussed therein, uses allowed within the Project Site must be consistent with the five permitted land uses (i.e., sound stage, production support, production office, general office, and retail) and the ancillary sitewide uses that support the studio and the five permitted land uses. These uses are fully accounted for in the impact analyses in the EIR.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Thus, a supplemental study is not required.

Comment No. 334-2

If the developer wants public support for this 20-year construction project, it needs to be totally transparent about what we should expect. We know that traffic will be much worse, but burying the true impact of traffic and related issues, like parking and air quality, is unfair to the community and will lead to widespread opposition to the project.

Response to Comment No. 334-2

The intent of the Draft EIR, which is publicly available on the Department of City Planning's website (<https://planning.lacity.org/development-services/eir/tvc-2050-project-0>), is to provide a thorough, transparent analysis of the likely impacts of the Project on the environment. The preferred construction of the Project by the Applicant is to build the Project in one phase, which would take approximately 32 months to complete and represents the worst-case condition from a traffic standpoint. To be comprehensive, the Draft EIR analyzed both a 32-month schedule and a long-term buildout schedule. Refer to Response to Comment No. 9-24 regarding the construction timeline.

Under SB 743, traffic congestion and the adequacy of a new development's parking are not CEQA considerations. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Air quality analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, of the Draft EIR. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. All other air quality impacts would be less than significant or less than significant with mitigation. It should be noted that all significant and unavoidable impacts associated with the Project would be temporary and cease when construction is complete. No significant and unavoidable impacts associated with Project operation were identified. Refer also to Response to Comment No. 26-E.1-15 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts associated with air emissions would be less than significant.

Comment Letter No. 335

Robin Lippin
445 N. Orlando Ave.
Los Angeles, CA 90048-2517

Comment No. 335-1

I ask that you take a closer look at the impact on air quality that the new studio at Television City would create if constructed. The air with breath around Los Angeles is already intoxicating and if there is a significant increase in carbon and pollutants from the traffic and construction of the project, we could be in for even more hazardous air.

Does the air quality analysis show that there could be 50, 100 or 200 production trucks spewing diesel particulates in the community for years to come? What exactly will be emitted? During what hours and over how many days? What about the greenhouse gas emissions from all these trucks? What are the specific effects expected from each of the types of particulate matter?

Response to Comment No. 335-1

The Draft EIR comprehensively analyzed the Project's potential air quality impacts in Section IV.A, Air Quality, in accordance with CEQA. As stated on page 11 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR and discussed in Response to Comment No. 26-E.1-16, the vehicle fleet mix used in the Project's air quality and GHG analyses were based on the Los Angeles County vehicle fleet mix (which includes trucks) from EMFAC2017, the version of EMFAC incorporated into the current version of CalEEMod at the time of Draft EIR publication. Heavy-duty vehicles associated with production trucks were included in the air quality and GHG analyses provided in the Draft EIR. Please refer to Table IV.E-11 (Annual Project (Conceptual Land Use Program) GHG Emissions Summary (2026 Buildout Year)) in the Draft EIR. GHG emissions associated with mobile sources, including production trucks, is included in the table under "mobile sources."

Please refer to Response to Comment No. 87-1 regarding emissions related to production trucks and Response to Comment No. 26-E.1-16 regarding the number of Project-related operational trucks accessing the Project Site per day and typical hours of use.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project

would be below the applicable significance thresholds and impacts would be less than significant. The HRA provides the emissions from the operational trucks.

As stated on page IV.A-6 of the Draft EIR, the primary effects of particulate matter exposure include potential aggravation of existing heart and lung diseases, affecting the body's defenses against inhaled materials, and lung tissue damage.

Comment No. 335-2

What can the developer possibly do to mitigate the health impacts of the worsening air quality due to this project? Other than not allowing the size, the amount of expected people, the volume of cars and trucks? Will the developer reduce the scale and density of what is being planned given the already poor air quality in Los Angeles?

Response to Comment No. 335-2

The Draft EIR comprehensively analyzed the Project's potential air quality impacts in Section IV.A, Air Quality, and determined that implementation of the mitigation measures listed on pages IV.A-65 to IV.A-66 of the Draft EIR would reduce localized impacts to less-than-significant levels.

Comment No. 335-3

Also, I ask you consider the health risks to children and senior from all the trucks that will be entering Grove Dr and emitting diesel exhaust next to a park—where is the breakdown of the emissions just due to those trips in that location? Why is the large parking structure being placed on Grove Drive, which is a small street, and right across from Pan Pacific Park? Think of the children that will have to breath dirty air from the pollution from all these trucks.

Response to Comment No. 335-3

The Draft EIR analyzed localized air quality impacts using the SCAQMD LST methodology which is based on the distance from the property boundary to the sensitive receptor. The localized air quality analysis in the Draft EIR took into account sensitive receptors located adjacent to the property boundary (residential uses to the east) and concluded that impacts at this receptor would be below SCAQMD significance thresholds. As discussed in Section IV.A, Air Quality, of the Draft EIR, all other air quality sensitive uses located at greater distances from the Project Site would experience lower air quality impacts. As the Pan Pacific Park is located farther away from the Project Site than the adjacent residential uses, localized air quality impacts at the Park receptor would be lower than those presented in the Draft EIR. Therefore, localized impacts to Pan Pacific Park, even if considered hypothetically as a sensitive receptor, would be less than significant.

As discussed above in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA includes health risk impacts from both Project-related construction and operational activities and from all Project-related sources, including diesel exhaust trucks and vehicles accessing the parking structures. A specific breakdown of the operational emissions directly next to the park is not available since the total amount of on-site truck travel and idling emissions is calculated for the entire length of the travel distance and modeled as a line source along the travel path. The calculation of these emissions is provided in Appendix FEIR-10. The HRA confirms the findings of the Draft EIR (see page IV.A-69 of the Draft EIR) that health risks from the Project would be less than significant, including at the receptor described in this comment, and no further mitigation for the purposes of human health risks is necessary. Refer to Response to Comment No. 26-E.1-13 for a detailed response regarding potential localized impacts at Pan Pacific Park if hypothetically treated as a sensitive receptor.

Comment No. 335-4

As both a resident and concerned citizen, I humbly ask for you to consider these risks and pass these questions to the developer.

Response to Comment No. 335-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 335-1 through 335-3.

Comment Letter No. 336

Jesse Lira
105 N. Kilkea Dr.
Los Angeles, CA 90048-3523

Comment No. 336-1

The Draft EIR should analyze the air quality, noise and other issues impacting all the sensitive uses along Fairfax. There are many schools, nursing homes and residential uses that will be impacted.

Response to Comment No. 336-1

The first sentence of this comment is identical to the second sentence in Comment No. 49-2. Refer to Response to Comment No. 49-2, above.

Refer to Response to Comment Nos. 26-26 and 35-46 for detailed discussions of air quality impacts at sensitive receptors. As discussed in Section IV.A, Air Quality, of the Draft EIR, localized air quality impacts would be less than significant.

The Draft EIR comprehensively analyzed the potential noise impacts during construction and operation to sensitive receptors along Fairfax Avenue in Section IV.I, Noise, of the Draft EIR (see Table IV.I-10 and Table IV.I-11 regarding construction noise impacts and Table IV.I-12 through Table IV.I-18 regarding operational noise impacts).

Comment No. 336-2

The project is proposing to stage thousands of trucks next to Loyola High School and Kaiser Hospital.

Response to Comment No. 336-2

All haul truck staging locations would be provided onsite. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 336-3

Have these residents been told that there may be 60,000 trucks idling and driving through their streets? Has anyone been notified about the incredible impacts that tens of thousands of trucks will have on their daily lives?

Response to Comment No. 336-3

Refer to Response to Comment No. 336-2 regarding idling.

Noticing for the Project has been conducted in accordance with CEQA. Refer to Response to Comment No. 32-3.

There will not be thousands of trucks driving through residential streets. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips and haul routes. Refer to Topical Response No. 10, Trip Generation, regarding the truck and automobile trip generation estimates during Project operation.

Comment No. 336-4

Air quality is also an issue—the area by Loyola in particular is a lower income community.

Response to Comment No. 336-4

An analysis of environmental justice is not required under CEQA. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please note that all construction haul truck staging would occur on-site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 336-5

Why are you putting trucks for your project in that community?

Response to Comment No. 336-5

Refer to Response to Comment Nos. 336-2 and 336-3. All haul truck staging locations would be provided onsite; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 336-6

Please provide an analysis of all of the possible impacts on these communities, including environmental justice issues. Please provide a health risk analysis on the impacts to these communities.

Response to Comment No. 336-6

Analysis of environmental justice is not required under CEQA and the Project is not within a disadvantaged or environmental justice community per SB 535 or AB 1550. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 327-1 regarding air quality health risks.

Comment Letter No. 337

Lise Ville
449 N. Orlando Ave.
Los Angeles, CA 90048-2517

Comment No. 337-1

I am deeply concerned about the Television City 2050 project and what it will mean for my neighborhood. The size and scope of the project in general could be problematic for those of us who live near Television City. There are some specific concerns I would like to share:

Response to Comment No. 337-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 337-2 through 337-8.

Comment No. 337-2

- The C2 Zoning appears to have has dozens, maybe hundreds, of possible uses. How many uses fall into that zoning category? Some of those uses could cause real harm to our community and others would bring up even more questions! Where is the analysis of how each possible use of the property would impact the surrounding community? Does the plan include the use of space as auditoriums? How many would each auditorium that is included be able to hold? If even one auditorium would seat 3,000, that would be a lot of additional visitors and additional cars in our neighborhood. Would more than one auditorium at a time be used, potentially with 3,000 attendees each, is that right?

Response to Comment No. 337-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan and Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed in therein, based on comments received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project and the reference to all C2 uses has been removed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses—sound stage, production support, production office, general office, and retail—as well as related ancillary and supportive uses, all of which

were fully disclosed and analyzed in the EIR. As discussed in Response to Comment No. 5-6, an auditorium open to the general public would not be permitted within the Project Site.

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, regarding audience trips, which were accounted for in the impact analyses in the Draft EIR.

Comment No. 337-3

Where would all the attendees park?

Response to Comment No. 337-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. All Project parking would be accommodated on-site. Refer to Topical Response No. 13, Parking, regarding the adequacy of the parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 337-4

What about traffic controls that would be required while that may visitors come to a show? What days of the week and what hours would that situation occur?

Response to Comment No. 337-4

The Project would still accommodate audience shows as is done under existing conditions on the Project Site. The level of audience shows would increase as a result of the Project, which has already been taken into account in the analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Audience members coming to a show taping would be directed to a specific Project Site entrance and then they would be directed to parking from that entrance. Additional parking personnel may be required inside of the Project Site to get the audience members to the designated parking area for that show, but no special traffic personnel or traffic controls would be needed on the public street system.

The audience shows that now take place on the Project Site occur during the weekday daytime and evening hours and on weekend evenings. That pattern of activity is expected to continue. Refer also to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, and Topical Response No. 12, Safety and Congestion.

Comment No. 337-5

- From the plan it seems that there will be 8000 employees at the site and as many as 5000 (or more?) additional visitors daily, yet the site will only have around 5000 parking spots, so where are all of these people going to park? What steps are going to be taken to make sure that residents are able to park where we live?

Response to Comment No. 337-5

Refer to Response to Comment No. 337-3 regarding parking.

The comment regarding the number of audience visitors is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation.

Comment No. 337-6

Also, so many additional people on our streets who don't live here might lead to other problems. What is the plan for security on site? Will it be 24/7? Will security also be monitoring outside the property, like on the sidewalks when people are leaving if they have attended one of the shows? What steps are going to be taken to make sure that the neighborhood remains safe with all of the additional traffic and additional people?

Response to Comment No. 337-6

Refer to Topical Response No. 13, Parking, regarding how the on-site parking supply would be sufficient to serve the full parking demand of the Project and prevent spillover parking. As such, the Project would not result in a substantial number of additional people utilizing sidewalks.

In addition, as discussed in detail on pages IV.J.2-12 and IV.J.2-13 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR, the Project includes a number of security features including security cameras and 24-hour security personnel that would monitor the Project Site on a 24-hour basis. With regard to special events, refer to Topical Response No. 3, Permitted On-Site Uses, regarding how special events would continue to be governed by the LAMC, consistent with existing conditions. With regard to audiences, as discussed in Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, audience members would represent a small fraction of the on-site population with an average of approximately 427 audience members on a weekday. These audience members would park on-site, would enter the Project Site through a security gate and would be monitored by on-site security staff. As such, audiences would not be a source of crime.

Comment No. 337-7

- The farmer's market is a very important part of our community. What analysis has been done to see how this will impact the farmer's market? Please describe what your evaluation has found will be the impacts to that amenity? Losing the farmer's market would be a major blow to the city and this area in particular. Clearly the project will make the area more congested with the additional cars and traffic, making it more difficult to get to the farmer's market and to park there. So what plans are in place to make sure that there are no impacts to the farmer's market, and our ability to enjoy it?

Response to Comment No. 337-7

Contrary to the assertion in this comment, The Original Farmers Market will not be lost due to the Project. For information regarding the Draft EIR's analysis of impacts to The Original Farmers Market, which is a historical resource, refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13 and 363-1.

While the Draft EIR's transportation analysis makes clear that a potential result of the Project, which would include an NTMP and would not result in significant transportation impacts under CEQA, is more vehicle trips in the Project Site vicinity, no evidence has been identified to suggest that a potential increase of vehicle trips will result in the demolition or material alteration of the physical characteristics of The Original Farmers Market that convey its historic significance and that justify its inclusion in, or eligibility for, listing as a historical resource as defined by CEQA. Therefore, a potential increase in vehicle trips would not result in significant impacts to The Original Farmers Market.

In addition, construction and operation of the Project would not affect physical access to The Original Farmers Market. Furthermore, as discussed in Topical Response No. 13, Parking, the Project would not result in spillover parking and as such would not affect parking at The Original Farmers Market.

Comment No. 337-8

- Between all the construction and additional cars and people, this area is going to be a much noisier and chaotic place. This is particularly a concern the later it gets into the night. With so many new sound stages that will be having audiences, how late will they be able to do that? What did the noise study state about noise levels and measures to make sure our neighborhoods will not be impacted during both construction and when the studios and stages are operating?

Response to Comment No. 337-8

Noise impacts during construction are fully analyzed in the Draft EIR. Refer to pages IV.I-35 through IV.I-43 therein.

Noise associated with outdoor production activities was analyzed in Section IV.I, Noise, of the Draft EIR. Refer to pages IV.I-44 and IV.I-45 and to Response to Comment No. 26-146. As demonstrated therein, potential impacts associated with operation of the Project would be less than significant.

As discussed in Response to Comment No. 26-141, the operational transportation noise analysis in the Draft EIR accounted for audience trips. Refer to Response to Comment No. 78-3 regarding the timing of evening audience shows.

Comment No. 337-9

This whole thing feels poorly thought out to me and I hope the city is going to take steps to make sure it isn't a disaster. It is very concerning that such a major project could happen, completely changing this place where I live.

Please consider stopping it, and if that is impossible doing all you can to make sure that this area is not negatively impacted. Thank you.

Response to Comment No. 337-9

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 337-2 through 337-8.

Comment Letter No. 338

Christopher Lord
27748 Summer Grove Pl.
Santa Clarita, CA 91354-1895

Comment No. 338-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 338-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

I am writing to comment on the CBS Television City expansion. As a 50 year resident of the neighborhood, I have seen a lot of change. This one is the largest and most serious to date.

Response to Comment No. 341-1

This introductory comment is identical to Comment No. 86-1, but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 341-2

I would love to provide feedback on the project, but the draft EIR says the plan is still conceptual and the applicant would be given flexibility. My understanding is this is why the applicant is asking for a 20-year development agreement. I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

Response to Comment No. 341-2

This comment is identical to the first paragraph in Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment No. 341-3

The proposal only has 5,300 parking spaces. This facility will be staffed by 8,000 employees and will also bring with it and thousands of audience members as well, where will the overflow parking be and has that even been studied?

Response to Comment No. 341-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and

prevent spillover parking. As discussed therein, the Project no longer proposes offsite parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The comment regarding the number of audience members is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation.

Comment No. 341-4

This project is projected to need 60,000 truck trips to complete its construction. The city does not lay out if it has studied how the proposed staging area for these trucks will affect Loyola High school, Kaiser hospital, the Holocaust Museum, or the historic cemetery. I would ask that each of these important community assets be studied individually so that we can clearly see how the community will be changed.

Response to Comment No. 341-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction truck trips.

All haul truck staging locations would be provided onsite, and, as such, no haul trucks would be idling offsite. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 341-5

When will the community be allowed to give public input and weigh in on the actual design, not a plan that says things like the company “may make improvements” or could be two decades of construction?

How much further will the project progress before we are provided the detailed information we deserve?

Response to Comment No. 341-5

This comment is identical to the second and third paragraphs in Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment Letter No. 342

Ginny Lubbin
7370 Rosewood Ave.
Los Angeles, CA 90036-1918

Comment No. 342-1

First I want to say how grateful I am and have been for all your help and work over the years of your term. You have been the Councilman our district has had and I can say that with experience!

Response to Comment No. 342-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 342-2

I am hoping that you feel the TVC 2050 is way to [sic] big for our community. It is!!!!

The size, traffic and impact of construction to our neighborhood life would be catastrophic.

Response to Comment No. 342-2

Refer to Response to Comment No. 11-3 regarding the size of the project. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment. Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the Project's construction traffic impacts.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 342-3

I think the most frightening part of the tremendous scope of the project will be the extensive dirt and ground water removal. Trucking out acres of dirt and pumping out hundreds of cubic feet of water will destroy that geological table. Perhaps they could scale down the need to excavate by cancelling the need to have an underground delivery center.

Response to Comment No. 342-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the Project's construction traffic impacts, including impacts from haul trucks.

Refer to Response to Comment No. 11-5 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts. Further, as discussed in Response to Comment Nos. 3-7 and 11-25, dewatering would be limited to temporary dewatering during construction, and there will be no long-term impact on the water table in the vicinity of the Project due to dewatering.

The Project does not include an underground delivery center, as incorrectly stated in this comment.

Comment No. 342-4

In addition their proposed use of Grove Drive for both construction and the final delivery center is not workable.

Currently Grove Drive has daily south bound one lane blockages for Erewhon grocery, the Grove loading dock and valet parking. When construction begins and the addition to the Holocaust museum takes place this also effect traffic. Then add TVC construction and final daily deliveries and workers of 5000—truly I cannot imagine what my life living here will be like.

Response to Comment No. 342-4

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access and use of The Grove Drive. Refer to Topical Response No. 10, Trip Generation.

The primary access points for construction would be from Beverly Boulevard and Fairfax Avenue. The existing blockages along The Grove Drive are caused by the Erewhon market and the Broadcast Center Apartments valet parking and not related to the Project.

Comment No. 342-5

I have lived in this area for 40 years. I can tell you I cannot handle anymore traffic or pollution! When is enough enough?

Thank you for taking your time to listen to my concerns and your continued help in keeping yours and my neighborhood a great place to be.

Response to Comment No. 342-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 342-2 through 342-4.

Comment Letter No. 343

Norma Luna
118 S. Hayworth Ave., Apt. 1
Los Angeles, CA 90048-3672

Comment No. 343-1

As a 20 year resident of this area, I am very concerned about the amount of traffic this project will bring.

Response to Comment No. 343-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please note that under SB 743, traffic congestion is not a CEQA impact; refer to Topical Response No. 12, Safety and Congestion. Specific issues raised by the commenter are addressed in Response to Comment Nos. 343-2 and 343-3.

Comment No. 343-2

I cannot find clear information as to the number of trucks needed to access the TVC project to build this project. We know that the project has to excavate over 700,000 cubic yards of dirt. Depending on truck size that is anywhere from 50,000 to 70,000 diesel dump trucks. Then there are tens of thousands of trucks to bring concrete to the site. A typical concrete truck carries about 8 to 10 cubic yards. How many cubic yards of concrete will this project take to build the parking structures, foundations and other concrete structures?? How many trucks to deliver the rebar, steel, decking, sheet rock, glass, exterior walls, and HVAC, plumbing and electrical equipment will be needed?? How big are some of these trucks??

Response to Comment No. 343-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the overall construction schedule and the estimate of the construction trip generation. As discussed therein and as shown in Table IV.I-11 of the Draft EIR, the excavation/foundation subphase is anticipated to include up to approximately 640 total truck trips per day (320 truck trips in and 320 truck trips out of the Project Site), comprising approximately 300 haul trucks and approximately 20 delivery trucks, resulting in up to approximately 107 truck trips per hour on average. The mat foundation phase, which would only occur for five days and consists of approximately 1,000 truck trips per day (500 truck trips in and 500 trucks out), is the subphase with the greatest number of truck trips. Also note that the delivery trips associated with rebar, steel, decking, sheet rock, glass, exterior walls, HVAC,

plumbing, and other construction materials are included in the truck trips discussed in Topical Response No. 14 and are fully accounted for in the analyses within the Draft EIR. The construction trucks would range in size, with the largest trucks consisting of a full-size semi-truck (WB-40 classification).

Comment No. 343-3

Is this all going to be brought up and down Fairfax? Has anyone in the Planning Department actually driven Fairfax? Do you know how many lanes Fairfax is? If this project is built in 3 years as has been suggested in the Draft EIR, can you tell the public how hundreds of thousands of truck are required?

Thank you for your time.

Response to Comment No. 343-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Regarding the number of trucks, see Response to Comment No. 343-2.

Comment Letter No. 344

118 S. Hayworth Ave., Apt. 1
Los Angeles, CA 90048-3672

Comment No. 344-1

As a 20 year resident of this area, I am very concerned about the amount of traffic this project will bring.

Response to Comment No. 344-1

This introductory comment is identical to Comment No. 343-1, but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 344-2

I cannot find clear information as to the number of trucks needed to access the TVC project to build this project. We know that the project has to excavate over 700,000 cubic yards of dirt. Depending on truck size that is anywhere from 50,000 to 70,000 diesel dump trucks. Then there are tens of thousands of trucks to bring concrete to the site. A typical concrete truck carries about 8 to 10 cubic yards. How many cubic yards of concrete will this project take to build the parking structures, foundations and other concrete structures?? How many trucks to deliver the rebar, steel, decking, sheet rock, glass, exterior walls, and HVAC, plumbing and electrical equipment will be needed?? How big are some of these trucks??

Response to Comment No. 344-2

This comment is identical to Comment No. 343-2. Refer to Response to Comment No. 343-2, above.

Comment No. 344-3

Is this all going to be brought up and down Fairfax? Has anyone in the Planning Department actually driven Fairfax? Do you know how many lanes Fairfax is? If this project is built in 3 years as has been suggested in the Draft EIR, can you tell the public how hundreds of thousands of truck are required?

Thank you for your time.

Response to Comment No. 344-3

This comment is identical to Comment No. 343-3. Refer to Response to Comment No. 343-3, above.

Comment Letter No. 345

Ben Mack

Comment No. 345-1

In this time of economic uncertainty, it's nice to see a project on the drawing board that will do so much to benefit the economy. Television City's studio renovation and modernization project, TVC 2050, will create thousands of jobs and will help meet demand for production space in Los Angeles.

The project will generate approximately \$2.4 billion annually in new economic output upon completion and approximately \$2.1 billion in total economic output during construction.

A project with these kinds of benefits doesn't come along very often. Since the Draft EIR concluded that TVC 2050 will have no significant long-term operational impacts and short-term temporary impacts in only two areas during construction, I would hope that this project will move through the approval process in a timely manner.

We need to keep our economy growing, and keep the entertainment industry thriving right here in Los Angeles.

Response to Comment No. 345-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 346

Casey Maddren
2141 Cahuenga Blvd., Apt. 17
Los Angeles, CA 90068-2781

Comment No. 346-1

I would like to submit the following comments on the TVC 2050 Project & Specific Plan EIR. While, in general, I support the expansion of production facilities at Television City, the EIR fails to provide adequate information to accurately assess the project's impacts with regard to air quality, greenhouse gas emissions, transportation and solid waste. I'm also concerned about the project's impact on this important historic resource, which helped to define the LA landscape in the 20th century.

My detailed comments are below. Thank you for your time.

Casey Maddren
2141 Cahuenga Blvd., Apt. 17
Los Angeles, CA 90068

Response to Comment No. 346-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 346-2 through 346-18.

Comment No. 346-2**TVC 2050 EIR COMMENTS****Project Description**

The project description outlines the development of the Television City campus, allowing for the construction of up to 1,626,180 square feet of new sound stages, production support, production office, general office, and retail uses, with buildout taking place either within a 32-month period or over the next 20 years. The project description says that there could be up to 350,000 sq. ft. of sound stages, although on page II-16 it notes that "The permitted sound stage floor area may be increased from 350,000 square feet up to a total of 450,000 square feet in exchange for decreases in other uses."

The problem is that the project description describes a film and TV production facility with up to 450,000 sq. ft. of sound stages, but subsequent sections of the EIR do not analyze the activities that actually take place in such a facility. Film and TV production facilities are a unique class, with specific needs with regard to production activities and transportation. But the EIR sections on air quality, greenhouse gas emissions and transportation do not acknowledge this.

Response to Comment No. 346-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 regarding the Project Description and proposed Specific Plan. Refer to Topical Response No. 1 and Response to Comment No. 9-14 regarding the proposed Land Use Exchange Program, which was comprehensively analyzed in the Draft EIR. Refer to Appendix FEIR-3 of this Final EIR, which discusses the maximum impact scenarios that were analyzed for each environmental topic. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 regarding the studio uses that would occur on-site. Additionally, refer to Response to Comment Nos. 346-3 to 346-18 below with regard to how the transportation impact analysis for the Project accounted for the proposed studio uses. Also refer to Response to Comment Nos. 26-28 and 26-E.1-28 regarding how production activities, including basecamps and trucks, have been accounted for in the air quality and GHG analyses.

Comment No. 346-3

Comparable production facilities with similar sound stage capacity in terms of square footage often have their own fleet of vehicles. Universal, Fox and Warner Bros. all have fleets of vehicles that range from golf carts to heavy duty diesel trucks. Warner Bros.' transportation fleet maintains over 270 owned and leased vehicles on the studio's main lot. A description of the vehicles commonly contained in studio fleets can be found in the ACME Directory of Film + TV.

<https://www.theacme.com/directory/transportation-car-truck-studio-rental>

Studio fleets commonly contain 2-axle & 3-axle tractors, stake bed trucks, camera trucks, 5 and 10 ton trucks, grip and electric trailers, passenger and cargo vans, shuttle busses and forklifts. None of these vehicles are mentioned in the EIR.

It would not be uncommon for a production facility the size of TVC 2050 to maintain some kind of studio fleet. And if there is no on-site studio fleet, then crews will still have to bring vehicles of their own to support their productions. The operation of a facility the size of TVC 2050, with the number and size of sound stages proposed, will inevitably involve the use of a range of vehicles, including 10 ton trucks, stake bed trucks, forklifts, shuttle

busses, etc., but none of this is covered in the EIR. Strangely, the EIR sections on air quality, greenhouse gas emissions and transportation do not make any mention of the kinds of vehicles listed above in connection with the project's operational phase. In fact, these three sections only mention trucks in the most general terms, without offering any specific details related to the actual project. The transportation section assures us that the project will not generate more than 100 truck trips per day, but offers no specific data to show how it reached that conclusion.

Response to Comment No. 346-3

Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation. The estimate of truck trips to/from the Project is based on a combination of traffic counts of the existing TVC driveways and interviews with MBS, the largest independent operators of studio complexes and sound stages in the nation. The estimate of trucks associated with the Project includes:

Semi-Trailer Trucks (Heavy Trucks)	18/day
Single Unit and Box Trucks (Light Trucks—10 ton)	43/day
Delivery Trucks (Light Trucks—5 ton)	<u>22/day</u>
Total	83/day

Of this total, the semi-trailer trucks would be primarily WB-40 trucks. The occasional larger truck (WB-67) would enter the Project Site, but it is estimated that this would not occur on a daily basis.

The Project does not intend to maintain a studio-owned fleet of trucks. Even if the Project changed its operation and had a studio fleet on-site, the 83 trucks in/out of the Project Site on a given day would still be the appropriate estimate.

In addition to these trucks, the general office space in the Project would also generate truck activity but at a much lower level. The use of semi-trucks for general office space is typically limited to moving vans to move businesses in and out of the office floors, which happens infrequently. Certainly UPS, FedEx, and Amazon-type delivery trucks would also serve the general office space.

The analyses of air quality, GHG emissions, and transportation in the Draft EIR include these truck trips.

Please note that the SCAQMD threshold for HRAs is 100 trucks per day, not 100 truck trips as incorrectly stated in the comment (refer to page IV.A-72 of the Draft EIR).

Also shown in Table II-10 in Topical Response No. 10, the Project would include 83 trucks per day, which is below the threshold cited above.

Comment No. 346-4

It is troubling that, on page 12 of Appendix B, Air Quality & GHG Emissions, the EIR says it uses trip generation calculations based on the assumption that TVC 2050 is a mixed-use project. This is completely inaccurate. The project description makes it clear that this project is completely different from what is commonly defined as a mixed-use project. Even more troubling, in the subsequent worksheets showing CalEEMod data, it appears that calculations for the 450,000 sq. ft. of sound stages are based on the assumption that this part of TVC 2050 functions as an industrial park. This is also completely inaccurate.

Response to Comment No. 346-4

This comment misrepresents the trip generation discussion on page 12 of Appendix B of the Draft EIR. The Project is not described as a mixed-use project. Instead, a description of the LADOT VMT Calculator methodology was provided. Specifically, that model incorporates EPA MXD equations to calculate trip reductions for multi-use developments. Please see Response to Comment No. 26-E.1-23 for a discussion of the Draft EIR trip generation rates. In addition, please see Response to Comment No. 26-E.1-27 for a discussion of the selection of land use types (e.g., industrial park) within CalEEMod.

Comment No. 346-5

It appears that there is no accepted standard method for analyzing trip generation rates and emissions for film and TV production facilities. In fact, there is very little available data on trip generation rates and emissions for these uses. However, the EIR does not even make a good faith effort to analyze impacts from these activities. Unless the developer makes a clear commitment to prohibit the use of 10 ton trucks, stake bed trucks, shuttle busses, etc. on the TVC 2050 campus, the EIR must be updated to include information about the use of these vehicles.

Response to Comment No. 346-5

Refer to Response to Comment No. 346-3 and Topical Response No. 10, Trip Generation. The truck trip generation of the Project under full operating conditions was made based on empirical data and on the experience of seasoned operators of similar facilities. These truck trips are included in the trip generation analysis of the Project and, therefore, are already included in the traffic operations analyses requested by LADOT, as well as the operational air quality and noise analyses included in the Draft EIR.

Comment No. 346-6**Air Quality**

The EIR section on air quality only includes discussions of trucks in general terms, and makes no mention of the vehicles commonly used at a film and TV production facility. Again, the developer must either make a firm commitment to prohibiting the use of heavy-duty vehicles on the lot, or make a good faith effort to estimate what kind of vehicles will be used in production. Even those vehicles not maintained on the site itself, but which are expected to be commonly used in production activities should be disclosed.

Response to Comment No. 346-6

As stated on pdf page 11 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR and discussed in Response to Comment No. 26-E.1-16, the vehicle fleet mix used in the Project's air quality and GHG analyses were based on the Los Angeles County vehicle fleet mix (which includes trucks) from EMFAC2017, the version of EMFAC incorporated into the current version of CalEEMod at the time of Draft EIR publication. Heavy-duty vehicles were included in the air quality analysis provided in the Draft EIR. As discussed in Response to Comment No. 26-E.1-38, ZE and NZE truck use will occur in the future, and it is not within the Project's operational influence to ensure that only ZE or NZE vehicles operate at the Project Site. During operations, numerous independent productions will utilize on-site facilities, each with their own unique operational needs. These productions will utilize various independent contractors, who may themselves subcontract other entities, including small businesses, to provide goods and services to meet those needs. There is simply no feasible mechanism to fairly apply and enforce such a requirement given the diverse needs of, and multitudes of entities involved in, the Project's unique studio operational uses. In addition, Project Design Feature GHG-PDF-3 has been added in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of electrical hookups at all basecamp areas. Refer to Response to Comment No. 346-3 regarding the number and types of production trucks.

Comment No. 346-7

As disclosed on page IV.A-26, "According to CalEnviroScreen, the Project Site is located in the 75th percentile, which means that the Project Site is worse than average in terms of pollution in comparison to other communities within California." Air quality in Central Los Angeles is not good, and the EIR needs to assess impacts from heavy duty vehicles that might reasonably be expected to be used during regular operations.

Response to Comment No. 346-7

This comment correctly identifies that the Draft EIR disclosed that the Project Site is located in the 75th percentile for air pollution according to CalEnviroScreen. As discussed above in Response to Comment No. 346-6, the vehicle fleet mix used in the Project's air quality and GHG analyses were based on the Los Angeles County vehicle fleet mix (which includes trucks) from EMFAC.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds and impacts would be less than significant.

Comment No. 346-8

The EIR also puts forward the ridiculous notion that long-term buildout would result in an overall reduction in operational emissions. The following paragraph is found on page IV.A-75:

From an operational standpoint, a long-term buildout would also result in an overall reduction in operational emissions due to more stringent requirements in the future. As an example, Title 24 requirements apply to projects based on the date when a building permit is issued. Thus, buildings constructed at a later date would be required to comply with subsequent versions of Title 24, which typically include increasingly stringent energy conservation requirements and associated reductions in energy use.⁸⁹ In addition, Governor Gavin Newsom signed Executive Order No. N-79-20 on September 23, 2020, which will phase out sales of new gas-powered passenger cars in California by 2035, with an additional 10-year transition period for heavy vehicles. With more stringent fuel economy requirements in subsequent years, fuel usage associated with the Project would similarly decrease. As such, a long-term buildout would reduce the Project's operational emissions.

This assertion can't be taken seriously. With absolutely no data, with no information about the kinds of vehicles to be used on site, and making the questionable assumption that California will actually enforce compliance with the law, the EIR claims long-term build-out will reduce operational emissions. With no data to support it, this claim is not credible.

Response to Comment No. 346-8

Contrary to what is stated in this comment, the Draft EIR provides substantial evidence that long-term buildout would result in an overall reduction in operational

emissions in comparison to a Year 2026 buildout. Buildout years 2026 and 2043 (long-term buildout) were analyzed using SCAQMD's recommended CalEEMod model. The results provided in Table IV.A-7 for Year 2026 on page IV.A-64 and Table IV.A-12 for Year 2043 on page IV.A-76 of the Draft EIR show that regional operational emissions would decrease under a long-term buildout scenario. The information provided above in this comment further supports that future more stringent regulations would reduce emissions. However, the Draft EIR analysis conservatively did not quantify the additional reduction in emissions. As an example, the Project would comply with the City's Ordinance No. 187714 (passed in December 2022), which requires all newly constructed buildings to be all electric. The reduction in emissions as a result of compliance with this new City ordinance was not accounted for in the Draft EIR.

The commenter, without evidence, also presumes that environmental laws will not be enforced or affect the fleet mix and inaccurately states that this invalidates the Project's air quality analysis. However, even without state regulations, federal requirements for cleaner heavy-duty equipment, such as the USEPA Clean Trucks Plan, will lead to cleaner, more efficient engine technologies and greater application of ZE vehicle technologies in heavy-duty vehicle fleets over the long-term buildout scenario.

Comment No. 346-9

Greenhouse Gas Emissions

Again, the EIR section on greenhouse gas emissions does not offer anything more than very general references to trucks, and offers no specific information on the use of vehicles commonly associated with film and TV production. Whether these are housed on-site as part of the facility's fleet, or whether they're brought to the site by the crews working there, the EIR needs to offer information on heavy duty trucks, diesel vehicles, etc., that will be used in the course of production activities at the TVC 2050 campus.

Response to Comment No. 346-9

Please refer to Response to Comment No. 346-6 for a discussion of the vehicle fleet mix used in the Draft EIR for evaluating the Project's air quality and GHG analyses. Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, and Response to Comment No. 26-E.1-16 for a discussion of Project truck trip generation during operation.

The Draft EIR disclosed all of the information required by CEQA to provide a comprehensive analysis of the Project's impacts. As discussed in Response to Comment No. 26-E.1-37, the threshold of significance adopted by the City for the GHG analysis is qualitative and based on the Project's consistency with appropriate laws, regulations,

plans, and policies. Quantitative information about Project trucks is provided where applicable in the Draft EIR, including, but not limited to, in Section IV.A, Air Quality; Section IV.K, Transportation; Appendix B; and Appendix M.

Comment No. 346-10

The EIR offers a single Production Design Feature (PDF) specifically addressing mobile emissions, but it does not address the actual range of vehicles to be used at the site, or the realities of travel behavior particular to film and TV production. We see the following PDF is offered on page IV.E-51:

Project Design Feature TR-PDF-2 implements a TDM Program that will include an educational program/on-site coordinator, bicycle parking and amenities, pedestrian amenities, shuttle service to the planned Metro D (Purple) Line Wilshire/Fairfax station, a ride-share matching and carpool/vanpool program, first-mile/last-mile options, a Guaranteed Ride Home Program, and incentives for alternative travel modes. As discussed further below, the Project would also provide multi-modal transportation solutions, including an on-site Mobility Hub, to connect with surrounding public transit lines, encourage alternative means of transportation, and focus growth in a high-density, jobsrich [sic] area in close proximity to transit, which would further encourage the use of alternative transportation. These TDM measures would serve to reduce GHG emissions.

This PDF is inadequate in the following ways:

- It does not make any effort to discuss the range of vehicles that will be used on-site.
- It does not acknowledge the fact that film and TV production starts early in the morning and continues late into the night, therefore offering different challenges than a standard Transportation Demand Management program.
- It offers no information on specific lines that employees and crews might use to access the site, no information on Metro/DASH timetables or operating hours, and no information on the hours the shuttle will be in operation or frequency with which it will serve the site.

Response to Comment No. 346-10

Refer to Response to Comment No. 346-3 for a summary of the range of trucks serving the Project Site.

The comment is correct that typical studio hours for the television and film industry start early in the morning and sometimes continue into the evening hours. However, the

trip generation rates in the Transportation Assessment (Appendix M.1 of the Draft EIR) take this hourly pattern into account. Empirical counts at the Project driveways, separating trucks and cars, verified the trip generation rates use in the operational analyses. The work VMT per employee is not sensitive to the hourly patterns of employee travel to/from the Project Site and, therefore, would not affect the CEQA conclusions of less than significant transportation impacts reported in the Draft EIR.

The proposed TDM Program has been tailored to the studio nature of the Project. Topical Response No. 11, Transportation Demand Management, shows many examples of entertainment venues that have achieved TDM successes far above the levels studied for the Project.

In terms of existing transit service to the Project Site, Figure 12 on page 43 of the Transportation Assessment shows the bus routes currently serving the Project Site while Table 3 on page 57 shows the operating hours for these lines, demonstrating that most of the lines begin service early in the morning (4 to 6 A.M.) and go well into the evening (7:30 P.M. to 1 A.M.).

Transit service, like the roadways serving the Project Site, is busiest during the morning and afternoon peak commute hours. The fact that studio workers arrive early and leave early means that they have a better opportunity to use the transit system before its occupancy levels peak. Table 15 on page 140 of the Transportation Assessment shows that the Project is seeking to shift a minimum of approximately 134 people in the morning peak hour and 145 people in the afternoon peak hour from their cars to transit. Tables 4A and 4B on pages 58 and 59 of the Transportation Assessment show that today's bus service has approximately 2,000 empty seats in each of these peak hours to serve the Project employees and visitors, without even considering the opening of the Metro D (Purple) Line Wilshire/Fairfax Station.

The transit and TDM goals of the Project are achievable even before the Wilshire/Fairfax Station opens, and the proposed shuttle system to the station will only enhance that ridership.

Comment No. 346-11

Furthermore, the City often requires developers to outline TDM programs in conjunction with large scale projects, but the City has never made any meaningful effort to gather data on TDM programs or to assess whether they achieve any meaningful results. There is a negligible amount of data available on results from other TDM programs that include bike parking, pedestrian amenities, shuttle service, and carpool/vanpool programs. In fact, in many cases the City has made no effort to actually confirm that these measures are even implemented. A recent example is the failure of developer Relevant to actually implement

a carpool/vanpool program or to install bike parking at its Dream Hotel. The City has been informed that Relevant has failed to follow through on these actions and has made no effort to enforce compliance. Therefore, I have to ask why we should believe that the City will enforce compliance with the TDM proposed for the TVC 2050 project.

Response to Comment No. 346-11

Refer to Topical Response No. 11, Transportation Demand Management, for a description of the proposed TDM Program, transit usage, and examples of the effectiveness of TDM and transit plans in other comparable California projects.

The new TDM Ordinance, under consideration by the City Council now, will require the Project to conduct annual average vehicle ridership surveys to show that the TDM goals of the Project are indeed being met. If they are not being met, additional TDM measures would be required until the target is achieved. Thus, the City will have the authority to enforce the TDM Program.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 346-12

Appendix B, Air Quality & GHG Emissions

As noted above, while the project description offers one description of the uses and activities associated with TVC 2050, in Appendix B the EIR offers different and contradictory descriptions which call into question whether the data included in the CalEEMod worksheets provides an accurate assessment of emissions. On page 12 of Appendix B we find the following paragraph:

Previously, trip generation for land uses was calculated based on survey data collected by the Institute of Transportation Engineers (ITE). However, these ITE trip generation rates were based on data collected at suburban, single-use, free standing sites, which may not be representative of urban mixed-use environments. Beginning in 2019, the USEPA has sponsored a study to collect travel survey data from mixed-use developments in order provide a more representative trip generation rate for multi-use sites. Results of the USEPA survey indicate that trip generation and VMT are affected by factors such as resident and job density, availability of transit, and accessibility of biking and walking paths. Based on these factors, the USEPA has developed equations known as the EPA Mixed-Use Development (MXD) model to calculate trip reductions for multi-use developments. The LADOT VMT Calculator incorporates the USEPA MXD model and accounts for project

features such as increased density and proximity to transit, which would reduce VMT and associated fuel usage in comparison to free-standing sites.

Let's be clear. The TVC 2050 project proposes the construction/expansion of a film and TV production facility. The standard definition of the term "mixed-use project" under the LAMC is a project that combines commercial uses and dwelling units in order to reduce vehicle trips and vehicle miles traveled by locating residents, jobs, and services near each other. While one of the project alternatives apparently incorporates some residential uses, it's clear that the developer's preferred alternative is to construct/expand a major film and TV production facility on the site. Using trip generation rates associated with a mixed-use project to calculate VMT and emissions data is completely inappropriate. Mixed-use projects do not involve the wide range of vehicles used at film and TV production sites, nor does the description of a mixed-use project cover the days/times of vehicle trips associated with film and TV production. For this reason, Appendix B does not give an accurate assessment of emissions for the project.

Response to Comment No. 346-12

The definition of mixed-use for purposes of VMT is different than that used in land use planning. There is no requirement that a project include residential land uses to be considered "mixed-use" as suggested in the comment. For purposes of VMT, a mix of commercial uses is permissible. The Project includes sound stages, production support, production and general offices, and retail—all of which have varying trip generation characteristics, joint trips, interaction among land uses, and varying seasonal and daily use activity patterns common to mixed-use projects. The trip generation rates used to calculate the Project trip levels isolated the trip characteristics of the individual land uses and the interaction between the land uses on the Project Site. The VMT analysis did not take any "credits" for mixed-use characteristics in the development of the work VMT per employee. Refer to Topical Response No. 8, Vehicle Miles Traveled.

Refer to Response to Comment Nos. 346-3 regarding the range of truck vehicles serving the Project Site.

Comment No. 346-13

Then, after saying the authors of the EIR used the mixed-use definition to determine trip generation rates, on page 25 of Appendix B, under 1.0, Project Characteristics, it appears that it was decided to analyze the sound stage portion of the project as an industrial park:

1.0 Project Characteristics

1.1 Land Usage

Floor Surface Area

Industrial Park 454,000.00

The table associates the industrial park use with a floor surface area of 454,000 sq. ft., which roughly corresponds to the amount of square footage for sound stages that would be allowed under the maximum buildout.

However, on page 102 of Appendix B we find the following under Table 4.2, which assesses trips generated during the operational phase:

4.2 Trip Summary Information

Average Daily Trip Rate

	<i>Weekday</i>	<i>Saturday</i>	<i>Sunday</i>
<i>Industrial Park</i>	0.00	0.00	0.00

Here we see that, while on page 25 of Appendix B the EIR authors appeared to be saying that the sound stages were being considered as industrial park space for the purposes of the CalEEMod analysis, they project that no trips at all will be associated with this use. **In fact, the authors project no trips generated for any of the uses listed except for user defined commercial.** [sic] It appears that now the authors have decided to yet another land use category to assess trips generated by the project:

	<i>Unmitigated</i>	<i>Mitigated</i>
	<i>Annual VMT</i>	<i>Annual VMT</i>
<i>User Defined Commercial</i>	22,310,515	22,310,515

Response to Comment No. 346-13

Refer to Response to Comment Nos. 26-E.1-27 and 26-E.1-28 for a discussion on the conservative nature of the CalEEMod land use modeling and its applicability to the Project's proposed land uses. The commenter incorrectly asserts that the CalEEMod analysis ignores VMT from sound stage uses. Please see Response to Comment No. 26-E.1-34 for an explanation of the industrial park land use, which was modeled as representative for Project-specific utilities demands. The VMT calculations identified in the User Defined Commercial line item on pdf page 102 of Appendix B of the Draft EIR are

representative of VMT estimated for all operations, as detailed further in Response to Comment No. 26-E.1-22.

Comment No. 346-14

Also, it seems that the number given under Unmitigated Annual VMT is exactly the same as under Mitigated Annual VMT. So while on page IV.K-33, under (f), TDM Strategies, the authors appear to be arguing that the proposed TDM strategies will serve as mitigation measures, Table 4.2, Trip Summary Information, shows absolutely no difference between mitigated and unmitigated VMT.

Response to Comment No. 346-14

This comment mischaracterizes the discussion on page IV.K-33 of Section IV.K, Transportation, of the Draft EIR, which describes the role of TDM strategies in the VMT Calculator in general. Page IV.K-33 states that “the VMT Calculator measures the reduction in VMT resulting from a project’s incorporation of TDM strategies as either project design features or mitigation measures.” As described in Section IV.K of the Draft EIR, the Project would include a TDM Program per Project Design Feature TR-PDF-2 (set forth on pages IV.K-37 to IV.K-40 of the Draft EIR); however, the CEQA transportation analysis did not account for the TDM measures to be conservative. The Draft EIR concluded that the Project’s transportation impacts would be less than significant. Accordingly, the TDM measures were not required to reduce any significant transportation impacts resulting from the Project. As the TDM measures are not mitigation measures, the reference table in this comment (Table 4.2, Trip Summary Information) within CalEEMod correctly showed no difference between mitigated and unmitigated VMT.

Comment No. 346-15

It’s also surprising that on page 107, under 8.0, Waste Detail, Appendix B offers no data at all for solid waste generation or associated emissions, either mitigated or unmitigated. We see only the following:

8.0 Waste Detail

8.1 Mitigation Measures Waste

Institute Recycling and Composting Services

Do the authors expect us to believe that no GHG emissions will be generated by the disposal of solid waste in landfills? This contradicts what numerous agencies, including the EPA, have found:

METHANE EMISSIONS FROM LANDFILLS

Municipal solid waste (MSW) landfills are the third-largest source of human-related methane emissions in the United States, accounting for approximately 14.5 percent of these emissions in 2020.

Basic Information about Landfill Gas from US EPA [https://www.epa.gov/lmop/basic-information-about-landfill-gas#:~:text=Methane%20Emissions%20from%20Landfills,-Note%3A%20All%20emission&text=Municipal%20solid%20waste%20\(MSW\)%20landfills,of%20these%20emissions%20in%202020](https://www.epa.gov/lmop/basic-information-about-landfill-gas#:~:text=Methane%20Emissions%20from%20Landfills,-Note%3A%20All%20emission&text=Municipal%20solid%20waste%20(MSW)%20landfills,of%20these%20emissions%20in%202020).

The idea that solid waste created by the project will generate no significant GHG emissions is ridiculous.

Response to Comment No. 346-15

The commenter incorrectly claims that the information included on pdf page 107 of Appendix B of the Draft EIR (CalEEMod output files) means that the Project would not result in GHG emissions generated by the disposal of solid waste in landfills. As discussed on page IV.E-81 and shown in Table IV.E-11 of the Draft EIR, the Project's GHG emissions from solid waste generation would result in a total of approximately 133 MTCO₂e per year, which accounts for a 76-percent recycling/diversion rate consistent with the City of Los Angeles Bureau of Sanitation's Zero Waste Progress Report. The commenter's statements regarding information about landfill gas from the USEPA are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 346-16

The Initial Study and the EIR section on Other CEQA Considerations assert there will be no significant impacts related to solid waste, but offer no actual evidence to support this conclusion. We are asked to believe that 350,000 to 450,000 square feet of sound stages, with all the activities associated with film and TV production, including set construction, costume preparation and catering, in addition to the proposed office space, will have no significant impacts with regard to solid waste. This is not credible, and the EIR offers no evidence of any kind to support this assertion.

The EIR section Other CEQA Considerations states that the project will comply with all existing laws regarding the disposal and recycling of solid waste, but this is not true. AB 939 requires all municipalities to recycle at least 50% of their solid waste, but the City of LA has never achieved this rate of recycling, and in fact, has never even gotten close. The project will be served by the City's RecycLA program, which actually only recycles between

20% and 30% of solid waste collected. While the City may have adequate landfill capacity to dispose of the remainder, this will produce methane, a greenhouse gas far more potent than CO₂. I quote again from the EPA web site:

Methane is a potent greenhouse gas 28 to 36 times more effective than CO₂ at trapping heat in the atmosphere over a 100-year period, per the latest Intergovernmental Panel on Climate Change (IPCC) assessment report.

The EIR does not appear to make any effort to quantify the amount of operational waste that will be generated by the project, nor does it appear to make any attempt to assess how much waste will be diverted to recycling or sent to landfills. A project the size of TVC 2050 will undoubtedly produce large amounts of solid waste during its operational phase. In the total absence of any data or evidence to support their views, the EIR authors' assertion that the project will have no significant impacts with respect to solid waste and associated GHG emissions is not credible. And the complete lack of any data on waste in Other CEQA Considerations and CalEEMod calculations shows that the authors haven't even bothered to consider this issue.

Response to Comment No. 346-16

The comment incorrectly claims that the Draft EIR did not evaluate solid waste impacts. Refer to pages 79 through 83 of the Initial Study included as Appendix A of the Draft EIR and pages VI-33 through VI-35 of Section VI, Other CEQA Considerations, of the Draft EIR. As shown therein, the Project's estimated net increase of approximately 643 tons per year for solid waste disposal represents approximately 0.0004 percent of the remaining capacity (148.40 million tons) at the Class III landfills serving the County of Los Angeles. The analysis was conducted in accordance with City methodology and used solid waste generation rates provided by LASAN. The Initial Study correctly concluded that impacts related to solid waste would be less than significant.

As discussed on page IV.E-81 of the Draft EIR, GHG emissions related to solid waste were calculated using the CalEEMod emissions inventory model, which multiplies an estimate of the waste generated by applicable emissions factors provided in Section 2.4 of USEPA's AP-42, Compilation of Air Pollutant Emission Factors. CalEEMod default solid waste generation rates for each applicable land use were selected for the analysis. This comment does not provide substantial evidence as to why the solid waste generation rates used in the Draft EIR or the diversion/recycling rates included in the City's Zero Waste Progress Report would not be applicable to the Project. As discussed in Response to Comment No. 346-15, CalEEMod was used to calculate both the solid waste generation rate and related GHG emissions. The commenter's statements regarding methane as it relates to GHG emissions is noted for the record.

Comment No. 346-17**Transportation**

It's hard to assign any credibility to the EIR section on transportation, since, as discussed above, the authors of the EIR apparently couldn't decide whether the project should be assessed as a film/TV production facility, a mixed-use project, an industrial park or user defined commercial. Also, the EIR section on transportation does not offer anything more than very general references to trucks, and offers no specific information on the use of vehicles commonly associated with film and TV production. Whether these are housed on-site as part of the facility's fleet, or whether they're brought to the site by the crews working there, the EIR needs to offer information on heavy duty trucks, diesel vehicles, etc., that will be used in the course of production activities at the TVC 2050 campus.

Again, as discussed above, the EIR offers a single Production Design Feature (PDF) specifically addressing mobile emissions, but it does not address the actual range of vehicles to be used at the site, or the realities of travel behavior particular to film and TV production. And, according to Appendix B, Table 4.2, Trip Summary Information, the CalEEMod calculations show no difference between mitigated and unmitigated annual VMT.

Response to Comment No. 346-17

The Project is a studio project and is also a mixed-use project for purposes of VMT by the very nature of its combination of different land use components. Section II, Project Description, of the Draft EIR presents a clear description of the proposed land uses. The Transportation Assessment included as Appendix M.1 of the Draft EIR analyzes the Project with the best information available in terms of trip generation, distribution, and travel characteristics.

Refer to Response to Comment No. 346-3 regarding the range of vehicles.

See Topical Response No. 10, Trip Generation, regarding the truck and automobile trip generation estimates during Project operation. Truck trips are not factored into the work VMT per employee so the discussion of truck trips in the CEQA portion of the Transportation Assessment and in the Draft EIR is limited as noted in the comment. However, the trip generation rates used in the operational non-CEQA analysis included truck trips in the analysis. The primary effect of trucks on the transportation system involves those trucks entering and leaving the Project Site throughout the day, and those truck trips are included in the trip assignments and the traffic operation analyses summarized in the non-CEQA portions of the Transportation Assessment.

Refer to Response to Comment Nos. 346-13 and 346-14, above, for a discussion of air quality.

Comment No. 346-18

The EIR section on transportation also does not appear to make any serious effort to assess impacts caused by traffic intrusion into residential neighborhoods. Since there are residential neighborhoods on three sides of the project, impacts from intrusion must be given serious consideration.

Response to Comment No. 346-18

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment Letter No. 347

Roman Madril
800 S. Fairfax St., Apt. 17
Los Angeles, CA 90036-4466

Comment No. 347-1

I have some issues with the TVC 2050 plan and the impacts it will bring to our Beverly/Fairfax neighborhood.

Response to Comment No. 347-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 347-2 through 347-6.

Comment No. 347-2

My main concern is with public safety and how I believe the development will have negative impacts in our area in that regard.

Response to Comment No. 347-2

As discussed in detail on pages IV.J.2-12 and IV.J.2-13 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR, the Project would include a number of security features including security cameras and 24-hour security personnel that would monitor the Project Site on a 24-hour basis. As also discussed therein, as well as in Response to Comment No. 16-5, LAPD has concluded that the Project's impacts associated with the need for police protection and associated police protection facilities would be less than significant.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 347-3

I saw in the Draft EIR that there will be a mobility hub added to the area to help mitigate some traffic, but I think this form of mitigation will be worse for the neighborhood. With public transportation, studies show transient people start showing in areas where they can hang out and gather, especially if it provides a sheltered area. Now, I sympathize with the

homeless, but I am also worried about the [sic] safety. How is the city going to address this issue? Where is the plan for how to handle teenagers on skateboards, the homeless who may need shelter, and people who have no other place to hang out? Is there a plan for additional police presence or some kind of police kiosk? People will not ride the transit or use the mobility hub if they do not feel safe and secure as well so that traffic mitigation idea may actually make things worse. If folks aren't going to take the bus they will drive and there will be additional busses not reaching capacity in the area which will add to the traffic.

Response to Comment No. 347-3

Refer to Topical Response No. 7, Mobility Hub. The Mobility Hub is a part of the Project and is not a mitigation measure as this comment incorrectly states. The Mobility Hub would be a private facility serving the Project's employees, visitors, and audience members, and it would be controlled by the Project's security personnel. With regard to the Project's security plan and associated security features, as well as the adequacy of LAPD police protection services to serve the Project Site, refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment No. 16-5. The comments regarding homeless and transient people, teenagers, public safety and bus capacity do not concern environmental issues under CEQA. Nevertheless, these comments are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 347-4

Ultimately, the point I would like to make in this letter is that this proposed development is not for this area. The size, the modernization, the huge number of people it will bring to the property, the many events—none of these aspects of the development are suited for the neighborhood. Why is the planned development considered a good fit and right for our neighborhood?

Response to Comment No. 347-4

This comment is substantively similar to Comment No. 172-3. Refer to Response to Comment No. 172-3 regarding the Project's compatibility with the surrounding area.

Comment No. 347-5

I am genuinely very concerned about my safety and the safety of my neighborhood. Will the developer do anything to help mitigate the public safety issues we are going to have? I feel like this traffic study in the DEIR does not paint the correct picture of the impact that our neighborhood is going to experience. Did the DEIR take into consideration how public safety is impacted by adding mobility hubs such as bus stations? What other means of

transportation could we consider other of [sic] busses? Clearly what needs to happen is that we need to slow way down on the process this proposal is going through and really examine the validity of this Draft EIR.

Response to Comment No. 347-5

Refer to Response to Comment No. 347-3 with regard to security and the Mobility Hub. With regard to neighborhood traffic, refer to Topical Response No. 9, Neighborhood Traffic Management Plan.

The City has allowed for adequate public participation in the CEQA process and has complied with all applicable laws and noticing requirements. Refer to Response to Comment No. 32-3.

The commenter's opinion regarding the pace of the CEQA process is nevertheless acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment No. 347-6

Why isn't this proposal being reviewed by other committees in our neighborhood council such as a committee that deals solely with transportation? It is imperative that we take our time with project and not rush it through because it is some billionaire trying to develop.

Response to Comment No. 347-6

The Mid-City West Neighborhood Council was included on the City's agency mailing list for the Project. Following the publication of the Draft EIR in July of 2022, the Project was considered during several public meetings before the Mid-City West Neighborhood Council's Planning and Land Use Committee and Executive Council in August and September of 2022, respectively, both of which voted to support the Project. Refer to Response to Comment Nos. 28-13 and 32-3 regarding public outreach and noticing. As discussed therein, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has engaged in an extensive outreach program.

Comment No. 347-7

Thank you for taking the time to read my letter and take my concerns into consideration.

Response to Comment No. 347-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 347-2 through 347-6.

Comment Letter No. 348

Miriam Majer
327 N. Alta Vista Blvd.
Los Angeles, CA 90036-2542

Comment No. 348-1

I'm writing regarding the draft EIR for the CBS Television Studio project. I am a 30 year resident and I am not very happy at the moment reading this document.

Response to Comment No. 348-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 348-2.

Comment No. 348-2

The application says the project will use 6x the current water use. I am a strong proponent of water conservation. Will the project actually use 6x the amount of current consumption or is that what will be allowed? I cannot water my grass yet they get 6 times the water? What will that amount of water be used for?

Where is that water going to come from? Won't that affect the availability of water for other needs the city and the actual community here needs? We have a serious water problem. What if the property uses change over time? Like more visitors for the sounds sages?

Response to Comment No. 348-2

Refer to Response to Comment No. 223-2 above regarding sources of the City's water supply and the proposed uses and Response to Comment No. 223-3 above regarding procedures if on-site uses subsequently change.

Comment No. 348-3

Thanks for responding to my questions.

Response to Comment No. 348-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-

makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 348-2.

Comment Letter No. 349

Sol Majer
327 N. Alta Vista Blvd.
Los Angeles, CA 90036-2542

Comment No. 349-1

The EIR says there will be thousands of trucks staged near Loyola High School. Thousands. Idling trucks spewing pollution near teenagers with developing brains. Why will those trucks be in that community? What regulations would allow that to happen? There are lots of people living there that don't make a lot of money. Has anyone looked at the environmental justice issues? Is that in the EIR? Where is the information about the impacts on people's health, not only from the trucks staged near the school but from all the truck traffic that will be coming?

Where have these possible consequences been identified and studied? If they haven't been yet, when are those studies going to be done?

Response to Comment No. 349-1

This comment is similar to Comment No. 332-5. Refer to Response to Comment No. 332-5, above.

Comment No. 349-2

Is the city really thinking of permitting developers to dump its pollution on the poor in order to make a few bucks is wrong. This should not go forward until health risks are studied at the very least and alternatives are seriously considered.

Response to Comment No. 349-2

This comment is substantively similar to Comment No. 332-6. Refer to Response to Comment No. 332-6, above.

Comment Letter No. 350

Mikel Mann
P.O. Box 515407
Los Angeles, CA 90051-6707

Comment No. 350-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 350-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 351

Jeff Mapes
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 351-1

Our economy needs all the help we can muster and TVC 2050 is a dream come true in terms of the economic benefits it will bring. This is a long-term investment in one of our cities greatest production facilities—Television City.

It's estimated that TVC 2050 will create 4,220 jobs during construction and 18,760 jobs during operations. That translates into \$2.1billion in total economic output during construction and \$2.4 billion annually in new economic output once the project is completed. With numbers like this, what's not to love?

It's rare to have such an amazing opportunity for growth that will do so much for the local community. I encourage your support for Television City's project

Response to Comment No. 351-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 352

David Marady

Comment No. 352-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 352-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 352-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 352-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 352-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 352-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 352-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 352-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 352-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 352-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 352-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 352-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 352-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 352-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 353

Jessica Marak
459 N. Edinburgh Ave.
Los Angeles, CA 90048-2307

Comment No. 353-1

The amount of sound stages proposed will overwhelm our neighborhood! 350,000–450,000sf [sic] of sound stages could be 20 to 25 stages. Even if it's 14 stages as the applicant has shown, that's too much production space on this site. How many production trucks will be going to and from the site each day for all of those sound stages? The Draft EIR does not say and that's critical for the community to understand.

Response to Comment No. 353-1

Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, and Response to Comment No. 346-3 regarding the truck trip generation estimates during Project operation.

Comment No. 353-2

Has the Draft EIR adequately analyze [sic] the impact of all of those trucks on air quality, greenhouse gases and traffic? It's impossible to tell because there is no explanation of how many production trucks are associated with stages each day. And how many of the stages will be used for audience shows? Today all of the stages are for audience shows. The traffic information makes no mention of the number of audience shows and the related traffic. Was that not included in the analysis? It could be thousands of additional cars.

Response to Comment No. 353-2

Audience trips are included in the trip generation rates for the sound stages; accordingly, the analysis of audience trips is included in the operational analyses requested by LADOT (Chapter 5 of the Transportation Assessment [Appendix M.1 of the Draft EIR]). On an annual basis, the audience trips would represent a small percentage of the total trips in and out of the Project Site. Refer to Topical Response No. 10, Trip Generation, for a description of the derivation of the trip generation estimates for the Project, as well as a discussion of the visitor trips and audience show trips to/from the Project Site.

The operational analyses of air quality and GHG emissions in the Draft EIR include these truck trips. Refer to the mobile emissions lines on Table IV.A-7 on page IV.A-64 of

Section IV.A, Air Quality, and Table IV.E-11 on page IV.E-78 of Section IV.E, Greenhouse Gas Emissions, of the Draft EIR.

With respect to traffic associated with truck trips, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 353-3

Where will they park?

Response to Comment No. 353-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment Letter No. 354

Karen Margarete
P.O. Box 691238
West Hollywood, CA 90069-9238

Comment No. 354-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 354-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 355

Solomon Margo
612 N. Laurel Ave.
Los Angeles, CA 90048-2321

Comment No. 355-1

We all know this is a vital industry for Los Angeles However, [sic] I am concerned about how my area will take on all of consequences of what is being proposed to expand the studio facilities at Television City because this is major project, and one that does not fit in our neighborhood.

Response to Comment No. 355-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 355-2 through 355-4.

Comment No. 355-2

First, the studio expansion will bring thousands of new employees driving thousands of cars. These workers won't all be from this area, and so my biggest question is, where will they all park? It seems like the studio's parking is already maxed out, and the EIR says that more than 5,000 new parking spaces are required. Where is that additional parking going to go? Is it going to spill into the neighborhood? And if they build these large parking structures, how will anyone get out of them during rush hour?

Response to Comment No. 355-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Additionally, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site.

Comment No. 355-3

And what happens if there is an emergency during that time? How will emergency response vehicles be able to get to Cedars Sinai in an emergency? There is gridlock now

that can keep an EMT vehicle stuck, not being able to get through bottlenecks in traffic. The application seems to minimize the problem so what assumptions were used in studying this issue?

Response to Comment No. 355-3

Refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, for information regarding emergency response times. As described therein, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

Comment No. 355-4

What is the smallest footprint possible for the objectives of the development? Sure they need sound stages to make big action movies, loud ones at that, but do they need thousands of square feet of office space? Did anyone look at a different set of options that maybe only included the production facilities and not all the offices? What offices are actually going to be used and for what purposes?

Response to Comment No. 355-4

Television City has been an operating studio within the Project Site since 1952 and will continue to operate as a studio upon completion of the Project. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed on pages II-10 to II-11 in Section II, Project Description, of the Draft EIR, the Project objectives include optimizing the currently underutilized studio and maximizing studio production capabilities by providing new technologically advanced sound stages combined with an adequate and complementary mix of state-of-the-art production support facilities, production office, and general office. The Project, as described in Section II, Project Description, of the Draft EIR (summarized in Table II-2 and depicted in Figure II-4, Conceptual Site Plan, of the Draft EIR), includes an operationally feasible balance of studio uses to meet modern production needs. The digitization of the production industry has created the need for much more office space relative to sound stage and production support space. Refer to Response to Comment Nos. 9-13 and 26-16 regarding the need for office space in modern studios. Also note that Section V, Alternatives, of the Draft EIR presented alternatives with reduced square footage.

Comment No. 355-5

This all seems like too much for my community to take in, especially since there have to be other viable options. Please listen to the community and take another look at whether this project is really necessary.

Thanks for listening.

Response to Comment No. 355-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 355-2 through 355-4.

Comment Letter No. 356

Stephen Marinko
624 N. Poinsettia Pl.
Los Angeles, CA 90036-1927

Comment No. 356-1

My name is Stephen Marinko, I am a resident of 13 years. I am very concerned about several things in the EIR for the studio project at the CBS building that need additional explanation.

Response to Comment No. 356-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 356-2

Why would this be an objective that is included in a review and assessment of impacts to the community and to the area of the project? The City should be caring about the lives and welfare of its residents, not whether some developer's investments achieve their anticipated return. What is the amount of this return? The EIR seems to reject alternatives because the developer doesn't come out AS far ahead financially. We need to know what the financials underlying this objective are. How is it determined that major impacts of a project, like are expected from this project, are outweighed by factors that could include how much of a return the developer gets? Where is that in city or state law?

Response to Comment No. 356-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 356-3

Where are all these people going to park? The EIR states more than 5,000 parking spaces are required for the influx of people, but then says that the parking spaces may be offsite. And the number of people expected is greater than the number of parking spaces being planned. Will that spill over into my neighborhood? What streets is the parking expected

to spill over onto? If the parking is offsite, what are the noise impacts, the safety issues from people speeding in the community, the pedestrian impacts, and other impacts of off-site parking? If this is going to require the taking of road spaces in front of people's homes, shouldn't that be accounted for? These impacts need to be analyzed.

Response to Comment No. 356-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 356-4

Accountability is important. Please let me know what this accountability will look like.

Response to Comment No. 356-4

This comment discusses accountability in general terms, and therefore a specific response cannot be provided. This comment is therefore noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 356-1 through 356-4.

Comment No. 356-5

. [sic] Who ultimately is responsible for ensuring that the community and surrounding neighborhoods are not left irreparably harmed and changed by this massive development being proposed? The neighborhood didn't ask for this, and 90% of my neighbors don't want it. It would be something that was done to us—not to benefit us, not for us. How can a development be forced upon a community when it may well not be the right development for a location?

Response to Comment No. 356-5

The Final EIR identifies parties responsible for enforcing mitigation measures. Section IV, Mitigation Monitoring Program, of this Final EIR includes details regarding timing, enforcement, and actions indicating compliance related to the Project's PDFs and mitigation measures.

The remainder of this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 357

Vicky Marino
7905 Melrose Ave.
Los Angeles, CA 90046-7109

Comment No. 357-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

Comment Letter No. 358

Larry Marshall
648 N. Laurel Ave.
Los Angeles, CA 90048-2321

Comment No. 358-1

I have lived in the neighborhood for over forty years. I have seen a tremendous increase in traffic since the introduction of the Beverly Center, Beverly Connection and the Grove. Please stop the trend toward greater density where I live.

Response to Comment No. 358-1

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, in Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment Letter No. 359

Jose Martinez
130 N. Sweetzer Ave.
Los Angeles CA 90048-3508

Comment No. 359-1

As a local resident, I am very concerned about the Television City 2050 Studio project, I have lived in the neighborhood for over ten years..

Response to Comment No. 359-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 359-2 through 359-4.

Comment No. 359-2

I'm trying to review the EIR, but like for many, this document is huge and complex, and I am still not fully aware of what the project actually is, much less understand the big changes that would ensue in our neighborhood.

Response to Comment No. 359-2

Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, and Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Comment No. 359-3

I am very concerned about the overflow traffic that residents can expect coming into our neighborhood. What streets will dump trucks, construction trucks and trucks carrying heavy equipment be allowed to drive on? Are neighborhood streets included in where they can travel, and if so, which ones? If any driving on those streets is going to be allowed, what hours of the day and which days of the week? I'm sure you can understand why I would be asking—this is a family and residential area, so if we are going to experience the

impacts of all the truck and additional car traffic, we should be informed exactly where that driving will be happening. Where is a map of the routes the different trucks and additional cars can take?

Response to Comment No. 359-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes. Construction trucks would be required to follow the haul routes approved by LADOT. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD. A construction manager would be appointed by the Project and his/her phone number would be advertised on the Project website and communicated to the neighbors so that trucks on the local streets could be reported to the construction manager, who, in turn, could call for targeted enforcement.

Comment No. 359-4

In the EIR, the developer said that they will “designate” a construction manager to serve as a liaison with the surrounding community and respond to any construction related questions. When will that construction manager be in place? And what times will that person be available? Is there a timeline for this community liaison to speak to us? Will this construction manager be accessible to the community before construction starts? Before preparation starts or will this be something after all of these changes have been set in motion?

We already do not have a liaison to discuss this project with. The developer has only stated positive things about the project, not given us real information about what will be the real impacts to our lives every day. And for how many years? It is not clear whether the project will take 3 years or 20 years—so when will residents know for sure? Will the project get approved without that timeline known for sure? How is that acceptable, to not know what to expect?

My neighbors and I have a lot of questions and still have yet to see someone acting as a liaison in my community for this project.

Response to Comment No. 359-4

Refer to Section IV, Mitigation Monitoring Plan, of this Final EIR for details on timing of all PDFs and mitigation measures, including Project Design Feature TR-PDF-1 requiring preparation of a CTMP. The CTMP, which includes designation of a construction manager to serve as a liaison to the community, would be prepared prior to construction and would be reviewed and approved by LADOT. As set forth in Project Design Feature TR-PDF-1,

as part of the detailed CTMP, the contact information for the construction manager will be posted on-site in a readily visible location and adjacent property owners and occupants will be notified of upcoming construction activities in advance of the start of construction.

With respect to the construction timeline, refer to Response to Comment No. 9-24.

Comment No. 359-5

I look forward to someone answering my questions, and having those answers before the project is allowed to be built.

Response to Comment No. 359-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 359-2 through 359-4.

Comment Letter No. 362

Anne McAllister
144 N. Detroit St.
Los Angeles, CA 90036-2916

Comment No. 362-1

I have some questions regarding the Draft EIR (ENV-2021-4091-EIR) for the TVC 2050 Project and would appreciate clarification on the following issues:

Response to Comment No. 362-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 362-2 through 362-8.

Comment No. 362-2

1. It appears the conceptual project is subject to change by utilizing the land use exchange program. If the Director approves an exchange of land uses, who will conduct the environmental analysis to determine if the exchange of uses will yield additional environmental impacts? What methodology will be used to determine these impacts? Would any of these land use exchanges result in possible significant impacts? If so, how will this be addressed?

Response to Comment No. 362-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-14 with regard to the Project Description and proposed Specific Plan, including a discussion of the limited Land Use Exchange Program. As discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Also refer to Appendix FEIR-3 of this Final EIR for a summary of the maximum impact scenarios that were analyzed in the Draft EIR and that represent the measure against which future land use exchange proposals may be considered.

Comment No. 362-3

2. If the VMT calculator does not include stage or production related uses, explain how you arrived at the empirical data used for the VMT calculator. How was the credit for internal capture derived? -

Response to Comment No. 362-3

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis. The VMT Calculator was run using its custom land use feature for all non-retail uses, which requires inputs of daily trips, total employees, and trip purposes. The estimation of daily trips was prepared using the empirical trip rates described in Topical Response No. 10, Trip Generation, and no credit for internal capture was applied.

Comment No. 362-4

3. If the project proposed is conceptual in nature, could the location of the tallest buildings change on the site? If so, how can the adjacent residents and property owns [sic] provide input on these height changes?

Response to Comment No. 362-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-16, 11-3, and 26-7 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, and the regulatory process under the proposed Specific Plan. As discussed therein, the Project includes height zone, stepback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. These requirements are not currently required under the existing zoning code. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, stepbacks, and frontage areas associated with the Project.

Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings, the dates of which will be published in accordance with the City's noticing requirements.

Comment No. 362-5

4. If alcohol is sold on-site during events, will police presence also be increased in order to reduce any residual impacts of large intoxicated crowds that may spill into the surrounding neighborhoods?

Response to Comment No. 362-5

With regard to police presence at special events, the Applicant currently provides advance notice to and coordinates with LAPD regarding large special events that take place on the Project Site. As under existing conditions, on-site security and safety measures would continue to be implemented as part of future operations within the Project Site. Refer to Topical Response No. 3, Permitted On-Site Uses, regarding how special events would continue to be governed by the LAMC, consistent with existing conditions.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 362-6

5. I could not find the Specific Plan referenced in the Draft EIR. Was it located in one of the appendices?

Response to Comment No. 362-6

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment No. 362-7

6. It appears the project proposes 10 access points. It seems that will increase pedestrian/vehicle conflicts. What tools will the project implement to provide maximum safety to pedestrians?

Response to Comment No. 362-7

As shown in Figures II-7 and II-8 in Section II, Project Description, of the Draft EIR, the Project would include nine vehicular access points and eight pedestrian access points.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 26-E.4-3 regarding hazards and pedestrian safety.

Comment No. 362-8

7. Studios are usually built like fortresses due to security concerns. Specifically, how will the project integrate the walled studio with the surrounding neighborhoods?

Response to Comment No. 362-8

The Project Site is already developed with an existing studio that has been operating for over 70 years and the Project would continue the existing studio use. The Project's design is pedestrian-oriented and enhances the public realm, while also accounting for the security needs of a secure studio campus. Refer to Response to Comment Nos. 16-72, 28-18, and 172-3 regarding the proposed public realm enhancements and the integration of the Project with the surrounding community.

Comment Letter No. 363

Kathryn McGee
kathryn@mcgeehistoric.com

Comment No. 363-1**I. INTRODUCTION**

This letter comments on the Draft Environmental Impact Report (DEIR) for the TVC 2050 Project (Project) at the approximately 25-acre Television City Studio property located at 7716–7860 W. Beverly Boulevard in Los Angeles, California (Project Site). The DEIR fails to adequately analyze, disclose, and acknowledge direct and indirect historical resources impacts on the adjacent property to the south, which includes the Gilmore Adobe and Farmers Market, located at 6301 and 6333 W. 3rd Street in Los Angeles, CA (Assessor Parcel Numbers 5512-003-030, 032, [sic] and -033, designated together as City of Los Angeles Historic-Cultural Monument No. 543). Additionally, the DEIR fails to adequately analyze, disclose, and acknowledge indirect impacts on several adjacent and nearby historic districts. This document explains these issues in detail, beginning with a description of the Project and regulatory setting; providing historical background and description of existing conditions; then including comments on the DEIR, and explaining how the Project has the potential to adversely impact historical resources.

III. [sic] REGULATORY SETTING**National Register**

The National Register of Historic Places is “an authoritative guide to be used by federal, state, and local governments, private groups, and citizens to identify the nation’s cultural resources and indicate what properties should be considered for protection from destruction or impairment,”¹ [sic] Administered by the National Park Service, the National Register is the nation’s official list of historic and cultural resources worthy of preservation. Properties listed in the National Register include districts, sites, buildings, structures, and objects that are significant in American history, architecture, archaeology, engineering, and culture. Resources are eligible for the National Register if they meet one or more of the following criteria for significance:

- A) are associated with events that have made a significant contribution to the broad patterns of our history; or
- B) are associated with the lives of significant persons in our past; or

- C) embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D) have yielded or may be likely to yield, information important in history or prehistory.²

Once a resource has been determined to satisfy one of the above criteria, then it must be assessed for “integrity.”³ Integrity refers to the ability of a property to convey its significance. Evaluation of integrity is based on “an understanding of a property’s physical features and how they relate to its significance.” The National Register recognizes seven aspects or qualities of integrity: location, design, setting, materials, workmanship, feeling, and association. To retain integrity, a property must possess several, and usually most, of these aspects.

Relationship to this report: The Project is located near the National Register-listed Beverly Fairfax Historic District and the potential Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District, which was found eligible for listing in the National Register in SurveyLA, the Los Angeles citywide historic resource survey.

California Register

Based substantially on the National Register, the California Register is “an authoritative guide... used by state and local agencies, private groups, and citizens to identify the state’s historical resources and to indicate what properties are to be protected.”⁴ For a property to be eligible for listing in the California Register, it must be found by the State Historical Resources Commission to be significant under at least one of the following four criteria:

- 1) is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage; or
- 2) is associated with the lives of persons important in our past; or
- 3) embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual or possesses high artistic values; or
- 4) has yielded, or may be likely to yield, information important in prehistory or history.

Also included in the California Register are properties which have been formally determined eligible for listing in or are listed in the National Register; are registered State Historical Landmark Number 770, and all consecutively numbered landmarks above

Number 770; and Points of Historical Interest, which have been reviewed and recommended to the State Historical Resources Commission for listing.

Relationship to this report: The Project is located near the California Register-listed Beverly Fairfax Historic District and the Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District, which was found eligible for listing in the California Register in SurveyLA.

California Environmental Quality Act (CEQA)

The California Environmental Quality Act (CEQA) was enacted in 1970 and offers protection for identified historical resources. In general, for purposes of CEQA and environmental review, an “historical resource” is that which has been determined eligible for listing in the California Register, or one that is designated at the local level. The term “historical resource” includes the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission for listing in the California Register of Historical Resources (Pub Res Code SS5024.1, Title 14 CCR, Section 4850 et seq).
2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements Section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to an historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record.

Generally, a resource shall be considered by the lead agency to be “historically significant” if the resource meets the criteria for listing on the California Register (Pub Res Code SS5024.1, Title 14 CCR, Section 4852).

The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to 5020.1 (k) of the Public Resources Code), or identified in an historical survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the

resource may be an historical resource as defined in Public Resources Code Sections 5020.1 (j) or 5024.1.

Relationship to this report. The Project is located nearby properties and historic districts that are historical resources under CEQA, including but not limited to: the Gilmore Adobe and Farmers Market, locally listed as a City of Los Angeles Historic-Cultural Monument (HCM); the National Register-listed Beverly Fairfax Historic District; the potential Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District; and the Miracle Mile North HPOZ.

City of Los Angeles

§22.171.7 of the Los Angeles Administrative Code defines criteria for designation of a Historic-Cultural Monument (HCM). For ease in applying local eligibility, the following numbers are assigned to the criteria, which align, to a large degree, with National and California Register criteria. Resources eligible for HCM designation are:

- 1) Historic structures or sites in which the broad cultural, economic or social history of the nation, state or community is reflected and exemplified; identified with important events in the main currents of national, state, or local history; or
- 2) Historic structures or sites identified with personages in the main currents of national, state or local history; or
- 3) Historic structures or sites which embody the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction or a notable work of a master builder, designer, or architect whose individual genius influenced his age.

An HPOZ is defined as:

a planning tool which recognizes the special qualities of areas of historic, cultural, or architectural significance. An HPOZ does not change the underlying zoning, rather it lays an added level of protection over a zone through local board oversight.⁵

The HPOZ criteria for evaluation state that structures, natural features, or sites within the involved area, or the area as a whole, shall meet one or more of the following:

- A. Adds to the historic architectural qualities or historic associations for which a property is significant because it was present during the period of significance, and possess historic integrity reflecting its character at that time.
- B. Owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community, or City.

- C. Retaining the structure would help preserve and protect an historic place or area of historic interest in the City.⁶

Relationship to this report: The Project Site is located near the Gilmore Adobe and Farmers Market, locally listed as a City of Los Angeles Historic-Cultural Monument (HCM no. 543, see additional information below); the potential Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District, which was found eligible as an HPOZ in SurveyLA; and the Miracle Mile North HPOZ.

Gilmore Adobe and Farmers Market HCM Designation: The Gilmore Adobe and Farmers Market were designated together as City of Los Angeles HCM No. 543 in 1991. The HCM designation includes the following description establishing the Adobe structure and its landscaping, the historic use of the Farmers Market, and the historical association with the Gilmore family as significant aspects of that HCM's history:

The Gilmore (Rancho La Brea) Adobe, built approximately 1852, is a one-story adobe brick structure finished with stucco. It has a moderately pitched roof covered with red tiles, a wide eaves overhang, a pave-tiled porch, exposed cross-bracing rafters, and heavy wood lintels above the wood-frame casement windows. A high stone wall and landscaping with mature trees surround the adobe, and two rear wings were added in the 19th century. Lawns on the north and east are crossed by terra-cotta tiled brick pathways.

The Farmers Market originated in 1934 as a site for depression era farmers to sell fresh farm produce, fruit and eggs. The site, currently owned by the A.F. Gilmore Co., houses an open air market with over 160 stalls representing a variety of farm produce, fruits, vegetables, gifts and novelty items.

The Clock Tower, added during the 1950's, [sic] has become an observable landmark for the Market, visible from quite a distance.

The Gilmore (Rancho La Brea) Adobe has particular historic and cultural significance to the City as one of the few structures of early adobe construction remaining and embodies the almost vanished architectural type adobe construction method. The Adobe and the Market also reflect the social and economic history of the City with their association with one of the original Mexican land grants and with several prominent families—Rocha, Thompson, Hancock and Gilmore.⁷

III. DESCRIPTION OF PROPOSED PROJECT

The Project is described in the introduction to the DEIR as follows:

The TVC 2050 Project (Project) would establish the TVC 2050 Specific Plan (Specific Plan) to allow for the continuation of an existing studio use and the modernization and expansion of media production facilities within the approximately 25-acre Television City studio located at 7716-7860 West Beverly Boulevard in Los Angeles, California (Project Site). The proposed Specific Plan would permit a total of up to a maximum of 1,874,000 square feet of sound stage, production support, production office, general office, and retail uses within the Project Site upon buildout, as well as associated circulation improvements, parking, landscaping, and open space. More specifically, the Specific Plan would permit up to 1,626,180 square feet of new development, the retention of up to 247,820 square feet of existing uses, and the demolition of up to 495,860 square feet of existing media production facilities. The designated Historic-Cultural Monument (HCM) No. 1165 (CHC-2018-476-HCM) located on-site would be retained and rehabilitated as part of the Project. In addition, a Sign District would be established to permit studio specific on-site signage. Construction would require an estimated 772,000 cubic yards of cut, potentially 50,000 cubic yards of imported fill and up to 772,000 cubic yards of export, with a maximum excavation depth of approximately 45 feet.

IV. HISTORICAL BACKGROUND ON GILMORE ADOBE AND FARMERS MARKET

The following historical overview is summarized from the book, *A Family's Vision—Spanning Three Centuries: The History of the A.F. Gilmore Company*:⁸

Fig 1: Gilmore Adobe, east façade, view northwest c. 1912 (courtesy A.F. Gilmore Co.); Fig 2: Gilmore Adobe, west façade, view northeast, c. 1912 (courtesy A.F. Gilmore Co.)

The Rancho La Brea originated as a 4,439-acre Mexican land grant given in 1828. In 1852, James Thompson built the existing Gilmore Adobe (La Casa de Rancho La Brea) for use as a residence. The adobe became the Gilmore family home in 1883, expanded by A.F. Gilmore to include four additional rooms.

In 1890, A.F. Gilmore took title to the Rancho La Brea property and used it as a dairy farm. He discovered oil on his land in 1901; by 1905, oil rigs replaced the dairy herds. Los

Angeles was growing rapidly during this time and the oil fields were soon surrounded by new development. City zoning laws in the 1920s prohibited large scale oil extraction in residential areas and drilling on the Gilmore property largely ended, with oil fields gone by the early 1930s.

Fig 3: Gilmore property covered with oil fields, c. 1920 (courtesy of A.F. Gilmore Company)

In the 1930s and 1940s, the Gilmore property was developed as “Gilmore Island,” a reference to the fact that it was island-like, surrounded by residential development. The Gilmore family envisioned the property as an entertainment destination, constructing the Gilmore Stadium, a racetrack that was also home to rodeos, boxing, and football; Gilmore Field, a baseball field; the Pan Pacific Auditorium; and the Farmers Market, which opened in 1934 as a place for local farmers to sell their goods. In 1940, the Gilmore Drive-In theater opened. Gilmore Stadium and Gilmore Field closed in the 1950s, replaced in 1952 by CBS Television City (where the Project Site is located). Plans for development of a new shopping center that would become an expanded version of the Farmers Market as well as The Grove began in the 1980s, though they were not realized until 2002 when the new development opened. The Adobe was seismically strengthened in 2015. Throughout the wide range of development and varied land uses, the Gilmore Adobe has remained as a residence with open spaces and landscaping, separate from The Grove and surrounding development, and ensconced in trees.

VI. THRESHOLDS FOR DETERMINING SIGNIFICANCE OF IMPACTS

California Environmental Quality Act (CEQA) Statutes

According to the CEQA Guidelines, a project would result in a significant impact to historical resources if it would cause a substantial adverse change in the significance of an historical resource. A *substantial adverse change* is defined in CEQA Guidelines Section 15064.5(4)(b)(1), as “physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the *significance of an historical resource would be materially impaired.*” The significance of an historical resource is materially impaired, according to CEQA Guidelines Section 15064.5(4)(b)(2), when a project:

- (A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
- (B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to §5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of §5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of the evidence that the resource is not historically or culturally significant; or
- (C) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.⁹

CEQA Guidelines also specify a means of evaluating the relative significance of project impacts on historical resources. CEQA Guidelines Section 15064.5(b)(3) states:

Generally, a project that follows the *Secretary of the Interior’s Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* or the *Secretary of the Interior’s Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (*Secretary’s Standards*, Weeks and Grimmer, 1995), shall be considered as mitigated to a level of less than a significant impact on the historical resource.¹⁰

Similarly, the City’s Cultural Heritage Ordinance provides that compliance with the *Secretary’s Standards* is part of the process for review and approval by the Cultural Heritage Commission of proposed alterations to Historic-Cultural Monuments (see Los Angeles Administrative Code Section 22.171.14.a.1).

The City of Los Angeles 2006 publication *LA CEQA Thresholds Guide* identifies the following thresholds for determining if the project will result in a significant impact:

- Demolition of a significant resource;
- Relocation that does not maintain the integrity and significance of a significant resource;
- Conversion, rehabilitation, or alteration of a significant resource which does not conform to the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings*; or
- Construction that reduces the integrity or significance of important resources on the site or in the vicinity.

Secretary of the Interior's Standards for Treatment of Historic Properties

The *Secretary's Standards* consist of four treatments, the most common of which is rehabilitation, which is defined as “the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features which convey its historical, cultural, or architectural values.” The rehabilitation standards are:

1. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.
2. The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible,

materials. Replacement of missing features will be substantiated by documentary and physical evidence.

7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.
9. New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
10. New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

The *Secretary's Standards* are intended to be flexible and adaptable to specific project conditions to balance change while retaining historic building fabric to the maximum extent feasible. The National Park Service has created a substantial amount of written guidance, most of it available online, including Illustrated Guidelines for Rehabilitating Historic Buildings, Preservation Briefs, Preservation Tech Notes, and Interpreting the Standards Bulletins (ITS).

Response to Comment No. 363-1

This comment includes an introductory comment and a description of the regulatory setting, Project, the commenter's summary of the historical background on the Gilmore Adobe and The Original Farmers Market, the commenter's summary of existing conditions at the Gilmore Adobe, and thresholds for determining significance of impacts.

This comment asserts that the Draft EIR fails to adequately analyze, disclose, and acknowledge direct and indirect impacts on the historical resources to the south, which include the Gilmore Adobe and The Original Farmers Market. The commenter also asserts that the Draft EIR fails to adequately analyze, disclose, and acknowledge indirect impacts on several "adjacent" and "nearby" historic districts. As discussed in detail in Response to Comment Nos. 363-2 to 363-3, the commenter's assertions about the adequacy of the Draft EIR's analysis are incorrect. These claims are not grounded in Appendix G of the CEQA Guidelines that establish the thresholds for significant impacts to historical resources or historic preservation principles and standards established by NPS. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, as well as Response to Comment No. 28-29 regarding the application of the Rehabilitation Standards.

The comment includes a historical background regarding the Gilmore Adobe and The Original Farmers Market. While this background information adds additional historic context for the area surrounding the Project Site, it does not provide any salient additional information necessary for analyzing potential impacts as defined by CEQA. The comment focuses on the continued development and redevelopment of the properties surrounding the Gilmore Adobe and The Original Farmers Market. Historic photos provided by the commenter illustrate the substantial changes that have occurred in the area surrounding the property since 1920, which provides additional evidence that supports the conclusion in the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR) that, while the immediate setting of the Gilmore Adobe property may be a character-defining feature of the Gilmore Adobe, the broad setting outside the Gilmore Adobe property is not a character-defining feature because it has been substantially altered over time.

Within the portion of this comment that describes the existing conditions at the Gilmore Adobe, the overview and mapping of the Gilmore Adobe property's existing conditions illustrates that only four buildings, including the Gilmore Adobe itself, can be considered extant from a recognized historic period (mid-19th century to the early-20th century). Three landscape areas, although undated, are also called out and considered character-defining features. The map calls out an additional four buildings dating from the first decade of the 21st century. However, the comment letter does not identify the three additional buildings immediately adjoining the Gilmore Adobe property to the east and west, which are commercial buildings that appear to date from the construction of The

Grove shopping and entertainment development. Despite the more recent development both on and immediately adjacent to the Gilmore Adobe property, the comment incorrectly asserts that the integrity of the Gilmore Adobe's historic setting (confined to the Gilmore Adobe property only) is "largely intact." In addition, Figure 9 of this comment incorrectly identifies Building Nos. 2 and 5 as apartments. As discussed in the Historic Report, the Gilmore Adobe property was substantially remodeled by Gilmore for use as a family home and continued to be used as a residence by subsequent generations of the Gilmore family until 1976.¹⁵⁶

Comment No. 363-2

VII. DEFICIENCIES OF DRAFT EIR

Direct Impacts on Gilmore Adobe

The DEIR fails to adequately analyze potential direct impacts of construction vibration on the structure of the 170-year-old Gilmore Adobe.

The adobe was constructed in 1852 of adobe brick finished in stucco. The HCM designation provides the following regarding the adobe structure:

The Gilmore (Rancho La Brea) Adobe has particular historic and cultural significance to the City as one of the few structures of early adobe construction remaining and embodies the almost vanished architectural type adobe construction method.¹¹

Underscoring the historic significance of adobe construction, the National Park Service published guidance on the preservation of adobe in *Preservation Brief 5: Preservation of Historic Adobe Buildings*.¹² Adobe is a fragile building material; as such, impacts could result from pile installation and vibration during construction of the Project. This is supported by another National Park Service publication, *Preservation Tech Note No. 3: Protecting a Historic Structure During Adjacent Construction*, which states, "Historic structures may be particularly vulnerable to the effects of vibrations generated at an adjacent site," and "may experience corresponding displacement that can result in major structural damage."¹³

¹⁵⁶ The Gilmore Adobe has been a commercial office use since 1976. This is verified by the 2018 book, *A Family Vision—Spanning Three Centuries—The History of the A.F. Gilmore Company*, written by the A.F. Gilmore Company and the certified Addendum to the Final Environmental Impact Report for The Grove at Farmers Market Project dated July 15, 1999 (EIR No. 87-515-SUB(ZV)(YV)(ZC); State Clearinghouse No. 87102102).

The DEIR briefly addresses potential impacts from vibration in Chapter IV.1: [sic] Noise. This chapter acknowledges off-site historical resources including the adobe as “buildings extremely susceptible to vibration damage” and states that “the estimated vibration levels from the construction would be well below the 0.12-PPV building damage significance criterion at the five off-site historical resources.”¹⁴ However, the data tables included in the associated technical report provide that the adobe will be 100 feet from construction equipment including: large bulldozer, caisson drilling, loaded trucks, jackhammer, and small bulldozer. The cultural resources technical report excludes mention of any potential impacts from pile installation and/or vibration on the adobe.

The DEIR fails to describe the existing condition of the adobe brick and its potential susceptibility to vibration. The DEIR also fails to substantiate its asserted 0.12-PPV ‘significance criterion’ as pertains to what the DEIR acknowledges as a “building extremely susceptible to vibration damage,” and fails to contain an analysis of the vibration impacts of the operation of the construction equipment described as operating within 100 feet of the adobe.

As provided in *Preservation Tech Note No. 3: Protecting a Historic Structure During Adjacent Construction*, there should be “Early consultation between the historic property owner and the developer of the neighboring construction site” as the “first and often most important step” to protecting an historic building like the adobe during adjacent construction; and, a “consulting engineer should ensure that the selected approach addresses the unique characteristics and vulnerabilities of the historic structure and that even incidental movement is restricted.”¹⁵ These essential steps to protect the adobe should be undertaken. An evaluation of potential impacts of vibration on the adobe by a structural engineer with experience working on adobe structures should be prepared and included in a revised and recirculated DEIR, disclosing potential impacts and identifying necessary mitigation measures. The adobe’s method of construction is one of the primary reasons for its significance. It is strongly recommended that a plan be made to ensure protection and monitoring of the adobe during construction.

Response to Comment No. 363-2

The commenter claims that direct impacts from vibration due to construction activities are not properly analyzed and vibration from construction has the potential to directly impact the Gilmore Adobe given the general fragility of adobe as a building material, which is incorrect. As discussed in Response to Comment No. 5-13, the nearest buildings within the Project Site would be located approximately 167 feet from the Gilmore Adobe, and construction activities would be located a minimum of approximately 125 feet from the Gilmore Adobe, which would be separated by existing buildings to the north of the Gilmore Adobe as well as a service alley used by Gilmore vehicles and trucks. To evaluate potential vibration impacts to the Gilmore Adobe, Section IV.I, Noise, of the Draft EIR used the most stringent criterion of 0.12 PPV for "buildings extremely susceptible to vibration damage" from the FTA. This criterion is even more stringent than FTA's 0.20 PPV criterion for "non-engineered timber and masonry buildings." As such, the fact that the Gilmore Adobe includes a brick structure is fully accounted for in the vibration analysis.

Furthermore, to be conservative, the analysis in the Draft EIR assumed that construction equipment would be located within 100 feet of the Gilmore Adobe. In addition, as stated in the Draft EIR (page IV.I-60), installation of piles for shoring and foundations would utilize drilling methods to minimize vibration generation, and no impact pile driving would occur as set forth by Project Design Feature NOI-PDF-2. Contrary to the statement in this comment, no heavy construction equipment would be operated within 100 feet of the Gilmore Adobe. As shown in Table IV.I-20 of the Draft EIR, the maximum vibration level associated with construction equipment would be 0.011 PPV, which is well below the 0.12 threshold for building damage for the most stringent FTA threshold of 0.12 PPV. Furthermore, the estimated maximum vibration level at the Gilmore Adobe (0.011 PPV) would be well below Caltrans' most stringent vibration criteria of 0.08 PPV, applicable to "extremely fragile historic buildings, ruins, ancient monuments." As such, AES, a licensed mechanical engineer with over 30 years of experience in evaluating construction noise and vibration impacts, has concluded that a monitoring plan or structural engineering plan during construction is not required. Generally, vibration monitoring would be provided when the estimated vibration levels would exceed or approach the vibration threshold (i.e., 0.12 PPV for buildings extremely susceptible to vibration damage). Also note that the analysis of vibration impacts is appropriately included in Section IV.I, Noise, of the Draft EIR in accordance with Appendix G of the of the CEQA Guidelines where the questions regarding vibration are included under the noise topic.

Comment No. 363-3

Indirect Impacts on Gilmore Adobe

The DEIR fails to adequately analyze, disclose, and acknowledge potential significant and unavoidable adverse impacts on the setting of the Gilmore Adobe.

In general, CEQA describes an indirect impact as one that results from the "...alteration of the resource or its *immediate surroundings* such that the significance of an historical resource would be materially impaired" (emphasis added—CEQA Guidelines §15064.5(b)(1)). Therefore, whether the proposed project would impact the *setting* of a resource must be studied.

Setting is defined by the National Park Service as follows:

Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historical role. It involves *how*, not just where, the property is situated and its relationship to surrounding features and open space.

Setting often reflects the basic physical conditions under which a property was built and the functions it was intended to serve. In addition, the way in which a property is positioned in its environment can reflect the designer's concept of nature and aesthetic preferences.

The physical features that constitute the setting of a historic property can be either natural or manmade, including such elements as:

- Topographic features (a gorge or the crest of a hill);
- Vegetation;
- Simple manmade features (paths or fences); and
- Relationships between buildings and other features or open space.

These features and their relationships should be examined not only within the exact boundaries of the property, but also between the property and its *surroundings*. This is particularly important for districts.¹⁶

Setting is an important aspect of integrity for the Gilmore Adobe. The property has always been defined by its relationships between buildings and open space, and its vegetation. The landscaping consists of front, back, and side yards, an orchard, mature trees, and a range of plantings. Historic photographs (Figs 1–8) clearly show the Gilmore Adobe property as a distinct grouping of buildings ensconced in trees, with a sense of separation and seclusion from surrounding development.

The adobe and its isolated setting are described in an historic photo description on file in the California Historical Society Collection held at USC as “shielded from public view by a fortress of foliage” and “as a bucolic island of tranquility in the heart of the city.”¹⁷

Over time, the surrounding development has included a wide range of land uses, as oil fields scattered with derricks, single- and multi-family housing, a car racing stadium and gas stations, a baseball park, the Farmers Market, and The Grove shopping center.

Images of Gilmore Adobe appear in the Historic American Building Survey Collection held by the Library of Congress. The significance statement associated with these records emphasizes the uniqueness of this property amidst dramatic changes to the broader landscape associated with the original Rancho La Brea land grant:

The history of the house, as simple and straightforward as the lines of its construction, contrasts dramatically with the complex development of the surrounding ranch lands it once governed. It has changed hands only twice and has

retained its original function without interruption, while most of the 44 hundred acres granted in 1828 to Antonio Jose Rocha have lost identity beneath the grid of city streets.¹⁸

Despite these changes to the broader landscape, surrounding land uses have always maintained distance from and not encroached on the property.

While the HCM designation asserts the property's significance for association with local developmental history as well as the Gilmore family, an association that has continued over time to present day. As such, the period of significance for the property appears to extend well beyond the date of construction in 1852, continuing through the mid-twentieth century, as the property and Gilmore family continued to have a substantial influence on local history and development during this timeframe.

Finally, the Gilmore adobe property and its outdoor spaces have long been an important gathering space for not only the Gilmore family but also various community groups. The family regularly allows community groups to utilize the outdoor spaces for events.

Response to Comment No. 363-3

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 5-13 and 26-47 regarding the Draft EIR’s comprehensive analysis of potential impacts to the Gilmore Adobe. As discussed therein, only the immediate setting, contained within the Gilmore Adobe property boundary, contributes to the historic significance of the Gilmore Adobe. The immediate setting would be unaffected by the Project because it would not involve demolition, destruction, relocation, or alteration within the boundary of the Gilmore Adobe property. The broad setting of the Gilmore Adobe was emphasized in the Draft EIR because that is where the Project Site is located, which is where all demolition, alteration, and new construction associated with the Project would take place. The broad setting has been continually altered by successive development and redevelopment after the Gilmore family took residence in the late 19th century, with development of The Grove shopping and entertainment center beginning in 2002 as the most recent example. The Project would not involve any physical changes within the boundary of the Gilmore Adobe property. As discussed in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), the broad setting does not contribute to the significance of the Gilmore Adobe because it no longer contains any direct physical association to the Gilmore Adobe; the relevant features of the setting are limited to the Gilmore Adobe property. This point is reiterated by the commenter who states that “[t]hroughout the wide range of development and varied land uses, the Gilmore Adobe has remained as a residence with open spaces and landscaping, separate from The Grove and surrounding development, and ensconced in trees.” Please note that, as discussed in Response to Comment No. 363-1, the Gilmore Adobe has not been a residential use since it was converted to Gilmore offices around 1976.

The commenter’s claim that “surrounding land uses have always maintained distance from and not encroached on the property” is not factually correct. New commercial and support uses enclose the Gilmore Adobe property to the east, west and north. Further, the nearest buildings within the Project Site would be located approximately 167 feet or more from the Gilmore Adobe, which is much farther away from the Gilmore Adobe than the newer buildings that have been built immediately adjacent to the Gilmore Adobe within the Gilmore/The Grove property. The buildings directly north of the Gilmore Adobe would separate the Gilmore Adobe from new buildings on the Project Site. Thus,

the commenter's statement that the Project will introduce new construction "adjacent" to the Gilmore Adobe is incorrect.

Comment No. 363-4

The Project would adversely impact the setting and functionality of the Gilmore Adobe by introducing a potentially dramatic increase in the scale of new construction adjacent to the adobe. Existing CBS buildings within approximately 150 feet north of the Adobe complex respect the special setting of the Adobe, and are limited to one story in height. The Project would allow buildings up to 225 feet in height within the same area setback by only 30 feet from the property line.¹⁹ Existing CBS buildings to east of the Adobe complex similarly respect the special setting of the Adobe, are substantially set back by approximately 150 feet, and are limited to one story in height. The Project would allow buildings up to 130 feet in height in the same area setback by only approximately 60 feet from the property line.²⁰ Allowing out-of-scale construction in such areas as proposed by the Project would create a wall that overshadows the low-scale adobe, especially the open spaces and north yard, a primary location for Gilmore family and community gatherings, and would entirely block out access to light and air in this area, significantly and adversely impacting the historic look and feel of the setting. The DEIR is fundamentally defective for failing to disclose and acknowledge this significant environmental impact.

Significant adverse impacts to the Adobe setting would not be avoided by limiting building height to the 88' "base height" (approximately 103' tall as measured in accordance with LAMC requirements) within the same areas characterized by open space and one-story structures, as they would similarly block out access to light and air in the Adobe complex.

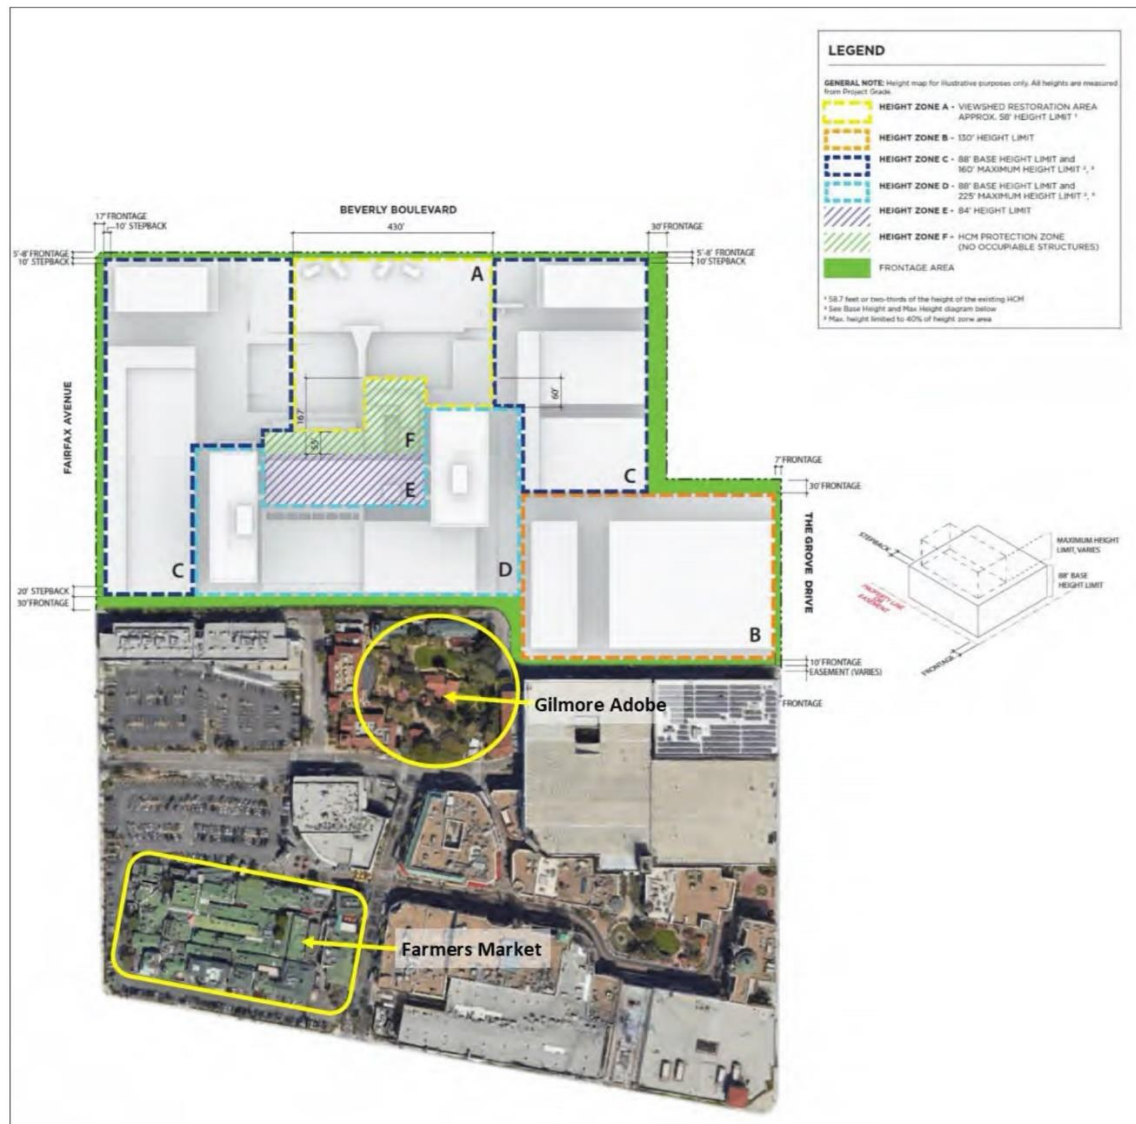

Fig 26: Massing and height zone diagram from DEIR with current aerial superimposed showing Gilmore Adobe and Farmers Market

The DEIR fails to address these potential impacts on setting, first by excluding a description of the setting of the adobe and its landscape features from the cultural resources technical report. The physical description is limited to the following:

Located directly south of the Project Site, The Original Farmers Market property was originally a portion of the Rancho La Brea land grant. The property includes the Rancho La Brea Adobe (generally referred to as the Gilmore Adobe), which was originally constructed in 1852. It was substantially remodeled by Gilmore for use as a family home and continued to be used as a residence by subsequent generations of the Gilmore family until 1976. The one-story building with cross-gabled red tile roof is located south of the Project Site.²¹

Second, the DEIR inadequately addresses the issue of potential impacts on setting by stating that the setting of the property has already been changed by construction of The Grove. The associated cultural resources technical report states the following:

Integrity of *setting* for both resources have been substantially altered previously by construction of The Grove shopping and entertainment center in 2002, and neither The Original Farmers Market nor the Rancho La Brea Adobe retains integrity of setting.²²

This analysis is entirely conclusory and incomplete. Nor is it supported by any of the technical reports contained in Appendix C of the DEIR (Cultural and Tribal Resources). Despite the development of The Grove, the adobe exists as a secluded oasis ensconced in landscaping and trees. Adjacent development is primarily one and two stories in height and well-buffered from the Adobe (The Grove Parking Structure being the exception). Thus, the integrity of the Adobe's historic setting is largely intact and should be protected to avoid a significant adverse impact to the adobe complex as an historical resource.

The below diagrams (Figs 27–29) prepared by the A.F. Gilmore Company demonstrate the full extent of the scale and height of the Project based on the proposed height zones and show that the construction nearest the adobe would dwarf and substantially overhang that building and its open spaces.

Fig 27: Massing diagram showing Project in relation to Gilmore Adobe, view north

Fig 28: Massing diagram showing Project in relation to Gilmore Adobe, view north

Fig 29: Massing diagram showing Project in relation to Gilmore Adobe, view northeast

- ¹⁹ The actual height of such buildings may be as much as 15' taller when measured in accordance with LAMC requirements.

- ²² Historic Resources Group, Historical Resources Technical Report TVC 2050 Project, May 2022: 88.

Response to Comment No. 363-4

This comment is similar to Comment No. 28-29. Refer to Response to Comment No. 28-29. As discussed therein, the claims that the Project would result in a significant impact to the Gilmore Adobe because it would be out of scale, overshadow, block access to light and air, etc., is not substantiated by facts or analysis and is not based on the threshold in Appendix G of the CEQA Guidelines. This comment does not provide any explanation as to what aspects of the immediate surroundings are instrumental in conveying the historic significance of this historical resource or how new construction located north of the Gilmore Adobe would diminish its integrity.

As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, impacts to aesthetics are based on different criteria and thresholds than those used for historical resources. This comment incorrectly conflates aesthetic and historic impacts. The differences between these two types of impacts are discussed in detail in Response to Comment Nos. 26-E.2-8 and 26-E.2-63.

Refer to Response to Comment No. 5-13 regarding the height limits under the proposed Specific Plan and the inaccuracies of the massing diagrams included in this comment (Fig 27-29). Refer to Response to Comment Nos. 5-13, 5-14, 11-3, 26-7, and 28-22 regarding the size and scale of the Project.

Comment No. 363-5

The Project is not in conformance with Standard 9 of the *Secretary's Standards*, which specifically addresses new construction and states the following:

New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property *and its environment* (emphasis added).

The DEIR fails to discuss that the new construction proposed by the Project does not meet Standard 9 in that (i) it would destroy spatial relationships that characterize the adobe as a historic property, and (ii) that its size, scale and proportion, and its massing fails to protect the integrity of the Project's environment (specifically the adobe complex). Accordingly, the DEIR should be revised and recirculated to acknowledge this significant adverse impact and identify potential mitigation measures.

Response to Comment No. 363-5

This comment incorrectly invokes Standard 9 of the Rehabilitation Standards to support the claim that new construction associated with the Project would result in a significant indirect impact to the Gilmore Adobe. As discussed in Response to Comment No. 28-29, while conformance with the Rehabilitation Standards are a safe harbor for avoiding significant impacts under CEQA, they are not the threshold for significant historical resource impacts. Furthermore, Standard 9 is concerned with additions, exterior alterations, or related new construction to a historical resource. However, the Project does not propose any addition or exterior alterations of any of the component buildings, structures or landscape areas that comprise the Gilmore Adobe property itself. The Project Site is a separate property that has had no association with the Gilmore Adobe property. As such, the Project does not represent *related new construction*, as there is no relationship between the two properties other than proximity. Therefore, Standard 9 does not apply. The Secretary of the Interior's Standards provide general guidance on the rehabilitation of historical resources. They are not intended to limit or control development on separate properties near historical resources, particularly if there is no historical association between the two properties.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 363-6**Indirect Impacts on Historical Use of Farmers Market**

Potential impacts from the Project on the historic use of the Farmers Market were not considered in the DEIR. The Farmers Market depends on support from the Shop Building along the north end of the property near the Project (see Figs 30-31), which necessitate open access to the road/alley to the north. All materials to support the Farmers Market and adjacent company-owned properties are loaded through this alley; loading activities only leave sufficient clearance for fire access. Thus, an increase in traffic would mean service vehicles may not have clearance to safely load and unload vehicles while maintaining an adequate fire lane; slow-moving service equipment (man lifts, scissor lifts, forklifts, etc.) regularly travel down the alley would also be interrupted by an increase in traffic. As the Project proposes to intensely utilize this road, which would disrupt the necessary Farmers Market support services in this location, it would therefore impede on the ability of the HCM to maintain its historic, significant use as a fully functioning, open-air market.

Fig 30: Shop Building (right), view east

Fig 31: Interior of Shop Building showing workshop servicing Farmers Market

Based on this analysis, the Project is not in conformance with the *Secretary's Standards*. Standard 1 is most relevant here as it specifically addresses the importance of maintaining historical use and states the following:

A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.

Disruption of the historic use of the Farmers Market does not meet Standard 1.

Indirect Impacts on Adjacent and Nearby Historic Districts

Fig. 32: Current aerial showing historic districts near the Project Site

The Project is located near three historic districts (see Fig 32):

1. The National Register-listed Beverly Fairfax Historic District, a largely multi-family residential district, designated in 2018, significant for its collection of period revival homes and association with the Jewish American community.²³ The district includes 463 single- and multi-family dwellings of which 366 are contributing, and is roughly bounded by Melrose Avenue to the north, Gardner Street to the east, Rosewood Avenue to the south and Fairfax Avenue to the west.
2. The potential Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District, found eligible for listing in the National Register in SurveyLA, the City of Los Angeles Citywide Historic Resources Survey, in 2015, and significant for its collection of period revival homes.²⁴ The district includes 380 parcels, 332 of which contribute to its significance, and is roughly bounded by Rosewood Avenue to the north, Gardner Street to the east, Beverly Boulevard to the south, and Fairfax Avenue to the west.

3. The Miracle Mile North HPOZ, a primarily single-family residential district adopted in 1990, significant for its collection of period revival homes and as an automobile suburb.²⁵ The district includes 598 parcels, 547 of which contribute to its significance, and is roughly bounded by Beverly Boulevard to the north, La Brea Avenue to the east, 3rd Street to the south, and Gardner Avenue to the west.

²⁴ Historic Places LA, <http://www.historicplacesla.org/reports/97f3d430-01f5-497c-917a-3b95209d5ae0>, accessed September 6, 2022.

²⁵ “Miracle Mile North Historic Preservation Overlay Zone,” Los Angeles City Planning, <https://planning.lacity.org/preservation-design/overlays/miracle-mile-north>, accessed September 6, 2022.

Response to Comment No. 363-6

This comment is substantially similar to Comment No. 28-31. Refer to Response to Comment No. 28-31.

This comment incorrectly invokes the Rehabilitation Standards, claiming that because the historic use of The Original Farmers Market as an open-air market would not be maintained (which is the commenter’s opinion and is not supported by facts or evidence), the Project would not comply with Standard 1, which addresses the use of a historic property when that property itself is being rehabilitated. However, the commenter misapplies Standard 1, which is as follows:

*Standard 1: A property shall be used for its historic purpose **or be placed in a new use** (emphasis added) that requires minimal change to the defining characteristics of the building and its site and environment.¹⁵⁷*

Standard 1 does not mandate continued historic use; rather, it requires that if a new use is deemed necessary, that use will not require substantial physical change to the historical resource. More importantly, the Project does not propose to rehabilitate The Original Farmers Market, as the Project is limited to the Project Site. Therefore, the Rehabilitation Standards, including Standard 1, are not applicable.

Contrary to the unsupported claims in this comment, the Project will not change or affect the use of The Original Farmers Market. The assertions in this comment regarding historical use are the opinion of the commenter and are not substantiated by facts or

¹⁵⁷ 36 CFR Part 67.7.

analysis, nor do they relate to the threshold for significant impacts to historical resources under Appendix G of the CEQA Guidelines. As demonstrated in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), The Original Farmers Market, including its component buildings, structures and associated outdoor spaces, would remain physically unchanged after implementation of the Project and it would continue to convey its historic significance. Therefore, impacts to The Original Farmers Market would be less than significant as defined by CEQA.

Comment No. 363-7

The DEIR does not adequately address the potential for impacts on the settings of the above-listed districts. Given the scale of the new construction, impacts on setting should be evaluated. The Project may not conform with Standard 9, which specifically addresses new construction and its impacts on spatial relationships that characterize an historical resource such as an historic district.

The DEIR also fails to consider that the large scale of the Project would fundamentally change the existing character of the area through substantial intensification of traffic, which could cause potentially significant adverse impacts to the above-listed historic districts. The DEIR's transportation assessment states that the Project will subject several key streets of the National Register-listed Beverly Fairfax Historic District in particular, specifically Genesee, Stanley, Oakwood and Rosewood to "excessive traffic burden" due to cut-through traffic caused by the Project. Such intensification could foreseeably lead to indirect impacts of degradation to the historic districts by deteriorating the roadways and character, which should be analyzed and disclosed in the DEIR.

Response to Comment No. 363-7

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 28-19 regarding the Beverly Fairfax Historic District, Orange Grove Avenue-Gardener Street Multi-Family Residential Historic District, and Miracle Mile North HPOZ. As an initial matter, the boundaries of the historic districts shown in Fig. 32 of this comment are inaccurate. The Orange Grove Avenue-Gardner Street Multi-Family Historic District (identified through survey evaluation only) was later subsumed into the larger Beverly Fairfax Historic District which was listed in the National Register in 2018. It is not accurate, therefore, to present the Orange Grove Avenue-Gardner Street Multi-Family Residential Historic District as separate and distinct from the Beverly Fairfax Historic District. Refer to Figure II-15 and Figure II-16 within Response to Comment No. 28-19 for the accurate boundaries of these districts.

The Draft EIR adequately addressed potential impacts to off-site historical resources. As discussed on page IV.B-27 in Section IV.B, Cultural Resources, of the Draft EIR, the Historic Report (Appendix C.1 of the Draft EIR) defines an area surrounding the Project Site where potential direct or indirect impacts could reasonably be expected to occur (i.e., the Project Site vicinity). In determining the Project Site vicinity, the Historic Report considered three factors: (1) the existing setting of the Project Site; (2) the scale and nature of the proposed Project; and (3) the impacts the Project could have on historical resources, if such resources exist. The Historic Report defined the Project Site vicinity as all parcels immediately adjacent to the Project Site, as well as all parcels located directly across the street from the Project Site. Properties beyond the Project Site vicinity were not analyzed because the Project would have no potential to directly or indirectly impact those properties. The western boundary of the Miracle Mile North HPOZ sits more than 800 feet from the easternmost edge of the Project Site and cannot be reasonably considered to be part of its environmental setting under CEQA, nor is there any potential for significant impacts to the Miracle Mile North HPOZ from the Project. Therefore, impacts to the Miracle Mile North HPOZ were not analyzed as part of the Draft EIR. The Beverly Fairfax Historic District also sits beyond the Project Site vicinity. The potential for impacts to the Beverly Fairfax Historic District were addressed in the Historic Report, however, for informational purposes. The Historic Report also discusses the Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District for informational purposes on page 39. As stated in the Draft EIR and Historic Report, there would be no potential for the Project to result in significant impacts as defined by CEQA to these historic districts due to the physical separation and distance between the historic districts and the Project Site.

The comment that impacts to “the settings” of these historic districts would be significant is not representative of historic districts and how they are defined. Industry standard preservation practice evaluates collections of buildings from similar time periods and historic contexts as historic districts. NPS defines a historic district as “a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.”¹⁵⁸ Thus, a historic district derives its significance as a single unified entity.

Boundaries for historic districts are selected to encompass the single area of land containing the significant concentration of buildings, sites, structures, or objects that contribute to the historic significance of the district and delineate the historic district from immediately surrounding areas of a different historic character or development pattern. NPS guidance on defining historic district boundaries state that boundaries should be drawn by observing the following:

¹⁵⁸ National Park Service, U. S. Department of the Interior, National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 1997.

- Visual barriers that mark a change in the historic character of the area or that break the continuity of the district, such as new development, highways or development of a different character.
- Visual changes in the character of the area due different architectural styles, types or periods, or to a decline in the concentration of contributing resources.
- Boundaries at a specific time in history such as the original city limits, or the legally recorded boundaries of a housing subdivision, estate, or ranch.
- Clearly differentiated patterns of historic development, such as commercial versus residential or industrial.¹⁵⁹

These tenets can be observed in the historic districts in the general vicinity of the Project Site. All have boundaries to exclude areas of different historic development pattern such as commercial development or areas of later development not associated with the period of significance for the individual district. In this manner, setting features associated with the historic significance of the historic district are necessarily included within the district boundaries. The larger setting located outside the district boundaries are not considered character-defining or important to the integrity of the historic district.

The Project Site is located well outside the boundaries of all of the historic districts in the area (over 200 feet from the Beverly Fairfax Historic District and over 800 feet from the Miracle Mile North HPOZ) and no physical alterations or changes within the boundaries of those historic districts are contemplated by the Project. As such, the Project cannot physically alter or change the setting of any historic district as all the setting features that contribute to the significance of the historic district are contained within its boundaries.

Additionally, the commenter misapplies Standard 9; refer to Response to Comment No. 363-5.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10 regarding vehicle trips in the Beverly Fairfax Historic District.

¹⁵⁹ National Park Service, U. S. Department of the Interior, National Register Bulletin Defining Boundaries for National Register Properties, revised 1997, p. 12.

Comment No. 363-8**VIII. CONCLUSION**

Based on the issues described in this letter, the Draft EIR for the TVC 2050 Project fails to adequately analyze, disclose, and acknowledge direct and indirect historical resources impacts, especially to the Gilmore Adobe, Farmers Market, and adjacent and nearby historic districts.

Attachment—Kathryn McGee Statement of Qualifications and Résumé [2 pages]

Response to Comment No. 363-8

As demonstrated by Response to Comment Nos. 363-1 through 363-7 provided above, the analysis of potential direct and indirect impacts in the Draft EIR associated with historical resources was comprehensive and fully complies with CEQA requirements.

Comment Letter No. 364

Allyse McGrath
353 N. Sierra Bonita Ave., #6
Los Angeles, CA 90036-2456

Comment No. 364-1

I am writing today to express my deepest concerns about the proposed studio expansion project. My concerns specifically pertain to parking and traffic in the neighborhoods close to the project site.

Response to Comment No. 364-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 364-2 through 364-4.

Comment No. 364-2

First of all, an expanded Television City will mean more commuter traffic from workers and cast members headed to the campus. How many are expected on a daily basis? How many days of the week? When will those additional commuters begin working and visiting there? What does your analysis find will be the additional number of cars overall weekly and monthly? Will they be arriving at any time of day? For example, will the site be used 24 hours a day, seven days a week? Will the volume of expected incoming and outgoing traffic differ depending on the day?

Response to Comment No. 364-2

This comment is identical to Comment No. 253-3. Please refer to Response to Comment No. 253-3, above.

Comment No. 364-3

Secondly, the increase in traffic from cars and trucks passing through will mean more noise, more emissions, and more accidents. What does the noise study say will be the increase expected every day, over what it is now? What will the air quality impacts be? Won't this be affect our overall air quality indicators for our community? Please provide that evaluation. What is going to be the impacts on the number of car accidents, bicycle accidents, and pedestrian accidents in this area? The site is located at the intersection of two of the highest injury streets. Will the expected increase in accidents put Beverly and

Fairfax in an even higher ranking for high injury streets? What measures are going to be taken to ensure this does not happen and that there will be no increase at all in the number of car, bike and pedestrian accidents, deaths and injuries. Please think about the children and families who call this place their home.

Response to Comment No. 364-3

This comment is identical to Comment No. 253-4. Please refer to Response to Comment No. 253-4 above.

Comment No. 364-4

There has been little to no transparency or communication so far from the developer and their team. It is my sincerest hope that you will evaluate this project based on merit and impact for residents who live in the area, not just the people who commute to work at the studio.

Response to Comment No. 364-4

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment Letter No. 365

Megan McGregor
8125 1/2 Blackburn Ave.
Los Angeles, CA 90048-4423

Comment No. 365-1

I am writing about the Television City development being proposed, and I am opposed to the development because residents in the nearby neighborhoods, including me, know very little about it. And we are concerned this project is going to be approved with the community getting very little specific information.

Response to Comment No. 365-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 365-2.

Comment No. 365-2

My main concern is residents have no idea what is being built. What exactly is going to be built? The draft EIR talks about studios, stages, offices, production space, but what is the actual description of the project? What is a specific plan? And what does it mean that there will be flexibility in deciding what the spaces or new buildings are going to be used for?

When is more information going to be provided about what goes into the specific plan that will allow residents to make an informed decision? And that about the effects on residential neighborhoods once the specific plan is actually “specific”?

Does the Planning department have the specific plan that can be reviewed by the community? If not, why isn't it required that the Planning department know more specifics about the project so that it can be evaluated thoroughly and completely? It is not acceptable for the community to be told, we'll tell you more when we know more.

What if the developers of this project change their mind about the buildings, such as height, location and what they will be used for, after the project changes? Is that going to be allowed? How will the community be informed about any changes? And what happens if the impacts of the project the community is told about then change as a result of those

changes? What if the impacts are expected to be worse once more specific plans about the project are actually made—what happens then?

Response to Comment No. 365-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. As also discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

As further discussed in Topical Response No. 1 and Response to Comment No. 9-14, the Draft EIR's environmental analysis encompasses the proposed development program and all maximum scenarios under the proposed Land Use Exchange Program, and thereby accounts for the maximum potential environmental impacts associated with the buildout of the Project. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 365-3

The idea that a developer could say one thing and then do another is not fair to the community. I strongly oppose this project until very specific details are made available, along with the impacts of what is being planned and what could be approved as part of the project. I urge all our city leaders to also do the same.

Response to Comment No. 365-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the

decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 365-2.

Comment Letter No. 366

Dayn McHugh
537 N. Orlando Ave., Apt. 2
Los Angeles, CA 90048-2530

Comment No. 366-1

I am struggling to get through the entirety of the draft EIR. This document is extremely long, and I don't know how people are expected to read through this entire document to fully understand the project. The EIR itself is 1,000 pages with an additional 5,000 pages of appendixes. Studies have shown that on average it takes people about five minutes to read a page of technical materials. So on average, that means that I can read about 12 pages per hour. Therefore, if I read 2 hours a day after work, it would take me 200 days to read the draft EIR. The comment period is only 30 days! It would be impossible for me to even read the entire draft report before the comment period closed. There is no way the average person in our community would be able to read this. Can you please explain how this meets the requirements of CEQA? How is this document supposed to be an informational document for the public to get an understand of the project at 6,000 pages of much technical information? Why hasn't the city held any public meetings to explain what is being proposed, how the community is going to be affected, and give us a chance to ask all the questions we need to? How is the average person supposed to be expected to spend 400 hours reading this? Have you polled the community to see how many residents have read this document, or even understand what is being proposed? If you haven't, do you plan to? Have you polled the community to see if residents actually want and need this project?

Response to Comment No. 366-1

Section I, Executive Summary, of the Draft EIR provides a brief summary of the Project and its environmental impacts in compliance with Section 15123 of the CEQA Guidelines. The Executive Summary is intended to provide readers with a comprehensive overview of the Project, and is shorter in length than the entirety of the Draft EIR. While the commenter correctly points out that the Draft EIR is of considerable length, community members are not required to read the entirety of the Draft EIR, but rather are welcomed to read sections that interest them or address their outstanding concerns regarding the Project's environmental impacts. Furthermore, the Draft EIR was written in accordance with Article 9, Contents of Environmental Impact Reports, of the CEQA Guidelines, and contains all components described therein. Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 366-2

Furthermore, it seems like the most important documents to understand the project are missing from the report! Why isn't the specific plan included? The conceptual plan is nothing but a concept and so the developer in theory could build whatever they want. They can build literally anything in the commercial zones. How does the EIR analyze the hundreds of possible variations of the project? Please explain how we can possibly understand the project if there is no specific plan?

Response to Comment No. 366-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, 9-14, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the limited Land Use Exchange Program, and how the Project Description discloses all of the elements of the Project required by CEQA. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan, which were disclosed and analyzed in the EIR. As further discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

As also discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment Letter No. 367

Chris McKee
gawara@ragcha.com

Comment No. 367-1

I expect you're mostly hearing complaints about this project, because there's an organized resistance to development, period. NIMBYs have caused rampant homelessness here in California [missing text] every major industrialized city in the world.

I understand, of course, TV City is not meant to become housing at all. But I am writing to support its development with a few caveats, which may help assuage some of the complaints of the [missing text]

1. Require the project use only electric vehicles. Volvo and Tesla are accepting orders for electric semis now, which will start shipping to buyers next year. And Mack and Caterpillar are already [missing text] other construction equipment. This will mitigate much of the pollution.
2. Require the construction start by building a parking structure on Fairfax south of Olympic—perhaps where the 7-11 [sic] is—and then get rid of the curbside parking on that stretch to reduce traffic [missing text] keep the shops and cafes on that stretch alive, with parking for their customers.
3. Extend the no stopping/parking zone from 7am–7pm on 6th street between La Brea and Just West of Cochran, where the road widens, to reduce jams there. Look for similar stretches on Be [missing text] Fairfax.
4. Look into the dozens of abandoned and underdeveloped properties on Fairfax to determine why they have not been developed into 5-story apartment buildings. Also the delayed development [missing text] One of the complaints I'm hearing is that there aren't enough homes for all the people who will be working in the expanded site once it is completed. I contend there is plenty of space here [missing text] not been developed. I will include a photo of an entire blighted block, just one block from 3rd & Fairfax, which should be replaced with housing.

Thank you for your time and consideration. I hope these ideas help the stakeholders find an acceptable compromise.

Response to Comment No. 367-1

While electric truck use for Project operation will inevitably occur as a result of CARB's recent decision to phase out diesel trucks by 2036, electrification of the

construction truck fleet is not a feasible measure given the large fleet of trucks required, distance traveled, and weight of loads. However, Mitigation Measure AIR-MM-2 has been amended to require the use of model year 2014 or newer heavy-duty trucks meeting CARB's low NOx standard during construction to the extent commercially available. Refer to Response to Comment No. 164-3 for a discussion of trucking, haul routes, and health effects.

The construction of a public parking structure and redeveloping properties the Applicant does not own are beyond the scope of a project EIR. Nevertheless, the suggestions are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The idea of an extended no stopping zone is not required to mitigate any Project impact. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 368

Luke McKinley
538 N. Spaulding Ave.
Los Angeles, CA 90036-1857

Comment No. 368-1

Heavy traffic, congestion, road closures and air pollution are already elements of living in L.A. This project makes all of those elements worse—does the Air Quality analysis show that there could be 50, 100 or 200 production trucks spewing diesel particulates in the community for years to come?

Response to Comment No. 368-1

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment.

The commenter's assertion regarding the number of production trucks to be used by the Project is incorrect. Please refer to Response to Comment No. 87-1 regarding emissions related to production trucks and Response to Comment No. 26-E.1-16 regarding the number of Project-related operational trucks accessing the Project Site per day. As shown therein, the truck trips (approximately 31 total net new diesel trucks) would be substantially less than the 100 trucks criteria cited in the Draft EIR that would trigger the need for a mobile air toxics HRA (see page IV.A-72 of the Draft EIR). This information further supports the Draft EIR's conclusion that Project-related TAC emission impacts during operations would be less than significant and consequently not result in a potential health risk impact.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to SCAQMD comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. On May 5, 2023, SCAQMD concluded that the HRA protocol adequately addresses health risk impacts related to the Project. The HRA utilizes methods formulated to be protective of the health of the most sensitive individuals in the population, including children and seniors. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased truck trips associated with future operations, would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Comment No. 368-2

What about the greenhouse gas emissions from all these trucks?

Response to Comment No. 368-2

Please refer to Response to Comment No. 335-1 regarding GHG emissions from Project-related trucks.

Comment No. 368-3

Are the power generators used at the basecamps going to run on diesel fuel or 100% electric? If it's the former, what is the plan for dealing with the toxic emissions and noise from these generators? Where will these power generators be located and how much will they run?

Response to Comment No. 368-3

This comment is substantively similar to Comment Nos. 188-4. Refer to Response to Comment No. 188-4, above .

Comment No. 368-4

And if these environmental impacts are as grim as they seem to be, how could the City have approved this project?

Response to Comment No. 368-4

Pursuant to Section 15092(a) of the CEQA Guidelines, project approval occurs only after the Final EIR has been completed and the Lead Agency decides whether or how to approve or carry out the project. Therefore, approval of the Project would not occur until after review and consideration of the Final EIR.

Comment Letter No. 369

Tara McVictor
153 S. Laurel Ave.
Los Angeles, CA 90048-3513

Comment No. 369-1

The Beverly Fairfax area deserves to receive real information that addresses the CBS building expansion in full. From what has been shared on the internet, this seems like a giant endeavor that is going to be constructed over the next 15 years. I still have no idea what in the world this proposal is. Will there be any apartments? Or just a bunch of offices? Surely, they aren't using a substantial amount of space for office, right? People work from home, and we need housing. We need AFFORDABLE housing. Where is the specific plan for this?

Response to Comment No. 369-1

As discussed throughout the Draft EIR, the Project is a studio project, which would continue the existing studio use; accordingly, the Project does not include any housing. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan and Topical Response No. 3, Permitted On-Site Uses, and Response to Comment Nos. 5-6, 9-13, and 26-16 with regard to the land uses that would be permitted in the proposed Specific Plan and the mix of studio uses. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Regarding the timing of the Project, refer to Response to Comment No. 9-24.

As discussed in Topical Response No. 1, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. Neither CEQA nor City policy requires a draft Specific Plan to be included in the EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

The commenter's opinion regarding housing is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 369-2

As far as I can tell, this is going to be a 20-year build. Is it in phases? When will it start? How many trucks are coming in per day? What will be done about the damage to the roads? Will you use the grove entrance for this? The construction is destined to impact school traffic.

Response to Comment No. 369-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, with regard to the Project Description and proposed Specific Plan and Topical Response No. 14, Construction Vehicle Impacts, regarding construction haul routes, truck trips, and the proposed CTMP, which includes measures to reduce the effect of construction trips on the surrounding community, including schools.

Regarding the timing of the Project, refer to Response to Comment No. 9-24.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding traffic and safety.

With regard to roadway damage, in the unlikely event that roadway damage occurs during construction, repair would occur under the direction of the City.

Comment No. 369-3

Not only is this a traffic nightmare that the city is not prepared to handle, but it is going to destroy the climate. LA has the best weather in the world. We can't destroy what we have with all these additional cars on the road, in addition to all the trucks that will be needed for the project. With the increased traffic, all those cars and construction trucks will be idling in the gridlock. Has there been a climate study?

Response to Comment No. 369-3

Please refer to Response to Comment No. 335-1 regarding GHG emissions from Project-related vehicles and trucks.

The Draft EIR provides a thorough analysis of the Project's GHG impacts within Section IV.E, Greenhouse Gas Emissions, of the Draft EIR. The analysis includes quantification of construction and operational GHG emissions (including Project-related construction and operational vehicular and truck trips), quantification of applicable reduction measures, and consistency with applicable local plans and policies. However, the threshold of significance adopted by the City for the CEQA GHG analysis is qualitative

and based on the Project's consistency with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. Thus, although provided for informational purposes only, the quantitative data and analysis demonstrate with substantial evidence that the Project's consistency with applicable plans, policies, regulations, and requirements will in fact result in notable GHG emissions reductions.

The Draft EIR correctly concluded that the Project would result in less than significant GHG impacts.

Mobile source emissions were modeled using CalEEMod which is based on EMFAC and includes both idle and travel emissions. Mobile source (e.g., cars and trucks) GHG emissions are provided in Table IV.E-11 (Annual Project GHG Emissions Summary) on page IV.E-78 of the Draft EIR.

Pursuant to SB 743, congestion is not a CEQA impact. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 369-4

Has there been a health study that includes the additional gas and diesel emission from the additional car and truck traffic?

Response to Comment No. 369-4

Refer to Response to Comment No. 26-E.1-21 for a discussion of the Draft EIR's analysis of localized air quality impacts. Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to public comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the findings of the Draft EIR.

Comment No. 369-5

Also, we're in the middle of drought. What about the lack of water in this region? How much water will a project of this size require per day? Is this the best use of water?

Response to Comment No. 369-5

Refer to Response to Comment No. 16-66 with regard to the adequacy of water supply to serve the Project and the consideration of drought conditions. Refer to Response

to Comment No. 26-175 regarding the Project's water demand and impact analysis. As discussed therein, LADWP's analysis does not focus on "best use of water." Rather LADWP's analysis focuses on the water demand associated with the Project as well as conservation features to reduce water demand.

Comment No. 369-6

Please address these concerns. Our community deserves better.

Response to Comment No. 369-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 369-1 through 369-5.

Comment Letter No. 370

Peter Meadows
360 1/2 N. Gardner St.
Los Angeles, CA 90036-5723

Comment No. 370-1

EIR fails as an informational document for the public or the City. There are so many issues that are not addressed and the project is not even clearly defined.

Response to Comment No. 370-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. With respect to the claim that the EIR fails as an informational document, refer to Response to Comment Nos. 370-2 through 370-6, below, which support the adequacy of the Draft EIR. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 370-2

Will there be a specific description of what the project is and what will be built? When will it be released to the public? What is the specific plan and where is it?

Response to Comment No. 370-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project. Neither CEQA nor City policy requires a draft Specific Plan to be included in the EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Refer also to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan.

Comment No. 370-3

Where will the Television City employees be located? Where will they park? Where are they commuting from? I know this is an entertainment studio, but how much noise are we as residents to expect on a daily basis?

Response to Comment No. 370-3

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Section IV.I, Noise, of the Draft EIR addresses potential noise impacts associated with construction and operation of the proposed Project. Noise associated with studio-related production is discussed beginning on page IV.I-44 of the Draft EIR, which, as stated on page IV.I-45 of the Draft EIR, noise impacts associated with outdoor studio production activities would be less than significant. Details in support of the noise impacts analysis are provided in Appendix J of the Draft EIR. As discussed therein, operational noise impacts would be less than significant.

Comment No. 370-4

Mostly, I am concerned about parking and traffic. Where in the analysis does it address the hundreds if not thousands of people who may come to attend the audience shows at the property? Please explain how the parking will work for people who come to see shows during the day when the parking structures are full with the 8,000 employees. I read that the project could affect the farmers markets parking. What happens when this inconveniences the public enough to stop going and it gets shut down?

Response to Comment No. 370-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The

Project would not affect parking at The Original Farmers Market as described in Section C, Parking Spillover into Adjacent Neighborhoods and Properties, of the topical response.

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, regarding the number of audience visitors and trips.

Comment No. 370-5

On top of that I understand that commercial loading zones are going to take over a number of metered parking spots. There is already a lack of parking in this area, what mitigation measures are going to be put in place for this?

Response to Comment No. 370-5

With respect to on-street metered parking, the Project does not propose to remove any such parking.

Comment No. 370-6

I read that streets, cross walks, sidewalks and bike lanes will be effected by the project. There is talk in the EIR of possibly improving some of these means, but no definite answer as to how. How are we supposed to believe that pedestrian safety is being prioritized when the project is taking them over? How will we be expected to travel anywhere at all considering traffic will be increased by 8,000+ people?

Response to Comment No. 370-6

There are no plans for any long-term sidewalk or bike lane closures as part of the construction process. There are some utility upgrades that would require new or revised connections between the Project Site and utilities that currently run under the streets. For these connections, sidewalks and bike lanes would have to be closed temporarily, but the CTMP prepared pursuant to Project Design Feature TR-PDF-1 would require that temporary sidewalks and bicycle rerouting be provided to maintain pedestrian access past the Project Site.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and

Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 370-7

There seems to be too many unanswered questions regarding this project and we as citizens deserve answers, detailed answers. There is little to no impact analysis and this terrifies me. I do not know what to expect living in this community anymore. Please provide us with a detailed EIR that will be circulated throughout the city. Everyone deserves a say in this matter and they deserve to know how they will be affected.

Response to Comment No. 370-7

Refer to Response to Comment Nos. 370-2 through 370-6. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 371

Zak Means
9217 Alcott St.
Los Angeles, CA 90035-3103

Comment No. 371-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 371-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 372

Faige Meller
336 N. Kilkea Dr.
Los Angeles, CA 90048-2227

Comment No. 372-1

Regarding the TVC 2050 expansion of the CBS studios, I would like you to address several concerns that I have.

Response to Comment No. 372-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 372-2 through 372-6.

Comment No. 372-2

Regarding traffic:

1. There will be a lot of car and truck traffic caused by this expansion. I think there needs to be turn lanes for traffic making right turns onto the project. Why aren't there going to be any dedicated turn lanes for trucks and cars? Were they considered? How is the problem of cars and trucks trying to make turns, darting across oncoming traffic going to be addressed?
2. Grove Drive is not a very large street. Why is the large parking garage going to be located on the Grove drive? Did you consider how many cars will have to drive on that street? Please explain the rationale for its use? Were alternative streets considered?
3. Grove Drive is also an access point for the Holocaust Museum with lots of school buses dropping kids off. How will the school buses be able to safely drop kids off with thousands of additional cars across the street? Will this be safe for school children? What measures are going to be taken so that safety remains a priority?

Response to Comment No. 372-2

This comment is identical to Comment No. 324-2. Please refer to Response to Comment No. 324-2, above.

Comment No. 372-3

Regarding zoning:

1. The DIER [sic] says that any use in the C2 zone will be allowed. What exactly is a C2 zone? From what I understand there are over 100 uses that could be allowed in the C2 zone. How will the community know what uses could be going to be proposed?

Response to Comment No. 372-3

This comment is identical to Comment No. 324-3. Refer to Response to Comment No. 324-3, above.

Comment No. 372-4

How will the community be informed about when and if that happens?

Response to Comment No. 372-4

This comment is identical to Comment No. 324-4. Refer to Response to Comment No. 324-4, above.

Comment No. 372-5

How are traffic impacts analyzed for the project for the variety of potential uses? Does that impacts analysis have to be done with potential uses are actual planned uses?

Response to Comment No. 372-5

This comment is identical to Comment No. 324-5. Refer to Response to Comment No. 324-5, above.

Comment No. 372-6

Regarding Vehicle Miles Traveled:

1. The analysis says the average travel distance is 3.5 miles. This does not make sense to me. Can you provide more details on how this number was reached and what it means?

Response to Comment No. 372-6

This comment is identical to Comment No. 324-6. Refer to Response to Comment No. 324-6, above.

Comment Letter No. 373

Harry Meller
6500 W. Fifth St.
Los Angeles, CA 90048-4712

Comment No. 373-1

I am a resident who is very concerned with the proposed Television City expansion project. We have not been made aware of just what this project will entail and what the details are, but my understanding is that it will be developed over 20 years, significantly enlarging the current footprint of Television City.

Response to Comment No. 373-1

This comment is nearly identical to Comment No. 256-1. Refer to Response to Comment No. 256-1, above.

Comment No. 373-2

I have several questions:

1. The neighborhood includes multiple schools and nursing facilities. Have these organizations and other types of businesses, not to mention residents, been notified of the increase in truck traffic and car traffic due to construction? What specific information have they been told about the impacts of those increases because someone told me the developer said there were no significant impacts, but there cannot be no impacts with a project like this? What impacts are considered by the city as not significant? Who determines what is significant or not for residents who are affected?

Response to Comment No. 373-2

This comment is identical to Comment No. 256-2. Please refer to Response to Comment No. 256-2, above.

Comment No. 373-3

2. On a related note, the developer would be keeping trucks in the community where Loyola High School and Kaiser Hospital are. The trucks would be an eyesore, polluting the air, backing up traffic, and potentially causing harm to the health of people who are already facing struggles. That area is a low-income area, so I would like to know how it was decided that trucks would be in this particular community. How that could be considered acceptable when there are

impacts to that low-income area? For what periods of time would those trucks be there? And would they be parked there, idling while waiting to drive somewhere else? Where exactly would they be parked?

Response to Comment No. 373-3

Refer to Response to Comment Nos. 178-3 and 183-1 regarding off-site staging. The Project has been modified to eliminate the off-site staging of haul trucks along streets serving the Project Site. There is no longer a plan to stage haul trucks near Kaiser Hospital or Loyola High School. All haul truck staging would be accommodated within the Project Site itself. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 373-4

3. The older buildings of Television City, from the 1960s and early 1970s, are not considered historic due to the definition of historical resource because that date is 1963. Please explain where that year of 1963 comes from in determining what part of the building is historic, and why the other buildings from Television City's past are not worthy of being preserved? Who or what policy sets that standard? What is involved in having the other older parts of Television City be preserved because there is a lot of history in those older buildings as well?

Response to Comment No. 373-4

Buildings and structures constructed after 1963 were not included in the HCM designation; these buildings were also analyzed as a part of the Draft EIR historical analysis and confirmed not to be historical resources. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance.

Comment No. 373-5

Thank you for your consideration.

Response to Comment No. 373-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 374

David Meltzer
heytmrw2@gmail.com

Comment No. 374-1

This is David Meltzer and I read people with an opinion on the CBS construction project should make their feelings known by Monday. OK—I oppose this project unless it can be shown those behind it live in the beverly grove [sic] area. SOOOOOOO easy to ask others to sacrifice when you are far away. I could go on and will if you and the councilman want me to do so. I am not afraid to express myself face to face or thru technology to the extent I understand the technology which is barely. Contact me if you wish Dylan. I am at your disposal as a retired 40 year federal employee who worked alongside federal administrative law judges and won awards for my performance.

Response to Comment No. 374-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 375

David Meltzer
heytmrw2@gmail.com

Comment No. 375-1

Hackman people want to talk to me. I imagine the person who will speak with me for them is adept at deflecting criticism and turning things to the bright side maybe all the benefits LA will secure down the line. I suppose self serving statements from the company that does these acquisitions for a living is to be expected but they will not deter me and my pursuit of the reality here which may mean no money for people who will NEVER EVER have enough.

Response to Comment No. 375-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 375-2

The congestion in an area already afflicted with that as the Grove, Farmers market already makes driving around there a cause for delays and now this and if what I've received in the mail is true city closures which ONLY could happen if the city was on board!!!!!!!

Response to Comment No. 375-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 375-3

I don't think the company can just hire guys to stand there with flags stopping traffic allowing that parade of trucks access if frankly CITY PLANNING was not in agreement.

Response to Comment No. 375-3

Pursuant to Section 15092(a) of the CEQA Guidelines, project approval occurs only after the Final EIR has been completed and the Lead Agency decides whether or how to approve or carry out the project. Therefore, approval of the Project would not occur until after review and consideration of the Final EIR.

Comment No. 375-4

But most of all it is this dispersal of NO_x that should trouble anyone living around CBS.

Response to Comment No. 375-4

Refer to Response to Comment No. 16-12 for a discussion of Project localized air quality impacts, including localized impacts related to NO_x. As discussed therein, Project construction and operational emissions would not exceed SCAQMD's localized significance thresholds with incorporation of mitigation measures. SCAQMD's localized significance thresholds represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standard.

Comment No. 375-5

And I doubt if any Hackman people do!!!!!!!!!!!!!!

Response to Comment No. 375-5

The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 376

Hannah Menkin
424 N. Alta Vista Blvd.
Los Angeles, CA 90036-2541

Comment No. 376-1

I am writing to express my concern and opposition toward the TVC 2050 project and its impacts on the community.

Response to Comment No. 376-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 376-2 and 376-3.

Comment No. 376-2

How can the public understand and weigh in when it hasn't been made clear what the actual planned uses are? When will a definitive plan be made available? How can the City approve a project that is more in concept than in specifics? If that is even possible, what do you then tell community members about how the project is going to actually affect their daily and long-term lives?

Response to Comment No. 376-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, 9-14, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the limited Land Use Exchange Program, and how the Project Description discloses all of the elements of the Project required by CEQA. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan, which were disclosed and analyzed in the EIR. As further discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 376-3

Will the city have any power to impose restrictions on how they use this property in a way that is more restrictive than the C2 zoning? What powers do they have and what will the enforcement method be? What penalties can be imposed on the developer if they violate those restrictions?

Response to Comment No. 376-3

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan, which were disclosed and analyzed in the EIR. As discussed therein, based on input received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project and specifically removes the reference to all C2 uses (even though these uses are currently permitted); refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses—sound stages, production support, production office, general office, and retail—as well as related ancillary and supportive uses. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan.

Comment No. 376-4

The developer should be required to add more clarity to the draft EIR about the intended uses on their property. Neighbors deserve to know what will actually happen on the property.

Response to Comment No. 376-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 376-2 and 376-3.

Comment Letter No. 377

Alex Messana
481 S. Roxbury Dr.
Beverly Hills, CA 90212-4165

Comment No. 377-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 377-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 378

Ida Messinger
448 N. Edinburgh Ave.
Los Angeles, CA 90048-2308

Comment No. 378-1

The applicant likes to talk about the studio uses on this site, but the Draft EIR lists a bunch of other stuff that they can do on the site with no analysis or explanation—including all uses in the C2 zone! The Draft EIR doesn't tell you, but I looked at Planning's "Lists of Uses Permitted in Various Zones" and it could be HUNDREDS of uses, including carnivals, hospitals, massage parlors, medical offices, and sports arenas. What's really going on here? The Draft EIR needs to explain which and how much of all of the proposed uses will be allowed and how they will be regulated. The impacts of the uses could be dramatically different than what is described. And what exactly is production support and production office? There's no explanation in the Draft EIR. And is there any restriction on what can occur in basecamps? How are we supposed to understand what the impacts will be and if they have been properly assessed if there's no explanation? The Draft EIR is useless. Where are the uses and activities described? Where are the impacts disclosed? If not disclosed then they shouldn't be permitted.

Look forward to your response.

Response to Comment No. 378-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan; Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 5-7 with regard to the definition of floor area under the proposed Specific Plan; and Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan. As discussed in Topical Response No. 3, based on input received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project and specifically removes the reference to all C2 uses (even though these uses are currently permitted); refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan only permits five land uses—sound stages, production support, production office, general office, and retail—as well as related ancillary and supportive uses. The EIR comprehensively analyzed all proposed uses, areas and activities.

The Project does not include carnivals, hospitals, massage parlors, medical offices, and sports arenas, and such uses would not be permitted under the proposed Specific Plan. Refer to Response to Comment Nos. 5-6, 28-6, and 224-1 regarding the specific uses discussed in this comment.

Refer to Response to Comment No. 26-122 regarding the definitions of production support and production office. Refer to Response to Comment No. 26-121 regarding the basecamp use.

Comment Letter No. 379

J. Brandon Meyer
535 N. Spaulding Ave.
Los Angeles, CA 90036-1855

Comment No. 379-1

I am a 26 year resident of the Beverly Fairfax community. I am writing to you today in response to the Draft Environmental Impact Report. After reading through it, I am left with many questions and even more concerns.

Response to Comment No. 379-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 379-2 through 379-7.

Comment No. 379-2

As someone who commutes to and from work by car, I am primarily concerned with the impact the Television City project would have on traffic in my neighborhood. Have you analyzed the impacts to those of us who drive in and out of the neighborhood for work, not just those you expect to drive here for work at the new site?

The plan drawings show several semi-trucks onsite. These trucks will consistently have to make left turns into oncoming traffic. Have studies been conducted to analyze how much extra traffic this would create? If so, can that please be outlined to me in a response to my letter? How will some of those trucks access the site, from other points as well? Furthermore, the plan fails to specify *how many* trucks would be on-site and when. Can you please specify? There's a big difference in the amount of traffic created by 50, 100,200, [sic] and so on trucks.

Response to Comment No. 379-2

This comment is identical to Comment No. 231-2. Please refer to Response to Comment No. 231-2,above.

Comment No. 379-3

Additionally, I am extremely concerned about the negative health impacts this project could have. Since you are putting a truck road and studio building next to apartments, negative

health impacts will undoubtedly occur. What kind of health studies have been conducted to evaluate the impact of noise and fumes on the residents? Did your health analysis, if one was conducted, include the impacts of students at the nearby schools? Which schools were shown to be most affected? What kind of health effects should I be worried about as a resident of Beverly Fairfax?

I understand that there will also be a large parking structure located on Grove Drive. The concerns I have above apply to this parking structure as well. Can you please draft an alternative in which parking is put somewhere else besides Grove Drive? And can you please avoid residential areas for such parking structures? Additionally, I am concerned about the children and seniors that use Grove Drive. Has a health impact analysis been conducted for these two groups as well? How will the exhaust emitted from the vehicles using the parking structure impact these groups?

Response to Comment No. 379-3

This comment is identical to Comment No. 231-3. Refer to Response to Comment No. 231-3, above.

Comment No. 379-4

Furthermore, this project proposes to stage thousands of trucks next to a hospital. What measures has the city taken to inform nearby residents and hospital employees that 60,000 trucks will be creating traffic nearby? What happens when the trucks are creating traffic and an ambulance needs to get to the emergency room? Can the public please see your plans for this?

Response to Comment No. 379-4

This comment is identical to Comment No. 231-4. Refer to Response to Comment No. 231-4, above.

Comment No. 379-5

Until we receive real information about the extra traffic created by this project and the real impacts expected, I cannot support this. Please respond to my letter with thorough responses to each of my questions. With more information, I can better form my opinion.

Response to Comment No. 379-5

This comment is identical to Comment No. 231-5. Refer to Response to Comment No. 231-5, above.

West Hollywood, CA 90048-2576

Comment No. 381-1

I hope you will seriously reconsider the proposed Television City expansion project. The EIR is confusing and incomplete. There are so many concerns with this proposed huge facility for a neighborhood that is historic. Please address these issues not explained in the EIR.

Response to Comment No. 381-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 381-2 through 381-9.

Comment No. 381-2

The Television City proposes improvements that will increase the height of some buildings by many stories. How will 20-story buildings appear behind our Farmer's Market and the Avila Adobe? The adobe has historical significance and has been around since 1818. How will the developer protect it from damage during all the construction? How close will the construction be to the edges of the adobe and market property? How will the increased traffic impact business at the Farmer's Market?

Response to Comment No. 381-2

This comment is identical to Comment No. 209-2. Refer to Response to Comment No. 209-2, above.

Comment No. 381-3

Also, it seems those tall buildings even fit into the neighborhood, was this even considered? The drawings show a mammoth sized complex. How could that kind of development fit into our community? What will happen to any views that residents in apartments have now?

Response to Comment No. 381-3

This comment is identical to Comment No. 209-3. Refer to Response to Comment No. 209-3, above.

Comment No. 381-4

With construction, residents need to know the schedule. How is the project construction going to be mapped out? Neighbors need to know the phases of the project, so please provide a plan. During construction there will be so many trucks, coming and going. Why is the route for this traffic pattern not confirmed already?

Response to Comment No. 381-4

This comment is identical to Comment No. 209-4. Refer to Response to Comment No. 209-4, above.

Comment No. 381-5

The digging required for this project will impact the groundwater. How will the nearby homes and businesses be affected by this change in the ground? Will foundations be shifted due to subsidence? Have the potentially affected owners of property been notified of these groundwater issues?

Response to Comment No. 381-5

This comment is identical to Comment No. 209-5. Refer to Response to Comment No. 209-5, above.

Comment No. 381-6

Has the developer partnered with the LA Conservancy in this development? It seems there has been a settlement of some kind. What is this settlement, and is it included in the EIR? Why does the LA Conservancy speak for our community? How does the settlement agreement affect the goals of the expansion project? How can the community know the limitations agreed to if it is not available to the public?

Response to Comment No. 381-6

This comment is identical to Comment No. 209-6. Refer to Response to Comment No. 209-6, above.

Comment No. 381-7

In the EIR, the Vehicle Miles Travelled analysis is difficult to understand. Please explain what vehicle miles travelled is and why is that used rather than number of cars and number of trips. The distance people drive in LA is greater than the averages you used; when are you going to correct those mileage numbers? The information does not seem to align with what are the typical transportation modes of Angelenos. For example, the VMT analysis makes assumptions about people traveling via public transportation, but most people's experience says otherwise. What data was used to create the analysis? If it showed a high percentage of people travelling via bus and metro, etc., then please provide that data.

Response to Comment No. 381-7

This comment is identical to Comment No. 209-7. Please refer to Response to Comment No. 209-7, above.

Comment No. 381-8

Thank you for your time.

Response to Comment No. 381-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 382

Lori Miller
527 N. Orlando Ave., Apt. 5
West Hollywood, CA 90048-2576

Comment No. 382-1

As a member of the Fairfax community, I feel threatened by the proposed project. How could such an egregious plan be put forward? There are many concerning aspects, and I will highlight a few of my main concerns below.

Response to Comment No. 382-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 382-2 through 382-4.

Comment No. 382-2

As it stands, there is a large parking structure being placed on Grove Drive. Grove Drive is right across from Pan Pacific Park. Children, senior citizens, and everyone in between frequent this park. With this new parking structure, there are going to be many more trucks entering Grove Drive and emitting fumes and exhaust next to the park. How many trucks are expected to be in this parking structure? How much diesel exhaust is going to be emitted? What are the health risks to people? Are the health risks different for younger children than for senior citizens? Please provide a proper analysis on the health risks associated with all of this exhaust.

Response to Comment No. 382-2

This comment is substantively similar to Comment Nos. 231-3 and 300-4. Refer to Response to Comment Nos. 231-3 and 300-4, above.

Comment No. 382-3

Staying on the theme of Grove Drive, essentially all of the parking is located on the road. This means that all the people trying to get to the project site will use Grove Drive. This seems impossible and is bound to be chaotic. How is the Grove gate going to handle this congestion? What will happen if 25% of traffic uses the Grove gate? What about 50%? 75%? And on the most extreme end, what would happen if 100% of the traffic tries to use the Grove gate?

Response to Comment No. 382-3

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access and use of The Grove Drive.

Based on the Conceptual Plan, almost 40 percent of the parking supply would be served directly from Fairfax Avenue and the remaining 60 percent would be equally served by the Beverly Boulevard and The Grove Drive signalized driveways. The parking supply on the Project Site is primarily served by the three signalized driveways and can be accessed from each of these driveways. Figure 22 on page 80 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that during the morning peak hour, approximately 32 percent of the inbound Project trips would use The Grove Drive entry, approximately 32 percent would use the Beverly Boulevard/Genesee Avenue driveway, and approximately 23 percent would enter the Project Site via one of the driveways on Fairfax Avenue. The remaining approximately 14 percent of entering vehicles would use the unsignalized driveways along Beverly Boulevard or along the Southern Shared Access Drive.

Comment No. 382-4

Another thing that concerns me is parking plan. In its current state, it makes no sense. The Draft EIR outlines that there will be roughly 8,000 people employees on site. Additionally, the large audience stages could bring in 3,000 to 5,000 people a day to the site. However, the project is allotting 5,300 parking spaces. What is the plan for employee parking? How are parking permits going to be distributed? How are they going to be monitored and enforced? With these numbers, there are not enough spaces. Where is the overflow going to park? Are you going to have designated spaces for them nearby or are they expected to park all around our community?

Response to Comment No. 382-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 382-5

All of the points above need to be addressed. They all directly impact the health and lifestyle of residents like me, and it is important for these questions to be answered and changes to be made. The plan it stands is unacceptable and needs to be heavily reconsidered.

Response to Comment No. 382-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 382-2 through 382-4.

Kristin Mirek
525 N. Curson Ave.
Los Angeles, CA 90036-1813

Comment No. 384-1

The “Television City Project,” will be a major, extremely disruptive construction project that could last up to twenty years. The community knows very little about this project, in a lot of ways it is because of the EIR saying the developer “may” do this or that.

Response to Comment No. 384-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 384-2 through 384-6.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 384-2

For example, the developer “may” include pedestrian improvements in the plan. What improvements? When will they be made? Why won’t the developer commit to improvements? Why aren’t the improvements made on the front end of construction to make everything more convenient for the community? What will determine if the developer does or doesn’t make the improvements? When will the community be informed with the specifics? I expect real answers if the developer wants to build a 1.8 million square feet expansion in our community. There really isn’t even any certainty on the layout of this development.

Response to Comment No. 384-2

Refer to Response to Comment Nos. 16-72, 16-76, 28-18, 35-101, 172-3, and 313-2 regarding the Project’s pedestrian-oriented design and public realm improvements.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the

Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan.

Comment No. 384-3

The developer also includes mention of potential “project alternatives,” but can you explain what those alternatives are? Why are alternatives considered at all? And why and how are any alternatives disregarded outside of a public process? Just another non-answer on what this project even is.

Response to Comment No. 384-3

Refer to pages V-1 and V-2 of Section V, Alternatives, of the Draft EIR for an introduction to CEQA’s requirements regarding analysis of alternative project scenarios. PRC Section 21002 states, in part, that the environmental review process is intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives which will avoid or substantially lessen such significant effects. CEQA Guidelines Section 15126.6(b) states that the discussion of project alternatives must focus on those alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the proposed project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly. Each alternative is explained in detail in Section V, Alternatives, of the Draft EIR, which is a public document that was published and circulated in accordance with CEQA. Refer also to Topical Response No. 16, Project Alternatives Analysis.

Refer to Response to Comment No. 32-3 regarding the noticing of the Project in compliance with CEQA.

Comment No. 384-4

They also have no idea what construction looks like for the development. The report evaluates based on a 32-month construction time period, but then it could actually be spread out over twenty years? How is that possible? Can you explain to me why a more consistent and predictable timeline is not required? Not preferred? What will be constructed first? I can’t imagine having to deal with construction for twenty years.

Response to Comment No. 384-4

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 384-5

What will be done about parking and managing the employees and construction workers that are going to invade our community and neighborhoods? What sort of enforcement is in place to make sure workers aren't parking in bike lanes or in neighborhoods? This could be a serious safety risk. Has this been considered? Where?

Response to Comment No. 384-5

The Project Site is large enough that all construction workers would be able to park on the Project Site itself. No off-site parking is needed to accommodate the parking demands of the construction workers and vehicles. Construction workers would be prohibited from parking off-site as part of the required CTMP prepared pursuant to Project Design Feature TR-PDF-1.

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 384-6

What about signage? Will there be signage for safety during construction? I believe there will be billboards surrounding the project site, but what about adequate signage for safety? Sometimes cones are used when a lane is about to gradually end; is that kind of driver notice going to be used, because the crews never plan well for it? Will there be billboards lit up at night? Has there been a study on the impact of these lights going into people's homes?

Response to Comment No. 384-6

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described in the Draft EIR. Also refer to Response to Comment Nos. 26-129 and 213-2 regarding off-site signs and billboards, which would not be permitted under the proposed Sign District. Note that pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic impacts (including impacts with respect to lighting) shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only. Refer to pages 38 through 40 of the Initial Study for a discussion of lighting.

Refer to Response to Comment No. 73-2 regarding the proposed CTMP. As discussed therein, the CTMP, which will be prepared and submitted to the City for review and approval prior to commencing construction, will identify specific actions during construction, including appropriate signage, that will reduce effects on the surrounding community.

Comment No. 384-7

There just isn't any obvious way the developer is going to handle working with the community. There has already been so little information shared, and I don't see things getting better. Enough is enough.

Response to Comment No. 384-7

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 384-2 through 384-6.

Comment Letter No. 385

L. Mita
8701 Delgany Ave., Unit 103
Playa del Rey, CA 90293-8151

Comment No. 385-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 385-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 386

Nicole Mitchell
367 N. Stanley Ave.
Los Angeles, CA 90036-2338

Comment No. 386-1

I genuinely am concerned about the outlook of this proposed studio expansion construction project in the Beverly Fairfax neighborhood. I am familiar with some of the numbers that are being put before the public as far as the increase in Metropolitan transit ridership that will result from this new development.

Response to Comment No. 386-1

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 386-2

The proposal, as I understand it, outlines relatively specific increases in ridership that will supposedly result directly from the studio site. The purpose of this study, I am guessing, is to reassure the public that most of the increased traffic that would otherwise find itself on roadways will be rerouted on to rapid transit. The problem with this proposal is that most of this transit is almost a mile or more from the site. On what basis are you projecting the numbers of people coming to the site will take the metro and then walk the rest of the way? What actual use of transit is that based on? I doubt most commuters will walk that far. Furthermore, the Wilshire/Fairfax station which appears to be the nearest stop to the studio area isn't even expected to be ready for use for at least a couple more years. What is the plan for the meantime? Doesn't the fact that the stop is not operating yet change the analysis and findings?

Response to Comment No. 386-2

Tables 4A and 4B on pages 58 and 59 of the Transportation Assessment (Appendix M.1 of the Draft EIR) show the number of bus routes and stops near the Project Site. They also show that the current bus service has sufficient capacity available to accommodate the entire transit demand to be generated by the Project, even before the Metro D (Purple) Line Wilshire/Fairfax Station opens.

The trip estimates in the analysis show that up to 15 percent of the trips associated with the Project would take transit or bike or walk to the Project. Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

The transit connection to the Wilshire/Fairfax Station is not expected to be made on foot as suggested in the comment. The Project's TDM Program would require an extensive system of shuttle buses to carry Project employees and visitors between the Wilshire/Fairfax Station and the Mobility Hub on the Project Site.

The comment is correct that the opening of the Wilshire/Fairfax Station is probably still two years away. However, the Project is currently in the entitlement process and, once approved, would include approximately 32 months of construction. The Wilshire/Fairfax Station would likely be open prior to the completion of the Project.

Comment No. 386-3

It does not seem realistic to rely on public transit as a way of alleviating the otherwise seemingly inevitable traffic patterns that would arise from this expansion project. I am concerned that if we take these numbers as is, we will wake up a year or two from now regretting that we believed them. Why is the developer trying to say that all of the increase traffic is just not going to be a problem? For someone like me, many of the details of this proposal seem rather misleading.

Response to Comment No. 386-3

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM. Please note that the CEQA transportation analysis in Section IV.K, Transportation, of the Draft EIR conservatively did not account for the Project's full TDM Program. Nevertheless, the Draft EIR concluded that potential transportation impacts would be less than significant.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment. The Transportation Assessment (Appendix M.1 of the Draft EIR) identifies the key intersections in the Study Area where the Project trips would add delay to the future operations (Table 18 on page 162) and identifies both safety and operational improvements to reduce these delays and improve traffic safety.

Comment No. 386-4

Can you please explain to the concerned members of the public how we are supposed to adapt if the transit numbers are off and traffic spikes around our neighborhoods? What else am I missing here in this proposal? What other details are residents and commuters not being told?

Response to Comment No. 386-4

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

The transit assumptions are very conservative (i.e., low) in that they can be achieved even without the extensive shuttle bus system that is being provided to move Project employees and visitors between the Project Site and the Metro D (Purple) Line Wilshire/Fairfax Station.

Please note that the CEQA transportation analysis in Section IV.K, Transportation, of the Draft EIR conservatively did not account for the Project's full TDM Program. Nevertheless, the Draft EIR concluded that potential transportation impacts would be less than significant.

Comment No. 386-5

Please let me know of any information pertaining to these questions. I appreciate your time.

Response to Comment No. 386-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 386-1 through 386-4.

Comment Letter No. 387

Maliha Moloo
8125 Blackburn Ave.
Los Angeles CA 90048-4423

Comment No. 387-1

I ask that you take a closer look at the impact on air quality that the new studio at Television City would create if constructed. The air with breath [sic] around Los Angeles is already intoxicating and if there is a significant increase in carbon and pollutants from the traffic and construction of the project, we could be in for even more hazardous air.

Does the air quality analysis show that there could be 50, 100 or 200 production trucks spewing diesel particulates in the community for years to come? What exactly will be emitted? During what hours and over how many days? What about the greenhouse gas emissions from all these trucks? What are the specific effects expected from each of the types of particulate matter?

Response to Comment No. 387-1

This comment is identical to Comment No. 335-1. Refer to Response to Comment No. 335-1, above.

Comment No. 387-2

What can the developer possibly do to mitigate the health impacts of the worsening air quality due to this project? Other than not allowing the size, the amount of expected people, the volume of cars and trucks? Will the developer reduce the scale and density of what is being planned given the already poor air quality in Los Angeles?

Response to Comment No. 387-2

This comment is identical to Comment No. 335-2. Please refer to Response to Comment No. 335-2, above.

Comment No. 387-3

Also, I ask you consider the health risks to children and senior [sic] from all the trucks that will be entering Grove Dr and emitting diesel exhaust next to a park—where is the breakdown of the emissions just due to those trips in that location? Why is the large parking structure being placed on Grove Drive, which is a small street, and right across

from Pan Pacific Park? Think of the children that will have to breath [sic] dirty air from the pollution from all these trucks.

Response to Comment No. 387-3

This comment is identical to Comment No. 335-3. Please refer to Response to Comment No. 335-3, above.

Comment No. 387-4

As both a resident and concerned citizen, I humbly ask for you to consider these risks and pass these questions to the developer.

Response to Comment No. 387-4

This comment is identical to Comment No. 335-4. Refer to Response to Comment No. 335-4, above.

Comment Letter No. 388

Richard Moon
richard@wom3pl.com

Comment No. 388-1

Hi, please do not approve this “REOGIONAL [sic] CENTER” project.

The designation is inappropriate, and you need to take more time to review because our community needs more time to understand the massive negative impact this project will have.

Thank you for your time and consideration.

Response to Comment No. 388-1

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 389

Lynn Mooney
150 S. Detroit St.
Los Angeles, CA 90036-2914

Comment No. 389-1

There are some things that are not made clear in the draft EIR for the TVC 2050 project, and I want a better understanding.

Most of us in the community know the importance of the historic and iconic landmark of the CBS Television City studios. But what we don't know is how the developer is able to build such an enormous and modern project when the entire property has a long and important history.

Please explain how only one small part of the site is being preserved? What is it I read about a settlement agreement between the LA Conservancy and the project's developer? How was the conservancy able to make an agreement that affects residents without our even knowing about it? Are the terms in the settlement agreement considered in the EIR? Doesn't this affect the historic designation the property got a few years ago? Does the agreement have specific constraints?

Another question I have is quite simply—what is the agreement? Is the project's developer paying the Conservancy? How much? Please provide more detail on what the agreement is at its core. Do the settlement agreement's limitations impact the project objectives? How so? In what capacity? Which specific objectives?

Another question I have is how will development be clustered in the center of the project site if the LA Conservancy settlement agreement requires setting back from the already existing buildings? This makes no sense to me. Please provide a detailed plan on how the development will be clustered in the middle given the agreement.

And lastly, and perhaps most importantly, how can the city of LA and community at large even understand what these issues are? The reason I ask that is because no one has had access to the Settlement Agreement. This issue seems large and impactful enough for the residents of the affected community to be kept in the loop.

I think it is fair for residents to be provided with the agreement. If you will not do so, please give us enough detail so that we understand what the agreement is. What are most significant aspects of the agreement? Who benefits the most from the agreement and in

what capacity? Who “loses” the most from the agreement? In one sentence, what is the agreement? If the developer is paying the conservancy, we would like to know how much.

Response to Comment No. 389-1

Refer to Sections B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, as well as Response to Comment Nos. 26-46 and 186-1 regarding the rehabilitation and preservation of the integrity of the Primary Studio Complex.

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

Comment No. 389-2

To be kept in the dark here is wrong and offensive, and I want a detailed response to all of the points made above.

Response to Comment No. 389-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 389-1.

Comment Letter No. 390

Robert Moran
120 N. Fuller Ave.
Los Angeles, CA 90036-2812

Comment No. 390-1

I'm writing today as a concerned citizen with many concerns and questions I'd like to share. I have read over the Television City EIR and here are the questions I would like addressed by the applicant.

Response to Comment No. 390-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 390-2 through 390-4.

Comment No. 390-2

As a resident that lives within 5 miles of the project site, my biggest concern is the traffic and the parking. According to the EIR, the average commute for visitors and employees will drive about 3 miles each way to the new studio. How could this possibly be true? As a resident of this area, I can assure you that thousands of these employees do not live in this area.

1. What model and analysis did you use to come up with the 3-mile commute figure?
2. How did the applicant take into consideration public transportation and the unknowns that arise with ride share.
3. How would the applicant accommodate parking if the site were to ever expand in the future?

Where is the data on how the applicant came up with these figures and please explain the data in a way residents can understand? We are scratching our heads wondering how they projected a 3-mile commute for employees. The home prices within a 3-mile radius of the proposed site would be out of the price range for mid level employees that would be working at the studio.

4. What economic factors did you take into consideration when commissioning the traffic study? As the cost-of-living increases, the number of employees who will move out of the city center and move further out. This will mean that most of the employees will be driving into work each day.

Response to Comment No. 390-2

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

The VMT Calculator is based on the citywide LADOT travel demand forecast model that projects land use and transportation choices out 20 years into the future. It tracks home-to-work trips through the entire Southern California region and looks at the likely distribution of trips that would be attracted to jobs at the Project Site. Transit choices, traffic congestion, residential and job density, housing prices, and a whole host of other factors go into the projection of future travel patterns in the region.

Refer to Topical Response No. 11, Transportation Demand Management, regarding the trip adjustment assumptions.

Refer to Topical Response No. 13, Parking, for a discussion of the Project's on-site parking supply and demand.

Comment No. 390-3

I am imagining that your under-estimation of commuters will have also skewed your air quality data. The air quality will definitely be worse with the presence of so many additional cars and trucks to the area.

5. Explain how you conducted the air quality test and what numbers you used in that test.
6. When commissioning the air quality test, did you take into consideration the increasingly hot summers and how that will continue to impact the air quality around the site?

Response to Comment No. 390-3

Please refer to Response to Comment No. 26-E.1-23 for a detailed discussion regarding transportation trip generation. The count of VMT identified in the User Defined Commercial line item on pdf page 102 of Appendix B of the Draft EIR are representative of

VMT estimated for all operations. Detailed estimation methodologies are presented in Appendix B-1, Air Quality and Greenhouse Gas Emissions Methodology, of the Draft EIR.

See Response to Comment No. 26-E.1-25 for a discussion of summer versus winter emission factors used for Project vehicle emission estimates.

Comment No. 390-4

I am just a concerned resident that would like answers. I would like to understand how the applicant came up with some of the data and findings, especially how the applicant states there are no significant impacts. Please explain?

Response to Comment No. 390-4

The Transportation Assessment included as Appendix M.1 of the Draft EIR includes a discussion of the methodology used in the analysis. Refer to pages 83–84 of the Transportation Assessment. Refer also to Topical Response No. 8, Vehicle Miles Traveled, for a discussion of the VMT analysis.

Comment Letter No. 391

Rick Morgan
424 N. Ogden Dr., Apt. 2
Los Angeles, CA 90036-1725

Comment No. 391-1

I live nearby to Television City and the proposed Television City 2050 project.

Response to Comment No. 391-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 391-2

I would like to know what it is going to do to the area I live in. Specifically, how is it going to affect traffic. Also, how will it affect the Metro? Is this really going to take 20 years?

Response to Comment No. 391-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The Project would support Metro through a privately funded shuttle bus system that will transport Project employees and visitors between the Wilshire/Fairfax Station and the Mobility Hub on the Project Site. The Project would not affect existing Metro services.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 391-3

The construction for this project is going to bring so many trucks to the area and then once it is completed there will be many more people and cars than the area is used to. How many cars and trucks did your studies find will be coming to the area during each of the years of construction? And when is the community going to know if construction will be 3 years or up to the 20 years? We should know that before the project gets approved,

because otherwise are you going to tell the community “we’ll let you know down the road at some point?” What about all the additional cars during all the years when construction is done and the new development starts being used, how many then?

Response to Comment No. 391-3

This comment is identical to Comment No. 135-2. Please refer to Response to Comment No. 135-2, above.

Comment No. 391-4

Most of us in the neighborhood have no idea what a Regional Center is, so please explain what that is, why it’s being considered to be put here, and what that will mean for our community? What if we don’t want a Regional Center here? Don’t the residents and businesses here have a say in that? Does it mean the property will always be a Regional Center? Is that something that goes into the city general plan? If so, can it be taken out of the general plan?

Response to Comment No. 391-4

This comment is identical to Comment No. 135-3. Refer to Response to Comment No. 135-3, above.

Comment No. 391-5

I am wondering what is going to happen with all of the trucks that will be hauling away debris and waste from the construction site? How often will they be leaving the site to haul loads? What times of day and which days? What routes will these trucks be taking? Traffic gets backed up badly now on Fairfax, on Beverly and on West 3rd, so why do you expect all those trucks won’t make the situation even worse? How do we know they will they be kept out of our neighborhoods? What enforcement will be done to make sure that trucks are not idling in the area damaging the already bad air quality?

Response to Comment No. 391-5

This comment is identical to Comment No. 135-5. Please refer to Response to Comment No. 135-5, above.

Comment No. 391-6

I hope that there are good answers to all these questions.

Thank you for your time.

Response to Comment No. 391-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 391-2 through 391-5.

Comment Letter No. 392

Alyssa Morris
458 1/2 N. Spaulding Ave.
Los Angeles, CA 90036-6305

Comment No. 392-1

I was totally shocked to see that the proposed construction will take 20 years.

Response to Comment No. 392-1

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Comment No. 392-2

Will we have to endure consistent, loud construction noise and haul trucks for the entire duration? Where will these trucks be allowed to idle? What about the buses and shuttles that brings people in and out of the site—where will they be allowed to idle?

Response to Comment No. 392-2

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise. Additionally, construction activity, including truck trips, would vary by construction phase. Refer to the construction noise analysis included in Section IV.I, Noise, of the Draft EIR. All haul truck staging locations will be provided on-site, so no haul trucks will be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Bus and shuttle idling would also occur within the Project Site. Idling during construction and operation would be restricted to no more than 5 minutes at any given time consistent with CARB airborne toxic control measure (ATCM) requirements.

Comment No. 392-3

Will they refuel on site? If so, does that mean that there will be a full-on gas station?

Response to Comment No. 392-3

The Project would not include fueling stations. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 392-4

What if the trucks and big buses break down? There will be instant traffic gridlock.

Response to Comment No. 392-4

This comment provides a general statement on the possibility that construction vehicles and buses may break down and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 392-5

There are just too many unknowns about this project for us to support. I think the Draft EIR should be reconsidered from the beginning and then recirculated to the public.

Response to Comment No. 392-5

Refer to Response to Comment Nos. 392-1 through 392-4. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 393

Adam Moysey
130 N. Gardner St.
Los Angeles, CA 90036-2720

Comment No. 393-1

As an 11 year resident, my husband Andy and I, would like to share our concerns about the EIR and its relation to the Television Studio Project.

Response to Comment No. 393-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 393-2 through 393-5.

Comment No. 393-2

1. The Draft EI [sic] has stated that the developer's return on investment is a project objective. The financial data behind this claim has not been supported. Please provide and circulate to the public the developer's proforma. Since the Developer has included as an objective, the financial information must be made available.

Response to Comment No. 393-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 393-3

2. The Draft EIR says any use in the C2 zones will be permitted. There are over 100 uses permitted in the C2 zone, including department stores, auditoriums up to 3,000 people, museums, hotels, car washes, schools, circus, auto repair facilities, building material stores, hospitals, nursing facilities, medical laboratories, and dozens of different kinds of retail stores and other establishments. Many of these uses and their related impacts have not been analyzed. Can you please provide an analysis of the potential impacts associated with this range of uses? For example, what would the traffic impacts

be if the project included a hospital? Or the air quality impacts if it includes auto repair facilities?

Response to Comment No. 393-3

This comment is substantially similar to Comment No. 224-1. Refer to Response to Comment No. 224-1 regarding the proposed uses.

Comment No. 393-4

3. A number of construction trucks will be used in the process of construction. How will large trucks make left hand turns on the streets in the area? Why doesn't the project have any lanes to get trucks and cars off the street? How will it work for trucks to turn into and out of traffic? And from which directions will they be required to come? The project should provide dedicated lanes to make right turn lanes onto project. Please analyze the ability of the project to provide these lanes.

Response to Comment No. 393-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 9-22 regarding construction haul routes, truck trips and the proposed CTMP. As discussed therein, three haul routes were selected to comprehensively analyze the potential haul routes and ensure all associated environmental impacts were evaluated in the Draft EIR.

Refer to Response to Comment Nos. 83-1 and 26-E.4-15 regarding turn lanes, truck turns, and maneuvering.

Comment No. 393-5

4. We are in desperate need of housing. Housing is a necessity and will impact the living situation and wellbeing of the community. Why is there no housing in this project? All kinds of housing, including affordable housing? Please show an alternative with housing as part of this project.

Response to Comment No. 393-5

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing and Response to Comment No. 159-4 regarding Alternative 4, which is a mixed-use alternative with an affordable housing component.

Comment No. 393-6

We have seen many mishaps in the past and we would hate for this project to be detrimental to the community.

Response to Comment No. 393-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 393-2 through 393-5.

Comment Letter No. 394

Travis Muroki
427 N. Ogden Dr.
Los Angeles, CA 90036-1710

Comment No. 394-1

I am writing to express my concerns regarding the proposal for the TV City expansion.

Response to Comment No. 394-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 394-2 through 394-7.

Comment No. 394-2

I am concerned about the lack of specifics contained within the plan, particularly when it comes to noise during the construction phase and after the construction is complete.

Response to Comment No. 394-2

This comment is identical to Comment No. 310-2. Refer to Response to Comment No. 310-2, above.

Comment No. 394-3

Construction obviously produces all types of noise: noise from the trucks driving in and out of and on the construction site, from the construction equipment itself, and from the construction activities. What kinds of construction trucks and equipment will be entering the property? What times of day will there be construction activities and which days of the week? Are there certain days and times of the day that we will not have to deal with construction vehicles driving into and out of the area? What permits do these vehicles need, and are they different for the different kinds of equipment? It doesn't seem there has been any acknowledgement of how all this noise and hours of construction will impact residents.

Response to Comment No. 394-3

This comment is identical to the first paragraph of Comment No. 161-2. Refer to Response to Comment No. 161-2, above.

Comment No. 394-4

Where is the information about what kinds of noise, from what sources, and which streets and neighbors are going to be impacted the most and the least? Please don't just tell me where to find the information, as I can't make my way through some long and complicated report. Please respond to those questions above when you respond to this letter. And I want to know how this information was derived—what are the thresholds for noise pollution? Who decides what those thresholds are?

Response to Comment No. 394-4

This comment is identical to the second paragraph of Comment No. 161-2. Refer to Response to Comment No. 161-2, above.

Comment No. 394-5

How was it determined when construction can occur? Are all of the other activities that are happening in the area at the same time taken into account when any analysis of noise levels was done—noise from daily commuting, weekends when more shoppers and visitors may visit the area?

Response to Comment No. 394-5

This comment is identical to Comment No. 161-3. Refer to Response to Comment No. 161-3, above.

Comment No. 394-6

What is going to be done to mitigate the different sources and times of noise? If the project could take three years or it could twenty years, that suggests construction could be ongoing for upwards of twenty years. What construction activities will occur in each of those years and generating what levels of noise? And what steps in each of those years will be taken to keep noise levels to a minimum?

Response to Comment No. 394-6

This comment is identical to Comment No. 310-6. Refer to Response to Comment No. 310-6, above.

Comment No. 394-7

Furthermore, with the number of soundstages that will be added, including outdoor soundstages, what will be the sound dampening efforts to deal with the noise once in use?

What days and hours will the outdoor soundstages be allowed to operate? On what basis is it determined what days and hours of the week those outdoor stages can be used?

Response to Comment No. 394-7

This comment is identical to Comment No. 310-7. Refer to Response to Comment No. 310-7, above.

Comment No. 394-8

The community needs specifics about what the plan is and what the impacts will be. People who live here need clarity and to know exactly how they will be impacted. Telling residents that there will be no impacts is just [sic] true. Thank you for responding to these questions and concerns.

Response to Comment No. 394-8

The claim that the Draft EIR did not identify any impacts is incorrect. Refer to Section I, Executive Summary, of the Draft EIR for a summary of the potential impacts associated with the Project and a list of the PDFs and mitigation measures to be implemented as part of the Project.

The remainder of this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 394-2 through 394-7.

Comment Letter No. 395

Ethan Murphy
531 N. Flores Ave.
West Hollywood, CA 90048-6038

Comment No. 395-1

This project is trying to do way too much on this property that is in an already congested area. It needs to be scaled back substantially. I am all for maintaining the existing studio use, but this location is not appropriate for 1.4 million sf of office and 225' buildings. There is no support in the EIR for why a studio needs this amount and size of office uses to supposedly maintain the studio. Office space attached to and at the height of the stages should be enough, like the applicant showed at the Neighborhood Council meeting. The height is out of character with this area which consists mainly of 1 and 2 story commercial and residential buildings. If the applicant wants to develop a high-rise office project, it should look to the nearby Wilshire corridor which is planned for tall office towers.

Response to Comment No. 395-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The remainder of this comment is identical to Comment Nos. 110-2 and 110-3. Refer to Response to Comment Nos. 110-2 and 110-3, above.

Comment Letter No. 396

Thomas Murphy
Marta Barbosa
351 1/2 N. Orange Grove Ave.
Los Angeles, CA 90036-2147

Comment No. 396-1

We have lived in this neighborhood for 27 years and can attest that traffic is already horrible.

Response to Comment No. 396-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 396-2 through 396-5, below

Comment No. 396-2

This project is likely to bring thousands of workers and audience people a day. What happens when they park in the community?

Response to Comment No. 396-2

Refer to Topical Response No. 10, Trip Generation, regarding employee and audience trips.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 396-3

Speeding through our neighborhood at all times of the day and night, coupled with hundreds of massive trucks, and impacting the air quality will profoundly affect our quality of life for years to come.

Response to Comment No. 396-3

Air quality was fully evaluated in Section IV.A, Air Quality, of the Draft EIR. This comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 396-4

Construction noise during the day and from all of the shows at night will further impact our daily lives.

Response to Comment No. 396-4

Noise during both construction and operation is fully analyzed in Section IV.I, Noise, of the Draft EIR.

Comment No. 396-5

And obviously, thousands of people pouring in our streets will create safety issues—will there be sufficient police coverage if hundreds or even thousands of people are walking around and parking on our streets every day?

Response to Comment No. 396-5

Refer to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply and that spillover parking into adjacent neighborhoods and properties is not anticipated. The Project will provide a convenient and sufficient parking supply on the Project Site, available to all employees and visitors, in addition to an NTMP. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan. In combination, these are the most effective safeguards to prevent spillover parking. Therefore, spillover parking into the nearby residential neighborhoods and commercial properties is not anticipated. Accordingly, Project Site visitors are also not anticipated to be walking in the surrounding neighborhoods.

Refer to Response to Comment No. 16-5 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment Letter No. 397

Paulette Nessim
10330 Rochester Ave.
Los Angeles, CA 90024-5354

Comment No. 397-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 397-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 398

Eric Netherland
438 N. Ogden Dr.
Los Angeles, CA 90036-1769

Comment No. 398-1

I've recently learned of the purchase and expansion of the CBS building on Beverly and Fairfax avenues. As a resident of this neighborhood, I welcome the growth for the local Television business but I have a few concerns.

Response to Comment No. 398-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 398-2.

Comment No. 398-2

Primarily the potential increase in traffic and parking in an already congested area. For myself and my wife the solution is simple but rarely implemented and that is to increase and improve our public transit, bike paths, and walkability.

A comprehensive bus, train system that is safe and frequent would go a long way to improving the neighborhoods [sic] sound and air pollution and to decreasing the traffic issues. Parking and safety would also benefit proportionally.

For those that are able, biking would be a healthier commuter solution but this is not considered safe enough without a well thought-out bike path system.

For those that cannot walk, bike, or take public transit, a ride share plan that compensates workers for their additional cost could be implemented. This would also mitigate traffic and reduce parking.

Public transit needs to improve to become more used and more popular. A large project funded at this level has the opportunity to significantly move us toward this goal. I encourage you to use your resources to promote healthier and less impactful type of commuting and to work with the city to build, purchase, and employ a less car-centric plan.

Response to Comment No. 398-2

This comment, providing a general statement on the traffic conditions in the area and the City's public transit system and bicycle network, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Topical Response No. 15, Transportation Improvement Program, which discusses the Project's transit program aimed at reducing vehicle trips and promoting public transit usage. One of the key features of the Project's transportation plan is the development of a privately-funded shuttle bus system to directly connect the Metro D Line Wilshire/Fairfax Station currently under construction to the Mobility Hub on the Project Site. This shuttle system would allow Project employees and visitors to seamlessly use the public investment already being made in the subway system to reach the Project Site. See Topical Response No. 7, Mobility Hub, and Topical Response No. 11, Transportation Demand Management.

Refer to Response to Comment No. 16-72 regarding the Project's pedestrian-oriented design, which would enhance walkability around the Project Site.

Comment Letter No. 399

Irene Nicolai
338 S. Citrus Ave.
Los Angeles, CA 90036-3036

Comment No. 399-1

I am more than worried about this potential Television City expansion.

Response to Comment No. 399-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 399-2 through 399-5.

Comment No. 399-2

We as a community are basically in the dark. There is a Draft EIR, but it only provides fragments of information of what the developer might do.

Response to Comment No. 399-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed there in, the Project Description in the Draft EIR is accurate, stable, and finite and the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 399-3

I am particularly concerned about the environmental impact on the community. Will there be explosions from the gas underground when the construction workers must excavate? What is the risk of that happening? Will this action release gas into the environment, such as methane? And what is the developer going to do about gas that is released into the air?

Response to Comment No. 399-3

Significant impacts related to the release of hazardous gases are not anticipated. Refer to Response to Comment Nos. 13-4, 13-6, 16-28, and 26-87 regarding methane and subsurface gases.

Comment No. 399-4

Please provide the scientific data about the gases released due to excavation. What other sources of emissions from gases and toxins could be emitted? How will this impact the air in the neighborhood and to LA's air quality? Aren't we already in a non attainment area when it comes to air quality? What is the developer's commitment to reducing methane emissions and other pollutants into our environment and to combatting climate change in our community and globally?

Response to Comment No. 399-4

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, 16-64, 16-85, and 26-78 regarding the Draft EIR's discussion of soil and groundwater contamination, including among other things, the extent and source of contamination, under existing conditions and the proposed Project. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane and its mitigation. Refer to Response to Comment No. 26-86 for a discussion of emissions from excavation of potentially contaminated soils and groundwater and related health risk impacts. As discussed in Response to Comment No. 26-99, methane is a naturally occurring gas found in the subsurface within the City of Los Angeles Methane Zone. As such, outside the buildings and structures, the naturally occurring methane will continue to escape and dissipate at the surface at the regular, natural rate. This would not be considered a new source of methane emissions. Refer to Response to Comment No. 26-75 for a discussion of the Project's less than significant GHG impacts and PDFs that would reduce GHG emissions. Please note that Table IV.A-1 (Ambient Air Quality Standards) on page IV.A-2 of the Draft EIR acknowledges that the Air Basin is non-attainment for ozone.

Refer to Subsection 5.i in Section II, Project Description, of the Draft EIR regarding the Project's commitment to sustainability.

Comment No. 399-5

The traffic impacts will be significant, both during construction and in the years to come. It appears the EIR uses a calculation or estimate that employees in Los Angeles commute 6.7 miles per day. Is this accurate? Is that one way or round trip. That can't possibly be right. On what basis is that number? When was it calculated? Was it studied during Covid when many people were not commuting to work? Most people in LA commute much more than a 6.7 miles distance. Also, what about all of the other kinds of driving, not just commuting to and from a job.

Response to Comment No. 399-5

As shown in Table I-1, Summary of Impacts Under the Project, in Section I, Executive Summary, of the Draft EIR, transportation impacts associated with the Project would be less than significant. Details that provide substantial evidence in support of that conclusion are provided in Section IV.K, Transportation, and Appendix M, Transportation, of the Draft EIR.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 399-6

These are the kind of significant issues and questions that need to be addressed.

Thank you for your time and for answering my questions.

Response to Comment No. 399-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 399-2 through 399-5.

Comment Letter No. 400

Nima and Claudine
404 N. Harper Ave.
Los Angeles, CA 0048-2221

Comment No. 400-1

I am upset and have questions about several things presented in the EIR for the Television City Project.

Response to Comment No. 400-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 400-2 through 400-5.

Comment No. 400-2

1. Will the project pump groundwater? How much groundwater? When during the project timeline will groundwater pumping occur and for how long? Won't that potentially cause contamination of the groundwater that we use? How will this groundwater be disposed of? How this crucial part of the project is going to be done needs to be made more clear.

Response to Comment No. 400-2

This comment is identical to Comment No. 247-2. Refer to Response to Comment No. 247-2, above.

Comment No. 400-3

2. This project is right nearby the La Brea Tar Pits. Any amateur paleontologist would tell you there could be a variety of fossils in the area. What will be the impact of project activities on resources in the ground such as fossils? Where is the analysis to identify those potential resources, and what does were the findings? If fossils do end up being unearthed, what steps will be taken to handle those artifacts? Will construction be shut down so that a full and proper examination of the area be done?

Response to Comment No. 400-3

This comment is identical to Comment No. 247-3. Refer to Response to Comment No. 247-3, above.

Comment No. 400-4

3. The EIR says that events and filming could be held outdoors. What kinds of events would be held? Do the different kinds of events require different permits or fall under different regulations? Different kinds of outdoor activities obviously can cause serious noise in the area, as well impact the community. How is outdoor activity handled differently from a safety and noise perspective? Will scenes with guns be filmed?

Will there be large audiences or casts if filming? Or large crowds attending if [sic] an event? What hours will events be allowed? What hours would filming be allowed to be done? It looks like the studio is going to be surrounded by houses, which seems dangerous at best, and definitely residents who will be affected. More analysis is needed; where is the detailed information about all these outdoor activities and the specifics about the impacts associated with the different kinds of outdoor events and outdoor filming?

Response to Comment No. 400-4

This comment is identical to Comment No. 247-4. Refer to Response to Comment No. 247-4, above.

Comment No. 400-5

4. What are all the project features it says in the EIR that the studio will use to keep bad things from happening?—everything from greenhouse gasses, to noise, and traffic are dealt with by these features. There doesn't seem to be master list of all of them in the EIR. Who at the city is responsible for keeping track of them? And how do we know they will actually be implemented. And shouldn't we know what the impacts are instead of being masked by something called project features? Please outline what those actual "features" are and what the impacts will be if the features aren't actually built or implemented.

Response to Comment No. 400-5

This comment is identical to Comment No. 247-5. Refer to Response to Comment No. 247-5, above.

Comment No. 400-6

A lot of people promise a lot of things, but what is important are the mechanisms to make sure they are done. Please let me know what that is.

Response to Comment No. 400-6

This comment is identical to Comment No. 247-6. Refer to Response to Comment No. 247-6, above.

Comment Letter No. 401

Steve Nori
458 N. Laurel Ave.
Los Angeles, CA 90048-2351

Comment No. 401-1

The Adobe and Farmers Market are true community landmarks and important to the community. How will the expansion of Television City affect the Adobe? During construction, it seems they would be impacted by construction noise, dust, and debris, so what will those impacts be? How much blasting, drilling, and other construction activity will there be to impact it? Won't visitor to the Farmers Market be impacted by the noise, traffic and daily construction? What steps are being taken to ensure the increased traffic and people coming into the area does not displace regular customers and visitors?

Response to Comment No. 401-1

This comment is identical to Comment No. 214-4. Refer to Response to Comment No. 214-4, above.

Comment No. 401-2

I understand there will be power generators at the basecamps. Since generators often run on diesel fuel, how will the pollution, both air and noise, be handled? How often will the generators be used? What will be they be used for? What about safety and hazard concerns?

Response to Comment No. 401-2

This comment is identical to Comment No. 214-5. Refer to Response to Comment No. 214-5, above.

Comment No. 401-3

We have seen every time there is development of this magnitude, promises are made but are never kept. The applicant mentions many possible enhancements that could be made, but where are the specifics as to what the applicant has committed to doing? Please detail those improvements and enhancements. Will they be made just to the site? Or are any being promised in the actual surrounding neighborhood? What are those? When will they be made? What is the schedule the community can expect to see those done?

Response to Comment No. 401-3

PDFs, including off-site improvements, that would be implemented as part of the Project are identified on pages I-16 through I-29 in Section I, Executive Summary, of the Draft EIR. The timing for implementation of these PDFs is provided as part of the Mitigation Monitoring Program, which is included as Section IV of this Final EIR.

Refer also to page II-30 of Section II, Project Description, of the Draft EIR, which provides a description of the improvements to the public realm included in the Project. These include, but are not limited to, new and, in some locations, widened sidewalks; parkways providing planting areas for street trees, shrubs, and groundcover; fencing, walls, and landscaped buffers; and berms and other visual screening to conceal parking areas.

Comment Letter No. 403

Erik Oh
439 N. Vista St.
Los Angeles, CA 90036-5742

Comment No. 403-1

I am worried about the environmental consequences of this project. As a community resident, I need to know the plans to transform my community will not destroy it in the process. In the DEIR, I read that the developers are planning to excavate down about 45 feet, removing over 700,000 cubic yards of dirt. I kept reading to see if there was any more information about any of the potential impacts, yet there are just two pages failing to provide a meaningful analysis.

Response to Comment No. 403-1

This comment is identical to Comment No. 323-1. Refer to Response to Comment No. 323-1, above.

Comment No. 403-2

Excavating down nearly 45 feet will likely lead to the discovery of historic resources. Archaeological excavation takes patience, and discovering dinosaur bones or other artifacts may occur. How will the developers plan on excavating all of this dirt while not damaging the resources in the ground? If anything is found, who will the artifacts be given to? What will be the chain of custody for anything found? Will the project construction be stopped until the affected area is thoroughly examined by archeologists? These details are essential to protecting the Beverly Fairfax Historic District.

Response to Comment No. 403-2

This comment is identical to Comment No. 323-2. Refer to Response to Comment No. 323-2.

Comment No. 403-3

Where will the dirt taken be disposed of and what research will be conducted to ensure that the dump site will not have any damage? I believe that it is important not only that the district's land will be okay but also that this does not raise environmental concerns for another area. On a more logistical note, what time of day will the excavation take place? And how many days per week? If the plan is agreed on, I will need to be waking up earlier

in anticipation of the traffic so I am concerned that I could be spending a long time waking up to the digging.

Response to Comment No. 403-3

This comment is identical to Comment No. 323-3. Refer to Response to Comment No. 323-3, above.

Comment No. 403-4

For years, tar preserved the bones of trapped animals at La Brea Tar Pit yet the developers are not considering that this excavation could unveil the bones of ancient animals. How far will the excavation site be from this landmark? If the developers plan on using massive excavators, how long are they planning on spending on excavation while looking for resources? These excavators can carry 19 to 24 tons—spotting an ancient bone would be like finding a needle in a haystack.

Response to Comment No. 403-4

This comment is identical to Comment No. 285-4. Refer to Response to Comment No. 285-4, above.

Comment No. 403-5

Until my concerns about Beverly Fairfax's historic and cultural resources are addressed, I will urge my neighbors to stand up against the project

Response to Comment No. 403-5

This comment is identical to Comment No. 285-5; nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 404

Sean O'Leary
Calsak Plastics
19801 S. Rancho Way, Unit B
Rancho Dominguez, CA 90220-6316

Comment No. 404-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 404-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 405

D. Ariela Olivas
611 N. Spaulding Ave.
Los Angeles, CA 90036-1881

Comment No. 405-1

Hello. I am writing regarding the proposed Television City 2050 construction near my home. I have a lot of concerns and questions about this. If it is handled poorly, and the plans do not look good, it could be a complete catastrophe for those of us who live in the neighborhoods Television City borders. This project is way too big for the neighborhood.

Response to Comment No. 405-1

Regarding the size of the Project, refer to Response to Comment No. 11-3. This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 405-2 through 405-9.

Comment No. 405-2

I am not looking forward to the overflow of parked cars, drivers, and pedestrians into my neighborhood, which is where many of them will wind up if this goes through as planned.

Response to Comment No. 405-2

Under SB 743, the adequacy of a new development's parking supply and congestion are not CEQA considerations. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. The Project no longer proposes off-site parking; the Project's parking supply and demand would be entirely accommodated on-site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 405-3

Here are the questions I have regarding Television City and what might be coming to my neighborhood:

- 1.) As I mentioned, the overflow of cars and drivers into my neighborhood is a major concern for me. With thousands of visitors coming to the site each day, and nowhere near enough parking planned, what is going to happen when these visitors park on the residential streets surrounding the site? How can you even ensure that won't happen, and when it does, what controls are going to be put in place?

Response to Comment No. 405-3

See Response to Comment No. 405-2. As discussed in Topical Response No. 13, Parking, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As also discussed in that topical response, elimination of long-term parking by non-residents in residential neighborhoods can most easily be accommodated by the institution of a residential parking permit district whereby local residents and their guests are allowed to park on the public streets within a parking district, usually during standard business hours. The neighborhoods to the north and west of the Project Site already have residential parking permit systems. Under the NTMP that is proposed as a condition of approval for the Project, this system could be further evaluated and expanded upon with neighborhood input. Strategies that could assist in addressing neighborhood concerns include modifying the time limits or the process for obtaining a permit, maintaining consistent enforcement, and/or making the permit system more effective.

Comment No. 405-4

- 2.) Speeding and careless driving are already major concerns here. What is going to be done to ensure the safety of pedestrians in the residential neighborhoods?

Response to Comment No. 405-4

The issue of speeding cars on the arterial street system is a matter of law enforcement and roadway design. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for a description of the neighborhood traffic planning process and goals. In working with the neighbors, the NTMP will identify strategies and improvements to reduce speeding in the neighborhoods with the goal of increasing safety.

Comment No. 405-5

- 3.) Has there been a study done to see how it is going to impact traffic on residential streets due to this influx of parking?

Response to Comment No. 405-5

Refer to Response to Comment No. 405-2 regarding the non-CEQA cut-through analysis. As discussed in Topical Response No. 13, Parking, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 405-6

Has there been a study to see how this extra traffic, with more exhaust and idling cars when backed up, is going to impact air quality in the area?

Response to Comment No. 405-6

Refer to Response to Comment No. 124-3. Please refer to page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, which shows that off-site vehicle trips associated with the Project would not approach screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects.

Comment No. 405-7

- 4.) Beverly and The Grove Drive are two important streets in our area. Beverly is heavily trafficked and The Grove Drive is home to apartment buildings and parking garages. These two streets are going to be overloaded as the only entrances for parking to the Television City site. Please provide information on how this is going to impact traffic on these streets and the impacts to the side streets that intersect with them.

Response to Comment No. 405-7

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-17 regarding access and use of The Grove Drive. Topical Response No. 12 provides a discussion of the queuing provided at each signalized entrance to the Project Site, to prevent queuing into surrounding streets.

Comment No. 405-8

- 5.) The Farmer's Market is an important fixture both for our neighborhood and the city as a whole. What is going to be done when parking for the Farmer's Market is taken up by employees and visitors can't park at the new development? Where have you evaluated the impacts of parking in other business parking lots and what were the findings?

Response to Comment No. 405-8

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Section C, Spillover Parking into Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking, for a discussion of parking effects of the Project on The Original Farmers Market. Project parking would not affect The Original Farmers Market.

Comment No. 405-9

- 6.) Regarding the residential streets that make up the bulk of the community here, these streets are narrower than the main streets surrounding the project. There are plenty of narrow streets that are filled with parked cars now, and a car has to wait until an oncoming car goes by in order to then proceed. Did you study those narrow streets for the expected additional cars driving through the neighborhood? How will you prevent trucks, trying to avoid gridlock on the main streets, from driving on those narrow streets?

Response to Comment No. 405-9

Refer to Response to Comment No. 405-2 and Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Regarding trucks on residential streets, trucks would not be allowed on residential streets. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD. A Construction Manager would be appointed by the Project, and his/her phone number would be advertised on the Project website and communicated to the neighbors so that trucks on the local streets could be reported to the Construction Manager, who, in turn, could call for targeted enforcement.

Comment No. 405-10

These are just some of the concerns that come up when I think about this project. Please consider the residents before giving this the go ahead. These plans have not been fully thought out and they need to be!

Response to Comment No. 405-10

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 405-2 through 405-9.

Comment Letter No. 406

Collin Olympius
1830 W. 36th St.

Comment Letter No. 408

Lisa Oropeza
7961 Blackburn Ave., Apt. 2
Los Angeles, CA 90048-4442

Comment No. 408-1

Are studios important employers here? Sure. We all know this is a vital industry for Los Angeles. However, I am concerned about how my area will take on all of consequences of what is being proposed to expand the studio facilities at Television City because this is a major project, and one that does not fit in our neighborhood.

Response to Comment No. 408-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 408-2 through 408-7.

Comment No. 408-2

First, the studio expansion will bring thousands of new employees driving thousands of cars. These workers won't all be from this area, and so my biggest question is, where will they all park? It seems like the studio's parking is already maxed out, and the EIR says that more than 5,000 new parking spaces are required. Where is that additional parking going to go? Is it going to spill into the neighborhood? And if they build these large parking structures, how will anyone get out of them during rush hour?

Response to Comment No. 408-2

This comment is identical to Comment No. 355-2. Refer to Response to Comment No. 355-2, above.

Comment No. 408-3

And what happens if there is an emergency during that time? How will emergency response vehicles be able to get to Cedars Sinai in an emergency? There is gridlock now that can keep an EMT vehicle stuck, not being able to get through bottlenecks in traffic. The application seems to minimize the problem so what assumptions were used in studying this issue?

Response to Comment No. 408-3

This comment is identical to Comment No. 355-3. Refer to Response to Comment No. 355-3, above.

Comment No. 408-4

The studios are in the business of promoting themselves and the movies and TV shows they make. What is the plan for billboards and advertising signage in the area? Will the planned signage be distracting? Will it block views? How large? We already have a lot signs in the area, and to me, it overly commercializes the area and cheapens the place where we live. Will there be a limit to the kinds, size and amount of signage to make sure it isn't splattered everywhere? It's Hollywood. They are in the business of "big, big and bigger!" How do we keep the signs from doing the same? Are there regulations to stop these billboards being lit up at night? Will video boards be allowed? Let's be real.

Response to Comment No. 408-4

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described in the Draft EIR. Also refer to Response to Comment Nos. 26-129 and 213-2 regarding off-site signs and billboards, which would not be permitted under the proposed Sign District. Refer to Response to Comment No. 26-129 regarding digital signage. Note that pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic impacts (including impacts with respect to lighting and views) shall not be considered significant impacts on the environment and, therefore, do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only.

Comment No. 408-5

These types of billboards are a blight on the community and use a huge amount of energy.

Response to Comment No. 408-5

Refer to Response to Comment Nos. 26-129 and 213-2 regarding billboards, which would not be permitted under the proposed Sign District. Refer to Response to Comment No. 102-6 regarding energy usage for signage.

Note that pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic

impacts (including impacts with respect to lighting) shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only.

Comment No. 408-6

Finally, what is the studio doing to let people work from home and limit traffic and congestion? Zoom meetings work, and remote working should be factored into new large-scale employers coming into the area. Where is the study that looks at how many of the new employees can do some of those expected jobs remotely? How many staff could be impacted? People can collaborate over vast distances effectively, and don't need to commute across town to sit in an office and type on a computer.

Response to Comment No. 408-6

The trip generation estimates in the Transportation Assessment (Appendix M.1 of the Draft EIR) are based on pre-pandemic conditions when remote working was uncommon. Therefore, the trips estimated represent a conservative (i.e., high) estimate of the likely trips to be generated by the Project. While many of the studio employees would have to be on-site to perform their duties, certain office workers can work remotely at least part of the time, and this practice would reduce the vehicle levels below those shown in the Draft EIR.

The remainder of this comment discusses non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 408-7

What is the smallest footprint possible for the objectives of the development? Sure they need sound stages to make big action movies, loud ones at that, but do they need thousands of square feet of office space? Did anyone look at a different set of options that maybe only included the production facilities and not all the offices? What offices are actually going to be used and for what purposes?

Response to Comment No. 408-7

This comment is identical to Comment No. 355-4. Refer to Response to Comment No. 355-4, above.

Comment No. 408-8

This all seems like too much for my community to take in, especially since there have to be other viable options. Please listen to the community and take another look at whether this project is really necessary.

Thank you for listening.

Response to Comment No. 408-8

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 408-2 through 408-7.

Comment Letter No. 409

Allison Osario
908 N. Genesee Ave., Apt. 3
West Hollywood, CA 90046-7375

Comment No. 409-1

I am very concerned about a number of issues with the plan for development at Television City.

Response to Comment No. 409-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 409-2 through 409-8.

Comment No. 409-2

One of my main concerns is the parking situation.

Response to Comment No. 409-2

This comment provides a general statement on parking and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 409-3

I have lived here for 8 years. The plan for parking seems very unrealistic given the number of workers, employees and visitor expected on a daily and regular basis. Please explain more clearly how parking will be distributed around the property? Which roads will be used to enter and exit? Will trucks enter and exit from those same places during construction? How many parking areas are there going to be in total? What exactly is planned for parking on Grove Drive? In each parking area, how many cars will be able to fit? Is truck parking accounted for, or is that a separate issue? If it is a separate issue, please detail those plans in your response to this letter.

Response to Comment No. 409-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, regarding access and use of The Grove Drive.

During construction, trucks would enter and exit the Project Site from both Fairfax Avenue and Beverly Boulevard. Once the Project is completed, trucks would primarily use the three signalized entrances to the Project Site.

Truck parking would take place on-site primarily in the basecamp areas surrounding the sound stages and in an underground level below Project Grade.

Comment No. 409-4

Is parking going to be free for employees and visitors? If not, how much will it cost?

Response to Comment No. 409-4

As discussed in Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking, the Project would provide convenient and sufficient on-site parking to its employees and visitors to meet its full demand. Project employees and visitors would be provided with temporary or long-term parking credentials. Audience members would be pre-screened and provided with access to parking facilities for the duration of their visit to the Project. Retail customers would be provided a time-limited grace period and would require further validation or provision of a fee beyond the initial time period.

The cost of parking is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 409-5

What about parking during events—where will that parking be? Will it be the same if the events are held during the day or held at night?

Response to Comment No. 409-5

Parking would be entirely provided on-site and no off-site parking is proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project.

Comment No. 409-6

Already in our neighborhood, it can be difficult to find parking. My street has both apartment buildings and homes. The streets in our neighborhoods are lined with cars now, and it can be hard to pass cars driving in both directions because so many streets are narrow. What assurances are the surrounding neighborhoods going to have that the project is not going to make that situation even worse with works, employees and visitors parking on our neighborhood streets? Those assurances need to be backed up, not just our being told “we are sure these folks aren’t going to park in your neighborhood.”

Response to Comment No. 409-6

Under SB 743, the adequacy of a new development’s parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. Also refer to Topical Response No. 9, Neighborhood Traffic Management Plan, for a discussion of a program in which the neighbors adjacent to the Project Site will work with the Applicant and LADOT to identify traffic and parking strategies to protect the neighborhoods from cut-through trips and spillover parking.

Comment No. 409-7

What is the plan for where all of the construction trucks are going to park? Will they be parking onsite only and for the entire time? What about if they are not in active use? My neighbors and I are extremely concerns that large trucks will try to drive down our narrow streets. What is the plan to ensure this does not happen?

Response to Comment No. 409-7

All construction haul truck staging and parking, as well as construction worker parking, would be accommodated on-site. Refer to Topical Response No. 14, Construction

Vehicle Impacts, and to Response to Comment No. 157-2 regarding parking during construction. Refer to Response to Comment Nos. 178-3, 183-1, and 231-4 regarding off-site staging. All haul truck staging locations would be provided on-site; accordingly, no haul trucks would be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Project construction trucks would not be permitted to drive on residential streets. If they do, neighbors would have the contact information for the Construction Manager, and they can report any trucks violating the residential streets. These trucks would be subject to citations written by LAPD.

Comment No. 409-8

Parking is one of those things that can really bottle neck and disrupt a neighborhood, so it is especially important that the community be given direct and true information.

Response to Comment No. 409-8

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment Letter No. 410

Conor O'Sullivan
457 1/2 N. Hayworth Ave.
Los Angeles, CA 90048-2703

Comment No. 410-1

I have lived in this area for 18 years.

Response to Comment No. 410-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 410-2

I am concerned what this will do to our traffic and it's effect on our public parking.

Response to Comment No. 410-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Accordingly, public parking would not be affected.

Comment No. 410-3

If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with the consequences of the increased pollution, noise and traffic, the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—

because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 410-3

This comment is identical to Comment No. 114-5. Refer to Response to Comment No. 114-5, above.

Comment No. 410-4

Thank you for your time.

Response to Comment No. 410-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 411

Ara Ouzounyan
ara.ouzounyan@tvcityla.com

Comment No. 411-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 411-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 412

Jason Paich
317 1/2 Stanley Ave.
Los Angeles, CA 90036-2328

Comment No. 412-1

I am writing to you with a serious concern regarding the developer's plan because I believe that more needs to be done to protect the environment. With our planet's surface temperature rising at a dangerous speed, I am concerned about this project's lack of environmental and social responsibility. Renewable energy is our future. Solar, geothermal, hydroelectric, wind, and biomass energy are used more and more as climate change becomes a growing concern.

Response to Comment No. 412-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 412-2 through 412-5.

Comment No. 412-2

I read in the EIR that the project might not be complete until 2045... why is renewable energy not in the developers plan for the project? In twenty years, the project's energy use could be completely outdated, inefficient and damaging to the environment to me. What percentage of the developer's most recent projects uses electricity? I want to know about previous projects that have been electrified.

Response to Comment No. 412-2

Refer to pages IV.C-43 to IV.C-44 in Section IV.C, Energy, of the Draft EIR, which includes an analysis of Project energy impacts under a long-term buildout scenario. As discussed therein, a long-term buildout would result in an overall reduction in energy use due to improved efficiencies and more stringent requirements in the future.

Refer to Response to Comment Nos. 45-1 and 77-4, which detail the sustainability features included in the Project, the Project's compliance with the City's new all-electric buildings ordinance, and new natural gas usage associated with the Project. Regarding renewable energy, Table IV.C-2 (Summary of Net Annual Energy Use During Project Operation) of the Draft EIR shows that the Project's solar generation (i.e., Project Design

Feature GHG-PDF-2) would result in an approximately 383,000-kWh increase in production relative to existing conditions.

The remainder of this comment discusses topics that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 412-3

I am concerned about the use of diesel fuel in the projects. At basecamps, will the power generators run on diesel fuel? How are toxic emissions going to be dealt with? I am concerned about the health and safety of my community and need information about the measures the developers will take.

Response to Comment No. 412-3

This comment is substantively similar to Comment No. 188-4. Refer to Response to Comment No. 188-4, above.

Comment No. 412-4

What will the noise levels for the generators be during the day and during the night? If they plan on emitting toxic chemicals into the air that my children and I breathe, is it really necessary to keep me up at night, too?

Response to Comment No. 412-4

Refer to Response to Comment No. 188-4. Generators associated with filming are included in the air quality and noise analyses in the Draft EIR. Refer to Table IV.A-7 on page IV.A-64 of Section IV.A, Air Quality, and page IV.I-44 in Section IV.I, Noise, of the Draft EIR, respectively. As discussed therein, the Project's operational air quality and noise impacts would be less than significant. Also refer to Response to Comment No. 1-3 regarding how future emissions from new generators will substantially decrease in comparison to existing emergency generators. Furthermore, during operation of the Project, emergency generators will be included for emergency use during a power outage and regularly tested for maintenance purposes but otherwise will not be used to provide power to basecamps, which will be outfitted with electric tie-ins, which reflects the City's new all-electric buildings ordinance (refer to Response to Comment No. 155-4). Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds and impacts would be less than significant.

Refer to Response to Comment No. 26-138 for a discussion of noise exposure and hearing loss.

Comment No. 412-5

How much money will it cost for the project to be 100% electric? I do not want to support a company that will spend heinous amounts of money to build not one, not two, but fourteen stages in the concert arena instead of allocating a portion of those proceeds to eliminate the need for power generators to be used at the basecamps.

Response to Comment No. 412-5

The comment regarding cost does not concern an environmental issue under CEQA. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please refer to Response to Comment No. 26-51 regarding the City's new all electric ordinance, which the Project would comply with.

The Project does not include any concert arenas. Refer to Topical Response No. 3, Permitted On-Site Uses, regarding the five studio land uses that would be permitted under the proposed Specific Plan.

Refer to Response to Comment No. 26-36 regarding basecamp power.

Comment No. 412-6

Until specific information is distributed about the energy use plan, I will continue to advocate against this project.

Response to Comment No. 412-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 413

Tracey Paleo
417 N. Gardner St.
Los Angeles, CA 90036-5754

Comment No. 413-1

I have significant concerns with the TVC 2050 project and how it will impact access to public transit and non-vehicle access in the Beverly-Fairfax area.

Los Angeles is a car-intensive community and walking or biking in our city can be perilous at times. I'm concerned that the intensity of the construction work for TVC 2050 and the length of time construction will be ongoing will make my neighborhood practically unlivable.

Response to Comment No. 413-1

This comment is identical to Comment No. 234-1. Refer to Response to Comment No. 234-1, above.

Comment No. 413-2

The draft EIR for this project calls for the excavation of 700,000 cubic yards of dirt. That means a tremendous number of trucks entering and leaving the site to remove not just soil but demolition debris as well. How is this going to impact the air quality of the neighborhood? What are the plans for making sure all the dust from this project doesn't find its way into our lungs?

Response to Comment No. 413-2

This comment is identical to Comment No. 234-2. Refer to Response to Comment No. 234-2, above.

Comment No. 413-3

Will blasting be required during any of the phases of construction? When during construction and how much blasting? What days and times? How will neighborhood residents be notified?

Response to Comment No. 413-3

This comment is identical to Comment No. 234-3. Refer to Response to Comment No. 234-3, above.

Comment No. 413-4

The draft EIR also seems to suggest a significant portion of the visitors to TVC 2050 once production starts will take mass transit to get there. How do they arrive at their projections? Will this increase in the number of mass transit users crowd out neighborhood residents who use mass transit for commuting and errands?

Response to Comment No. 413-4

This comment is identical to a portion of Comment No. 234-4. Refer to Response to Comment No. 234-4, above.

Comment No. 413-5

If visitors to TVC park on residential streets or at the Farmer's Market, will neighborhood residents be inconvenienced?

Response to Comment No. 413-5

This comment is identical to a portion of Comment No. 234-4. Refer to Response to Comment No. 234-4, above.

Comment No. 413-6

Please provide more detailed answers and information.

Response to Comment No. 413-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 413-2 through 413-5.

Comment Letter No. 414

Cathy Palmer
511 N. Fuller Ave.
Los Angeles, CA 90036-1940

Comment No. 414-1

I am a 50 year resident of Beverly Fairfax. I am writing to express my concerns about the plan for the Television City project presented in the draft EIR.

Response to Comment No. 414-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 414-2 and 414-3.

Comment No. 414-2

My primary concern is this project's impact on the environment. This huge enlargement of the complex in a residential area will create adverse health effects on community members. There is no way that all of the additional cars, various kinds of truck traffic, added noise, increased water usage and more will not have an adverse effect. What kind of studies have been conducted to examine each potential cause of adverse health impacts? If they have not yet been conducted, when will they be? When will the findings be released to the community? On what basis can the city approve a project if it is found to have any adverse health effects at all on people, not just "significant" health effects?

Response to Comment No. 414-2

The Project is located in a mixed commercial and residential area. The Project would represent the continuation and expansion of an existing studio complex in an urban commercial area. The Project's Draft EIR, which has been made available to the public for review, measures the impacts of the Project on a wide variety of technical and environmental issue areas. The transportation analysis in the Draft EIR (Appendix M.1 of the Draft EIR) showed that the Project would not have a significant transportation impact related to VMT, plan consistency, geometric hazards, or traffic safety. Air quality and noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operation emissions. All other air quality impacts would be

less than significant or less than significant with mitigation. As discussed in Section IV.I, Noise, of the Draft EIR, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. All other noise impacts would be less than significant, including those associated with operational traffic.

Water supply is analyzed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR. As discussed therein, LADWP would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Therefore, the Project's operational impacts on water supply would be less than significant.

A quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the points of maximum impact (PMIs), even after accounting for increased truck trips associated with future operations, would be below SCAQMD's risk thresholds, further affirming the statements on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of toxic air contaminants would result in a less than significant impact.

Comment No. 414-3

These trucks will also increase the noise level, which can disrupt our sleep and increase stress. This problem will persist after construction concludes, as making movies can be noisy too. What noise level analyses have been conducted with a set development plan? How can I be sure they will be accurate?

Response to Comment No. 414-3

This comment discusses issues that are similar to those in Comment No. 147-3. Refer to Response to Comment No. 147-3, above. Refer to Response to Comment No. 26-138 for a discussion of noise exposure and hearing loss.

The noise analysis included in Section IV.I, Noise, of the Draft EIR was conducted in accordance with CEQA and City guidelines and is based on the Conceptual Site Plan. Refer to Response to Comment No. 236-4 regarding noise impacts associated with truck trips. With the exception of trucks associated with concrete mat pour activities (which would occur for a maximum of five days), construction trucks would be used during daytime hours and, thus, would not result in sleep disturbance. As provided in Response to Comment No. 26-146, the estimated noise levels associated with outdoor production and basecamp productions at off-site residential and hotel/motel uses during the nighttime hours would be less than under existing conditions. Therefore, Project operation would not result in sleep disturbance.

Comment No. 414-4

Until I receive answers to my questions above, I urge that this project be rejected. I look forward to hearing what steps will be taken to resolve the issues I have outlined.

Thank you for your time and consideration.

Response to Comment No. 414-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 415

Katrina Palmer
455 N. Ogden Dr.
Los Angeles, CA 90036-1753

Comment No. 415-1

The safety impacts of the Television City project will be tremendous and I feel the EIR does not adequately address all of them and how they will be mitigated. I am concerned about the traffic this will bring to our area.

Response to Comment No. 415-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 415-2 through 415-6.

Comment No. 415-2

The mobility hub sounds like an area of the development where a lot of activity could be happening, and it could attract people who hang out there rather than passing through. How will the city keep people legitimately using the hub safe? What will the police presence be at the mobility hub? How will the people using the hub for non-transportation needs (i.e. people who have nowhere else to go or someone looking for a quick buck) be handled?

Response to Comment No. 415-2

With regard to the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment No. 16-5 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 415-3

There will be special events held at the site. What limits have been determined for special events in terms of the number of people and does it depend on the kind of event? How often will these events be held, weekly, monthly? And what days of the week and hours will these special events be held? Will specific or different equipment be brought in and for what purpose? Are there any special events that will not be allowed there, if so what are

those? Where will guests attending these events be directed to park? How has the additional noise from these events been analyzed and how will it impact not only those attending but the neighbors? The potential impacts of increased noise levels are often overlooked.

Response to Comment No. 415-3

The first six sentences of this comment are identical to Comment No. 102-2. Refer to Response to Comment No. 102-2, above.

The seventh sentence of this comment is identical to Comment No. 102-3. Refer to Response to Comment No. 102-3, above.

The last two sentences of this comment are identical to Comment No. 102-4. Refer to Response to Comment No. 102-4, above

Comment No. 415-4

I understand the construction will take 20 or more years. What are all of the different kinds of construction activity that will take place? And should we expect to be the different kinds of noise—jackhammering? blasting or explosions? What about the excavation/digging? Loading dump trucks and truck driving on site? I want to have a much clearer understanding of what all the sources and decibels of noise will be.

Response to Comment No. 415-4

This comment is identical to Comment No. 102-5. Refer to Response to Comment No. 102-5, above.

Comment No. 415-5

The signage is not described in enough detail. It seems billboards were mentioned but what about lighting of those and any other signs? Light pollution is a real thing. How will these lighting impact residents? How much energy will the signs use? What about any signage planned for on the property?

Response to Comment No. 415-5

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described in the Draft EIR. Also refer to Response to Comment Nos. 26-129 and 213-2 regarding off-site signs and billboards,

which would not be permitted under the proposed Sign District. Note that pursuant to SB 743 (Public Resources Code Section 21099), because the Project is an employment center project located on an infill site, the Project's aesthetic impacts (including impacts with respect to lighting) shall not be considered significant impacts on the environment and therefore do not require evaluation under CEQA. Nevertheless, the Initial Study included as Appendix A of the Draft EIR included an aesthetics analysis for informational purposes only.

Refer to Response to Comment No. 102-6 regarding the energy calculations, including energy for the proposed signage.

Comment No. 415-6

Another major concern is the portion of the BIR that states a goal for this Television City project is to make money for the developer. The city has no reason to state this. Why was that included? Is the city working for the developer or the people who live here?

Response to Comment No. 415-6

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 416

James Panozzo
LAUNCH LA
170 S. La Brea Ave.
Los Angeles, CA 90036-3090

Comment No. 416-1

I am the Director of LAUNCH LA, a neighborhood nonprofit arts organization close to Television City. I respectfully ask the City to approve the studio's plans to invest in more jobs and enhance and modernize its production facilities while at the same time working with its immediate neighbors to achieve these goals.

Television City has been in the Beverly/Fairfax District for generations, and the studio owners have been good neighbors.

I support the plan's overall goal of ensuring Television City remains a top level production hub attracting the best crews and talent in the entertainment industry while continuing to act as a good and cooperative neighbor. This plan will contribute to the long-term viability of the studio and area businesses, while preserving Television City's role in the neighborhood as a first-class production center.

Response to Comment No. 416-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 417

Jun Park
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 417-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 417-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 418

Rosa Park
537 N. Croft Ave.
West Hollywood, CA 90048

Comment No. 418-1

I would not have moved into this neighborhood a year ago if I had known about this project. None of the plans will benefit the existing community—what's really needed is housing, and NOT more than 1.4 million square feet of office space. Have you considered the vacancy rate of offices in the area? It seems to me that a lot of people will continue to work remotely. Instead, why can't a portion of this site be dedicated to housing?

The City of LA should be focused on making this our neighborhoods more healthy, more livable, and more walkable.

Response to Comment No. 418-1

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment Letter No. 419

Debra Pasquerette
325 N. Gardener St.
Los Angeles, CA 90036-5715

Comment No. 419-1

This project is not at all clear and it seems like the developer can essentially do whatever it likes once it gets the green light. For example, the Draft EIR continuously references a “specific plan” for the regulations that will dictate the project, but the draft specific plan isn’t included and obviously there could be hundreds of variations of the project—each having different impacts. We deserve to see the draft specific plan.

Response to Comment No. 419-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, 9-14, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the limited Land Use Exchange Program, and how the Project Description discloses all of the elements of the Project required by CEQA. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan, which were disclosed and analyzed in the EIR. As further discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

As also discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning’s website prior to the publication of this Final EIR.

Comment No. 419-2

And what are all of these Project Design Features? Are they a part of the project and if so, how will they be enforced? Seems that the EIR does not analyze the project’s impacts without project design features.

Response to Comment No. 419-2

Refer to Response to Comment No. 9-34 regarding the proposed PDFs.

Comment No. 419-3

The public can't understand the impacts if the analysis assumes project design features, whatever those are. The EIR needs to be recirculated to the community for further review and comment.

Response to Comment No. 419-3

Refer to Response to Comment No. 9-34 regarding the inclusion of PDFs in the Draft EIR.

The Draft EIR was prepared in accordance with the requirements of CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 420

Charles Paus
548 Spaulding Ave.
Los Angeles, CA 90036-1808

Comment No. 420-1

My wife and I have lived in this community for 25+ years and oppose every element of this plan—none of it will benefit the people who already live here. To the contrary: traffic and parking will be infinitely worse, construction is scheduled for the next 20 YEARS, emissions and pollution will be a constant, thousands of huge trucks will be rumbling through our streets, there will be a huge impact on our water resources, ceaseless noise, we will have ongoing security and safety concerns, historic and cultural sites like the Adobe, the Farmers Market and the Holocaust Museum will be affected...

Response to Comment No. 420-1

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Regarding parking, under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project does not propose off-site parking.

Regarding the buildout timeline, refer to Response to Comment No. 9-24.

Air emissions during construction and operation, including those associated with truck trips, are fully analyzed in Section IV.A, Air Quality, of the Draft EIR.

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding truck trips during construction.

Impacts related to water resources are also analyzed in the Draft EIR. Refer to Section IV.G, Hydrology and Water Quality, of the Draft EIR for a discussion of water quality and Section IV.M.1, Utilities and Service Systems—Water Supply and

Infrastructure, of the Draft EIR for a discussion of water supply. As discussed in these respective sections, impacts would be less than significant.

Noise impacts during construction and operation are analyzed in Section IV.I, Noise, of the Draft EIR.

Impacts related to public safety are addressed in Section IV.J.2, Public Services—Police Protection, of the Draft EIR.

Impacts to cultural resources, including historical resources, are analyzed in Section IV.B, Cultural Resources, of the Draft EIR. As discussed therein, impacts would be less than significant. Please note that the Holocaust Museum is not a historical resource as defined by CEQA. Refer to Response to Comment No. 41-4.

The remainder of this introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 420-2

Did we read the EIR correctly that one of the project objectives is to make money for the developer? Why is the City of Los Angeles saying that private sector profit is an objective for this project? What about the impacted community?

Response to Comment No. 420-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 421

Jennifer Peagler
351 N. Sierra Bonita Ave.
Los Angeles, CA 90036-2467

Comment No. 421-1

I write today in reference to the Television City redevelopment plan in our neighborhood.

Response to Comment No. 421-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 421-2

My number one concern is that it doesn't seem that we have considered strongly enough the negative impact that additional car traffic from the development coupled with the morning and afternoon school traffic from Fairfax High School will have on the adjacent neighborhoods. How have you studied the impact of the development on school traffic? Did your study look at traffic around 8:00am and 3:00pm when school traffic is at its peak?

Response to Comment No. 421-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). Notwithstanding, the Transportation Assessment investigated the operational effects of Project trips on the streets and intersections near Fairfax High School and in the nearby neighborhoods. The Transportation Assessment included the evaluation of Project effects on three signalized intersections along Fairfax Avenue (at Melrose Avenue, Clinton Street, and Rosewood Avenue) immediately adjacent to Fairfax High School. These intersections were studied in the morning (7–9 A.M.) and afternoon (4–7 P.M.) as per LADOT TAG. In addition, the neighborhood streets around Fairfax High School were evaluated as part of the residential street cut-through traffic analysis found on pages 167–179 of the Transportation Assessment (Appendix M.1 in the Draft EIR). These streets would be included in the NTMP to be developed by the neighbors, Applicant, and LADOT for the neighborhood north of the Project Site, including the Fairfax High School campus area.

Refer also to Topical Response No. 9, Neighborhood Traffic Management Plan, for a description of the neighborhood traffic planning process and goals, including a discussion of the deterrence of cut-through traffic. Fairfax High School is located within the north neighborhood area that would be addressed as part of the NTMP, and, therefore, solutions to school traffic affecting the neighborhood would be considered as part of the NTMP.

Comment No. 421-3

Have you taken into account how the number of students at this high school might change over the next twenty years? How will you adequately study the traffic over the next twenty years (and possibly 20 years of construction!) if the number of students does drastically change?

Response to Comment No. 421-3

The Transportation Assessment (Appendix M.1 of the Draft EIR) projects traffic into the future using an annual growth factor to account for increases in traffic. This growth factor is intended to account for growth in school, residential, and commercial projects that might occur in addition to the 68 related projects studied in the analysis.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 421-4

We already experience issues with the student and parent traffic on our residential streets, and I believe that it will only get worse as they are forced to avoid main roads due to the construction taking place in and around Television City. Will you have guidelines for where students and parents should and should not park? How will you communicate these guidelines?

Response to Comment No. 421-4

The control of traffic around public schools is beyond the purview of the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. As described in the Response to Comment No. 421-2, the high school is part of the NTMP, and a school traffic management plan could be an outcome of the NTMP.

Comment No. 421-5

If all the traffic is pushed to residential streets, this is a massive safety issue for our pedestrians. How will you ensure more traffic does not flow onto our neighborhood

streets? What measures will be taken to ensure all residential streets have proper crosswalks, sidewalks, and signage for the pedestrians?

Response to Comment No. 421-5

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Comment No. 421-6

The bottom line is how are we going to ensure that traffic isn't redirected into the surrounding neighborhoods? And how will you protect the residents if it is? I appreciate your attention to this matter!

Response to Comment No. 421-6

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 421-2 through 421-5, above.

Comment Letter No. 422

Ruth Peebles
142 S. Kilkea Dr.
Los Angeles, CA 90048-3526

Comment No. 422-1

Thank you for the opportunity to express my strong opposition to this project—it is not at all clear what the finished project is supposed to look like, exactly where it's supposed to be located, how our neighborhood will be impacted, and when.

There could be literally hundreds of variations of the project—each having different impacts.

Response to Comment No. 422-1

This comment is similar to Comment No. 366-2. Refer to Response to Comment No. 366-2 regarding the Project Description and Specific Plan.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 422-2

What are the phases of how this project will be built? It's outrageous that we haven't been shown a phasing plan for this project—how can the community know what will be built, and when the phases will start and finish? And what kinds of disruptions to our lives are expected?

Response to Comment No. 422-2

Regarding Project phasing, refer to Response to Comment No. 9-24. The Project's construction schedule is included in Appendix B of the Draft EIR and is also provided in Table 1 of Appendix FEIR-8, Details of Project Buildout and Construction.

Section IV, Environmental Impact Analysis, of the Draft EIR includes a detailed analysis of Project impacts during both construction and operation.

Comment No. 422-3

The public deserves to see the draft specific plan and it should be included in a recirculated Draft Environmental Impact Report.

Response to Comment No. 422-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Refer also to Response to Comment No. 5-3. As discussed in Topical Response No. 1, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the Project, and the proposed Specific Plan is not necessary for evaluation of the Project.

Please note that the Preliminary Draft Specific Plan incorporates all of the same Project elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR. Future Project changes that are substantially different than the proposed Project or are beyond the scope of impacts evaluated in the EIR would require additional City review and approval, as well as CEQA compliance review. Refer to the Preliminary Draft Specific Plan, which is publicly available on the Department of City Planning's website.

With regard to recirculation, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 423

Tim Peng
timpeng@kw.com

Comment No. 423-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive

Response to Comment No. 423-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 424

Simone Perusse
101 N. Gardner St.
Los Angeles, CA 90036-2719

Comment No. 424-1

As a concerned resident who has lived in the neighborhood for 13 years. [sic]

Response to Comment No. 424-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 424-2

I am writing to you because I feel the Draft EIR is deficient as it did not include a copy of the proposed Specific Plan for the project.

The Draft EIR references the Specific Plan throughout the document. Initially, I thought the Specific Plan was included in the appendices of the Draft EIR. However, much to dismay, it was nowhere to be found. It is difficult to understand how the public can comment effectively on the land use section of the Draft EIR when the most important component of the project i.e., the land use regulations of the Specific Plan, was not included. Presenting fragmented references to a document that does not exist fails to provide the disclosure of information for the public's benefit. Can you explain if this was an oversight by the City and how it will be corrected?

Based on the fact that the Specific Plan was entirely omitted from the Draft EIR, an egregious error on the City's behalf, please recirculate the Draft EIR to include the Specific Plan. It would not be appropriate to include the Specific Plan in the Final EIR as the public would not have the opportunity to provide comments in a timely manner.

I appreciate your consideration of my comments.

Response to Comment No. 424-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is

accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

As also discussed therein, all of the physical aspects of the Project that will be implemented by the proposed Specific Plan were fully disclosed and analyzed in the Draft EIR in accordance with CEQA, and although neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 425

Danielle Peters

Comment No. 425-1

The above-referenced Project will negatively and irrevocably change my neighborhood, and the DEIR does not adequately identify or address these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of their project required a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it.

Response to Comment No. 425-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 425-2**The Scope of This Project is Too Large for the Infrastructure of our Neighborhood**

The infrastructure of this neighborhood was sufficient to support the CBS of the past. It was NEVER intended to support the scope of what is being proposed by the Project applicants. While we treasure CBS Television City, the needs of the studio have changed over the last 50 years ago, and it and may have outgrown the neighborhood

First, the Los Angeles Police Department lacks the man power for the incredibly large area they must cover, and. response times are already marginal. Our neighborhood has seen a drastic increase in both the homeless population and residential crime (including the murder of Gabriel Donnay in 2021). This is serious, ongoing issue that already exceeds existing resources. Any increase in the amount of people in an area will inevitable bring about increase in crime. There are simply not enough resources available to keep our neighborhoods safe as it is.

Second, the frequency and duration of power outages in our neighborhood has also drastically increased over the past few years. This is further evidence of an infrastructure that is already over taxed and unable to support the MUCH greater load that the CBS redevelopment would generate.

Response to Comment No. 425-2

With regard to the scope and size of the Project, refer to Response to Comment Nos. 5-8 and 11-3. Infrastructure impacts were fully addressed and analyzed in Section IV.M, Utilities and Service Systems, of the Draft EIR and impacts were concluded to be less than significant.

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment No. 16-5 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

With regard to power outages, as discussed on page IV.M.3-12 of Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR, LADWP confirmed in its will-serve letter (included in Exhibit 5 of the Utility Report [Appendix O of the Draft EIR]) that the Project's estimated electricity demand could be met by the existing electrical infrastructure in the Project area, and impacts would be less than significant. An updated will-serve letter was also issued by LADWP as part of this Final EIR and is included in Appendix FEIR-18.

Comment No. 425-3**A “Regional Center” Does Not Belong in Our Neighborhood**

Project Applicants claim that we “have always had a Regional Center in our backyards” and that they are just asking that the land use designation “catch up.” This is empirically false. A “Regional Center” is the same designation as Century City and Downtown Los Angeles. It is a place with tall buildings, commuters, traffic, people who come for their workday but don't have a vested interest in the community because they leave when the day is over.

This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, gridlock, soil destabilization as a result of dewatering, and air quality issues.

There is a process for changing the designation of an area, in our case the Wilshire Community Plan. The Project applicants are not going through that process. Consequently, our community members are being deprived of the opportunities to voice our concerns that such a process affords. Furthermore, this opens the door for future developers to request Regional Center designations in neighborhoods like ours, where such designations simply do not belong.

Response to Comment No. 425-3

Refer to Response to Comment Nos. 5-8, 11-29 and 16-4 regarding the proposed Regional Commercial designation.

The second paragraph of this comment is identical to a portion of Comment No. 100-6. Refer to Response to Comment No. 100-6 regarding the proposed development program.

Refer to Topical Response No. 6, Wilshire Community Plan Update, and Response to Comment No. 28-20 with regard to the Wilshire Community Plan update.

Comment No. 425-4**“Base Camps” Are Not Included In FAR Calculation**

Renderings of the Project on their own website shows what are called “Base Camps” that are under cover (i.e. [sic] there is a roof above them) and clearly being used for activities. However, these areas are not included in the FAR calculations. Most projects would include area that is under roof [sic] and being used in operations as part of FAR calculations. Therefore, assertions made to the public that there is only a modest increase in FAR seem misleading.

Response to Comment No. 425-4

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 with regard to the definition of floor area under the proposed Specific Plan, how the Draft EIR does not underestimate the size of the Project, how all of the proposed uses, areas and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area, and how no active production activities would be located in the parking and basecamp areas below Project Grade.

Comment No. 425-5**Traffic—Negatively Impacts (1) The Safety of Our Walkable Neighborhood and (2) Our Daily Commutes**

This Project will dramatically increase traffic, congestion, and gridlock and degrade the walkability and safety of the neighborhood. Our quiet streets—the streets we jog on, walk our dogs on, where our children play—will be filled with cars and cut through traffic impacting not only safety but also our regular commutes.

The Project applicants assert that their data shows that traffic will not be impacted, as the majority of employees would live in this neighborhood. This is ludicrous, and even they acknowledge that they do not yet know who will constitute their tenant base or who will be renting studio space. So, the actual number of commuters at any given time is not only an unknown, but a fluctuating unknown.

The DEIR “analysis” of cut through traffic is conveniently confined to a very small area directly around the Project. This not how cut through traffic operates. We already live with the consequences of traffic on Beverly Boulevard, Third Street, La Cienega and Wilshire during peak commuting hours. We are also keenly aware that drivers avoid that traffic in through OUR neighborhood streets. This is the reality.

Response to Comment No. 425-5

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Regarding walkability, refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

The City of Los Angeles has established criteria for determining if a proposed project would result in cut-through traffic effects. The analysis of cut-through traffic was not limited to just the neighborhoods north and west of the Project Site. Rather, the analysis looked at many neighborhoods around the Project, and the residential neighborhoods immediately north and west of the Project Site were the only ones that met the City’s criteria. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

The Draft EIR does not state or suggest that the majority of the Project employees would live in the neighborhood. The VMT analysis demonstrates that the location of the Project would result in a work VMT per employee that fell below the target threshold for work trip travel in this area of Los Angeles. This indicates that the jobs are well placed in relationship to the distribution of residential uses served by the employment center. Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project’s VMT analysis, including as related to employee trip lengths.

The remainder of this comment discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 425-6

Lack of Affordable Housing—Rents Will Increase

The Project will employ approximately 8,000 workers, putting enormous pressure on area rents. For many of those that are employed by the studios, living here is simply not affordable, and thousands more commuters will be coming into and out of our neighborhood daily. For our community, this means that landlords will be able to charge a new tenant a great deal more than they are charging us. For our current renters, that is not a good place to be. For our future renters, the cost of renting will be significantly higher.

Response to Comment No. 425-6

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, the provision of housing, and the consideration of economic and social effects under CEQA.

Vehicle trips anticipated to be generated by the Project and the associated impacts on the transportation system are addressed in Section IV.K, Transportation, of the Draft EIR. As discussed in Section IV.K of the Draft EIR, Project impacts related to transportation would be less than significant and no mitigation measures would be required.

Comment No. 425-7

Water Table—Soil Instability in a Seismically Active Area

From Beverly Boulevard to the Farmer's Market property line, the Project proposes 800,000 yards of excavation for underground facilities. Water will be depleted from surrounding areas causing soil instability. In an area that is seismically active, there must be further analysis done on the impact of a seismic event, at various intensities on surrounding areas whose water tables have been depleted. Much more needs to be understood about the impact on natural resources and soil stability in an area with a high water table and potentially serious seismic risks.

Response to Comment No. 425-7

Refer to Response to Comment No. 26-69 with respect to dewatering as it relates to subsidence and other seismic risks. Refer to Response to Comment No. 26-E.3-7 regarding seismic-related impacts.

Comment No. 425-8**Conclusion**

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, they offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

Response to Comment No. 425-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 425-2 through 425-7.

Comment Letter No. 426

Danielle Peters

Comment No. 426-1

The DEIR Air Quality Analysis for the above referenced Project (the “Proposed Project”) is fraught with error and puts the health of sensitive receptors at risk. Specifically in this communication I am focusing on the Hancock Park Elementary School (“HPES”). I have been a resident of this area my whole life, I am an alumnus of HPES and am now the President of the booster club and parents to two young children who attend HPES. The DEIR for the Proposed Project fails to keep my children and our community safe. The DEIR fails to (1) analyze the cumulative air quality effects concurrent overlapping construction (2) substantiate claims about atmospheric dispersion, (3) account for the proximity of the haul route to HPES (a sensitive receptor) in its calculations and does not accurately report trips along that route and (4) require preparation of a Health Risk Assessment. As such, HPES students, especially as a sensitive population, are at significant risk and that risk is undisclosed to the general public.

Response to Comment No. 426-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comments Nos. 426-2 through 426-5 for specific responses to the issues raised in this comment letter.

Comment No. 426-2**I. The DEIR Does Not Sufficiently Analyze the Cumulative Effects of Emissions/ Pollutants as it Relates to HPES**

The Town and Country Project (“TC Project”), which is identified as a related project (DEIR page III-6) is projected to have a construction period of approximately three (3) years with construction projected to begin in late November, 2022.

An environmental impact report (EIR) must identify and focus on the significant environmental effects of the proposed project (Cal. Code Regs., tit. 14, § 15126.2, subd. (a)). A significant environmental effect is a substantial, or potentially substantial, adverse change in the environment (Pub. Resources Code, § 21068; Cal. Code Regs. tit. 14, § 15382). “Environment” means the physical conditions that exist within the area that will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, and objects of historic or aesthetic significance (Pub. Resources Code, §

21060.5; Cal. Code Regs., tit. 14, § 15360). Even if a project's impact may be individually limited, this impact may be cumulatively considerable, and an EIR must discuss these impacts (Pub. Resources Code, § 21083, subd. (b)(2); Cal. Code Regs., tit. 14, §§ 15065, subd. (a)(3), 15130, subd. (a)). **“Cumulatively considerable” means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects** (Pub. Resources Code, § 21083, subd. (b)(2); Cal. Code Regs., tit. 14, § 15065, subd. (a)(3)). [Emphasis added]

San Franciscans for Livable Neighborhoods v. City and County of San Francisco (2018) 26 Cal. App. 5th 596, 622

The DEIR must account for the cumulative effects of pollutants caused by the Project *in addition* to any simultaneous and concurrent demolition and/or construction of the T & C Project. HPES has had the opportunity to thoroughly analyze the TC Project and did not oppose the EIR for that project or any information therein however the same cannot be said [sic] the Proposed Project.

The DEIR does not adequately evaluate emissions to show estimates that would include emissions from T & C Project. As argued below, the numbers that the DEIR is basing its analysis on are already based on underestimations and therefore already flawed. This in conjunction with the fact the DEIR fails to analyze the cumulative effects of proposed levels of emissions/pollutants resulting from the Project in addition to the increased pollutants that will exist during the concurrent construction of the T & C Project at various stages of construction, results in a gross miscalculation of the health risks to HPES. This is particularly concerning with respect to the emissions resulting from the haul route discussed below.

Response to Comment No. 426-2

Contrary to the commenter's assertion, the Town & Country project was accounted for in the cumulative impact analyses throughout the Draft EIR. As shown in Table III-2, Related Projects, on page III-9 of Section III, Environmental Setting, of the Draft EIR, the Town & Country project is included as Related Project No. 13. The cumulative methodology for air quality impacts recommended in this comment would not be consistent with SCAQMD guidance for the evaluation of cumulative impacts. Based on SCAQMD guidance, as discussed on page IV.A-77 of the Draft EIR, individual construction projects that exceed SCAQMD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the

Air Basin is in non-attainment.¹⁶⁰ Refer to the cumulative air quality analysis on pages IV.A-77 through IV.A-79 in Section IV.A, Air Quality, of the Draft EIR.

Comment No. 426-3

II. DEIR Relies on Unsupported Claims About Atmospheric Dispersion

Hancock Park Elementary School (“HPES”) is located approximately 1,500 feet south of the Project Site. (DEIR, IV.A.-29). This school is one of many sensitive receptors identified within the Project area (DEIR IV.A 30–31). Children and those with cardio-respiratory diseases are considered more sensitive to air pollution. (DEIR. [sic] IV.A-31; Appendix A, page 46).

The DEIR uses Southern California Air Quality Management District (SQACMD) Localized Significant Threshold which provides mass rate look-up tables with Localized Significance Thresholds (“LST’s” [sic] which are based on the distance between sensitive receptors and Project Site boundaries. (DEIR IV.A-31). According to these tables, the shortest receptor distance is 25 meters (82 feet). (DEIR IV.A-31). SQACMD recommends that LSTs are used for receptors within 25 meters of the Project. Therefore, DEIR assumed LST receptor distance to be 25 meters. “All other existing air quality-sensitive used are located at greater distances from the Project Site” and thus “*would experience lower air quality impacts from potential sources of emissions at the Project Site due to atmospheric dispersion effects.*” [Emphasis Added] (Page IV.A-31). **These claims are not supported by modeling of atmospheric dispersion let alone modeled accounting for simultaneous and concurrent construction that will also affect HPES.** The DEIR must include modeling for atmospheric dispersion and in that modeling must account for emissions from concurrent construction.

Response to Comment No. 426-3

Refer to Response to Comment No. 26-28 for a discussion of why atmospheric dispersion is not necessary to evaluate the localized impacts of Project emission sources. Refer to Response to Comment No. 26-E.1-21 for a discussion of the analysis of localized air quality impacts, the LST methodology and the 25-meter criterion.

As discussed on pages IV.A-77 to IV.A-80 and shown in Table IV.A-13 in Section IV.A, Air Quality, of the Draft EIR, the cumulative localized air quality impacts would be less than significant with mitigation.

¹⁶⁰ SCAQMD, White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution, August 2003, Appendix D.

Comment No. 426-4**III. [sic] The DEIR Does Not Account for Proximity of Haul Route to HPES and Underestimates Haul Trips Along That Route**

Using SQACMD's Localized Significant Threshold for CEQA Evaluations which provides mass rate look up tables with Localized Significant Thresholds (LSTs), the DEIR determines that because the Project Site is greater than 25 meters from HPES it is at a great enough distance to experience lower air quality impacts. (DEIR page IV.A-31). This claim—that sensitive receptors such as HPES would experience lower air quality impacts due to atmospheric dispersion—does not account for the proximity of the Proposed Project's haul route.

The scheduled truck route for excavation and fill takes all vehicles directly past the HPES campus—well within the 25-meters set forth above. (DEIR IV.A 60–62, DEIR Appendix A page 38). “The haul route for these trips would include traveling Southbound on South Fairfax to San Vicente...” (DEIR, Appendix N, page 38). Stated differently, all construction and demolition debris, will make its way past HPES. This included 60,000 cubic yards of hazardous soil material. (DEIR Appendix B-3) the “excavation and export of approximately 86,500 cy of soil” is “estimated to generate approximately 12,358 haul truck trips... over an approximate three-month period.” (DEIR, Appendix A page 38). In fact, the portion of HPES that is located closest to this traffic is playground for the Transitional Kindergarten and Kindergarten children—the youngest group of students at HPES. Additionally, the route passes a large portion of the main building with classrooms whose windows open onto Fairfax Avenue.

Having said that, the DEIR underestimates the number of hauling trips evaluated in the air dispersion calculations and therefore grossly underestimates the air quality impacts. The DEIR appears to only calculate hazardous waste hauls but does not include approximately 95,000 haul trips in the emission analysis. Should this number be corrected, it would nearly double the VMT. Should this number be corrected AND include data from concurrent simultaneous construction, it would be clear how at risk these children are. The DEIR's failure to accurately account for trips renders the Air Quality analysis, atmospheric dispersion analysis (or lack thereof) and the related documents upon which these analyses are based ineffective, misleading putting and dangerous to human lives.

Response to Comment No. 426-4

Refer to Response to Comment No. 26-E.1-21 for a discussion of the localized air quality impact analysis and the Project's use of the 25-meter LST lookup tables. Please refer to Response to Comment No. 26-30 for a discussion of the Project's CalEEMod model accounting for all Project-related hauling, including a total of approximately 126,972 truck trips related to grading import/export (111,000 trips for import/export, 7,400 trips that

could be used for deliveries or import/export, and 8,572 trips related to export from contaminated soils). As discussed therein, potential impacts were evaluated at the closest off-site sensitive receptor, which is the residential use located directly east of the Project Site boundary. The localized impact analysis included both off-road (e.g., bulldozers, loaders, and excavators) and on-site on-road vehicles (e.g., haul and delivery truck travel and idle time). As shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with the incorporation of mitigation measures. Construction-related trucks along haul routes near the Project Site would represent a small fraction of the total emission evaluated in the air quality analysis as a truck would only be located next to a single residence or sensitive receptor, such as Hancock Park Elementary School, for a very short duration (traveling around 25 mph). As discussed above, the total on-site emissions would result in a less-than-significant localized air quality impact at the closest sensitive receptor. Therefore, no additional analysis of trucks along haul routes is required under CEQA.

The claim that the Draft EIR underestimates the number of hauling trips is incorrect. As shown above, the Project includes approximately 126,972 truck trips and is substantially more than the CalEEMod default of 102,750 truck trips. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Appendix B of the Draft EIR regarding the number of construction trucks.

Comment No. 426-5

IV. The DEIR Fails to Prepare a Health Risk Assessment

Despite the Proposed Project being close to a number of sensitive receptors, including HPES, the DEIR fails to prepare a Health Risk Assessment (“HRA”). As previously stated, the Proposed Project subjects HPES, a sensitive receptor, to diesel particulate matter—known carcinogens and other toxic air contaminants that could have a serious health risk impact. Due to the proximity of (1) HPES to the Proposed Project, (2) the proximity of HPES to the truck haul route, (3) the 772,000 cubic yards of cut and 50,000 cubic yards of fill going to and from the Project site, (4) the number of trucks trips (which is highly underestimated) and the emission resulting thereof, (5) concurrent construction emissions and (6) the release of harmful pollutants resulting from moving soil and hauling that contaminated soil past HPES, there is a very serious risk that must be communicated to HPES families.

The California Supreme Court in *Sierra Club v. County of Fresno* (Dec. 24, 2018) 6 Cal.5th 502 held that portions of the air quality analysis in Fresno County’s BIR for the 942-acre Friant Ranch Specific Plan violated CEQA. In reaching this decision, the Court made four important holdings which include, but are not limited to: (1) for an EIR’s discussion of environmental effects “is sufficient to satisfy CEQA, an EIR must include sufficient detail to

enable those who did not participate in its preparation to understand the issues raised by the proposed project and (2) an BIR must show a “reasonable effort to substantively connect a project’s air quality impacts to likely health consequences.

Response to Comment No. 426-5

The air quality analysis in Section IV.A, Air Quality, of the Draft EIR analyzed impacts to Hancock Park Elementary School as a sensitive receptor. As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased truck trips associated with construction and operations, would be below SCAQMD’s risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less than-significant impact.

Refer to Response to Comment No. 26-E.1-21 for a discussion of the analysis of localized air quality impacts, the LST methodology and the 25-meter criterion. Refer to Response to Comment No. 426-4 regarding the analysis of haul trucks. Refer to Response to Comment No. 426-4 regarding the number of haul truck trips. Refer to Response to Comment No. 426-3 regarding cumulative localized impacts. The Draft EIR’s air quality analysis accounted for dust emissions that would result from soil-handing activities. Refer to Response to Comment No. 11-26 regarding the Friant Ranch decision and the Draft EIR’s air quality analysis.

Comment No. 426-6

V. Conclusion

The DEIR Air Quality analysis is erroneously analyzed and, among other shortcomings, is based on unfounded statements about atmospheric dispersion, an underestimated number of hauling trips, a lack of analysis on overlapping concurrent construction and resulting operational emissions and without an HRA. Based on flawed calculations, or a complete lack of analysis on others and without an HRA it is impossible for HPES families to know and understand that potential risks associated with the Proposed Project and therefore robs them of the ability to mitigate those impacts for their families.

I respectfully request that the DEIR be recirculated upon the following corrections being made: (1) the DEIR must include detailed modeling of atmospheric emissions including emissions from concurrent and overlapping construction , (2) the DEIR Air Quality analysis be corrected to reflect an accurate number of hauls & truck trips, (3) appropriate mitigations

be adopted accordingly and (4) that a detailed HRA be prepared to calculate and disclose the risk of cancer and other health risks to HPES and other sensitive receptors.

Response to Comment No. 426-6

Refer to Response to Comment Nos. 426-2 through 426-5. As demonstrated therein, the Draft EIR meets the requirements of CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 427

Edward Petlak
174 S. Detroit St.
Los Angeles, CA 90036-2914

Comment No. 427-1

I'll be frank; I don't understand the traffic analysis provided with the draft EIR for the TVC 2050 project. The traffic plan provided as part of the draft EIR doesn't give any indication how traffic will be re-routed. It also doesn't take into account special events when traffic counts are heaviest or trash collection days. How will first responders navigate the neighborhood when its gridlocked?

Will the developers provide additional detail to back up their claims?

Response to Comment No. 427-1

This comment is identical to Comment No. 78-1. Please see Response to Comment No. 78-1, above.

Comment No. 427-2

The plans for parking during construction don't seem credible to me. Tens of thousands of construction vehicles will be entering the site off of Fairfax. Do we have any idea where these trucks will be staging and idling? What kind of impact will the truck traffic have on noise and air quality? Have the developers communicated at all with any of the schools, residences, and nursing homes along Fairfax regarding the possible disruption to their lives? What have they been told about impacts that will affect them?

Response to Comment No. 427-2

This comment is identical to Comment No. 78-2. Please refer to Response to Comment No. 78-2, above.

Comment No. 427-3

According to the draft EIR, almost 8,000 employees will be on site once the production facilities become operational. Up to 5,000 people per day will access the site as television audience members. Yet the draft EIR calls for 5,300 parking spaces on site. Where will everyone else park? How did they arrive at these numbers. Will people accessing the TVC site be allowed to park in adjacent neighborhoods? Will audiences be accessing the facilities during the evening hours? We haven't been provided answers to these questions.

Response to Comment No. 427-3

This comment is identical to Comment No. 78-3. Please refer to Response to Comment No. 78-3, above.

Comment No. 427-4

I hope you'll demand answers from the developers to my questions. I also hope you'll demand the developers do a better job of communicating with neighborhood residents and business owners. The more I learn about TVC 2050, the more concerned I become. Please don't let this project move forward until our questions are answered.

Response to Comment No. 427-4

This comment is identical to Comment No. 78-4. Refer to Response to Comment No. 78-4, above.

Comment Letter No. 428

Michael Petruncola
603 N. Laurel Ave.
Los Angeles, CA 90048-2320

Comment No. 428-1

I'm writing on behalf the TVC 2050 application. The Draft EIR has zero details, and there needs to be an in-depth review of impacts to streets. The location of the planned project sits in one of the busiest intersections in one of the busiest areas of Los Angeles.

Response to Comment No. 428-1

This comment is identical to Comment No. 305-1. Refer to Response to Comment No. 305-1, above

Comment No. 428-2

How will the project—at the corner of what I understand have been deemed **two** high injury network streets, Beverly Blvd and Fairfax—impact safety? The draft EIR gives no specifics about what it means for a street to be in the high injury network, but it's no surprise that they are. So what determines a high injury street? What are the high injury statistics for those two streets? What are the findings on what the increase in high injury accidents will be when this project is being built? And when it is done? What is the project planner required to do as a result of his project being at the corner of two high injury network streets? I would expect different measure would have be taken, right? since going into the project, we all know those streets will be hugely affected.

Response to Comment No. 428-1

This comment is identical to a portion of Comment No. 305-2. Please see Response to Comment No. 305-2, above.

Comment Letter No. 429

Roderick Pinkney
4859 W. Slauson Ave., #137
Los Angeles, CA 90056-1290

Comment No. 429-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 429-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 430

Devora Pinson
243 S. Formosa Ave.
Los Angeles, CA 90036-2813

Comment No. 430-1

The Television City project's plans will be extremely damaging to the community's economy and environment.

Response to Comment No. 430-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 430-2 through 430-5.

Comment No. 430-2

I am concerned about the project's response and acknowledgement of global trends. Since the beginning of the Coronavirus pandemic, more employers are providing remote work flexibility as well as downsizing their office space. The project includes plans that are outdated and an ineffective use of resources. With thousands of new employees expected, why isn't remote work considered in the plan? What are the projected trends of remote vs in person work trends for the entertainment industry? Many people were surprised to see the decreasing popularity of movie theaters in the United States in the past twenty years. An industry that was once flourishing and deeply ingrained in American culture now struggles to stay afloat. What research has been done about concerts and their popularity? Are the developers concerned about the long-term vitality of the concert venue?

Response to Comment No. 430-2

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Note that the Project does not propose a concert venue on the Project Site; refer to Topical Response No. 3, Permitted On-Site Uses. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 430-3

With the expansion and creation of many buildings, what about plans for landscaping? What is the design vision for the streets of Beverly Fairfax? Will funds be reserved toward planting trees and grass, or adding parks in the community?

Response to Comment No. 430-3

Refer to pages II-23 through II-25 in Section II, Project Description, of the Draft EIR for a discussion regarding landscaping improvements associated with the Project. Refer to Response to Comment No. 16-47 for additional information regarding the Project's landscape improvements. The Project is not proposing a park for public use. Refer to Response to Comment Nos. 16-72, 28-18, and 172-3 regarding the proposed public realm enhancements and pedestrian-oriented design.

Comment No. 430-4

The plan is to make our community a regional center, so I do not know if that vision will include developments to the area. What exactly does that mean anyway, to be a regional center? What if the community does not want that?

Response to Comment No. 430-4

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Following the publication of this Final EIR, the Project approvals, including the proposed General Plan Amendment, among others, and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Comment No. 430-5

Automotive companies have been racing to offer electric cars, and more consumers are making the switch. California is requiring sales of only electric vehicles. Yet, the draft EIR does not include information about electric charging availability. What will the breakdown of parking spots with electric charging stations to those without charging stations be? With incredible developments in environmentally friendly cars in the past five year, the plans for the parking structure must consider the needs residents and workers will have in 2045.

Response to Comment No. 430-5

As stated on page IV.E-51 of the Draft EIR, the Project would comply with the City's EV charging requirements, which specify that 10 percent of new parking spaces must include EV charging equipment, and a total of 30 percent of all new parking spaces would be required to be EV "ready," which must be capable of supporting future EV charging equipment. In addition, a PDF is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of electrical hookups at all basecamp areas. In addition, four EV chargers would be provided at the Mobility Hub for future electrical shuttles. Refer to Response to Comment No. 26-52 regarding electricity associated with EV charging and Response to Comment No. 26-E.1-38 regarding ZE and NZE infrastructure support.

Comment No. 430-6

Thank you for considering my concerns about the project. I want the best for Beverly Fairfax and will be awaiting your responses to my questions.

Response to Comment No. 430-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 430-2 through 430-5.

Comment Letter No. 431

Yossi Pinson
243 S. Formosa Ave.
Los Angeles, CA 90036-2813

Comment No. 431-1

I would like to comment on several aspects of the Proposed TVC 2050 Project.

Response to Comment No. 431-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 431-2 through 431-4.

Comment No. 431-2

The project proposed to have production facilities in the basement of the parking garage. Does that mean no cars will be able to get through these areas? What is the plan for circulation then? Why is production space being allotted in that location? So which access points or gates will cars and trucks be using? Only on Beverly and the Grove Drive? Please explain because the plan is not understandable. Can you show analysis of what will happen if cars and trucks cannot park except through Beverly and Grove gates?

Response to Comment No. 431-2

Refer to Response to Comment No. 16-11 regarding the Project's multi-level circulation plan, which is discussed on pages IV.K-42 to IV.K-44 in Section IV.K, Transportation, of the Draft EIR. Please note that no active production activities or uses would occur in the parking and basecamp areas below Project Grade. Refer to Figure II-6(a) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Much of the truck activity would occur in the lower (subterranean) level of the Project Site although there would still be underground parking covering much of the Project Site. The lower-level truck areas would be used for basecamps to support the sound stages and for deliveries.

The primary entry points for both trucks and cars would be through the three signalized entrances on Fairfax Avenue, Beverly Boulevard, and The Grove Drive. Cars

entering through any of the three signalized entrances would be able to travel within the Project Site to any of the parking areas.

If all access to/from the Project Site were limited to the Beverly Boulevard and The Grove Drive gates, they would both operate at a lower level of service than shown in the Transportation Assessment and congestion on both Beverly Boulevard and The Grove Drive would increase.

Comment No. 431-3

It also appears that almost all of the parking is located on the Grove drive, so wouldn't most people trying to get to the site use that entrance? What happens if all of the traffic to the site tries to use that Grove gate? Was other analysis done of the various levels of usage at each gate? Where is that analysis available? Several of us in the community do not understand the plan for entering and exiting parking, the access points if not on Grove, and what happens when traffic gets backed up trying to enter a parking garage. Please explain in detail.

Response to Comment No. 431-3

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Topical Response No. 12, Safety and Congestion, regarding access and use of The Grove Drive. The Grove Drive was selected as one of three signalized access driveways for the Project because The Grove Drive has more available capacity than either Fairfax Avenue or Beverly Boulevard.

Figure 22 on page 80 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the assignment of trips in and out of each Project driveway and Table 18 on page 162 shows the performance of each of the signalized driveways, indicating that all three driveways operate at LOS B upon full buildout of the Project. Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion.

The remainder of this comment discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 431-4

I am also very concerned about putting a truck road and studio buildings so close to apartments. This will create a health risk for residents. What are the health impacts on

residents from fumes coming from these trucks and studios? What about when those trucks are idling? Trucks and studios are also very loud. What will the noise impact be on the adjacent residential apartments? There is also a school across the street. Please analysis the noise and health impacts on the apartment residences and the school.

Thank you.

Response to Comment No. 431-4

This comment is similar to the first paragraph of Comment No. 231-3. Refer to Response to Comment No. 231-3 regarding health impacts. Also refer to Response to Comment No. 126-2 regarding truck idling.

The Draft EIR also includes an analysis of Project impacts with respect to noise. As discussed on pages IV.I-54 through IV.I-56 Section IV.I, Noise, of the Draft EIR, Project operations would not result in the generation of a substantial permanent increase in ambient noise levels in the vicinity of the Project Site in excess of standards established in the City's General Plan or Noise Ordinance, or applicable standards of other agencies, resulting from all on-site sources, as well as roadway vehicle noise from the Project. Therefore, the Draft EIR concluded that the Project's impacts with respect to noise during operation would be less than significant.

Comment Letter No. 432

Comment Letter No. 433

David Purdie
451 N. Sierra Bonita Ave.
Los Angeles, CA 90036-2471

Comment No. 433-1

As a member of the Fairfax community, I feel threatened by the proposed project. How could such an egregious plan be put forward? There are many concerning aspects, and I will highlight a few of my main concerns below.

Response to Comment No. 433-1

This introductory comment is identical to Comment No. 382-1 but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 433-2

As it stands, there is a large parking structure being placed on Grove Drive. Grove Drive is right across from Pan Pacific Park. Children, senior citizens, and everyone in between frequent this park. With this new parking structure, there are going to be many more trucks entering Grove Drive and emitting fumes and exhaust next to the park. How many trucks are expected to be in this parking structure? How much diesel exhaust is going to be emitted? What are the health risks to people? Are the health risks different for younger children than for senior citizens? Please provide a proper analysis on the health risks associated with all exhaust.

Response to Comment No. 433-2

This comment is identical to Comment No. 382-2. Refer to Response to Comment No. 382-2, above.

Comment No. 433-3

Staying on the theme of Grove Drive, essentially all of the parking is located on the road. This means that all the people trying to get to the project site will use Grove Drive. This seems impossible and is bound to be chaotic. How is the Grove gate going to handle this congestion? What will happen if 25% of traffic uses the Grove gate? What about 50%? 75%? And on the most extreme end, what would happen if 100% of the traffic tries to use the Grove gate?

Response to Comment No. 433-3

This comment is identical to Comment No. 382-3. Refer to Response to Comment No. 382-3, above.

Comment No. 433-4

Another thing that concerns me is parking plan. In its current state, it makes no sense. The Draft EIR outlines that there will be roughly 8,000 people employees on site. Additionally, the large audience stages could bring in 3,000 to 5,000 people a day to the site. However, the project is allotting 5,300 parking spaces. What is the plan for employee parking? How are parking permits going to be distributed? How are they going to be monitored and enforced? With these numbers, there are not enough spaces. Where is the overflow going to park? Are you going to have designated spaces for them nearby or are they expected to park all around our community?

Response to Comment No. 433-4

This comment is identical to Comment No. 382-4. Refer to Response to Comment No. 382-4, above.

Comment No. 433-5

All of the points above need to be addressed. They all directly impact the health and lifestyle of residents like me, and it is important for these questions to be answered and changes to be made. The plan as it stands is unacceptable and needs to be heavily reconsidered.

Response to Comment No. 433-5

This comment is identical to Comment No. 382-5. Refer to Response to Comment No. 382-5, above.

Comment Letter No. 434

Adam Raeburn
451 N. Poinsettia Pl.
Los Angeles, CA 90036-2504

Comment No. 434-1

I am writing to raise questions that need to be answered about the proposed Television City plan.

Response to Comment No. 434-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 434-2 through 434-3.

Comment No. 434-2

It appears from the Draft EIR that only a qualitative description of a long-range project buildout was provided. The analyses all seem to be based on a three-year construction timeline even though the applicant is asking for a 20-year Development Agreement, meaning that construction could actually go on for 20 years.

Given that a long-term buildout scenario is definitely possible, why isn't the city requiring a full analysis of that potential, with complete data and information that would allow member of the public and concerned parties to learn about and understand the full range of potential impacts? How would the city be able to approve a project with significant long-range impacts that have not been quantified and examined? And why would the city want to take such an irresponsible action?

Response to Comment No. 434-2

Regarding the Project timeline, refer to Response to Comment No. 9-24. As discussed therein, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is included for each of the environmental topics studied in the Draft EIR. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment No. 434-3

In an area that is so traffic-intensive for many miles in every direction, why was only a .5 mile radius used to analyze cumulative impacts that would result from other projects? And why was it assumed that all related projects would be completed by 2026 for the purpose of doing the traffic analysis? Why were the only projects included in the traffic assessment those within .5 miles?

Even the EIR's projected growth estimates used a .5 radius as a basis for the analysis, even though there is awful traffic on all the streets leading to and away from the project site. Why was that radius used? Wouldn't it make more sense to actually capture the distance from the project site that will be effected? The city needs to make sure these analyses are redone to take into account the on-the-ground reality of the broad reach of the impacts this project will have.

Response to Comment No. 434-3

Under SB 743, the transportation impacts of a project are measured in terms of VMT instead of the previous criteria based on traffic capacity and congestion. The VMT analysis uses the City's regional travel demand forecast model to track work trips from their homes (wherever they may be in the entire region) to the place of employment. The City's travel demand model is based on long-range projections 20 years into the future and covers not just a 0.5-mile radius from the site but covers the entire region. The City of Los Angeles also requires a non-CEQA operational impact that measures the Project's potential impacts on key intersections near the Project. For this reason, the Transportation Assessment (Appendix M.1 of the Draft EIR) selected 31 intersections near the Project Site and measured the LOS effects of Project trips on these locations. Beyond the radius selected for the Study Area, the incremental impact of Project trips quickly dissipates.

Future traffic levels in the Study Area were a combination of existing (pre-pandemic) traffic levels, an ambient growth rate applied to all existing traffic, and traffic expected from 68 related projects that may send all or a portion of their traffic through the study intersections.

While the comment suggests that only related projects within a 0.5-mile radius of the Project Site were investigated, a review of Figure 14 on page 47 and Table 5 on pages 60–65 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that the actual boundaries of the related project search area was Sunset Boulevard on the north, Pico Boulevard on the south, the Santa Monica Boulevard/Wilshire Boulevard intersection on the west, and La Brea Avenue on the east. This represents a related project study area of approximately four miles wide by three miles high. This is clearly much larger than the 0.5-mile radius cited in the comment. The 68 related projects were all conservatively assumed

to be approved, constructed, and fully occupied by 2026, which is highly unlikely to occur. Nevertheless, all these related projects were assumed to be generating traffic onto the street systems by the time that the Project is completed.

The growth estimates used in the Transportation Assessment were based on an annual growth rate increase of 1 percent per year. This growth rate was applied to all the existing traffic using the streets in the area today, regardless of where the trips originated.

The combination of 68 related projects and the 1-percent annual growth rate resulted in future base 2026 traffic levels approximately 12.8 percent higher than are on the streets today. This is a higher growth rate than the SCAG regional travel demand model predicts for area streets in the Year 2040.

Comment Letter No. 435

Ali Rahimi
464 S. Mansfield Ave.
Los Angeles, CA 90036-3516

Comment No. 435-1

As I read the draft EIR for the TVC 2050 project, the people who are building this monstrosity are trying to convince us traffic will not be all that bad if the project is approved. Who are they kidding?

Response to Comment No. 435-1

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 435-2

They claim that large numbers of people will start using mass transit in the Beverly-Fairfax area, both tourists and residents alike, rather than deal with the traffic headaches caused by decades of high-rise construction and the arrival and departure of production trailers. I have no idea how they arrived at their numbers for transit users, but I can guess they have very little understanding of Angelenos and their love of cars. Can you please explain how it was determined that a large number of people will start using mass transit? Do you know the average number of people that are expected to switch to mass transit? How were these numbers determined? How will these numbers be adjusted when studies are done of the actual transportation used of people working and visiting there? How will the impacts that are being stated as not significant be re-analyzed for actual transit use, not some projections? If the project is approved based on these kinds of assumptions, then how can we go back once it's shown that the transit use numbers are just not happening? What happens then?

Response to Comment No. 435-2

This comment is identical to Comment No. 90-2. Refer to Response to Comment No. 90-2, above.

Comment No. 435-3

All of these construction trucks and production trucks and the re-routed commuter traffic is going to be in very close proximity to residential properties and apartments. I fear an increase in traffic accidents, injuries and worse. Where are the estimates of the increase in accidents, injuries and deaths resulting from all of the additional cars and trucks? You know that Beverly and Fairfax are two of the highest injury streets, right? How can this huge development be considered in that situation, for that location? How do you plan to mitigate traffic accidents or injuries? Who will be responsible for these accidents?

Response to Comment No. 435-3

This comment is identical to Comment No. 90-3. Please see Response to Comment No. 90-3, above.

Comment No. 435-4

Please pump the brakes on TVC 2050 and ask the developer to provide a lot more detail to their plans. Neighborhood residents deserve details.

Response to Comment No. 435-4

This comment is identical to Comment No. 90-4. Refer to Response to Comment No. 90-4, above.

Comment Letter No. 436

Danielle Railla
341 N. Stanley Ave.
Los Angeles, CA 90036-2398

Comment No. 436-1

The community is aware of the information sent out in the EIR regarding the upcoming project. However, the EIR appears to generate several concerns.

Response to Comment No. 436-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 436-2 through 436-5.

Comment No. 436-2

With tens of thousands of trucks having to come up Fairfax to get to the project site, the Draft EIR should analyze the air quality, noise and other issues impacting all the sensitive uses along Fairfax. What specific plans are in place to illuminate noise from the construction? There are many schools, nursing homes and residential uses that will be impacted. Have these people been notified of the incredible impact's tens of thousands of trucks will have on their lives?

Response to Comment No. 436-2

The first sentence of this comment is similar to a portion of Comment No. 49-2. Refer to Response to Comment No. 49-2 regarding trucks on Fairfax.

Refer to Response to Comment Nos. 26-E.1-2 and 26-E.1-16 regarding sensitive receptors. Refer to Response to Comment Nos. 26-E.1-2 and 26-E.1-16. Refer to pages IV.I-35 through IV.I-59 of Section IV.I, Noise, of the Draft EIR for a detailed discussion of construction-related noise impacts associated with on-site construction activities and haul trucks.

Comment No. 436-3

The project may have thousands of audience people a day. What happens when they park in the community, is there a strategy outlined for community parking? With the number of people in the area increasing, people in the neighborhood would need to be more cautious.

What are the risks of a security standpoint for the community? Speeding in the area could raise a big problem for school children, the elderly, and for Jewish people walking to services. Is there a plan to control motor vehicular accidents during the time of construction?

Response to Comment No. 436-3

The first two sentences of this comment are similar to Comment No. 396-2. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Please note that the comment regarding the number of audience members is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 12, Safety and Congestion. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Pursuant to Project Design Feature TR-PDF-1, the Project is required to prepare a CTMP for City approval that would address potential construction safety issues.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

This comment refers to generalized “risks” without specifying a concern and, as such, has been noted for the administrative record.

Refer to Response to Comment No. 405-4 regarding speeding.

Comment No. 436-4

The EIR outlines some aspects of the physical work to be done. However, the environment will be impacted as well. What will be done about the air quality for those affected by the construction? All of the added idling, exhaust and emissions will definitely affect those who live and work here. What will those adverse impacts be?

Response to Comment No. 436-4

As stated on pages IV.A-59, IV.A-66, IV.A-73, and IV.A-75 through IV.A-77 of the Draft EIR, air quality impacts would be less than significant for all criteria pollutants after the application of mitigation, except for regional construction NO_x emissions, and regional

overlapping construction plus operational VOC and NO_x emissions during the long-term buildout scenario. In addition, construction and operational localized air quality impacts would be less than SCAQMD's significance criteria for all pollutants (see Tables IV.A-10 and IV.A-11 of the Draft EIR). Additionally, a quantitative HRA, which includes an analysis of carcinogenic and non-cancer risks (such as respiratory issues) was developed in response to SCAQMD's comment on the Draft EIR and is included as Appendix FEIR-10 of this Final EIR. As discussed on pages IV.A-72 and IV.A-73 of the Draft EIR, and further confirmed by the results of the quantitative HRA, the Project is not expected to generate substantial TAC emissions or result in significant contributions to human health hazards in the Project area.

Comment No. 436-5

There is a historic district to the north of the project site. Thousands of cars and trucks will be traveling through the community. What will be the impact on the historic district?

Response to Comment No. 436-5

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10 regarding impacts to the Beverly Fairfax Historic District and how an increase in trips will not affect the integrity of the Beverly Fairfax Historic District.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding cut-through effects on adjacent neighborhoods and the proposed NTMP.

Comment No. 436-6

As leaders, it is imperative these concerns be addressed. The EIR has failed to answer many questions and the community members fear this project will do more damage than good.

Response to Comment No. 436-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 436-2 through 436-5.

Comment Letter No. 437

Gary Randall
139 S. Edinburgh Ave.
Los Angeles, CA 90048-3605

Comment No. 437-1

Energy-related aspects of the project's design are not clear to me—

1. **What is meant by the EIR's "fueling stations and vehicle repair?" Does this mean there will be a gas station and mechanic shop on the site? If so, where will it be located? Where does the EIR evaluate the impacts from having a fueling station next to residences?**

Response to Comment No. 437-1

The Project would not include fueling stations or vehicle repair shops. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 437-2

2. **Will the power generators used at the basecamps run on diesel? If so, has the EIR analyzed the toxic emissions and noise from these generators? Will they run 24 hours a day/7 days a week? Will the generators be electrified? There is no reason that the site cannot be 100% electric.**

Response to Comment No. 437-2

This comment is substantively similar to Comment No. 188-4. Refer to Response to Comment No. 188-4, above.

Comment No. 437-3

3. **Why is the project planning to use natural gas, especially if you'll be building this project through 2043? Aren't new buildings supposed to be fully electric to address global warming?**

Response to Comment No. 437-3

Refer to Response to Comment No. 45-1 regarding the Project's compliance with City Ordinance No. 187714 (all-electric buildings ordinance) and natural gas usage associated with the Project.

Comment No. 437-4

4. Finally, doesn't this area of LA have naturally-occurring methane that will create a safety problem for the underground studios you are building? Will the methane build up and risk explosions in my neighborhood like the Ross that exploded?

Response to Comment No. 437-4

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding methane.

Comment No. 437-5

The project should address all of these issues: the EIR says that a plan will be created, but provides no detail.

The plan should be developed now so that the public can review it to ensure it is adequate for our safety.

Response to Comment No. 437-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 437-2 through 437-4. See the Preliminary Draft Specific Plan, which has been made publicly available on the Department of City Planning's website.

Comment Letter No. 438

David Ravanshenas

Comment No. 438-1

Television City is in the heart of Los Angeles and has been an icon in the entertainment industry for almost 70 years. It's about time that the studio gets a facelift.

The TVC 2050 project will allow the studio to celebrate its past while preparing for its future. An improved and modernized technological infrastructure will create a highly sought-after studio facility for production. This plan represents a major investment in the entertainment industry, the Beverly/Fairfax community, and the city.

Keeping production here in Los Angeles is key to our city's long-term economic success. This project is a win-win for everyone.

Response to Comment No. 438-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 439

Mimi Ravnoy
329 Fuller Ave.
Los Angeles, CA 90036-2522

Comment No. 439-1

I live within the Beverly Fairfax Historic District more than 18 years. The fact that the project's EIR concludes there won't be any effects on our historic district worries me a lot, I mean a real lot. The EIR I have seen over the last 20 years do not really assess the traffic and problems.

Response to Comment No. 439-1

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project, including Project trips, would not significantly impact the Beverly Fairfax Historic District. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 439-2

The Project's construction years are discussed in the EIR, but not with any clarity. Is construction going to be for three years? What does it mean that construction could be up to 20 years? Does that mean construction could be going on for 20 years in our community? We are a community of pedestrians, and children and families frequently stroll around our neighborhoods to visit one another's homes and attend religious services. Does the city expect that our lives could be affected by noise, more traffic, trucks all week long, closures, more cars driving through our neighborhood—for up to 20 years?

Response to Comment No. 439-2

The Applicant's desire is to construct the entire Project in one construction phase, subject to market conditions. A one-phase construction schedule would complete the Project in an approximately 32-month time period. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

If the Project is not built in one phase, it could be built in multiple phases over the 20-year time limit of the Development Agreement. However, the Project involves a working studio with sound stages that are sensitive to both noise and vibrations, so it is very unlikely that continuous construction would be compatible with the land uses in the Project.

The Construction Traffic Management Plan described in Topical Response No. 14, Construction Vehicle Impacts, would address the issue of construction traffic driving through the neighborhoods and would seek to minimize the effects of any roadway or lane closures. Again, there is no plan to develop a construction program that would result in daily construction traffic and noise for a continuous 20-year time span.

Comment No. 439-3

In addition, it will ruin our way of life and interfere with the very cultural Importance that has made Beverly Fairfax a historic area. Did you evaluate the effect all the construction activities will have on visitors to the historic area boundaries? Where is that analysis? Can you point to findings that construction trucks and employees are not going to be driving through our communities at all hours of the day and night? When and how will construction trucks will be routed? Will trucks being using an entrance that runs along Fairfax, pulling out into traffic to get to the freeway?

Response to Comment No. 439-3

This comment is identical to Comment No. 257-3. Refer to Response to Comment No. 257-3, above.

Comment No. 439-4

Please inform me of any city actions about this project.

Response to Comment No. 439-4

All commenters are added to the notification list for the Project. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 440

Andrew Ray
530 N. Alta Vista Blvd.
Los Angeles, CA 90036-1967

Comment No. 440-1

I am writing to express my concern and opposition toward the TVC 2050 project and its impacts on the community. I am very confused because I have looked through the Draft EIR and I still don't know what uses the developer actually intends for the project site!

Response to Comment No. 440-1

As discussed throughout the Draft EIR, the Project is a studio project. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 regarding permitted uses.

Comment No. 440-2

Warehousing and "conference facilities?" What does the developer intend to do with those uses, exactly? And what impacts will those uses have on the community and the environment? Because I tried to find those impacts in the document and they seem totally missing. How can the impacts of different "uses" that are not spelled out in the first place even be analyzed? The project developer wants to have flexibility, but if the uses change, will those uses then be studied?

In fact, the Draft EIR seems to say that ANY use in the C2 zone will be permitted on this lot. That's a lot of uses. If the developer intends to tell us that their project could include any of those uses, then the developer should also be obligated to tell us the impact of the entire range of uses allowed on the property. Where is that analysis—of all the impacts of all the uses that could potentially be allowed? If they are allowed to do anything that is permitted in a C2 zone, will the city require them to study the impact of each of those uses? If not, why? It seems like they are trying to sneak in additional uses that the neighborhood may object to.

If the project is allowed to build a fueling station and vehicle repair facility, then we should know what the air quality, safety, and traffic impacts would be on surrounding residents. So, what uses will the developer actually be permitted to have on the site?

Response to Comment No. 440-2

Based on comments received in response to the Draft EIR, the list of permitted uses was clarified to reflect the studio objective of the Project, including, among other things, removing the C2 zone text referenced in this comment (even though these uses are currently permitted); refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses—sound stage, production support, production office, general office, and retail—as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the EIR.

Comment Letter No. 441

Ziggy Rees
1324 N. Spaulding Ave.
Los Angeles, CA 90046-4010

Comment No. 441-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 441-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 443

Leah Reichman
326 Vista St.
Los Angeles, CA 90036-5739

Comment No. 443-1

I have been living in the Beverly Fairfax community for quite some time now, and I can tell you that there are obvious problems with the Television City plan as it stands right now.

Response to Comment No. 443-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 443-2 and 443-3.

Comment No. 443-2

For starters, parking in the nearby streets of the surrounding neighborhoods is going to be an issue. This is already a problem, and you are going to exacerbate it. The fact that this problem already exists is enough of a reason for this project to be reconsidered. Why hasn't that been more obvious to city planning? Was time spent by planning department staff in our neighborhoods and in the community to see what parking is like now? And then extrapolate the number of employees and visitors expected at the new space, along with their cars, onto those findings?

Beyond the existing problem been made much worse by this project, I feel that not everything was made clear to us. One question I want to be answered is what is an off-site parking agreement or covenant? Can you provide specific examples? Who agreed upon these? How many of them exist? What does the agreement for our area state when it comes to this project? And if the agreement has not been prepared yet, why not? How are we supposed to know how these parking problems are going to be addressed?

Similarly, what makes an agreement or covenant "satisfactory" to the Planning Director? Who is the Planning Director? What is their background? What metrics do you use to quality and fulfill the term "satisfactory." This seems very subjective to me.

I also think it would be fair for the community and the affected residents to have some input. When is there going to an [sic] opportunity for us to know about and provide input

into an agreement or covenant? This issue of parking is a fairly large and impactful issue that residents should know about.

Please explain how off-site parking is going to affect the safety of our neighborhoods? Are there going to be more cars on residential streets where our children play and run around? How many more cars do you think will be going through the side roads because of more traffic caused by the project? If the city does not know this yet, it should before this project goes any further.

Parking in the nearby streets of the surrounding neighborhoods is a problem that we already have to deal with, and I think it is unfair and insensitive to blatantly make the problem worse. Please answer the questions above. Thank you.

Response to Comment No. 443-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language referenced above was deleted from the Draft EIR.

Regarding neighborhood intrusion, refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 444

Amy Reiley
amy@lifeofreiley.com

Comment No. 444-1

Please find my submission of comments on the DEIR of TVC 2050. My comments are in the body of this email, below as well as attached as a pdf.

Please send a response acknowledging receipt of this submission.

Thank you for the opportunity to comment on the Draft Environmental Impact Report for the proposed Television City Project

I am a homeowner and mother living in the area. I have reviewed the EIR and have several concerns about the proposed project based on the findings of the Environmental Impact Report

Response to Comment No. 444-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 444-2 through 444-11.

Comment No. 444-2**Change of Zoning**

Section 3.4 discusses that a change of zoning would be necessary for the site to Regional Center. I am concerned, first of all, that the level of building density that would necessitate a zoning change is an indication in itself that the scope of this project is outside of a size this neighborhood can support. Areas [sic] of investigation in the EIR point to this assertion being a correct one.

Secondly, if it is so simple to change the zoning of a parcel as simply making a plan large enough that it cannot exist within the current zoning, what's to stop developers from requesting Regional Center designation on plots all over the neighborhood? Once the precedent is set with this project, is there really any viable reason to deny every other developer that request it? Yet, as I mentioned, the EIR points to multiple indicators that the area cannot support a single Regional Center.

Response to Comment No. 444-2

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. The proposed Regional Commercial land use designation would serve to create a cohesive Project Site subject to uniform land use regulations, while recognizing the unique studio land uses that have been operating on-site for many decades. Refer to Response to Comment No. 11-3 regarding the size of the Project.

Comment No. 444-3

- Conditional Use

It does not appear that there will be any conditional use applied to this project along with the up zoning to Regional Center. Whether or not a plan to up-zone the plot is granted, I cannot understand why there is no conditional use. What is to stop the developer from getting the project up-zoned then flipping it to a hotel and shopping retailer? The argument for expanding Television City is because Los Angeles has a lack of central television production facilities. It is absolutely essential that the specific use as a production facility be a condition of this expansion.

Response to Comment No. 444-3

The Project includes the creation of a specific plan, which is a land use ordinance enacted by the City Council. Citywide, specific plans and other overlays are commonly used to prescribe use and floor area limitations differing from standard LAMC provisions.

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation. As discussed therein, the Regional Commercial designation does not permit upzoning at the Project Site or result in a major change in the identity of the community. The Project could be requested and approved regardless of whether the land use designation is modified to “Regional Commercial” or the existing Community Commercial, Limited Commercial, and/or Neighborhood Commercial designations are retained. As discussed in Response to Comment No. 444-2, the proposed Regional Commercial land use designation would serve to create a cohesive Project Site subject to uniform land use regulations, while recognizing the unique studio land uses that have been operating on-site for many decades.

Television City has been a studio for over 70 years, and the proposed Specific Plan will ensure that the Project Site will continue to operate as a studio in the future. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6

regarding the five permitted studio uses and the studio purpose of the Project. The Project would not permit hotel uses or a shopping center as suggested by the commenter.

Comment No. 444-4

It is the final section of the EIR, XXI in which you can see clearly, immediately and without question how it is almost impossible to imagine the area can support a Regional Center designation. This section flags multiple environmental issues that could have significant impact on the wellbeing of local residents. I have concerns and questions as to how many of these issues will be tackled.

Response to Comment No. 444-4

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation, which was fully analyzed in the Draft EIR in accordance with CEQA.

It is unclear to which section of the Draft EIR this comment refers as the Draft EIR does not include a Section XXI. If the commenter is referring to Section XXI of the Initial Study included as Appendix A of the Draft EIR, the purpose of an Initial Study is to identify potentially significant impacts that require further evaluation in the Draft EIR. All of the potentially significant impacts identified in Section XXI of the Initial Study are thoroughly evaluated in the Draft EIR. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 444-5

Air Quality

According to the South Coast Air Quality Management District (AQMD), particulate emissions from both construction and operations may increase stationary and mobile emissions in the area to the point where AQMD cannot meet their Air Quality Emission Plan, which would be counter to federal and state clean air acts. The EIR goes on to note that the project has the potential to expose sensitive receptors to substantial pollution concentrations.

As a parent this concerns me and I want to know what will be done either to reduce emissions or to offset the emissions created by Television City to keep the area aligned with clean air acts. This project should not be approved without a clear plan of action to keep it within the limits of state and federal clean air acts.

Response to Comment No. 444-5

The commenter appears to refer to Table IV.A-9 in Section IV.A, Air Quality, of the Draft EIR, which indicates that without the application of mitigation, the Project would result in significant emissions of particulate pollutants. Table IV.A-11 indicates that, after the implementation of applicable Project mitigation measures, the Project would not exceed the SCAQMD thresholds or result in exposure of sensitive receptors to substantial pollutant concentrations. Refer to Response to Comment No. 26-E.1-21 for a discussion of the analysis of localized air quality impacts. Please refer to Response to Comment No. 26-E.1-2 for additional details on health impacts to nearby sensitive receptors.

Comment No. 444-6**Geology and Soils**

The EIR indicates that because of the location of the project and the intended deep excavation, this project has the potential to cause seismic ground shaking and even possible liquefaction. I want to know if a seismic study will be ordered before this excavation is approved. And if not, why would this be deemed unnecessary and how do you plan to mitigate potential seismic risk?

Response to Comment No. 444-6

Refer to Response to Comment No. 26-E.3-13 regarding seismic-related impacts.

Comment No. 444-7**Greenhouse Gas Emissions**

EIR findings state that this project will increase greenhouse gas emissions in the area. We live in a time when this factor cannot be ignored. Further investigation must be undertaken to ensure that this project meets—or better yet beats—regulations adopted for the reduction of greenhouse gases.

Response to Comment No. 444-7

The Draft EIR provides a thorough analysis of the Project's GHG impacts within Section IV.E, Greenhouse Gas Emissions, of the Draft EIR. As concluded therein, the Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing emissions of GHGs. With the implementation of the PDFs and compliance with applicable regulatory requirements, the Project's incremental increase in GHG emissions would not result in a significant impact on the environment. Therefore, the Project's impacts with regard to climate change would be less than

significant. Refer to Response to Comment No. 26-E.1-37 regarding the applicable thresholds of significance used to assess the Project's potential GHG impacts.

Comment No. 444-8

Public Services

As the mother of two young children, one of the areas of the EIR of greatest concern to me is the finding that this project could potentially put a huge strain on our fire and police resources. I want to know what further investigation is being done to ensure that the area will have sufficient fire and police resources to service the established community as well as this new Regional Center. And, if additional fire and police resources were necessary, how will this shortfall be addressed?

Response to Comment No. 444-8

With regard to the adequacy of LAFD fire protection services and infrastructure and LAPD police protection services to serve the Project, refer to Response to Comment Nos. 9-35, 16-5, 16-10, and 26-147. Also refer to Response to Comment No. 16-5 and pages IV.J.2-12 and IV.J.2-13 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR regarding the Project's security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Refer to Response to Comment No. 5-8 regarding the proposed Regional Commercial designation.

Comment No. 444-9

Transportation

The most obvious area of impact from this proposed development is the additional surge of traffic in an already congested area. Although the additional traffic caused by construction is a temporary issue, it will cause a significant impact on both pollution and noise, particularly since a scheduled truck route for excavation and fill take all vehicles directly past the campus of Hancock Park Elementary. The impact of construction traffic clearly needs further study and routes that don't take multiple trucks past an elementary school should be planned.

Response to Comment No. 444-9

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and

Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Section IV.I, Noise, of the Draft EIR for a discussion of construction noise. As discussed on pages IV.I-40 through IV.I-43 therein, noise impacts from construction trucks would be potentially significant. However, there are no feasible mitigation measures to reduce the temporary significant noise impacts associated with the off-site construction trucks. As such, noise impacts from off-site construction truck trips would be significant and unavoidable. It should be noted that this impact would be temporary and cease when construction is complete.

Refer to Section IV.A, Air Quality, of the Draft EIR for a discussion of construction air quality impacts. As discussed on pages IV.A-59 through IV.A-62, air quality impacts from construction trucks would be potentially significant. As presented in Table IV.A-8, with the implementation of Mitigation Measures AIR-MM-1 through AIR-MM-4, peak daily regional NO_x emissions would be reduced but would still exceed the SCAQMD regional threshold of 100 pounds per day. As such, Project construction would result in a significant Project-level and cumulative impact related to regional NO_x emissions, even with the incorporation of feasible mitigation measures. Although temporary, this impact would be significant and unavoidable. Refer to Response to Comment No. 426-4 regarding emissions near the school. As discussed therein and shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with incorporation of mitigation measures. The Project also includes a quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Refer to Response to Comment No. 26-E.1-2 for further discussion of the HRA.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Comment No. 444-10

Additionally the increase in size and significant increase in employees of Television City will represent an increase of vehicular traffic now and forever. The EIR investigation seems woefully incomplete when it comes to reflecting [sic] impact [sic] the existing neighborhood businesses and residential areas. Since the property is surrounded on three sides by residential neighborhoods, why is there no detailed study on cut through traffic? I want to see greater detail of how the increased traffic will impact the safety of our residential streets.

Response to Comment No. 444-10

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR). Please note that the commenter is not correct that the Project Site is surrounded on three sides by residential neighborhoods, as the Project Site is located in an urban commercial area.

Refer to Topical Response No. 12, Safety and Congestion regarding traffic safety.

Comment No. 444-11**Historic Preservation**

Lastly, it is wonderful that this project is attempting to save the historic buildings and preserve Los Angeles television history. However it is part of the agreement that the original buildings designated historic be preserved according to certain guidelines, according to section 3.3.4. It is my understanding, based on information sent out by the Los Angeles Conservancy, these guidelines have not been met by the Television City Specific Plan. If the historic site is supposed to be preserved, why isn't it being done correctly? Development of and around these historic properties should not be allowed without the support of the Los Angeles Conservancy.

Response to Comment No. 444-11

Refer to Sections A, Existing Evaluation and Designation of the Primary Studio Complex, B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding preservation of the Primary Studio Complex.

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy. Please note that the Los Angeles Conservancy supports the Project.

This comment references certain guidelines and section 3.3.4, but it is not clear what this is in reference to. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 444-12**Conclusions**

I am concerned that this project fails to consider the infrastructure of the neighborhood. It appears to fail on protecting our children's health or the health of the planet for that matter. It puts the area in danger of seismic activity and strains our already congested roadways. And although the owners promised that this Television City makeover would be a celebration of Los Angeles film and television history, they even failed on that count, didn't they?

Response to Comment No. 444-12

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 444-2 through 444-11, above, and 444-13, below.

Comment No. 444-13

In closing, I'm failing to understand why approvals for this project seem to be rushed through before the update of the Wilshire Community Plan. A project, as the owners tell it, of such incredible historic significance and such a monumental addition to Los Angeles film legacy, isn't it too important to rush? I would like to know why the approval of the Television City update cannot wait until we have an updated plan for the region and it can be welcomed as a cohesive part of the neighborhood.

Response to Comment No. 444-13

Refer to Topical Response No. 6, Wilshire Community Plan Update, regarding why development of the Project does not need to occur after the Wilshire Community Plan update is complete.

Comment Letter No. 445

Cole Resnick
540 N. Croft Ave.
Los Angeles, CA 90048-2545

Comment No. 445-1

According to the plans, construction on this project won't be done until 2043, which sounds like the title of a science fiction movie.

Response to Comment No. 445-1

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Comment No. 445-2

In the meantime, we will have to deal with 20 years of unbelievable traffic, endless parking headaches, diesel-belching construction trucks rumbling and idling in our community, thousands of random people on our streets, the release of methane gas from the excavation, loud music and noise from the studio's stages, and 6X the water use.

Response to Comment No. 445-2

Refer to Response to Comment Nos. 5-12 and 9-24 regarding the buildout timeline.

Air quality and noise analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively.

Police protection would continue to be provided by LAPD. Potential impacts associated with police protection were fully analyzed in Section IV.J.2, Public Services—Police Protection, of the Draft EIR, and were determined to be less than significant.

Section IV.F, Hazards and Hazardous Materials, of the Draft EIR fully analyzes impacts with respect to methane. As discussed therein, impacts would be less than significant through a combination of adherence to the City's Methane Code and implementation of Mitigation Measure HAZ-MM-2. Refer specifically to pages IV.F-43, IV.F-46 and IV.F-47, and IV.F-53 and IV.F-54 of the Draft EIR. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 with respect to this topic.

Water supply is analyzed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR. As discussed therein, LADWP would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Therefore, the Project's operational impacts on water supply would be less than significant.

Comment No. 445-3

And at the end of those 20 years, the outcome will be a massive studio with 14 stages which will totally change the feel of our neighborhood. Why is the City of LA pushing this unwanted project on us? Doesn't our opposition count?

Response to Comment No. 445-3

Refer to Response to Comment No. 9-24 regarding the buildout timeline. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 446

John Reuter
888 E. Walnut St.
Pasadena, CA 91101-1895

Comment No. 446-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelinos it supports will continue to thrive.

Response to Comment No. 446-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 447

Jane Rhodes
517 Vista St.
Los Angeles, CA 90036-5744

Comment No. 447-1

I am sure you have been getting plenty of questions about the proposed studio expansion. As a 22 year resident, I am increasingly concerned about the city's housing crisis, and I'm especially worried how this massive project will negatively impact our housing supply.

Response to Comment No. 447-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 447-2.

Comment No. 447-2

Last I heard, there is no residential development coming with this project, not a single unit of housing for anyone. However, this development will bring thousands construction workers and employees to the community. Why should we support a new commercial development that is going to take up a huge chunk of space and real estate if it doesn't have any new housing? Why isn't housing being included? And why isn't housing being required, given how many additional people this project would be bringing into the area? Can you please provide an alternative plan that includes housing? Where will all these workers and employees live when there is already a housing shortage in the area?

In addition to the issue of incredibly limited housing options, I'm worried how this project will affect housing prices. How is it beneficial to add more development to this community if housing is already very unaffordable? If you do provide an alternative plan with housing, can you please ensure that there are multiple affordable housing options? By adding additional development, you will raise the cost of living, rents, groceries, utilities, parking costs, etc. And the project won't even add a single home or residential unit to the housing supply. No thank you!

Have you studied how this project will affect the cost of living in the area? How will the project affect rental rates? How will the project affect home prices? Will residents be displaced from their home because they cannot afford to live in their own neighborhood? What about landlords who will evict their tenants in order to raise the rent?

Response to Comment No. 447-2

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, the provision of housing, and the consideration of economic and social effects under CEQA. This comment raises a number of non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment No. 447-3

I strongly hope you will pass my concerns along to the developer and ask why such a proposal does not include any kind of new housing, affordable or otherwise. I cannot support a project of this size if it does not increase the housing supply in our neighborhood.

Response to Comment No. 447-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 447-2.

Comment Letter No. 448

Thomas Rice
437 1/2 N. Spaulding Ave.
Los Angeles, CA 90036-2291

Comment No. 448-1

I am a resident of the area for 9 years. I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I continue to learn about the details (although not many have been provided to the public) about this development right in my back yard.

Response to Comment No. 448-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 448-2

I'm concerned about the walkability and safety, parking congestion, new traffic, and how long this development will go on and disrupt the neighborhood.

Response to Comment No. 448-2

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 16-72 and 26-E.4-3 regarding pedestrian safety and the Project's pedestrian-oriented design.

Under SB 743, the adequacy of a new development's parking supply and congestion are not CEQA considerations. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 448-3

We have so many questions as neighbors: How do you expect all these new employees to get to work? Where do they park? How am I, as a neighbor, supposed to navigate this new congestion on the streets? Do any of you all live this area? Are you riot concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Response to Comment No. 448-3

This comment is substantially similar to Comment No. 95-2. Refer to Response to Comment No. 95-2, above.

Comment No. 448-4

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Response to Comment No. 448-4

This comment is identical to Comment No. 95-3. Refer to Response to Comment No. 95-3, above.

Comment No. 448-5

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I pray and hope that you do the same with this development.

Response to Comment No. 448-5

This comment is identical to Comment No. 95-4. Refer to Response to Comment No. 95-4, above.

Comment Letter No. 449

Kate Richter
427 N. Alta Vista Blvd.
Los Angeles, CA 90036-2540

Comment No. 449-1

The developer is asking for a zone change based [sic] to make his development financially pencil out. The City Planning Department has included an objective regarding the developer getting a return on its investment. If I now what [sic] to get a change in zone and the community plan for my property, is the City going to change the rules for me so that I can make a reasonable rate of return on my investment? No matter how much I overpay for the property?? If the developer didn't factor in the existing development rules properly when making its investment, why does the neighborhood have to pay the price? What evidence does the City have regarding the developers financial investment to evaluate this issue?? It should be provided in the Draft EIR. How can we evaluate if the Developer is making a reasonable return?

Response to Comment No. 449-1

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 449-2

What financial information did the City have. Has the City retained a financial consultant to review this information from the TVC developer? Is this even a proper consideration for the City?? Has the City done this for other projects? What projects? If the City is using this kind of information to evaluate projects, what is the City's policy on what is a reasonable rate of return?? Please provide a copy of the policy?

Response to Comment No. 449-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 450

Comment Letter No. 451

Matt Ritchley
417 N. Gardner St.
Los Angeles, CA 90036-5754

Comment No. 451-1

I am a concerned resident of the Beverly Fairfax community. After learning more about the Television City project and its Draft Environmental Impact Report, I felt led to voice my opinions and concerns. I have listed several questions I have about the project, and I am hopeful that the city and the developer will take the time to read and thoroughly answer each of them.

Response to Comment No. 451-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 452-2 through 452-4.

Comment No. 451-2

Primarily, I am worried about the presence of hundreds of construction trucks in my neighborhood. The conceptual plan shows that tons of 18-wheeler trucks can be on the project site at any one time. The conceptual plan, however, fails to tell neighbors how many there will be. Will there be 15? 50? 100? Will they all be 18-wheelers, or will there be dump trucks as well? Where will they park? What hours will they be driving to and from the property? Will their parking spaces be visible from residential property lines? I am concerned about the eye-sore that this many trucks in my neighborhood would create, especially if this project takes 20 years to complete.

Response to Comment No. 451-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Section 5D beginning on page 179 of the Transportation Assessment (Appendix M.1 of the Draft EIR) details the number of trucks trips associated with the two busiest activity times of the construction process—excavation/foundation and building interior finishes. The heaviest truck movements occur during the excavation and foundation phase when the Transportation Assessment shows on page 181 that up to approximately 320 trucks per

day could be expected to enter the Project Site. These trucks would enter and leave the Project Site between 7 A.M. and 4 P.M., and this phase of the construction program would last approximately 8.5 months.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Entrances to the Project Site on both Fairfax Avenue and on Beverly Boulevard would be used for construction truck access to the Project Site.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and to Response to Comment Nos. 178-3, 183-1, and 231-4 regarding off-site staging. All haul truck staging locations would be provided on-site; accordingly, no haul trucks would be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

With respect to parking during construction, the Project includes a CTMP pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 to IV.K-37 of the Draft EIR), which would include a prohibition of construction worker or equipment parking off-site.

The Project Site would be secure during construction surrounded by the fence and landscaping present on the Project Site today. Therefore, it is likely that trucks and cars parked on the Project Site would not be visible from the residential neighborhoods.

In accordance with LAMC requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between 8:00 A.M. and 6:00 P.M. on Saturday or national holidays, or outside of these hours if a temporary noise variance is approved by the Los Angeles Board of Police Commissioners.

Lastly, the goal of the NTMP described in Topical Response No. 9, Neighborhood Traffic Management Plan, is to keep both construction and Project trips out of the neighborhoods near the Project Site.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 451-3

Furthermore, I am worried about the environmental impact of this project. LA already deals with smog and excess carbon emissions, so I'm worried that this project will severely exacerbate this problem. Have the environmental impacts of the trucks been fully analyzed? What did your analysis conclude about increased greenhouse gas emissions? Please cite specific studies. If studies have already been conducted, did they look at the

impact of 50 trucks vs. 100 trucks? What about 200 trucks? Until we know how many trucks will be on-site, having all the possibilities included in the study is essential.

Response to Comment No. 451-3

Refer to Response to Comment No. 231-3 for a detailed response regarding potential health risk impacts related to diesel trucks. Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding the number of construction trucks. Refer to Response to Comment No. 87-1 regarding emissions related to production trucks and Response to Comment No. 26-E.1-16 regarding the number of operational trucks.

Refer to Sections IV.A, Air Quality, and IV.E, Greenhouse Gas Emissions, and Appendix B of the Draft EIR, which analyze the air quality and GHG impacts associated with trucks.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risks from the Project, including risks associated with truck trips, would be below the applicable significance thresholds and impacts would be less than significant.

Comment No. 451-4

I am also worried about the traffic created by these trucks. In the conceptual plan, there doesn't seem to be a traffic-calming way for large trucks to make left hand turns onto the project site. Have proper analyses been done to evaluate what additional traffic these left turns would create? Has the city considered putting arrow signals on the traffic lights around the project site? Will a truck detour be created?

Response to Comment No. 451-4

The vast majority of the trucks would enter the Project Site through one of the three signalized entrances, which would all be equipped with green left-turn arrows. Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Comment No. 451-5

The concerns outlined above are shared by many Beverly Fairfax residents. I hope the city will take the time to answer my questions about the Television City project.

Response to Comment No. 451-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 451-2 through 451-4.

Comment Letter No. 452

David Roa
302 S. Orange Dr.
Los Angeles, CA 90036-3009

Comment No. 452-1

The EIR for the Television City proposed development has some holes, or at the least, hard-to- understand parts in it.

Response to Comment No. 452-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 452-2 through 452-6.

Comment No. 452-2

Most specifically, I would like to understand the Vehicle Miles Travelled portion(s).

How was the analysis of Vehicle Miles Travelled completed? The model is difficult to comprehend so please explain in more detail how this information was determined. What assumptions are made when doing that analysis? What if the assumptions for this area and this project are wrong? There should be specifics to show citizens how the model worked to provide context for the analysis and information presented in the EIR.

Response to Comment No. 452-2

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

The use of the VMT Calculator and the assumptions therein were approved by the City of Los Angeles Department of Transportation in the Assessment Letter that is presented in Appendix M.2 of the Draft EIR.

Refer to Response to Comment No. 209-7 for additional discussion of VMT.

Comment No. 452-3

The EIR appears to say that the average distance to a regional movie production facility with 1.5 million square feet of offices is 3.5 miles. How was this number reached? If people working in production must get to the studio, it does not seem possible that this 3.5-mile amount is correct. Studios such as Disney are in Burbank. Workers for these types of jobs often live in the San Fernando Valley. Does the developer of this project have good information about where people live who will work there? If so, where will that be? If the developer doesn't have good information about that, then how can your assumptions hold up?

Response to Comment No. 452-3

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

There is no recommendation in City or State guidance on VMT analysis to use empirical trip lengths when a model-based solution that combines trip thresholds and Project analysis is available. Critically, it is necessary in conducting VMT analysis that both the thresholds of significance and the Project-level VMT estimates are developed using the same data source in order to ensure an apples-to-apples comparison. Therefore, the VMT analysis presented in the Draft EIR is appropriate and accurate for Project VMT analysis.

Comment No. 452-4

Additionally, the number of people taking public transportation may have been used in the calculations and analysis. What are the statistics of people who work in offices and/or production using buses or other public transportation? What about people who work remotely now? My experience is that drivers in LA would be solo drivers. What research is available showing the percentage of people who might work at the site might actually use public transportation, ride share, or other less environmentally harmful methods?

Response to Comment No. 452-4

The Project is anticipated to attract 15 percent of its employees and less of its visitors via transit, bike, and walk modes. Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment Nos. 26-156 and 107-4 for a discussion of the potential effectiveness of transit and TDM.

With the Project's extensive TDM Program, including the shuttle bus between the Metro D (Purple) Line Wilshire/Fairfax Station and the Project Site, the Project is expected to exceed these estimates.

Comment No. 452-5

I would like details used to create the Vehicle Miles Travelled about all the others, not employees, who will also be making many trips to the site. For example, there will be many audience members attending tapings or events at the proposed facility. How were their Vehicle Miles Travelled included in the EIR? Or, if they were not, it should include this information. Where will those people live/be travelling from? How would this information be able to be gleaned?

Response to Comment No. 452-5

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 452-6

Finally, I am interested in the Vehicle Miles Travelled for the many construction vehicles and delivery trucks that will be clogging the neighborhood streets during the years of construction followed by the potentially limitless time of active use of this facility? How far will construction vehicles be traveling to bring materials to the site? And how far will they have to go carrying out the debris and dirt from excavation? How far will delivery trucks bringing production materials and supplying the needs of the thousands of office workers be driving to get to the site? Were these additional Vehicle Miles Travelled calculated for the EIR?

Response to Comment No. 452-6

Delivery truck trips to/from employment centers and construction truck trips are exempt for the calculation of work VMT per employee. The threshold for work VMT per employee of 7.6 for employment centers in this portion of the City of Los Angeles is based solely on employee work trips. Refer to Topical Response No. 8, Vehicle Miles Traveled.

Section 5D of the Transportation Assessment (Appendix M.1 of the Draft EIR) discusses the construction traffic analysis and cites the primary destination for the excavation haul routes as the Irwindale landfill. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Comment Letter No. 453

Beth Robbins
461 N. Harper Ave.
Los Angeles, CA 90048-2220

Comment No. 453-1

I'm writing to express my concern about the planned TV City expansion and how it will affect the neighboring residents of the development.

Response to Comment No. 453-1

This comment is identical to a portion of Comment No. 54-1. Nevertheless, this introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 453-2 through 453-6.

Comment No. 453-2

I think that there are still many questions about traffic impacts that have not been addressed in the plan or in the draft EIR.

This project also causes problems for people who would like to use these community amenities, like with their access and parking? Any analysis of the impacts of this development is incomplete without a traffic analysis on Grove Drive. Of course all that traffic will spill out onto neighboring roads, how could it not? How much neighborhood spill over is expected and how will it affect residents, and what is being proposed to deal with that?

Response to Comment No. 453-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access to and use of The Grove Drive.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 453-3

I am also concerned with how close the development will be to many of the apartments in the area. Truck traffic from construction and hauling soundstage equipment will be driving along residential streets, and some of these stages are being planned for right next to apartments.

Response to Comment No. 453-3

Residential uses near the Project Site have been taken into consideration in the Draft EIR. As discussed in Section IV.A, Air Quality, of the Draft EIR, localized air quality impacts associated with construction would be less than significant. Refer also to Response to Comment No. 26-E.1-2 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. In addition, as discussed in Section IV.I, Noise, of the Draft EIR, potential impacts associated with on-site construction activities at off-site sensitive receptors would be reduced to less-than-significant levels with the incorporation of mitigation measures, with the exception of the sensitive uses represented by receptor location R1 (e.g., the Broadcast Center Apartments). During construction, vibration impacts associated with human annoyance at receptor location R1 and along the haul routes would be significant. Vibration impacts associated with building damage would be less than significant.

As discussed in detail in Sections IV.A, Air Quality, and IV.I, Noise, of the Draft EIR, operation of the Project would not result in significant localized air quality or noise impacts. Construction trucks would not be allowed on residential streets. Trucks that move on local streets and haul trucks that move on streets other than the haul routes are subject to ticketing by the LAPD. A Construction Manager would be appointed by the Project and his/her phone number would be advertised on the Project website and communicated to the neighbors so that trucks on the local streets could be reported to the Construction Manager who in turn could call for targeted enforcement.

Project trucks during the operation of the completed Project would not need to use the residential streets in the vicinity of the Project Site and restrictions on these vehicles could be discussed as part of the NTMP.

Comment No. 453-4

What kind of noise and air pollution will be affecting the apartment residents and other residents? All expected risk of health problems for residents should be made clear—what does the data indicate?

Response to Comment No. 453-4

This comment is identical to the last two sentences of Comment No. 54-4. Refer to Response to Comment No. 54-4, above.

Comment No. 453-5

What about the loss of property value for the actual apartment owners? It's unclear that an economic study was done about impacts to property values; where is that study? Apartment owner and tenants should know what to expect because that information is not being made available or very easily.

Response to Comment No. 453-5

Property values are not a CEQA issue. Under CEQA, “an economic or social change by itself shall not be considered a significant effect on the environment” (CEQA Guidelines Section 15131). Substantial evidence must be provided to demonstrate a reasonably foreseeable physical impact on the environment from the economic or social change, and no such evidence is provided in the comment. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 453-6

Trucks could also be a general traffic nuisance unless there are dedicated turn lanes on this project, and even putting in turn lanes can be extremely disruptive especially if not at a light but in the middle of the street. What is planned for turn lanes, if anything? Where would they be located? I do not see any plans to add these lanes for the massive trucks that will be needed for this project.

Response to Comment No. 453-6

Refer to Response to Comment No. 83-1 regarding turn lanes.

Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Comment No. 453-7

Please make sure that any deal is one that benefits the people already living near TV City property.

Response to Comment No. 453-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 453-2 through 453-6.

Comment Letter No. 454

Michael Robertson
167 S. Vista St.
Los Angeles, CA 90036-2707

Comment No. 454-1

I hope this letter finds you well. I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I'm devastated as I continue to learn about the details (although not many have been provided to the public) about this development right in my back yard.

I have lived in LA for 15 years and developments like this, and its implications, I can't fathom how that is possible to remain in my neighborhood. More than that, I can't fathom how city leaders, like you all, would allow for something like this.

Response to Comment No. 454-1

This comment is substantially similar to Comment No. 125-1. Nevertheless, this introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 454-2 through 454-4.

Comment No. 454-2

We have so many questions as neighbors: How do you expect all these new employees to get to work?

Response to Comment No. 454-2

This comment is identical to a portion of Comment No. 95-2. Please refer to Response to Comment No. 95-2, above.

Comment No. 454-3

Where do they park?

Response to Comment No. 454-3

This comment is identical to a portion of Comment No. 95-2. Please refer to Response to Comment No. 95-2, above.

Comment No. 454-4

How am I, as a neighbor, supposed to navigate this new congestion on the streets?

Response to Comment No. 454-4

This comment is identical to a portion of Comment No. 95-2. Please refer to Response to Comment No. 95-2, above.

Comment No. 454-5

Do any of you all live this area? Are you not concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I pray and hope that you do the same with this development. We need more leaders fighting for a better future, not just fighting for a big check.

Response to Comment No. 454-5

The first paragraph of this comment is identical to a portion of Comment No. 95-2. The second and third paragraphs of this comment are identical to Comment Nos. 95-3 and 95-4, respectively. Refer to Response to Comment Nos. 95-2, 95-3, and 95-4, above. This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 455

Rena Ronson
418 N. Kilkea Dr.
Los Angeles, CA 90048-2229

Comment No. 455-1

As a resident of a neighborhood near Television City, I feel that the large project to expand it will be problematic. The environmental review excludes some important information that we as citizens deserve to know since its building will impact our quality of life, not to mention safety.

Response to Comment No. 455-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 455-2 through 455-5.

Comment No. 455-2

Both during construction and when the supposed studios are active, there will be many, many additional vehicles, workers, and audience members in this area. What does the increase in traffic mean in terms of parking? I understand that there will be 5,300 parking spaces on site but also some parking offsite. What does offsite parking mean for our streets in the neighborhood?

Response to Comment No. 455-2

This comment is identical to Comment No. 155-2. Refer to Response to Comment No. 155-2, above.

Comment No. 455-3

What about pedestrian traffic? This is a huge walking community. What about the rights and safety of all the different pedestrians when the traffic increases significantly, with more drivers in the area trying to get through backed up intersections? It is already hard to cross at crosswalks now, to cross from one side of the street to another when it isn't at an intersection, but this will make traffic issues practically impossible. Has the city gone out to each intersection to measure traffic? And to measure traffic at different times of the day, and different days of the week? Have you done pedestrian counts along all the major

streets around the project area? What have those studies concluded? Or were estimates and actuarial data used, not real numbers? If not, why not?

Response to Comment No. 455-3

This comment is identical to Comment No. 155-3. Refer to Response to Comment No. 155-3, above.

Comment No. 455-4

The plan for construction includes basecamps that will use power generators. Do these run on diesel fuel? This huge polluter of air and cause of increased noise is unacceptable. This project, if approved, should run completely on electric power, both during construction and when the expanded facility is in regular use. New buildings are supposed to run on electric, so this should qualify. What hours will power generators be used, 24/7? What if the generators break down?

Another source of air pollution will be the many trucks going to and coming from the site for years. It appears that there is not a defined truck route to the site. Please confirm that the trucks carrying construction debris will not be idling and lining up along our residential streets. I can't imagine the stress the additional noise, odors, and activity would cause everyone in this neighborhood. Does the Draft EIR analyze these impacts on the community? What were the conclusions of that analysis? And, does the whole community know what may happen if this project moves forward?

Response to Comment No. 455-4

This comment is identical to Comment No. 155-4. Refer to Response to Comment No. 155-4, above.

Comment No. 455-5

People need to be kept informed in multiple ways so they can express their concerns before this project moves forward.

Response to Comment No. 455-5

This comment is identical to Comment No. 155-5. Refer to Response to Comment No. 155-5, above.

Comment Letter No. 456

Dan Rosenfeld
danrosenfeld.la@gmail.com

Comment No. 456-1

I am writing in support of the TVC 2050 Studio Plan for two fundamental reasons:

1. Support for the filmed entertainment industry in Los Angeles

Second only to our Port of Los Angeles, the filmed entertainment industry is the economic backbone of our community. A strong economy enables all of our other social goals, including education, culture, sustainability and prosperity. Unlike the Port, however, film production can leave Los Angeles. Therefore it is essential—among our top economic priorities—to maintain our high market share in this high value-added, prestigious and creative business sector.

2. Support for creative “adaptive reuse”

The proponent’s plans for TVC 2050 show considerable sensitivity to the classic architectural design of the campus, while tastefully updating and expanding it for contemporary use. This is “adaptive reuse” at its best, consistent with our need to carefully densify and modernize our legacy communities.

We urge support for this application, [sic]

Response to Comment No. 456-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 457

Rich Rossi
406 S. Citrus Ave.
Los Angeles, CA 90036-3537

Comment No. 457-1

As a 25 year resident I urge you to oppose the new studio project that is could dramatically change and wreck my neighborhood.

Response to Comment No. 457-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 457-2

There are many reasons why I am against this project, but the main issue I see is the lack of transparency when it comes to the DEIR' s "trip generation adjustments." It seems that only general and not studio-specific steps were taken, and that is going to be detrimental to anyone's acceptance of this project. If people didn't measure specific impacts on this community, how can we actually know if this is going to be a good thing? Do they plan to measure the specific impact to this community?

According to the DEIR, trip generation for this was based on empirical studies of trip generation at different studios in LA because the Trip General Manual does not provide data for studio-related uses. LA is a big and diverse city, with different neighborhoods and communities in it. One study can't be copied and pasted into another. Where all the studios that were used for this analysis located within LA? What kinds of communities were these studios in? No studios are the same themselves, so did these studios have the same number of employees and similar distances from them to travel?

If there are answers to these questions, how come they weren't added to the DEIR? We as community members have a right to know what information is being used to make decisions by the city that will directly impact us. If adjustments were made on these studies, that's a big deal! We don't want to be promised one thing and then given another.

Response to Comment No. 457-2

Refer to Topical Response No. 10, Trip Generation, for a more detailed description of the derivation of the trip generation estimates for the Project.

The trip generation rates used in the Transportation Assessment (Appendix M.1 of the Draft EIR) are based on trip rates from other Los Angeles area studio complexes. One of the most detailed studies of studio trip generation rates in Los Angeles was conducted for the Universal Studios expansion project. In that study, the trip generation rates of the various elements of the studio campus (sound stages, production support, production offices, and general offices) were developed and validated against numerous ground counts at the Universal Studios entrances. Similar ground counts were conducted at Paramount Pictures Studios and the City of Los Angeles has been monitoring Fox Studios in Century City for years. These data collection efforts have yielded a rich history of trip rates to be used in projecting traffic levels from future studio campuses.

The comment is correct in that studios have varying characteristics when it comes to trip generation because each studio has a unique mix of studio components. The trip generation for the Project used the history of trip generation studies from the individual studio land use components and applied those individual trip rates to the land use mix proposed for the Project. The trip generation study went one step further and completed a detailed count of the driveways at the existing studio and compared those counts to the trip rates used in the Draft EIR. The rates were validated as applicable trip rates for the Project.

Comment No. 457-3

In order to hold this new studio accountable, we need to know what kind of information is being given to officials. Please answer these questions and fully flush out this incomplete DEIR.

Response to Comment No. 457-3

The EIR released to the public is the same document reviewed by City decision-makers. This comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 458

Esther Roth
609 S. Citrus Ave.
Los Angeles, CA 90036-3534

Comment No. 458-1

As a resident of the city, I do not feel as if the draft EIR gives the community enough insight to the Television City project. While we were provided with a conceptual plan, it seems as if there is no actual structure or concrete vision. I don't see how you can give approval to a project of this size if there is no actual plan.

Response to Comment No. 458-1

Refer to Response to Comment No. 5-3. The Project Description meets the requirements of CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description. Furthermore, the Project has not been approved.

Comment No. 458-2

There is a lot of mention of a specific plan that governs the regulations of the project, but is the specific plan in the draft EIR or is it a separate document that has not been provided? When will it be made available? There appears to be inconsistencies with the land use framework discussed in the DEIR and the conceptual plan, such as the building height zones. Please explain. Is the developer bound by the conceptual plan? Is the developer allowed to make changes to the conceptual plan? If so, then what good is any input given by the community? How were analyses and assessments done for a project that is conceptual in nature?

Response to Comment No. 458-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan. As discussed therein, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and

approval, as well as potential CEQA compliance review. As also discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR. Please note that the proposed Specific Plan incorporates the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR.

Comment No. 458-3

In terms of actual project planning, is it known where the buildings will go? How tall will they be? Where will the 14 sound stages go? Is it true that building locations can be moved and when will we know for certain where they will go? What uses have been decided upon and what uses could still be added?

Response to Comment No. 458-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan, the Conceptual Site Plan that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan. As discussed therein, the massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, CPC-2021-4089-AD-GPA-ZC-SN-SP. Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the permitted on-site land uses set forth in the proposed Specific Plan. As discussed in Topical Response No. 1 and Response to Comment Nos. 9-16, 11-3, and 26-7, the Project includes height zone, stepback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. These requirements are not currently required under the existing zoning code. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, stepbacks, and frontage areas associated with the Project.

Comment No. 458-4

The draft EIR has stated that the developer's return on investment is a project objective. Why is that? Why is this developer allowed to do whatever he wants with the project site. The city and community deserve to see the developer's proforma. Since the developer has

included as an objective, the financial information must be made available. The EIR even rejects alternatives because the developer will not make as much profit. Why is that consideration allowed in ruling out a project alternative? It is alarming that the city cares so much about how much money the developer makes off of this project. Is there at least something valuable in return for the city? We need to know what the financials underlying objectives are.

Response to Comment No. 458-4

This comment is substantively similar to Comment No. 133-3. Refer to Response to Comment No. 133-3 regarding the Project's economic objective.

Comment No. 458-5

The DEIR simply fails to provide enough information for the Television City project. There is no way for us to fully understand the impacts that will result if we don't know the location of the buildings, the intended building uses, square footage and the range of potential impacts. Please provide us with a detailed analysis and recirculate is for the city to review and comment.

Response to Comment No. 458-5

As demonstrated in Response to Comment Nos. 458-1 through 458-4 above, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 459

Alex Rotsnansky
aexerotsnansky47@gmail.com

Comment No. 459-1

I have been reading about the proposed TVC 2050 project and have a couple questions about how this project will impact the culture of our neighborhood. We live in an area with many historic and cultural buildings, sites and homes. What will the impacts of this project on all of the historic places in our community? How can the community view the results of any study that spells out those impacts? What is the developer required to do to protect historic places and within what distance all around the project site? What is being proposed to continue to protect those important places?

Response to Comment No. 459-1

The Draft EIR and all of its appendices have been available for public review on the Department of City Planning's website since July 14, 2022. Potential impacts to historic resources are fully analyzed in Section IV.B, Cultural Resources, of the Draft EIR. As discussed therein, impacts would be less than significant.

Comment No. 459-2

The cultural historic monument designation of the CBS building was based on certain criteria, right? So what were those criteria? What impact will the planned building have and could the designation be jeopardized? Is the designation be reevaluated since they're going to change the complex and buildings so much? There are buildings on the property from the 1960s and 1970s. Why wouldn't they be considered part of the historic fabric?

Response to Comment No. 459-2

Potential impacts to historical resources from the proposed Project were analyzed in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), and it was concluded that impacts to historical resources would be less than significant. The Draft EIR is available online on the Department of City Planning's website.

As discussed in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval,

including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. The Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website for informational purposes prior to the release of this Final EIR. Please note that this draft is not final and has not been approved by City decision-makers. As discussed in Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, any substantial alteration to a designated HCM would require OHR review and compliance with the Rehabilitation Standards pursuant to Section 22.171.14 of the Cultural Heritage Ordinance.

Comment No. 459-3

The cultural historic monument designation of the CBS building was based on certain criteria, right? So what were those criteria? What impact will the planned building have and could the designation be jeopardized? Is the designation be reevaluated since they're going to change the complex and buildings so much? There are buildings on the property from the 1960s and 1970s. Why wouldn't they be considered part of the historic fabric?

Response to Comment No. 459-3

The criteria for designating an HCM are discussed on pages IV.B-13 to IV.B-14 of Section IV.B, Cultural Resources, of the Draft EIR. As stated therein, the Cultural Heritage Ordinance (Sections 22.171 et seq. of the Los Angeles Administrative Code) established the criteria for designating an HCM. The Cultural Heritage Ordinance states that an HCM designation is reserved for those resources that have a special aesthetic, architectural, or engineering interest or value of a historic nature. A historical or cultural monument is any site, building, or structure of particular historical or cultural significance to the City of Los Angeles. A proposed resource may be eligible for designation if it meets at least one of the following criteria:

1. The proposed HCM is identified with important events of national, state, or local history or exemplifies significant contributions to the broad cultural, economic, or social history of the nation, state, city, or community is reflected or exemplified; or
2. The proposed HCM is associated with the lives of with historic personages important to national, state, city, or local history; or

3. The proposed HCM embodies the distinct characteristics of style, type, period, or method of construction, or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.¹⁶¹

As discussed in the HCM Findings (which are included in Appendix C of the Historic Report [Appendix C.1 of the Draft EIR]), CBS Television City met each of the HCM designation criteria.

The HCM designation, which was adopted by the Los Angeles City Council, would not be jeopardized or reevaluated. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-41 regarding the HCM designation, the period of significance, and why the 1969 Mill Addition and 1976 Support Building are not considered historical resources.

Comment No. 459-4

I read about a settlement between the LA conservancy and the developer. What is in this agreement? Are there limitations from this settlement? Why hasn't the settlement agreement been provided to the public? The LA conservancy doesn't speak for me and my concerns for historical preservation.

Response to Comment No. 459-4

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

¹⁶¹ City of Los Angeles, Los Angeles Administrative Code, Section 22.171.7.

Comment Letter No. 460

Sabrina Rudolph
322 N. Harper Ave.
Los Angeles, CA 90048-2219

Comment No. 460-1

Are studios important employers here? Sure. We all know this is a vital industry for Los Angeles. However, [sic] I am concerned about how my area will take on all of the consequences of what is being proposed to expand the studio facilities at Television City because this is a major project, and one that does not fit in our neighborhood.

Response to Comment No. 460-1

This comment is identical to Comment No. 355-1, above; nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 460-2

First, the studio expansion will bring thousands of new employees driving thousands of cars. These workers won't all be from this area, and so my biggest question is, where will they all park? It seems like the studio's parking is already maxed out, and the EIR says that more than 5,000 new parking spaces are required. Where is that additional parking going to go? Is it going to spill into the neighborhood? And if they build these large parking structures, how will anyone get out of them during rush hour?

Response to Comment No. 460-2

This comment is identical to Comment No. 355-2. Refer to Response to Comment No. 355-2, above.

Comment No. 460-3

And what happens if there is an emergency during that time? How will emergency response vehicles be able to get to Cedars Sinai in an emergency? There is gridlock now that can keep an EMT vehicle stuck, not being able to get through bottlenecks in traffic. The application seems to minimize the problem so what assumptions were used in studying this issue?

Response to Comment No. 460-3

This comment is identical to Comment No. 355-3. Refer to Response to Comment No. 355-3, above.

Comment No. 460-4

The studios are in the business of promoting themselves and the movies and TV shows they make. What is the plan for billboards and advertising signage in the area? Will the planned signage be distracting? Will it block views? How large? We already have a lot signs in the area, and to me, it overly commercializes the area and cheapens the place where we live. Will there be a limit to the kinds, size and amount of signage to make sure it isn't splattered everywhere? It's Hollywood. They are in the business of "big, big and bigger!" How do we keep the signs from doing the same? Are there regulations to stop these billboards being lit up at night? Will video boards be allowed? Let's be real. These types of billboards are a blight on the community and use a huge amount of energy.

Response to Comment No. 460-4

With the exception of the last sentence, this comment is identical to Comment No. 408-4. Refer to Response to Comment No. 408-4, above.

The last sentence of this comment is identical to Comment No. 408-5. Refer to Response to Comment No. 408-5, above.

Comment No. 460-5

Finally, what is the studio doing to let people work from home and limit traffic and congestion? Zoom meetings work, and remote working should be factored into new large-scale employers coming into the area. Where is the study that looks at how many of the new employees can do some of those expected jobs remotely? How many staff could be impacted? People can collaborate over vast distances effectively, and don't need to commute across town to sit in an office and type on a computer.

What is the smallest footprint possible for the objectives of the development? Sure they need sound stages to make big action movies, loud ones at that, but do they need thousands of square feet of office space? Did anyone look at a different set of options that maybe only included the production facilities and not all the offices? What offices are actually going to be used and for what purposes?

Response to Comment No. 460-5

The first paragraph of this comment is identical to Comment No. 408-6. Refer to Response to Comment No. 408-6, above.

Refer to Section V, Alternatives, of the Draft EIR, for an analysis of alternatives to the Project, which includes a reduced density alternative (i.e., Alternative 3). Refer also to Topical Response No. 16, Project Alternatives Analysis, for a discussion of alternatives suggested during public comment. As discussed therein, while an EIR must describe a range of reasonable alternatives that avoid or reduce a project's significant impacts, it "need not consider every conceivable alternative to a project." (CEQA Guidelines Section 15126.6(a).) CEQA establishes no categorical legal imperative as to the scope of the alternatives to be analyzed in the EIR.

The remainder of this comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 460-6

This all seems like too much for my community to take in, especially since there have to be other viable options. Please listen to the community and take another look at whether this project is really necessary.

Response to Comment No. 460-6

This comment is identical to Comment No. 355-5. Refer to Response to Comment No. 355-5, above. Nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 461

Jane Ruhm
454 S. Mansfield Ave.
Los Angeles, CA 90036-3516

Comment No. 461-1

I live in Beverly Fairfax. I am writing to you today with a few questions regarding the Television City Project:

Response to Comment No. 461-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 461-2 through 461-5.

Comment No. 461-2

- Who can I get in contact with to receive the specific plan mentioned in the project's draft Environmental Impact Report? I would like the specific plan sent to me. I am confused about what exactly is being built, and I think the specific plan would help. Why would the specific plan mentioned not already be included in the draft Environmental Impact Report?

Response to Comment No. 461-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. As also discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment No. 461-3

- Where will the buildings in the height map be located? It's not clear how many of those buildings are being planned, please clarify? I'm concerned about 15–20

story buildings being so close to homes in the neighborhood. What are the risks while those tall buildings are being constructed? What will they be used for?

Response to Comment No. 461-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-16, 11-3, and 26-7 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, and the regulatory process under the proposed Specific Plan. As discussed therein, the Project includes height zone, setback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. These requirements are not currently required under the existing zoning code. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, setbacks, and frontage areas associated with the Project. Height Zone D, located in the central and southern portion of the Project Site, is the only height zone that allows a maximum height of 225 feet, and this maximum height is permitted at up to 40 percent of the Height Zone D area. The remaining height zones are more restrictive. Also note that the Draft EIR accounts for the building heights set forth in Figure II-5, Height Zone Map, of the Draft EIR.

Comment No. 461-4

- Once the building locations are finalized, will I receive an additional risk analysis if my home is nearby the buildings? Are there safeguards for the neighborhood homes and apartments?

Response to Comment No. 461-4

The potential for impacts to nearby buildings and uses is analyzed throughout Section IV, Environmental Impact Analysis, of the Draft EIR. Thus, an additional risk analysis is not required. With respect to building placement, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Comment No. 461-5

- Are there certain kinds of buildings or uses that would not be allowed as part of the development? For example, will any of the space be allowed to be used for some kind of cannabis business? What happens if they want to start using some of the space for a use that has not been analyzed or may not be compatible with the neighborhood?

Response to Comment No. 461-5

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 regarding the five permitted studio uses. As discussed in these

responses, based on comments received in response to the Draft EIR, the permitted uses were clarified to reflect the studio objective of the Project; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. A cannabis business would not be permitted.

Comment No. 461-6

Ultimately, I need these questions answered before I can fully form my opinion on the project. As it stands now, I don't support this project. The City and the developer have both failed to effectively communicate with the community, and that makes me feel very uneasy about the project's constructions and operations.

Response to Comment No. 461-6

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

The remainder of this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 462

Hayley Ruszecki
8250 W. Fourth St.
Los Angeles, CA 90048-4402

Comment No. 462-1

I'm writing about this new plan for the Television City studios.

Response to Comment No. 462-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 462-2

This new project should definitely not be allowed, and I will be particularly upset if it goes through, mainly because the whole thing has been sneaky and suspicious and the everyday common person who lives in the area has not been brought into the discussion at all. This makes me question the integrity of the people developing this project and even more sure this is something they are trying to get approved without most people ever knowing. Probably because they know we will not be happy with this change!

Response to Comment No. 462-2

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 462-3

From what I'm reading, this is going to be such a huge project that is very complicated. The documents pertaining to the changes are extremely long and very technical and detailed. No non-technical person like myself could even begin to understand the complexities of this. It would only make sense to me and the people in the neighborhood that the city would have a public meeting where we could learn what exactly this plan is and what they intend to happen. We should be able to have an open conversation and ask questions to understand the details, but nothing like this has been done at all. Once again, this just seems like it is because they are hiding something. No project should go through where the local residents are kept in the dark. What about transparency?? Why have there been so few opportunities for public input?

Response to Comment No. 462-3

This comment is similar to Comment No. 330-2. Refer to Response to Comment No. 330-2, above.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing, the extended public comment period, and future public hearings.

Comment No. 462-4

I know there are a few requirements for local outreach, but outside of that, I haven't seen or heard from anyone educating us on what this new development will be. No community meetings have been held. If the project applicant was truly concerned with being a good addition to the community and thought they had something beneficial to offer to the area, they would have a genuine interest in hearing feedback from residents in the surrounding neighborhoods. They would have no problem addressing our concerns because they would be able to do so easily, but they obviously do not have any interest in that. This is going to impact me! I should have people willing to listen to me as a stakeholder!

Response to Comment No. 462-4

Refer to Response to Comment Nos. 28-13 and 32-3 regarding the outreach conducted for the Project.

Comment No. 462-5

All in all, we need more information. And if we cannot have a lot more information and a public dialogue, then this new plan should in no way move forward.

Response to Comment No. 462-5

Refer to Response to Comment Nos. 28-13 and 32-3 regarding public outreach, noticing, the extended public comment period, and future public hearings.

Comment No. 462-6

Thank you for your attention to this matter.

Response to Comment No. 462-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 463

Moshe Ruttner
364 N. Formosa Ave.
Los Angeles, CA 90036-2527

Comment No. 463-1

I am a concerned resident of Beverly Fairfax. I would like to share my thoughts and concerns on the Television City project.

Response to Comment No. 463-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 463-3 through 463-5.

Comment No. 463-2

Specifically, I will outline my thoughts on how this project will hurt the chance for more affordable housing in my neighborhood.

Response to Comment No. 463-2

Refer to Response to Comment Nos. 463-3 through 463-5 below for a discussion of affordable housing.

Comment No. 463-3

It's no secret that LA lacks affordable housing. If the project developer says the project benefits the community, why doesn't it include housing—namely affordable housing? Why isn't the developer required to include affordable housing? Or housing of any kind?

Response to Comment No. 463-3

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Comment No. 463-4

What is the rationale for building 1.4 million square feet that includes space for offices, especially when so many people plan to permanently work from home? What is the plan if

this office space sits empty? Where is the data or information that supports the need for this much office space? If that space isn't used for offices, will it be used for something else? For what other uses? The community should know in advance what else the buildings could be used for, if not for what is being proposed.

Where are the people who work in those offices going to live? Do you have a study that shows what the estimated number of employees is that will be commuting from other parts of LA and don't live nearby? Has a housing alternative been considered? Providing workforce housing could help with the insane housing costs and reduce how many miles are being driven, which are two of LA's biggest problems.

Response to Comment No. 463-4

Television City has been an operating studio within the Project Site since 1952 and will continue to operate as a studio upon completion of the Project. Specifically, as set forth on page II-10 of Section II, Project Description, of the Draft EIR, the underlying purpose of the Project is to maintain Television City as a studio use and to modernize and enhance production facilities to meet both the existing unmet and anticipated future demands of the entertainment industry, keep production activities and jobs in Los Angeles, upgrade utility and technology infrastructure, and create a cohesive studio lot. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. See also Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan.

Refer to Topical Response No. 8, Vehicle Miles Traveled, for a discussion of the VMT by employees traveling to and from the Project Site.

The Draft EIR evaluated a residential project alternative; refer to pages V-91 to V-126 in Section V, Alternatives, of the Draft EIR. Given the mixed-use nature of this alternative, Alternative 4 would not meet the underlying purpose of the Project, which is to maintain Television City as a studio use and to modernize and enhance production facilities within the Project Site. Alternative 4 would be less effective than the Project in meeting this purpose as a result of the reduced amount of studio-related uses.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 463-5

By going through with this project, the City of LA is demonstrating that it cares more about already well-off developers than it does about its ordinary taxpayer. Can you please be more specific about what the City means when it says its objective is to make the developer money?

Response to Comment No. 463-5

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 463-6

Ultimately, I don't want to live in a city that's only pay-to-play. I hope the City and the developer can find a way to make this project work for everyday people too.

Response to Comment No. 463-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 464

Rosanne Sachson
P.O. Box 5864
Beverly Hills, CA 90209-5864

Comment No. 464-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 464-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 465

Carole Sackley
6647 Drexel Ave.
Los Angeles, CA 90048-4208

Comment No. 465-1

As someone who lives and works in the Beverly Fairfax area, I am deeply concerned about the proposed expansion of the CBS studio lot.

Response to Comment No. 465-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 465-2 through 465-6.

Comment No. 465-2

There has been very little community involvement, and I think a lot of people in our neighborhood would want to know about this huge expansion.

Response to Comment No. 465-2

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 465-3

There have been no details given about the Specific Plan and I am worried that our community does not understand the full impacts of this project.

Response to Comment No. 465-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-12, and 9-15 with regard to the Project Description and proposed Specific Plan, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, how neither CEQA nor City policy requires a proposed specific plan ordinance to be included in an EIR, and the regulatory process under the proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the

environmental impacts of the Project. In addition, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment No. 465-4

I am most concerned about traffic and the lack of benefits it will bring to our neighborhood. We simply don't need any more traffic. How will this impact traffic during rush hour? I already sit in traffic for hours every day.

Response to Comment No. 465-4

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 465-5

How long will construction take? The DEIR says that the project could be built in one phase over 32 months, but it could extend until 2043? That's over 20 years of construction in our neighborhood.

Response to Comment No. 465-5

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 465-6

I don't want to live in a neighborhood that will be consumed by traffic Monday through Friday from 7AM until 9PM and all day on Saturday for the next 20 years. That is unacceptable. This is not even limited to off peak hours. This would include during rush hour every single day. Not to mention all the noise from construction. If the project takes the full 20 years, doesn't that mean we are subject to construction noise for the next two decades?

Response to Comment No. 465-6

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and

Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Refer to Response to Comment No. 26-138 regarding construction noise.

Comment No. 465-7

Please consider rejecting this project.

We have enough development already here in LA. We need more housing, not more offices.

And we definitely don't need more traffic or 20+ years of construction.

Response to Comment No. 465-7

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No 9-24 regarding the buildout timeline.

Comment Letter No. 466

Jan Sacks
8371 W. Fourth St.
Los Angeles, CA 90048-4202

Comment No. 466-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 466-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 466-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 466-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 466-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 466-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 466-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 466-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 466-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 466-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 466-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 466-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 466-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 466-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 467

Shara Sahota
329 N. Gardener St.
Los Angeles, CA 90036-5706

Comment No. 467-1

Air pollution in Los Angeles is already notorious, and this project will make it far worse for my community I moved into just last year. Has the air quality assessment considered the compound impacts of all of these pollutants? What about water pollution? What about the naturally-occurring gases that will be released?

Response to Comment No. 467-1

Please refer to Sections IV.A, Air Quality, IV.E, Greenhouse Gas Emissions, IV.I, Noise, and IV.K, Transportation, of the Draft EIR for an analysis of the Project's potential impacts, PDFs, and mitigation measures applicable to these environmental topics.

Table IV.A-1 (Ambient Air Quality Standards) on page IV.A-2 of the Draft EIR acknowledges that the Air Basin is non-attainment for ozone. Section 3.d in Section IV.A, Air Quality, of the Draft EIR analyzed localized operational air quality impacts resulting from Project emissions consistent with SCAQMD Localized Significance Threshold (LST) guidelines and considers NO_x, CO, PM₁₀ and PM_{2.5}. SCAQMD's LST guidelines do not provide significance thresholds for "compound impacts of all these pollutants" and no such analysis is applicable to the Project. As shown in Table IV.A-10 of the Draft EIR, Project localized operational emissions would not exceed SCAQMD significance thresholds, resulting in a less-than-significant impact. Thus, no sensitive receptors would be impacted by increased air emissions due to the operation of the Project. In response to SCAQMD comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, 16-64, 16-85, and 26-78 regarding the Draft EIR's discussion of soil and groundwater contamination, including, among other things, the extent and source of contamination, under existing conditions and the proposed Project. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane and its mitigation.

Comment No. 467-2

I'm also very concerned about traffic, which is already a huge problem in Los Angeles. Having thousands of trucks and cars coming and going into our community will create even more traffic congestion. And it doesn't seem as though the parking will be remotely sufficient, considering the number of people who will driving into the area every single day. It's already hard to find parking in our neighborhood.

Response to Comment No. 467-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment Letter No. 468

Andrew Salazar
andrew@technicolorprinting.com

Comment No. 468-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Comment Letter No. 469

Dennis Salem
458 N. Curson Ave.
Los Angeles, CA 90036-2325

Comment No. 469-1

I am writing to voice my strong opposition to the proposed CBS building development in the Beverly Fairfax area. As a 13 year resident, I feel I speak for most of the residents who feel that this project will be hazardous, disruptive, and overall, a bad deal for neighbors and members of the community.

Response to Comment No. 469-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 469-2 through 469-4.

Comment No. 469-2

We have seen every time there is development of this magnitude, promises are made but are never kept. The applicant mentions many possible enhancements that could be made, but where are the specifics as to what the applicant has committed to doing? Please detail those improvements and enhancements. Will they be made just to the site? Or are any being promised in the actual surrounding neighborhood? What are those? When will they be made? What is the schedule the community can expect to see those done?

Response to Comment No. 469-2

This comment is identical to Comment No. 401-3. Refer to Response to Comment No. 401-3, above.

Comment No. 469-3

While the project is being constructed, we see are expecting large trucks driving through are neighborhood each morning and evening. What hours of the day and how many days a week will those trucks be allowed to enter and exit the site? Are there any kinds of trucks that will not be able to enter the site and have to park on the street, with a lane being closed as a result? Where is that expected to occur? There are some trucks, maybe those carrying large equipment, that will not be able to negotiate a turn from a lane into one of the

access driveways, so are those the trucks that will have to park in the street? How long will they be allowed to take up a lane?

Response to Comment No. 469-3

This comment is identical to Comment No. 123-2. Refer to Response to Comment No. 123-2, above.

Comment No. 469-4

Also, these trucks will create lots of noise and spew lots of exhaust. What are the thresholds for how much exhaust can be emitted? Will the trucks be gas or diesel? At a time when smog levels are on the rise, I can only imagine the added noxious fumes our kids and family members will have to breath. [sic] Will any of the trucks be carrying hazardous materials? What kind? What are the restrictions as to truck travel with hazardous materials in our neighborhood?

Response to Comment No. 469-4

This comment is identical to Comment No. 123-3. Please refer to Response to Comment No. 123-3, above.

Comment No. 469-5

Before, you rubber stamp this proposal, I strongly encourage you to listen the voices of those living here and to hear our needs. We cannot be disregarded in this matter.

Response to Comment No. 469-5

This comment is identical to Comment No. 123-4. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 469-2 through 469-4.

Comment Letter No. 470

Emily Sallack
347 N. Kilkea Ave.
Los Angeles, CA 90048-2226

Comment No. 470-1

I live in the Beverly Fairfax neighborhood, with my Husband and dog Berkley. I am very concerned about the proposed TVC 2050 plan. I have only just heard about this project, and I had to figure out where to learn more. The draft Environmental Impact Report is very technical and immense.

Response to Comment No. 470-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 470-2 through 470-6.

With respect to the complexity of the EIR, the Draft EIR and its technical appendices were prepared in accordance with the requirements of CEQA. The Draft EIR was written to be as accessible to the general public as possible. Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

Comment No. 470-2

But one of my issues is how affected we are by the constant noise. Obviously I live in an urban neighborhood, but construction and development always bring even more.

So I have questions and concerns and tried to read even a fraction of that report about noise. I couldn't understand much of it though.

Response to Comment No. 470-2

This comment, which does not raise specific issues about the noise analysis, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Section IV.I, Noise, of the Draft EIR provides a comprehensive analysis of potential noise impacts associated with construction and operation of the Project.

Comment No. 470-3

What exactly is a Mobility Hub? Where is the analysis that supports that our neighborhood even needs a Mobility Hub? Have actual residents asked that a Mobility Hub be located at that location and be part of updating the Television City property?

Response to Comment No. 470-3

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips.

Comment No. 470-4

What is going to be the noise impact of that proposed Mobility Hub? It sounds like there could be tons of shuttles, buses, and cars going to and from it.

Response to Comment No. 470-4

Refer to Response to Comment No. 35-129 regarding the noise analysis associated with the Mobility Hub. As discussed therein, noise impacts associated with the Mobility Hub would be less than significant.

Comment No. 470-5

Will it operate in the evening or only during the day? How many vehicles are expected to use it? Will the number increase every year? How will that impact noise levels? What impacts will that have on the neighboring residences?

Response to Comment No. 470-5

The Mobility Hub would be the most active during the morning and afternoon peak commute hours when up to four shuttle buses would operate. Other hours of the day would see fewer buses operate to bring employees and visitors to/from the Metro D (Purple) Line Wilshire/Fairfax Station.

As discussed in Topical Response No. 7, Mobility Hub, the Mobility Hub would be open during the primary hours of operation for the Project itself.

Refer to Response to Comment No. 35-129 for a discussion of noise at the Mobility Hub.

Comment No. 470-6

What regulations will a Mobility Hub have to follow? Who enforces those rules? Is the city overseeing it? Will there be any sort of monitoring to ensure the Mobility Hub does not generate excessive noise impact from its bus and shuttle operation? The developer makes it sound like this is a really big thing, shouldn't there be more analysis about it?

Response to Comment No. 470-6

TVC would be responsible for the operation and the security of the Mobility Hub. Noise complaints from residents would be investigated by the City and violations of any applicable noise levels would require remediation on the part of the Project.

Comment No. 470-7

The neighborhood and community need to have answers to these kinds of questions to really understand what is being planned.

Response to Comment No. 470-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 470-2 through 470-6.

Comment Letter No. 471

Berta Sandberg
543 N. Martel Ave.
Los Angeles, CA 90036-1932

Comment No. 471-1

I live in the Beverly Fairfax neighborhood. I am quite concerned about this so called TVC2050 Project.

Response to Comment No. 471-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 471-2 through 471-5.

Comment No. 471-2

I say so called because who knows when this will be complete? Do you? Does the developer even know? They said it could be developed over 20 years! That's just ridiculous.

Response to Comment No. 471-2

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Comment No. 471-3

That's 20 years of trucks in our neighborhoods. I don't want to live in an area that will be inundated by thousands of trucks over the next two decades. That is also a lot of pollution that idling trucks will be spewing all over our community. Have you investigated the impacts on health that two decades of deiseal pollution would have on a community? This project is also right next to Pan Pacific Park. Did the EIR analyze the impact of pollution right next to the park? I would request that there be a study done in the impacts of long-term air pollution in our area.

Response to Comment No. 471-3

The Draft EIR comprehensively analyzed the Project's potential air quality impacts, including impacts from trucks and diesel emissions, in Section IV.A, Air Quality, and Appendix B of the Draft EIR in accordance with CEQA.

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding the number of construction trucks. Refer to Response to Comment No. 87-1 regarding emissions related to production trucks and Response to Comment No. 26-E.1-16 regarding the number of operational trucks. Refer to Response to Comment No. 126-2 regarding truck idling.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs, even after accounting for increased truck trips associated with construction and future operations, would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Please refer to Response to Comment No. 105-3 regarding the less-than-significant air quality impacts at the Pan Pacific Park, if considered hypothetically as a sensitive receptor.

Comment No. 471-4

This will also add a ton of noise pollution. Will all these trucks have an impact on our quality of life? Especially if they will be in our neighborhood for 20 years. Has there been an impact study on the noise and air pollution? There are a lot of children and schools in our neighborhood, and loud trucks could be very disruptive and dangerous for children who are still growing. Have the businesses, schools, synagogues, nursing homes, etc. been notified of these potential impacts? How will they be notified about air and noise pollutions studies are completed? Will more studies be done over time when construction has been taking place for years?

Response to Comment No. 471-4

Air quality and noise were comprehensively analyzed in the Draft EIR in accordance with CEQA and City policy. Refer to Section IV.A, Air Quality, and Section IV.I, Noise, respectively.

Please note that quality of life is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 9-24 regarding the construction timeline.

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 471-5

Is the route that trucks will be taking confirmed? Why are these trucks going through the poorer neighborhoods? Are there different options? How will these routes be enforced? Receiving answers to all of these questions is absolutely imperative to understand how the residents of this community will be impacted by this project.

Response to Comment No. 471-5

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes.

Limiting the Project construction haul trucks to the use of the approved haul routes would be enforced by the LAPD and the California Highway Patrol.

Comment Letter No. 472

Hannah Sanders
327 N. Stanley Ave.
Los Angeles, CA 90036-2313

Comment No. 472-1

We need more detail provided in the EIR.

Response to Comment No. 472-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 472-2 through 472-4.

Comment No. 472-2

Only qualitative discussion is provided for the transportation impacts. This is great but serves no use if there isn't also a quantitative analysis to accompany it. The Vehicle Miles Travelled analysis is not making sense to me as it is providing many assumptions, but unreasonably so. Realistically how many people utilize public transportation in this area? We all know city commuters do not. Where do Television City employees live and what routes will they be using? The EIR is assuming they will be living close by, but how do we know this for sure?

Response to Comment No. 472-2

Refer to Section C, Assumptions in the VMT Analysis, Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 for a full discussion of the trip length and other assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

As revealed therein, the Transportation Assessment includes both the qualitative and quantitative analyses required of the EIR process.

Comment No. 472-3

Is the city really assuming that we will all take public transportation? What makes you think after a global pandemic, we would feel safe surrounded by this many people on a daily basis? Sure environmental standards would benefit from this, but what does this mean in terms of health and safety. Exactly how many people will be commuting to this area on a daily basis and how many will be carpooling? Taking the subway? The bus? Do we have enough public transportation resources for this 10,000+ surplus of people? What happens when events are being held and all of the parking and transportation means are used to their full capacity by residents?

Response to Comment No. 472-3

The Project is anticipated to attract 15 percent of its employees and less of its visitors via transit, bike and walk modes. Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

Table 15 on page 140 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the calculations of the number of people expected to take transit to/from the site. The assumptions indicate that approximately 134 people will travel to the Project Site in the morning and approximately 145 in the afternoon via transit, bike, and walking. Tables 4A and 4B on pages 58–59 of that document show that the current bus service to the Project Site current has almost 2,000 available seats in both the morning and afternoon peak hours, and these numbers do not count service to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction. There is plenty of transit capacity available to accommodate the Project demand.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 472-4

In regards for lack of parking, what is the city planning on doing to add more? Are there any mitigation factors put in place to compensate for the lack of spots in regard to amount of people. Considering commercial loading zones will be occupying numerous existing meter spots, are visitors expected to park in our neighborhoods? This is simply unacceptable.

Response to Comment No. 472-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration, and thus mitigation is not required. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 472-5

We need a full numbers analysis of these issues. As city planners, your first concern is to be protecting the public interest. I do not feel like LA residents' health, safety or welfare is being prioritized at all. In order for the public to have full transparency, we need statistical evidence of the impacts this project will leave on our community. The future of LA relies heavily on the results Television City will bring. We need to know what to expect. Please give us more detail and show that every decision is well thought out in regards to us as citizens.

Response to Comment No. 472-5

Section IV, Environmental Impact Analysis, of the Draft EIR includes a detailed analysis of the Project's impacts during construction and operation in accordance with CEQA. This includes a quantitative analysis where appropriate.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 473

T. Sanders
323 S. Citrus Ave.
Los Angeles, CA 90036-3035

Comment No. 473-1

I am a resident of the Beverly Fairfax community, and there are many concerns that I have with this project—both small and large.

Response to Comment No. 473-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 473-2 through 473-5.

Comment No. 473-2

In a very general sense, I understand that the proposed project is supposed to be under construction for 20 years. Does this mean that my community is going to have to deal with loud and consistent noises for 20 years straight? Or, is most of the loud construction going to take place during the beginning phases of construction? If not, during what phases? What are the different phases of construction? And what should we expect during each phase of construction? By this I mean what should we expect in terms of noise levels, traffic levels, and other things that impact our daily lives.

Response to Comment No. 473-2

First, construction of the Project is not expected to take 20 years. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

With respect to noise, noise impacts by construction phase are provided in Section IV.I, Noise, of the Draft EIR. Refer to pages IV.I-35 through IV.I-43, specifically Table IV.I-10 on page IV.I-39, which provide noise levels at each receptor location by construction phase prior to mitigation. Noise levels after mitigation are provided in Table IV.I-19 on page IV.I-58 of the Draft EIR. As shown therein, impacts would be less than significant at all sensitive noise receptor locations with the exception of R1 with implementation of mitigation.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project.

With respect to "other things that impact our daily lives," this statement is too vague to provide an adequate response. The Draft EIR included a comprehensive analysis of all the topic areas required by Appendix G of the CEQA Guidelines.

Comment No. 473-3

What will be the sources of the noise during those phases? Please provide a detailed timeline of this project and everything that is expected during each time. I find it hard to believe that my community is going to have to deal with loud construction noise for 20 years straight, so please help me out and clarify this.

Response to Comment No. 473-3

The noise assumptions for each piece of construction equipment are provided in Table IV.I-9 of Section IV.I, Noise, of the Draft EIR, and the resulting noise levels at each receptor location are provided in Table IV.I-10 of the Draft EIR. Noise levels with mitigation measures included are provided in Table IV.I-19 of the Draft EIR. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 473-4

Another thing I am worried about relates to construction as well. The plan says that the project will extract groundwater for construction. How can you assure me that my property, as well as the property of my friends and family is not impacted by this groundwater extraction? Impacts to nearby properties are not made clear, so where is that study? Please provide precedent developments that are similar to this one in order to demonstrate the impact of groundwater extraction on nearby properties in both the short term and long term. Will the extraction cause subsidence? Please do not provide just a yes or no answer. Rather provide a detailed analysis so that we can be confident that our properties will not be impacted at all.

Response to Comment No. 473-4

Refer to Response to Comment Nos. 11-25, 16-74, 16-85, and 26-69 as well as the Dewatering Report (Appendix FEIR-13 of this Final EIR) with respect to dewatering as it relates to subsidence.

Comment No. 473-5

And lastly, why does the City care about any return on the developer's investment? Where is the basis for this in City planning or land use law? LA should care about its residents first and foremost, and that does not seem to be the case right now. How is the health and welfare of Fairfax residents being evaluated to ensure that this project does not impact residents negatively?

Response to Comment No. 473-5

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding why this objective was included as part of the Project. As discussed therein, neither CEQA nor the CEQA Guidelines prohibit a public agency from adopting an economic or financial project objective. Refer also to Response to Comment No. 41-2.

Comment Letter No. 474

Patrick Sanderson
109 S. Kings Rd.
Los Angeles, CA 90036

Comment No. 474-1

I do not believe we have been provided with an adequate amount of information regarding the Television City project. I am very concerned about certain landmarks and how the project is going to affect their prosperity. It is making me extremely frustrated that historic sites are not seeming to be considered.

Response to Comment No. 474-1

Potential impacts to historical resources are fully analyzed in Section IV.B, Cultural Resources, of the Draft EIR. As discussed therein, impacts would be less than significant.

Comment No. 474-2

Audience and employee parking is going to create a huge problem for the Farmers Market. Where are customers supposed to park when these audience members displace parking? This is going to create a major inconvenience to the community members and will most likely drive away business.

Response to Comment No. 474-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Therefore, the Project would not displace The Original Farmers Market parking.

Comment No. 474-3

Also, all of the additional traffic delays and gridlock will likely keep customers from still wanting to visit there, how can that not be obvious? Why weren't those impacts made clear? What does this mean for farmers of California? What does it mean for families of LA? What does this mean for the merchants? Will their employees lose their jobs?

Response to Comment No. 474-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The remainder of this comment discusses non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 474-4

This would be a major loss for the city. The Farmers Market has been around for so long. It has brought such a unique culture and sense of community to LA and it is infuriating that city planners are doing nothing to protect it. The DEIR should analyze the potential deterioration and loss of Farmers Market. Where is that analysis if it has been done already and what impacts did it reveal?

Response to Comment No. 474-4

The Project would not result in any physical changes to The Original Farmers Market. In addition, the Draft EIR analyzed all potential environmental impacts to The Original Farmers Market; refer to Sections IV.B, Cultural Resources, and IV.I, Noise, of the Draft EIR. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the Draft EIR's analysis of potential historic impacts to The Original Farmers Market.

Comment No. 474-5

Thousands of additional vehicles will be traveling through and near the historic district daily due to this project's density. This is going to absolutely tarnish the area and make it to where nobody visits or appreciates the district anymore.

Response to Comment No. 474-5

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-10 regarding increased vehicle trips and the Beverly Fairfax Historic District.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 474-6

Not only this, but the project also proposes a major change in the general plan for the area to Regional Center. What does it mean to our community to have the area be made a Regional Center? Why is the city considering allowing this? I can only image what major impacts this will have on the community. What further developments are going to take place in the area as a result? The Draft EIR needs to analyze the likely intensification of further development in the surrounding area as a result of this major change to the community plan.

Response to Comment No. 474-6

This comment is similar to Comment Nos. 11-29, 80-2, and 325-2, and the last sentence of the comment is identical to the last sentence in Comment No. 287-2. Refer to Response to Comment Nos. 11-29, 80-2, 287-2, and 325-2 regarding the proposed Regional Commercial designation. Refer to Response to Comment No. 26-177 regarding the Project's growth-inducing impacts.

Comment No. 474-7

As city planners, aren't you supposed to have the community members' best interest in mind? It does not seem that the public is being prioritized at all. Please provide us with a detailed analysis of the potential impacts that this project is going to have on LA.

Response to Comment No. 474-7

Section IV, Environmental Impact Analysis, of the Draft EIR includes a detailed analysis of the Project's impacts during construction and operation. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 475

Steven Sann
5551 W. Sixth St., Apt. 3224
Los Angeles, CA 90036-7511

Comment No. 475-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 475-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 476

Yasmin Sarikaye
653 S. Citrus Ave.
Los Angeles, CA 90036-3534

Comment No. 476-1

After reading the Draft Environmental Impact Report for the Television City project, I knew I had to speak up for my fellow Beverly Fairfax residents. I am deeply concerned about the impact of this project on my neighborhood, and I am even more worried about the lack of transparency from the developers.

Response to Comment No. 476-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 476-2 through 476-4.

Comment No. 476-2

Firstly, I find it strange that the developer has failed to include a definitive project phase timeline for residents. Has the developer outlined when each phase of the project will begin and end? How will we know when the project will reach its operational phase? The project could take up to 20 years to complete. This leaves a huge range of phases. How will we be notified when this phase and each phase is reached? What if our opinions on the project have changed? What happens when actual impacts are beginning to be experienced? Will the plan for the project then be revised?

Response to Comment No. 476-2

Refer to Response to Comment No. 9-24 regarding the Project timeline, and Appendix FEIR-8, Details of Buildout and Construction. There is no specific phasing plan for Project construction.

Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings.

The Project's potential impacts during both construction and operation are identified throughout the Draft EIR. Refer to Table I-1 of Section I, Executive Summary, of the Draft EIR, as well as each individual section in Section IV of the Draft EIR.

The proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 476-3

Additionally, I am concerned about the similarities this project shares with the Millennium Project. This project seems to be as opaque and confusing as the Millennium Project. The city is supposed to require Environmental Impact Reports to be specific and informative. Why is this EIR allowed to be so vague and unhelpful? What measures will the developer take to keep the public informed? Is the city even trying to prevent the same thing that happened with this project? What action steps are being taken?

Response to Comment No. 476-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13 with regard to the Project Description and proposed Specific Plan, which includes a discussion of the *Millennium* project EIR and associated legal case. As discussed therein, the *Millennium* case is not applicable to the Project, and the Project Description is distinguishable from the project description at issue in *Millennium*. Unlike *Millennium*, the Project is not seeking any flexibility with respect to the nature of the Project and what may be built, as the proposed studio uses and the overall size of the Project are defined and fixed elements of the Project. The Project would allow for limited flexibility in the size and placement of the permitted studio uses, as is typical with a studio specific plan.

Contrary to this comment, the Project Description is not vague. Rather, as explained in Topical Response No. 1, the Project Description is accurate, stable, and finite and provides sufficient details to fully evaluate the environmental impacts of the Project. Also refer to Response to Comment Nos. 5-3 and 9-13 and Topical Response No. 1 regarding how all of the physical parameters of the proposed Specific Plan are consistent with the Draft EIR.

As discussed in Response to Comment Nos. 28-13 and 32-3, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively

engaged with the community and shared information about the Project for several years. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Comment No. 476-4

Finally, I'm having trouble distinguishing between this project's design features and mitigation features. Why does the EIR not highlight the actual impact of the project's design features? Why are the mitigation features not added after the project design has been outlined? What additional tools will the developer provide that will help us understand the project's mitigation features?

Response to Comment No. 476-4

Refer to Response to Comment No. 9-34 regarding the inclusion of PDFs in the Draft EIR.

Comment No. 476-5

I am disappointed with the way the city has clearly not learned from the Millennium Project. The city still does not understand that we need to have a detailed outline of the project's phases and its mitigation measures. Until these issues are addressed correctly, I will not support this project.

Response to Comment No. 476-5

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13 for a discussion of the difference between this Project and the *Millennium* project. Additionally, all of the Project's mitigation measures are provided in Section I, Executive Summary, of the Draft EIR, as well as within each specific topic area. This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 477

vsaugstad@gmail.com

Comment No. 477-1

As a resident of Carthay Circle, I'm writing to voice my concern about the TVC 2050 project.

Response to Comment No. 477-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 477-2.

Comment No. 477-2

This proposed "Regional Center" designation is inappropriate and will add extreme congestion to the area.

Response to Comment No. 477-2

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 477-3

Please take more time to review the Draft EIR so the community can understand this massive project.

Response to Comment No. 477-3

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 478

Michael Sauk
5551 W. Sixth St., Apt. 3224
Los Angeles, CA 90036-7511

Comment No. 478-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 478-1

Comment Letter No. 481

Samuel Schneerson
364 N. Fuller Ave.
Los Angeles, CA 90036-2523

Comment No. 481-1

Please address my concerns with the proposed Television City construction project. As a resident of 10 years, my wife, Sima and I want to know what is potentially going to be built and how it will change our neighborhood.

Response to Comment No. 481-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 481-2 through 481-6.

Comment No. 481-2

The site is right in the middle of a neighborhood with schools, religious organizations, museums and Pan Pacific Park. How will the increased car and truck traffic for construction and then the increased traffic for employees in the enlarged Television City impact the health of residents? of the school children? And of visitors to the park? How will increased exhaust from diesel trucks negatively affect these people, particularly people at risk? What is the analysis of the impacts to the most at-risk populations such as children, people with asthma, seniors, and what were the conclusions? How many different at-risk groups live in this area? And how close are they to the project site?

Response to Comment No. 481-2

This comment is identical to Comment No. 127-4. Refer to Response to Comment No. 127-4, above.

Comment No. 481-3

Another impact that needs to be further explained in the EIR is noise from all those trucks and from the construction itself. During construction, how much increased sound will occur? and what will be the impacts of the different sources of noise to the residents 'and others 'hearing? If construction takes two decades or more, how much does that increase the impact on people's hearing? How much does it impact quality of life? Construction noise is annoying at best and harmful at worst.

Response to Comment No. 481-3

This comment is identical to Comment No. 127-5. Refer to Response to Comment No. 127-5, above.

Comment No. 481-4

The Adobe and Farmers Market are true community landmarks and important to the community. How will the expansion of Television City affect the Adobe? During construction, it seems they would be impacted by construction noise, dust, and debris, so what will those impacts be? How much blasting, drilling, and other construction activity will there be to impact it? Won't visitor to the Farmers Market be impacted by the noise, traffic and daily construction? What steps are being taken to ensure the increased traffic and people coming into the area does not displace regular customers and visitors?

Response to Comment No. 481-4

This comment is identical to Comment No. 214-4. Refer to Response to Comment No. 214-4, above.

Comment No. 481-5

I understand there will be power generators at the basecamps. Since generators often run on diesel fuel, how will the pollution, both air and noise, be handled? How often will the generators be used? What will they be used for? What about safety and hazard concerns?

Response to Comment No. 481-5

This comment is identical to Comment No. 214-5. Refer to Response to Comment No. 214-5, above.

Comment No. 481-6

It seems irresponsible given the housing crisis that this huge expansion would not include residential development.

Response to Comment No. 481-6

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of with regard to housing.

Comment Letter No. 482

Gladys Schreiber
212 S. Formosa Ave.
Los Angeles, CA 90036-2814

Comment No. 482-1

As a resident of the area, I need more information. My neighbors and I are extremely concerned about the Television City project and the impacts that it will have in our community.

Response to Comment No. 482-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 482-2 through 482-5.

Comment No. 482-2

There are a bunch of different uses listed in the Draft EIR that are not included in the discussion of trips in the traffic section. What about the expected traffic from things like warehouses, theaters, educational uses, and conference facilities—where are the analyses about the extent of expected traffic and impacts of those possible uses? Clearly, warehouses would bring a lot of truck trips—not just trucks during construction but during operations, which the EIR says will bring no significant impacts. But how can that be stated when the definite uses are not named and analyzed? What about the emissions, air quality, and noise impacts from the different uses that could end up there? All of this needs to be analyzed fully so that the community understands the full range of possible effects.

Response to Comment No. 482-2

Refer to Topical Response No. 3, Permitted On-Site Uses. As discussed therein, uses allowed within the Project Site must be consistent with the five permitted land uses (i.e., sound stage, production support, production office, general office, and retail) and the ancillary sitewide uses that support the studio and the five permitted land uses. These uses are fully accounted for in the impact analyses in the EIR. Refer also to Response to Comment 5-6.

Air quality and noise analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively.

Comment No. 482-3

I also don't understand why the city thinks people are going to take transportation. I work in this area and everyone I know commutes in their cars alone. Is there any actual evidence that people at this project are going to ride transit? If actual data was not generated, then on what basis can those assumptions actually be made? What happens when this development is up and running and it turns out the assumptions were wrong, and that most workers and employees are driving to and from? And the impacts will then be much more significant than is being presented to the community? So what will the city do then?

Response to Comment No. 482-3

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM. The upcoming TDM Ordinance of the City of Los Angeles will require a monitoring program to measure the continuing effectiveness of the Project's TDM Program. If the TDM Program is not meeting its goals, additional TDM strategies will have to be implemented until the Project meets the effectiveness levels discussed in the Draft EIR.

Comment No. 482-4

The EIR states that that an average employee only commutes 6.7 miles per day. But this information is buried on page 75 of the 83 page traffic section. Please provide evidence for this commute mileage, as it is not realistic. From what I understand, the construction is also going to lead to a loss of crosswalks, sidewalks and bike lanes. How is this prioritizing the public's safety at all? Which crosswalks, sidewalks and bike lanes are going to be affected? Will they be affected all at the same time or part of construction phases? How is the community supposed to know what to expect? What measures will be taken to ensure pedestrian safety?

Response to Comment No. 482-4

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Regarding crosswalks, sidewalks, and bike lanes, refer to Response to Comment No. 370-6. The Project driveways would be designed to minimize vehicle conflicts with other vehicles, pedestrians, and bicyclists and provide safer pedestrian crossings through pedestrian signal phasing and continental crosswalks. Refer to Topical Response No. 12, Safety and Congestion.

Comment No. 482-5

In terms of the environment, what are going to be the expected air pollution effects? When will those effects be felt and where in the neighborhood? The carbon monoxide levels are higher than 50% already and I am very concerned about what this means for myself and for my family. Please provide a health risk analysis on the impacts to my community.

Response to Comment No. 482-5

Refer to Section IV.A, Air Quality, of the Draft EIR for a comprehensive analysis of the Project's potential air quality impacts. As discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips associated with the Project would not approach screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects. Nonetheless, as discussed in Response to Comment No. 26-E.1-2, in response to SCAQMD comments on the Draft EIR, a quantitative HRA has been prepared and is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

Comment No. 482-6

The community deserves answers and we will not stand for anything less.

Response to Comment No. 482-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 482-2 through 482-5.

Comment Letter No. 483

Sallo Schreiber
212 S. Formosa Ave.
Los Angeles, CA 90036-2814

Comment No. 483-1

I am writing to express my concerns about many aspects of this proposed plan for Television City. These concerns demand major reconsideration of this project.

Response to Comment No. 483-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 483-2 through 483-4.

Comment No. 483-2

To start, what is the route that trucks will take while traveling to the project site and then when moving away demolition, debris and dirt from the project site? Why have routes not been confirmed? Will the routes vary depending upon the day and time of day? What if an accident shuts down one of the routes or causes a long delay? Will the trucks take different detours then? I think that this is crucial and it must be clarified.

Response to Comment No. 483-2

This comment is identical to Comment No. 164-2. Refer to Response to Comment No. 164-2, above.

Comment No. 483-3

How much demolition debris and dirt is expected, on a weekly basis? What are previous studies on environmental impacts of debris and dirt on nearby properties? What about studies on the health impacts of debris and dirt on nearby residents? Why are there different options for the trucks? How is it determined which trucks get which options? Are these trucks going to line up and be idling outside of my house choking me and my children with exhaust? Even if you do clarify the truck routes, how are they going to be enforced? Will it be the local authorities, or are you hiring people to do it? Please answer the questions above in enough detail for anyone to have a clear understanding of your plan and potential impacts in might have on our environment, and more importantly, health.

Response to Comment No. 483-3

This comment is identical to Comment No. 164-3. Please refer to Response to Comment No. 164-3, above.

Comment No. 483-4

Similarly, what are the working hours and under what timeline is this project going to take place? I'd imagine that with demolition debris and dirt, there must be loud things that are going to occur. How will this noise not going to [sic] make it unbearable to live in the neighborhood? Can you assure the neighborhood of that? Specifically, how loud do you expect these actions to be? Will anything take place during the nighttime, making it harder for me to put my children to bed? Are we going to be woken up early in the morning with the sound of loud explosions?

Response to Comment No. 483-4

This comment is identical to Comment No 164-4. Refer to Response to Comment No. 164-4, above.

Comment No. 483-5

I feel entitled to a thorough response to all of the above. These are questions that directly relate to the quality of life of Beverly Fairfax residents, and it is important to consider that! Please answer the above and include any additional detail that you think is important for us to have a better understanding.

Response to Comment No. 483-5

This comment is identical to Comment No. 164-5. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 483-2 through 483-4.

Comment Letter No. 484

Brian Schroeder
brianschroeder10@gmail.com

Comment No. 484-1

I wholeheartedly support the TVC 2050 plan. I believe the renovation of that property will create jobs in the television industry and increase the prestige of the Los Angeles entertainment industry.

Response to Comment No. 484-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 485

Devorah Schwalb
351 N. Poinsettia Pl.
Los Angeles, CA 90036-2506

Comment No. 485-1

I have concerns I'd like to share with your department about the project being considered, TVC 2050. This project will bring many impacts to the community that need to be fully explained to residents and businesses—the people who live and work here every day.

Response to Comment No. 485-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 485-2.

Comment No. 485-2

Anyone who has been to the area around the CBS property is very familiar with the traffic and parking issues. Parking in nearby streets is already a problem. It is not enough for the developer of the project to say that parking won't be a problem or that no one will be able to park on our neighborhood streets. The EIR that was released mentions temporary off-street parking. What is that referring to? Where would that temporary parking be? For what periods of time? Would it be throughout construction and during operations? And what would the off-site parking be for?

The EIR refers to a parking agreement, but why aren't the details of that parking agreement part of this approval process? That makes it sound like the parking agreement would be worked out later, but then how will residents and businesses be a part of those terms and conditions? How will they be able to provide input if it doesn't get decided until later?

It already seems that between the number of people who will be working in the new development and the number of people they expect to visit, there won't be enough parking. How will that additional need for parking be handled? Please provide more details about what is planned? Who will be able to park in the parking structure? What will happen when the parking structure is full? I'm sure you can understand why residents and businesses would be concerned about so many specifics not being spelled out before the city maybe approving this project.

I would appreciate you addressing these concerns and questions.

Response to Comment No. 485-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

With respect to parking during construction, the Project includes a CTMP pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 to IV.K-37 of the Draft EIR), which would include a prohibition of construction worker or equipment parking off-site.

Comment Letter No. 486

Bayla Schwazmer
155 N. Detroit St.
Los Angeles, CA 90036-2915

Comment No. 486-1

I am writing to address a major concern I have with the Television Center development and the Draft Environment Impact Report that was released. First, I find the EIR to be very confusing and lack a lot of detail throughout most of the document. It seems as if it was left open ended on purpose. The specifics areas that I would like to receive much more information on is how this project will impact the Cedars hospital and the changes in the look of the community.

Response to Comment No. 486-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 486-2 and 486-3.

Comment No. 486-2

This development will require an abnormal amount of large trucks and heavy machinery move around the area. This undoubtedly will create much more traffic than Beverly Fairfax normally has. This will likely decrease the response of emergency vehicles and how needy patients can access the hospital. Imagine an ambulance trying to weave in and out of massive semi-trucks in stand-still traffic trying to get to the hospital. Are there going to be a large amount of lane closures to accommodate the construction vehicles? Are there going to be traffic guards directing backups of vehicles? How will you conduct an analysis that studies how projects, that are like this one, have impacted hospitals that are in close proximity?

Response to Comment No. 486-2

Refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, for information regarding emergency response times. As described therein, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by

driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

The Project Site is large enough to allow the haul truck staging and construction worker parking to be confined to the Project Site itself. The construction program does not anticipate long closures of travel lanes adjacent to the Project Site.

As required by the CTMP prepared pursuant to Project Design Feature TR-PDF-1, traffic control personnel and flag personnel would be used, if necessary, to assist construction trucks in and out of the Project Site and in the event of any truck maneuvers that involved backing up.

Comment No. 486-3

A development of this size will drastically alter the look of the community and nearby neighborhoods. This is concerning because of the significance of the buildings around it. First is the CBS building. This iconic building has been a part of the community since 1952. How will pedestrians be able to see the CBS building with the new building being built in this location? Along with altering the view of the CBS building, it will also alter overall aesthetics of the single-family homes and apartment buildings in the immediate proximity. The entire feel or look of the community will be drastically altered if 58-foot buildings would be built surrounding them. Has the community been asked about their opinion on these dramatic changes? Has the difference in the view of the area been analyzed or predicted?

Response to Comment No. 486-3

Refer to Response to Comment Nos. 5-13, 5-14, 11-3, 26-7, and 209-3 regarding the size of the Project.

Refer to Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the preservation of the Primary Studio Complex.

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-45 regarding the regulations and procedures for new construction in the Viewshed Restoration Area and restoration of the historic viewshed along Beverly Boulevard. As discussed therein, the 58-foot height limit in the Viewshed Restoration Area, which is approximately two-thirds of the 88-foot height of the existing Primary Studio Complex, is taken directly from the HCM Findings. In addition to the 58-foot height limit, any development in the Viewshed Restoration Area would be required by the HCM Findings to

restore the currently obstructed character-defining viewshed features of the Primary Studio Complex as seen from adjacent public areas along Beverly Boulevard. Further, development in the Viewshed Restoration Area greater than one story in height would require a Project Compliance approval pursuant to LAMC Section 11.5.7[13B.4.2], which is a discretionary approval that would require CEQA compliance review.

The Draft EIR fully evaluated potential impacts to the Primary Studio Complex and historical resources in the Project Site vicinity and concluded that impacts would be less than significant. Detailed discussions of the analyses are provided in Sections D, Analysis of Impacts to the Primary Studio Complex, and E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources.

This comment incorrectly conflates aesthetic and historic impacts. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-8 regarding the different criteria and thresholds for aesthetic and historic impacts.

Following the publication of this Final EIR, the Project will be considered during several public hearings and meetings before City decision-makers prior to any approval.

Comment No. 486-4

These concerns to be addressed. Much more adequate analysis needs to be done before this project can be allowed to begin. The lack of detail in and ambiguity of this initial EIR is not acceptable.

Response to Comment No. 486-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 486-2 and 486-3.

Comment Letter No. 487

Tuvia Schwarzmer
155 N. Detroit St.
Los Angeles, CA 90036-2915

Comment No. 487-1

I am concerned about several things in the EIR for the studio project at the CBS building that need additional explanation.

Response to Comment No. 487-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 487-2 through 487-5.

Comment No. 487-2

1. Why does the City care how much money the developer?[sic] Why would this be an objective that is included in a review and assessment of impacts to the community and to the area of the project? The City should be caring about the lives and welfare of its residents, not whether some developer's investments achieve their anticipated return. What is the amount of this return? The EIR seems to reject alternatives because the developer doesn't come out AS far ahead financially. We need to know what the financials underlying this objective are. How is it determined that major impacts of a project, like are expected from this project, are outweighed by factors that could include how much of a return the developer gets? Where is that in city or state law?

Response to Comment No. 487-2

This comment is identical to Comment No. 356-2, with the exception of the first sentence. Refer to Response to Comment No. 356-2, above.

Comment No. 487-3

2. Where are all these people going to park? The EIR states more than 5,000 parking spaces are required for the influx of people, but then says that the parking spaces may be offsite. And the number of people expected is greater than the number of parking spaces being planned. Will that spill over into my neighborhood? What streets is the parking expected to spill over onto? If the

parking is offsite, what are the noise impacts, the safety issues from people speeding in the community, the pedestrian impacts, and other impacts of off-site parking? If this is going to require the taking of road spaces in front of people's homes, shouldn't that be accounted for? These impacts need to be analyzed.

Response to Comment No. 487-3

This comment is identical to Comment No. 356-3. Refer to Response to Comment No. 356-3, above.

Comment No. 487-4

3. How do we know people may come in on public transit? How was it estimated who would take public transit? Which forms of public transit? I work and live in this area, and almost everybody drives to get to and from places. Is there evidence that people at this project will ride transit? How many cars are expected to be added to our streets? Not how many miles they're expected to commute, but actually cars on a daily basis?

Response to Comment No. 487-4

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM. The upcoming update to the TDM Ordinance of the City of Los Angeles will require a monitoring program to measure the continuing effectiveness of the Project's TDM Program. If the TDM Program is not meeting its goals, additional TDM strategies would have to be implemented until the Project meets the effectiveness levels discussed in the Draft EIR.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 487-5

4. Who ultimately is responsible for ensuring that the community and surrounding neighborhoods are not left irreparably harmed and changed by this massive development being proposed? The neighborhood didn't ask for this, and most of my neighbors don't want it. It would be something that was done to us—not to benefit us, not for us. How can a development be forced upon a community when it may well not be the right development for a location?

A lot of people guarantee a lot of things, but accountability is more important to see that it's done. Please let me know what this accountability will look like.

Response to Comment No. 487-5

This comment is identical to Comment Nos. 356-4 and 356-5. Refer to Response to Comment Nos. 356-4 and 356-5, above.

Comment Letter No. 488

Jake Seevers
1843 S. Eighth St.
Alhambra, CA 90021-2440

Comment No. 488-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable Industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 488-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 489

Sussy Selbot
465 N. Curson Ave., Apt. 105
Los Angeles, CA 90036-2323

Comment No. 489-1

I'm writing to discuss the DEIR for the Television Studios project.

Response to Comment No. 489-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 489-2

I would like to know why the specific plan was not included in the DIER? [sic] This seems like a super important document to be left out of the DEIR. Will the DEIR be sent back out for review once it includes the specific plan? If so, what is your plan and timeline for recirculating the specific plan? There are far too many possible things that could be developed, so isn't a specific plan supposed to spell out those details. How are we in the public and community supposed to give input to a plan that is so broad and open-ended?

Response to Comment No. 489-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan and the regulatory process under the proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. As also discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 489-3

Where will the buildings actually be located and how big and how tall will they be? Why would the developer of the project still be figuring that out? The DEIR says the plan is just conceptual, but how are we supposed to comment on the project if everything is just conceptual?

Response to Comment No. 489-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, and 9-12 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR and the regulatory process under the proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. As discussed in Topical Response No. 1 and Response to Comment Nos. 9-16, 11-3, and 26-7, the Project includes height zone, setback, and frontage area requirements that will dictate the placement, mass, and height of future buildings. These requirements are not currently required under the existing zoning code. Refer to pages II-17 through II-21 in Section II, Project Description, of the Draft EIR for information regarding height zones, setbacks, and frontage areas associated with the Project.

Comment No. 489-4

What is the difference between what are project design features and what is referred to as mitigation measures? Will the community get a clear understanding of the real impacts before this project begins? What happens if project design features change?

Response to Comment No. 489-4

Refer to Response to Comment No. 9-34 regarding the difference between PDFs and Mitigation Measures, and how they will be enforced.

Comment No. 489-5

I also would like to know more the difference between production offices and general offices. Is it possible that the entire project will just become offices or is there a requirement that production continue on the site? What guarantees that the developer won't make the entire project an office project? Is there a limit on how many offices can be put in? Doesn't the developer have to show the need for the different uses, including why so many offices are needed when so many people work remotely now?

Response to Comment No. 489-5

Refer to Response to Comment No. 489-3 regarding the Project Description and Specific Plan.

Television City has been operating as a studio since 1952 and will continue to operate as a studio upon completion of the Project. With regard to the difference between production office and general office uses, refer to Response to Comment No. 26-122, which discusses the definitions of the permitted uses in the proposed Specific Plan. Also refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment Nos. 5-6 and 26-14. The approval of the Specific Plan would ensure that, consistent with the proposed development program in the Draft EIR, production office and general office would be limited to a maximum of 700,000 square feet of floor area each. Refer also to Response to Comment No. 5-15 regarding the underlying purpose of the Project. As discussed therein, the underlying purpose of the Project is to continue the studio use on the Project Site. The Project would not consist of only office uses. Refer to Response to Comment Nos. 9-13 and 26-16 regarding the mix of studio uses required for a modern studio campus.

The comment regarding the need of office and remote workers does not concern CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 489-6

Thank you for your time and consideration of these questions.

Response to Comment No. 489-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 489-2 through 489-5.

Comment Letter No. 490

Richard J. Serino
serinoconst@aol.com

Comment No. 490-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 490-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 491

Mina Seroosh
330 N. Edinburg Ave.
Los Angeles, CA 90048-2302

Comment No. 491-1

My concerns mostly lie with traffic and parking. Why is most of the parking located on Grove Drive? There is no way this many cars can use Grove Drive and gridlock is certain. Please show an alternative with parking distributed around the property.

Response to Comment No. 491-1

This comment is similar to Comment Nos. 316-1 through 316-3. Refer to Response to Comment Nos. 316-1 through 316-3, above. As described in those responses, the parking supply is indeed distributed across the Project Site, and accessible to the signalized entrances on all three sides of the Project Site.

Comment No. 491-2

Also, Grove Drive is right across from Pan Pacific Park. Did the EIR consider the health risks to children and senior from all the trucks that will be entering Grove Drive and emitting diesel exhaust next to a park? How is this allowed?

Response to Comment No. 491-2

Refer to Response to Comment No. 105-3 regarding the less-than-significant air quality impacts at the Pan Pacific Park, if considered hypothetically as a sensitive receptor.

Comment Letter No. 492

Lisa Serratos
328 N. Orange Grove Ave.
Los Angeles, CA 90048

Comment No. 492-1

Besides the thousands of cars and trucks that will be entering our community every day are the “special events” can be held on the property that will add even more traffic and parking issues for our community.

Did the City specify or limit what kind of special events will be allowed? What days of the week and what hours? How many times a year? How many people will be permitted to attend these special events? What prevents outdoor gathering include concerts and dances with loud music? What equipment and set-up and break-down will be required for the events and when will that occur?

Response to Comment No. 492-1

Special events would not be regulated by the proposed Specific Plan, do not regularly occur on-site, and would be subject to existing City permitting regulations.

Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 492-2

It seems to me that the community is being asked to put up with constant noise and disruption forever.

Response to Comment No. 492-2

This comment does not raise any specific issue with the noise analysis. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 493

Chadaphea Sethik
7941 1/2 Blackburn Ave.
Los Angeles, CA 90048-4417

Comment No. 493-1

The new Television City project, or TVC 2050, poses many concerns regarding our children, schools, and community. There are multiple schools, prominent businesses, and national landmarks within a close radius of the project. These places deserve to keep operating at a standard, uninterrupted level. They should not suffer any adverse impacts from the TVC 2050 project and that should be a guarantee from the company.

Response to Comment No. 493-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 493-2 through 493-6.

Comment No. 493-2

On the already busy Beverly Blvd and Fairfax Ave, how will a new development impact traffic?

Response to Comment No. 493-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 493-3

Will an ambulance make it to our schools for emergencies or will they be gridlocked in traffic?

Response to Comment No. 493-3

Refer to Topical Response No. 12, Safety and Congestion, for information regarding emergency response times. As described therein, the Project would not increase the

number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

Comment No. 493-4

Will the construction from this project affect surrounding businesses with noise, dust, vibration, and other impacts?

Response to Comment No. 493-4

Businesses, with the exception of lodging facilities, are generally not considered noise sensitive receptors under CEQA. Refer to Section IV.I, Noise, of the Draft EIR for a detailed analysis of noise and vibration impacts at nearby sensitive receptors during construction of the Project.

Refer to Sections IV.A, Air Quality, and IV.I, Noise, of the Draft EIR. As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, the SCAQMD Rule 403—Fugitive Dust, would require the use of BACT for dust control, which includes mandatory control actions and dust control contingency measures. As shown in Table IV.A-11 in Section IV.A, Air Quality, of the Draft EIR, localized construction impacts after the application of applicable mitigation would be less than significant for the 25-meter receptor range. Thus, all receptors accounted for in that range and all receptors farther from the Project Site than that range (e.g., surrounding businesses) would also be expected to experience less-than-significant localized air quality impacts.

Comment No. 493-5

Will patrons, visitors, and tourists be able, and willing, to navigate the surrounding neighborhoods, the traffic, and construction detours?

Response to Comment No. 493-5

See Response to Comment No. 493-2 for a discussion of the overall performance of the roadway system after the completion of the Project. Patrons, visitors, and tourists will still be able to navigate along the streets serving the area.

The Project Site is large enough to allow the haul truck staging and construction worker parking to be confined to the Project Site itself. Substantial lane closures and construction detours are not necessary for the construction of this Project.

Comment No. 493-6

Will this multiyear project result in local businesses closing because of its impacts?

We want answers. TRUTHFUL answers and¹ not flowery responses about how great the project is going to be and how much economic benefit it will have for employees and the community.

Any potential cost to the community must be known too. Businesses could be impacted if their customers no longer come because it takes too long to drive there. Visitors to the area could decide that the traffic has gotten so bad, they will pass on coming to our local stores, businesses, and attractions. Many employees may not live in or nearby, so they would be leaving the community to commute to wherever they live. These are impacts that also must be taken into consideration, especially if there are adverse economic impacts

Response to Comment No. 493-6

Economic impacts in and of themselves are not CEQA issues. Under CEQA, “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR 15131). Substantial evidence must be provided to demonstrate a reasonably foreseeable physical impact on the environment from the economic or social change, and no such evidence is provided in this comment. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 494

Mona Shaikh
934 N. Genesse [sic] Ave.
West Hollywood, CA 90046-7346

Comment No. 494-1

I am a resident of the community that will be impacted by the proposed Television City project. I have lived here for 10 years.

Response to Comment No. 494-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 494-2 through 494-4.

Comment No. 494-2

I am concerned that my daily life will be very disrupted with the chaotic nature of parking issues. After reading the Draft EIR, the parking plan as it stands makes no sense to me, and I want more clarity.

In the draft, it says that there will be around 8,000 employees on the project site. Furthermore, because this project involves a number of audience stages being built, it is said that anywhere between 3,000 to 5,000 audience people a day could be going to the site. This means that on any given day, there could be between 11,000 and 13,000 people going to the site. That is a lot of people and a lot of cars, which requires a lot of parking.

However, the draft states that the project will only have 5,300 parking spaces. On a slow day for the site, this is not even close to nearly enough parking spaces!

What analysis led you to proposing 5,300 parking spaces? I am genuinely curious because the numbers simply do not match up. What plans do you have in mind to make parking work? Where will parking be that doesn't fit into the parking structure referred to? Where is the overflow going to park? Who is going to have parking priority? How much is parking going to cost? Will the public be able to use the parking structure or only employees and official visitors? How are you going to handle inevitable parking disputes given that so many people will be fighting for limited spots? If someone cannot get a space in the parking garage, that person will need to exit and drive around looking for parking, right? Seems they will be competing for the limited on-street parking, isn't that right?

Response to Comment No. 494-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Project parking would not be open to the general public.

The comment regarding the number of audience visitors is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 494-3

A major concern of mine is that the overflow parking is going to park around our community and flood us with cars. Why does the plan try to suggest this will not be the case? What are the plans for the overflow? What are the specific plans? How can we be sure that our neighborhood is not going to become one massive parking lot?

Response to Comment No. 494-3

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, off-site parking is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 494-4

The parking numbers as they stand make absolutely no sense. Please revise your plans and answer the questions above so that there is enough parking to accommodate all of the new people that will be going to the site. The parking plan as it stands should be enough of a reason to deny the project right now.

Response to Comment No. 494-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment Letter No. 495

Louise Shane
171 N. Fuller Ave.
Los Angeles, CA 90036-2811

Comment No. 495-1

I ask that you take a closer look at the impact on air quality that the new studio at Television [sic] would create if constructed. The air with breath [sic] around Los Angeles is already intoxicating and if there is a significant increase in carbon and pollutants from the traffic and construction of the project, we could be in for even more hazardous air.

Response to Comment No. 495-1

This comment is identical to a portion of Comment No. 335-1. Refer to Response to Comment No. 335-1, above.

Comment No. 495-2

Does the air quality analysis show that there could be 50, 100, or 200 production trucks spewing diesel particulates in the community for years to come? What exactly will be emitted? During what hours and over how many days?

Response to Comment No. 495-2

This comment is identical to a portion of Comment No. 335-1. Refer to Response to Comment No. 335-1, above.

Comment No. 495-3

What about the greenhouse gas emissions from all these trucks?

Response to Comment No. 495-3

This comment is identical to a portion of Comment No. 335-1. Please refer to Response to Comment No. 335-1, above.

Comment No. 495-4

What are the specific effects expected from each of the types of particulate matter?

Response to Comment No. 495-4

This comment is identical to a portion of Comment No. 335-1. Refer to Response to Comment No. 335-1, above.

Comment No. 495-5

What can the developer possibly do to mitigate the health impacts of the worsening air quality due to this project? Other than not allowing the size, the amount of expected people, the volume of cars and trucks?

Response to Comment No. 495-5

This comment is identical to a portion of Comment No. 335-2. Refer to Response to Comment No. 335-2, above.

Comment No. 495-6

Will the developer reduce the scale and density of what is being planned given the already poor air quality in Los Angeles?

Response to Comment No. 495-6

This comment is identical to a portion of Comment No. 335-2. Refer to Response to Comment No. 335-2, above.

Comment No. 495-7

Also, I ask you consider the health risks to children and senior [sic] from all the trucks that will be entering Grove Dr and emitting diesel exhaust next to a park—where is the breakdown of the emissions just due to those trips in that location? Why is the large parking structure being placed on Grove Drive, which is a small street, and right across from Pan Pacific Park? Think of the children that will have to breath [sic] dirty air from the pollution from all these trucks.

Response to Comment No. 495-7

This comment is identical to Comment No. 335-3. Refer to Response to Comment No. 335-3, above.

Comment No. 495-8

As both a resident and concerned citizen, I humbly ask for you to consider these risks and pass these questions to the developer.

Response to Comment No. 495-8

This comment is identical to Comment No. 335-4. However, this comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 495-1 through 495-7.

Comment Letter No. 496

Jerry and Evelyn Shapiro

Comment No. 496-1

I am writing to comment on the CBS Television City expansion.

Response to Comment No. 496-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 496-2

I would love to provide feedback on the project, but the draft EIR says the plan is still conceptual and the applicant would be given flexibility. My understanding is this is why the applicant is asking for a 20-year development agreement. I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

When will the detailed plan be provided? When will the community be allowed to give public input and weigh in on the actual design, not a plan that says things like the company "may make improvements" or could be two decades of construction?

Response to Comment No. 496-2

This comment is identical to the first and second paragraphs of Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment No. 496-3

Not to mention the traffic and parking issues.

Response to Comment No. 496-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and the adequacy of parking supply are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment. Refer to Topical Response No. 13,

Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 496-4

How much further will the project progress before we are provided the detailed information we deserve?

Response to Comment No. 496-4

This comment is identical to the third paragraph of Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment Letter No. 497

Leonard Shapiro

Comment No. 497-1

I live next to this proposed project, and I am really worried about parking. Our neighborhood is already full with people parking when the nearby shopping parking lots, meters, and businesses have no parking available. It's already frustrating enough not being able to park in my own neighborhood.

From what I understand this project would add 6,000 more employees. That's 6,000 people commuting every day to work. Plus, all of the different kinds of trucks for construction! Why does the DEIR say the project will have 5,300 parking spaces when there could be 6,000 cars. Where will the overflow go?

Response to Comment No. 497-1

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 497-2

The DEIR says that the average employee only commutes 6.7 miles a day. This doesn't seem right. Where did this data come from? How can the applicant already know where the new employees will be coming from to get to and from work there?

Response to Comment No. 497-2

A full discussion of the trip length and other assumptions that went into the VMT analysis is found in Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 26-156.

Comment No. 497-3

Has the city considered the additional traffic during events? What about when there is a live audience during filming? Have they considered all the additional people that will bring?

Response to Comment No. 497-3

The Transportation Assessment (Appendix M.1 of the Draft EIR) accounted for event and audience trips. Refer to Topical Response No. 10, Trip Generation, for a discussion of the Project's trip generation.

Comment No. 497-4

I see people parking on my street all the time to go to the farmers market and the Grove. I'm sure this will bring even more traffic. People always use our streets when they don't want to pay for parking. The plan does not provide actual solutions to what all of us who live here know the actual consequences if the project gets built.

Response to Comment No. 497-4

Unlike The Original Farmers Market and The Grove, employees and visitors to the Project Site would not pay for parking as part of their entry to the Project Site. Parking would be effectively free for visitors and audience members, and, therefore, there would be no reason to search for parking in the adjacent neighborhoods.

The cost of parking is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 498

Malka Shapiro
347 N. Detroit St.
Los Angeles, CA 90036-2530

Comment No. 498-1

I am a married woman with four children, I have lived in the neighborhood for a long time. I have been reading about the proposed TVC2050 project and have a couple questions about how this project will impact the culture of our neighborhood. We live in an area with many historic and cultural buildings, sites and homes.

Response to Comment No. 498-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 498-2 and 498-3.

Comment No. 498-2

The cultural historic monument designation of the CBS building was based on certain criteria that is City Law? What impact will the planned building have and could the designation be jeopardized? Is the designation be reevaluated since they're going to change the complex and buildings so much? There are buildings on the property from the 1960s and 1970s. Why wouldn't they be considered part of the historic fabric?

Response to Comment No. 498-2

This comment is nearly identical to Comment No. 459-3. Refer to Response to Comment 459-3, above.

Comment No. 498-3

I read about a settlement between the LA conservancy and the developer. Why and what is this agreement? Why hasn't the settlement agreement been provided to the public? The LA conservancy doesn't speak for me and my concerns for historical preservation.

Response to Comment No. 498-3

This comment is nearly identical to Comment No. 459-4. Refer to Response to Comment 459-4, above.

Comment Letter No. 499

Al Shayne
153 S. Laurel Ave.
Los Angeles, CA 90048-3513

Comment No. 499-1

I know a shady deal when I see one, and by golly this fits the bill. I have been a resident for over 40 years. I have seen a few of these e-documents. This Draft EIR is insufficient in its transparency regarding project benefits and past agreements with the project developer. This needs to be recirculated in the community so people are aware of this, or rather, aware of all that this is missing.

Response to Comment No. 499-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 499-2 and 499-3.

Comment No. 499-2

I read about a settlement agreement between the LA Conservancy and the project's developer. This gave me a lot of pause. What is that agreement? Does it influence the deal they have made here? Is the developer paying the Conservancy? This just seems immensely unknown and potentially dangerous to me. If we are being asked to provide public comment, we need the whole truth, and right now we don't have a grain of it. How can the City and community understand what these issues are if no one has been provided the Settlement Agreement.

Response to Comment No. 499-2

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and fulfills CEQA's purpose as an informational document that allows for meaningful public participation.

Comment No. 499-3

The Draft EIR has stated that the developer's return on investment is a project objective. What about the community the project is a [sic] going to dramatically change? Since the Developer has included ROI as an objective, we should know how much that could be. If this is about helping out the local area, I can't see how at this point, since no numbers have been given.

Response to Comment No. 499-3

This comment is identical to Comment No. 278-2. Refer to Response to Comment No. 278-2, above.

Comment No. 499-4

This proposal is frankly incomplete and insufficient. There are so many unanswered questions provided here that just don't add up. I know the community needs more information before any sort of decision can be made. If this dramatic change is being proposed, we need to know all the implications and potential outcomes that could occur.

Response to Comment No. 499-4

The Draft EIR was prepared in accordance with the requirements of CEQA. Specific issues raised by the commenter are addressed in Response to Comment Nos. 499-2 and 499-3. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA.

Comment Letter No. 500

Stephen Shiao
355 S. Citrus Ave.
Los Angeles, CA 90036-3035

Comment No. 500-1

I hope you will seriously reconsider whether the Television City studio project is compatible with our community and whether it is in the best interest of residents here. We are talking about a massive project that will take decades to construct, assuming a real construction timeline is ever made available, and it will pose serious risks to the health and safety of this community. The EIR does little to address the concerns my neighbors and I have, which does little to make me believe that we were considered at all in this process.

Response to Comment No. 500-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 500-2 through 500-5.

Comment No. 500-2

For starters, we have many residences, schools, temples and families that will be greatly impacted by this expansion effort. Why was a health assessment not included in this EIR? If thousands of trucks are going to be operating near our schools and worship centers, we are putting vulnerable populations at risk. Could you please explain how the health and safety of these communities was assessed? What were the findings? Please explain what the plan is to help keep children safe when thousands of trucks are going to be coming nearby every day? Why put our students at risk without having a plan? Will construction affect the operations at the hospital? Fairfax is not very accessible for that many large trucks, so what other avenues were considered for truck traffic? What about an air quality study? One that includes a much larger geographic area because more than a ½ mile will be seriously impacted? Could you please explain why there was not more community consultation in this process?

Response to Comment No. 500-2

The Draft EIR analyzed construction traffic in Section IV.K, Transportation, and the Transportation Assessment (Appendix M.1 of the Draft EIR) included a full analysis of construction traffic. As discussed therein, the Project includes the development of a CTMP for the Project as Project Design Feature TR-PDF-1. The Project would not result in

significant traffic safety hazards as construction staging, deliveries, etc. would generally occur within the boundaries of the Project Site. Any activity on the Project Site periphery would include pedestrian and bicycle protection and detours as necessary. The Project would comply with all construction safety requirements and would not introduce unusual features that could result in an unusual safety hazard. The haul routes use arterial streets and have been reviewed and approved by the City. By following standard rules and implementing the CTMP, the Project would not result in any significant safety hazards. Refer to pages IV.K-36, IV.K-37, and IV.K-80 of the Draft EIR; pages 179–184 of the Transportation Assessment; and Topical Response No. 14, Construction Vehicle Impacts, for additional information. Also refer to Response to Comment No. 9-29 regarding traffic hazards.

In terms of truck trip volumes, the comment suggests that “thousands of trucks are going to be coming nearby every day.” That statement is inaccurate. The busiest daily activity during construction will see a maximum of approximately 640 truck trips in the course of one day and that level of activity would only occur during the approximately 8.5-month excavation/foundation phase. During the day-to-day operation of the completed Project, the maximum truck activity is expected to be approximately 83 trucks producing 166 truck trips per day. In the case of both construction and Project operations, these truck trips would be spread out, and they would not all occur on any one street. Weight limitations would reduce the chance that Project trucks would utilize residential streets near the Project.

Section IV.A, Air Quality, of the Draft EIR includes an analysis of regional emissions. Refer to pages IV.A-59 through IV.A-62 therein. As discussed therein, the Project would result in an exceedance of NO_x. With implementation of Mitigation Measures AIR-MM-1 through AIR-MM-4, peak daily regional NO_x emissions would be reduced but would still exceed the SCAQMD regional threshold of 100 pounds per day. As such, Project construction would result in a significant Project-level and cumulative impact related to regional NO_x emissions, even with the incorporation of feasible mitigation measures. Although temporary, this impact would be significant and unavoidable. However, construction and operation of the Project would not result in localized air quality impacts. Refer also to Response to Comment No. 26-E.1-2 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR’s conclusion that health risk impacts would be less than significant.

With respect to public outreach, this Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeded the required 45-day Draft EIR public comment period. Following the publication of this Final EIR, a finalized draft of the Specific Plan and the Project’s other requested entitlements will be considered during several public hearings before City decision-makers prior to any decision made on the Project. The public will have additional opportunities to comment on the

Project at public hearings and meetings, including, but not limited to, City Planning Commission and City Council meetings, the dates of which will be provided to the public in accordance with the City's noticing requirements.

Comment No. 500-3

Additionally, the groundwater and dewatering analysis is confusing and doesn't address many issues. The levels for groundwater are pretty shallow in the area. What sort of dewatering can we expect? Please explain the health implications of dewatering. How can we know the full extent of groundwater impact if we do not know how long the project will last? Where will groundwater be disposed and has there been a health impact study?

Response to Comment No. 500-3

Refer to Response to Comment Nos. 3-7, 11-5, 11-25, 16-74, 16-85, and 26-65 and the Dewatering Report (Appendix FEIR-13 of this Final EIR) with respect to temporary construction dewatering as it relates to subsidence. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Draft EIR's analysis of groundwater quality. With respect to the health implications of dewatering, refer to Response to Comment No. 11-5.

Comment No. 500-4

An EIR that is thousands of pages with no clear guide for reading it is meant to mislead normal residents. Everything is so general it is hard to even navigate the appendices. Can you provide a greater explanation as to each reference where we are supposed to be looking? When were residents expected to have time to read through this massive EIR? Is this EIR even compliant with standards to educate the community?

Response to Comment No. 500-4

Refer to Response to Comment No. 26-4 regarding the length of the Draft EIR.

The Draft EIR is complete, adequate, and meets the requirements of CEQA. Section I, Executive Summary, of the Draft EIR includes an overview of the purpose and focus of the Draft EIR, a description of the organization of the Draft EIR, a general description of the Project, a general description of areas of controversy, a description of the public review process for the Draft EIR, a list of the PDFs and mitigation measures to be implemented as part of the Project, and a summary of the alternatives to the Project evaluated in the Draft EIR, including identification of the Environmentally Superior Alternative, consistent with CEQA Guidelines Section 15123. The Project Description contained in Section II, Project Description, of the Draft EIR meets the requirements of CEQA Guidelines Section 15124, as it describes the Project Site's precise location, includes a statement of the Project objectives, and provides a general description of the

Project's characteristics. The environmental setting contained in Section III, Environmental Setting, of the Draft EIR meets the requirements of CEQA Guidelines Section 15125 as it includes a description of the physical environmental conditions in the vicinity of the Project Site as well as a discussion of applicable land use plans. More detailed information regarding the Project's potential environmental effects is provided in Sections IV through VI of the Draft EIR, consistent with CEQA Guidelines Section 15126.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 for further discussion of how the Draft EIR meets the requirements of CEQA and additional discussion of the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Refer to Response to Comment No. 32-3 regarding how the Project exceeded CEQA's noticing requirements.

Comment No. 500-5

Why hasn't there been a public hearing to have the project details and impacts explained in clear terms that community members can understand and respond to?

Response to Comment No. 500-5

As discussed in Response to Comment No. 32-3 above, following the publication of this Final EIR, the Project and EIR will be considered during public hearings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings, the dates of which will be published in accordance with the City's noticing requirements.

Comment No. 500-6

There are too many unknowns here. I don't think you can put our community at risk like this and have so little to show for it. Maybe next time residents should be consulted about projects like this. I hope you reconsider this whole thing.

Response to Comment No. 500-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 500-2 through 500-5.

Comment Letter No. 501

Robert Shiell
853 S. Spaulding Ave.
Los Angeles, CA 90036-4607

Comment No. 501-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 501-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 502

Barton Shisoholha
8004 W. Fourth St., #5
Los Angeles, CA 90048-4450

Comment No. 502-1

The proposed Television City mega development is bad for Beverly Fairfax community and I would ask that more be done to study the impact it will have. I understand that the film and television industry is important but first and foremost our elected officials should protect residents from quality of life, especially against the all the negative this project will bring.

Response to Comment No. 502-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Note that quality of life is not a CEQA issue.

Comment No. 502-2

The proposal only has 5,300 parking spaces. This facility will be staffed by 8,000 employees and will also bring with it and thousands of audience members as well, where will the overflow parking be and has that even been studied? How will this affect Grove Drive? The metric being used to measure the traffic impact is called "VMT" but how and why this metric was chosen was never laid out to the public and I think fails to capture what the actual disruption will look like.

Response to Comment No. 502-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access to and use of The Grove Drive.

The change from LOS to VMT was implemented by the State of California, and all cities in California were required to follow the new protocol for determining the significance of impacts related to transportation. The origin of, and basis for, requiring transportation

analyses in CEQA documents to be based on VMT is discussed on pages IV.K-4 through IV.K-6 in Section IV.K, Transportation, of the Draft EIR. SB 743 directed the Governor's Office of Planning and Research to develop revisions to the CEQA Guidelines by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics for traffic level of service (i.e., traffic congestion). The rationale behind this change was that reducing the miles traveled by automobiles associated with new development would be more effective than continuing to widen roadways to accommodate the additional travel demand. As further discussed in Section IV.K of the Draft EIR, including, but not limited to, on pages IV.K-6, IV.K-13, IV.K-14, and IV.K-31, LADOT developed the VMT Calculator to estimate project-specific daily household VMT per capita and daily work VMT per employee for developments within City limits. The methodology for determining VMT based on the VMT Calculator is consistent with the CEQA Guidelines and the TAG. Refer to Topical Response No. 8, Vehicle Miles Traveled.

Comment No. 502-3

This project is projected to need 60,000 truck trips to complete its construction. The city does not lay out if it has studied how the proposed staging area for these trucks will affect Loyola Highschool, Kaiser hospital, the Holocaust Museum, or the historic cemetery. I would ask that each of these important community assets be studied individually so that we can clearly see how the community will be changed.

Response to Comment No. 502-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction truck trips.

Refer to Response to Comment Nos. 178-3, 183-1, and 231-4 regarding off-site staging. All haul truck staging locations would be provided on-site; accordingly, no haul trucks would be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 502-4

The applicants anticipates that this project will take 25 years to build. The city needs to study if this constant construction will lead to a decline in new businesses opening in the area and how this extended construction period will harm existing businesses. What person will want to explore and enjoy a neighborhood engulfed in truck traffic and dust?

Response to Comment No. 502-4

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

As discussed in Section IV.A, Air Quality, of the Draft EIR, the Project would comply with SCAQMD Rule 403, which requires dust control measures during construction activities. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM₁₀ emissions to less than 50 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Best available control measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers, and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the USEPA. This Final EIR also includes a quantitative HRA which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Refer to Response to Comment No. 26-E.1-2 and the HRA included as Appendix FEIR-10 of this Final EIR for further discussion.

Comment No. 502-5

These are just a few of the many concerns I have, please deny this project until more due diligence has been done on this will change our neighborhood.

Response to Comment No. 502-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 502-2 through 502-4.

Comment Letter No. 503

Ronald Shlesman
531 N. Alta Vista Blvd.
Los Angeles, CA 90036-1966

Comment No. 503-1

I am opposed to the TVC 2050 mega development.

Response to Comment No. 503-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 503-2

The developer doesn't seem to care at all about noise pollution. Remember—this studio is very near people's homes. They're making the Television City building bigger and noisier. There are children living nearby with sensory issues, it is hard enough now without a new studio doing whatever it wants very close to their homes.

Response to Comment No. 503-2

This comment does not raise any specific issue with the noise analysis. Note that the detailed noise analysis provided in Section IV.I, Noise, of the Draft EIR concludes that noise impacts associated with operation of the Project would be less than significant. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 503-3

Here are my big concerns:

How much noise will be generated during construction of the development? I am seeing a 20-year build out. Will the community be dealing with noise from that construction the entire time? I believe we should have a more detailed construction plan. How much noise will be generated by each phase of the development, and who will be impacted by that?

Response to Comment No. 503-3

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

The Project's potential noise impacts during construction are analyzed on pages IV.I-35 to IV.I-43 in Section IV.I, Noise, of the Draft EIR. The noise assumptions for each piece of construction equipment are provided in Table IV.I-9 of Section IV.I, Noise, of the Draft EIR, and the resulting noise levels for each construction stage at each receptor location are provided in Table IV.I-10 of the Draft EIR. Noise levels with mitigation measures included are provided in Table IV.I-19 of the Draft EIR.

Comment No. 503-4

Where is the analysis of expected noise levels, and from what sources, that will be generated during construction and then generated when the facility starts being used?

Response to Comment No. 503-4

Refer to Response to Comment No. 503-3 regarding the construction noise analysis.

With respect to operational noise, refer to pages IV.I-43 through IV.I-56 of the Draft EIR. As discussed therein, impacts would be less than significant.

Comment No. 503-5

What about outdoor gatherings? Will these be on site? Could there be concerts? Is there any rule preventing those from happening? How frequent could outdoor gatherings be? How many people would be allowed to attend an outdoor gathering on the site at once? What times would they be allowed? Are there any rules governing what kinds of outdoor gatherings are allowed? Could they host a party with a thousand people outside? Could people be yelling, cheering, or screaming? Did the EIR study these noise impacts? If not, why would they be excluded?

Response to Comment No. 503-5

Refer to Response to Comment No. 26-135 for a discussion of the outdoor noise analysis, including assumptions with respect to the location of outdoor decks and the number of people. As discussed on page IV.I-45 in Section IV.I, Noise, of the Draft EIR, outdoor gathering areas would be used between 7:00 A.M. to 12:00 A.M. In addition, Project Design Feature NOI-PDF-4 establishes the noise limits for any amplified sound system for outdoor gatherings on roof decks as to not exceed the City's noise limit (i.e., an increase of

5 dBA above the ambient noise level) at any off-site noise-sensitive receptor location. As provided in Table IV.I-13 in Section IV.I, Noise, of the Draft EIR, the estimated noise levels from the outdoor uses, including amplified sound, would be below the significance criteria and noise impacts would be less than significant. Lastly, the Project does not propose a concert venue. Refer to Topical Response No. 3, Permitted On-Site Uses.

Comment No. 503-6

I would appreciate a response to these concerns. Many residents who hope for a little more peace and quiet would really appreciate additional information from the developer

Response to Comment No. 503-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 503-2 through 503-5.

Comment Letter No. 504

Elliot Shoenman
8256 W. Fourth St.
Los Angeles, CA 90048-4402

Comment No. 504-1

I heard that there's a plan to spend twenty years renovating TV City, and that part of that plan is to allow a lot more traffic near our schools. There's enough smog and traffic to deal with in LA as it is. We should not be exposing our children even more to these dangers by parking thousands of 18-wheelers near places like Loyola High.

Response to Comment No. 504-1

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Refer to Response to Comment Nos. 178-3, 183-1, and 231-4 regarding off-site staging. All haul truck staging locations would be provided on-site; accordingly, no haul trucks would be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Response to Comment Nos. 426-4 regarding emissions near the school. As discussed therein and shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with incorporation of mitigation measures. The Project also includes a quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Refer to Response to Comment No. 26-E.1-2 for further discussion of the HRA.

The remainder of this comment provides a general statement on concern regarding the traffic and air quality conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 504-2

Added traffic is one thing in this city, but it isn't even going in service to the neighborhood. We still have a lack of housing all across the city. Instead of building something we could all use, now you want to just enrich another developer. Come on.

Response to Comment No. 504-2

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment No. 504-3

I have not seen any analysis on how these issues will be mitigated, likely because there isn't any. How can knowingly exposing school children to toxic fumes from cars and trucks be justified anyway? You would have to admit that approving a project with these kinds of impacts is deciding that any so-called benefits outweigh these harmful health effects.

Response to Comment No. 504-3

As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptors. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 504-4

We cannot get exploited like this. Please consider your constituents when voting out no on this ridiculous plan.

I would appreciate a response

Response to Comment No. 504-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 505

Linda Shoenman
8256 W. Fourth St.
Los Angeles, CA 90048-4402

Comment No. 505-1

The city of Los Angeles has dishonored its citizens (yet again!). Time and time again, development projects walk all over residents of this city just to make the rich richer and richer, and richer. Is this why there has been no public hearing regarding the TVC 2050? How many billions will this project make the new owner of the CBS building? And at the expense of who?—the residents of Beverly Fairfax. It is ABHORRENT.

Are residential needs no longer relevant? Don't bother asking that to the millionaires and billionaires of this city, and don't even think about asking the politicians....

Response to Comment No. 505-1

As discussed in Response to Comment No. 32-3, following the publication of this Final EIR, the Project and EIR will be considered during public hearings before City decision-makers prior to any decision being made on the Project. The remainder of this comment, which does not address CEQA-related issues, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 505-2

I can hardly park my car now. What will it be like for years of construction to come? The EIR says 3 years of construction, but you can't tell me that a project of this magnitude will be completed in 3 years. To me, we are talking about 10+ years of ridiculous traffic, detours on our already loaded streets, and public safety issues that nobody has even considered. But yes, the almighty dollar reigns again.

Response to Comment No. 505-2

This comment is identical to Comment No. 239-3. Please refer to Response to Comment No. 239-3, above.

Comment No. 505-3

I am requesting that the city hold a public hearing regarding TVC 2050 with posted public notices and full presentation given to our community members. There should be an

opportunity for all concerned members of the community to ask as many questions as needed and get their questions answered.

Response to Comment No. 505-3

Refer to Response to Comment No. 505-1 regarding public hearings.

Comment Letter No. 506

Linda Shoenman
8256 W. Fourth St.
Los Angeles, CA 90048-4402

Comment No. 506-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 506-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 506-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 506-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 506-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 506-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 506-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 506-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 506-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 506-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 506-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 506-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 506-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 506-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 507

Lena Shor
935 N. Genesee Ave., Apt. 3
West Hollywood, CA 90046-7348

Comment No. 507-1

As a community member, I have quite a few concerns regarding the Television City project. From a residential standpoint, I do not know what these plans mean for the future of my neighborhood.

Response to Comment No. 507-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 507-2 through 507-6.

Comment No. 507-2

In the EIR, I read that the building of this project is anticipated to begin in 2043. If that information is true, why is there no mention of the construction site being electric? We simply cannot afford to pollute LA more by allowing these toxic emissions.

Why is the project planning to use natural gas? What does that say about LA's efforts to combat climate change?

Response to Comment No. 507-2

Please refer to Response to Comment No. 26-137 regarding the feasibility of electric construction equipment. In addition, the Project would use electric power, if available, and/or solar generators, rather than temporary diesel or gasoline generators during construction per Project Design Feature AIR-PDF-1 (see page IV.A-47 of the Draft EIR).

New natural gas would not be used as part of the Project (with certain exceptions) consistent with the City's new all-electric buildings ordinance. Please refer to Response to Comment No. 26-51 regarding the City's new all-electric buildings ordinance, with which the Project would comply.

Regarding toxic emissions, as stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as

Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations. The HRA was conducted using conservative assumptions and utilizes methods formulated to be protective of the health of the most sensitive individuals in the population. All Project-related emission sources, including diesel construction equipment, were analyzed in the HRA.

Comment No. 507-3

I feel extremely unsafe when imaging this project in our neighborhood. Who is willing to address the fact that this area of LA has naturally occurring methane? What happens when these high levels of methane are released into the air, and we are left struggling to breathe? This exposure results in 1 million premature deaths every year, and the EIR leaves this unaddressed. What is the point in building underground studios if this risk jeopardizes the city's health?

Response to Comment No. 507-3

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane and methane mitigation.

Comment No. 507-4

I also read there will be a gas station and a mechanic shop on site. Once again, this does not seem very safe. Please evaluate the impacts having a fueling station near residents will have and provide those impacts when responding to my letter.

Response to Comment No. 507-4

The Project would not include fueling stations. This clarification is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 507-5

As community members, why are we not aware of where the fueling station will be or where the power generators will be located?

Response to Comment No. 507-5

Please refer to Response to Comment No. 26-E.1-18 for a detailed discussion of the Project's emergency generators, their potential locations, and their required emission standards.

Refer to Response to Comment No. 507-4 regarding fueling stations.

Comment No. 507-6

Besides safety, is the public's well-being taken into account at all during the planning of this project? The EIR does not state that the loudest activities will remain in property lines. Because there is no set plan of development, can noisy activities happen anywhere? I am very worried about what this means for the noise levels of operation. Not only during daily operations, but what about the noise levels at the events that will be held at Television City and the filming that will take place? There is no analysis on when these things will take place. Is the community going to be tormented by constant loud music and hollering?

Response to Comment No. 507-6

The issues discussed in this comment are similar to those in Comment Nos. 147-3, 247-4, and 298-7. Refer to Response to Comment Nos. 147-3, 247-4, and 298-7, above.

Comment No. 507-7

There does not seem to be near enough evaluation for this project to become a reality. The city planners and everyone involved need to take into account the neighborhoods and their safety, privacy and respect.

Response to Comment No. 507-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 507-2 through 507-6.

Comment Letter No. 508

Gurinder Sidhu
537 Alandele Ave.
Los Angeles, CA 90036-3250

Comment No. 508-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 508-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 509

Jacob Sidney
537 N. Orlando Ave., Apt. 5
Los Angeles, CA 90048-2530

Comment No. 509-1

I have questions about the Television City Project as well as a fair number of concerns. I live in the area and feel as though many components of the project have been overlooked.

Response to Comment No. 509-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 509-2 through 509-5.

Comment No. 509-2

My first question is about the phasing of the project. Why haven't we seen a phasing plan so that we know what is being built and when? I want to know when there will be traffic in which areas so I can prepare accordingly for that. However, I cannot do that because I don't know what is being built.

Response to Comment No. 509-2

Refer to Response to Comment No. 9-24 regarding the Project timeline. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 96-5 regarding the proposed CTMP. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Project Description and the proposed development program that was analyzed in the Draft EIR.

Comment No. 509-3

First of all, I am concerned about the lack of housing in the project. Los Angeles needs more housing and yet this new proposal to expand the studios does not include any housing. This land could be used to house Los Angeles residents, which would be far more beneficial for the city than simply more studios, offices and parking space. Did the developer ever consider adding housing to this proposed massive plan? Why isn't there a requirement that he has to?

Where is it expected all the employees that will be there will live? Will landlords evict current tenants and raise rental rates, to make more rentals available to all those people?

Response to Comment No. 509-3

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, the provision of housing, and the consideration of economic and social effects under CEQA. Refer also to Response to Comment No. 159-4 regarding the consideration and analysis in the Draft EIR of an alternative to the proposed Project that includes a housing component.

Comment No. 509-4

Second, I don't understand how the city can place a large parking structure of [sic] Grove Drive. Anyone who lives in the area knows that Grove Drive is right across from a park that is filled with seniors and children. Not to mention, it's already a small street that cannot handle more traffic. How does the developer plan to protect the kids and elderly residents that frequent this area? How do you plan to mitigate the diesel exhaust coming from the trucks?

Response to Comment No. 509-4

The southeast parking structure in the Conceptual Site Plan is located immediately adjacent to the larger parking structure for The Grove shopping center. The Grove Drive is classified as a Collector Street in the City's Mobility Element of the General Plan, and the distribution of Project access to and from the parking structures serving the Project and serving The Grove shopping center is consistent with the function and purpose of a Collector Street. Project parking would be spread out throughout the Project Site.

Section IV.A, Air Quality, of the Draft EIR includes an analysis of construction emissions. As discussed therein, the Project would result in an exceedance of NO_x. With implementation of Mitigation Measures AIR-MM-1 through AIR-MM-4, peak daily regional NO_x emissions would be reduced but would still exceed the SCAQMD regional threshold of 100 pounds per day. As such, Project construction would result in a significant Project-level and cumulative impact related to regional NO_x emissions, even with the incorporation of feasible mitigation measures. Although temporary, this impact would be significant and unavoidable. However, construction and operation of the Project would not result in localized air quality impacts. The Project also includes a quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Refer to Response to Comment No. 26-E.1-2 for further discussion of the HRA. Please refer to Response to Comment No. 231-3 for a

detailed discussion of health risk impacts (including seniors and children) related to Project-related operations.

Refer to Topical Response No. 12, Safety and Congestion, regarding pedestrian safety.

Comment No. 509-5

This will also add a ton of traffic and we have yet to see what the impact will be when people use the Grove gate. When will we see adequate analysis to understand this impact? How can the plan move forward before there is thorough understanding of the impacts?

Response to Comment No. 509-5

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The effects of Project vehicles entering and exiting the Project Site, including via The Grove Drive driveway, are included in the non-CEQA operational analysis, which is summarized in Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR). The results show that the three signalized intersections providing access to the Project Site would all operate at LOS B after full buildout of the Project. Topical Response No. 12 provides a discussion of the queuing provided at each signalized entrance to the Project Site.

Refer to Response to Comment Nos. 26-171 and 26-E.4-17 regarding access to and use of The Grove Drive.

Comment No. 509-6

I appreciate you taking the time to read this letter and answering my questions. I hope an agreement can be reached that has more concern for the community members who will be impacted by this project.

Response to Comment No. 509-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the

decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 509-2 through 509-5.

Comment Letter No. 510

Pamela Silverman
750 S. Spaulding Ave., Apt. 101
Los Angeles, CA 90036-4551

Comment No. 510-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 510-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 511

Lachap Simmans
6151 Blackburn Ave.
Los Angeles, CA 90036

Comment No. 511-1

I am writing to express concern about the excavation activity described in the DRAFT EIR for this project. It appears that the development would be allowed to go down 45 feet. Given the tar and methane below ground level in the area, this kind of allowed excavation seems much too risky. Please address this concern.

Response to Comment No. 511-1

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Draft EIR's analysis of groundwater quality. Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of tar and methane and the associated mitigation.

Comment No. 511-2

Do we know how this will impact groundwater? What kinds of gases will be released? What about the impact of hundreds of trucks full of dirt leaving the site?

Response to Comment No. 511-2

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, and 26-87 regarding methane and subsurface gases. Refer to Response to Comment Nos. 3-7 and 11-5 and the Dewatering Report (Appendix FEIR-13 of this Final EIR) with respect to construction dewatering as it relates to groundwater quality. Additionally, as discussed on page IV.F-40 of Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, it is conservatively assumed that an estimated 60,000 cubic yards of exported soil may include hazardous soil materials which would be exported to Buttonwillow Landfill in Kern County. Project construction activities would not create a significant hazard to the public or the environment through the use, handling, transport, or disposal of hazardous materials during construction, and development of the Project would not exacerbate any current environmental conditions so as to create a significant hazard to the public or the environment. With implementation of appropriate hazardous materials management protocols at the Project Site and continued compliance with all applicable local, state, and federal laws and regulations relating to environmental protection and the management of hazardous materials, impacts related to the routine transport, use, or disposal of hazardous materials during construction would be less than significant.

Comment No. 511-3

I am also concerned about water usage. The plan proposes that TVC 2050 will use six times more water than the current CBS Television City site. We are in a drought. How can this possibly not be a significant impact? How does it account for all the different uses of water [sic]

I do not understand their water plan and I can't see how the city can move forward without knowing.

Response to Comment No. 511-3

Refer to Response to Comment Nos. 16-66 and 26-175 with regard to the adequacy of water supply and consideration of drought conditions and to Response to Comment No. 223-2 with regard to the types of uses that would generate a demand for water within the Project Site.

Comment Letter No. 512

Sizeifman
421 N. Poinsettia Pl.
Los Angeles, CA 90036-2504

Comment No. 512-1

The plan being proposed for Television City is alarming for me and my neighbors, long time residents of the area. It seems pretty clear that there will be significant impacts to our neighborhood if this project gets built.

Response to Comment No. 512-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 512-2 through 512-5.

Comment No. 512-2

One of my main concerns has to do with all of the added emissions that will pour into our community. The addition of thousands of cars and construction trucks into our already horrendous traffic is unimaginable. There is so much idling of vehicles that occurs now because we sit bumper to bumper for miles, can't get through intersections, and it takes 3 and 4 times as long to get where we're going because of the gridlock. So what do the studies show about the actual impacts that the community will have to deal with? Specific and detailed information is requested. What exactly will be the pollutants, the levels of emissions, and impacts to our health as a result?

Response to Comment No. 512-2

Refer to Sections IV.A, Air Quality, IV.E, Greenhouse Gas Emissions, and IV.K, Transportation, of the Draft EIR's for the analyses of the Project's potential air quality, GHG and transportation impacts.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Response to Comment No. 155-4 regarding the proposed CTMP.

Refer to Response to Comment No. 126-2 regarding truck idling. Tables IV.A-7, IV.A-8, IV.A-10, IV.A-11, and IV.A-12 in Section IV.A, Air Quality, of the Draft EIR summarize the Project emissions, including emissions from vehicles, and compare those emissions to the applicable thresholds of significance. Refer to Topical Response No. 10, Trip Generation, regarding vehicle trips during operation of the Project. Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction vehicle trips.

As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation during the long-term buildout would be less than significant at sensitive receptor locations.

Comment No. 512-3

Please don't refer me to the air quality study or an appendix. These documents are technical, and the average resident should not have to try to decipher the information. And the draft EIR refers to a "general description of the adverse health impacts resulting from the pollutants at issue is all that can be feasibly provided at this time." Does the city expect to consider and approve an enormous development with only a "general description of adverse health impacts"? Is the city going to tell its residents that it is prepared to do that?

Response to Comment No. 512-3

This comment is referring to the discussion of regional emissions and human health as it relates to the *Friant Ranch* case on pages IV.A-80 to IV.A-82 of the Draft EIR. Refer also to Response to Comment No. 11-26. As discussed in Response to Comment No. 11-26, the City has provided guidance documenting the public health consequences resulting from exposure to pollutants. The guidance document also explains that direct correlation of an individual project's emissions and health effects is not feasible, as no expert agency has approved a quantitative method to identify health effects for the scale of projects typically analyzed in City EIRs. Section 3.d in Section IV.A, Air Quality, of the Draft EIR analyzed localized construction and operational air quality impacts resulting from Project emissions consistent with SCAQMD Localized Significance Threshold (LST) guidelines. SCAQMD's localized significance thresholds represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard. As shown in Table IV.A-10 of the Draft EIR, Project localized operational emissions would not exceed SCAQMD significance thresholds, resulting in a less-than-significant impact. As shown in Table IV.A-11 of the Draft EIR, Project localized construction emissions with incorporation of mitigation measures would not exceed SCAQMD significance thresholds, resulting in a less-than-significant impact. Thus, no

sensitive receptors would be impacted by increased air emissions due to construction and operation of the Project.

Section 3.d in Section IV.A, Air Quality, of the Draft EIR also analyzed air quality impacts associated with Project vehicle trips. Consistent with the carbon monoxide (CO) methodology discussed on page IV.A-45 in Section IV.A, Air Quality, of the Draft EIR, if a project intersection does not exceed 400,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis. At Project buildout, the highest average number of daily trips at an intersection would be approximately 65,260 trips at La Brea Avenue and Beverly Boulevard, which is substantially below the daily traffic volumes expected to generate CO exceedances as evaluated in the 2003 AQMP. Therefore, the Draft EIR correctly concluded that the Project does not trigger the need for a detailed CO hotspots model and would not cause any new or exacerbate any existing CO hotspots, and impacts related to localized mobile source CO emissions would be less than significant. Thus, no sensitive receptors would be impacted by Project-related vehicular air emissions due to the operation of the Project.

In response to SCAQMD comments on the Draft EIR, a quantitative HRA has been prepared and is included as Appendix FEIR-10 of this Final EIR. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the PMIs would be below SCAQMD's risk thresholds, confirming the conclusions on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact.

SCAQMD risk thresholds are 10 in one million over 30 years of exposure for new carcinogenic (cancer) risks, a value of one for acute (short-term exposure) risks, such as many non-recurring respiratory discomforts, and a value of one for chronic (annual) risks, such as the formation of long-term impacts, such as bronchitis. As shown in the HRA, the Project's risk values would be well below these established risk values at the maximally exposed receptors (peak impact).

Comment No. 512-4

Please explain how the city considers this project to be a typical city project? How were estimates derived as to the daily construction NOx emissions? The draft EIR suggests the maximum daily construction NOx emissions of 105 pounds IS over the South Coast Air Quality management district's significance threshold, so doesn't that mean the emissions will exceed the significance threshold? Why would that be allowed? And what about the reference to regional emissions? What matters is the emissions that float into our neighborhoods, our backyards, our schools and playground, our parks—so are emissions being studied for our community or for the region? Because looking at emissions in a

regional framework is not the same thing as the impacts to the immediate and surrounding community.

Response to Comment No. 512-4

Section IV, Other CEQA Considerations, of the Draft EIR summarizes all significant unavoidable impacts which might be associated with the Project and indicates the reasons why the Project is being proposed, notwithstanding those impacts. Further, exceeding an impact threshold is not prohibited or against the law. Rather, exceeding an impact threshold requires that: (1) feasible mitigation measures would need to be provided; and (2) if an impact is still significant, then the decision-makers need to justify why the project benefits override the significant unavoidable impact. As discussed above in Response to Comment No. 512-3, localized construction and operational emissions would remain below the significance thresholds for the closest sensitive receptors to the Project Site after mitigation.

Comment No. 512-5

The city should be holding neighborhood meetings to make clear all of the relevant information about the air quality, health risks, and adverse impacts related to this project. When will those meetings be held?

Response to Comment No. 512-5

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding future public hearings.

Comment No. 512-6

I look forward to your response to my questions.

Response to Comment No. 512-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 512-2 through 512-5.

Comment Letter No. 513

Fred Smillow

Comment No. 514-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 514-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 515

Leslie Sobel
428 N. Kilkea Dr.
Los Angeles, CA 90048-2229

Comment No. 515-1

Television City is proposing an expansion and there are problems with the DEIR. I need more information, please.

Response to Comment No. 515-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 515-2 through 515-6.

Comment No. 515-2

As a 30 year resident, my primary concern is related to traffic and its environmental impact. If there is an underground parking garage, please confirm that all vehicles be able to access it only through the Beverly and Grove gates. In addition, the garage appears to have facilities for production in it. How will cars and those production areas both be able to use the garage?

Response to Comment No. 515-2

As discussed in Topical Response No. 13, Parking, parking would be spread out across the entire Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site. Refer to Section A, Queuing at Project Driveways, and Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, for details regarding parking access. The southeast parking structure in the Conceptual Site Plan does include a ground level basecamp area, and the trucks to/from the basecamp area and the automobiles utilizing the parking spaces would have separate travel paths so as to not interfere with one another. Refer to Response to Comment Nos. 26-121 and 26-122 regarding the difference between basecamp and production support.

The environmental impacts associated with Project trips are analyzed in the Draft EIR. As discussed in Section IV.K, Transportation, of the Draft EIR, transportation impacts would be less than significant. Refer to the analysis of off-site noise on pages IV.I-48 through IV.I-54 of Section IV.I, Noise, of the Draft EIR. As demonstrated therein, impacts

would be less than significant. With respect to the effect of traffic on air quality, refer to page IV.A-71 of Section IV.A, Air Quality, of the Draft EIR. As demonstrated therein, impacts would be less than significant.

All vehicles would be able to access any parking facility on the Project Site from any of the three signalized entrances to the Project.

Comment No. 515-3

The number of parking spaces listed is 5,300, so please explain how the 8,000 employees will park. How was that number derived as an accurate estimate for parking spots considering the employees and visitors to the site?

Response to Comment No. 515-3

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 515-4

Please provide an explanation of the Vehicle Miles Travelled analysis. It appears to show that average travel distance is 3.5 miles, which does not seem possible for workers at Television City. Additionally, are the miles travelled for visitors included? The audience members coming to the site each day will potentially number in the thousands. Please show how these people's miles travelled are included in the VMT analysis. Also show how the additional traffic and air pollution will increase.

Response to Comment No. 515-4

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. The 3.5-mile average travel distance statement in this comment represents an inaccurate interpretation of the work VMT per employee calculation. Audience trips represent a small percentage of the total trips to/from the Project Site and are not included in the calculation of work VMT per employee, consistent with CEQA requirements.

Refer to Topical Response No. 10, Trip Generation, for information about studio audience and visitor trip generation. As discussed therein, these trips comprise a small

percentage of the total trips to/from the Project Site. When other trip types are a small component of overall VMT, the Technical Advisory on Evaluating Transportation Impacts in CEQA (California Governor's Office of Planning and Research, December 2018) recommends that the focus of VMT reduction efforts should be on trips between home and work. Therefore, the work VMT per employee analysis is based on vehicle miles of travel by the employees from their homes to the Project Site, which is not affected by visitors, audience members or delivery truck trips.

Refer to Response to Comment No. 515-2 for a discussion of air quality impacts associated with construction.

Comment No. 515-5

The trucks during construction create additional gridlock and pollution, not to mention an unsafe environment for me and my dog Roxy.

Response to Comment No. 515-5

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Refer to Response to Comment No. 515-2 regarding the Draft EIR's air quality analysis. Refer also to Response to Comment No. 26-E.1-2 and the quantitative HRA included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant.

Comment No. 515-6

How will these problems be addressed to the satisfaction of the community? This all seems very unsafe.

Response to Comment No. 515-6

The Project's CTMP includes a provision that the Applicant would designate a construction manager to serve as a liaison with the surrounding community and respond to any construction-related inquiries.

In terms of potential traffic impacts during the operation of the completed Project, the neighbors, Applicant, and LADOT will work together to prepare an NTMP aimed at reducing traffic impacts on the adjacent neighborhoods.

Comment Letter No. 516

Marnin Somerman
6437 Lindenhurst Ave.
Los Angeles, CA 90048-4731

Comment No. 516-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 516-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 517

Erica Sommer
208 S. Formosa Ave.
Los Angeles, CA 90036-2814

Comment No. 517-1

In the TVC 2050 Environmental Impact Report (Land Use and Planning Chapter), the report refers to a studio headquarters site to be adaptable and expandable over time to meet the changing needs of the entertainment industry. How are impacts of a proposed project supposed to be analyzed while the project could also be allowed to be adaptable and expandable? How then are parameters established for what could be allowed as part of adapting and expanding? Without any parameters, then it would seem a developer could do anything. Who defines what the changing needs of an industry are? If industry needs are always changing, how does the community then respond to a building that could continue to change and expand? How can a community be assured that information about the true impacts is factual and grounded in reasonable assumptions?

Looking at the rest of the chapter, currently television city is designated under 'community commercial' zoning but this proposed project wants to expand the zoning of the site to encroach into the 'limited commercial' zoning and 'neighborhood commercial' zoning overlay that sits on the corner of Beverly Boulevard and The Grove Drive. What do these things mean? What are the implications for these zoning changes? Wouldn't this zoning change ultimately reduce housing in the area? Is there no way for the proposed development to be completed without a zoning change that would inevitably reduce housing?

Response to Comment No. 517-1

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-13 with regard to the Project Description and proposed Specific Plan, the proposed development program that was analyzed in the Draft EIR, the proposed Land Use Exchange Program, and the regulatory framework in the proposed Specific Plan. Refer to Response to Comment No. 26-16 regarding the Project objective to "provide an expandable, flexible, and operationally seamless production ecosystem that can respond to evolving market demands, support content creation, and maximize studio production capabilities." An expandable, flexible and operationally seamless production ecosystem is referring to the mix of uses and activities that are needed to support the continued operation of a modern studio in a manner that responds to the changing demands of the entertainment industry. Refer to Topical Response No. 3,

Permitted On-Site Uses, and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan.

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed General Plan Amendment to change the Project Site's existing land use designations to a unified Regional Commercial designation, which was fully analyzed in the Draft EIR in accordance with CEQA; refer to Section IV.H, Land Use and Planning, of the Draft EIR.

Refer to Response to Comment No. 16-73 regarding how no changes to the allowable residential density potential would occur as a result of the Project.

Comment Letter No. 518

Nachum Saver
428 N. Detroit St.
Los Angeles, CA 90036-2529

Comment No. 518-1

As a 35 year resident, I am very concerned about the proposed increase in the size of the Television City studio.

Response to Comment No. 518-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 518-2 and 518-3.

Comment No. 518-2

What does the construction period mean for my neighborhood? What kinds of disruptions to traffic will take place? On all streets surrounding the studio? More disruptions on some streets than on others? How the community supposed to keep track? What notifications will be sent out as to the disruptions, what they will be and when they will be scheduled? How far in advance will the area be told? Does it depend on what kind of disruption it is, such as a lane closure, or a sidewalk being torn up, or parking spaces being blocked?

Response to Comment No. 518-2

This comment is identical to a portion of Comment No. 129-2. Refer to Response to Comment No. 129-2, above.

Comment No. 518-3

The project developers owe it to the residents of and visitors to this area to designate a specific route for truck drivers to follow instead of them deciding their own path through the neighborhood. What will those routes be? Will truck traffic be limited to certain times of the day and days of the week? Will the truck routes be determined prior to the EIR being finalized and project possibly approved, not after? Because otherwise how are the public, city planners, and council members (who will be voting on the project) be fully informed, if these kinds of important pieces of information are not known beforehand?

Response to Comment No. 518-3

This comment is identical to a portion of Comment No. 129-2. Refer to Response to Comment No. 129-2, above.

Comment No. 518-4

I would appreciate responses to all of my questions and concerns.

Response to Comment No. 518-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 518-2 and 518-3.

Comment Letter No. 519

Lola Spector
612 N. Laurel Ave.
Los Angeles, CA 90048-2321

Comment No. 519-1

The studios are in the business of promoting themselves and the movies and TV shows they make. What is the plan for billboards and advertising signage in the area? Will the planned signage be distracting? Will it block views? How large? We already have a lot signs in the area, and to me, it overly commercializes the area and cheapens the place where we live. Will there be a limit to the kinds, size and amount of signage to make sure it isn't splattered everywhere? It's Hollywood. They are in the business of "big, big and bigger!" How do we keep the signs from doing the same? Are there regulations to stop these billboards being lit up at night? Will video boards be allowed? Let's be real.

Response to Comment No. 519-1

This comment is identical to Comment No. 408-4. Refer to Response to Comment No. 408-4, above.

Comment No. 519-2

These types of billboards are a blight on the community and use a huge amount of energy.

Response to Comment No. 519-2

This comment is identical to Comment No. 408-5. Refer to Response to Comment No. 408-5, above.

Comment No. 519-3

Finally, what is the studio going to let people work from home and limit traffic and congestion? Zoom meetings work, and remote working should be factored into new large-scale-employers coming into the area. Where is the study that looks at how many of the new employees can do some of those expected jobs remotely? How many staff could be impacted? People can collaborate over vast distances effectively, and don't need to commute across town to sit in an office and type on a computer.

Response to Comment No. 519-3

This comment is identical to Comment No. 408-6. Refer to Response to Comment No. 408-6, above.

Comment Letter No. 520

Debra Spidell
464 S. Orange Dr.
Los Angeles, CA 90036-3510

Comment No. 520-1

I learned about the CBS studio expansion, or the "Television City Project," and after looking through the draft EIR I have a lot of concerns. It looks like we can all expect to have major, disruptive construction with no end in sight.

Response to Comment No. 520-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 520-2 through 520-6.

Comment No. 520-2

The developer has put in no effort to educate the community, and we should not be expected to have to learn everything on our own.

Response to Comment No. 520-2

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 520-3

I am very concerned about the issue of signage for this project. It seems like the entire area is just going to be covered in huge billboards. Is that the plan? How many and where will they be installed? Will there be other signage as well? Will the signs be lighted at night? What sort of costs will be pushed on to the community for the energy used? It always seems like taxpayers are responsible for picking up the costs for major projects like this one, and we never even asked for this project to be here.

Response to Comment No. 520-3

Refer to Response to Comment Nos. 5-10, 26-129, and 277-2 regarding signage.

Regarding the energy used for the signage, refer to Response to Comment No. 102-6.

The Project would be privately funded and would not burden the community and tax payers with the cost of energy usage by the Project.

Comment No. 520-4

Also please explain what the project alternatives are for this project? How are alternatives even identified? Will the EIR address every possible alternative in its analysis? What about alternatives that aren't included in the draft EIR? Please explain what an analysis of alternatives looks like and whether residents can expect to hear about any alternatives. How about the alternative of no project? Why isn't that being given more serious consideration?

Response to Comment No. 520-4

Refer to Topical Response No. 16, Project Alternatives Analysis, and Response to Comment No. 384-3 regarding the CEQA analysis of Project alternatives.

Refer to Response to Comment No. 35-160 regarding the no project alternative.

Refer to Response to Comment No. 32-3 regarding the noticing of the Project in compliance with CEQA.

Comment No. 520-5

How will the development start? Is there a specific month by month plan for development? Will the project be completed in phases, and, if so, can you show a plan to the community? We deserve to at least have a plan, and to know how many years of construction. And where will all of the people associated with the project go? There are thousands of construction workers for this, thousands of employees that will be working at the offices, but there is no plan to fit all of these new people coming to my neighborhood. Where do these people plan on parking? What happens if people begin parking in our neighborhoods? Who is responsible for enforcement of parking? I feel like this will cause serious safety issues for the community, but is that something that will be addressed?

Response to Comment No. 520-5

The start of construction cannot be set precisely until the Project is approved by the City Council and building permits for individual buildings and structures are issued by the

City. Refer to pdf page 30 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR for the construction schedule that was analyzed.

Refer to Response to Comment No. 9-24 regarding the buildout timeline. As stated throughout the Draft EIR, construction is anticipated to begin as early as 2023 with buildout as early as 2026.

Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of construction truck trips.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Enforcement of the current (and any future) neighborhood parking permits would be the responsibility of the LADOT Parking Enforcement Officers.

Comment No. 520-6

I am also concerned about the fact that the developer's website shows that the production facilities are in the basement parking garage. How does that make sense? Will the basement be used for parking or will it be production facilities? Does that include production offices? I mean, it's either a basement parking garage or it's not.

Response to Comment No. 520-6

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 regarding the definition of floor area, how all of the proposed uses, areas and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area, and how no active production activities would be located in the parking and basecamp areas below Project Grade. Refer to Response to Comment No. 26-16 regarding the renderings of outdoor production activity and basecamp areas.

Comment No. 520-7

There are too many unanswered questions, and the developer has not made a real effort to win over the community. We still do not know how this project will impact the health and convenience of the community. We need to take a stand, and I hope you will take these concerns seriously.

Response to Comment No. 520-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 520-2 through 520-6.

Comment Letter No. 521

John Stamos
103 S. La Jolla Ave.
Los Angeles, CA 90048-3529

Comment No. 521-1

As someone who has lived in the neighborhood for 40 years, I've seen a lot of changes—some have been great but others, like the amount of traffic, are terrible.

Response to Comment No. 521-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 521-2 and 521-3.

Comment No. 521-2

Grove Drive is a small street, and right across from Pan Pacific Park, where people walk their dogs and families gather. Why is a huge parking structure being placed there?

Response to Comment No. 521-2

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access and use of The Grove Drive. As stated on page IV.H-37 in Section IV.H, Land Use and Planning, of the Draft EIR, "The Grove Drive is designated as a Collector Street in the Mobility Plan, which requires a 20-foot half-width roadway within a 33-foot half-width right-of-way. The Project would include a 3-foot-wide public sidewalk easement in addition to the 7-foot public right-of-way to provide a 10-foot sidewalk as required by the Mobility Plan. The sidewalk would include parkways extending approximately 4 feet from the back of the curb to provide planting areas for street trees, shrubs, and groundcover. Adjacent to the 3-foot sidewalk easement, an additional 4 feet would be provided to create a transition between the sidewalk and the parking structure along The Grove Drive, thus creating a 7-foot frontage area along this Project Site edge. Landscaping within this frontage area and the street parkways would incorporate existing street tree and plant selections along The Grove Drive and include species to complement those at Pan Pacific Park and the Holocaust Museum LA to the east. Refer to Section IV.K, Transportation, for a discussion of the roadway widening proposed along The Grove Drive to accommodate a northbound left-turn lane to access the Project Site."

Refer to Response to Comment No. 226-2 regarding proposed parking. Based on the Conceptual Site Plan provided in Figure II-4 of Section II, Project Description, of the Draft EIR and the application materials filed with the City, parking would be provided in a parking structure at the southeastern corner of the Project Site adjacent to the parking structure serving The Grove shopping center and in underground and surface parking. While the Conceptual Site Plan provided in Figure II-4 in Section II, Project Description, of the Draft EIR illustrates specific parking locations, ultimately, parking may be located at different locations within the Project Site, as discussed and analyzed in the Draft EIR. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 521-3

Does the Air Quality analysis show that there could be as many as 200 production trucks spewing diesel particulates in the community for years to come? Did it even consider the health risks to children and senior [sic] from the dozens of big 18-wheeler trucks on the site that will be entering Grove Dr and belching diesel exhaust in our neighborhood and next to a park?

Response to Comment No. 521-3

The first sentence of this comment is identical to a portion of Comment No. 87-1, and the second sentence of this comment is similar to Comment Nos. 87-1 and 335-3. Refer to Response to Comment Nos. 87-1 and 335-3, above.

Comment No. 521-4

I write to express my opposition to this project

Response to Comment No. 521-4

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 522

Carlos Stancic
517 N. Hayworth Ave.
Los Angeles, CA 90048-2705

Comment No. 522-1

I'm concerned about all the traffic that this will produce.

Response to Comment No. 522-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 522-2

Also, the lack of parking and the dangerous amount of emissions this will cause over a 20 year buildout.

Response to Comment No. 522-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Air quality analyses during both construction and operation of the Project have been completed, which analyzes the 32-month construction timeline, as well as the long-term buildout scenario and are included in Section IV.A, Air Quality, of the Draft EIR.

Comment No. 522-3

If the City is going to decide the scope of the TVC project on the basis of the developer's rate of return, it should also consider all of the financial consequences the developer is imposing on the community and not paying for, like the cost of physical and mental health care the community will need to deal with the consequences of the increased pollution, noise and traffic, the degradation of our infrastructure, including the streets from all of the construction and production trucks (and don't tell me the increased taxes will pay for it—

because it won't), the lost productivity of everyone sitting in added gridlock, and the adjustments that will need to be made to deal with climate change from additional GHGs.

Response to Comment No. 522-3

This comment is identical to Comment No. 114-5. Refer to Response to Comment No. 114-5, above.

Comment Letter No. 523

Sarah Stapanowich
439 N. Stanley Ave.
Los Angeles, CA 90036-2301

Comment No. 523-1

I am writing to express grave concern that your upcoming development will negatively impact the community. As an active and proud citizen of the city, I implore you to consider the adverse effects this will have on neighboring communities and citizens.

Response to Comment No. 523-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 523-2 through 523-7.

Comment No. 523-2

Transportation and Travel: I don't understand the Vehicle Miles Travelled analysis. It says it is based on a City model, but it doesn't seem to make any sense. There are assumptions about people using transportation, but where are these assumptions from? How many people take public transportation to the site today or did before the pandemic? This would be the best data. We all know that people who work in office projects don't take public transportation. Where do the people live who will work here? The EIR seems to assume they live close by, but where's the evidence supporting this? Why is Vehicles Miles Travelled limited to employees only? What about the distance that trucks and deliveries will travel? What about all the live audience shows? How far are the audience members going to travel?

Response to Comment No. 523-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Refer to Response to Comment No. 9-24 regarding the Project timeline. Also refer to Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR.

Refer to Response to Comment Nos. 28-13 and 32-3 regarding noticing and opportunities for public review. As discussed therein, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project for several years. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Refer to Section C, Assumptions in the VMT Analysis, Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

Comment No. 523-3

Planning Structure: It is imperative the community is aware of the plans for this development. We should not be left in the dark and unsure about the project's time frame. What are the phases of how this project will be built?

Response to Comment No. 523-3

Refer to Response to Comment No. 9-24 regarding the Project's buildout timeline. There is no phasing plan for construction.

Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, CPC-2021-4089-AD-GPA-ZC-SN-SP.

Comment No. 523-4

What does the specific plan referenced have to do with the applicant's plan as analyzed in the EIR? Where are the specifics of a specific plan?

Response to Comment No. 523-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and

proposed Specific Plan, how CEQA and City policy do not require the Specific Plan to be included in the EIR, the level of detail required for a specific plan project EIR, how the Draft EIR disclosed and analyzed all physical elements of the Project in accordance with CEQA, and the regulatory process under the proposed Specific Plan, which has been made publicly available in response to comments on the Draft EIR prior to the publication of this Final EIR. As discussed in these responses, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 523-5

Please show a phasing plan for this project so the community can know what will be built when.

Response to Comment No. 523-5

Refer to Response to Comment No. 523-3, above.

Comment No. 523-6

What is a development agreement and why would the city give a 20-year one?

Response to Comment No. 523-6

Refer to Response to Comment Nos. 9-24 and 268-2 regarding the proposed Development Agreement.

Comment No. 523-7

Environmental Safety: As a conscious group of citizens, we always seek out ways to preserve our environment. The conceptual plan shows many dozens of big 18-wheeler trucks on the site. How many trucks can be on site? Have the impacts of the trucks been fully analyzed. Does the Air Quality analysis show that there could be 50, 100 or 200 production trucks spewing diesel particulates in the community for years to come? What about the greenhouse gas emissions?

Response to Comment No. 523-7

This comment is similar to Comment Nos. 87-1 and 335-1. Refer to Response to Comment Nos. 87-1 and 335-1, above.

Comment No. 523-8

These question are important to citizens of the city and we are eager to see how these concerns will be addressed.

Response to Comment No. 523-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 523-2 through 523-7.

Comment Letter No. 524

Andrew Starr
8380 W. Fourth St.
Los Angeles, CA 90048-4203

Comment No. 524-1

I am concerned about the environmental impact of this project.

Response to Comment No. 524-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 524-2 through 524-4.

Comment No. 524-2

Why does development allow for excavation down 45 feet?

Response to Comment No. 524-2

As discussed in the Draft EIR, excavation to a maximum depth 45 feet would allow for the construction of the below-grade parking included in the proposed development program.

Comment No. 524-3

This is an area with tar and methane—the La Brea Tar Pits is close by. Is it possible that methane will build up and risk explosions in my neighborhood like the Ross that exploded? The EIR should evaluate the amount of harmful gases that will be released into the environment as a result of excavation.

Response to Comment No. 524-3

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of tar and methane and the associated mitigation. Response to Comment No. 13-6 also discusses the potential for methane explosions similar to the Ross incident.

Comment No. 524-4

How many trucks will it take to haul away all that dirt? Did the Draft EIR consider the impact of haul trucks spewing emissions on the community? What about the schools along the haul route?

Response to Comment No. 524-4

Please refer to Response to Comment No. 164-3 for a detailed discussion on the number of haul trucks, construction haul routes, staging areas, and idle emissions. Refer to Response to Comment No. 26-E.1-21 for a discussion of the Project's use of the 25-meter LST lookup tables. Please refer to Response to Comment No. 26-30 for a discussion of the Project's CalEEMod model accounting for all Project-related hauling. As discussed therein, potential impacts were evaluated at the closest off-site sensitive receptor, which is the residential use located directly east of the Project Site boundary. The localized impact analysis included both off-road (e.g., bulldozers, loaders, and excavators) and on-site on-road vehicles (e.g., haul and delivery truck travel and idle time). As shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with the incorporation of mitigation measures.

Construction-related trucks along haul routes would represent a small fraction of the total emissions evaluated in the air quality analysis as a truck would only be located next to a single residence or sensitive receptor, including schools, for a very short duration (traveling around 25 mph). As discussed above, the total on-site emissions would result in a less-than-significant localized air quality impact at the closest sensitive receptor. Therefore, no additional analysis of trucks along haul routes is required under CEQA.

Comment No. 524-5

Look forward to hearing back, [sic]

Response to Comment No. 524-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 524-2 through 524-4.

Comment Letter No. 525

Mike Stein
300 S. Citrus Ave.
Los Angeles, CA 90036-3036

Comment No. 525-1

As a resident of the Fairfax community, I think that some of the objectives of this project are wrong. I think that the residents, like myself, should be cared about more because it is our lives that are going to be impacted from this project.

Response to Comment No. 525-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 525-2 through 525-4.

Comment No. 525-2

First, the Draft EIR states that the developer's return on investment is a project objective. My first question is why is this an objective? Shouldn't the community be cared about more than the profit of a developer? Similarly, since it is stated an objective, please produce us with the financial information about the project. Why does the City care about how much money the developer makes? Shouldn't the City care more about the health and welfare of its residents than the developer's financial goals? The City seems to care about the anticipated return, so what is the return? What assurances is the City requiring in the event the developer walks away from the project? Why would the financial return be considered when the Alternatives are being evaluated? That does not seem right. I think it is fair to those of us living in the area to have an understanding of the financial figures.

Response to Comment No. 525-2

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

This comment also raises several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 525-3

Another thing that I think needs consideration is La Brea Tar Pits. This project is just down the road from this site. Digging 45 feet across the entire 25 acre site many uncover interesting artifacts and items needing to be preserved. As it stands, the project does not have a plan in place to deal with this. What is that plan? What does it provide for if there are historic or cultural artifacts? I think it is important that there is a clear plan for these instances in order to preserved interesting findings. Please provide us with a fleshed out plan for us to comment on.

Response to Comment No. 525-3

Refer to Response to Comment Nos. 13-7 and 285-2 regarding the means by which archaeological and paleontological resources are assessed during the environmental review and addressed during Project implementation, including the ownership and disposition of any collected materials. Mitigation proposed for the Project includes plans that specify the process followed during the ground-disturbing activities for the Project.

Comment No. 525-4

And lastly, the mobility hub is going to attract a lot of people who will consider it a lighted, warm and safe place to hang out in. What does your analysis say about that likelihood? What is the City going to do about that? And what about the potential for more crime due to the hub? Please tell us how you plan on keeping us safe. Are you going to install a police kiosk? What about 24/7 police presence, not just security guards? Are there going to at least be more policemen at the mobility hub? Please provide a detailed analysis of how local authorities are going to ensure that the mobility hub does not become cluttered with crime.

Response to Comment No. 525-4

With regard to the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. Refer to Response to Comment No. 16-5 and pages IV.J.2-12 and IV.J.2-13 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 525-5

The three main points above are important for myself, and I am assuming the rest of the residents in Fairfax. Please answer all of the above in great detail to give us a better understanding of a project that is going to impact our community.

Response to Comment No. 525-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 525-2 through 525-4.

Comment Letter No. 526

Alex Stemkovsky
839 S. Curson Ave.
Los Angeles, CA 90036-4620

Comment No. 526-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 526-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 527

Liz Sterbenz
lizsterbenz@yahoo.com

Comment No. 527-1

I am writing in regard to the TVC 2050 Project, ENV-2021-4091-EIR.

I am a long-term resident of the neighborhood, having moved into this apartment 22 years ago in August 2000. I have seen the neighborhood change a great deal over the years. While there are certainly neighbors who pre-date me, and in fact grew up in the neighborhood, I have my own experience of seeing how the construction of the Grove impacted the neighborhood as it was built, as well as with the traffic it brought with it.

I have worked as a TV producer for over 25 years, both here in LA and in NYC, and in fact I've worked on several productions on the Television City lot—and really enjoyed that commute from a few doors away! I understand the importance of having updated facilities nearby, and I really do hope that Television City can remain a thriving studio far into the future.

However, I have to voice several concerns that I have about the specifics of this project, as well as issues that I feel would need to be addressed for the neighborhood in order to prevent the overspill from adversely affecting our quality of life.

Response to Comment No. 527-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 527-2 through 527-4.

Comment No. 527-2

I have serious concerns about the length of time requested for the development project. A decades long construction period seems excessive by any estimation. The idea that once construction begins, an entire generation could be born, grow up, and start a family of their own, all while living in the shadow and fallout of construction detritus—noise, dust, debris, traffic, etc.—is overwhelming. I don't understand how any group could ask that of their neighbors, and it seems that they must not care if it pushes us out.

Response to Comment No. 527-2

Refer to Response to Comment No. 9-24 regarding the Project timeline. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the Project's construction traffic impacts under the 32-month and long-term buildout scenarios.

Refer to pages IV.I-40 through IV.I-43 in Section IV.I, Noise, of the Draft EIR for an analysis of temporary noise impacts associated with construction haul trucks.

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, including measures for the prevention of dust track-out onto public roads. Refer to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust. As also discussed in Topical Response No. 14, localized air quality impacts as a result of hauling activities would be less than significant.

Refer to Topical Response No. 14 and Response to Comment No. 96-5 regarding construction trips and the proposed CTMP. The CTMP will establish requirements to control noise, dust and debris, and traffic during construction.

Comment No. 527-3

I am not convinced that there is a reasonable plan to address the amount of traffic that will be generated from this project—both during the construction, and after the completion and once the studios are open. I live on Genesee, four doors up from Beverly. I see many cars race down this street, attempting to make the green light to cross onto the lot as it stands now. I think the only way to make this a feasible plan without destroying this residential neighborhood is to make it impossible to cross onto the lot from Genesee. The residents here have also tried to get bumps/humps on the street over the years, and we've been turned down. I believe a much more comprehensive look at this neighborhood to prevent cut through traffic—and especially the cut through traffic that is speeding trying to make a light!—would help. Roundabouts in the intersections, cutoffs to prevent crossover to CBS—all of these would help. We were finally able to get permit parking on the block which was able to cut down on the audience parking which had been a long-term problem. Now, since parking is limited to two hours, the audiences are forced to follow the directions they are given by the audience coordinators, and park in the Grove lot. Previously, they would ignore these directions, and park on Genesee and surrounding blocks which were much closer for them, and they would stay for hours and hours at a time, overly taxing an already very stressed parking situation.

Response to Comment No. 527-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Appendix M.1, Transportation Assessment, of the Draft EIR includes a complete Project construction assessment as part of its non-CEQA transportation analysis (refer to Section 5D, pages 179 through 184). As discussed therein, while construction-related activities associated with the Project would result in varying levels of truck and worker trips to and from the Project Site daily, such trips would be far less than operational Project-related trips. Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Additionally, the Project would include a CTMP prepared pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 and IV.K-37 of the Draft EIR), which would include provisions to limit the amount of construction-related trips during peak hours to the extent feasible, as well as a prohibition of off-site construction worker or equipment parking.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR). Although the neighborhood may have been unsuccessful in the past at getting speed humps and traffic control devices installed on neighborhood streets, the Project's Transportation Improvement Program includes the development of a NTMP for the neighborhoods north and west of the Project Site. The neighbors, Applicant, and LADOT will work together to develop an NTMP for each neighborhood. This joint effort, supported by the Council Office, should have a better chance of getting approval for implementation if support by the neighbors can be achieved.

Comment No. 527-4

Overall, I'm not optimistic that this project will turn out well for the neighbors, but I'm hoping that the city can consider for themselves what it might be like to live next to a project that is asking to be under construction for 20—30 years, and that is promising to triple or quadruple in size the amount of people coming into an area that sees bumper to bumper traffic every morning and evening.

Response to Comment No. 527-4

Regarding the Project timeline, refer to Response to Comment No. 9-24.

Refer to Topical Response No. 10, Trip Generation, and Response to Comment Nos. 9-32 and 106-2 regarding Project trips and the number of employees and visitors.

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 527-5

I've loved living in this neighborhood, and I'm afraid that it will become an untenable situation. I'm also concerned as while I've always spent portions of my year working from home as a freelance producer, since March of 2020, I've exclusively worked remotely as many people have been doing. Between the noise of construction, and the amount of debris to be released into the environment, especially since I'm in an older apartment building with no A/C and therefore pretty much year-round open windows—I expect that my quality of life will be seriously impacted, and very likely my physical and mental health.

Again, as a TV producer, I really do understand the need for an upgraded studio facility—but it really seems like this TVC 2050 is not being a good neighbor to what is already here.

Response to Comment No. 527-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 527-2 through 527-4.

Comment Letter No. 528

Deborah Stern
6350 W. Fifth St.
Los Angeles, CA 90048-4718

Comment No. 528-1

I believe that my strong opposition to every element of this project is shared by my neighbors and the general community.

How is it that such a huge and disruptive project seems to be on a fast track when it will have such a profound impact on our neighborhood? I have lived in this community for more than 20 years and am horrified by the idea that the construction of this project is scheduled to last as long as I've been there.

Response to Comment No. 528-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 528-2.

Comment No. 528-2

I read about a settlement agreement between the LA Conservancy and the project's developer. Are the constraints from this settlement agreement considered in the EIR? If so, what is the agreement?

Is the developer paying the Conservancy? How do the settlement agreement's limitations impact the project objectives? How will development be clustered in the middle of the site if the Conservancy agreement requires setting back from the existing buildings?

More to the point, how can the City and community understand what these issues are if no one has been provided with the Settlement Agreement?

Response to Comment No. 528-2

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

Comment Letter No. 529

Josh Stock
639 N. Poinsettia Pl.
Los Angeles, CA 90036-1926

Comment No. 529-1

What is going to be done to mitigate the different sources and times of noise? If the project could take three years or it could twenty years, that suggests construction could be ongoing for upwards of twenty years. What construction activities will occur in each of those years and generating what levels of noise? And what steps in each of those years will be taken to keep noise levels to a minimum?

Response to Comment No. 529-1

This comment is identical to Comment No. 310-6. Refer to Response to Comment No. 310-6, above.

Comment No. 529-2

Furthermore, with the number of soundstages that will be added, including outdoor soundstages, what will be the sound dampening efforts to deal with the noise once in use? What days and hours will the outdoor soundstages be allowed to operate? On what basis is it determined what days and hours of the week those outdoor stages can be used?

Response to Comment No. 529-2

This comment is identical to Comment No. 310-7. Refer to Response to Comment No. 310-7, above.

Comment Letter No. 530

Sarai Stoermer
522 N. Poinsettia Pl.
Los Angeles, CA 90036-1929

Comment No. 530-1

I hope this letter finds you well. I'm reaching out about a recent project that has come to light in the neighborhood—the TVC expansion. I'm devastated as I continue to learn about the details (although not many have been provided to the public) about this development right in my back yard.

Response to Comment No. 530-1

This comment is identical to a portion of Comment No. 125-1; nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 530-2

We have so many questions as neighbors: How do you expect all these new employees to get to work? Where do they park? Where can we park? This is going to increase the already stressed congestion in the area. How am I, as a neighbor, supposed to navigate this new congestion on the streets? Do any of you all live this area? Are you not concerned about this if you do? And if you don't live in the hub, then why do you get to make these decisions on our behalf?

Response to Comment No. 530-2

This comment is substantively similar to Comment No. 95-2. Please refer to Response to Comment No. 95-2 for a discussion of the Project's trip generation, TDM Program, and parking supply and demand.

Comment No. 530-3

Most of my neighbors, including myself, are incredibly concerned about the implications of this development. Beyond that, we have not been given the resources or information needed to fully understand how this will change our backyard, our neighborhood, our HOMES.

Response to Comment No. 530-3

This comment is identical to Comment 95-3. Refer to Response to Comment No. 95-3, above.

Comment No. 530-4

Please help us stop this project, or at least give us a seat at the table to have the conversations that are necessary. While this may not affect your day-to-day life, I hope you will see how it will affect ours. As a leader that is supposed to represent our best interest, I pray and hope that you do the same with this development. We need more leaders fighting for a better future, not just fighting for a big check.

Response to Comment No. 530-4

This comment is identical to Comment 95-4. Refer to Response to Comment No. 95-4, above.

Joe Stolz
joestolz@hotmail.com

Comment No. 533-1

Please include our votes to put this project on hold until we can review the impact.

Response to Comment No. 533-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 533-2

The Grove project has brought misery and traffic snarls to us DAILY.

Response to Comment No. 533-2

This comment provides a general statement on the traffic conditions in the area related to The Grove shopping center. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 533-3

Do we really need to ruin Beverly Fairfax for good?

Response to Comment No. 533-3

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 534

Sylvia Stone
6330 W. Fifth Street
Los Angeles, CA 90048-4718

Comment No. 534-1

I write to express my disappointment that housing was not included in the project, which is desperately needed.

Why can't a portion of the site be dedicated to housing? It's pretty clear that more and more people are going to be working remotely so there is no a need for 1.4 million more square feet of office space.

Response to Comment No. 534-1

Refer to Response to Comment No. 152-3 regarding housing.

Comment No. 534-2

My other concern is with traffic—with tens of thousands of trucks having to come up Fairfax to get to the project site, the Draft EIR should analyze the air quality, noise and other issues impacting all the sensitive uses along Fairfax. There are many schools, nursing homes and residential uses that will be impacted. The community should be notified about the incredible impacts of tens of thousands of trucks!

Response to Comment No. 534-2

This comment is similar to Comment No. 78-2. Refer to Response to Comment No. 78-2 for a discussion of construction vehicle impacts and the Notice of Availability of the Draft EIR that was published on July 14, 2022, which fully discloses the environmental impacts of the Project, including construction trucks and those related to Project operation.

Comment Letter No. 535

Etan Strauss-Cohn
313 N. Stanley Ave.
Los Angeles, CA 90036-2328

Comment No. 535-1

The Television City 2050 development plan is not for the Fairfax area. California is a state that is concerned with and has issues with environmental problems. Our state is suffering from the impact that we have put on it. Wildfires, unhealthy air qualities and consistent water issues. A lot of that stems from having developments such as the TVC 2050 project.

Response to Comment No. 535-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to the Project's Initial Study included as Appendix A of the Draft EIR for a discussion of wildfire impacts; Section IV.A, Air Quality, of the Draft EIR for a discussion of air quality impacts; and Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR for a discussion of water supply impacts.

Comment No. 535-2

The amount of traffic this project will bring will add a lot of idling emissions and potential groundwater contamination. This project will have to go deep into the ground in order to achieve some of the design features such as the basecamp and other below ground improvements to the site. I am extremely worried about the possible groundwater contamination that could happen with this site. Will there be any ways the developer could go around constructing this development without having to blast? Are there plans to do additional hydrology studies to prevent running into any underground water ways and what would those look like? As a state that is concerned with environmental concerns I would hope that the city and the developer would take a longer look at the potential impact of this development.

Response to Comment No. 535-2

Refer to Response to Comment Nos. 13-4, 13-6, 16-28 and 26-E.3-4 regarding the Draft EIR's analysis of groundwater quality. See Response to Comment Nos. 3-7 and 11-5 for a discussion of dewatering as it relates to groundwater quality. With regard to whether it would be possible to avoid encountering groundwater, it would not be. As discussed on page IV.F-44 of Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, recent borings on-site have encountered groundwater at depths ranging from approximately 10 to

30 feet, with a historic high groundwater level of approximately 8 feet bgs, and Project excavation for below grade parking would extend to a maximum depth of approximately 45 feet. As such, it is not anticipated that the Project could avoid encountering groundwater during construction. With regard to whether blasting is necessary, as described in the Preliminary Geotechnical Engineering Investigation, Addendum I—Response to Soils Report Review Letter (Geotechnical Addendum I), and Addendum II—Additional Geotechnical Comments (Geotechnical Addendum II), all prepared by Geotechnologies, Inc. and provided in Appendix E of the Draft EIR, the Project Site is underlain by variable, semi-consolidated to consolidated alluvial sediments, including combinations of clays, silts and sands. Based on the available subsurface soil data, the excavations are expected to be suitable for heavy excavation equipment and will not require blasting.

Refer to Response to Comment No. 126-2 regarding truck idling.

Comment No. 535-3

Another issue I have is the methane that is in this area. If you live or visit this area frequently you can find a methane alarm in almost every building you go into. We clearly have a lot of methane present in the area. Does the DEIR address this issue? Not only is this an environmental concern but this is also a public safety issue. What if during construction the crews hit a high methane area and the cause and explosion? Is there an issue that it could cause a methane leak into the local business that would make them have to close the business down for a day or two? This is a serious issue as a lot of the businesses are still trying to recover from the impacts of Covid and not being allowed to open their doors or have as many customers. Could we do a study as to what the impact of a methane leak would have on a business that would have to shut down? Surely there are some businesses that are barely surviving and need to be open as much as they can. Closing down would not be beneficial to them at all. We need to prioritize smaller businesses over a billion-dollar industry. I hope that we can address all of these concerns before moving forward with this project.

Response to Comment No. 535-3

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane and its mitigation. With regard to the closure of nearby businesses, this is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 536

Ash Stuck and Tim Scales
542 N. Harper Ave.
Los Angeles, CA 90048-2223

Comment No. 536-1

We are resident of the Fairfax area and have several concerns.

Response to Comment No. 536-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 536-2 through 536-4.

Comment No. 536-2

1. Traffic. This project is so huge. We live in LA so we are accustomed to traffic. But this is too much construction and too many people too quickly. The EIR doesn't even seem to discuss traffic and congestion at this point. It talks about miles to travel to work, but we all know an LA mile is different from anything else. Where is the actual analysis of how all the additional traffic we know will result from the project is going to impact congestion, gridlock and bottlenecking? What are the measures to address the added back-up of traffic on the streets in and around the project? Why didn't the city study what will be the actual impacts, using the planned number of additional workers, staff, people visiting, and all that additional driving, rather than estimates of miles traveled based on some other "similar" workplace?

Response to Comment No. 536-2

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, impact thresholds relative to changes in driver delay are no longer applicable to identify transportation-related impacts under CEQA. As discussed on pages IV.K-72 through IV.K-78 of the Draft EIR, impacts related to VMT would be less than significant. Specifically, in the case of the Project, the work VMT trip per employee target was 7.6 work VMT per employee and the analysis of the Project showed that it would generate 6.7 work VMT per employee as shown in Table 13 (page 122) of the Transportation Assessment (Appendix M.1 of the Draft EIR). Since the Project work VMT per employee falls below the target for the Central APC area, the Project is determined to have no significant VMT impact. Notwithstanding, upon the Project's anticipated

completion in 2026, several intersections on arterial streets would operate at LOS E or F, before and after the addition of Project vehicles. The Project would not cause any location to change from LOS D or better to LOS E or F during morning or afternoon peak hours. Refer to Topical Response No. 8, Vehicle Miles Traveled, regarding the CEQA VMT and the Project's less-than-significant impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 536-3

2. Methane Pockets. I remember the 1985 explosion at the Ross store from a methane pocket under the store. I've always been concerned when new big projects get built around here and dig into the ground. This is a methane zone. What will this project do to avoid hitting a methane pocket when they dig below the surface for the parking garages? Also, when I looked at the Hazards section of the EIR, it talked about methane gas pockets, but all of the mitigation seemed to be for the people on site. This is a family neighborhood. If an explosion were to happen in the neighborhood due to hitting a methane pocket, what is the response plan? How will people be evacuated from the area? How will people be alerted to a potential danger? Is there a compensation plan in case of an accident? There seems to be mitigation measures for the workers, but the EIR doesn't look outside of the site. Please explain the plan to keep my neighborhood safe.

Response to Comment No. 536-3

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane and its mitigation. Response to Comment No. 13-6 also discusses the potential for methane explosions similar to the Ross incident.

With regard to evacuation, a health and safety and monitoring plan will be in place to evaluate and address safe methane levels during construction as required by Mitigation Measure HAZ-MM-2. In addition, LADBS and LAFD are responsible for reviewing, approving and oversight of contingency and emergency procedures required under the City of Los Angeles Methane Code ordinance. The procedures include development of an Emergency Plan with procedures that must be approved by the LAFD.

Comment No. 536-4

3. Hydrocarbons. The La Brea tar pits are nearby the project, and the EIR says that digging will encounter natural pockets of methane, oil and other hydrocarbons. These are awful for air quality in the area. How will the project make sure the community isn't impacted by the toxics and chemicals that will be uncovered in the soil? What are the health risks to the community? Where is

the information about those risks and what steps will be taken to reduce those very real risks. None of these questions have been answered.

Response to Comment No. 536-4

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 for a discussion of the presence of methane, oil, and hydrocarbons and the associated mitigation.

Comment No. 536-5

There are too many lingering questions to let this project continue. I thank you in advance for listening to the community.

Response to Comment No. 536-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 536-2 through 536-4.

Comment Letter No. 537

James Sugahora
437 S. Orange Dr.
Los Angeles, CA 90036-2611

Comment No. 537-1

I am submitting comments and questions about the plan to modernize and develop Television City.

Response to Comment No. 537-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 537-2

I have several questions about the extent of the excavation. The La Brea Tar Pits are very close by.

- Will the excavation release gases into the environment? What gases are going to be released, and what is the city and the developer going to do about that risk? What about the effects to the public, to visitors, and to those who live in the area?
- Did the EIR study how much gas would be released? What were those findings? Where is that located?

Response to Comment No. 537-2

This comment is identical to Comment No. 211-2. Refer to Response to Comment No. 211-2, above

Comment No. 537-3

I am also really concerned this excavation will have a negative impact on the groundwater and drinking water.

- Did you study the impact of any excavation on water? What was the result of that study?

- Will my property in the Beverly Fairfax neighborhood be impacted by removing groundwater?
- Will I be notified if my property is impacted? What will be done to ensure no damage to my property?
- How much groundwater will you be removing? Where will it be pumped to?

Response to Comment No. 537-3

This comment is identical to Comment No. 211-3. Refer to Response to Comment No. 211-3, above.

Comment No. 537-4

I am also wondering why the EIR says that what is being planned for below ground is not part of the floor area? Construction and operations below ground will have impacts.

- Can you define floor area in the context of this project? Why would basement and below ground areas not be considered floor space? That doesn't make any sense, but does sound as though it allows the developer to not disclose the impacts.
- What will the operation and construction impacts be from any buildings, area, and space that the EIR says are not considered part of the square footage?

Response to Comment No. 537-4

This comment is identical to Comment No. 211-4. Refer to Response to Comment No. 211-4, above.

Comment No. 537-5

I look forward to reviewing your response.

Response to Comment No. 537-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 538

Bob Sullivan
bobs2000@hotmail.com

Comment No. 538-1

I support a responsible, well-designed, and well-scaled renewal of Television City that respects its historic assets.

Response to Comment No. 538-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-2

I have some concerns with respect to the TVC 2050 Draft EIR.

Response to Comment No. 538-2

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comment Nos. 538-2 through 538-29.

Comment No. 538-3**General Comments**

The draft EIR enumerates various project approvals that are required. What is the timing of actions that will take place subsequent to this Draft EIR? How will these actions be scheduled? How will the public be informed? Which ones will involve public meetings?

Response to Comment No. 538-3

Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers, including the City Hearing Officer and Deputy Advisory Agency, the City Planning Commission, the Planning and Land Use Management Committee, and the City Council with input from the City Attorney's office. The public will have additional opportunities to comment on the Project at any of these upcoming hearings and meetings. Noticing for the

public hearings will be conducted in accordance with all applicable City and State noticing requirements.

Comment No. 538-4

How would the Specific Plan, design and sign standards be implemented from the city's point of view? Will it involve staff and/or some review board operating at a public hearing? Will the cultural heritage commission review occur at every step of the way? Is there a time limit to the Specific Plan?

Response to Comment No. 538-4

This comment does not relate to the Draft EIR's analysis of environmental impacts; however, a response is included below for informational purposes. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

As discussed in Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, any alteration to the HCM would require OHR review and compliance with the Rehabilitation Standards pursuant to Section 22.171.14 of the Cultural Heritage Ordinance.

The proposed Specific Plan and proposed Sign District are discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Refer to Topical Response No. 1 for a discussion of the regulatory framework under the proposed Specific Plan. Refer to the Preliminary Draft Specific Plan which has been made publicly available on the Department of City Planning's website for informational purposes prior to the release of this Final EIR. Please note that this draft is not final and has not been approved by City decision-makers (it will be reviewed by City decision-makers following the publication of this Final EIR).

Comment No. 538-5

What all does a development agreement entail? Does it require a single ownership for the entire site? Does it still apply if the property should change ownership? What happens after the agreed upon time expires?

Response to Comment No. 538-5

Refer to Response to Comment No. 9-24 and 16-22 regarding the Development Agreement. As stated throughout the Draft EIR, the Development Agreement would confer a vested right to develop the Project in accordance with the approved Specific Plan and

Mitigation Monitoring Program throughout the term of the Development Agreement. The approved Specific Plan and Mitigation Monitoring Program would continue to regulate development of the Project Site and provide for the implementation of all applicable PDFs and mitigation measures associated with any development activities during and beyond the term of the Development Agreement.

Comment No. 538-6

I question whether the City Planning Director should be the only one to make decisions about land use exchange within the Specific Plan. I think that this should be something handled in a public hearing. The design standards and master sign plan and any revisions should also be considered in a public hearing. The implementation of a city design review board is indicated.

Response to Comment No. 538-6

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan includes a regulatory framework for implementation of the Project, including, among other things, a discretionary process for future changes that are substantially different than the Project, including a proposal that involves a land use exchange. However, the procedures discussed in this comment do not represent environmental issues and are outside the scope of this EIR.

No decision has been made on the Project. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers, including the City Hearing Officer and Deputy Advisory Agency, the City Planning Commission, the Planning and Land Use Management Committee, and the City Council with input from the City Attorney's office. The public will have additional opportunities to comment on the Project at any of these upcoming hearings and meetings. Noticing for the public hearings and meetings will be conducted in accordance with all applicable City and State noticing requirements.

Comment No. 538-7**Aesthetics/Cultural Resources**

The original Television City building has significant architectural and design importance. It is more than just facades and surfaces to be seen from Beverly Boulevard. It is a three-dimensional mass, it has eye catching contrasts of black and white colors, along with red trim.

The proposed office towers and bridge over the historic building are overpowering and dwarf the historic resource. They are not in scale with it.

Response to Comment No. 538-7

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-6. As discussed therein, the Draft EIR fully analyzed potential impacts to the Primary Studio Complex from new adjacent construction and a rooftop addition and concluded that impacts would be less than significant.

Comment No. 538-8

Streetscape is an important aspect of urban design. Grove Drive already has a parking structure fronting it at The Grove shopping center. I don't think it needs another one. The streetscape needs some variety.

Response to Comment No. 538-8

Refer to Response to Comment Nos. 16-72, 28-18, 172-3, and 313-2 regarding the Project's pedestrian-oriented design and public realm improvements.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-9

I for the life of me cannot understand why parks are so poorly regarded in this city. The Grove shopping center has no orientation to Pan Pacific Park. The proposal here to place another parking structure facing the park makes no sense. Why not have an office building that faces the park so that workers could have some nature to view?

Response to Comment No. 538-9

This comment does not raise issues related to CEQA or the environmental analysis included in the Draft EIR. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-10

A fence along Beverly Boulevard that one can see through to the original building should be used. The view of the original building should not be impaired between the two main driveways along Beverly. The landscaping there should be ground cover, no high bushes

and no trees. From the preliminary plan it looks like this is the proposed location for some small buildings. This is not in keeping with the intent of the viewshed restoration area.

What is permitted within the viewshed? There needs to be a clear and unobstructed view of the historic building for the length of the view shed. Why is the viewshed in a zone designated with a 58 foot height limit? There should be no buildings in it. Buildings and high landscaping may not improve upon the situation that currently exists.

Response to Comment No. 538-10

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the regulations and review process for new construction in the Viewshed Restoration Area. As discussed therein, the Project would enable unobstructed views of the Primary Studio Complex from Beverly Boulevard, thereby restoring an important character-defining viewshed feature that has been compromised.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-11

Air Quality/Noise

The complete switchover to electric vehicles is still years away. Meantime, I am concerned particularly with diesel powered vehicles operating on the lot during construction. The exhaust can affect nearby neighborhoods. In addition, what is to keep dust from flying off the dump trucks along their route through the city? After construction is complete, what about diesel powered vehicles, both going to and from their parking spaces as well as idling. Diesel powered generators should be prohibited on the site, especially in the underground base camps. Electrical hookups need be provided.

Response to Comment No. 538-11

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, which includes mandatory control actions and dust control contingency measures to control fugitive dust and would serve to reduce dust from trucks along haul routes. Refer to Response to Comment No. 26-E.1-2 and 123-3 regarding the analysis of DPM emissions. As further discussed on page IV.A-72 in Section IV.A, Air Quality, of the Draft EIR, the CARB-mandated ATCM limits diesel-fueled commercial vehicles (delivery and haul trucks)

to idle for no more than five minutes at any given time, which would further limit diesel exhaust emissions. Please refer to Response to Comment No. 164-3 for a detailed discussion on the number of haul trucks, construction haul routes, staging areas, and idle emissions. Refer to Response to Comment No. 26-E.1-21 for a discussion of the Project's use of the 25-meter LST lookup tables. Please refer to Response to Comment No. 26-30 for a discussion of the Project's CalEEMod model accounting for all Project-related hauling. As discussed therein, potential impacts were evaluated at the closest off-site sensitive receptor, which is the residential use located directly east of the Project Site boundary. The localized impact analysis included both off-road (e.g., bulldozers, loaders, and excavators) and on-site on-road vehicles (e.g., haul and delivery truck travel and idle time). As shown in Table IV.A-11 on page IV.A-74 of the Draft EIR, localized air quality impacts would be less than significant with the incorporation of mitigation measures.

Please refer to Response to Comment No. 26-E.1-16 regarding the number of Project-related operational trucks accessing the Project Site per day. As shown therein, the truck trips (approximately 31 total net new diesel trucks) is substantially less than the 100 trucks criteria cited in the Draft EIR that would trigger the need for a mobile air toxics HRA (see page IV.A-72 of the Draft EIR). This information further supports the Draft EIR's conclusion that Project-related TAC emission impacts during operations would be less than significant and would not result in a potential health risk impact.

Refer to Response to Comment No. 26-36 regarding power generators and basecamp power.

Comment No. 538-12

How are the underground parking areas to be ventilated? What about noise and pollution from mechanical venting? Where will the vents be placed on the site? Will these be unsightly? Will the noise be heard from public areas?

Response to Comment No. 538-12

Ventilation for underground parking areas will comply with Section 120.6(c) of the California Building Code, Mandatory Requirements for Enclosed Parking Garages, which mandates a minimum flow rate of 0.15 cubic feet per minute per square foot when the structure is scheduled to be occupied. The placement of exhaust fans inside the parking structure will allow for energy efficiency and minimize potential noise from the mechanical equipment. Venting is also typically run vertically through the parking structure and out through the top level of the parking structure. Please refer to Response to Comment No. 26-28 regarding potential emissions related to parking operations.

Comment No. 538-13**Geology and Soils/Hazards**

Will the older buildings on the site be seismically retrofitted and have asbestos removed?

Response to Comment No. 538-13

To the extent that existing structures are removed or renovated, asbestos-containing materials will be abated in accordance with applicable legal requirements and Project Design Feature HAZ-PDF-6. With regard to seismic retrofitting, no structural retrofit activities have been completed. As such, all seismic retrofitting for the existing buildings will conform with jurisdictional and departmental required laws and regulations as necessary.

Comment No. 538-14

What effect would the shallow water table have on the underground parking? Will pumps be installed?

Response to Comment No. 538-14

Temporary construction dewatering, including a temporary system of pumps, will be required for excavations that will extend into the groundwater table. Refer to Response to Comment Nos. 11-5 and 11-25 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts and the Dewatering Report in this Final EIR (Appendix FEIR-13 of this Final EIR). As discussed therein, impacts related to dewatering would be less than significant. The proposed below-grade parking structures will be designed to resist the hydrostatic pressure, such that a permanent dewatering system (post-construction dewatering) will not be required. The temporary construction dewatering pump system will be removed following completion of the underground parking garage construction.

Comment No. 538-15**Land Use and Planning**

The proposed merger of subdivided land makes sense, But [sic] what is meant by re-subdividing? Is the merged site then going to be divided up into a different configuration and for what purpose? Is the intent to sell off portions of the site?

Response to Comment No. 538-15

The Project includes a Vesting Tentative Tract Map submitted for various purposes, including, but not limited to, the merger and re-subdivision of the Project Site and to facilitate the annexation of an approximately 0.63-acre portion of the Project Site located in an unincorporated area of the County of Los Angeles.

A merger and resubdivision is a land development process identified in LAMC Section 17.10.1 and allows for existing parcels to be merged and redrawn under procedures detailed in the Subdivision Map Act and the LAMC. In the case of the Project, four (4) unique parcels each with their own Assessor Parcel Number (i.e., 5512-001-003, 5512-002-002, 5512-002-001, and 5512-002-009) will be merged together along with a portion of over-dedicated public right-of-way (as determined by the Department of Public Works) and resubdivided into three (3) Lots as shown on Vesting Tentative Tract Map No. 83387. Layout and configuration of a subdivision is regulated by the Subdivision Map Act and Article 7 of Chapter 1 of the LAMC but itself is not a CEQA issue unless the merger or subdivision of land itself results in new development rights.

The Project includes a proposed Specific Plan, among other entitlements, which would regulate the land uses, physical construction, and certain operational characteristics of the Project. Further, a project's economic effects, including on the purchase and sale of property, are not effects on the environment under CEQA (see Section 15131(a) of the CEQA Guidelines). Although factors other than environmental impacts may be considered by the decision-makers, the purpose of an EIR is to focus on a project's physical environmental effects as required by CEQA. Accordingly, configuration of the subdivision is itself not a CEQA issue and therefore is not analyzed in the Draft EIR.

Comment No. 538-16

Why is it proposed that this site be designated Regional Center Commercial? Why not industrial? The main purpose of this location is manufacturing with associated office. Any commercial uses are ancillary to the main function.

Response to Comment No. 538-16

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

Contrary to the comment, the main purpose of the Project is to continue the existing studio operations at the Project Site. As discussed in Topical Response No. 3, Permitted On-Site Uses, and Response to Comment Nos. 5-6 and 28-6, the proposed Specific Plan would only allow five studio uses—sound stage, production support, production office,

general office, and retail—as well as related ancillary uses that support the studio and the five permitted uses, all of which were fully disclosed and analyzed in the EIR. The Project does not include any non-studio manufacturing uses. Mills and set/façade manufacturing associated with production activities would be permitted under the production support use; refer to page II-16 of the Draft EIR.

Comment No. 538-17

With regard to the proposed Specific Plan designation, I have concern [sic] about floor area exchanges between different uses. This is first and foremost a production facility and not an office park. I would be opposed to any studio and production support areas being allowed to be traded for general office uses. There are existing and proposed general office buildings nearby on Wilshire Boulevard.

I don't want the numerical figure for general office area to become an absolute entitlement.

The proposal articulates several categories of use and total square footage for each of those uses. How were these figures derived? The applicant has done some detailed work to arrive at these figures. This detail is thus far lacking in the public documents. Further, where is the square footage of each use distributed around the site?

The proposal increases the area devoted to sound stages, but with less production support area than is used by the stages that currently exist. Why is this so?

Response to Comment No. 538-17

Refer to Response to Comment No. 489-5 regarding the Project's studio purpose and the studio office uses.

Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-12, and 9-14 with regard to the Project Description and proposed Specific Plan, including a discussion of the proposed development program that was analyzed in the Draft EIR, which is based on the architectural plans on file with the City, the regulatory process in the proposed Specific Plan, and the Land Use Exchange Program. As discussed therein, the Land Use Exchange Program would not allow increases in office floor area.

Refer to Response to Comment Nos. 9-13 and 26-16 regarding the mix of studio uses.

Comment No. 538-18

Some shows may not need or desire full-fledged base camps, especially those that have occupied the historic building for decades. In lieu of relying completely on base camps, some additional built space could be provided in a new level on top of the new stages on the west and northeast parts of the site. It could provide some flex spaces, dressing rooms, hair and makeup spaces, rehearsal areas, production offices, and additional space into which to move. This could reduce the need for temporary buildings like those that currently litter the site. Such a level could be set back from the stage wall.

There are four stages proposed for the northeast corner. There is no immediate adjacent production support space depicted on the proposed site plan for the two most easterly stages.

In addition, all of the stages proposed for the northeast corner of the site could have an enclosed backstage area between them.

Elevators may be used to ferry items from trucks in the basement to the stage level. It is much more convenient for trucks to offload sets, light trusses, audience bleachers, etc., directly at each stage's elephant doors, and even enter the stage itself. This may require room for the truck to back in. The proposed building immediately west of the historic building may restrict the space to do this.

Response to Comment No. 538-18

This comment provides the commenter's suggestions about the Project but does not discuss the analysis of the Project's environmental impacts contained in the Draft EIR. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-19**Parking**

1,510 parking spaces have been identified as existing on the site. Are all of these currently available, or some occupied by temporary office and dressing room structures? In addition, how many spaces are available to Television City personnel at The Grove parking structure? Are there seasonal or other restrictions on the use of these spaces?

Response to Comment No. 538-19

The approximately 1,510 existing parking spaces on the Project Site are available for employee and visitor parking. Similar to any dynamic production studio campus, surface parking lots are occasionally used for temporary set storage and basecamp areas, but these parking lots can be used for parking during instances where additional parking is needed.

There are no spaces at The Grove parking structure reserved for existing TVC employees. The Project Site would have sufficient parking to accommodate the audience parking demand on-site. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment No. 538-20

I sense that the scope of this project hinges on a substantial use of tandem parking. A tandem space includes space for two or more cars in a head-to-tail arrangement. Only one car would have immediate access to a travel lane. Of these, how many are on the inside without immediate lane access?

Response to Comment No. 538-20

The final parking design will be determined during the City's regulatory building permit process, but the comment is correct that tandem parking may be utilized. Tandem parking of employees and visitors would require some level of attendant parking to assure access to the inside parking spaces.

Comment No. 538-21

If no tandem parking arrangements were to be allowed and all spaces required to have immediate lane access, how many total parking spaces would remain? This could have an effect on how much of this project could be developed.

Response to Comment No. 538-21

Tandem parking is a common practice in large, underground and above-grade parking structures. Automated parking is another possibility for parking facilities on the Project Site. The issue of "immediate lane access" as cited in the comment affects the design and operation of tandem or automated garages more than it affects the overall capacity of the garage. Parking facilities with tandem spaces have to maintain a group of attendants large enough to move the blocked spaces to the aisles when needed. Likewise, the automated parking structures have to be designed with enough vehicle

loading/unloading areas to move the anticipated flow of vehicles to/from the parking spaces. Neither of these factors would limit the capacity of the garage if the garage were properly designed and staffed. A requirement, such as the one described in the comment, would be extremely unusual and not required to mitigate any CEQA impact.

Comment No. 538-22

Why do parts of the site have two levels of underground parking and others three levels?

Response to Comment No. 538-22

As discussed above, the final parking design will be included in the detailed construction plans during the regulatory building permit process, but the Project Site itself slopes downward from northeast to southwest so the topography of the Project Site itself suggests that different underground parking levels in different areas of the Project Site would minimize excavation.

Comment No. 538-23

Why is there no parking proposed under the new stages on the northeast part of the site?

Response to Comment No. 538-23

Sufficient parking could be developed on-site without adding underground parking below the northeast portion of the Project Site. Parking could be developed under active sound stages but isolating the sound stage from the potential noise and vibration effects of underground parking would make the parking under sound stages more expensive to construct.

Comment No. 538-24

Studio Audiences

The EIR does not address the issue of studio audiences.

People in a studio audience are more than likely to come by car. A few may arrive on foot from nearby neighborhoods, some dropped off by car or come via public transit. Groups may arrive by private chartered bus.

At present, no audience parking is provided on site. Currently, audience members gather on sidewalks along Fairfax Avenue for shows in the original building. They gather on Beverly Boulevard for shows produced in the East Studio Building. There are times when the two studios in the latter building have shows with audiences going on at the same time.

Is parking going to be available onsite for cars and private buses? If so, where is the entrance going to be for that? Will there be different entrances depending on whether a car or private bus is used? Will the mobility hub be used for such buses?

After parking their cars or leaving private buses, where will audience members go to line up, check in and go through security? Where will those who get there by other means line up and check in?

Is there going to be a central studio audience gathering location? Will there be different locations depending on how people arrive and where the destination studio is located on the lot?

Will studio audiences be queuing up on the public sidewalk or onsite? If on the sidewalk, the audience members could get in the way of people otherwise using the sidewalk to get from one place to another.

Most TV shows overbook the number of people in an audience in order to insure that enough people show up. In the event that someone is bumped, they would need to have easy access to their car in order to leave. Tandem parking for studio audience members is not feasible.

Many shows in the East Studio Building have as many as 600 people in their audiences. In the original studio building, Studio 33 seats up to 350 people for the Price is Right and Real Time.

A good source of information on audience sizes might be audience booking companies such as On Camera Audiences and 1iota.

If onsite car parking is not going to be available, will vouchers be given for free parking at The Grove parking structure? If The Grove parking structure is going to be used, people are likely to try to access Television City using the Grove Drive entrance, or even queue up on the sidewalk outside of it. The proposed width for the sidewalk adjacent entrance is not sufficient for safe gathering. People are likely to step into the street as they wait to get onto the lot. In preliminary drawings, a wide east-west running sidewalk on the lot is depicted. Unfortunately, its use is partially blocked by a power substation. Could that be located elsewhere?

Los Angeles traffic is unpredictable, and so people who will be in a studio audience may leave home early in order to be on time. Sometimes they may arrive early. How do you handle early arrivals? Will they be told to go drive around for awhile?

For some shows, such as the Price is Right, audience members will form a line on the sidewalk at very early hours of the day.

At studio audience gathering areas on the lot, there is need for rain, sun and heat shelter, seating, and rest rooms. Perhaps the ground floors of the office buildings at the northwest and northeast corners of the lot could be used for this purpose. Further, there is need for easily accessible rest rooms for studio audience members at each sound stage. The use of porta potties looks tacky and would not be in keeping with the quality of this project.

Response to Comment No. 538-24

Audiences were considered as part of the transportation analysis. With respect to modes of travel, the comment is correct that most audience members are expected to arrive by private vehicles. It has been assumed that approximately 90 percent would arrive by private vehicles and approximately 10 percent would arrive either on the TVC shuttle from the Metro D (Purple) Line Wilshire/Fairfax Station or via vehicle drop off at the Mobility Hub. Charter buses for audiences are rare.

With respect to parking, under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nevertheless, audience parking would be provided on-site. Audience members would be directed to one of the three signalized entrances to enter the Project Site, and then they would be directed to parking areas for that specific show. Audience members arriving via shuttle, drop off, or via private bus would check in through a pedestrian area at the Mobility Hub. With respect to audience staging and amenities, an audience staging area and check-in facility is planned in the vicinity of the Mobility Hub where audience members would be greeted and screened for entry into the Project Site. It is not anticipated that the perimeter public sidewalks would be used for audience staging. A secondary audience staging area may be planned in the proposed open space area along Beverly Boulevard to serve sound stages in that area of the Project Site. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, and Topical Response No. 12, Safety and Congestion, regarding audience shows, trips and access.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is acknowledged and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment No. 538-25**Transportation**

I would like to see a real time animated simulation of traffic throughout all peak traffic times on the abutting streets and site driveways. I am concerned that the addition of traffic lights on Fairfax Avenue and The Grove Drive could slow all traffic down on both streets. Fairfax Avenue and Third Street already is highly congested.

What is to physically prevent people from making left turns from Beverly Boulevard into the most westerly driveway on the site? What is to physically prevent people from making left turns from Fairfax into the most northerly entry and most southerly entry to the site? What physically prevents a driver from making a left turn onto Fairfax Avenue from the most northerly and most southerly driveways along that street.

Response to Comment No. 538-25

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Notwithstanding, the additional signalized entrances to the Project Site are expected to operate at LOS B as reported in Table 18 on page 162 of the Transportation Assessment (Appendix M.1 of the Draft EIR). This indicates that these traffic controls will not add to congestion along The Grove Drive or Fairfax Avenue.

Turn prohibitions into the intended right turn in-and-out driveways would be controlled by pavement marking and signs prohibiting the movements in question.

The remainder of this comment discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-26**Sidewalks**

There is growing interest in sidewalks providing a pleasant experience for pedestrians. This requires that sidewalks are wide and comfortable for two people to walk together in

each direction at the same time on commercial streets. The sidewalks on all perimeter streets should be at least 15 feet wide.

Grove Drive may be classified as a collector and as such have certain standards, for width, sidewalk dimensions, etc. This classification does not address the reality of this situation. Currently the sidewalk is too narrow for residents of the neighborhoods to the north and the Broadcast Center Apartments to easily get to The Grove and other stores nearby.

Response to Comment No. 538-26

As part of the Vesting Tentative Tract Map, the Advisory Agency, in consultation with the Bureau of Engineering and Department of Transportation, will determine appropriate right-of-way, roadway, and sidewalk widths. Refer to Response to Comment Nos. 16-30, 16-72, and 16-76 regarding sidewalk and frontage widths. Refer to Response to Comment No. 521-2 regarding access and the use of The Grove Drive.

Comment No. 538-27

The Beverly Boulevard sidewalk will provide a pleasant view of the historic building. I am concerned about the view on Fairfax Avenue. The wall depicted in the preliminary sketches gives a fortress like appearance. It could also be a convenient target for taggers. More work needs to be done on the design of that.

Response to Comment No. 538-27

Refer to Response to Comment Nos. 9-17, 16-72, 28-18, 172-3, and 313-2 with regard to the Project's pedestrian-oriented design and public realm enhancements, as well as the design standards that are part of the proposed Specific Plan.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-28

Design Standards

Will there be a chance for public comment on the design standards?

New buildings should keep with the standard established by the historic building. Studio facades should be white concrete and/or have black decking. Elephant doors should be black in color. Red trim should be used. Cylindrical columns should be considered.

The facades of the office buildings are important. They need to function as a background and not distract from focus on the main building. No staggered windows should be used. In addition, no striped facades with windows alternating with vertical white striped areas should be used. These standards need to also apply to facades that face Fairfax Avenue.

Response to Comment No. 538-28

Refer to Response to Comment Nos. 538-3, 538-7, 538-10, and 538-27.

The commenter's opinions about the Project design are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-29

Signs

Will there be a chance for public comment on the sign plan?

The Television City location is not in downtown Hollywood or Las Vegas. This is a more subdued area. Signage needs to be appropriate for this neighborhood.

Purpose

Signage that can be seen from the street should be used only for identification, direction and not for advertising purposes. There should be no distractions for drivers along Beverly Boulevard and Fairfax Avenue. There is enough for them to deal with to drive safely.

Design standards need to apply even to signs that are not readily seen from the street. I am concerned about the south elevation of the new studio block along Fairfax Avenue.

Tenants

Except for tenants in the commercial space on Beverly Boulevard, no tenant signage should be allowed. The exception may be a major tenant, or company that has a long-term lease on the entire site.

Location

No signs should be mounted on rooftops.

No signage should be allowed in landscaped areas.

The main design feature of this development is the architecture. Signage should never be used to compensate for weak design. Further, it should work with the design feature where it is situated. It should not look like it has been applied as an afterthought, as in the example of the “Netflix” sign on one of its Hollywood office buildings.

No signage should be allowed on the facade of the historic building, unless CBS should become a major tenant.

Type

No billboard type signage should be allowed. This includes those that incorporate into windows.

No banners should obscure windows.

There should be no pole signage, or freestanding signs, except for the Television City vehicular entrance signs.

In no case should there be internally lit cabinet signs with Plexiglas faces. No signs should extend perpendicular from a wall.

There should be no signs mounted on external raceways that stick out from the building wall.

There should be no visible electrical conduits or junction boxes. There should be no signs with animation.

For commercial businesses with direct access from the sidewalk, signage needs to be subdued. The sign needs to be immediately above the entrance, or to the side. Consider using signage that consists of individual reverse pan channel letters with halo illumination. The sign for the Television City Mobility Hub depicted on the TVC 2050 website provides a good example of the use of this type of sign.

Response to Comment No. 538-29

Refer to Response to Comment No. 538-3 regarding opportunities for public input on the Sign District.

Refer to Response to Comment Nos. 5-10 and 26-129 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square

footage, illumination, etc.) that were described in the Draft EIR in accordance with CEQA and City policy.

The commenter's opinions about the Project signage are noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 538-30

I appreciate the opportunity to comment., [sic]

Please keep me on the notification list for future phases and opportunities to comment on the TVC 2050 project.

Response to Comment No. 538-30

All commenters are added to the notification list for the Project. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 539-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Comment Letter No. 541

Fiona Tagliente
359 1/2 N. Gardner St.
Los Angeles, CA 90036-5722

Comment No. 541-1

I am a concerned resident of the Beverly Fairfax community. After learning more about the Television City project and its Draft Environmental Impact Report, I felt led to voice my opinions and concerns. I have listed several questions I have about the project, and I am hopeful that the city and the developer will take the time to read and thoroughly answer each of them.

Response to Comment No. 541-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 541-2 through 541-4.

Comment No. 541-2

Primarily, I am worried about the presence of hundreds of construction trucks in my neighborhood. The conceptual plan shows that tons of 18-wheeler trucks can be on the project site at any one time. The conceptual plan, however, fails to tell neighbors how many there will be. Will there be 15? 50? 100? Will they all be 18-wheelers, or will there be dump trucks as well? Where will they park? What hours will they be driving to and from the property? Will their parking spaces be visible from residential property lines? I am concerned about the eye-sore that this many trucks in my neighborhood would create, especially if this project takes 20 years to complete.

Response to Comment No. 541-2

This comment is identical to Comment No. 451-2. Refer to Response to Comment No. 451-2, above.

Comment No. 541-3

Furthermore, I am worried about the environmental impact of this project. LA already deals with smog and excess carbon emissions, so I'm worried that this project will severely exacerbate this problem. Have the environmental impacts of the trucks been fully analyzed? What did your analysis conclude about increased greenhouse gas emissions?

Please cite specific studies. If studies have already been conducted, did they look at the impact of 50 trucks vs. 100 trucks? What about 200 trucks? Until we know how many trucks will be on-site, having all the possibilities included in the study is essential.

Response to Comment No. 541-3

This comment is identical to Comment No. 451-3. Refer to Response to Comment No. 451-3, above.

Comment No. 541-4

I am also worried about the traffic created by these trucks. In the conceptual plan, there doesn't seem to be a traffic-calming way for large trucks to make left hand turns onto the project site. Have proper analyses been done to evaluate what additional traffic these left turns would create? Has the city considered putting arrow signals on the traffic lights around the project site? Will a truck detour be created?

Response to Comment No. 541-4

This comment is identical to Comment No. 451-4. Refer to Response to Comment No. 451-4, above.

Comment No. 541-5

The concerns outlined above are shared by many Beverly Fairfax residents. I hope the city will take the time to answer my questions about the Television City project.

Response to Comment No. 541-5

This comment is identical to Comment No. 451-5. Nevertheless this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 451-2 through 451-4.

Comment Letter No. 542

Liat Tala
535 N. Fuller Ave.
Los Angeles, CA 90036-1940

Comment No. 542-1

This project is proposing to have thousands of trucks park near core community institutions like Fairfax High, Loyola High School as well as Kaiser Hospital, which serve children and patients makes this a dangerous situation, I am sure you are aware that Loyola High School is in a lower income area. Have you studied the potential health impacts on Loyola High's surrounding residents of the exhaust/ emissions from possibly 60,000 trucks? What is going to be done to ensure those residents will not be affected? I don't mean the city will keep risk to a minimum—I mean, what is the city going to do to make sure there is no health impact of this project on those residents? Because otherwise you are saying that a project developer's profit is more important than even one person not becoming sick from the project's impacts. Environmental and health justice cannot be bartered. Have health and environmental risk analyses need to be completed and shared with every resident 3 miles in every direction from these locations.

Response to Comment No. 542-1

Refer to Response to Comment Nos. 178-3, 183-1, and 231-4 regarding off-site staging. All haul truck staging locations will be provided on-site, so no haul trucks will be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

An analysis of environmental justice is not required under CEQA.

Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to SCAQMD comments on the Draft EIR, an HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the findings of the Draft EIR.

The Draft EIR's environmental analysis was conducted in compliance with CEQA based on the thresholds of Appendix G of the CEQA Guidelines. Thus, the 3-mile analysis requested in this comment is not required under CEQA.

Comment No. 542-2

I am also concerned about the route or routes that trucks will take when hauling off construction debris. Why is their route not specified in the draft EIR? We should know this before a project can be approved. I would like to know if I am going to be exposed to increased exhaust fumes, as this will have long-term impacts on my health. Will the increased traffic caused by the project mean these trucks will idle next to my home? What about the idling from being stuck in the already traffic-laden streets all around the project?

Response to Comment No. 542-2

Refer to Response to Comment Nos. 26-30 and 164-3 for a detailed discussion of the construction haul routes, staging areas, and idling and associated emissions and health risk.

Comment Letter No. 545

Debi Taub
357 N. Poinsettia Pl.
Los Angeles, CA 90036-2506

Comment No. 545-1

I am writing to present my questions and concerns regarding the TVC 2050 proposed project that will affect the historic CBS Television Studios.

I've provided a list of questions below.

Response to Comment No. 545-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 545-2 through 545-4.

Comment No. 545-2

- Please explain the process for analyzing how the multiple projects in the surrounding community will be affected. It's my understanding that projects within radius of 0.5 miles were included in your analysis. How was this radius determined? Have you fully analyzed what is within this 0.5 mile radius? How many businesses? How many crosswalks? How many stop signs and traffic lights? Understanding all of this information will be imperative.

Response to Comment No. 545-2

The Study Area analyzed in the Transportation Assessment (Appendix M.1 of the Draft EIR) was developed in concert with LADOT based on the number of trips and the anticipated directionality of Project trips. In the case of the Project, 31 key intersections were selected for operational analysis of Opening Day conditions within a study area that was bounded by an area 1.5 miles high by 1.25 miles wide. Figures 6–8 on pages 34–39 of the Transportation Assessment (Appendix M.1 of the Draft EIR) present the crosswalk, traffic control devices, and the traffic lane assignments at each of the 31 intersections as requested in the comment.

Per CEQA Guidelines Section 15355(b), related projects are "closely related past, present, and reasonably foreseeable probable future projects." The goal is to select those related projects that could send traffic through the Project's Study Area and influence the

key study intersections within that area. Figure 14 on page 47 and Table 5 on page 60 of the Transportation Assessment provide the location and description of 68 related projects that were included in the analysis. The related projects are in an area from Sunset Boulevard on the north to Olympic Boulevard on the south and the Santa Monica Boulevard/Wilshire Boulevard intersection of the west to La Brea Avenue on the east. The area stretches approximately 2.7 miles in the north-south direction by 2.8 miles in the east/west direction—far greater than the 0.5-mile study area mentioned in the comment.

In addition to the trips from 68 related projects, the background trip levels assume a one percent annual growth in ambient traffic levels. This turns out to be a very conservative estimate since the pandemic has virtually halted ambient traffic growth since 2019. In fact, the transportation analysis assumed that the background traffic would grow by 4 percent by 2023 and by 7 percent by 2026. The current traffic counts in 2023 have not yet returned to 2019 levels, and, therefore, the operational traffic analysis in the Transportation Assessment represents a conservative (i.e., high) estimate of background traffic levels.

The effects of all related project trips, the potential ambient growth in background traffic levels, and the Project trips were combined to evaluate the Project's operational effects on the 31 key intersections within the Study Area.

Comment No. 545-3

- The draft EIR states that “all related projects were assumed to be completed by the estimated 2026 Project buildout year for the purposes of traffic analysis.” Why are you assuming that all the related projects would be completed by 2026? What date does this assumes the construction begins? Is this assumption made for the purpose of understanding the impact on traffic and congestion? I’m concerned that you aren’t analyzing the full scope of construction on these projects, or the full scope of the proposed TVC 2050 project. You are failing to take into account the full process, construction, and impact of these projects.

Response to Comment No. 545-3

Traffic generated by all 68 related projects was assumed to be added to the future Opening Year background traffic levels even though some of these projects may never be built or may be delayed beyond the Year 2026 Opening Year date. It is, therefore, a conservative analysis because it is highly unlikely that all 68 related projects would be approved, constructed, and fully occupied by Year 2026.

Section 5D beginning of page 179 of the Transportation Assessment (Appendix M.1 of the Draft EIR) analyzes the worst-case construction impacts assuming that the entire Project was constructed in a 32-month period. Assuming Project construction starts in

2023, the 32-month construction period would result in a Project Opening Year of 2026. These assumptions allow for the analysis of the full impacts of the construction of the complete Project. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 545-4

- Finally, I'm concerned about the nature of this study. It appears that only qualitative analysis was conducted to understand the impact of transportation. Is qualitative analysis enough to understand the long-range buildout scenario? Will you perform any quantitative analysis? It seems unlikely that you can have a comprehensive study without considering both the qualitative and quantitative aspects of this proposed project.

Response to Comment No. 545-4

Section IV.K, Transportation, of the Draft EIR provides quantitative information where appropriate, particularly as related to the discussion of VMT impacts presented on pages IV.K-73 through IV.K-78 of the Draft EIR (i.e., quantification of building areas, daily vehicle trip rates, number of employee and employee trips, and daily work VMT, including daily VMT per employee). Additional detail, including more quantitative data, in support of the transportation analysis is provided in Appendix M.1, Transportation Assessment, of the Draft EIR. Chapter 4 of the Transportation Assessment summarizes the quantitative analysis the VMT analysis, summarized in Table 13 on page 123 while Chapter 5 beginning on page 134 and continuing until page 186 provides the quantitative analysis of the traffic operational analysis. Chapter 5 provides the level of service capacity analyses that readers are more used to seeing in a Draft EIR. The LOS operational analysis is summarized in Table 18 on page 162 of the Transportation Assessment where the "with and without Project" morning and afternoon peak hour LOS calculations for the 31 study intersections are presented.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. That topical response includes additional details and another example regarding how work VMT per employee is calculated, and also provides empirical data in support of the employee trip length assumptions used in the VMT analysis.

Thus, the Transportation Assessment (Appendix M.1 of the Draft EIR) includes both the qualitative and quantitative analyses required of the EIR process, consistent with the TAG and CEQA.

Comment No. 545-5

I would urge you to fully think through the process of drafting the EIR and consider if you have done a sufficient amount of study to understand the impacts of traffic, congestion, and development on this community. I don't believe your scope of analysis is adequate to provide a comprehensive outlook on how this proposed project will negatively affect the livelihood of nearby residents.

Response to Comment No. 545-5

The Transportation Assessment meets all of the requirements of the State of California CEQA process and the requirements of the TAG. The Transportation Assessment (Appendix M.1 of the Draft EIR) has been thoroughly reviewed and approved by LADOT as summarized by their Assessment Letter dated November 16, 2021 (Appendix M.2 of the Draft EIR).

Both Chapter 4 and Chapter 5 of the Transportation Assessment (Appendix M.1 of the Draft EIR) present detailed quantitative analyses of VMT (Chapter 4) per CEQA and intersection LOS (Chapter 5) per the TAG. The analyses fully disclose the potential transportation impact of the Project and, according to State CEQA standards, the Project has no significant transportation impacts.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 546

Jack Taylor
541 1/2 N. Spaulding Ave.
Los Angeles, CA 90036-1807

Comment No. 546-1

The CVS studio expansion just does not work for our neighborhood.

Response to Comment No. 546-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 546-2

The construction will cause constant gridlock and create safety risks for all of us. Pedestrians and bicyclists will be seriously affected once sidewalks are closed, bike lanes host parked cars, and roads are closed.

Response to Comment No. 546-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

The Draft EIR discussed construction traffic in Section IV.K, Transportation, and the Transportation Assessment (Appendix M.1 of the Draft EIR) included a full analysis of construction traffic. As discussed therein, the Project includes the development of a CTMP prepared pursuant to Project Design Feature TR-PDF-1. The Project would not result in significant traffic safety hazards as construction staging, deliveries, etc. would occur within the boundaries of the Project Site. Any activity on the Project Site periphery would include pedestrian and bicycle protection and detours, as necessary. The Project would comply with all construction safety requirements and would not introduce unusual features that could result in a safety hazard. The haul routes use arterial streets and have been reviewed and approved by the City. By following standard rules and implementing the CTMP, the Project would not result in any significant safety hazards. Refer to pages IV.K-36 to IV.K-37, and IV.K-80 of the Draft EIR; pages 179 to 184 of the Transportation Assessment; and Topical Response No. 14, Construction Vehicle Impacts, for additional information.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

There are no plans for any long-term sidewalk or bike lane closures as part of the construction process. There are some utility upgrades that will require new or revised connections between the Project Site and utilities that currently run under the streets. For these connections, sidewalks and bike lanes would have to be closed temporarily, but the CTMP prepared pursuant to Project Design Feature TR-PDF-1 would require that temporary sidewalks and bicycle rerouting be provided to maintain pedestrian access past the Project Site.

Regarding concerns about cars parking in bike lanes, refer to Section A, Parking Supply, of Topical Response No. 13, Parking, for a discussion of how the parking provided on-site is more than adequate to meet peak parking demand. Refer to Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of the same topical response, for a discussion of how the adequate on-site parking supply will prevent the need to park off-site. Accordingly, no off-site parking is proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 546-3

There is the issue on how data was collected for this project. There are only qualitative discussions for the transportation impacts? Where is a quantitative assessment? Can you please explain the analysis here? What were the assumptions when looking at increase in traffic, where drivers to the site would be driving from and the distances, how often and how many days?

Response to Comment No. 546-3

Refer to Response to Comment Nos. 545-4 and 545-5 for a discussion of the quantitative analysis of the transportation impacts, including assumptions and data used, in Section IV.K, Transportation, of the Draft EIR, and in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Specifically responding to the detailed questions in the comment, the following sections of the Transportation Assessment (Appendix M.1 of the Draft EIR) address the requests:

Assumptions to produce estimates of trip increases:

- Future Background Trips: pages 26–29 and Figure 16 (page 51)

- Project Trips: Table 6 (page 81)
- Trip Distribution: Figures 19A and 19B (pages 69–70)
- Peak Hour Trip Levels: Figure 21 (page 77)

Contrary to the comment, the Transportation Assessment (Appendix M.1 of the Draft EIR) contains pages and pages of quantitative data and technical results summarizing vehicle miles traveled and intersection level of service for the Project. According to State CEQA standards, the Project would not create a significant transportation impact.

Comment No. 546-4

In several places, the EIR references things the applicant might do, such as maybe make some pedestrian improvements. How can the applicant have a plan approved when definitive improvements like that are uncertain, with no schedule and no explanation of when improvements will be decided upon? Why isn't the City requiring pedestrian improvements be put into place?

Response to Comment No. 546-4

Refer to Response to Comment Nos. 16-72, 28-18, 35-101, 172-3, and 313-2 regarding the Project's pedestrian-oriented design and public realm improvements.

Comment No. 546-5

When is the public going to hear anything about what "may" happen? How will we be sure if these improvements are even effective or work for the community?

Response to Comment No. 546-5

Refer to Response to Comment Nos. 16-72, 28-18, 35, 101, 172-3, and 313-2 regarding the Project's pedestrian-oriented design and public realm improvements.

Comment No. 546-6

There is also a lot of environmental uncertainty around the project's impacts. It seems impacts were studied for only a three year construction timeline, so how can the applicant be asking for a 20 year agreement and yet impacts for that long a period of time are not provided. What are the impacts for all planned and potential years of traffic? We cannot live with so much uncertainty about construction noise, traffic, and increased disruption every day.

Response to Comment No. 546-6

Refer to Response to Comment No. 9-24 regarding the Project timeline. As discussed therein, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts, including noise and traffic impacts, associated with a 20-year buildout is included for each of the environmental topics studied in the Draft EIR.

Comment No. 546-7

I just don't see how this project could be allowed to be built. So few people want this, but a lot of people are frustrated and do not want this project.

Please help me understand this and answer my questions.

Response to Comment No. 546-7

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 546-2 through 546-6 above, and 546-8 below.

Comment No. 546-8

There will be terrible traffic and other potential serious impacts to our community.

Response to Comment No. 546-8

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment Letter No. 547

Julia Teweles
413 N. Sierra Bonita Ave.
Los Angeles, CA 90036-2461

Comment No. 547-1

As a member of the Fairfax community, I feel threatened by the proposed project. How could such an egregious plan be put forward? There are many concerning aspects, and I will highlight a few of my main concerns below.

Response to Comment No. 547-1

This comment is identical to Comment No. 382-1; nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 547-2

As it stands, there is a large parking structure being placed on Grove Drive. Grove Drive is right across from Pan Pacific Park. Children, senior citizens, and everyone in between frequent this park. With this new parking structure, there are going to be many more trucks entering Grove Drive and emitting fumes and exhaust next to the park. How many trucks are expected to be in this parking structure? How much diesel exhaust is going to be emitted? What are the health risks to people? Are the health risks different for younger children than for senior citizens? Please provide a proper analysis on the health risks associated with all of this exhaust.

Response to Comment No. 547-2

This comment is identical to Comment No. 382-2. Refer to Response to Comment No. 382-2, above.

Comment No. 547-3

Staying on the theme of Grove Drive, essentially all of the parking is located on the road. This means that all the people trying to get to the project site will use Grove Drive. This seems impossible and is bound to be chaotic. How is the Grove gate going to handle this congestion? What will happen if 25% of traffic uses the Grove gate? What about 50%? 75%? And on the most extreme end, what would happen if 100% of the traffic tries to use the Grove gate?

Response to Comment No. 547-3

This comment is identical to Comment No. 382-3. Refer to Response to Comment No. 382-3, above.

Comment No. 547-4

Another thing that concerns me is parking plan. In its current state, it makes no sense. The Draft EIR outlines that there will be roughly 8,000 people employees on site. Additionally, the large audience stages could bring in 3,000 to 5,000 people a day to the site. However, the project is allotting 5,300 parking spaces. What is the plan for employee parking? How are parking permits going to be distributed? How are they going to be monitored and enforced? With these numbers, there are not enough spaces. Where is the overflow going to park? Are you going to have designated spaces for them nearby or are they expected to park all around our community?

Response to Comment No. 547-4

This comment is identical to Comment No. 382-4. Refer to Response to Comment No. 382-4, above.

Comment No. 547-5

All of the points above need to be addressed. They all directly impact the health and lifestyle of residents like me, and it is important for these questions to be answered and changes to be made. The plan as it stands is unacceptable and needs to be heavily reconsidered.

Response to Comment No. 547-5

This comment is identical to Comment No. 382-5; nevertheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 548

Elsa Thompson
534 N. Kilkea Dr.
Los Angeles, CA 90048-2212

Comment No. 548-1

As a resident of 49 years, I really do not understand this project.

Response to Comment No. 548-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 548-2 through 548-10.

Comment No. 548-2

Please explain how the Television City expansion project will be laid out. The Draft EIR lacks a lot of detail about the buildings, sound stages, parking, and other aspects of the proposal.

Response to Comment No. 548-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan. As discussed in these responses, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Comment No. 548-3

I have some concerns I am requested [sic] that you address:

- I understand that many billboards will be placed throughout and surrounding the site. What size billboards and how many? Where will billboards be located? Please show where these will be located and how they will be lit?

Response to Comment No. 548-3

This comment is identical to the first half of Comment No. 277-2. Refer to Response to Comment No. 277-2 regarding billboards, which would be prohibited by the proposed Sign District.

Comment No. 548-4

Nighttime signage could impact animals.

Response to Comment No. 548-4

This comment is identical to a portion of Comment No. 277-2. Refer to Response to Comment No. 277-2, above.

Comment No. 548-5

The lighting and energy used for signs was not included in the report. Where is the analysis of those?

Response to Comment No. 548-5

This comment is identical to a portion of Comment No. 277-2. Refer to Response to Comment No. 277-2, above.

Comment No. 548-6

- Outdoor gatherings are expected events and I would like more information about where Television City would allow these. Nighttime parties across from residences would be noisy and disruptive. How does the developer plan to approach this common occurrence and protect the people who live near the project? How often would they be held? What kinds of outdoor gatherings? Will there be a limit of what types of events would be allowed?

Response to Comment No. 548-6

This comment is identical to Comment No. 277-3. Refer to Response to Comment No. 277-3, above.

Comment No. 548-7

- The Mobility Hub mentioned is not something most people are familiar with. What is a Mobility Hub? It sounds as though it is more than a bus stop? Who is expected will use it? It sounds like it could be a very busy place, and there are

many safety concerns for this ambiguous facility. Who decided a hub of this kind was needed in our neighborhood? Will buses, taxis and ride shares be a part of it? No one came to speak with me about it.

Response to Comment No. 548-7

This comment is identical to Comment No. 277-4. Refer to Response to Comment No. 277-4, above.

Comment No. 548-8

- The streets that surround the property can't hold more people and more traffic, especially on Grove Dr., Beverly Blvd and Fairfax, and West 3rd. Was the fact that these main streets are already so busy considered? Wasn't the fact that the corner where Erewhon and the post office are located is a crazy busy intersection considered? Cars trying to turn in either direction onto Beverly from Grove typically can't do that in one light. And drivers have a terrible time trying to get out of the post office parking lot, into traffic in both directions. What is going to be done about the gridlock there already? There will be potentially thousands of workers, visitors, audiences to the studios, and others driving trying to get through traffic to get to the site and then to the parking garage.

Response to Comment No. 548-8

This comment is identical to Comment No. 277-5. Refer to Response to Comment No. 277-5, above.

Comment No. 548-9

- Will the buildings for this expansion be 15 or 20 stories high, which? How was that height decided? Where will those tall buildings be located?

Response to Comment No. 548-9

This comment is identical to Comment No. 277-6. Refer to Response to Comment No. 277-6, above.

Comment No. 548-10

With this imprecise information, it seems the developer is keeping so many options open for the project. This is not helpful for people in the community who want to understand what is proposed to be built in the neighborhood. The EIR needs to be cleaned up and more specific. It is unfair for Angelenos to be kept in the dark

Response to Comment No. 548-10

This comment is identical to Comment No. 277-7. Refer to Response to Comment No. 277-7, above.

Comment Letter No. 549

John Thompson
7905 Melrose Ave.
Los Angeles, CA 90046-7109

Comment No. 549-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 549-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 550

Kevin Thulin
146 N. Fuller Ave.
Los Angeles, CA 90036-2812

Comment No. 550-1

Please answer the following questions related to the Television City expansion project EIR. It is unsatisfactory in its explanations of vehicle miles traveled, benefits, and water usage.

Response to Comment No. 550-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 550-2 through 550-5.

Comment No. 550-2

1. The people who will work in the upgraded facility are listed as driving an average of 6.7 round trip miles to get there and home. These vehicle miles traveled analysis cannot be accurate. The number of commuters coming from locations such as the San Fernando Valley and Orange County and other parts of LA is large, most likely a majority. The distances do not work with the numbers. Where did the information come from to determine the 6.7-mile figure? Vehicle Miles Traveled is a pressing issue in LA, and the information should be accurate to protect our environment and people's safety.

Response to Comment No. 550-2

Refer to Section C, Assumptions in the VMT Analysis, Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 550-3

2. When the EIR looks as though it is only for the benefit of the developer itself, it is a problem. I see alternatives in the EIR that look like they intentionally favor the proposal of the developer. Why aren't the other alternatives being given greater consideration? They are described as alternatives that were already considered and dismissed, but never put out for public input before being dismissed.

Response to Comment No. 550-3

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the range of alternatives selected. As stated therein, there are no requirements governing the nature or scope of the “reasonable range” of alternatives to be discussed, other than the “rule of reason” (CEQA Guidelines Section 15126.6(a) and (f)). The range of alternatives chosen was appropriately based on the significant impacts identified in the Draft EIR and public comments.

With respect to public input, refer to Response to Comment Nos. 28-13 and 32-3 regarding the extensive public outreach that has been conducted and the noticing of the Project in compliance with CEQA. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the required 45-day period per CEQA. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings, the dates of which will be published in accordance with the City’s noticing requirements.

Comment No. 550-4

3. Additionally, the developer’s earning potential is a goal of the project. Of course, the developer wants to make money from this huge project, but this information is totally irrelevant to the EIR. Why is the EIR at all about the fiscal benefits of the project? Isn’t the EIR’s purpose to protect the citizens of LA along with its land and flora and fauna?

Response to Comment No. 550-4

Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR. This comment raises non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

As described in Section 15121 of the CEQA Guidelines, an EIR is an informational document that will inform public agency decision-makers and the public of the significant environmental effects of a project, identify possible ways to minimize any significant effects, and describe reasonable project alternatives. Therefore, the purpose of the Draft EIR is to focus the discussion on the Project’s potential environmental effects that the City, as the Lead Agency, has determined to be, or potentially may be significant. The Draft EIR was prepared in accordance with CEQA and City requirements, and includes analyses related to human health, wildlife, and protected plant species as appropriate. Refer specifically to

Draft EIR Sections IV.A, Air Quality, and IV.F, Hazards and Hazardous Materials, as well as the Initial Study included as Appendix A of the Draft EIR.

Comment No. 550-5

4. I am also concerned about the expansion because of the impact on the water usage. Any construction project is going to use a lot of this precious resource in our water-starved state. After construction, too, the expanded Television City would use a lot of water. Please describe what the water uses will be when the building is in regular use. What will the various uses of water be? This project is so large, the EIR says it will increase water use by six times. Six seems like an extreme increase. However, it is not identified as a significant impact in the EIR. Why is this? Where is the cutoff for a significant impact for water use? I am discouraged by this cavalier attitude toward the use of something we need to value in LA and throughout California.

Response to Comment No. 550-5

Refer to Response to Comment Nos. 16-66 and 26-175 with regard to the adequacy of water supply, Response to Comment No. 223-2 with regard to the types of water demand associated with the Project, and Response to Comment No. 292-2 with regard to the threshold for a significant impact related to water demand under CEQA.

Comment No. 550-6

This project is unacceptable based on what the EIR says currently.

Response to Comment No. 550-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 550-2 through 550-5.

Comment Letter No. 551

Comment Letter No. 552

Josh and Rachel Tomaszewski
162 S. Alta Vista Blvd.
Los Angeles, CA 90036-2824

Comment No. 552-1

I am very concerned about the development plan for the Television City location.

Response to Comment No. 552-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 552-2 through 552-4.

Comment No. 552-2

The plan talks about many dozens of large 18 wheeler trucks driving to and being on the site. Is there any analysis of the environmental impacts that so many 18 wheelers will have on the community? I worry that no consideration has been given to how these trucks will affect air quality and am very curious if this has been considered at all. If it has been examined, what did the city find out? Those findings should be shared with the public. How often will this particular kind of truck traffic be driving to the property, and from where? Will they park on the property? For how long?

Response to Comment No. 552-2

This comment is identical to Comment No. 157-2. Refer to Response to Comment No. 157-2, above.

Comment No. 552-3

What about when they are exiting the property? They will have to turn into the huge amount of traffic on the streets that lie all around the perimeter of the property, so how will that be done?

There are no dedicated lanes to get cars and trucks on the street. If there were dedicated turn lanes where vehicles could turn onto the project the traffic and congestion would still be very bad—but without dedicated turn lanes, it's going to be a huge mess. This community will not be able to accommodate this type of additional consequences for the traffic situation in that vicinity. What is going to be done about this?

Response to Comment No. 552-3

This comment is identical to Comment No. 157-3. Refer to Response to Comment No. 157-3, above.

Comment No. 552-4

Additionally, having all the parking on Grove Drive makes no sense. Grove Drive is not able to accommodate that many cars. I feel like this process is rushed and the EIR has been rushed and all these details have not been fully thought through. What alternatives routes or streets were considered?

What is the overall parking plan for the development? Aren't they required to have something like a parking management plan? Does it include the implications for the neighborhood?

Response to Comment No. 552-4

This comment is identical to Comment No. 157-4. Refer to Response to Comment No. 157-4, above.

Comment No. 552-5

Unless these measures are addressed I strongly oppose this project

Response to Comment No. 552-5

This comment is identical to Comment No. 157-5. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 552-2 through 552-4.

Elena Topoozian
631 N. Las Palmas Ave.
Los Angeles, CA 90004-1019

Comment No. 553-1

I am writing to you as a concerned constituent of CD5 who has lived in the Fairfax, Melrose, and Hancock Park neighborhoods for nearly 40 years. I am deeply concerned regarding the proposed overdevelopment of the CBS Studios, known as the TVC 2050 Project.

Response to Comment No. 553-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 553-2 and 553-3.

Comment No. 553-2

As it stands now, the current proposal of a 20 story building with the added office space would not be in keeping with the historic nature of the beloved Original Farmers Market.

Response to Comment No. 553-2

This comment is the opinion of the commenter and does not relate to the Draft EIR's analysis of historic impacts. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the Draft EIR's analysis of impacts to The Original Farmers Market. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 553-3

Besides the traffic, congestion, and construction disruptions that would go on for years (literally years), the idea of a 20 story building, towering over the rest of the neighborhood, is preposterous. A building like that is appropriate for DTLA or Century City, but not in the heart of the Fairfax district.

Response to Comment No. 553-3

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment No. 96-5 regarding construction impacts and the proposed CTMP.

Refer to Response to Comment Nos. 9-16, 11-3, and 26-7 regarding the height of the Project. Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 553-4

I implore you to work closely with the developers and the city planners to come to a more reasonable development project that fits both the needs of CBS Studios and the community.

Thank you very much, [sic]

Response to Comment No. 553-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 553-2 and 553-3.

Comment Letter No. 554

Marco Torres
6322 W. Slauson Ave.
Culver City, CA 90230-6126

Comment No. 554-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 554-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 555

Sarah Torres
603 S. Citrus Ave.
Los Angeles, CA 90036-3534

Comment No. 555-1

Before you make decisions about allowing the Television City expansion project, I want to make my concerns known. I am a resident whose voice should be heard.

Response to Comment No. 555-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 555-2

The Television City expansion Draft EIR is confusing and unclear. When is the city going to hold public hearings so that the community can really understand what the project will do? Why is there no specific plan required, a plan that provides details rather than general descriptions? How are we supposed to understand impacts of a development that lacks specifics about what is going to be built and the effects? What does getting a Specific Plan mean and why can it lack specifics? Seems contradictory. Please explain exactly how the current codes or zoning for this building and for the property would be changed from what is in place now for this proposed project?

Response to Comment No. 555-2

This comment is identical to Comment No. 57-2. Refer to Response to Comment No. 57-2, above.

Comment No. 555-3

Another concern about this project is that it will lead to more development. If Television City's expansion happens, then the general plan for the community will change, won't it? Will this change open the door to more development? What kinds of development would then be allowed? How does the EIR address how this development will lead to even more? Does that mean that future projects wouldn't have to be approved? It is not acceptable that the Television City project would be an umbrella project for other projects and development, but is that what would happen?

Response to Comment No. 555-3

This comment is identical to Comment No. 57-3. Refer to Response to Comment No. 57-3, above.

Comment No. 555-4

Parking for the tremendous increase of workers at a new, larger facility will be a problem. The EIR says there are more than 5,000 spaces to be added at the site with more located offsite. That number of parking spaces doesn't even match the expected number of new employees, so what about those that can't park on site? What does offsite mean? And where is offsite? Will more parking spaces be created in other parts of the neighborhood? If so, how will that impact the area surrounding the project?

Response to Comment No. 555-4

This comment is identical to Comment No. 57-4. Refer to Response to Comment No. 57-4, above.

Comment No. 555-5

I believe Television City should not increase in size because of the potential for even more development and quality of life impacts for the community.

Response to Comment No. 555-5

This comment is identical to Comment No. 57-5. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please note that quality of life is not a CEQA impact.

Comment Letter No. 556

Amy Townsend
118 N. Kilkea Dr.
Los Angeles, CA 0048-3524

Comment No. 556-1

I am most concerned about traffic and the lack of benefits it will bring to our neighborhood. We simply don't need any more traffic. How will this impact traffic during rush hour? I already sit in traffic for hours every day.

Response to Comment No. 556-1

This comment is identical to Comment No. 465-4. Refer to Response to Comment No. 465-4, above.

Comment No. 556-2

How long will construction take? The DEIR says that the project could be built in one phase over 32 months, but it could extend until 2043? That's over 20 years of construction in our neighborhood.

Response to Comment No. 556-2

This comment is identical to Comment No. 465-5. Refer to Response to Comment No. 465-5, above.

Comment No. 556-3

I don't want to live in a neighborhood that will be consumed by traffic Monday through Friday from 7AM until 9PM and all day on Saturday for the next 20 years. That is unacceptable. This is not even limited to off peak hours. This would include during rush hour every single day. Not to mention all the noise from construction. If the project takes the full 20 years, doesn't that mean we are subject to construction noise for the next two decades?

Response to Comment No. 556-3

This comment is identical to Comment No. 465-6. Refer to Response to Comment No. 465-6, above.

Comment Letter No. 557

Ann Trank
465 N. Gardner St.
Los Angeles, CA 90036-5708

Comment No. 557-1

I have lived in this neighborhood for over 40 years. I am a local biker and walker who is deeply concerned about the potential hazards and risks that will be brought to our neighborhood by the proposed studio expansion. This whole project appears to me as one big safety threat.

Response to Comment No. 557-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 557-2 and 557-3.

Comment No. 557-2

I have multiple questions in regards to pedestrian traffic and “improvements.” First of all, how many sidewalks will be added? That was not made clear in the proposal. And how many cars will wind up on the road as a result of this new construct? I feel joggers and bikers like me have a right to know what the increased risks will be from getting hit by a car or truck passing through our area on the way the to the studio site.

Response to Comment No. 557-2

Sidewalks surround the Project Site on the west, east, and north sides. These sidewalks will be maintained and improved with wider sidewalks and/or upgraded landscape parkways. Refer to Response to Comment No. 16-72 for a discussion of the proposed improvements to enhance the public realm. Controlled pedestrian crosswalks would be added at the two new traffic signals (one on Fairfax Avenue and one on The Grove Drive).

The Transportation Assessment included as Appendix M.1 of the Draft EIR shows on Table 13 on page 123 that the Project would add approximately 9,733 net new vehicle trips per day to the roadways within the Study Area. These trips would be spread out among Fairfax Avenue to the north and south and Beverly Boulevard and 3rd Street to the east and west. Refer to Topical Response No. 10, Trip Generation.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

Comment No. 557-3

Speaking of bikes, I saw the plan referenced bicycle lane “improvements” as well, but again it was not clear what those would be. Nor is there an actual clear timeline. With all these additional vehicles passing through our neighborhood, it appears there is not plan to ensure the safety of pedestrians or bikers. What about bike lanes—will there be more? Will existing ones be changed? How do you plan to ensure safety with no additional bike lanes? Do you plan to widen the existing lanes? How are we expected to walk and ride safely?

Response to Comment No. 557-3

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 16-72 and 26-E.4-3 regarding pedestrian safety and the Project’s pedestrian-oriented design.

As part of the Project’s Transportation Improvement Program (see Topical Response No. 15), the Project is committed to a financial contribution to advance the Rosewood Avenue neighborhood bicycle greenway. The Rosewood Avenue bicycle greenway is under study between La Cienega Boulevard on the west and La Brea Avenue on the east. Improvements such as curb extensions and neighborhood traffic circles would reduce vehicular speeds and enhance the experience for bicyclists. With respect to neighborhood intrusion, refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 557-4

Please address these concerns. They are very reasonable and important questions that should be answered.

Response to Comment No. 557-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 557-2 and 557-3.

Comment Letter No. 558

Karen Tsai
6206 W. Fifth St.
Los Angeles, CA 90048-4726

Comment No. 558-1

This community has been my home for the past 12 years and I'm very concerned about what is being proposed—

Response to Comment No. 558-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 558-2 through 558-3.

Comment No. 558-2

from what I've seen, the project is likely to attract thousands of audience people a day and tons of huge trucks will be driving in and out for years to come.

People will be speeding through and parking in our community—lots of schools are located here. Jewish people walk to services. Children and older people and families go to the park and Farmer's Market.

Response to Comment No. 558-2

The claim that the Project would result in thousands of audience members per day is inaccurate. The Project Site today attracts an average of approximately 213 audience members on a weekday. This number is expected to increase to an average of approximately 384 audience members on a weekday (i.e., a net increase of less than 200 audience members) upon full buildout of the Project. Audience trips represent a small percentage of the total vehicle trips in and out of the Project Site daily.

Refer to Topical Response No. 10, Trip Generation, regarding the truck and automobile trip generation estimates during Project operation.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment No. 26-E.4-3 regarding pedestrian safety.

With respect to neighborhood intrusion, refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR). The intent of the NTMP explained in Topical Response No. 9 is to address the issues of cut-through trips, speeding, and pedestrian safety within the neighborhoods.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 558-3

Has the Draft Environmental Impact Report studied the security risks for our community? What about the air quality impacts?

Response to Comment No. 558-3

Section IV.J.2, Public Services—Police Protection, of the Draft EIR includes a detailed analysis of potential impacts related to police protection during both construction and operation. Impacts were determined to be less than significant. Refer also to Response to Comment No. 16-5 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Section IV.A, Air Quality, of the Draft EIR contains a detailed analysis of the Project's potential impact on air quality during both construction and operation.

Comment Letter No. 559

Mark Tuohy
101 S. Kilkea Dr.
Los Angeles, CA 90048-3525

Comment No. 559-1

As a neighborhood resident of 17 years, I am really concerned about this project.

Response to Comment No. 559-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 559-2 through 559-3.

Comment No. 559-2

Traffic and parking are top of mind—with almost all the parking located on Grove Drive, most if not virtually all, of the people trying to get to the site will use Grove Drive. It will be a disaster. Please show what will happen if 50% or 75% of the traffic tries to use the Grove gate.

Response to Comment No. 559-2

Refer to Response to Comment Nos. 26-171 and 26-E.4-17 for a discussion of parking access and use of The Grove Drive.

Comment No. 559-3

The project proposes 14 stages, many of which will be audience stages. This could add thousands of people to the site, not to mention constant trucking. What happens when they park in the community? What are the risks from a security standpoint for the community? Speeding in the community could raise a big problem for children and older people. And for Jewish people walking to services.

Please analyze the Vehicle Miles Travelled implications of these additional trips, the impact on neighborhood safety, and the impact on air quality.

Response to Comment No. 559-3

Refer to Response to Comment Nos. 227-3 and 436-3 and Topical Response No. 10, Trip Generation, regarding audience and truck trips.

Refer to Response to Comment No. 405-4 regarding speeding.

The Project would generate truck trips on a daily basis. It is anticipated that the Project would generate a total of approximately 83 trucks per day.

Refer to Topical Response No. 13, Parking, for a discussion of derivation of the proposed parking supply and the adequacy of that supply to meet the peak Project demands. Because the Project's parking supply is projected to be adequate to meet the parking demands, spillover parking into the neighborhoods is not anticipated.

The audience trips are already accounted for in the air quality analyses presented in Section IV.A, Air Quality, of the Draft EIR. As discussed therein, operational air quality impacts, including those associated with vehicle trips, would be less than significant.

With respect to security, the Project includes Project Design Feature POL-PDF-1, which requires the implementation of security features, including security fencing, low-level security lighting, locked entry, and security patrols.

Comment No. 560-1

Thank you for joining the Beverly Fairfax Community Alliance!

Our coalition's objective is to stop the Television City 2050 Project (TVC 2050) as proposed and work with the developer on something that is sensible, reflects the voices of the neighbors, and represents a better fit for our community.

About the TVC 2050 Project:

This project will add almost 2,000,000 square feet of development with 1.4 million square feet of offices. This represents an enormous increase from the current site.

A construction timeline of 20 years could bottleneck our communities with construction trucks delivering millions of tons of steel, concrete, and dirt.

The magnitude of this expansion will bring traffic, gridlock, disruption to mobility, and more cars into neighborhood streets than we have ever experienced before.

Help us preserve our community by submitting a letter with your concerns to Councilmember Koretz (paul.koretz@lacity.org) and Staff Planner Paul Caporaso (paul.caporaso@lacity.org)

Let them know that a “Regional Center” designation is inappropriate and request they take more time to review the Draft EIR so the community can understand this massive project.

–The Beverly Fairfax Community Alliance

Response to Comment No. 560-1

Refer to Response to Comment No. 5-8 regarding the proposed Regional Commercial designation and its relation to the size of the Project.

Refer to Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 562-1

I am writing to express grave concern that your upcoming development will negatively impact the community. As an active and proud citizen of the city, I implore you to consider the adverse effects this will have on neighboring communities and citizens.

Response to Comment No. 562-1

This comment is identical to Comment No. 523-1 but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 562-2 through 562-5.

Comment No. 562-2

Transportation and Travel: I don't understand the Vehicle Miles Travelled analysis. It says it is based on a City model, but it doesn't seem to make any sense. There are assumptions about people using transportation, but where are these assumptions from? How many people take public transportation to the site today or did before the pandemic? This would be the best data. We all know that people who work in office projects don't take public transportation. Where do the people live who will work here? The EIR seems to assume they live close by, but where's the evidence supporting this? Why is Vehicles Miles Travelled limited to employees only? What about the distance that trucks and deliveries will travel? What about all the live audience shows? How far are the audience members going to travel?

Response to Comment No. 562-2

This comment is identical to Comment No. 523-2. Refer to Response to Comment No. 523-2, above.

Comment No. 562-3

Planning Structure: It is imperative the community is aware of the plans for this development. We should not be left in the dark and unsure about the project's time frame. What are the phases of how this project will be built? What does the specific plan

referenced have to do with the applicant's plan as analyzed in the EIR? Where are the specifics of a specific plan?

Response to Comment No. 562-3

This comment is identical to Comment Nos. 523-3 and 523-4. Refer to Response to Comment Nos. 523-3 and 523-4, above.

Comment No. 562-4

Please show a phasing plan for this project so the community can know what will be built when. What is a development agreement and why would the city give a 20-year one?

Response to Comment No. 562-4

This comment is identical to Comment Nos. 523-5 and 523-6. Refer to Response to Comment Nos. 523-5 and 523-6, above.

Comment No. 562-5

Environmental Safety: As a conscious group of citizens, we always seek out ways to preserve our environment. The conceptual plan shows many dozens of big 18-wheeler trucks on the site. How many trucks can be on site? Have the impacts of the trucks been fully analyzed. Does the Air Quality analysis show that there could be 50, 100 or 200 production trucks spewing diesel particulates in the community for years to come? What about the greenhouse gas emissions?

Response to Comment No. 562-5

This comment is identical to Comment No. 523-7. Refer to Response to Comment No. 523-7, above.

Comment No. 562-6

These question are important to citizens of the city and we are eager to see how these concerns will be addressed.

Response to Comment No. 562-6

This comment is identical to Comment No. 523-8. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific

issues raised by the commenter are addressed in Response to Comment Nos. 562-2 through 562-5.

Comment No. 563-1

I am writing to express my concern and opposition toward the TVC 2050 project and its impacts on the community.

Response to Comment No. 563-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 563-2 through 563-3.

Comment No. 563-2

I am very confused because I have looked through the Draft EIR and I still don't know what uses the developer actually intends for the project site!

Response to Comment No. 563-2

This comment is identical to a portion of Comment No. 440-1. Refer to Response to Comment No. 440-1, above.

Comment No. 563-3

Warehousing and "conference facilities?" What does the developer intend to do with those uses, exactly? And what impacts will those uses have on the community and the environment? Because I tried to find those impacts in the document and they seem totally missing. How can the impacts of different "uses" that are not spelled out in the first place even be analyzed? The project developer wants to have flexibility, but if the uses change, will those uses then be studied?

In fact, the Draft EIR seems to say that ANY use in the C2 zone will be permitted on this lot. That's a lot of uses. If the developer intends to tell us that their project could include any of those uses, then the developer should also be obligated to tell us the impact of the entire range of uses allowed on the property. Where is that analysis—of all the impacts of all the uses that could potentially be allowed? If they are allowed to do anything that is permitted in a C2 zone, will the city require them to study the impact of each of those uses?

If not, why? It seems like they are trying to sneak in additional uses that the neighborhood may object to.

If the project is allowed to build a fueling station and vehicle repair facility, then we should know what the air quality, safety, and traffic impacts would be on surrounding residents. So, what uses will the developer actually be permitted to have on the site?

How can the public understand and weigh in when it hasn't been made clear what the actual planned uses are? When will a definitive plan be made available? How can the City approve a project that is more in concept than in specifics? If that is even possible, what do you then tell community members about how the project is going to actually affect their daily and long-term lives?

Will the city have any power to impose restrictions on how they use this property in a way that is more restrictive than the C2 zoning? What powers do they have and what will the enforcement method be? What penalties can be imposed on the developer if they violate those restrictions?

The developer should be required to add more clarity to the draft EIR about the intended uses on their property. Neighbors deserve to know what will actually happen on the property.

Response to Comment No. 563-3

The first three paragraphs of this comment are identical to Comment 440-2. Refer to Response to Comment 440-2, above.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 regarding the five permitted studio uses. As discussed therein, based on input received in response to the Draft EIR, the permitted uses were clarified to reflect the studio objective of the Project and the reference to all C2 uses has been removed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses—sound stage, production support, production office, general office, and retail—as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the EIR. Further, as discussed in Topical

Response No. 1, the Draft EIR analyzed the proposed development program as well as the maximum impact scenarios to account for the full range of impacts associated with the Project.

Refer to Response to Comment Nos. 26-10 and 26-14 regarding warehouse and conference facility uses. A fueling station or vehicle repair facility would not be permitted, as stated incorrectly by the commenter.

The fourth paragraph of this comment is identical to Comment No. 376-2. Refer to Response to Comment No. 376-2, above.

The fifth paragraph of this comment is identical to Comment No. 376-3. Refer to Response to Comment No. 376-3, above.

As a resident of the Mid City West area, for over 30 years I am very concerned about the proposed increase in the size of the Television City studio.

Response to Comment No. 564-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 564-2 through 564-4.

Comment No. 564-2

What does the construction period mean for my neighborhood? What notifications will be sent out as to the disruptions, what they will be and when they will be scheduled? How far in advance will the area be told? Does it depend on what kind of disruption it is, such as a lane closure, or a sidewalk being torn up, or parking spaces being blocked?

Response to Comment No. 564-2

This comment is identical to portions of the first paragraph of Comment No. 129-2. Refer to Response to Comment No. 129-2 regarding Project construction.

Comment No. 564-3

What does the increase in studio space and employees mean for traffic? What days of the week will be affected, and by how much traffic? What kind of traffic—cars, trucks, both? What will the expected traffic patterns be during construction? What about once the development is done?

Response to Comment No. 564-3

This comment is identical to the second paragraph of Comment No. 129-2. Refer to Response to Comment No. 129-2, above.

Comment No. 564-4

The EIR doesn't tell me where the construction trucks are going to travel. Can trucks use any route? Will neighbors be consulted? Will churches and synagogues be consulted? Will schools be consulted? Two sisters walking home from school were killed recently in South Los Angeles by a dump truck.

Response to Comment No. 564-4

This comment is identical to the third paragraph of Comment No. 129-2. Refer to Response to Comment No. 129-2, above.

Comment No. 564-5

I would appreciate responses to all of my questions and concerns.

Response to Comment No. 564-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 564-2 through 564-4.

Comment Letter No. 565

Pauline Van Keulen
548 N. Spaulding Ave.
Los Angeles, CA 90036-1808

Comment No. 565-1

Has anyone carefully considered the impact of traffic congestion? The Draft EIR states there will be almost 8,000 employees on the site. Plus 3,000–5,000 people per day could be coming to the site—most will probably drive, but others will come via Uber and Lyft. Plus, hundreds of trucks coming in and out of site, for twenty years. That all adds up to filthy air and incredible traffic, even if there are dedicated traffic cops assigned to the area.

Response to Comment No. 565-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips.

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Air quality analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, of the Draft EIR. Project construction would result in a significant Project-level and cumulative impact related to regional NO_x emissions, even with the incorporation of feasible mitigation measures. Although temporary, this impact would be significant and unavoidable. However, construction and operation of the Project would not result in localized air quality impacts. The Project also includes a quantitative HRA included as Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Refer to Response to Comment No. 26-E.1-2 for further discussion of the HRA. Operational air quality impacts would be less than significant.

Comment No. 565-2

And where are all of these people going to park? The current plan of 5,300 parking spaces is laughably insufficient.

Response to Comment No. 565-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking.

Comment Letter No. 566

Henry van Mayland
546 S. Curson Ave.
Los Angeles, CA 90036-3253

Comment No. 566-1

I want to express my support for the Television City Project.

First, it is of vital importance to Los Angeles that it maintain its position as the leading production city in the world, and this project will go some way to alleviating the current shortage of sound stages and other production facilities. Providing a place of employment for nearly 8,000 people is also a boost to the economic wellbeing of the region.

Second, it integrates neatly into Los Angeles' future public transport plans—the Purple Line Wilshire/Fairfax station to the south and the possibility of the Crenshaw Line Northern Extension Beverly/Fairfax station, which promises to be immediately adjacent to this project, this on top of local bus lines. The Project's Mobility Hub will further facilitate public transport usage. I am particularly appreciative that the VMT impact would not be significant. In a densifying residential area, it is also a reasonable assumption that many employees will walk.

Third, I am delighted that the original CBS buildings will be not only restored, but kept for their original use.

Finally, and I write now as a resident of Park La Brea who regularly walks in the area, a bleak and sun-blasted stretch of Fairfax which has been a discontinuity in our neighborhood for decades is being resolved.

Response to Comment No. 566-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 567

Sam Van Wagemen
8139 Blackburn Ave.
Los Angeles, CA 90048-4423

Comment No. 567-1

I recently learned about some concerning details regarding the Television City renovations. My major concerns are the length of this project and the lack of transparency regarding its approval.

Response to Comment No. 567-1

This introductory comment is identical to Comment No. 282-1; nonetheless, it is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 567-2.

Comment No. 567-2

I had not received any notifications regarding the approval process for this project, and yet now I hear that it's being fast-tracked for approval. I think this is a gross breach of public trust, and any approvals should be delayed until the public has appropriate time to hear about the potential impacts of this project. After all, I understand the developer is asking for a 20-year timeframe for the project.

Why would the city approve a project that could cause impacts to the area for 20 years? Are the impacts going to be worse over that timeframe? How is the community supposed to understand exactly what the impacts are going to be for each of those and cumulatively over that period?

Response to Comment No. 567-2

This comment is identical to the first two paragraphs of Comment No. 282-2. Refer to Response to Comment No. 282-2, above.

Comment No. 567-3

That is an incredible amount of time to be building something without proper oversight from the community. I have not heard about any community benefits offered to ensure the community will benefit, or at least not be harmed, by this development. I'd urge you to pause this plan until the community has an appropriate amount of time to actually

understand how the neighborhood will change with this huge development. After all, you're here to represent us and not Hollywood elites, right?

Response to Comment No. 567-3

This comment is identical to the last paragraph in Comment No. 282-2. Nevertheless the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 282-2.

Comment Letter No. 568

Amelia Vargas
358 N. Ogden Dr.
Los Angeles, CA 90036-2163

Comment No. 568-1

I'm writing to comment on the draft EIR for the proposed project at the Television studios.

Response to Comment No. 568-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 568-2

What are they building? I've heard there will be new studios, new stages and a lot of offices. But then I heard about some kind of mobility hub, which sounds like a bus or transit station. So which is it—are they going to have studios and stages, or will it be an office building, or is it going to some kind of transit center? And I heard there will be outdoor events too? So it is going to be concert venue? What else are they planning to do with the property?

What is going to be the effect in the surrounding neighborhoods of all those different things going onto the site? All this information needs to be made clear to residents and businesses. They are ones that will be affected by this project.

There are too many unknowns for those of us in the community to really understand and weigh in on this plan.

Will they be allowed to build anything taller than what is there now? What are the height requirements? Is there a limit to how big any of the buildings can be?

Response to Comment No. 568-2

This comment is identical to Comment No. 131-2. Refer to Response to Comment No. 131-2, above.

Comment No. 568-3

They need to narrow down what it is they are doing and then send the plan to go through the process again. When will that process happen? If the plan is updated with more detailed information, will you recirculate to the community?

This is a massive project, and more information is needed.

Thank you for your time and consideration.

Response to Comment No. 568-3

This comment is identical to Comment Nos. 131-3 and 131-4. Refer to Response to Comment Nos. 131-3 and 131-4, above.

Comment Letter No. 569

Rob Vautherine
7800 Beverly Blvd.
Los Angeles, CA 90036-2112

Comment No. 569-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 569-1

Comment Letter No. 571

Ryan Vermilion
401 W. Ogden Dr.
Los Angeles, CA 90036-1735

Comment No. 571-1

I'm writing to comment on the draft EIR for the proposed project at the Television studios.

Response to Comment No. 571-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 571-2

I am very concerned about the amount of traffic this will produce in the area.

Response to Comment No. 571-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

This comment expresses a general concern on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 571-3

I heard about some kind of mobility hub, which sounds like a bus or transit station. So which is it—are they going to have studios and stages, or will it be an office building, or is it going to some kind of transit center? And I heard there will be outdoor events too? So it is going to be concern [sic] venue? What else are they planning to do with the property?

Response to Comment No. 571-3

This comment is identical to a portion of the first paragraph of Comment No. 131-2. Refer to Response to Comment No. 131-2, above.

Comment No. 571-4

What is going to be the effect in the surrounding neighborhoods of all those different things going onto the site? All this information needs to be made clear to residents and businesses. They are ones that will be affected by this project.

There are too many unknowns for those of us in the community to really understand and weigh in on this plan.

Will they be allowed to build anything taller than what is there now? What are the height requirements? Is there a limit to how big any of the buildings can be?

Response to Comment No. 571-4

This comment is identical to the last three paragraphs of Comment No. 131-2. Please refer to Response to Comment No. 131-2, above.

With respect to building heights, as part of the Specific Plan, height zones with specified height limits would be established to regulate building heights throughout the Project Site. Refer to the discussion of height zones in Section II, Project Description, of the Draft EIR, pages II-17 through II-20. As discussed therein, maximum heights would vary by zone, but the maximum height within the Project Site would be 225 feet in up to 40% of the Height Zone D area.

Comment No. 571-5

They need to narrow down what it is they are doing and then send the plan to go through the process again. When will that process happen? If the plan is updated with more detailed information, will you recirculate to the community?

This is a massive project, and more information is needed.

Response to Comment No. 571-5

This comment is identical to Comment Nos. 131-3 and 131-4. Refer to Response to Comment Nos. 131-3 and 131-4, above.

Comment Letter No. 572

Greg Wachs

Comment No. 572-1

I would like to comment on this project.

Response to Comment No. 572-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 572-2

The project is supposed to have 5,300 parking spaces. There will be thousands more employees than that working there. Those of us who live here know that our parking spaces fill up whenever there is a show taping. Where will people park? They will fill up our neighborhood streets with parking.

We have older people here that sometimes have to walk several blocks to get home. That isn't right. Visitors and employees should have to pay for their own parking and not use the already limited parking in our neighborhood. How will the developer of this project make sure of this? How will that situation be monitored? It is not enough to just tell the neighborhood not to worry, it won't happen. Of course it will, and my neighbors and I all know it.

This project should not proceed until we know where they intend all their employees and visitors to park.

Response to Comment No. 572-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer also to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the development process for the NTMP to minimize the Project's potential effects

related to cut-through trips, as well as consider parking controls to prohibit and control Project parking within the neighborhoods.

Comment Letter No. 573

Shelley Wagers
6507 W. Fifth St.
Los Angeles, CA 90048-4711

Comment No. 573-1

I oppose the redevelopment of CBS Television City as currently proposed. The project will devastate a cherished Los Angeles neighborhood.

The voluminous Draft Environmental Impact Report fails to adequately address the scale of the project and major risks that it poses to the community. My objections include:

Response to Comment No. 573-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 573-2 through 573-8.

Comment No. 573-2

(1) Scale. The scope of this Project is out of scale and will further strain infrastructure and community services that are already overburdened.

Response to Comment No. 573-2

This comment is similar to Comment No. 100-2. Refer to Response to Comment No. 100-2 regarding the Project's scale and impacts to infrastructure and public services.

Comment No. 573-3

(2) Traffic. Walkable neighborhoods would be less safe for pedestrians. Cut-through traffic from a huge number of employees commuting through our neighborhood would choke residential streets. Construction lasting for up to 20 years would gridlock major intersections.

Response to Comment No. 573-3

This comment is similar to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 573-4

(3) Housing. The project lacks an affordable housing component (or any housing component). The Project would employ about 8,000 workers. Adding thousands of new workers without corresponding housing would dramatically inflate area rents.

Response to Comment No. 573-4

This comment is similar to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 573-5

(4) Stability of soil and water. The DEIR does not adequately study the impacts of soil destabilization and depletion of the water table in a seismically active area.

Response to Comment No. 573-5

This comment is substantively similar to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 573-6

(5) Regional Center designation. A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. The developer is evasive about the actual consequences of the designation they are asking for.

Response to Comment No. 573-6

This comment is similar to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 573-7

(6) Duration. The development has a projected construction timeline of 20-years with a deluge of negative impacts including traffic, air quality, and soil destabilization from dewatering.

Response to Comment No. 573-7

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 573-8

In place of a detailed plan that specifies exactly what Hackman Capital will build, the application offers a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

Response to Comment No. 573-8

This comment is identical to a portion of Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment No. 573-9

The DEIR does not fully analyze and mitigate the negative impacts the proposed redevelopment will have on the surrounding community. The city should require a more rigorous and forthright environmental review.

Response to Comment No. 573-9

Refer to Response to Comment Nos. 573-2 through 573-8. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 574

Elaine Waldman
elainejulie.waldman@gmail.com

Comment No. 574-1

I have respected your work for decades: you care about workers and tenants and their health.

Response to Comment No. 574-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 574-2

We don't need a massive development at the Television City location. I live in Park la Brea and my neighbors, family, and I would be impacted negatively by this huge-scale project. Noise, poor air quality, gridlock, and higher rents: we don't need this construction and this scale of development!

Response to Comment No. 574-2

This comment provides a general statement of concern regarding noise, air quality, and traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Sections IV.I, Noise; IV.A, Air Quality; and IV.K, Transportation, of the Draft EIR for discussions of noise, air quality, and transportation impacts, respectively. Rent is not a CEQA consideration and is not addressed in the Draft EIR. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 574-3

Please spend more time on quality and environmental review, and keep your legacy of health and safety alive!

Response to Comment No. 574-3

Refer to Response to Comment No. 574-2. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA.

Comment No. 574-4

Thanks, Paul. Have a good day!

Response to Comment No. 574-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 575

Michelle Wang
439 1/2 N. Stanley Ave.
Los Angeles, CA 90036-2301

Comment No. 575-1

As a resident of the Beverly Fairfax neighborhood, I felt led to share my thoughts on the Television City project's Draft Environmental Report.

Response to Comment No. 575-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 575-2 through 575-4.

Comment No. 575-2

I am primarily concerned about the EIR's on-site and off-site parking plan for TVC employees, visitors, and construction. I am left with several questions about this plan. I ask that the city and the developer review my questions and respond back to this letter with answers.

Response to Comment No. 575-2

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 575-3

Firstly, I am worried about the EIR's mentioning of off-site parking. Currently, it claims that 5,000 parking spaces are needed. It's clear that there can be more than 5,000 employees, visitors, and construction workers on any given day, so what is the city's plan for off-site parking? Which neighborhoods will this off-site parking be in? Will you build additional parking lots, or will you take away street parking for this project? How will I be notified about these developments? How soon will I be notified?

Response to Comment No. 575-3

Refer to Response to Comment No. 575-2. Noticing for the Project has been conducted in accordance with CEQA requirements as discussed in Response to Comment No. 32-3. Following publication of this Final EIR, the EIR and Project entitlements will be considered at several public hearings and meetings before City decision-makers prior to certification and approval.

Comment No. 575-4

Secondly, I think the current parking impact analysis is insufficient. These extra cars will have several major consequences. I am mostly worried about the noise, air quality, and pedestrian safety consequences this project could create. What kind of noise analysis has been conducted? What kind of mitigation measures will be put in place to ensure parkers won't be on-site late at night and early in the morning? Cars in off-site parking areas will greatly diminish the air quality in Beverly Fairfax. Have proper studies been conducted to evaluate this impact? What kind of contaminants will residents be exposed to, specifically? I am also extremely worried about the safety of our pedestrians. Moving cars to off-site parking areas can jeopardize the safety of the thousands of people that walk in our neighborhoods each day. What kind of steps will be taken to ensure their safety? Would the developer be open to building sidewalks to offset this negative consequence?

Response to Comment No. 575-4

Refer to Response to Comment No. 575-2 regarding parking. Section IV.I, Noise, of the Draft EIR provides a detailed discussion of potential noise impacts associated with the Project and concludes that, while the Project would result in short-term construction noise impacts, no operational noise impacts, including impacts from on-site parking, would occur. Regarding air quality, as discussed in Section IV.A, Air Quality, of the Draft EIR, no localized air quality impacts would occur because of construction or operation of the Project. Regional NO_x emissions would, however, be significant and unavoidable. Regarding contaminants, as discussed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, operational impacts associated with hazards would be less than significant, and construction impacts would be less than significant with implementation of mitigation measures. Regarding pedestrian safety, refer to Topical Response No. 12, Safety and Congestion. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 575-5

Ultimately, I think that this project and its parking needs are not compatible with the Beverly Fairfax community. Given the vague language in the DEIR, I am currently unable to

support this project. As a result, I hope that the city and the developer will read and answer my questions.

Response to Comment No. 575-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 575-2 through 575-4.

Comment Letter No. 576

John Ward
156 S. Gardner St.
Los Angeles, CA 90036-2718

Comment No. 576-1

I am writing to you to express my concerns regarding the Draft EIR (ENV-2021-4091- EIR) for the TVC 2050 Project.

As a member of the community for over 35 years, I am concerned that projects with significant and unavoidable impacts are being processed through the entitlement process rather hastily and with little regard to community impacts. How many environmental impact reports have been processed within the last five years within the Wilshire Community Plan area? How many of those environmental impact reports have been adopted with a statement of overriding consideration for significant and unavoidable impacts to air quality, noise, etc.? Who monitors the cumulative impacts of all significant and unavoidable impacts of these environmental impact reports? Is this information available to the public and the decision-makers?

Response to Comment No. 576-1

Pursuant to Section 15093(a) of the CEQA Guidelines, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered “acceptable.” The commenter should note that the Project has not been approved by the City. Following publication of this Final EIR, the Project will be subject to public hearings and meetings, including meetings before the City Planning Commission and the City Council, during which the public will have the opportunity to provide comments about the Project.

With respect to cumulative impacts, as required by CEQA, each EIR and Initial Study includes a thorough analysis of cumulative impacts. As it pertains to the Project, Section III, Environmental Setting, of the Draft EIR includes a detailed discussion of cumulative impact analysis methodology and a list of 68 related projects that were considered in the cumulative impact analyses in the Draft EIR. Refer to pages III-7 through III-15 of the Draft EIR.

EIRs published by the City are available on the Department of City Planning’s website at <https://planning.lacity.org/development-services/eir>. The number of EIRs

published in the last five years is not a CEQA issue and is not related to the adequacy of the Project's EIR.

Comment No. 576-2

Those of us who actually live in the community will shoulder all the significant and unavoidable impacts of this project. Please explain how this project will benefit those of us who will endure poor air quality and noise impacts for years to come.

Response to Comment No. 576-2

Refer to Sections IV.A, Air Quality and IV.I, Noise of the Draft EIR regarding the Project's temporary impacts associated with air quality and noise, respectively. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 576-3

Thank you for your attention to this matter. I look forward to your response to my questions and concerns.

Response to Comment No. 576-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 577

Margalete Ward
156 S. Gardner St.
Los Angeles, CA 90036-2718

Comment No. 577-1

I am a resident who lives near where Television City is being considered for a mammoth development, and I have many concerns about what that project would mean for our community.

Response to Comment No. 577-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 577-2 and 577-3.

Comment No. 577-2

What does it mean that the site could be a Regional Center? A regional center that would do what? Are there other areas in the city that are also regional centers? Would the regional center be the same boundaries as the Television City site or expand beyond just that development?

Does that mean that other projects would fall under the category of the area being a regional center, not just the one for Television City? Would other projects then not have to go through a thorough review? Would they just get approved or be allowed because they are part of some regional center area?

How does regional center then fit into the city's General Plan? What about the Wilshire Community plan?

It seems that it could lead to uncontrolled growth of our wonderful community. Is that what could happen? How much growth or density would be allowed? Would there be a limit as to how much development could happen?

If a regional center wouldn't be only the Television Center property, it doesn't seem right or fair that an expansion of that designation, which would be hugely impactful on our neighborhoods and community, would be imposed upon us, especially not with a full understanding by community members, businesses and residents of what it would mean.

By what right could the developer do that? On what basis could the city approve that? Is there anything that the residents and businesses can do about it?

Where is an any analysis and findings that our family oriented, small business community needs or wants to be any kind of a regional center?

Response to Comment No. 577-2

This comment is identical to Comment No. 80-2. Refer to Response to Comment No. 80-2, above.

Comment No. 577-3

I strongly urge you to oppose this development.

Response to Comment No. 577-3

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 578

Deryn Warren
166 N. Fuller Ave.
Los Angeles, CA 90036-2812

Comment No. 578-1

As a resident of the Fairfax area, I am disbelief that the city is considering making traffic an even larger issue. Having lived in this area for the past 15 years, my neighbors and I are very familiar with the day-to-day traffic and have learned to accept it as part of living in this community. However, a project of this size will simply exacerbate the issue in this area. I can't even imagine what a daily commute would look like with all these additional drivers. Will it be an additional 10,000+ drivers on the road? How many additional drivers should we expect each day?

Response to Comment No. 578-1

The total number of new trips per day expected to/from the Project Site is summarized in Table 13 on page 123 of the Transportation Assessment (Appendix M.1 of the Transportation Assessment). This summary shows approximately 9,733 net new trips per day, which would be spread out among Fairfax Avenue and The Grove Drive from the north and south and both Beverly Boulevard and 3rd Street from the east and west. Refer to Topical Response No. 10, Trip Generation.

With respect to operational trips, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 578-2

This area could physically not be more developed. Think of all the malls, the Grove and the Beverly Center. Countless people visit these areas daily and are lucky if their car moves a mile in 20 minutes. It is not possible to add thousands of extra cars, and this could potentially congest the intersections to the point of insanity. Not to mention all the extra pollution that will be emitted into the atmosphere from all this congestion. How do you expect commute time to differ for residents living in the area? How will citizens of the area get to their jobs in a timely manner? How will citizens take their kids to school or simply get from point A to point B?

Response to Comment No. 578-2

Pursuant to SB 743, traffic congestion is no longer a CEQA consideration. Refer to Response to Comment No. 578-1 and Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment.

Air quality analyses during both construction and operation of the Project have been completed and are included in Section IV.A, Air Quality, of the Draft EIR.

Comment No. 578-3

Does the city really believe that people are going to be willing to travel via bus or subway? After a global pandemic, LA has proved we will refuse to ride the subways. Even at the peak of the climate change movement, the city has failed to improve the public transportation systems. If the city is going to be so generous with development approvals, why is there no compromise when it comes to proactive traffic and congestion measures?

Response to Comment No. 578-3

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

Refer to Response to Comment No. 578-2 regarding traffic congestion.

Comment No. 578-4

Why are we expected to risk our safety on the buses or subway? A crowded transit vehicle seems like the perfect place for a COVID-19 outbreak to present itself once again. Not only this, but too much wait time, too many buses stuck in traffic and too many delays. But regardless, this project will force the majority of LA to travel this way which will be incredibly frustrating.

Response to Comment No. 578-4

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 578-5

I don't even understand how this project is plausible at all considering the site developers are intending on using far more space than the city allows.

We deserve answers.

Response to Comment No. 578-5

The Project's proposed Specific Plan would permit up to 1,874,000 square feet of floor area, and a finalized draft of the Specific Plan along with the other Project approvals will be considered by City decision-makers at public hearings following the publication of this Final EIR.

Comment Letter No. 579

Michael Warrenbarger
345 N. Fuller Ave.
Los Angeles, CA 90036-2522

Comment No. 579-1

The EIR says there will be thousands of trucks staged near Loyola High School. Thousands. Idling trucks spewing pollution near teenagers with developing brains. Why will those trucks be in that community? What regulations would allow that to happen? There are lots of people living there that don't make a lot of money. Has anyone looked at the environmental justice issues? Is that in the EIR? Where is the information about the impacts on people's health, not only from the trucks staged near the school but from all the truck traffic that will be coming?

Where have these possible consequences been identified and studied? If they haven't been yet, when are those studies going to be done?

Response to Comment No. 579-1

Please see Response to Comment No. 26-24 for a discussion of haul truck staging areas. As discussed therein, all haul truck staging would occur on-site per LADOT's recommendation letter dated June 30, 2022.¹⁶² The two off-site staging locations described and evaluated in the Draft EIR are no longer proposed and have been removed for consideration and evaluation. As such, an HRA is not warranted for sensitive receptors near the two removed off-site staging areas. The removal of the staging locations is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Response to Comment No. 26-E.1-21 for a discussion of the Draft EIR's analysis of localized air quality impacts. Additionally, as discussed in Response to Comment No. 26-E.1-2, in response to SCAQMD comment on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the findings of the Draft EIR.

¹⁶² Refer to Appendix M.5 of the Draft EIR for the LADOT approval letter.

Comment No. 579-2

Is the city really thinking of permitting developers to dump its pollution on the poor in order to make a few bucks is wrong. This should not go forward until health risks are studied at the very least and alternatives are seriously considered.

Response to Comment No. 579-2

This comment is identical to Comment No. 349-2. Refer to Response to Comment No. 349-2, above.

Comment Letter No. 580

Andrew Watnich
941 N. Genesee Ave.
West Hollywood, CA 90046-7347

Comment No. 580-1

I have been a resident of the area for many years. I love the city for its many opportunities, landmarks and entertainment. With this being said, I feel as if there is a disconnect with you (the city planners) and the LA community when it comes to the TVC 2050 plan. I am simply appalled that the city would allow a project with such lack of foundation. Bringing jobs to the city and industry is important, but the impact of where and how that is done must be considered. In reality, it can take 20 minutes to travel a mile in LA rush hour traffic as is.

Response to Comment No. 580-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 580-2 through 580-4.

Comment No. 580-2

The EIR does not provide any explanation for how the city is going to handle this volume of people in the neighborhood, nor does it address this as a concern. Where is the city addressing the many effects of an influx of all those cars and people into the community? And why isn't the city seeing this as a major concern?

Response to Comment No. 580-2

The Transportation Assessment (Appendix M.1 of the Draft EIR) includes a thorough evaluation of both CEQA and non-CEQA transportation issues. Under CEQA, the Project was found to be consistent with existing plans and regulations for the Project Site and meet and exceed the target thresholds for work VMT per employee, indicating that the location of the Project is in the right place to reduce overall regional VMT. Thus, the Project's CEQA transportation impacts would be less than significant.

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and

Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

With respect to neighborhood intrusion, refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment.

Comment No. 580-3

The daily onslaught of construction trucks alone will cause major congestion on the roads even more. The EIR promised a detailed construction traffic management plan, but where is it? How long will it take to be released to the public? What will the plan cover? When the community be able to give input into that plan?

Response to Comment No. 580-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the elements included in the CTMP.

Typically, the CTMP is outlined in the Draft EIR and the detailed CTMP is presented to LADOT for review and approval as a requirement prior to the issuance of the first building permit at the start of construction. Refer to page IV.K-36 and IV.K-37 of the Draft EIR and Topical Response No. 14, Construction Vehicle Impacts, for discussions of the elements included in the CTMP.

Typically, the development and the approval of the CTMP is handled at the technical staff level with approvals by LADOT and perhaps the Bureau of Engineering.

The NTMP is the planning element that would be developed by the neighbors, the Applicant, and LADOT.

Comment No. 580-4

I understand there will be a large amount of parking being added near our houses, not only for new employees but also people traveling to Television City for events. This is greatly increasing the amount of strangers my children will encounter in our community on a daily basis. How many cops are going to be available for this events? Will additional officers be available if something does happen? Is the city willing to take the extra steps to fund protection of our families? What is going to happen when ambulances, police cars, fire trucks and any other emergency vehicles need to get through to the site and there is absolutely no way for them to because of being stuck in traffic?

Response to Comment No. 580-4

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Given the operation of the Project Site, the fact that full parking demand for the Project can be accommodated on-site and pick-up/drop off activities can be accommodated in the Mobility Hub, it is not expected that Project employees or visitors would park or walk through the adjacent neighborhoods.

The Project also includes a number of PDFs that would enhance safety on the Project Site, including Project Design Feature POL-PDF-2, which requires a 24/7-security plan.

Refer to Topical Response No. 12, Safety and Congestion, for information regarding emergency response times. As described therein, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

Comment No. 580-5

At what point is it too much? Where will the line be drawn? Are there no limits anymore in the city of LA? How will this project be in compliance with zoning, health, police, fire and hazardous material laws? Please provide those specifics. I cannot support this project in its current state. There are too many unanswered questions, and our community deserves full transparency.

Response to Comment No. 580-5

The issues raised by the commenter are fully analyzed in the Draft EIR. Refer to Draft EIR Section IV.H, Land Use and Planning, for a discussion of zoning; Section IV.J.1, Public Services—Fire Protection, for a discussion of fire protection; Section IV.J.2, Public Services—Police Protection, for a discussion of police protection; and Section IV.F, Hazards and Hazardous Materials, for a discussion of hazardous materials.

It is unclear what the commenter means by “health,” but impacts related to human health are addressed in Section IV.A, Air Quality, and Section IV.F, Hazards and Hazardous Materials, of the Draft EIR. Refer also to the quantitative HRA in Appendix FEIR-10 of this Final EIR.

Comment Letter No. 581

Rosalie Wayne
8140 Blackburn Ave.
Los Angeles, CA 90048-4424

Comment No. 581-1

The above-referenced Project will negatively impact and irrevocably change my neighborhood. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, my community will be unrecognizable. The scope of the proposed Project requires a voluminous Draft Environmental Impact Report. The city and the community deserve adequate time to evaluate it. For the following reasons, I do not support this Project as currently proposed.

Response to Comment No. 581-1

This comment is identical to Comment No. 100-1. Refer to Response to Comment No. 100-1, above.

Comment No. 581-2

- (1) The scope of this Project is too large and will result in a strain on an already overburdened infrastructure and community services that are already taxed.

Response to Comment No. 581-2

This comment is identical to Comment No. 100-2. Refer to Response to Comment No. 100-2, above.

Comment No. 581-3

- (2) Traffic would be negatively impacted. As a result, our once walkable neighborhoods will be less safe for pedestrians, our residential streets will be more congested as a result of cut through traffic, and our commutes longer as a result of gridlock resulting from the proposed 20-year construction as well as the fact that a large number of employees will inevitably be commuters.

Response to Comment No. 581-3

This comment is identical to Comment No. 100-3. Refer to Response to Comment No. 100-3, above.

Comment No. 581-4

- (3) There is a lack of an affordable housing component (or any housing component). The Project will employ approximately 8,000 workers, but includes no housing whatsoever. Adding 5,700 new workers without corresponding housing, [sic] will put enormous pressure on area rents.

Response to Comment No. 581-4

This comment is identical to Comment No. 100-4. Refer to Response to Comment No. 100-4, above.

Comment No. 581-5

- (4) The DEIR does not sufficiently analyze the impacts of soil destabilization on a seismically active area.

Response to Comment No. 581-5

This comment is identical to Comment No. 100-5. Refer to Response to Comment No. 100-5, above.

Comment No. 581-6

- (5) A “Regional Center” does not belong in our neighborhood. It is the same designation as Century City and Downtown Los Angeles. This Project would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. The development has a projected construction timeline of 20-years [sic] which will result in a deluge of negative impacts including, but not limited to, traffic, soil destabilization as a result of dewatering, and air quality issues.

Response to Comment No. 581-6

This comment is identical to Comment No. 100-6. Refer to Response to Comment No. 100-6, above.

Comment No. 581-7

The DEIR does not adequately analyze and mitigate the negative impacts the proposed Project will have on the surrounding community. In place of a detailed plan that specifies exactly what Project applicants will build, Project applicants offer a “conceptual” site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that

conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site “a regional center” that writes its own rules. Their window-dressing cannot disguise the burden they would impose on an area that already suffers some of the worst congestion and traffic in the city.

I respectfully request a more vigorous environmental review in the areas discussed.

Response to Comment No. 581-7

This comment is identical to Comment No. 100-7. Refer to Response to Comment No. 100-7, above.

Comment Letter No. 582

Emma C. Webster
335 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 582-1

As a resident of LA, and a concerned citizen, I am writing to ask about the Television Studio project and information outlined in the EIR.

Response to Comment No. 582-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 582-2

The project is proposing to stage thousands of trucks next to Loyola High School and Kaiser Hospital. This seems inappropriate to stick thousands of trucks in these communities. Have these residents been told that there may be 60,000 trucks idling and driving through their communities? How was it decided to use that area? Are you aware there is a recreation center right by Loyola High School and a historic cemetery? This area by Loyola in particular is a lower income community. What are your plans for restoring this community and what specific thing will be done to assist residents in the area during the time of construction?

Response to Comment No. 582-2

There is no longer a plan to stage trucks near Kaiser Hospital or Loyola High School. All haul truck staging locations would be provided on-site; accordingly, no haul trucks would be idling off-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. No construction traffic impacts would occur near Loyola High School and Kaiser Hospital.

Comment No. 582-3

It is risky and harmful to the environment to excavate. The excavation will release gases to the environment and greatly impact those in surrounding areas. The health of the community should be taken into consideration. Did the EIR evaluate the amount of gases that will be released as a result of excavation? Where is that in the analysis? And it is wasteful to pull out all that groundwater. We have seen how drinking contaminated water

has adversely affected the lives of many in the nation. What impact does take that water have on the use of that groundwater for drinking water?

Response to Comment No. 582-3

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, 16-64, and 26-E.3-4 regarding excavation, groundwater quality, and subsurface gases. Please note that excavation in a methane zone does not increase the amount of methane that is released as a result of natural conditions. There is a consistent rate of off-gassing regardless of excavation.

Project construction will require temporary dewatering that is expected to last approximately 21 months and not permanent dewatering. The proposed below-grade parking structures will be designed to resist the hydrostatic pressure, such that a permanent dewatering system (post-construction dewatering) will not be required. The groundwater that is removed during construction will be discharged off-site pursuant to a discharge permit. Also, there are no supply wells (i.e., pumping wells) within one mile of the Project Site, and thus the local, temporary dewatering will not interfere with any existing supply wells. As described in Response to Comment No. 11-25, the estimated quantity of groundwater removed by dewatering is expected to be a very small percentage (less than 0.1 percent) of the Hollywood Subbasin storage capacity in which the Project Site overlies.

Comment No. 582-4

As we continue to look at water and how the environment will be affected, we feel that sustainability should be upheld. According to the EIR, after the Project is fully built, total water use would be about 6x more than it is currently. Why is this not considered a significant impact, especially when California is in a severe drought and drought conditions are likely to continue? Also, how does the EIR's water use calculations account for the different types of uses that could occur on the property?

Response to Comment No. 582-4

Refer to Response to Comment No. 16-66 with regard to the adequacy of water supply and consideration of drought conditions, Response to Comment No. 223-2 with regard to the types of water demand associated with the Project, and Response to Comment No. 292-2 with regard to the threshold for a significant impact related to water demand under CEQA.

Comment No. 582-5

To my understanding, every project should be in the betterment of the community. However, based off the EIR, the Television Studio Project is more detrimental than [sic] helpful to the community and environment.

Response to Comment No. 582-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 583

Nick Wechsler
347 N. Gardner St.
Los Angeles, CA 90036-5700

Comment No. 583-1

As a resident of the neighborhood for the past 15 years,

Response to Comment No. 583-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 583-2

I have been trying to clearly understand what is being proposed in this 25 acre spread. It's hard to make out what the proposed buildings will look like, given that all we know is that 20-story buildings are allowed. But we haven't been shown where they will be actually located or even how big they will be in terms of square feet. What will the density be? Is it all office building? Is more office space even needed in LA?

Please provide clarity as to what will be built and where.

Response to Comment No. 583-2

This comment is similar to Comment No. 170-2. Refer to Response to Comment No. 170-2 regarding the Project Description, massing, and locations of the proposed buildings.

Comment No. 583-3

And when will the phases start and end?

Response to Comment No. 583-3

Refer to Response to Comment No. 9-24 regarding the Project timeline.

Comment No. 583-4

This project seems like a black box—the community is supposed to express our support for something but we don't have enough information to make an informed decision.

Response to Comment No. 583-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan. As discussed in these responses, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. Further, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Comment Letter No. 584

Douglas Weinstein
bakeryoperations@diamondbakeryla.com

Comment No. 584-1

I am writing to ask the City to please support Television City's plan to invest in the studio and in the entertainment industry. This project will generate thousands of good paying entertainment jobs and keep them in Los Angeles. For more than 70 years, Television City has demonstrated a commitment to the community, and now it is the City's turn to permit them to flourish in the future.

This plan will allow the studio to improve its facilities with new, modern stages and production space while preserving and rehabilitating its historic resources onsite. They will also invest in the community by providing streetscape beautification and new transportation improvements connecting the neighborhood to public transit options.

I love the history of the Beverly/Fairfax District and feel Television City is a very important part of what makes this neighborhood so special. The studio is willing to invest in improving its facilities to stay competitive in an industry that changes all the time. I hope the City will let them continue to be successful, providing good jobs, supporting local businesses and organizations, and producing great entertainment in our back yard.

And let's be honest about the condition and state of Beverly/Fairfax, it's a mess. The streets and sidewalks are littered and dirty, the streets need to be resurfaced, the graffiti is out of control the homeless problem is not only a humanitarian disaster but it is infringing on the rights of tax paying citizens by occupying the sidewalks and alleys, digging through dumpsters and leaving the mess for the city to clean, the vandalism and personal assaults that occur are diminishing the area's appeal. The foot traffic on our block has nearly dried up.

Help the revenue generating entities to make a positive impact on our community at least as much as you allow the homeless destroy it.

Response to Comment No. 584-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 585

Ahuva Weisbaum
8318 W. Fourth St.
Los Angeles, CA 90048-4203

Comment No. 585-1

I am writing to comment on the CBS Television City expansion. As a 50 year resident of the neighborhood, I have seen a lot of change. This one is the largest and most serious to date.

Response to Comment No. 585-1

This comment is identical to Comment No. 86-1, but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 585-2

I would love to provide feedback on the project, but the draft EIR says the plan is still conceptual and the applicant would be given flexibility. My understanding is this is why the applicant is asking for a 20-year development agreement. I am deeply concerned that this project has made it this far in the process, but we don't have an actual specific plan to review.

Response to Comment No. 585-2

This comment is identical to the first paragraph of Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment No. 585-3

The proposal only has 5,300 parking spaces. This facility will be staffed by 8,000 employees and will also bring with it and thousands of audience members as well, where will the overflow parking be and has that even been studied?

Response to Comment No. 585-3

This comment is identical to Comment No. 341-3. Refer to Response to Comment No. 341-3, above.

Comment No. 585-4

This project is projected to need 60,000 truck trips to complete its construction. The city does not lay out if it has studied how the proposed staging area for these trucks will affect Loyola High school, Kaiser hospital, the Holocaust Museum, or the historic cemetery. I would ask that each of these important community assets be studied individually so that we can clearly see how the community will be changed.

Response to Comment No. 585-4

This comment is identical to Comment No. 341-4. Refer to Response to Comment No. 341-4, above.

Comment No. 585-5

When will the community be allowed to give public input and weigh in on the actual design, not a plan that says things like the company “may make improvements” or could be two decades of construction?

How much further will the project progress before we are provided the detailed information we deserve?

Response to Comment No. 585-5

This comment is identical to the second and third paragraphs in Comment No. 86-2. Refer to Response to Comment No. 86-2, above.

Comment Letter No. 586

Roland White
12408 Lemay St.
North Hollywood, CA 91606-1358

Comment No. 586-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 586-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 587

Thayer Wiederhorn

Comment No. 587-1

I'm trying to figure out how the Draft EIR will mitigate the massive traffic problems this studio project will generate. Not only are thousands of construction and production trucks going to be rolling in and out of the site for the next 20 years, but thousands of passenger cars will be entering and leaving the site every day too.

Response to Comment No. 587-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Thus, mitigation is not required, as incorrectly stated in this comment.

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 32-6, 107-2, and 124-6 regarding construction trips. Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 587-2

What are the anticipated traffic patterns? Are all of the trucks supposed to use Grove and Fairfax? What happens if a huge truck jackknifes and/or the trucks block intersections? Why doesn't the project have any dedicated lanes to get trucks and cars off the street?

Response to Comment No. 587-2

Figure 21 on page 77 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the patterns of the Project trips. The figure shows the assignment of Project trips through each of the 31 study intersections. Refer to Response to Comment No. 9-31 regarding trip distribution.

Refer to Response to Comment No. 83-1 regarding turn lanes.

Refer to Response to Comment No. 26-E.4-15 regarding truck turns and maneuvering.

Comment No. 587-3

Please analyze the ability of the project to mitigate traffic congestion, alternative plans if there are any, and an analysis of whether dedicated right lane-only turn lanes would be helpful.

Response to Comment No. 587-3

Refer to Response to Comment Nos. 587-1 and 587-2 for a discussion of construction traffic impacts and turn lanes.

Comment Letter No. 588

Anne Williams
157 N. Gardner St.
Los Angeles, CA 90036-2719

Comment No. 588-1

I am a resident of this neighborhood since 1987 and I am writing to you because I feel the Draft EIR did not adequately define "The Project."

Response to Comment No. 588-1

The Project Description meets the requirements of CEQA. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Comment No. 588-2

I reviewed the executive summary and then the project description but I still do not know what the project is. There are multiple caveats throughout the Draft EIR indicating that the project is only conceptual. How is the public supposed to comment on a "make-believe" project if it is subject to change. If the conceptual project changes, then our comments on the Draft EIR would be useless and a waste of time.

If the project is only conceptual, when will the public have an opportunity to comment on the "real" project and its environmental impacts? When will the community be advised of any modifications to the conceptual project? Will this information be posted on a website? Should the project's proposed development agreement be approved, does that mean that the community may have to wait decades to be informed of the actual project?

Please define the project in concrete terms and recirculate the Draft EIR so the public has an opportunity to make productive comments on impacts to the community.

Response to Comment No. 588-2

This comment is identical to Comment No. 260-2. Refer to Response to Comment No. 260-2, above.

Comment Letter No. 589

James Williams
Marc Wenderoff
6410 W. Fifth St.
Los Angeles, CA 90048-4710

Comment No. 589-1

We have lived in this community for 24 years and are completely opposed to this project.

Response to Comment No. 589-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 589-2 through 589-5.

Comment No. 589-2

Not only do the height maps allows buildings up to 20 stories in some areas and 15 stories in other areas but it's not at all clear where they will be.

Response to Comment No. 589-2

This comment is similar to Comment No. 170-2. Refer to Response to Comment No. 170-2 regarding building heights and locations.

Comment No. 589-3

With the influx of thousands of cars and wildly insufficient parking spots, both parking and traffic problems will be increased exponentially.

Response to Comment No. 589-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the

on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, the Project no longer proposes off-site parking; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 589-4

The noise pollution will be horrible when all 14 of those stages are holding events and concerts, and the light pollution from the billboards at nighttime will not only bother us but disorient birds and bat species.

Response to Comment No. 589-4

Section IV.I, Noise, of the Draft EIR fully analyzed potential noise impacts associated with Project related on-site noise sources, including outdoor uses (people talking and amplified sound) and outdoor production activities. Refer to pages IV.I-44 through IV.I-46 in Section IV.I, Noise, of the Draft EIR. As discussed therein, noise impacts associated with outdoor uses would be less than significant. The Project does not propose a concert venue. Refer to Response to Comment No. 213-4 with regard to potential lighting impacts on wildlife. Please note that the proposed Sign District would prohibit billboards.

Comment No. 589-5

Nothing about the project seems energy efficient.

Response to Comment No. 589-5

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment Nos. 45-1 and 77-4 which detail the sustainability features included in the Project and how new natural gas would not be used as part of the Project (with certain exceptions) consistent with the City's new all-electric buildings ordinance.

Comment No. 589-6

This project needs to be reconsidered from the very beginning.

Response to Comment No. 589-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 589-2 through 589-5.

Comment Letter No. 590

Barbara Wilson
144 N. Detroit St.
Los Angeles, CA 90036-2916

Comment No. 590-1

Please see my comments below:

Response to Comment No. 590-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 590-2

- According to Footnote 3 in the Project Description of the Draft EIR, the Southern Shared Access Drive (depicted on Figure II-3) is privately owned. Who owns this drive? Please explain how the developer can use this private drive if they do not own it in its entirety. It seems that there will be a substantial increase in vehicular and pedestrian activity along the Southern Shared Access Drive given that it is anticipated to be used for commercial delivery trucks, motor vehicles, and pedestrians. What safety measures will be put in place to ensure the Southern Shared Access Drive is not overwhelmed with so much activity that it becomes a hazard to pedestrians?

Response to Comment No. 590-2

Refer to Response to Comment No. 9-29 regarding traffic hazards.

Vehicles and pedestrians currently have access along the Southern Shared Access Drive. The Project has joint access rights to the Southern Shared Access Drive, and the two vehicular driveways proposed onto the roadway are in the southeast quadrant of the Project Site.

Figure 22 on page 80 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the assignment of Project trips to the Southern Shared Access Drive. The Southern Shared Access Drive is a lightly used driveway to the Project Site. Only approximately 55 trips in the morning peak hour and approximately 59 trips in the afternoon peak hour are expected to enter or leave the Project Site via the Southern Shared Access

Drive. Compare this number to approximately 400 trips in each peak hour using The Grove Drive driveway.

The intersection of the Southern Shared Access Drive with The Grove Drive would be controlled by a stop sign and signalized pedestrian crosswalks across the Grove Drive would be available at intersections to both the north and the south close to the Southern Shared Access Drive. The Project intends to construct a sidewalk along the north side of the Southern Shared Access Drive to connect The Grove Drive to the Project's pedestrian entrance. Given the light vehicle volumes, the Southern Shared Access Drive is not expected to be a hazardous location for vehicles or pedestrians.

Comment No. 590-3

- Noise impacts are concerning. The Draft EIR has identified significant and unavoidable noise impacts related to construction off-site noise and off-site vibration (human annoyance). If a 20- year development agreement is approved, does that mean that adjacent residential uses will have to endure these significant and unavoidable impacts for years? Since the project is conceptual, how will the public be informed of any changes to these noise impacts as a result of any modification to the conceptual project?

Response to Comment No. 590-3

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 5-5 with regard to the Project Description and proposed Specific Plan and the conceptual nature of all plans in an EIR. As discussed in these responses, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. As discussed in Response to Comment No. 26-135, the Draft EIR noise analysis was based on the Conceptual Site Plan, and future changes that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

As discussed on pages IV.I-34, IV.I-35, and IV.I-56 in Section IV.I, Noise, of the Draft EIR, a number of PDFs and a mitigation measure are proposed to address construction noise. In addition, as discussed on pages IV.K-36 and IV.K-37 in Section IV.K, Transportation, of the Draft EIR, in accordance with Project Design Feature TR-PDF-1, the Project will include a CTMP that will include a provision that the Applicant will designate a construction relations officer to serve as a liaison with the surrounding community and respond to any construction-related inquiries, including those related to construction noise.

Comment No. 590-4

- The project proposes two construction scenarios, a three-year and 20-year construction schedule. If the buildout year is extended to 2043, why is the project title include “2050”? Is this the anticipated sunset year for the proposed Specific Plan? Why is it not 2043? If the project is completed within the 32-month period, how will that affect the sunset year of the Specific Plan, if there is

one. Since the Specific Plan was not included, this information was not available for public review.

Response to Comment No. 590-4

Refer to Response to Comment No. 9-24 with regard to the Project timeline, which, as discussed in that response, could extend until 2043. If approved, the proposed Specific Plan would continue to govern the Project Site after the Project has been constructed (there is no sunset year).

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan. As discussed therein, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment Letter No. 591

Justin Wilson
144 N. Detroit St.
Los Angeles, CA 90036-2916

Comment No. 591-1

Please see my comments and questions below:

Response to Comment No. 591-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 591-2

It seems that there is so much flexibility built into the proposed project that the public doesn't really know what is being proposed. If a project is conceptual, what is the public commenting on? A project by its very definition is something that is concrete. The dictionary defines project as "a collaborative enterprise that is carefully planned to achieve a particular aim." If the aim was to confuse the reader, then the aim has been achieved. Please explain how a conceptual project provides any real information to the public.

Response to Comment No. 591-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 5-5, 9-12, 9-13, and 9-15 with regard to the Project Description and proposed Specific Plan, the conceptual nature of all plans in an EIR, the level of detail required for a specific plan project EIR, how the Project Description discloses all of the elements of the Project required by CEQA, and the regulatory process under the proposed Specific Plan. As discussed in these responses, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project. As also discussed in these responses, the the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 591-3

Several significant documents were blatantly omitted from the Draft EIR. Where is the Specific Plan that includes all the land use regulations of the conceptual project? It would have been helpful to have the document for review so the public can fully understand how the project's land use regulations have the potential to impact the surrounding neighborhoods and community. Why was it not included?

Response to Comment No. 591-3

Refer to Response to Comment No. 591-2. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3, neither CEQA nor City policy requires a draft Specific Plan to be included in the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment No. 591-4

Further, there were references to the Sign Program, but yet again, the document was not included in the Draft EIR. The impacts of signage are important to residents who live adjacent to the proposed project. Please explain why this document was not included in the Draft EIR.

Response to Comment No. 591-4

Refer to Response to Comment No. 5-10 regarding the physical elements of the proposed Sign District (e.g., sizes, types, locations, maximum square footage, illumination, etc.) that were fully described in the Draft EIR. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR disclosed all elements of the proposed Sign District required by CEQA, and the Sign District is not necessary for the environmental analysis of the Project. Nevertheless, in response to comments on the Draft EIR, a proposed Sign District has been made publicly available on the Department of City Planning's website concurrent with the publication of this Final EIR.

Comment No. 591-5

Please recirculate the Draft EIR so that there is a defined project what will not morph into something entirely different. Also include all documents referenced in the Draft EIR that were not included in the appendices as is required by CEQA.

Response to Comment No. 591-5

Refer to Response to Comment Nos. 591-2 through 591-4. As demonstrated therein, the Draft EIR meets the requirements of CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 592

Kathy Wilson
104 N. Orange Dr.
Los Angeles, CA 90036-3015

Comment No. 592-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 592-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 593

Comment Letter No. 594

Paul Witt
Deborah Welsh
Mindy Lake
West 3rd Street Business Association
119 N. Fairfax Ave., #246
Los Angeles, CA 90036-2110

Comment No. 594-1

On behalf of The West 3rd Street Business Association, we want to express our support for TVC 2050—The Los Angeles Studio Plan.

The W3SBA is an organization of shops, restaurants and independent specialty stores located on W. Third Street between La Cienega and Fairfax, near the studio. The studio has been in touch with us on several occasions regarding the progress of their plans and we appreciate their efforts to engage with neighborhood stakeholders. Our group has enjoyed a positive working relationship with Television City and believes this project will have a beneficial impact on the Beverly/Fairfax District and the surrounding neighborhood.

We recently met with Television City and were shown the draft environmental impact report which showed that the plan is designed in a way that it will create no significant impacts during operations. We also appreciate that it will preserve its historic cultural monument onsite and has earned the support of the Los Angeles Conservancy. In addition, we were glad to hear the plan will improve internal circulation for production vehicles and trucks as well as create parking and production “basecamps” onsite.

We welcome this major investment in our neighborhood to an industry icon that’s so important to the city. We feel the modernization and improvement of this large production facility is much needed and will surely enhance the economic growth and security of our community.

Response to Comment No. 594-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 595

C. Wittenberg
318 S. Mansfield Ave.
Los Angeles, CA 0036-3057

Comment No. 595-1

I am submitting comments and questions about the plan to modernize and develop Television City.

Response to Comment No. 595-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 595-2

I have several questions about the extent of the excavation. The La Brea Tar Pits are very close by.

- Will the excavation release gases into the environment? What gases are going to be released, and what is the city and the developer going to do about that risk? What about the effects to the public, to visitors, and to those who live in the area?
- Did the EIR study how much gas would be released? What were those findings? Where is that located?

Response to Comment No. 595-2

This comment is identical to Comment No. 211-2. Refer to Response to Comment No. 211-2, above.

Comment No. 595-3

I am also really concerned this excavation will have a negative impact on the groundwater and drinking water.

- *Did you study the impact of any excavation on water? What was the result of that study?*

- *Will my property in the Beverly Fairfax neighborhood be impacted by removing groundwater?*
- *Will I be notified if my property is impacted? What will be done to ensure no damage to my property?*
- *How much groundwater will you be removing? Where will it be pumped to?*

Response to Comment No. 595-3

This comment is identical to Comment No. 211-3. Refer to Response to Comment No. 211-3, above.

Comment No. 595-4

I am also wondering why the EIR says that what is being planned for below ground is not part of the floor area? Construction and operations below ground will have impacts.

- *Can you define floor area in the context of this project? Why would basement and below ground areas not be considered floor space? That doesn't make any sense, but does sound as though it allows the developer to not disclose the impacts.*
- *What will the operation and construction impacts be from any buildings, area, and space that the EIR says are not considered part of the square footage?*

Response to Comment No. 595-4

This comment is identical to Comment No. 211-4. Refer to Response to Comment No. 211-4, above.

Comment No. 595-5

I look forward to reviewing your response.

Response to Comment No. 595-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 596

Caroline Witts
537 N. Orlando Ave.
West Hollywood, CA 90048-2530

Comment No. 596-1

I have flipped through the draft environmental report and have a couple of questions and concerns about accessibility and project impacts.

Response to Comment No. 596-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 596-2 through 596-6.

Comment No. 596-2

There doesn't seem to be any consideration or analysis of how all the additional car traffic will impact the local neighborhood school traffic during the school year. The neighborhood is already severely impacted by Fairfax High School traffic. Has anyone on the development team or planning department tried to drive down those adjacent streets at 3pm when schools get out? Or even down the street when work ends at 5pm? Why isn't there any analysis of the additional impacts more cars would have on these streets?

Response to Comment No. 596-2

This comment is similar to Comment No. 421-2. Refer to Response to Comment No. 421-2 for a discussion of the operational effects of Project trips on the streets and intersections near Fairfax High School and in the nearby neighborhoods.

Comment No. 596-3

I know this project will push even more cut through traffic into our neighborhood. Has the planning department done any studies on whether or not this will increase cut through traffic? What days and time of day were those studies done?

Response to Comment No. 596-3

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 596-4

How dangerous will this be to all the pedestrians in our neighborhoods if it does increase cut through traffic?

Response to Comment No. 596-4

Refer to Topical Response No. 12, Safety and Congestion, and Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of —cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 596-5

I also saw that the developer is expect people to use alternative mobility modes like the bus or subway. I live in the area, and everyone I know drives to work. It is also nearly a mile to the future metro purple line that will be the Wilshire/Fairfax stop. If we are expected to change our transportation habits, does the city plan to change or add routes to better accommodate the residents? Not only will this stop not be operational until 2024, I think it is very unrealistic to expect a lot of employees or visitors to use this. The DEIR extremely overestimates the number of people that will use public transportation to visit the site. I also find it unrealistic to think people will take the purple line and then walk nearly a mile to get to work.

Response to Comment No. 596-5

Refer to Topical Response No. 11, Transportation Demand Management, and Response to Comment No. 107-4 for a discussion of the potential effectiveness of transit and TDM.

The Transportation Assessment does not assume that employees or visitors would be willing to walk the approximately 0.8 mile from the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction to the Project Site. Instead, the Project includes a privately funded and operated shuttle bus system to move people between the two points as part of the proposed Mobility Hub that would be located on the Project Site.

Comment No. 596-6

Plus, a lot of audience members are probably going to be tourists, for example people who will attend while visiting Los Angeles. I doubt those visitors would take the subway. Can you please explain how these numbers were reached? Can you also do an alternative study showing the impacts on traffic if people do not use public transportation?

Response to Comment No. 596-6

Refer to Response to Comment No. 596-5 for a discussion of visitor use of transit to the Project Site. The 10-percent assumed non-auto mode split by audience members includes rideshare, taxi, bike, and walk as well as drop-off modes.

The audience travel represents a small percentage of the total trips to/from the Project Site so even if the 10-percent estimate of non-auto trips was hypothetically wrong and no audience member arrived by any mode other than the automobile, the trip generation estimates upon which the Transportation Assessment is based would increase by much less than one percent, and the conclusions of the analysis would not change. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation.

Comment Letter No. 597

Comment Letter No. 598

Mari Worden
7924 W. Fourth St.
Los Angeles, CA 90048-4413

Comment No. 598-1

I am writing this to express my dire concern about the proposed Television City project.

Response to Comment No. 598-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 598-2 through 598-4.

Comment No. 598-2

Our community doesn't not [sic] want this development, and even if it did, our infrastructure cannot handle the amount of traffic that this will produce both during construction and once it opens. The process of constructing this huge project and sheer volume of people who will need to commute to it will have devastating impacts to the Beverly Fairfax area.

Response to Comment No. 598-2

This comment provides a general statement on the traffic conditions in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 598-3

The city has changed how it measures a project's traffic impacts and has not communicated how or why this change was made. Analysis of traffic impacts is challenging enough for a resident to understand. The EIR says that the average commute will be 3 miles but offers no data to back this claim up. How is that average derived?

Response to Comment No. 598-3

Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment No. 130-2 for a discussion of the change from a LOS analysis of transportation impacts to VMT.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths.

Comment No. 598-4

And when was the analysis done? Because the past two and a half years has been a very different commute situation for many people. But things are going back to a pre-pandemic time as so many people are returning to work on-site. If the traffic analysis is not redone more recently, then it shouldn't be considered valid.

Response to Comment No. 598-4

The trip counts upon which the transportation operational analyses were based were collected in 2019 prior to the pandemic and then factored up to represent 2021 and 2026 conditions. Refer to Topical Response No. 10, Trip Generation, and Response to Comment No. 130-3 for additional discussion of the validity of the transportation analysis.

Comment No. 598-5

This project benefits no one but the developer. A million square feet of television studios with no affordable housing for the people who will build and operate it, what a joke!

This project creates an enormous traffic and environmental footprint with no tangible benefit for locals and I would ask that this project be rejected.

Response to Comment No. 598-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 599

Michael Wyatt
319 N. Ogden Dr.
Los Angeles, CA 90036-2133

Comment No. 599-1

I am very concerned about the hundred thousand or more trucks going to go up and down Fairfax to build this project. What is an accurate count of all the trucks needed?? What will be the physical impact to Fairfax from these massive trucks going up and down Fairfax. Can you tell me how many schools, churches, temples, homes and apartments on Fairfax will be impacted? Someone should actually count the numbers of these uses along Fairfax. And isn't Fairfax a single lane in each direction for portions? And you want to bring a hundred thousand or two hundred thousand trucks through this area? Have these people and businesses along this corridor been told what is going to happen to them?? Did you mail notices to these people? And you want to park thousands of trucks over by Loyola High School?? And by the Kaiser Hospital.

Have you notified the High School and the hospital of this?? The noise, air quality, safety issues through this area will be tremendous. Where is the analysis of all this? And why did the developer pick a lower income area to park these trucks in?? Can you provide the demographic information for these communities where the developer wants to park tens of thousands of trucks and polluting these communities?? Were these communities mailed notices of the Draft EIR??

Response to Comment No. 599-1

This comment is identical to Comment No. 183-1. Refer to Response to Comment No. 183-1, above.

Comment Letter No. 600

Sofia Yazpik
441 N. Orange Grove Ave.
Los Angeles, CA 90036-1708

Comment No. 600-1

I'm writing to discuss my concerns about the TVC2050.

Response to Comment No. 600-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 600-2 through 600-7.

Comment No. 600-2

TVC2050 will have huge impacts on our neighborhood, streets, schools, parks, and quality of life. However, the draft environmental impact report said that the project level impacts would be "less than significant" and therefore require no mitigation measures. How was this conclusion reached? The claim that less than significant impacts seems false and misrepresents the reality of the devastating impacts on the community over two decades of construction. How does 20 years of construction lead to "less than significant" impacts? Why do the mitigation measures only apply to when the project is in operation?

Response to Comment No. 600-2

The analysis included throughout the Draft EIR explains in detail how the conclusions were reached.

With respect to transportation, refer to Section IV.K, Transportation, of the Draft EIR. As discussed therein, impacts related to all of the transportation-related CEQA Guidelines Appendix G questions (i.e., potential conflicts with plans, VMT, hazardous geometric design features, and emergency access) would be less than significant without mitigation. The Project has a less-than-significant impact on transportation during operations; therefore, mitigation measures are not warranted. Chapter 5 of the Transportation Assessment (Appendix M.1 of the Draft EIR) details the operational analysis that measures the Project's impacts on the transportation system in the vicinity of the Project Site. Table 18 on page 162 therein summarizes the LOS impacts of adding Project trips to future base conditions. The addition of Project trips does not cause any intersection operating at LOS D

or better to degrade to LOS E or F. The addition of Project trips to the roadway system serving the area causes the average intersection delay to increase by approximately 2.2 seconds per vehicle in the morning peak hour and approximately 2.4 seconds per vehicle in the afternoon peak hour.

The commenter refers to impacts to schools, but provides no specifics. With respect to school capacity, refer to pages 70 and 71 of the Initial Study included as Appendix A of the Draft EIR. As discussed therein, per SB 50, the Applicant would be required to pay development fees for schools to LAUSD prior to the issuance of building permits. Pursuant to Government Code Section 65995, the payment of these fees is considered full mitigation of Project-related school impacts, and no additional mitigation is required. Impacts to school attendees and employees are accounted for throughout the Draft EIR. The commenter refers to impacts to parks, but provides no specifics. With respect to park facilities, refer to page 71 of the Initial Study included as Appendix A of the Draft EIR. As discussed therein, the Project would not include residential uses and would not generate a new residential population that would regularly utilize nearby parks and recreational facilities and on-site amenities would be provided for employees. Therefore, impacts related to park services would be less than significant, and no mitigation measures would be required. Impacts to park goers are accounted for throughout the Draft EIR.

Please note that quality of life is not a CEQA issue. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

A complete list of mitigation measures included in the Project is provided in Section I, Executive Summary, of the Draft EIR. Refer to pages I-29 through I-36 therein.

Comment No. 600-3

Some of the significant impacts this project will have are traffic, pollution, and crime just to name a few off the top of my head.

Response to Comment No. 600-3

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

It is unclear what type of pollution the commenter is referring to, but if the commenter is referring to air pollution, refer to Section IV.A, Air Quality, of the Draft EIR.

As discussed in Section IV.A of the Draft EIR, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operation emissions. All other air quality impacts would be less than significant or less than significant with mitigation. Refer also to Response to Comment No. 26-E.1-2 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant. Potential impacts related to hazards and hazardous waste are analyzed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR. As discussed therein, with implementation of Mitigation Measures HAZ-MM-1 and HAZ-MM-2, impacts would be less than significant.

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR for a discussion of public safety. As discussed on pages IV.J.2-13 through IV.J.2-17 therein, impacts associated with police protection would be less than significant. The Project also includes a number of PDFs that would enhance safety on the Project Site, including Project Design Feature POL-PDF-2, which requires a 24/7 security plan.

Comment No. 600-4

This project will have live audiences and add thousands of new employees commuting to work every day. Additionally, there will be thousands of construction trucks coming in and out of the site daily for potentially the next two decades. Why is that not considered a significant impact? On what basis can the applicant claim this?

Response to Comment No. 600-4

CEQA does not require a VMT analysis of construction traffic; CEQA Guidelines Section 15064.3, subdivision (b) notes, “for many projects, a qualitative analysis of construction traffic may be appropriate.” The City does not require an analysis—quantitative or qualitative—of VMT impacts during construction based on the Transportation Assessment Guidelines (LADOT, August 2022). Refer to Topical Response No. 14, Construction Vehicle Impacts, for a detailed discussion of why construction VMT analysis is not required and that Project construction generates substantially fewer trips than Project operation.

Appendix M.1, Transportation Assessment, of the Draft EIR includes a complete Project construction transportation assessment (refer to Section 5D, pages 179 through 184). As discussed therein, while construction-related activities associated with the Project would result in varying levels of truck and worker trips to and from the Project Site on a daily basis, such trips would be far less than operational Project-related trips. Additionally, the Project includes a CTMP prepared pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 and IV.K-37 of the Draft EIR), which would include provisions to limit the amount of construction-related trips during peak hours to the extent feasible, as well as a

prohibition of off-site construction worker or equipment parking. The Project construction program does not anticipate any long-term closures of sidewalks or travel lanes along the streets adjacent to the Project Site. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

Comment No. 600-5

These trucks will also be releasing diesel particles, greenhouse gases and other pollution. Has there been a health study on these impacts? How much pollution would thousands of trucks add over the span of building this project? Why aren't these impacts considered significant?

Response to Comment No. 600-5

Please refer to Response to Comment Nos. 26-E.1-2, 123-3, and 127-4 for a detailed response regarding diesel trucks and related emissions and health impacts.

Comment No. 600-6

Where is the analysis on the additional impacts of more cars on our major streets around the project site? The streets in our neighborhood are already crazy busy during the school year. Have you tried driving down these streets at 7AM or 3PM when kids are going to and from school? Will the project push more traffic into our neighborhoods along cut through streets? Why isn't traffic in our neighborhood considered a significant impact?

Response to Comment No. 600-6

Refer to Response to Comment No. 421-2 for a discussion of the operational effects of Project trips on the streets and intersections near Fairfax High School and in the nearby neighborhoods.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment (Appendix M.1 of the Draft EIR).

Comment No. 600-7

Why aren't the many adverse impacts expected important to the city when approving the project? Is the city saying that residents will have to just live with the impacts because the project is more important than the neighborhood?

Please answer these questions before moving forward with this project.

Response to Comment No. 600-7

Pursuant to Section 15093(a) of the CEQA Guidelines, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered “acceptable.” The commenter should note that the Project has not been approved by the City. Following publication of the Final EIR, the Project will be subject to public hearings, including hearings before the City Planning Commission and the City Council.

This comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 601

Bilal Young
1758 N. Orange Dr.
Los Angeles, CA 90028-4374

Comment No. 601-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 601-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 602

David Young
441 1/2 N. Ogden Dr.
Los Angeles, CA 90036-1748

Comment No. 602-1

Please address my concerns with the proposed Television City construction project. As a local, I want to know what is potentially going to be built and how it will change my neighborhood.

Response to Comment No. 602-1

This comment is identical to Comment No. 214-1, but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 602-2 through 602-6.

Comment No. 602-2

The site is right in the middle of a neighborhood with schools, religious organizations, museums and Pan Pacific Park. How will the increased car and truck traffic for construction and then the increased traffic for employees in the enlarged Television City impact the health of residents? of the school children? and of visitors to the park? How will increased exhaust from diesel trucks negatively affect these people, particularly people at risk? What is the analysis of the impacts to the most at-risk populations such as children, people with asthma, seniors, and what were the conclusions? How many different at-risk groups live in this area? And how close are they to the project site?

Response to Comment No. 602-2

This comment is identical to Comment No. 127-4. Refer to Response to Comment No. 127-4, above.

Comment No. 602-3

Another impact that needs to be further explained in the EIR is noise from all those trucks and from the construction itself. During construction, how much increased sound will occur? and what will be the impacts of the different sources of noise to the residents 'and others 'hearing? If construction takes two decades or more, how much does that increase

the impact on people's hearing? How much does it impact quality of life? Construction noise is annoying at best and harmful at worst.

Response to Comment No. 602-3

This comment is identical to Comment No. 127-5. Refer to Response to Comment No. 127-5, above.

Comment No. 602-4

The Adobe and Farmers Market are true community landmarks and important to the community. How will the expansion of Television City affect the Adobe? During construction, it seems they would be impacted by construction noise, dust, and debris, so what will those impacts be? How much blasting, drilling, and other construction activity will there be to impact it? Won't visitor to the Farmers Market be impacted by the noise, traffic and daily construction? What steps are being taken to ensure the increased traffic and people coming into the area does not displace regular customers and visitors?

Response to Comment No. 602-4

This comment is identical to Comment No. 214-4. Refer to Response to Comment No. 214-4, above.

Comment No. 602-5

I understand there will be power generators at the basecamps. Since generators often run on diesel fuel, how will the pollution, both air and noise, be handled? How often will the generators be used? What will they be used for? What about safety and hazard concerns?

Response to Comment No. 602-5

This comment is identical to Comment No. 214-5. Refer to Response to Comment No. 214-5, above.

Comment No. 602-6

It seems irresponsible given the housing crisis that this huge expansion would not include residential development. Why did the developer choose not to include housing? Why isn't he required to include any housing, especially affordable housing? Is there a possibility to add it to the plan for development? Doesn't the city have a responsibility to offer more housing to workers given the need?

Response to Comment No. 602-6

This comment is identical to Comment No. 127-6. Refer to Response to Comment No. 127-6, above.

Comment Letter No. 603

Shirley Zadaca
454 N. Kilkea Dr.
Los Angeles, CA 90048-2229

Comment No. 603-1

I am writing with concerns about the proposed TVC project and its application process. As a long term resident I have seen a lot of building in my area.

Response to Comment No. 603-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 603-2 through 603-6.

Comment No. 603-2

During the Planning review process, did they detail how the proposed plan differed from the current code? Was the draft plan shared with the public? If so, when was it shared and with whom? What is required for this kind of a permit? It seems those of us in the community are just hearing about the project for the first time.

During the Planning review process, did they detail how the proposed plan differed from the current code? Was the draft plan shared with the public? If so, when was it shared and with whom? It seems those of us in the community are just hearing about the project for the first time.

Response to Comment No. 603-2

Refer to Response to Comment No. 26-22 regarding the relationship of the Specific Plan to the LAMC and the Draft EIR's CEQA analysis of the Project's consistency with the LAMC.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 26-6 with regard to the Project Description and proposed Specific Plan, the purpose and function of a specific plan, how the Draft EIR disclosed and analyzed all physical elements of the Project in accordance with CEQA, and the regulatory process under the proposed Specific Plan. As discussed therein, neither CEQA nor City policy requires a proposed specific plan to be included in the EIR.

Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available prior to the publication of this Final EIR, which can be accessed on the Department of City Planning's website. Further, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Refer to Response to Comment No. 604-5 regarding the entitlement process. Also refer to Response to Comment Nos. 28-13 and 32-3 regarding noticing and community outreach. As discussed therein, in addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively engaged with the community and shared information about the Project for several years. Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

Comment No. 603-3

When will a public hearing be held for the project? Don't you have to have one as part of this comment period?

Response to Comment No. 603-3

Following the publication of this Final EIR, the Project approvals and EIR will be considered during public hearings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings. Noticing for hearings will be sent in accordance with state law. Notices will be sent to everyone who commented on the Draft EIR.

Comment No. 603-4

There are no specifics in the plan. We have no idea what they might build on this property. How will we be able to know if what is being built falls within the appropriate codes of what is allowed? I am not sure we need another 2 million square feet of building in this neighborhood.

Response to Comment No. 603-4

Refer to Response to Comment No. 603-2 regarding the Project Description and Specific Plan.

The comment is incorrect that the Project would add 2 million square feet of development. As discussed on Draft EIR page II-1 in Section II, Project Description, the

proposed Specific Plan would permit up to 1,626,180 square feet of new development (1,130,320 net new square feet).

Comment No. 603-5

This needs to be detailed and recirculated according to the necessary regulations. I am very concerned about traffic and parking on site!

Response to Comment No. 603-5

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, off-site parking is no longer proposed; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

This comment does not provide substantial evidence that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 603-6

I look forward to how your department will address these questions.

Response to Comment No. 603-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 603-2 through 603-5.

Comment Letter No. 604

Tamar Zadaca
454 N. Kilkea Dr.
Los Angeles, CA 90048-2229

Comment No. 604-1

I am writing with concerns about the proposed TVC project and its application process. As a long term resident I have seen a lot of building in my area.

Did this application follow the appropriate process with the Planning department for this kind of a project? What is that process, so that those of us who don't know it well? What is required for this kind of a permit?

What other permits, like from other agencies, will the development need to get? Doesn't the developer needs to get some kind of water, hazardous, fire prevention, waste management, and other approvals? Please provide details about these other permits. In what order and when does the developer have to get them?

Response to Comment No. 604-1

Refer to Response to Comment No. 604-5 regarding the application process.

Pages II-35 and II-36 in Section II, Project Description, of the Draft EIR list the anticipated discretionary entitlements, reviews, permits, and approvals required to implement the Project.

Comment No. 604-2

During the Planning review process, did they detail how the proposed plan differed from the current code? Was the draft plan shared with the public? If so, when was it shared and with whom? It seems those of us in the community are just hearing about the project for the first time.

Response to Comment No. 604-2

The Project's impacts related to land use were analyzed in Section IV.H, Land Use and Planning, of the Draft EIR. In accordance with CEQA, the Draft EIR analyzed the Project's potential to conflict with applicable plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental effect, and determined that impacts would be less than significant.

Refer to Response to Comment No. 32-3 regarding the extended 60-day public comment period for the Draft EIR, which provided the public sufficient opportunity to comment on the Project.

Comment No. 604-3

When will a public hearing be held for the project? Don't you have to have one as part of this comment period?

Response to Comment No. 604-3

This comment is identical to Comment No. 603-3. Refer to Response to Comment No. 603-3, above.

Comment No. 604-4

There are no specifics in the plan. We have no idea what they might build on this property. How will we be able to know if what is being built falls within the appropriate codes of what is allowed?

Response to Comment No. 604-4

This comment is identical to a portion of Comment No. 603-4. Refer to Response to Comment No. 603-4, above.

Comment No. 604-5

What guardrails exist to keep track of the plans?

Response to Comment No. 604-5

In the City of Los Angeles, the submitted entitlement request is governed by Sections 11.5.6, 11.5.7, 12.32, 13.11, and 17.15 of the LAMC in addition to approval from the City of Los Angeles on a Development Agreement authorized under California Government Code Sections 65864 and 65869.5 as well as subsequent future approvals from the Local Agency Formation Commission (LAFCO).

The proposed Specific Plan, Sign District, and VTTM applications were filed with the City of Los Angeles Planning Department and requires an initial decision-maker to review and deem said application as complete. The initial decision maker for this case will be the Deputy Advisory Agency for the VTTM and the City Planning Commission for the proposed Specific Plan, proposed Sign District, and proposed Development Agreement. The City

Planning Commission's recommendation would then be considered by the City Council and the Mayor.

The entitlements filed require a public hearing and notice. They require that the Project Site be posted with a notice of any public hearing (at a date prescribed), and the application requires that findings be made to support the decision-maker's determination. Whether the application is approved or denied, the Letters of Determination issued on any portion of the Case may be appealed for persons aggrieved by the initial decision.

Television City has undertaken an entitlement process that includes full CEQA EIR review and clearance, as well as for multiple opportunities for an interested party to engage and be included in city discussions on the Project, all leading to a recommendation by the City Planning Commission that the City Council and Mayor can approve (in whole or in part and with or without conditions) or deny. This recommendation will incorporate "guardrails" in the form of an approved Specific Plan that would rule and regulate the size, height, and design of what can be constructed on-site, as well as processes and procedures for which elements can be built with an administrative and/or discretionary review. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan.

Comment No. 604-6

This needs to be detailed and recirculated according to the necessary regulations.

Response to Comment No. 604-6

Refer to Response to Comment Nos. 604-2 through 604-5. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 604-7

I look forward to how your department will address these questions

Response to Comment No. 604-7

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 604-2 through 604-6.

Comment Letter No. 605

Daniel Zeanel
327 N. Formosa Ave.
Los Angeles, CA 90036-2526

Comment No. 605-1

I live within the Beverly Fairfax Historic District for over 36 years.

Response to Comment No. 605-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 605-2

The fact that the project's EIR concludes there won't be any effects on our historic district worries me a lot.

Response to Comment No. 605-2

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding how the Project, including Project trips, would not significantly impact any historic district. The comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 605-3

The Project's construction years are discussed in the EIR, but not with any clarity. Is construction going to be for three years? What does it mean that construction could be up to 20 years? Does that mean construction could be going on for 20 years in our community? We are a community of pedestrians, and children and families frequently stroll around our neighborhoods to visit one another's homes and attend religious services. Does the city expect that our lives could be affected by noise, more traffic, trucks all week long, closures, more cars driving through our neighborhood—for up to 20 years?

Response to Comment No. 605-3

This comment is identical to Comment No. 257-2. Refer to Response to Comment No. 257-2, above.

Comment No. 605-4

In addition, it will ruin our way of life and interfere with the very cultural Importance that has made Beverly Fairfax a historic area. Did you evaluate the effect all the construction activities will have on visitors to the historic area boundaries? Where Is that analysis? Can you point to findings that construction trucks and employees are not going to be driving through our communities at all hours of the day and night? When and how will construction trucks will be routed? Will trucks being using an entrance that runs along Fairfax, pulling out into traffic to get to the freeway?

Response to Comment No. 605-4

Comment No. 606-1

Being a resident of this neighborhood for 30 years, I feel like I have a big stake in this project. None of it sounds good to me.

Response to Comment No. 606-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 606-2

First of all, it reminds me of The Millennium project in Hollywood, where there was no real definition—we have no idea what this project is. All we know is that construction is going to take place for the next 20 years, but don't know what it's going to look like, the phases of construction, the traffic impacts, the noise and disruption, impacts and so on and so on.

Please explain why you put out an EIR that went against what the court said in that case the City cannot do.

Response to Comment No. 606-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13. As discussed therein, the *Millennium* case is not applicable to the Project, and the Project Description is distinguishable from the project description at issue in *Millennium*.

With regard to the Project Description, refer to Topical Response No. 1 and Response to Comment No. 5-3. As discussed in these responses, the Project Description contained in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the environmental impacts of the Project.

Refer to Response to Comment No. 9-24 with regard to the Project timeline. Also refer to Topical Response No. 14, Construction Vehicle Impacts.

Refer to Sections IV.I, Noise, and IV.K, Transportation, of the Draft EIR, which include a comprehensive analysis of the Project's potential noise and transportation impacts.

Comment No. 606-3

It seems unbelievable that the draft EIR was approved without the community being able to express our opinions.

Response to Comment No. 606-3

The Project has not been approved by the City. Following publication of the Final EIR, the Project will be subject to public hearings, including hearings before the City Planning Commission and the City Council. Refer to Response to Comment No. 32-3.

Comment No. 607-1

I recently heard that the TVC 2050 Plan includes a provision that would potentially change our Community Plan to that of a Regional Center. I must admit, I have some reservations about the idea. I certainly have many questions about it.

For one, have you analyzed the impacts that would come from future development under this jurisdiction? Transforming our Community Plan practically guarantees there will be more development here and that it will be harder for us to discern which projects truly benefit our community. I understand that there are impact reports for the TVC plan, but do they extend to the expected development that will come as a result of this plan change? How is a change to a Regional Center implemented? Why is it not being done as part of updating our Community Plan? Do we have an estimate on how much more development there will be in the area as a result of this change? When would that happen? How might this affect residents, due to added development bringing added traffic and added pollution? Or how traffic might continue to increase from additional development beyond the calculations specific to the TVC development?

Response to Comment No. 607-1

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. The proposed General Plan Amendment to Regional Commercial applies only to the Project Site and would not allow for additional development on other sites within the City. Any development proposed for another site would be required to go through the City review process, including potential CEQA review, as applicable. Refer to Topical Response No. 6, Wilshire Community Plan Update, with regard to the Wilshire Community Plan update.

Comment No. 607-2

Speaking of residents, have you received sufficient community input for a change to the Community Plan? These Plans are crafted through an established process to help ensure everyone gets a chance to make their voice heard. I have heard little about the fact that the TVC Plan will change our Community Plan. As a matter of fact, I've barely heard about community input periods for the TVC Plan in general. So I need to ask, how many people have attended these meetings? How many public input sessions have there been thus far?

Were people given sufficient notice? How many people did you contact in your outreach efforts? Did you send personal messages to anyone close to the development, and if so, how close to the development did they need to be for you to send the message? I suspect there are others who, like me, were unaware of this Regional Center aspect being tied to TVC, so I want to make sure people have a chance to make their voices heard.

Response to Comment No. 607-2

Refer to Response to Comment Nos. 28-13 and 32-3 for a discussion of public outreach conducted thus far for the Project, public noticing, and future public hearings prior to Project approval.

Comment No. 607-3

One last concern I have about this change to a Regional Center is how this might affect the property values of people living here and homeowners. I suspect becoming a Regional Center will increase property values in today's real estate market. What does your analysis say about that? While property owners would favor that, I know there are many renters who be forced to move out if rents were to rise. So have you analyzed how much Regional Center renters have to pay in rent versus their counterparts? How do you expect property values to change as a result? Do you have specific protections in place for long-term residents here? Once again, have you made those who might be affected aware of what is to happen?

Response to Comment No. 607-3

Refer to Response to Comment No. 5-8 regarding the proposed Regional Commercial designation.

Under CEQA, "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR 15131). Substantial evidence must be provided to demonstrate a reasonably foreseeable physical impact on the environment from the economic or social change. The commenter has provided no such evidence. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 607-4

Thank you for your time. I think these questions are an important part of the process, and I would like to know you have answers that will satisfy the whole community before you make changes to the plan we approved

Response to Comment No. 607-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 607-2 and 607-3.

Comment No. 608-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.
