Although the adequacy of a development's parking supply is not a CEQA impact, a response to this comment is included for informational purposes. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding how the parking proposed for the Project relates to applicable parking provisions. A key reason for the increase in the parking ratio is the increase in employee density. Currently, there are approximately 2,130 employees for 743,680 square feet of development for a ratio of 2.86 employees per 1,000 square feet. With the Project, there would be an estimated 7,832 employees in 1,874,000 square feet of development for a ratio of 4.18 employees per 1,000 square feet. The proposed parking ratio for the Project increases because the density of people on the Project Site increases and the land uses on the Project Site intensify (e.g., existing studio

to future office space). In conjunction with the on-site parking ratio, the Project also includes a TDM Program per Project Design Feature TR-PDF-2, which would reduce automobile trips and VMT and promote transit usage. Refer to pages IV.K-37 and IV.K-38, IV.K-44 through IV.K-55, and IV.K-74 and IV.K-75 of the Draft EIR, as well as Topical Response No. 11, Transportation Demand Management, for a detailed discussion of the Project's TDM Program.

Comment No. 26-159

The DEIR assumes that the Project could be built by 2026, and only applies the one-percent growth factor for traffic through 2026. (DEIR IV.K-24) That assumption is unsupported by citation to any evidence or any discussion. To the contrary, the DEIR is clear that Project build-out could extend to 2043.

The DEIR claims that the list of related projects used to analyze traffic impacts “is a conservative estimate that overestimates the actual traffic volume growth that would likely occur in the five years prior to the anticipated 2026 Project buildout year.” (*Id.* at IV.K-25.) However, the related projects list is missing projects, such as the Holocaust Museum, that will introduce traffic to the same immediate roadways. And, again, Project buildout can be as late as 2043. What are the related projects assumed through 2043? What will ambient traffic be in 2043 if Project buildout does not occur until then? Please provide a cumulative analysis for build out in 2043.

Response to Comment No. 26-159

The transportation analysis in Section IV.K, Transportation, of the Draft EIR provided a long-range cumulative analysis of transportation impacts in the form of the VMT analysis and determined impacts to be less than significant (see pages IV.K-81 to IV.K-83 of the Draft EIR). The LADOT VMT Calculator is based on the City's long-range cumulative travel demand forecast model (which in turn is based on the SCAG long-range model). The VMT Calculator, therefore, represents a long-range travel forecast based on land use projections and travel demand and pattern assumptions for the region. Thus, the CEQA transportation analysis presented in the Draft EIR accurately represents the long-range cumulative impacts of the Project.

The comment's discussion of related projects only applies to the non-CEQA operational analysis required by the City and not to the analysis required by CEQA. Page 3-8 of the LADOT TAG requires an operational analysis to be performed for likely operating conditions on the roadways near the Project during the best estimate of Opening Year for the Project. That was done for this Project assuming an Opening Year of 2026, consistent with LADOT policy.

The existing Holocaust Museum was open and operating when the trip counts for the Project were conducted, and, therefore, the existing Holocaust Museum trips were included in the analysis. In addition, the smaller expansion of the Holocaust Museum was investigated as a potential related project, but its peak hour trip generation was found to be minimal, and, thus, it was not included in the related project list by LADOT. Specifically, the 2007 Initial Study and the Mitigated Negative Declaration (MND) for the original Holocaust Museum was reviewed, and the project was found to have no significant traffic impacts on adjacent key intersection or residential street sections. The peak hour trip generation for the development of the original Holocaust Museum estimated nine total trips in the morning peak hour and 11 total trips in the afternoon peak hour, as reported by Crain & Associates in their full 2006 traffic study attached to the MND. The one percent annual growth in background traffic levels was assumed to occur between the pre-COVID traffic counts conducted in 2019 and the 2026 target year for Project completion. This one percent annual growth rate is used by LADOT throughout the City as a conservative estimate of potential growth.

The one percent annual growth in background traffic levels is the high end of the annual range for total traffic growth in the urbanized areas of the City of Los Angeles. This annual growth rate is utilized by LADOT to determine Future Base traffic levels which consist of:

Existing Conditions Traffic Levels + 1% Annual Ambient Growth Rate +
Related Projects Traffic = Future Base Conditions

This methodology yields a conservative (i.e., high) estimate of Future Base Opening Year traffic projections because the 1-percent annual growth rate already includes the related projects that happen each year. The Opening Year projections used in the traffic analysis for Year 2026 include both the 1-percent annual growth and the traffic to be generated by the 68 related projects discussed in Response to Comment No. 26-157. Thus, by adding the traffic from the 68 related projects described above to this background traffic growth rate, the analysis effectively “double-counts” the related project trips.

The related projects list includes a list of reasonably foreseeable related projects in the Project vicinity based on information from LADOT and the Department of City Planning. The non-CEQA operational traffic analysis assumed that all known related projects would be approved, constructed, fully occupied and operational by 2026. Related projects beyond the current list through 2043 are unknown and annual growth rate predictions to 2043 would be purely speculative. Long-range travel demand model projections developed by SCAG predict growth rates well below the one percent level for this area of the City of Los Angeles. The combination of related projects and one-percent assumed growth rate resulted in a 12.8 percent increase in background trips between existing traffic levels and Future 2026 Traffic without Project shown in Figure 21 (page 77) of the Transportation

Assessment (Appendix M.1 of the Draft EIR). The SCAG 2040 travel demand model predicts a smaller traffic increase compared to the existing traffic levels shown in the Transportation Assessment. Thus, an operational analysis using the SCAG 2040 base traffic levels would not have had substantially different results than the same analysis shown in the 2026 operational analysis in the Project Transportation Assessment.

Furthermore, as discussed on pages IV.K-80 to IV.K-81 of Section IV.K, Transportation, of the Draft EIR, with the exception of the freeway safety analysis, the Project's transportation impact analyses per the CEQA Guidelines Appendix G transportation thresholds and the TAG are not dependent upon the Project buildout date, and, therefore, the results and conclusions presented in the CEQA transportation analysis are equally applicable to a long-term buildout date. As such, a later buildout date would not affect the impacts or significance conclusions in the Draft EIR under CEQA. With regard to the freeway analysis, LADOT typically uses a lower ambient growth rate, such as 0.5 percent per year, recognizing that the combination of related project traffic and ambient growth generally overestimates traffic growth over a long timeframe. Nonetheless, even if traffic were to increase substantially by year 2043, the conclusions of the freeway safety analysis would not be affected, and no long-range significant impact from the Project would occur because the level of Project trips added to the freeway off-ramps is less than 25 peak hour trips at all but one ramp (i.e., SB US 101 and Highland Avenue off ramp) and that ramp has sufficient queue storage length to accommodate Project vehicles.

Note that it is the intent of the Applicant to complete the full buildout of the Project well before 2043.

Comment No. 26-160

Shouldn't the Mobility Hub should be analyzed as a "transportation project" under the City's Transportation Assessment Guidelines? (City of Los Angeles Transportation Assessment Guidelines at 2-13, available at https://ladot.lacity.org/sites/default/files/documents/2020-transportation-assessment-guidelines_final_2020.07.27_0.pdf.) Under that threshold, a transportation project will have a significant impact if it "induces substantial additional VMT." (*Id.*) It appears that the Mobility Hub could include substantial additional VMT and the DEIR should analyze the Mobility Hub itself as a transportation project and disclose those significant VMT impacts.

Response to Comment No. 26-160

The TAG defines a "transportation project" as a project that "increases vehicular capacity" and "can lead to additional travel on the roadway network, which can include induced vehicle travel due to factors such as increased speeds and induced growth." The Mobility Hub is not a transportation project as defined by the TAG, and in fact it serves the

opposite purpose. The Mobility Hub is an integral part of the Project's proposed TDM Program, as it would serve as a focal point of first-mile/last-mile transportation services for employees and visitors to the Project Site. Such services reduce single-occupant vehicle trips to and from the Project Site and, thus, reduce VMT. Refer to Topical Response No. 7, Mobility Hub, for a detailed description of the proposed Mobility Hub.

Comment No. 26-161

The DEIR states that the VMT analysis omits "trips to a non-residential destination originating from a non-residential use at the Project Site," "trips to a non-workplace destination originating from a residential use," and "trips to a non-residential destination originating from a non-residential use." (DEIR, p. IV.K-31.) The DEIR explains "those trips are typically localized and are assumed to have a negligible effect on the VMT impact assessment." But given the nature of this particular Specific Plan project, what is the evidence supporting the decision to exclude all of these different trips? The DEIR should assess the entire VMT generated by the Project, based on empirical data from the existing property operations and the full range of permitted uses.

As with the VMT data, the trip generation data fails to use actual data from the existing site. (DEIR, p. IV.K-35.) The public and decision-makers have no idea how many new cars will be added to the roads with this Project. This information needs to be clearly provided. Appendix M, Table 5 states that trip generation rates for production office uses are based on empirical data from another studio. As noted above, where is the evidence that this information is relevant or applicable to the Project? Does empirical data from the existing studio at the Project Site support the trip generation rates for production office? Why wasn't this data generated from the existing Television City users? Does the Television City data support the use of different rates for production office and general office at this Project Site? How are those different office uses defined? Without definition or existing data, there is no information in the DEIR supporting use of a different daily rate for office and production office at this Project Site.

How does the stage and production support space trip generation rates account for the varied permitted uses listed in the DEIR as allowed in those spaces? For example, does the stage trip rate account for all the audience participation shows? How? The Project Site currently has audience shows. What is the trip generation associated with existing audience shows? How does that compare with the assumed trip generation rate? Please provide information as to trip numbers and trip lengths for existing audience show guests. Since audience shows can add more than 5,000 guests a day to the projected 7,800 employees, the trip generation for the Project Site and related impacts are likely significantly understated.

Given the current and past extensive use of the Project Site stages for audience participation shows and that the Project includes use of all future stages for such shows, additional information is necessary to assess the transportation and parking impacts from such shows. Please provide information regarding the nature and extent of the audience shows for the last five years, including show schedules and numbers of guests. This information is not currently in the DEIR and would provide data for projecting future audience show use at the Project Site. Where is parking provided for audience show guests currently? How many times a day are shows taped? What times do audience show guests arrive? Are there more than one taping a day for different shows? What will be the rated audience show capacity of each of the proposed stages at the Project Site in the future? Will the Specific Plan include any restrictions on the number of shows per day? The hours of audience guest arrival and departure? The parking for such guests?

Response to Comment No. 26-161

Refer to Topical Response No. 8, Vehicle Miles Traveled, for a discussion of the different trip purposes and which are considered in the VMT analysis. As described therein, State guidance on VMT analysis from the OPR Technical Advisory suggests that for employment-based projects, “the focus can be on home-based work trips.” The other trip types are considered to be a relatively small component of overall VMT, and the OPR Technical Advisory recommends that the focus of VMT-reduction efforts be on trips between home and work. As such, the City’s significance thresholds were developed using the home-based work attraction trip type, just as the VMT Calculator’s analysis of work VMT per employee is based on that trip type for an apples-to-apples comparison.

Refer to Topical Response No. 10, Trip Generation, for a discussion on the validity of the empirical data used to estimate trip generation for production office, sound stage, and production support uses at the Project, including a comparison of actual driveway counts of existing trips at the Project Site to estimates using those trip rates. It also includes a detailed discussion of trip generation for studio audience members, including how they were accounted for in the Project trip generation estimates and that these trips represent a small percentage of the average daily total trip generation of the Project. The comments regarding the number of audience guests and that trip generation estimates are understated are incorrect. In regard to the information requested about audience shows, see Tables II-5 and II-6 in Topical Response No. 10.

See Response to Comment No. 26-156 for a discussion of why the empirical trip rates from the existing studio were not used as the sole basis for the Project trip generation estimates. Table 6 on page 81 of Appendix M.1, Transportation Assessment, of the Draft EIR provides a clear estimate of the number of net new trips to be added to the street system.

Refer to Topical Response No. 13, Parking, for information on the adequacy of the Project's proposed parking supply, including for studio audience visitors.

As discussed in Topical Response No. 3, Permitted On-Site Uses, five uses would be permitted under the Specific Plan (sound stage, production support, production office, general office, and retail) as well as the ancillary sitewide uses that support the studio and the five permitted land uses. These uses are fully accounted for in the transportation impact analysis in the Draft EIR.

This comment discusses several non-CEQA issues and questions regarding audience attendance. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-162

How will guests access the Project Site if they are parked off-site? Please explain how guest parking in residential areas will be prevented? How will community security be handled if guests park in the residential areas? Will there be nighttime access to studio shows? When will these shows depart? How will noise from audience show guests in the community be minimized? What access gates will be used for audience show guests? If guests are parked on-site, how will access (ingress and egress) be handled for multiple shows occurring at the same time? How will the site prevent back-up on the surrounding streets from guests entering the Project Site?

The DEIR should identify where off-site parking will be located and include in its analysis an assessment of impacts from the off-site parking. For example, the website for one of the live audience shows operated at the existing Television City facilities encourages audience members to park in The Grove parking structure. Is this the Project's plan going forward? What will happen to Farmers Market if audience show members park there and displace customers to Farmers Market? Could this lead to deterioration of Farmers Market?

Response to Comment No. 26-162

With respect to off-site parking, as discussed in Section B, Off-Site Parking, of Topical Response No. 13, Parking, the Project does not intend to implement an off-site parking program or negotiate an agreement with the City regarding off-site parking. The Project does not need off-site parking to meet its peak parking demands and, therefore, is no longer proposing off-site parking. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the adequacy of the proposed on-site parking supply.

Project driveway queueing distance is addressed in Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion. Queue lengths at the Project driveways were evaluated and summarized in Section 5B of the Transportation Assessment (included in Appendix M.1 of the Draft EIR) as part of the non-CEQA transportation analysis. As discussed therein, adequate queueing storage would be provided at each Project driveway to minimize the potential for vehicles to back out into the adjacent arterial streets.

Audience access is discussed in Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion. In addition, refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for information about audience shows, including the number and timing of audience shows.

Comment No. 26-163

The DEIR should be revised to include an analysis of potential traffic impacts resulting from cars circling nearby neighborhoods looking for parking. Neighborhoods will be forced to bear the burden of Project parking as drivers begin queuing on arterials, and residential streets will become clogged with drivers slowing to search for street parking. What are the air quality impacts from cars circulating looking for parking? What are the additional greenhouse gas impacts from this? What are the hazards to pedestrians, with drivers looking anywhere but directly in front of them searching for parking? Such impacts should be disclosed.

The secondary environmental impacts of people circling for parking spots are well known, and need to be studied here. (*E.g.*, Willa Ng, Circling for parking is terrible for cities. Let's put an end to it. (Sept. 21, 2016), available at <https://medium.com/sidewalk-talk/circling-for-parking-is-terrible-for-cities-lets-put-an-end-to-it-48c51921b776>; The Guardian, The hidden climate costs of America's free parking spaces (Nov. 5, 2021), available at <https://www.theguardian.com/environment/2021/nov/05/us-free-parking-spaces-climate-cost>.)

Please address the potential secondary impacts of the drivers potentially circling the Project Site looking for parking.

Response to Comment No. 26-163

The comment raises several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comment No. 26-162 explaining that off-site parking is no longer proposed by the Project. Refer to Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply and that spillover parking into adjacent

neighborhoods and properties is not anticipated. As such, the types of secondary environmental impacts speculated in the comment are not anticipated to occur.

Comment No. 26-164

The transportation section of the DEIR has a long section of Project Design Features. (DEIR, pp. IV.K-36–41.) These features are actually mitigation measures, and the analysis should have been done without assuming the PDFs in place and, then, if needed, mitigation measures imposed to address potentially significant impacts. Otherwise the true impacts of the Project are masked.

Similarly, the DEIR needs to analyze the Project Design Features (which are actually mitigation measures) for their own environmental impacts. The DEIR should evaluate the impact to traffic patterns of the proposed PDFs, including any localized congestion and related impacts.

Response to Comment No. 26-164

The PDFs included in Section IV.K, Transportation, of the Draft EIR include implementation of a Construction Traffic Management Plan (CTMP) as required by LADOT, a TDM Program that includes Project features to reduce automobile trips and resulting VMT, improvements to pedestrian facilities, a contribution to transportation system management improvements, and installation of left-turn signal phases at three intersections, among other things. Refer to pages IV.K-36 to IV.K-41 of the Draft EIR. These PDFs are a part of the Project and are not mitigation measures as incorrectly stated in the comment. Mitigation measures are required by CEQA to reduce identified impacts below an applicable threshold of significance. As shown in Section IV.K, Transportation, of the Draft EIR, the Project would result in less than significant transportation impacts, and thus no mitigation measures are required. The PDFs identified in Section IV.K, Transportation, of the Draft EIR were not the basis by which transportation impacts were determined to be less than significant. In fact, Appendix E of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that the only PDF that was considered in the VMT analysis was the addition of bicycle parking and bicycle support facilities. The Project PDFs are largely non-construction actions that would reduce vehicle trips, improve safety, and encourage/enhance non-auto trips, and, thus, they would not result in their own environmental impacts.

Comment No. 26-165

When would the Mobility Hub be constructed? Is it required to be built when a certain amount of new square footage is constructed?

The DEIR's analysis of consistency with the Mobility Plan and Community Plan is inaccurate and should be redone. Below are some of the failures of the analysis of Project's impact analysis as it relates to the City's Mobility Plan and the Wilshire Community Plan. addressing these points in detail:

- The analysis in the EIR assumes that many commuters and visitors to the Project will use transit or carpool. But transit ridership is low and single-car passenger trips are high, and there is nothing in the EIR requiring transit ridership or demonstrating it will occur. The analysis should be redone with a realistic assessment of transit ridership based on empirical data.
- The analysis in the EIR assumes that pedestrian, bicyclist and motorist safety will be adequately addressed with basic improvements like crosswalks and signage. But this is an area the City has already identified as prone to accidents as part of the High Injury Network. And the Project has the potential to increase accidents and hazards by adding trips, increasing truck traffic, adding new driveways, and adding a fully signalized private street intersection. As explained in the LLG Report, the Project will significantly impact pedestrians. The proposed new driveways on Beverly Boulevard and The Grove Drive would adversely affect pedestrian movement to existing residential areas, recreational centers and schools. The analysis should be redone with an acknowledgment that this is an accident-prone area that the Project will make worse, and then make modifications, such as reducing proposed driveways, to improve pedestrian, bicyclist and motorist safety.
- The introduction of pedestrian circulation and access, along with a passenger loading area and new vehicular and truck access, along the southerly alleyway creates significant hazards for both pedestrians and motorists that is not disclosed or analyzed in the DEIR.
- The analysis ignores the Mobility Plan policy to limit truck movement to the arterial street network. The Project should be conditioned to limit truck activity to its existing driveways on Beverly Boulevard and Fairfax Avenue.

Response to Comment No. 26-165

Refer to Topical Response No. 7, Mobility Hub, for information on when the Mobility Hub functions would be implemented.

A detailed analysis of the Project's consistency with the transportation-related policies set forth in the Wilshire Community Plan is provided in Table IV.K-2 beginning on page IV.K-58 of the Draft EIR. Project consistency with additional applicable Wilshire Community Plan goals, objectives, and policies is discussed in Section IV.H, Land Use and Planning, of the Draft EIR and detailed in Table 2 of Appendix I of the Draft EIR. The Project would support many of the City's policies to maintain the community's distinctive

character, including promotion of multimodal transportation (e.g., walking, bicycling, driving, and taking public transit); improvements to Project Site access and circulation along a central commercial corridor; and the creation of a mobility-friendly environment through pedestrian-oriented building design and landscaping and the introduction of a Mobility Hub. Accordingly, the Draft EIR concluded that the Project supports the transportation-related goals and objectives of the Wilshire Community Plan. Further, a detailed analysis of the Project's consistency with the applicable policies in the Mobility Plan is provided in Table IV.K-1 beginning on page IV.K-47 of the Draft EIR. In summary, the Project is conceived as a pedestrian- and transit-oriented development that emphasizes accessibility by all travel modes, and the Draft EIR concluded that the Project would not conflict with the Mobility Plan. Thus, the comment that the Draft EIR's analysis of consistency with the Mobility Plan and Wilshire Community Plan is inaccurate and should be redone is incorrect.

Contrary to the comment, the Draft EIR does not assume or imply that "many commuters and visitors to the Project would use transit or carpool." As noted on page IV.K-74 of the Draft EIR, "the VMT analysis conservatively excludes most of those measures for the purposes of determining whether the Project could have a significant impact on VMT. In accordance with guidance from the City, the VMT Calculator analysis incorporates only two TDM measures: bicycle parking per LAMC requirements and secure bike parking and showers." Impacts with respect to VMT were determined to be less than significant. From a vehicular trip reduction standpoint, the Draft EIR assumed that only 15 percent of the total employee person-trips would use transit, walk, bike, and carpool to travel to/from the Project Site. The Project is expected to exceed these non-auto mode splits given the extensive TDM Program planned for the Project Site. Refer also to Topical Response No. 11, Transportation Demand Management, and Topical Response No. 10, Trip Generation.

Regarding traffic hazards, please refer to Response to Comment No. 9-29.

As concluded in the Initial Study, the Project would have a less-than-significant impact related to increased hazards due to a design feature, and no further analysis of this topic was required in the Draft EIR. Nonetheless, a detailed analysis of the Project access plans as it relates to hazards due to geometric design features, including safety, operational, or capacity impacts under Threshold T-3 was provided in Section 4C of the Transportation Assessment (included in Appendix M.1 of the Draft EIR). As detailed therein, all Project access points would be designed to provide adequate sight distance and, where necessary, pedestrian refuge areas to limit any potential vehicular-pedestrian and vehicular-bicycle conflicts. Two of the driveways on Beverly Boulevard would function as secondary vehicular access and limited to right-turn in/out only with minimal traffic usage. The new driveway on The Grove Drive would incorporate the existing pedestrian crossing across The Grove Drive and improve this location with a full traffic signal. In addition to improvements surrounding the Project Site perimeter, the Project would

contribute toward several off-site improvements that would benefit pedestrians, vehicles, and the surrounding neighborhood, including pedestrian safety improvements in the Study Area as part of Vision Zero, traffic calming measures and neighborhood bicycle features, traffic signal upgrades, etc. The Project access and improvements would not preclude or interfere with any City implementation of any future improvements.

The commenter reaches the conclusion that the Project would significantly impact pedestrians without providing any technical analysis or support for that conclusion. The Draft EIR transportation analysis investigated pedestrian safety and specifically the design of the Project driveways to conclude that safe driveways designs, and enhanced pedestrian sidewalks and parkways would be provided to address any potential pedestrian safety issues.

The Project's proposal to provide Project Site access along the Southern Shared Access Drive would not create a significant safety hazard. Vehicles and pedestrians circulate on the Southern Shared Access Drive today, including to access properties to the south, and there is existing pedestrian access from the southern portion of the Project Site. If a new pedestrian gate to the Southern Shared Access Drive is constructed in the southeast portion of the Project Site, it could be accompanied by a sidewalk along the south side of the parking structure connecting the pedestrians entering/leaving the Project Site to The Grove Drive, thereby increasing pedestrian safety over existing conditions. The Project has joint right of access to the Southern Shared Access Drive and the two vehicular driveways proposed provide access to the southeast quadrant of the Project Site. As discussed on page IV.K-57 of the Draft EIR, along portions of the southern property line, sidewalks, screening, and/or planting areas would be introduced. In particular, along the Southern Shared Access Drive, a 10-foot-wide frontage would be provided.

This comment regarding Mobility Plan policy is assumed to refer to Mobility Plan, Policy 1.8—Goods Movement Safety, which states “Ensure that goods movement sector is integrated with the rest of the City / transportation system that does not endanger the health and safety of residents and roadway users.” The Mobility Plan defines goods movement as “the transport of for-sale products from their manufacturing origin to their final destination where they will be sold. Moving goods can involve many different types of transport such as airplanes, cargo ships, trains, and trucks.” This policy is not applicable to the Project as the trucks that access the Project Site are primarily production vehicle trucks, commercial trucks, etc., and not related to goods movement.

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Thus, the transportation analysis does not need to be redone, as incorrectly suggested by this comment.

Comment No. 26-166

- The analysis in the EIR gives short shrift to the Wilshire Community Plan, including its policies related to ingress and egress points, street widening, and, in particular, acceptable levels of service (LOS) analysis. LOS remains important under the Community Plan, and the Project will add thousands of daily trips to already overburdened streets, and the analysis fails to account for many trips by permitted uses. The DEIR's analysis of the Community Plan policy on LOS is inaccurate. The DEIR claims to not conflict with the policy when its own data shows that the Project will degrade LOS conditions at the intersections of Fairfax Avenue and Beverly Boulevard and Stanley Avenue/The Grove Drive and Beverly Boulevard. The analysis in the EIR should be redone to address the Project's impacts on LOS as required by the Community Plan.

Response to Comment No. 26-166

Contrary to this comment, the Draft EIR provides a detailed analysis of the applicable objectives and policies of the Wilshire Community Plan, including those related to transportation. Refer to Table IV.K-2 commencing on page IV.K-58 of Section IV.K, Transportation, of the Draft EIR. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

Table 18 (pages 162 and 163) of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the results of the LOS analysis with and without the Project. Of the 62 peak hours tested at the study intersections under Year 2026 full buildout conditions, the Project vehicles and the resulting roadway improvements result in two intersections improving from LOS E to LOS D or LOS B. In addition, no additional intersections degrade to LOS F as a result of the addition of Project vehicles.

According to CEQA, a project does not need to be in perfect conformity with each and every policy. A project is considered consistent with an applicable plan if it is consistent with the overall intent of the plan and would not preclude the attainment of its primary goals. Therefore, any inconsistency with an applicable policy, plan, or regulation is only a significant impact under CEQA if the inconsistency itself would result in a direct physical impact on the environment.

Comment No. 26-167

Traffic/Access Issues. As noted in the attached LLG Report, the traffic and access issues are inadequately analyzed in the DEIR. The DEIR says that it will have 7,752 non-retail employees. (DEIR, p. IV.K-74.) This number appears to ignore significant trip generation and VMT related to the Project. Does it include contractors working on production and third-party production companies filming at the stages? As is typical in the entertainment

industry, many people working at a studio site are not “employees” but are contractors or third-party production companies. Are these people counted within the category of the 7,752 non-retail employees? What about guests and audience participants? These vehicle trips and their VMTs do not appear to be captured in the analysis. Are production trucks and vehicles serving the studios (production areas and basecamps) included in the analysis? If these categories are not included, then the analysis substantially undercounts the total VMT the Project will generate. Based on a review of the trip generation and the VMT analysis, it appears they are not all included. The VMT analysis for this Specific Plan project needs to look at all trips the Project will generate and their associated miles traveled and not just those of “employees.”

Even assuming the underestimated trips, the Project will cause numerous safety impacts that were not disclosed in the DEIR. The DEIR needs to be redone to properly disclose and mitigate the impacts.

Response to Comment No. 26-167

The employee estimates for the Project are inclusive of all types of on-site employment, including contractors and third-party production companies filming on-site. The non-retail employment estimates were based on occupancy levels at the sound stages, production support, production office and general office land uses within the Project Site, which include the range of employees cited in the comment. The employee totals do not include guests or studio audience participants, as they are not employees and do not travel to and from the Project Site regularly.

The Project trip generation estimates account for studio audience visitors, production trucks, and other studio vehicles, as those are inherent in the rates used in the estimates. Refer to Topical Response No. 10, Trip Generation, for more information about Project trip generation estimates.

The VMT analysis used the Project trip generation estimate as a key input. Refer to Topical Response No. 8, Vehicle Miles Traveled, for a discussion of the different trip purposes and which trips are considered in the VMT analysis. As described therein, State guidance on VMT analysis from the OPR Technical Advisory suggests that for employment-based projects, “the focus can be on home-based work trips.” The other trip types are considered to be a relatively small component of overall VMT, and the OPR Technical Advisory recommends that the focus of VMT-reduction efforts be on trips between home and work. As such, the City’s significance thresholds were developed using the home-based work attraction trip type, just as the VMT Calculator’s analysis of work VMT per employee is based on that trip type for an apples-to-apples comparison. The VMT analysis was completed in compliance with CEQA and LADOT requirements and comprehensively accounted for all potential environmental impacts of the Project. The

Draft EIR concluded that the Project's potential transportation impacts would be less than significant, and no mitigation is required.

The comment also refers to the Project causing "numerous safety impacts" without citing specifics. Refer to Response to Comment No. 12, Safety and Congestion, for a discussion of the Project's safety. Also refer to Response to Comment No. 9-29 regarding the Project's less-than-significant impacts regarding hazards due to a geometric design.

Comment No. 26-168

Currently the site has vehicular access points on Fairfax Avenue and on Beverly Boulevard. There currently is no vehicular access to the Project Site from Grove Drive. All of the Project Site traffic currently enters from Fairfax Avenue and the Beverly Boulevard driveways, with the main entrance on Beverly Boulevard. The Project Site today has approximately 53% of its frontage on Beverly Boulevard, 31% on Fairfax Avenue, and 16% on Grove Drive. Yet, the Project is proposing to add four new access points to the site, with the primary access for the entire Project be located by way of a new signalized T-intersection on Grove Drive across from the Holocaust Museum. The Project also proposes vehicular access from the private alleyway that itself is accessed from the Grove Drive. Currently the Project Site has no access from Grove Drive and there is no signalized intersection at the location of the proposed new entrance.

As described above and in the LLG Report, the Project's estimate of traffic volumes on Grove Drive are unsubstantiated. Further, based on the DEIR and applicant data, approximately 60% of the Project's parking spaces will be located on Grove Drive yet 40% of the total Project traffic will supposedly access the Project from Grove Drive. Given that 60% of the parking will be located on Grove Drive, how will the Project manage to restrict Project traffic on Grove Drive to not more than 40% of total traffic volumes?

Response to Comment No. 26-168

The assumption that the parking supply would be split such that 60 percent of the parking will be accessed from The Grove Drive is incorrect. Any parking located along The Grove Drive would also be accessible from the signalized entrances along Beverly Boulevard and Fairfax Avenue. Figure 22 on page 80 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that 32 percent of the trips entering/leaving the Project Site in the peak hours would use The Grove Drive signalized entrance, 32 percent would use the signalized entrance on Beverly Boulevard, and 21 percent would use the Fairfax Avenue driveway. The remaining 15 percent of the trips would use the unsignalized driveways serving the Project Site.

The estimate of the percentage of vehicles approaching the Project Site from each direction was used to estimate the distribution of trips using each Project driveway. Typically, vehicles approaching a site will use the closest and most convenient driveway to enter a site, if that site provides good internal circulation. That travel pattern, plus the fact that The Grove Drive has more available capacity than either Beverly Boulevard or Fairfax Avenue, influenced the assignment of Project trips to the various driveways.

It should also be noted that the assignment of Project trips to individual driveways does not affect the calculation of VMT, and, thus, the CEQA conclusions of less-than-significant transportation impacts are not altered by the distribution of Project trips.

Comment No. 26-169

The Grove Drive is a Collector Street that exists only from 3rd Street on the south to Beverly Boulevard at the north; beyond Beverly Boulevard it becomes Stanley Avenue, a residential street. The Grove Drive is designated part of the Pedestrian Enhanced Network and portions are designated part of the Neighborhood Enhanced Network and Bicycle Enhanced Network. Given the limited frontage of the Project Site on Grove Drive, the designations of the street in the Mobility Plan and the existing uses, the level of Project traffic, including truck traffic, directed to the Grove Drive (without consideration of the likely greater trips unaccounted for in the DEIR) conflicts with existing City plans and policies and will create significant hazards.

Response to Comment No. 26-169

There are no unaccounted Project trips along The Grove Drive. That assertion is based on an incorrect assumption by the commenter as explained in Response to Comment No. 26-168.

Figure 16 on page 51 and Figure 21 on page 77 of the Transportation Assessment (Appendix M.1 of the Draft EIR) show the Future without Project and the Project Traffic Volumes, respectively. In the afternoon peak hour, The Grove Drive is expected to carry approximately 845 vehicles per hour just south of Beverly Boulevard and approximately 852 vehicles per hour north of 3rd Street. The Project would add approximately 145 trips per hour south of Beverly Boulevard and approximately 154 trips per hour north of 3rd Street—or about a 15-percent traffic increase in either location. Upon full buildout, the Project would, thus, represent a small percentage of the traffic levels on The Grove Drive, with the majority of traffic on the street destined for The Grove shopping center or The Original Farmers Market. Even with the increased trips from the Project, The Grove Drive will still be well below its ultimate roadway capacity. The Grove Drive will carry approximately 1,000 vehicles per hour (vph) in the afternoon peak hour as compared to a capacity of approximately 2,720 vph for a volume/capacity utilization of 37 percent—even

after the completion of the Project. At the same time both Beverly Boulevard and Fairfax Avenue would be carrying approximately 2,720 vph against a capacity of approximately 3,400 vph for a volume/capacity utilization of 80 percent.⁷² Clearly, The Grove Drive has more available capacity than either Beverly Boulevard or Fairfax Avenue.

The Grove Drive, as a Collector Street, is an appropriate street classification for a street collecting traffic from an adjacent land use along that street and delivering that traffic to the arterial street system—in this case to Beverly Boulevard or 3rd Street. Under the Project, The Grove Drive would operate in exactly the same manner that the street currently collects traffic from The Grove shopping center and delivers that shopping center traffic to Beverly Boulevard or to 3rd Street. LADOT's Driveway Design guidelines (*Manual of Policies and Procedures, Section 321*) state that a project should provide access from non-arterial streets whenever possible. With nearly 400 feet of Project Site frontage on The Grove Drive, those guidelines allow up to two access points. Contrary to the comment, the Project's use of The Grove Drive would not conflict with City plans and policies and would not result in significant safety hazards. Refer to Response to Comment No. 9-29 regarding hazards.

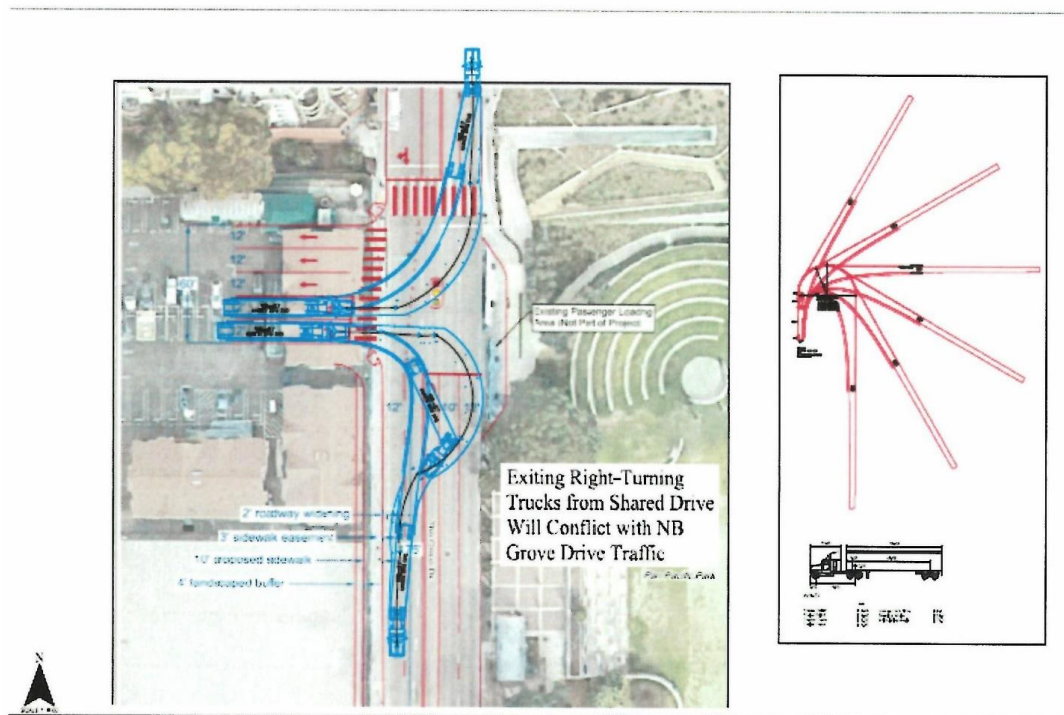

Comment No. 26-170

The new signalized intersection on Grove Drive introduces a major access point on a T-intersection where the eastern edge of the T-intersection has a curbside drop-off/pick-up lane that serves the Holocaust Museum, predominantly used by buses. (DEIR, p. IV.K43.) This new signalized intersection will create a major safety issue with the curbside lane, especially the buses, many with children, loading and unloading in what is a new major intersection. How is this not an increase in hazards due to a geometric design feature—"dangerous intersection"? In addition, the proposed new northbound left-turn lane at this intersection would line up directly with the oncoming southbound through line. To avoid a collision, the vehicles would need to transition approximately 10 feet to the west. Large trucks, including 18-wheel tractor trailers, are proposed to navigate this intersection, with its hazardous design across from a major pedestrian drop-off. The DEIR has no analysis of this condition.

In addition, large production trucks will not be able to safely access through this T-intersection or the private alleyway without sweeping into other traffic lanes. LLG's analysis for trucks entering and exiting the Project at this intersection and the private alleyway indicates trucks will encroach into outgoing traffic lanes. See below for depictions of trucks exiting the Project at the T-intersection on Grove Drive and the private alleyway.

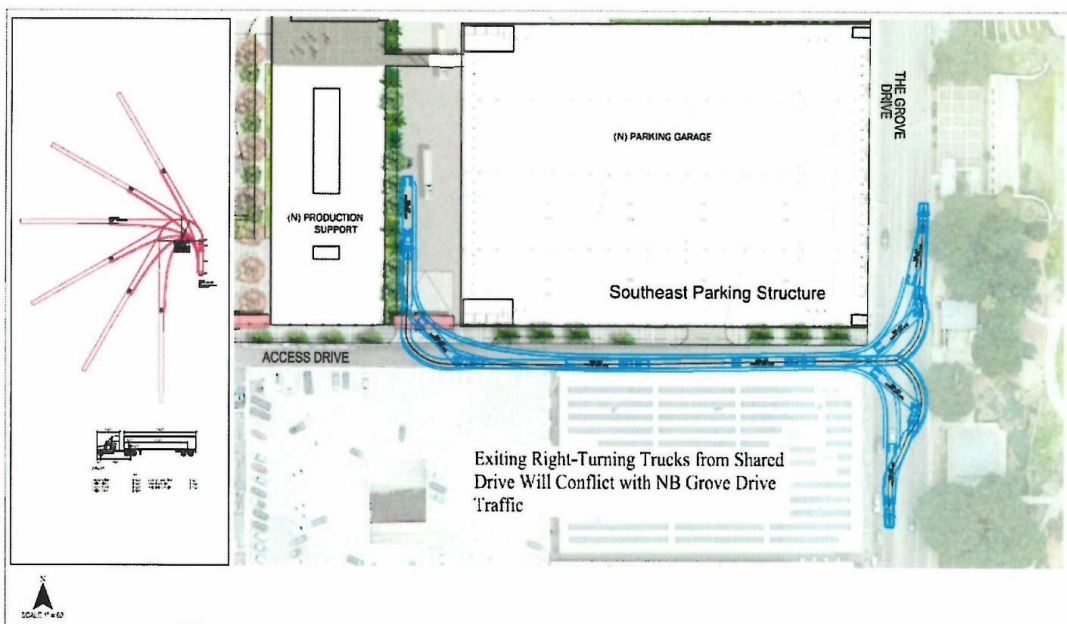

⁷² Roadway capacities based on average per-lane capacity as reported in the *Highway Capacity Manual, 6th Edition*, (Transportation Research Board, 2016).

(See also LLG Report Figures 6a and 6c showing the encroachment from trucks entering the Project.) This is clearly a significant traffic hazard.

TVC 2050 Project

Construction and operational production trucks should not be permitted to access the site from The Grove Drive.

Response to Comment No. 26-170

Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, for a discussion of treatment of The Grove Drive near the proposed Project driveway. In addition, as shown in Figure II-14 on page II-1153 with Response to Comment No. 26-E.4-16, below, the southbound alignment has been addressed in the design of The Grove Drive. The 10-foot westerly transition mentioned in the comment has been eliminated.

In terms of the truck turning movement diagrams shown above, these represent turning radius tests for a WB-67 truck, which is the largest truck allowed on California roadways and, therefore, is a very infrequent occurrence at the Project Site. See further discussion of truck turning movements in Response to Comment No. 26-E.4-15. Please note that the Project is proposing a two-foot roadway widening on The Grove Drive to provide a dedicated northbound left-turn lane into the Project driveway.

The curbside bus drop-off lane for the Holocaust Museum will work in coordination with the proposed traffic signal and the signalized crosswalk. The student drop off would be on the sidewalk side of the buses and the students will enter the Museum without ever crossing the street or being affected by the traffic signal.

The proposed signalized T-intersection poses no hazardous geometric design condition because it would be designed as a standard intersection familiar to motorists and pedestrians alike. The signalized driveway would be designed to meet LADOT standards for both intersection and driveway radius designs, and, therefore, there are no safety concerns associated with this location. Thus, the comment that this is an unsafe intersection is incorrect. Refer to Response to Comment No. 9-29 regarding hazards and safety.

Comment No. 26-171

Further, the DEIR fails to disclose the impacts from vehicle queuing. To begin with, the DEIR does not analyze vehicle queuing at all of the Project Site driveways, including the southern alleyway which the Project inappropriately proposes for vehicular and truck access and passenger loading. The City's guidelines for conducting transportation assessments requires evaluation of vehicle queuing at all primary project driveways and unsignalized intersection that are adjacent to the project or expected to be integral to the project's site access and circulation. Given the City's own guidelines, why did the DEIR not analyze the vehicle queuing for the Project access at Fairfax Avenue south of First Street,

Beverly Boulevard west of Genessee [sic], Beverly Boulevard across from Spaulding and at the southern alleyway? This analysis needs to be completed, utilizing supportable trip generation estimates and distribution, including truck and guest traffic.

The queuing analysis that was completed shows that the Project will increase queue lengths on Grove Drive that will block the proposed new T-intersection and private driveways. This is a traffic hazard that can lead to additional accidents that is not adequately addressed in the DEIR. Further, the level of queuing disclosed likely is understated for the reasons stated above and because there is no limitation on the size or number of parking spots permitted in the proposed parking garage.

Given the existing Project Site access, the nature of The Grove Drive, the various City plans and policies, and the hazardous conditions that the proposed access from The Grove Drive would create, the Project should not include the proposed access from The Grove Drive. If any access is permitted from The Grove Drive, then it should not permit truck access and should be designed to minimize queue lengths by locating Project traffic queuing within the Project Site, providing automated clearance for daily entrants, and directing visitors to the Project's main entrance on Beverly Boulevard. Further, no vehicular access should be permitted from the private alleyway.

Response to Comment No. 26-171

As summarized in the comment, the City's (specifically LADOT's) *Transportation Assessment Guidelines* (updated August 2022) require evaluation of vehicle queueing at "all *primary* project driveways" and "unsignalized intersections that are adjacent to the project or that are expected to be integral to the project's site access and circulation plan." The Project proposes three signalized driveways—on Fairfax Avenue at 1st Street, on Beverly Boulevard at Genessee Avenue, and on The Grove Drive. All other access points are secondary, and while they may serve specific purposes to the Project's circulation plan, they would carry small fractions of the trips and would have minimal queuing. Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, for a detailed discussion of queuing at Project driveways.

The comment incorrectly suggests that hazards related to offsite vehicle queuing were not adequately addressed in the Draft EIR. As noted in the comment, the non-CEQA analysis in the Transportation Assessment (Appendix M.1 to the Draft EIR) identified long queues on The Grove Drive extending to Beverly Boulevard. Importantly, the queues would extend beyond the proposed Project driveway on The Grove Drive even under Future without Project Conditions; as shown in Table 19 on page 164 of the Transportation Assessment (Appendix M.1 of the Draft EIR), the Project would increase the northbound right-turn queue by less than approximately 10 percent compared to Future without Project Conditions. The operational effects of the additional queuing have been fully disclosed in

the Transportation Assessment in Table 19, and LADOT's review did not find this small increase in queues on The Grove Drive to be an operational effect. It is customary that streets at times have queues, and queues do not themselves present safety or hazard issues, especially on non-arterial streets and at low speeds.

The comment expresses concern that the queuing on The Grove Drive could be underestimated because the maximum number of parking spaces in the southeast parking structure number has not been set, and a larger garage could lead to longer queues. This statement ignores the fact that the parking spaces in the southeast parking structure could be accessed from all three signalized entrance/exits, so a longer queue on The Grove Drive would tend to send vehicles to one of the other two exits, and the system would balance.

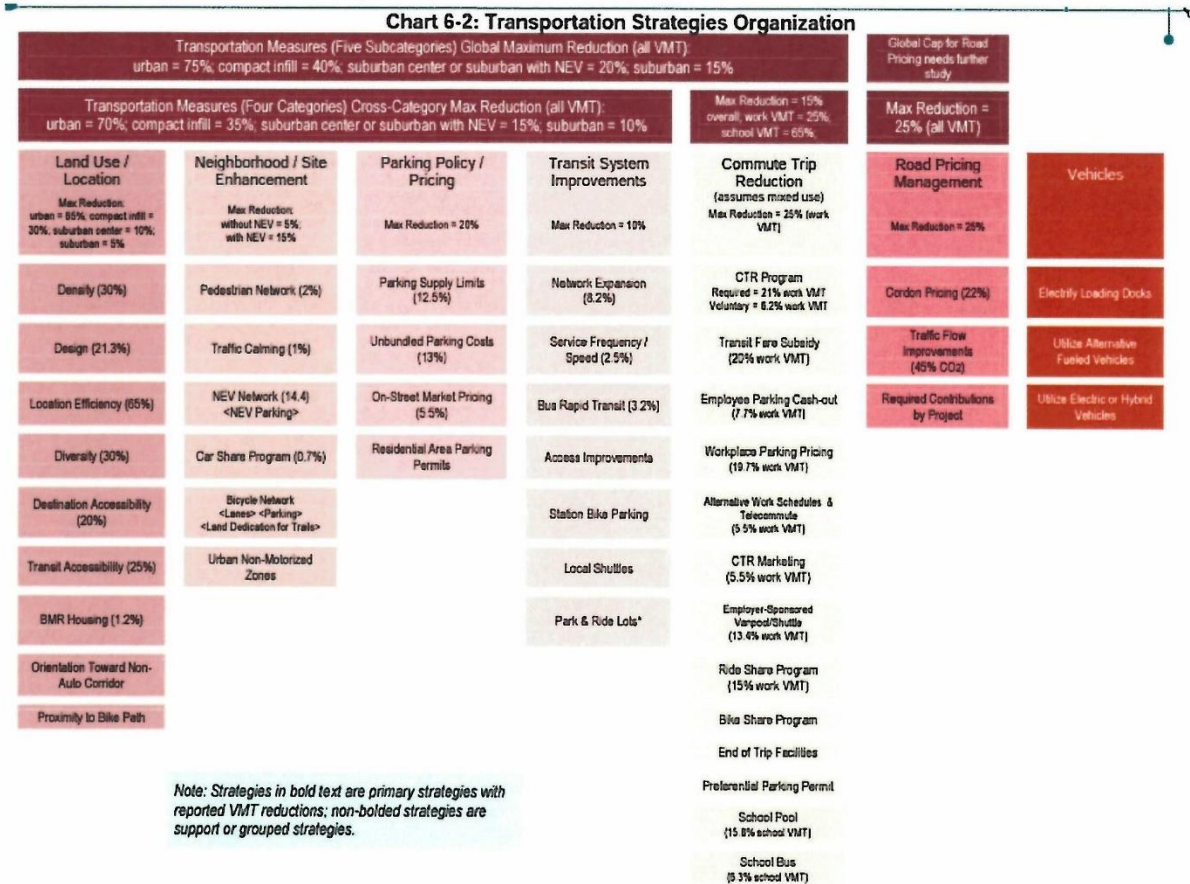

Refer to Response to Comment No. 9-29 regarding hazards and queues.

Refer to Topical Response No. 12, Safety and Congestion, for a discussion of the importance of using The Grove Drive as a Project access point. The comments regarding the use of The Grove Drive do not relate to the CEQA analysis in the Draft EIR, and no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-172

The DEIR finds that the Project has less-than-significant operational traffic impacts. But as discussed above, the conclusions are not supported. The City should analyze all feasible mitigation measures to reduce VMT impacts and a reasonable range of feasible alternatives. There are extensive existing resources available describing potential mitigation measures for VMT impacts. One of those sources is the California Air Pollution Control Officers Association (CAPCOA) report "Quantifying Greenhouse Gas Mitigation Measures." (Available at <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>.)

An excerpt listing potentially effective VMT mitigation measures is depicted below, and the CAPCOA report is incorporated by reference. Please analyze each of the VMT reduction measures listed in this report, including those in the table below, for feasibility and effectiveness at the Project.

Whatever mitigation measures the Project uses, it will be important to have measurable, quantified targets the Project must meet.

Response to Comment No. 26-172

Refer to Topical Response No. 8, Vehicle Miles Traveled, for a discussion of the adequacy of the Project's VMT analysis presented in Section IV.K, Transportation, of the Draft EIR and its conclusion that the Project would not result in any significant VMT impacts and, thus, would not require mitigation measures. Nonetheless, the Project would implement a TDM Program to further reduce VMT. Refer to Section A, TDM Effects on Trip Generation, of Topical Response No. 11, Transportation Demand Management, which discusses the effectiveness of the proposed transit and TDM Program elements of the Project. The CAPCOA analysis requested in the comment is presented in Table II-11 in Topical Response No. 11.

The development of a TDM Program would be a Condition of Approval for the Project and would include the trip reduction targets and monitoring requirements that are in place at the time of the Project's approval. As demonstrated in the comprehensive VMT analysis within the Draft EIR that was completed under the direction of LADOT and in

accordance with OPR guidance and CEQA, the Project would not result in significant impacts related to VMT. As such, mitigation measures and alternatives to address VMT impacts are not required.

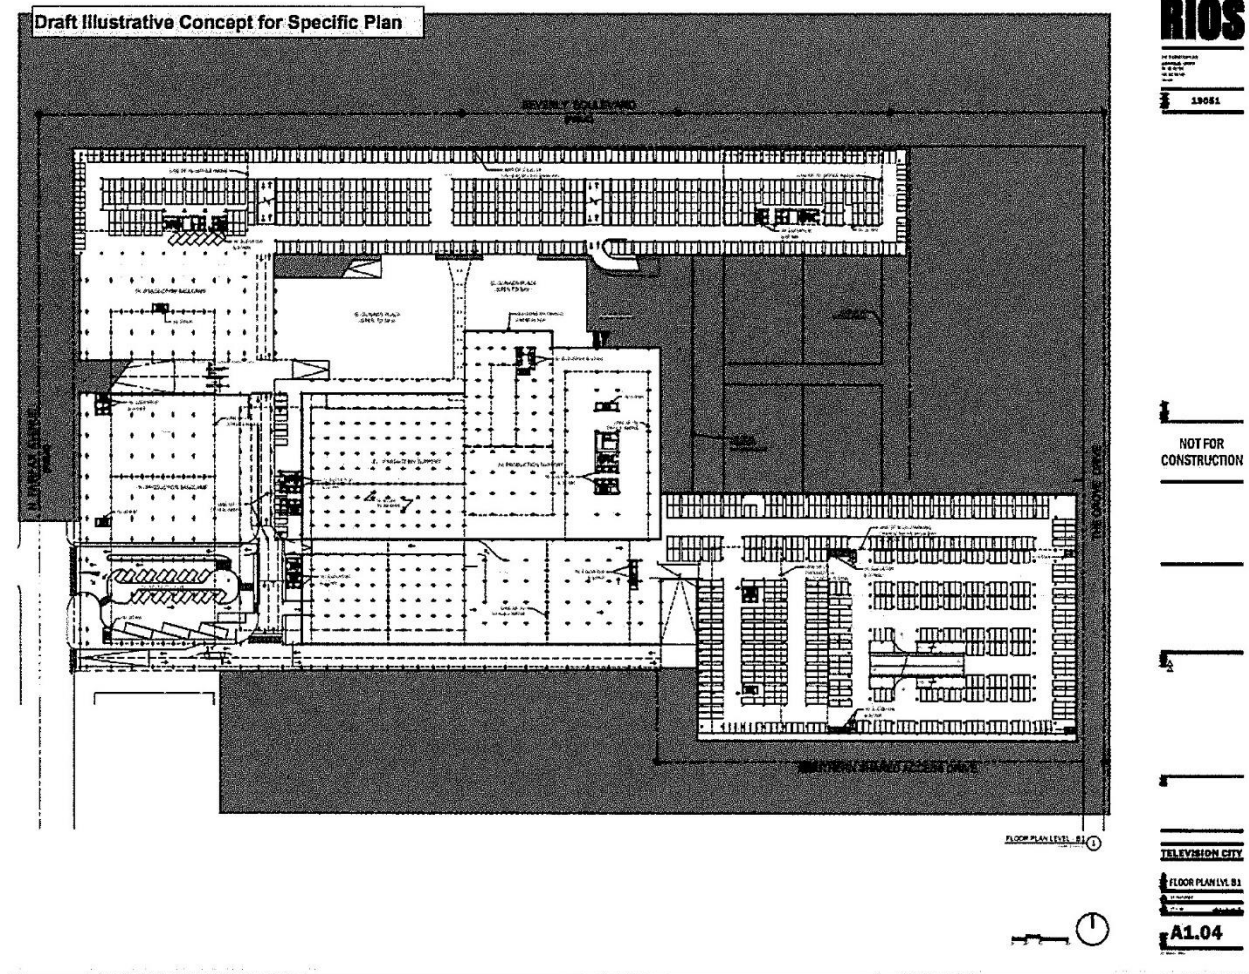

Comment No. 26-173

L. Utilities

DEIR Fails to Analyze all Utility Impacts

The various utilities section use conflicting assumptions without explanation. This is another example of the failure of the DEIR to provide an accurate, stable, and finite project description. In addition, as noted throughout this document, the DEIR fails to properly account for the impacts associated with basecamp, below grade production zones, and Mobility Hub uses.

Within the Utilities water analysis, the DEIR notes that there will be 194,600 square feet of basecamp uses and 36,000 square feet of Mobility Hub uses resulting in impacts to water demand and wastewater. It is unclear how these square footage were calculated. Does the Specific Plan include a maximum square footage for such uses? As the DEIR does not include a precise development plan or the Specific Plan, it is not possible to confirm the accuracy of this assumption. However, it appears inconsistent with the site plans included with the Project applications, included below. The DEIR should include information as to how these square footage numbers were generated and whether they reflect the maximum amount of square footage of such uses.

Response to Comment No. 26-173

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for detailed information on how the Project Description is accurate, stable, and finite. Refer to Response to Comment Nos. 5-3 and 26-5 regarding how the proposed Specific Plan is consistent with Section II, Project Description, of the Draft EIR and, thus, would not result in any environmental impacts that have not already been evaluated in the EIR.

This comment does not include any evidence to support the assertion that the utilities analyses utilize conflicting assumptions. Rather, all of the utilities analyses are based on the same assumptions included in Section II, Project Description, of the Draft EIR. As shown in Tables IV.M.1-5 and IV.M.1-6 of Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, and Tables IV.M.2-2 and IV.M.2-3 of Section IV.M.2, Utilities and Service Systems—Wastewater, of the Draft EIR and in the Utility Report included as Appendix O of the Draft EIR, the water and wastewater analyses account for basecamp areas at and below Project Grade, the proposed Mobility

Hub, and covered parking areas. As such, the utilities analyses do not include conflicting assumptions.

In addition, active production activities would not occur in the parking and basecamp areas below Project Grade with the Project. Refer to II-4(c) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As stated in the Draft EIR, these below-Project Grade areas would be limited to circulation, parking, and basecamp. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, for a discussion that these activities do not separately generate intensity and therefore are not counted as floor area by the City.

In addition, as part of this Final EIR, the energy analysis for the Project was updated to account for the City's recent Ordinance No. 187714 adopted in December 2022 (after the Draft EIR was released). This Ordinance requires that as of April 2023, all newly constructed buildings must be electric (with some exceptions). As shown in the updated energy analysis included in Appendix FEIR-9 of this Final EIR, all of the Project components, including basecamp, the Mobility Hub, and covered parking, have been accounted for.

The net increase of approximately 194,600 square feet of basecamp uses and 36,000 square feet of Mobility Hub space are based on the Conceptual Site Plan that is included in Section II, Project Description, of the Draft EIR. While already analyzed in the Draft EIR, the specific square footage has been added in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would include a regulatory framework for implementation of the Project and a discretionary process that includes additional CEQA compliance review for future Project changes that would potentially exceed the environmental impacts analyzed in the EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Comment No. 26-174

Oddly, there is no indication that the Project considered any basecamp and Mobility Hub uses in its analysis of electricity or natural gas usage. This is inconsistent with the assumption in the water analysis and what appears to be the ability of Project to have significant basecamp and production areas Project Site in the subgrade level and parking structures without counting it as floor area.

The DEIR states that "LADWP confirmed in its will-serve letter... that the Project's estimated electricity demand could be met by the existing electrical infrastructure in the Project area..." Similarly, the DEIR states that "SoCalGas confirmed in its will-serve letter... that the Project's estimated natural gas demand could be met by the existing natural gas infrastructure in the Project area." However, these conclusions are only

relevant if the information LADWP and SoCalGas assessed was complete. Based on the information available in the DEIR and Appendices, it does not appear that electricity and natural gas demand from basecamps, below grade production zones and the Mobility Hub were included in the total demand sent to LADWP. Page 66 of Appendix O includes the calculations for electricity use for the Project. In the chart labeled “Land Use Exchange-Max Electricity Demand Scenario,” there are no rows showing demand from the basecamps or Mobility Hub. Similarly, in the table labeled “Land Use Exchange-Max Natural Gas Usage Scenario,” there are no rows showing demand from the basecamps or Mobility Hub. However, it is clear that these uses will have electricity demand and will likely have natural gas demand as well. As indicated in the images below, the basecamps and Mobility Hub will have electricity demand. Thus, the conclusions from LADWP and SoCalGas that they will be able to serve the Project are not based on accurate information.

Response to Comment No. 26-174

Refer to Response to Comment Nos. 26-E.1-27, 26-E.1-28, and 35-53 for a detailed discussion regarding electricity usage associated with the basecamp areas and the Mobility Hub, the CalEEMod land use modeling, and how the EIR analyzed the potential physical environmental impacts of all proposed uses, areas, and activities. In response to Draft EIR comments and the adoption of the City's new all-electric buildings ordinance (Ordinance No. 187714, effective January 2023), the electricity analysis has been further clarified in this Final EIR to specifically account for the basecamp areas and is included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). The updated LADWP will-serve letter is also provided in Appendix FEIR-9 of this Final EIR and confirms that the Project's estimated electricity demand could be met by the existing electrical infrastructure in the Project area and confirms the Draft EIR's less-than-significant impact conclusions for electricity and natural gas.

As discussed in Response to Comment No. 26-175, the service letter submitted to SoCalGas, which is included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR) for informational purposes, includes the same information about the Conceptual Site Plan that is included in Section II, Project Description, of the Draft EIR. As stated in this comment, the Draft EIR confirms on page IV.M.3-13 of the Draft EIR that "SoCalGas confirmed in its will-serve letter ... that the Project's estimated natural gas demand could be met by the existing natural gas infrastructure in the Project area." Compliance with the City's new all-electric buildings ordinance would prohibit the use of new natural gas under the Project, with certain exceptions. Thus, the natural gas usage evaluated in the SoCalGas will-serve letter would be considered conservative, as it overestimates the potential natural gas usage under the Project.

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and to Response to Comment Nos. 5-7 and 26-121 regarding the basis for the definition of floor area, how all of the uses and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area, and how no active production activities would be located in the parking and basecamp areas below Project Grade.

Comment No. 26-175**DEIR Defers Analysis of New Lines, Connections, and Upgrades**

The DEIR states that "the Project would include the installation of any necessary new lines, connections, and upgrades required by LADWP to ensure adequate service to the Project Site." (DEIR, IV.M.3-12.) However, the DEIR does not describe this work or the impacts

associated with it. Because the Project is committing to undertake this work, the DEIR should be revised to identify and analyze this part of the Project. There is no analysis provided as to needed upgrades of infrastructure necessary for the Project.

DEIR Fails to Include Necessary Information

The DEIR includes the “will-serve” letters from LADWP and SoCalGas but fails to include any of the letters that the Project sent to those entities. Therefore, it is impossible for the public or decision-makers to know what information was provided about the Project. Given that the DEIR has no stable and finite definition of the Project, it would be helpful to see what LADWP and SoCalGas were provided. Also referenced in the Appendix O to the DEIR are two letters regarding wastewater impacts which were not included in the Appendix O. Please provide the following letters referenced in the Utility Report Appendix O:

1. December 9, 2021 Letter to the City regarding wastewater evaluation.
2. June 18, 2021 Letter to the City regarding wastewater evaluation.
3. December 7, 2021 Letter to LADWP regarding electric service.
4. Undated “inquiry” to SoCalGas referenced in SoCalGas’s July 31, 2021 Will-Serve letter.

PDFs Are Disguised Mitigation Measures

WAT-PDF-1 is actually a mitigation measure and, thus, the DEIR’s Water Supply analysis should not account for any reductions of such a measure. Further, the Water Supply Analysis (“WSA”) appended to the DEIR includes the following additional commitment that should be included as mitigation measures.

“The Applicant has also committed to comply with the City of Los Angeles Low Impact Development Ordinances (City Ordinance No. 181899 and No. 183833) and to implement Best Management Practices that have stormwater recharge or reuse benefits for the entire Project as applicable:

- Cistern—captures stormwater runoff as it comes down through the roof gutter system.” (DEIR, Appendix N, p. 52.)

The Project’s Water Use

The DEIR explains that existing total water use is only 44,662 gallons per day. With Project buildout, total water use will be 302,424 gallons per day—a six-fold increase,

although the Project square footage as represented in the DEIR is not increasing six-fold. Please explain how the DEIR concluded this is a less than significant impact, particularly when California is facing worsening drought conditions.

The DEIR misses opportunities to minimize potable water demand by not assessing potential water reuse, particularly the extensive groundwater extraction that will be necessary for Project construction and operation.

Response to Comment No. 26-175

Contrary to the assertion made by this comment, the Draft EIR does not defer analysis of any electrical upgrades. The entirety of the discussion that the comment is referring to on page IV.M.3-12 of the Draft EIR states the following:

As discussed in the Utility Report, LADWP confirmed in its will-serve letter (included in Exhibit 5 of the Utility Report) that the Project's estimated electricity demand could be met by the existing electrical infrastructure in the Project area, including the existing underground conduits in Beverly Boulevard and Fairfax Avenue. Furthermore, the Project would include the installation of any necessary new lines, connections, and upgrades required by LADWP to ensure adequate service to the Project Site.

As summarized in this paragraph and in the Utility Report (Appendix O of the Draft EIR), LADWP has confirmed that the existing electrical infrastructure system can accommodate the Project. As such, off-site improvements are not expected. As is typical with new construction, the Project would need to provide new lines, connections, and upgrades on-site. These upgrades would occur as part of the construction activities that have been thoroughly evaluated in the Draft EIR. Specifically, the labor and construction equipment for these improvements are accounted for in the building foundation and building construction activities evaluated in the Draft EIR. Refer to Appendix FEIR-8 of this Final EIR for an overview of the construction assumptions for the Project, including the construction equipment mix and number of workers. Based on the Conceptual Site Plan, future off-site connections would be located a minimum of 75 feet from off-site sensitive receptors. Construction associated with the off-site utility connection would involve limited pieces of equipment (i.e., a concrete saw, a backhoe, and a dump truck) and would occur for a very short duration (i.e., a few days). Based on the calculations provided in Appendix FEIR-16 of this Final EIR, noise levels associated with the connections would be approximately 71.7 dBA (L_{eq}) at the nearest sensitive receptors along Fairfax Avenue (receptor R8) and Beverly Boulevard (receptor R3), which would be below the 5-dBA significance threshold (at receptors R8 and R3).

With regard to the service letters submitted to BOS, LADWP and SoCalGas, the information sent is consistent with Table II-2, Proposed Development Program, on page II-13 in Section II, Project Description, of the Draft EIR (i.e., the Conceptual Site Plan). Nonetheless, in response to this comment, these request letters are included as Appendix FEIR-8 of this Final EIR.

The commentor asserts that a PDF for water supply (Project Design Feature WAT-PDF-1) is a “disguised” mitigation measure. The provisions of this PDF are consistent with the water conservation measures included in the Water Conservation Commitment Letter the Applicant committed to implement as part of construction of the Project during the WSA process (see Appendix B of the WSA, which is included as Appendix N of the Draft EIR). Note that CEQA calls for the evaluation of the impacts of a proposed project as designed. Certain aspects of the design of the project may reduce the level of impacts. Those design features are permissible under CEQA so long as they are enforceable by the lead agency. The City of Los Angeles, when acting as the lead agency under CEQA, enforces PDFs through the Mitigation Monitoring Program, which is required under CEQA Guidelines Section 15126.4 and would be adopted by the City when it certifies the Final EIR. In the Mitigation Monitoring Program, both PDFs and mitigation measures will be identified, and for each PDF and mitigation measure, the following information will be provided—the enforcement agency, the monitoring agency, the monitoring phase, the monitoring frequency, and the action indicating compliance.

With regard to LID compliance and the implementation of BMPs, compliance with the City of Los Angeles Low Impact Development Ordinances (City Ordinance No. 181899 and No. 183833) and implementation of BMPs are required by law and, as such, are not mitigation measures. The assessment of potentially significant impacts and mitigation measures to reduce such impacts to a less-than-significant level occurs after consideration of regulatory compliance. With regard to the water demand calculations, as discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the water demand analysis was prepared based on detailed calculations from the WSA prepared by LADWP and adopted by its Board, included as Appendix N of the Draft EIR. The Project’s potential impacts on water supply are analyzed on pages IV.M.1-34 to IV.M.1-41 of the Draft EIR. As discussed in the Draft EIR and the Utility Report included as Appendix O to the Draft EIR, the analysis of existing conditions is based on LADWP billing records and the analysis of future conditions is based on the proposed floor area by land use in addition to other Project components such as basecamp, the Mobility Hub, and covered parking areas. Table IV.M.1-5 on page IV.M.1-35 of the Draft EIR shows the estimated water demand associated with the proposed development program detailed in Section II, Project Description, of the Draft EIR, while Table IV.M.1-6 on page IV.M.1-37 of the Draft EIR demonstrates a land use mix permitted under the Land Use Exchange Program that would generate the highest potential water demand for the Project (i.e., the maximum demand scenario). As shown therein, the Project could

generate an estimated maximum new domestic water demand of up to approximately 302,424 gpd, for a net increase of approximately 269,123 gpd over existing conditions, or approximately 301 acre feet per year (afy), including water savings from compliance with applicable regulatory requirements and additional water saving features as set forth in Project Design Feature WAT-PDF-1 on pages IV.M.1-30 to IV.M.1-31 of the Draft EIR. The 302,424-gpd calculation does not include the reduction associated with the existing uses to be removed or the Project's water conservation commitments that are set forth in the Draft EIR. Based on the projected water demand estimates for LADWP's service area from the 2020 UWMP identified in Table IV.M.1-4 on page IV.M.1-28 of the Draft EIR, the Project's estimated net operational domestic water demand of 269,123 gpd (301 afy) under the maximum demand scenario would represent approximately 0.047 percent, 0.045 percent, and 0.046 percent of LADWP's projected 2025 average, single-dry, and multi-dry year water demand and supply, respectively. Furthermore, as stated on page 21 of the WSA, LADWP concluded that the projected water supplies for average, single-dry, and multiple-dry years reported in LADWP's 2020 UWMP would be sufficient to meet the Project's estimated water demand, in addition to the existing and anticipated future water demands within LADWP's service area, through the year 2045. Accordingly, the Draft EIR correctly concluded that LADWP would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years, and, therefore, impacts on water supply would be less than significant. Also note that the WSA specifically addresses drought conditions and near-term drought risk management (refer to page 10 of the WSA and the discussion of drought conditions and plans to address such drought conditions throughout Appendix F of the WSA). In addition, as discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the 2020 LADWP UWMP takes into account the realities of climate change and the concerns of drought and dry weather and notes that the City of Los Angeles will meet all new demand for water due to projected population growth by expanding local water supply programs and reducing demands on purchased imported water.

As discussed in Response to Comment Nos. 3-7, 26-112, and 26-115, groundwater extraction for the Project will be limited to temporary construction dewatering, with no ongoing permanent dewatering. Refer to the Dewatering Report included in Appendix FEIR-13 of this Final EIR, which includes a dewatering analysis that was prepared in response to comments for informational purposes and confirms the conclusion in the Draft EIR that impacts related to construction dewatering would be less than significant. The analysis also confirms that impacts related to subsidence from dewatering would be less than significant and would not damage neighboring properties; refer to Appendix D of the Dewatering Report included in Appendix FEIR-13 of this Final EIR.

The Project would implement regulatory infiltration control measures during temporary construction dewatering if necessary, and the underground structure would be designed such that no operational dewatering following construction is required. The

extracted groundwater will be discharged off-site via an approved NPDES permit or industrial sewer discharge permit. Neither of these discharge permits or other permits allow for the on-site reuse or re-injection of groundwater from temporary dewatering.

Comment No. 26-176

Cumulative Impacts

The DEIR analyzes a total of 68 related projects for its cumulative impacts analysis, based on a 2026 buildout year. However, the Project is requesting a potential buildout until 2043. Please explain how the DEIR failed to analyze impacts to the projected build out of 2043. Please provide evidence of what cumulative analysis was provided to assess cumulative impacts of buildout to 2043 on water supplies, wastewater capacity, and energy infrastructure. The DEIR needs to analyze reasonably foreseeable projects with a buildout to 2043. Please explain how the Development Agreement with a term to 2043 can be considered if the DEIR analysis does not extend to 2043?

Response to Comment No. 26-176

In accordance with CEQA Guidelines Section 15355, the cumulative analysis for each of the impact analyses within the Draft EIR is comprehensive and accounts for all reasonably foreseeable projects at the time the NOP was prepared for the Project, as well as future growth projections for each utility through 2043. In addition, Project impacts associated with long-term buildout through 2043 are specifically addressed in each of the impact analysis sections within Section IV of the Draft EIR. With regard to long-term impacts associated with water supplies and cumulative impacts, page IV.M.1-41 of the Draft EIR states:

LADWP's 2020 UWMP accounts for existing development within the City, as well as projected growth through the year 2045. Additionally, as stated in the WSA for the Project, a determination was made by LADWP that the demand associated with the Project is included in its 2020 UWMP, which shows that there is an adequate 20-year water supply. As such, a later buildout date would not affect the impacts or significance conclusions presented above.

With regard to long-term impacts associated with wastewater, page IV.M.2-19 of Section IV.M.2, Utilities and Service Systems—Wastewater, of the Draft EIR provides the following:

While future years could generate greater service area demands, LASAN would continue to evaluate the need for infrastructure upgrades and expansion based on long-term growth and demand projections. Additionally,

the One Water LA 2040 Plan—Wastewater Facilities Plan projects an available capacity of 92 mgd at the HWRP and 192 mgd in the broader Hyperion Sanitary Sewer System in 2040, which would provide more than sufficient capacity to accommodate the Project in the future.... As such, a later buildout date would not affect the impacts or significance conclusions presented above.

In addition, as set forth on page IV.M.2-20 of Section IV.M.2, Utilities and Service Systems—Wastewater, of the Draft EIR:

...[N]ew development projects occurring in the Project Site vicinity would be required to coordinate with LASAN via a sewer capacity availability request to determine adequate sewer capacity. In addition, new development projects would be subject to LAMC Sections 64.11 and 64.12, which require approval of a sewer permit prior to connection to the sewer system. In order to connect to the sewer system, related projects located in the City of Los Angeles would be subject to payment of the City's Sewerage Facilities Charge. Payment of such fees would help to offset the costs associated with infrastructure improvements that would be needed to accommodate wastewater anticipated to be generated by overall future growth. If system upgrades are required as a result of a given project's additional flow, arrangements would be made between the related project and LASAN to construct the necessary improvements, similar to the Project. Furthermore, as with the Project, each of the 26 related projects in the LASAN service area would be required to comply with applicable water conservation programs, including the City of Los Angeles Green Building Code. In addition, as with the Project, related projects would be required to implement construction management plans to ensure that adequate and safe access remains available during construction activities. Such construction management plans would also ensure that appropriate construction traffic control measures (e.g., detour signage, delineators, etc.) would be implemented, as necessary, to ensure emergency access and traffic flow is maintained on adjacent streets.

In summary, and as discussed in more detail in the Draft EIR, including compliance with regulatory requirements, cumulative wastewater infrastructure impacts associated with reasonably foreseeable future growth and related projects would be less than significant.

With regard to long-term impacts associated with energy infrastructure, page IV.M.314 of Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR provides the following:

While future years could generate greater service area demands, the existing electricity, natural gas, and telecommunications infrastructure systems in the surrounding area would continue to be expanded and improved in response to any increased demand, and the service providers for these utilities would continue to evaluate the need for infrastructure upgrades and expansion based on long-term growth and demand projections. As such, a later buildout date would not affect the impacts or significance conclusions presented above.

Furthermore, with regard to electricity, as set forth on page IV.M.3-16 of Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR:

LADWP would coordinate with the related projects to provide any necessary electrical infrastructure improvements specific to each development project. The related projects would be reviewed by LADWP to identify necessary power facilities and service connections to meet their respective needs. The related projects would be required to provide the necessary infrastructure and system improvements for their individual projects, thereby contributing to the electrical infrastructure in the service area. As discussed above, will-serve letters are provided for individual projects in which LADWP determines whether sufficient infrastructure is in place to provide electricity to a proposed project. As part of the will-serve process, LADWP takes into account all uses (including future development projects) in the service area to ensure that sufficient local and regional infrastructure is available. As discussed above, the LADWP will-serve letter for the Project demonstrates that adequate electricity infrastructure is available to serve the Project.

In addition, with regard to natural gas, as set forth on page IV.M.3-17 of Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR:

SoCalGas would coordinate with the related projects to provide the necessary natural gas infrastructure improvements specific to each development project. The related projects would be reviewed by SoCalGas to identify necessary power facilities and service connections to meet the needs of their respective projects. Project applicants would be required to provide the necessary infrastructure and system improvements for their individual projects, thereby contributing to the natural gas infrastructure in the service area. As discussed above, will-serve letters are provided for individual projects in which SoCalGas determines whether sufficient infrastructure is available to provide natural gas to a proposed project. As part of the will-serve process,

SoCalGas takes into account all uses (including future development projects) in the service area to ensure that sufficient local and regional infrastructure is adequate. As discussed above, the SoCalGas will-serve letter for the Project demonstrates that adequate natural gas infrastructure is available to serve the Project.

Based on the above and the more detailed analysis included in the Draft EIR, reasonably foreseeable cumulative impacts associated with water supply, wastewater, and energy infrastructure have been adequately addressed in the Draft EIR and such impacts were concluded to be less than significant.

Comment No. 26-177

III. OTHER CONSIDERATIONS

A. Growth Inducement

The Project will have growth inducing impacts that the DEIR has not addressed. Section 15126.2(d) of the CEQA Guidelines requires an EIR to “discuss the ways in which the project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth...”

In general terms, a project may result in a significant growth inducing impact if it individually or cumulatively with other projects results in any of the actions described in the following examples:

- The project removes an obstacle to growth, such as: the establishment of an essential public service, the provision of new access to an area, or a change in zoning or general plan designation.
- The project results in economic expansion, population growth, or the construction of additional housing occurs in the surrounding environment in response to the project, either directly or indirectly.

While the Project will meet these criteria, including by changing the General Plan land use designation from “Community Commercial” to “Regional Center,” the DEIR includes a mere two pages of conclusory statements regarding the potential growth inducing impacts that will result from the Project.

Given the proposed General Plan amendment and adoption of the Specific Plan that will nearly triple the density on the Project Site, and increase the FAR, additional analysis of

growth inducing impacts was warranted. The DEIR needs to analyze the impacts of growth occasioned by the regionally significant project on the local community.

While the Project will both remove obstacles to growth and result in economic expansion, the DEIR spends a mere three pages addressing the potential environmental impacts that will result.

The Project will remove obstacles to growth in numerous ways. The DEIR concludes that “any access improvements would be limited to driveways necessary to provide immediate access to the Project Site and to improve safety and walkability.” (DEIR, p. IV-17.) Not only is there no substantial evidence supporting this conclusion, it is factually incorrect.

For example, the DEIR discusses the creation of a “Mobility Hub” which would bring new transportation options to the neighborhood. This “Mobility Hub” will expand the capacity of local infrastructure and remove constraints on development.

Similarly, the DEIR failed to analyze meaningfully the environmental effects of induced growth. The DEIR states that the Project would result in a net increase of approximately 5,702 jobs in the City. (DEIR, p. VI-15.) The DEIR oddly dismisses this as insignificant. Moreover, these employees will need to live somewhere, and because the Project is claiming no impacts on VMT, it should be assumed that these employees will need to live close to the Project Site, thus driving up demand in the City.

Response to Comment No. 26-177

The criteria listed by the commenter that may result in a significant growth inducing impact are discussed on page VI-14 of Section VI, Other CEQA Considerations, of the Draft EIR. Contrary to this comment, the analysis of growth-inducing impacts provided on pages VI-14 through VI-17 of the Draft EIR is thorough, complete, and fully complies with CEQA. Refer to Response to Comment Nos. 5-8 and 11-29 regarding how the proposed Regional Commercial designation would not increase the size of the Project allowed under the requested entitlements; rather, a site’s permitted FAR and height are controlled by its zone and height district designations. Currently, an FAR of 1.5:1 is permitted by existing zoning, and the Project is requesting an increase to 1.75:1 (a 0.25 increase in permitted FAR, which represents an approximately 17 percent increase over existing zoning). Also refer to Topical Response No. 7, Mobility Hub, regarding the function of the Mobility Hub, which would serve employees and visitors to the Project Site only. It would not be open to the general public without authorized access. Rather than creating “unplanned growth” as suggested by the comment, the Mobility Hub would reduce automobile trips and VMT. With regard to the net increase in employees on-site as a result of the Project, the Draft EIR did not “dismiss this as insignificant” as incorrectly stated by the commenter. Rather, the Draft EIR concluded that overall, the provision of new jobs would constitute a small

percentage of the City's anticipated employment growth and would not be considered "unplanned growth." Specifically, as discussed on page VI-15 of Section VI, Other CEQA Considerations, of the Draft EIR, the Project's net increase in employment would represent approximately 0.29 percent of the total number of employees in the City in 2026 and approximately 11.50 percent of the growth between 2021 and 2026. In the event of phased development of the Project, which could potentially extend to 2043, the Project's net increase in employment would represent approximately 0.27 percent of the total number of employees in the City in 2043 and approximately 2.61 percent of the total projected growth between 2021 and 2043.

With regard to housing for employees, as discussed on page VI-15 through page VI-16 of Section VI, Other CEQA Considerations, of the Draft EIR, while some new Project employees may be anticipated to relocate to the Project vicinity, many would not; similarly, existing employees would not be expected to move as a result of redevelopment of the Project Site. Accordingly, this potential indirect increase in population would not be substantial. Specifically, some employment opportunities may be filled by people already residing in the vicinity of the Project Site, and it is anticipated that other employees would commute to the Project Site from other communities both in and outside of the City, as under existing conditions. Therefore, given that the Project would not directly contribute to substantial population growth in the Project area as the Project does not propose the development of residential uses, and since many of the employment opportunities generated by the Project would be filled by people already residing in the Project vicinity or who would commute to the Project Site, the potential growth associated with Project employees who may relocate their place of residence would not be substantial.

The transportation analysis in the Draft EIR used the VMT Calculator, as required by LADOT, to evaluate the potential change in VMT by the Project. The VMT Calculator is a tool based on the SCAG Regional Travel Demand Forecast Model, which takes into account demographic data (both residential and employment distribution) in the local area and throughout the region. Section A, Appropriateness of Using the VMT Calculator, of Topical Response No. 8, Vehicle Miles Traveled, discusses the VMT generated by an infill development, such as the Project, in the existing urbanized and dense Central Area Planning Commission (Central APC) of the City of Los Angeles. The fact that the Project meets the work VMT per employee threshold goals of the Central APC is a strong indication that the Project moves jobs closer to housing, which is one of the key goals of the CEQA VMT evaluation criteria.

Overall, as discussed in more detail in the Draft EIR, the Project would not remove obstacles to growth, and the analysis presented throughout that document supports this conclusion. Furthermore, note that the CEQA Guidelines also state that it must not be

assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment.⁷³

Comment No. 26-178

B. Alternatives

CEQA requires an EIR to include a discussion and evaluation of “a reasonable range of alternatives to the project, or to the location of the project, which would feasibly obtain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.” (CEQA Guidelines §15126.6(a).) CEQA requires the lead agency to identify a range of feasible alternatives, including alternative sites, that could “substantially lessen any significant effects that the project would have on the environment,” and to discuss the comparative environmental effects of the project and the alternatives. (*Id.*, § 15021(a)(2); see *Mountain Lion Foundation v. Fish and Game Comm’n* (1997) 16 Cal.4th 105.)

Alternatives that may avoid or lessen the impacts of a project must be thoroughly analyzed, “even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.” (CEQA Guidelines § 15126.6(b).) These alternatives should not merely be variations on the design that the project proponent ultimately hopes to implement, but should be designed with the goal of avoiding or lessening the impacts of a project.

Further, “in order for the FEIR to be certified as in compliance with CEQA,” it must “identify a reasonable range of environmentally superior alternatives and to set forth facts and ‘meaningful analysis’ of these alternatives rather than ‘just the agency’s bare conclusions or opinions.’” In addition, the EIR should have identified any alternatives rejected as infeasible during the scoping process along with the reasons why those alternatives were found infeasible. The EIR was required to contain ‘detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully’ the alternatives to the proposed project.”

Finally, an EIR’s discussion of alternatives must be reasonable and supported by substantial evidence. (See, e.g., *Cleveland Natl. Forest Found v. San Diego Assn. of Govts.* (2014) 231 Cal.App.4th 1056, 1082-83.) “Argument, speculation, unsubstantiated opinion or narrative” do not constitute substantial evidence. (CEQA Guidelines § 15384(a).)

⁷³ CEQA Guidelines Section 15126.2(e).

The DEIR's alternative analysis is inadequate for several reasons. First, as noted previously, the DEIR fails to identify a number of significant impacts. Any analysis of alternatives is dependent first on a correct identification of impacts. In addition to the impacts the City identified in the DEIR, there may be significant impacts to transportation, greenhouse gas emissions, land use, energy, and cultural resources, at a minimum. The City needs to analyze a range of alternatives to reduce or avoid all the significant impacts ultimately identified in a revised and recirculated DEIR. Until the DEIR is revised and recirculated, it is impossible to accurately evaluate the alternatives.

Second, the alternative must be evaluated in the context of the most "basic objectives" of the project. The 12 Objectives provided for in DEIR are splattered from the most narrow to the most global. For example, the first Objective: "Create a fully integrated and cohesive master planned site regulated by a Specific Plan that retains the Project Site's land use as a studio facility...." Set aside the Specific Plan is non-existent, this objective is too specific to allow for a reasonable range of alternatives. How does one evaluate this objective without the Specific Plan? Even more specific and baseless is the Objective regarding the applicant's needed financial return: "Permit a reasonable, risk-adjusted return on investment commensurate with the Project Applicant's fiduciary responsibilities and allow for sustained economic viability and growth in an evolving entertainment market, while generating tax and property revenues to the City." As this Objective is tied to the specific financial analysis done by the applicant for the development of this Project, won't all the alternatives fail to meet this objective.

And other Objectives as noted previously are almost impossible to decipher. For example, Objective 1 provides that the Project should be an "expandable, flexible and operationally seamless production ecosystem." How did the City evaluate the Alternatives with regard to this Objective and others? Did the City retain a technical expert to assist it with the evaluation of what is a "seamless production ecosystem"?

Response to Comment No. 26-178

Refer to Response to Comment Nos. 26-5 through 26-177. As demonstrated therein, the Draft EIR has been prepared in full compliance with CEQA and fully evaluates the potential environmental impacts of the Project. As such, recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Regarding the range of impacts addressed in Section V, Alternatives, of the Draft EIR, the section addresses each of the impacts listed in the comment (transportation, greenhouse gas emissions, land use, energy, and cultural resources). See a summary of each topic in Table V-2 beginning on page V-16 of Section V, Alternatives, of the Draft EIR.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a discussion of how CEQA does not require a draft Specific Plan be included in the Draft or Final EIR.

Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of the Project objectives. As discussed therein, the Project objectives address a range of issues and are not impermissibly narrow. Furthermore, the Project objectives do not impede the development and evaluation of a reasonable range of alternatives in conformance with the requirements of CEQA. The objectives themselves, including the one cited by the commenter which is related to the studio's ability to respond to the future needs of the entertainment industry, also conform with the requirements of CEQA, and the commenter has provided no evidence to the contrary.

Refer to Topical Response No. 4, Appropriateness of Economic Objective, regarding the economic objective.

Refer to Response to Comment Nos. 26-16 and 26-18 regarding the Project objective referenced in the last paragraph of this comment.

Comment No. 26-179

Third, and finally, the DEIR does not analyze an appropriate range of alternatives.

The DEIR rejected some of the most important alternatives without analyzing them, including an alternatives [sic] site. (DEIR, p. V-12.) The very purpose of CEQA is to identify alternatives that could reduce or avoid significant environmental impacts.

The applicant recently acquired the CBS Radford Studios in the Studio City area of the San Fernando Valley. Why is this not an alternative site for some of the same uses being proposed? Is the applicant proposing to add density in the future to the CBS Radford site? How much density? The DEIR Alternatives section should include an analysis of expanding the CBS Radford site. What other sites does the applicant own in the area? Culver City studios? Why was this not analyzed as an alternative for the Project?

Response to Comment No. 26-179

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the range of alternatives selected and why an alternative site alternative was deemed infeasible. As stated therein, pursuant to CEQA Guidelines Sections 15126.6(a) and (f), there are no requirements governing the nature or scope of the "reasonable range" of alternatives to be discussed, other than the "rule of reason." The range of alternatives

chosen was appropriately based on the significant impacts identified in the Draft EIR and public comments.

With respect to an alternative site, refer to pages V-11 and V-12 of Section V, Alternatives, of the Draft EIR, as well as Topical Response No. 16. Among other reasons, the objectives of the proposed Project are closely tied to the need to improve existing operations on the Project Site by creating a cohesive and integrated studio campus environment with new technologically advanced facilities.

Comment No. 26-180

Similarly the DEIR does not analyze a true reduced project alternative. Alternative 3—Reduced Density Alternative only reduces the project's proposed development program by 20%. Yet, the analysis shows that this alternative would not substantially reduce any of the Project's significant impacts and would itself have significant and unavoidable construction noise and air quality impacts. The DEIR states that it would not be "feasible" to assess an alternative that would avoid the construction impacts because doing so would require moving construction 700 feet to the west of the adjacent residential uses. However, if a true reduced density alternative were considered, it would reduce the development program by 50%, not merely 20%. With a reduced development program of 50%, it would be feasible to locate all of this new development more than 700 feet from the adjacent residential uses. Development could be focused along Fairfax Ave and to the west of the Primary Studio Complex. This is a feasible alternative, as defined by CEQA, that the City should have considered because it would have avoided one of the Project's two identified significant and unmitigated impacts. Please revise and recirculate the DEIR with this alternative analyzed.

Response to Comment No. 26-180

Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of an alternative that would avoid the Project's significant onsite construction noise and vibration impacts. As noted by the commenter, this would require a 700-foot setback from the Shared Eastern Property Line, preventing development on over sixty percent of the Project Site (i.e., approximately 15.5 acres out of approximately 24.5 acres), in addition to the constraints associated with the HCM designation, which cover approximately 5.3 acres when including the Viewshed Restoration Area. A 50 percent reduced Project, as suggested by the commenter, would significantly hamper modern production operations, and impact the studio's financial viability. (Refer to Appendix FEIR-4, Economic Considerations). Both Alternatives 2 and 3 analyze significantly reduced density developments on the Project Site and as discussed in Section V, Alternatives, of the Draft EIR, these alternatives do not meet the underlying purpose of the Project or many of its

objectives, compared to the Project, and in the case of Alternative 2, do not meet many of the Project objectives.

Refer also to Response to Comment No. 26-179 regarding the range of alternatives chosen.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-181

Alternative 4—Mixed-Use Alternative appears to be a strawman. The scope of development is so much larger than the project, three million square feet in total, that it seems designed to fail. Since Alternative 4 actually increases impacts across numerous impact areas, it is entirely unclear why it was even included in the DEIR. Alternatives are supposed to be studied to avoid or reduce impacts. Alternative 4 does not do that. Alternative 4 increases the impacts. Therefore, it is not a reasonable alternative to have studied. A reasonable mixed-use alternative would have been one that included fewer residential uses in order to minimize construction noise and construction air quality impacts. Further, it is unclear why a 1,750 stall parking structure was included in Alternative 4 and why it was located immediately adjacent to the existing off-site residential and across from a City park. Again, it seems as if this was done to increase the alternative’s impacts. Alternative 4 should have created a buffer zone around the sensitive uses and not placed both a parking structure and six-story general office tower immediately adjacent to the existing off-site residential uses. Why couldn’t the office building be located on the western edge of the site as is the case for the Project? Alternative 4 is too big and was designed to fail as an alternative. Please revise and recirculate the DEIR with a mixed-use alternative that more appropriately sites new construction to address the Project’s identified impacts and reduces the amount of residential proposed so as not to create more impacts than the Project.

Response to Comment No. 26-181

Refer to Topical Response No. 16, Project Alternatives Analysis, and Response to Comment No. 26-179 regarding the range of alternatives chosen. With respect to Alternative 4 specifically, this alternative was chosen in response to multiple public comments received during the NOP comment period requesting the inclusion of housing in the Project. Alternative 4 also represents an alternate use to present a reasonable range of alternatives to the reader, and the evaluated FAR is consistent with the Project Site’s location in a Tier 3 Transit Oriented Community (TOC). An alternative which is superior to

a project in only some respects can satisfy the requirement of analysis of a reasonable range of alternatives. It should also be noted that Alternative 4 would reduce some of the less-than-significant-with-mitigation impacts associated with the Project, specifically archaeological resources, paleontological resources, and hazards and hazardous materials during construction. Thus, the alternative fulfills CEQA's goal of providing the public an opportunity to evaluate the comparative merits of alternative uses of the Project Site.

With respect to its development program, Alternative 4 was designed to locate all of the residential along the Fairfax Avenue frontage within a 30-story mixed-use structure with ground floor retail. A smaller office tower and parking structure would be located on the eastern portions of the Project Site. The location of the residential component along the Fairfax Avenue frontage preserves the HCM-required historic viewshed and allows for on-going operations of the existing HCM and studio uses to continue without interruption. The location along Fairfax Avenue also minimizes any potential site-wide security issues that might arise from the co-location of a residential project within a larger studio site. The design of the residential component of this Alternative is consistent with the goals of the Citywide Design Guidelines through the provision of a continuous street-wall and opportunities for retail, restaurant, and residential uses along Fairfax Avenue.

The design element for Alternative 4 is also consistent with the Mixed-Use Boulevard designation identified within the City's Framework Element. To complement this proposed location, the siting of the mixed-use residential component along Fairfax Avenue provides proximity to current bus stops serving the DASH Fairfax route, as well as the Metro 14, 214, 217, and 218 bus lines. The number of units chosen is consistent with City goals related to housing production. The provision of multi-modal transportation opportunities is also linked to Objective 3.13 of the Mixed-Use Boulevard in Chapter 3 in that it locates mixed-use where existing or planned major transit facilities are located. Additionally, the density associated with this Alternative is consistent with the TOC Tier 3 designation; however, please note that the Alternative does not maximize the density that would be permitted under TOC Tier 3 in order to be compatible with the density of the surrounding community. The office building is also located outside of the viewshed and in compliance with the HCM. This Alternative complies with the setbacks required under existing zoning and provides a greater than code required setback from its eastern property line. Alternative 4 also includes the same frontage areas, building stepbacks, general landscape plan, and streetscape improvements as the Project. Lastly, an aboveground parking structure would be located in the southeast corner of the Project Site, adjacent to (across an alley) from an existing parking garage.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-182

Where the DEIR [sic] does analyze an alternative, the analysis is unsupported. For example, the DEIR's analysis of Alternative 5 is plainly inadequate. Alternative 5 states that it would permit the same development program, but place the parking in above-grade structures instead of below ground.

The conceptual Site Plan for Alternative 5 is effectively the same as that of the Project (which the DEIR makes clear is only illustrative). It is not clear in the DEIR how the Project will eliminate multiple levels of below grade development yet not alter the above-grade development. How are the height limits going to be retained if the same square footage is being built above parking podiums? Are the Project heights already designed to have all parking above-grade? Is that why, for example, Height Zone B is 130 feet in height? If that's the case, were the related impacts adequately analyzed in the DEIR? Or will the Specific Plan include design and operational limitations on the above-grade parking?

The buildings in Alternative 5 are not shown as taller in the conceptual plan. How is this possible? What is the difference between the Project and Alternative 5? We note that page V 132 states that the above ground parking podiums "would increase building heights and density under this alternative." Is this correct? How will it increase the heights? How will it increase the density?

Further, what are the heights of the conceptual site plan presented in the Project? Do they differ from the maximum heights presented in the Height Zone map? Do they differ from the heights permitted in the Specific Plan that is not provided or are the height limits the same? If Alternative 5 has taller buildings, what are the Alternative 5 buildings and what are the heights of the Project's conceptual plan's buildings?

Response to Comment No. 26-182

This comment misrepresents the purpose of an alternatives analysis under CEQA. An alternatives analysis is, by its very nature, comparative, whereby the impacts of the alternative are compared to the impacts of the Project. The Project alternatives analysis was conducted consistent with the requirements of CEQA. Note that the level of detail required for the analysis of alternatives under CEQA is not as stringent as the level of detail required for the analysis of project impacts in an EIR. In accordance with CEQA Guidelines Section 15126.6(d), Section V, Alternatives, of the Draft EIR included "sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project," and Table V-2 on page V-16 provides a comparative summary of the environmental impacts under each alternative with the environmental impacts associated with the Project.

This comment also makes several incorrect claims about the Alternative 5 analysis, each of which is addressed further below.

First, the commenter makes several claims regarding building heights. As stated plainly on page V-127 of Section V, Alternatives, of the Draft EIR, the elimination of underground parking “would result in increased building heights compared to the Project.” Refer to page V-127 of the Draft EIR for the specific heights. With respect to the environmental impacts of building heights, as discussed on pages 31 and 32 of the Initial Study (Appendix A of the Draft EIR) and pages VI-20 and VI-21 of Section VI, Other CEQA Considerations, of the Draft EIR, pursuant to PRC Section 21099 (SB 743), the Project is an employment center project that would be located on an infill site within a TPA. Therefore, in accordance with PRC Section 21099(d)(1), the Project’s aesthetic impacts are not considered to be significant impacts on the environment and therefore do not require further evaluation under CEQA. The same is true for Alternative 5. With respect to the commenter’s question about the Project’s conceptual plan, heights for the Project are less than the maximum height limits in each height zone and also less than the heights in Alternative 5.

Comment No. 26-183

The Project proposes to put substantial amounts of production support and basecamps in below grade levels. Where will the production support and basecamp parking be located if the subterranean levels are eliminated? Will production support space go on the first floor of the parking structures? Where is basecamp going to be located? According to the Objectives, basecamp is essential to the efficient operation of a working studio lot. The Project proposes to also locate basecamp in the subterranean level and the parking structure. Where is the basecamp in Alternative 5 and how are the impacts different?

The construction air quality analysis summarily concludes that Alternative 5 would avoid the Project’s significant and unmitigated impacts from regional construction NOx emissions. There is no evidence provided to support this conclusion other than the statement that import/export of soils would be less than for the Project. Please provide the data showing that the regional NOx impacts would be less than significant.

While construction activities will be at similar distances, there will be more construction occurring above-grade. What are the impacts from this? There will be more above-grade construction and, therefore, there will be different emission sources. The DEIR summarily states that localized impacts would be less than significant with mitigation. Where is the data supporting this analysis? It needs to be provided in the DEIR for the public to review.

The conclusion regarding Toxic Air Contaminants is similarly truncated with no evidence. Where is the evidence showing that the equipment needed to build massive above-ground

parking structures will not have an impact greater than those associated with the excavation and export? Please provide this evidence and data.

The DEIR states that the energy usage is the same for above-grade parking and structures as it is for below grade structures without providing any data or analysis to support this conclusion. The data supporting this conclusion should be included in the DEIR.

The DEIR states that operational emissions and impacts will be the same for private vehicles as the project because the square footage is the same. But Alternative 5 places parking structures at and above grade with cars idling and emitting emissions closer to sensitive users. How will these garages be vented? Will they be naturally vented? If not, where will the mechanical exhaust be located? How much energy will the ventilation systems use? Was this factored into Alternative 5's emissions and air quality impacts and GHG impacts?

The DEIR states that Alternative 5 will have taller buildings. The cultural resource impacts from these taller buildings adjacent to the HCM are not analyzed. The DEIR only summarily states that the HCM would not be materially impaired. How is this determined? There is no analysis.

Similarly, there is no analysis regarding impacts to offsite HCMs like the Gilmore Adobe or Farmers Market or the historic district to the north. How will these taller buildings impact these resources? What are the impacts of these taller buildings on adjacent properties? The DEIR should include these analyses.

The DEIR's Energy analysis for Alternative 5 for the first time states that the garages will not require mechanical ventilation. Where is the analysis for the conclusion for the Project as well as the Alternative?

The Energy analysis also states that the project's construction would use less energy than the project because there would be less soil export/import. But what about the taller buildings? Will there be more energy required to build the podiums and then the structures on top? There is no analysis provided in the DEIR. The conclusion is provided without any evidence or analysis to support the conclusion. The energy consumption needs to be quantified.

Where are the solar panels to generate electricity going to be located for Alternative 5? Where are they located for the Project? If not incorporated into Alternative 5, then Alternative 5 will use more energy and likely more nonrenewable resources than the project. Is it feasible to generate two million kwh on an annual basis from solar panels on rooftops? Where is the analysis showing this? Please provide the analysis.

Currently solar panels cover almost the entire parking field and generate less electricity. How will solar panels on the rooftops generate more than the existing solar panels?

Alternative 5 would have taller buildings, but the DEIR concludes that the geologic (seismic) impacts would be the same. Where is the analysis to support this?

The GHG analysis for Alternative 5 has similar issues to the deficient air quality analysis. It states in a wholly conclusory manner that GHG emissions would be less. But what about the emission impacts from construction of the above-grade parking? What are those? How much more concrete may be used in their construction? What are the GHG emissions from the increased use of concrete?

Alternative 5 states that permanent dewatering would not be required. Given the relatively shallow level of groundwater onsite, where is the analysis that supports this claim? In addition, the Alternatives section includes for the first time an unsupported statement regarding Project dewatering. It states that subterranean parking would be designed to withstand hydrostatic forces and incorporate comprehensive waterproofing systems in accordance with industry standards. The DEIR includes no information regarding how this will be implemented for the Project or alternatives. How will the methane mitigation systems work with such waterproof designs? What are the industry standards, especially in the high water table and artesian groundwater conditions at the Project Site? The DEIR, including the alternative analyses, completely ignores the potential impacts from permanent dewatering.

There is no analysis of runoff from open parking garages. Brake dust, leaking fluids, and other contaminants in parking garages have the potential to enter surface water from open garages during rain events and otherwise. There is no analysis of this impact from the open parking structures. This analysis needs to be completed.

There is no analysis of Alternative 5's land use impacts from the taller buildings. There is a lone statement stating that the taller building heights and increased density could be considered less compatible with the surrounding area. First, the DEIR needs to reach a conclusion and not be conditional. Are the taller heights less compatible with the surrounding area? Second, how do the above ground podiums comply with the City's policies against such structures? What is the land use impact from being inconsistent with the City's policies against above-ground parking structures? This analysis should have been completed. Similarly, there should have been an analysis of car lights shining into adjacent uses and what disruption the lights could cause to sleep patterns and enjoyment of use.

There is no analysis of the offsite noise from the above-grade parking structures. What noise levels will occur from tire screeching, engines revving, and other noises generally emanating from parking garages? Similarly, if basecamp and production support is now not going to be below ground, what will the increased noise levels from these activities be at the adjacent sensitive receptors? This analysis was not done and should have been completed.

The transportation analysis of Alternative 5 suggests for the first time that there may be various levels of the parking structures that include “production operations” levels that provide large basecamp areas. How were the impacts from the large basecamp areas accounted for in the overall analysis of Alternative 5? The trips, energy usage, water consumption, and air emissions were not assessed for this square footage. Please provide this analysis so the public can understand the impacts for Alternative 5. The DEIR needs to address the full scope of Alternative 5’s impacts, which includes impacts from these production operation levels and basecamp.

What would the noise impacts be of locating basecamp and other production operations on higher floors of the parking structures in Alternative 5? Similarly, what odors would be created by craft services serving the productions? This also was not analyzed. There is no analysis of impacts from having production on higher parking levels. And how have these square footages been included in Alternative 5 and the Project?

That production operations would be less efficient is not an environmental impact. It is unclear why this is relevant to the environmental impact analysis of Alternative 5. Alternatives are intended to assess ways in which a project’s significant and unmitigated impacts can be reduced or avoided. Suggesting that above-ground parking may be bad for business is not relevant to CEQA’s considerations in assessing an alternative.

Response to Comment No. 26-183

This comment makes several incorrect claims about the Alternative 5 analysis, each of which is addressed further below.

With respect to building heights as it pertains to historical resources, as stated on page V-132 of Section V, Alternatives, of the Draft EIR, the changes to the immediate surroundings have been altered such that they no longer contribute to the significance or integrity of historical resources. The alternatives analysis correctly concluded that impacts to historical resources would be less than significant.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR analyzed the proposed development program (i.e., the Conceptual Site Plan), and any substantial changes from which would be subject to further

discretionary City review and CEQA compliance review. The proposed Specific Plan would incorporate all of the same Project elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR.

Refer to page V-150 of Section V, Alternatives, of the Draft EIR regarding the location of basecamp areas and the effects of eliminating the below-grade areas under Alternative 5. With all parking under Alternative 5 located in aboveground parking structures, the design of these production related circulation areas would be compromised and need to be modified. In some locations, production staging and basecamp uses would need to be located on higher floors, which would disrupt production circulation and staging. Sound stages would need to be located at higher levels, which would create the need for truck ramps, service elevators, and additional layers of fire/life safety systems. This is accounted for in the analysis of Alternative 5 and the location of the basecamp would not affect trip generation, energy consumption (discussed further below), water consumption, or air quality (discussed further below) as suggested by the commenter.

Because no subterranean parking is proposed, basecamp operations under Alternative 5 would be aboveground and are analyzed as such throughout.

With respect to the air quality and GHG analyses, including TAC emissions, because no subterranean parking is proposed in Alternative 5, the import/export of soils would be reduced by approximately 78 percent compared to the Project. As an alternatives analysis is comparative, as explained above, this significant reduction in grading would result in a reduction of emissions from heavy construction equipment. A quantitative analysis is not required to make this determination. With that being said, the intensity of grading activities would be expected to be reduced proportionally with the amount of import/export. On pages 25 to 49 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, the CalEEMod TVC Construction Output shows that the Project would result in approximately 185 pounds per day of NO_x from grading activities. A 78-percent reduction in the use of heavy-duty construction equipment and haul truck trips would result in approximately 41 pounds per day of NO_x. The overlap of demolition and grading activities would result in a total of approximately 60 pounds per day of NO_x, well below the SCAQMD regional threshold of 100 pounds per day of NO_x. All other construction activities were below the SCAQMD regional construction thresholds.

TAC emissions (primarily diesel exhaust particulate) would similarly be reduced with the reduction in the use of heavy-duty construction equipment and haul truck trips. As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA includes health risk impacts from both Project-related construction and operational

activities. The quantitative HRA confirms the Draft EIR's conclusion that health risks from the Project, and likewise Alternative 5 (i.e., reduced TAC emissions associated with reduction in heavy-duty construction equipment and haul trucks trips during grading activities), would remain below applicable significance thresholds.

Regarding localized impacts, this comment acknowledges that construction activities under Alternative 5 would occur at similar distances as the Project. On pages 50 to 76 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, the CalEEMod TVC Construction Output shows that grading activities would result in the maximum localized emissions associated with the Project. While grading activities under Alternative 5 would be substantially reduced, grading activities would still result in the maximum daily localized emissions during construction. Section 3.d, Analysis of Project Impacts, in Section IV.A, Air Quality, of the Draft EIR summarized the CalEEMod modeling and results were compared to SCAQMD Localized Significance Threshold (LST) guidelines. As shown in Table IV.A-12 (Estimated Maximum Daily Regional Emissions from Project Concurrent Construction (Mitigated) and Operations) of the Draft EIR, Project localized construction emissions would not exceed SCAQMD significance thresholds, resulting in a less-than-significant impact. Thus, no sensitive receptors would be impacted by increased air emissions due to the operation of the Project, and Alternative 5 would further reduce this less than significant localized impact.

As far as non-earthwork construction emissions are concerned, the overall amount of non-earthwork construction (building foundation, structure/enclosure, and architectural coating/finishing) would not change because that construction is now aboveground. Similarly, aside from grading equipment, the type of equipment used for aboveground construction is typically the same as below ground (e.g., concrete can only be poured for one floor at a time). Because the total amount of construction and equipment used would be the same, further analysis would yield the same results. As an example, Alternative 5 would include the same number of parking spaces and related parking square footage regardless of whether parking is above- or below-grade. Thus, the same amount of concrete would be used for either type of parking structure, and the alternative would result in the same amount of GHG emissions as the Project. With respect to operational vehicle emissions, these emissions are based on vehicle trips, not the location of parking. For the reasons stated above, the air quality and GHG analyses in Alternative 5 are adequate and comply with CEQA. The comment incorrectly claims operational energy demand would be the same as the Project. Energy demand associated with parking structures was calculated using CalEEMod 2020.4.0. As shown on page 36 in Appendix A (Calculation Details for CalEEMod) of the CalEEMod User's Guide (May 2021), unenclosed (aboveground) parking structures result in 1.75 kWh/sf associated with lighting. Enclosed (below grade) parking structures result in 1.75 kWh/sf associated with lighting and an additional 3.92 kWh/sf associated with mechanical ventilation-. Therefore, as stated on page V-134 of Section V, Alternatives, of the Draft EIR, Alternative 5 "would result in

slightly less operational energy demand associated with mechanical ventilation, which would not be required for the aboveground parking structures.” This reduction in energy demand would have a corresponding reduction in GHG emissions associated with Alternative 5. Please refer to Response to Comment No. 26-28 regarding parking structure exhaust (i.e., idling emissions) and potential localized impacts.

Similar to air quality and GHG, non-earthwork energy use during construction would be similar to the Project because the overall amount of non-earthwork construction would not change just because that construction is now aboveground and similar construction would be used.

The commenter incorrectly claims that there is no analysis regarding impacts to off-site historical resources. Refer to pages V-132 and V-133 of Section V, Alternatives, of the Draft EIR. Refer also to Response to Comment No. 26-45 above and Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources.

As stated on page V-136 of Section V, Alternatives, of the Draft EIR, consistent with Project Design Feature GHG-PDF-2, “Alternative 5 would be designed to meet LEED Gold or equivalent green building standards, and rooftop solar panels capable of generating 2,000,000 kilowatt-hours annually would be installed, similar to the Project.” PDFs would be enforced as a condition of approval for the Project or any adopted alternative. In other words, this level of solar production is a required element of both the Project and Alternative 5. The exact location of solar panels is not relevant to the alternatives analysis.

Impacts related to seismic hazards would be similar to the Project because, as stated on page V-135 of Section V, Alternatives, of the Draft EIR, like the Project, “Alternative 5 would be subject to all applicable regulations, including the applicable provisions in the Alquist-Priolo Earthquake Fault Zoning Act, Seismic Safety Act, Seismic Hazards Mapping Act, the California Building Code, the City’s General Plan Safety Element, and the Los Angeles Building Code.”

With respect to groundwater hydrology, as is the case with the Project’s subterranean parking, building foundations and footings under Alternative 5 would be designed such that they can withstand hydrostatic forces and incorporate comprehensive waterproofing systems in accordance with current industry standards and construction methods. In addition, any such designs would be subject to compliance with all applicable laws and regulations, including, among others, the City’s LID ordinance, methane ordinance, and the California Building Code; the specific methods of code compliance for Alternative 5 are not relevant to the alternatives analysis. Please note that Project Design Feature GEO-PDF-1 included on pages IV.D-18 to IV.D-19 in Section IV.D, Geology and Soils, of the Draft EIR requires permanent Project structures to be designed for hydrostatic

pressure such that the temporary construction dewatering system will be terminated at the completion of construction. As with the Project, Alternative 5 would not require permanent dewatering.

With respect to methane, below-grade structures located within shallow groundwater levels will require an alternate methane mitigation system (MMS) design excluding subslab venting and mechanical extraction components, which would be impacted by the groundwater level. In lieu of subslab components, the impervious membrane would be overlaid by the parking structure mat slab designed with a minimum 1-percent slope toward the perimeter of the parking structure to promote methane migration from the subgrade along the below-grade walls. Additionally, the impervious membrane would consist of: (i) a dual-purpose waterproofing and methane barrier; or (ii) a waterproofing barrier and a methane barrier (two layers). The alternate MMS design would include gas detection and alarm systems and mechanical ventilation per the Methane Code. Approval of the proposed alternate MMS design would be subject to review and approval by LADBS. As such, with regulatory compliance, impacts would be less than significant.

Treatment of stormwater runoff is a matter of code compliance. Refer to pages V-140 and V-141 of Section V, Alternatives, of the Draft EIR for BMPs under Alternative 5. As stated therein, "Alternative 5 would implement BMPs for managing stormwater runoff in accordance with the City's LID Ordinance requirements." Because groundwater infiltration was deemed to be infeasible for the Project Site, it is expected that Alternative 5 would include the installation of a capture and use system similar to the Project. If capture and use is later determined to not be feasible, the Project would implement high efficiency biofiltration/bioretenion systems pursuant to LID requirements.

With respect to land use compatibility, the threshold under CEQA is whether or not a project would "cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." As stated on page V-143 of Section V, Alternatives, of the Draft EIR, based on approval of the requested land use entitlements, Alternative 5 would be consistent with the applicable goals, policies, and objectives in local and regional plans that were adopted to avoid or mitigate an environmental effect, including, but not limited to, the City's General Plan Framework Element, Wilshire Community Plan, LAMC, and SCAG's 2020–2045 RTP/SCS. Furthermore, as noted above, in accordance with PRC Section 21099(d)(1), the Project's aesthetic impacts (including those associated with building height) are not considered to be significant impacts on the environment and, therefore, do not require further evaluation under CEQA.

Operational noise impacts associated with aboveground parking under Alternative 5 would not be substantially different than the Project. While all parking would be provided aboveground, parking garages are not substantial generators of noise, and their walls

provide noise barriers that reduce noise levels at surrounding properties. As analyzed in the Draft EIR (pages IV.I-46 and IV.I-48 in Section IV.I, Noise, of the Draft EIR), the Project noise analysis included aboveground parking facilities, including at grade parking areas and a multi-level aboveground parking structure located at the southeastern portion of the Project Site, nearest to the off-site noise sensitive receptor location R1 (i.e., the Broadcast Center Apartments). Noise levels associated with the parking facilities under Alternative 5 would be similar to the Project at the nearest off-site noise receptor location R1, as the aboveground parking structure along the eastern side of the Project would be similar under both the Project and Alternative 5. In addition, noise levels associated with the aboveground parking facilities along the western and northern perimeter of the Project Site under Alternative 5 would be similar to existing conditions, which also include open at grade/surface parking lots in the same locations, as there is no shielding provided with the open at grade parking lots under the existing condition. With respect to basecamp and support operations, in response to comments on the Draft EIR, an additional confirmatory noise analysis was performed to evaluate the noise impacts associated with the studio outdoor production activities (including basecamp and outdoor production activities), as discussed above in Response to Comment No. 26-146. The additional noise analysis assumed basecamp operations would occur at the perimeter of the Project Site to represent a conservative analysis. As analyzed therein, the estimated noise levels associated with future outdoor production and basecamp operations would result in a maximum noise increase of approximately 0.1 dBA, which is well below the perceptible level and the 5-dBA significance threshold, thereby confirming the Draft EIR's conclusion of less-than-significant impacts. As also described on page V-129 of the Draft EIR, the integration of basecamp, staging, and circulation areas for production vehicles with the new sound stages and production areas would be reduced under this alternative compared to the Project. Therefore, noise impacts associated with the basecamp operation under Alternative 5 would be similar or less as compared to the Project, which is less than significant.

With respect to odors associated with basecamp operations, the commenter's point is not clear. As stated on page 44 of the Initial Study, "according to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding." Basecamp operations do not include any of these uses and the craft services mentioned by the commenter consist only of food and drinks provided for cast and crew members.

Lastly, the operational inefficiencies cited by the commenter are not included in the environmental analysis of Alternative 5. This is appropriately discussed in Subsection 4, Relationship of the Alternative to Project Objectives (commencing on page V-155), of Section V, Alternatives, of the Draft EIR.

Comment No. 26-E.1-1**Exhibit 1—Ramboll US Consulting letter**

Ramboll US Consulting (Ramboll) has reviewed the Draft Environmental Impact Report (DEIR) for the TVC 2050 Project on behalf of our client. Our findings reflect the conclusions reached given the time available for our review and information provided. To the extent that additional information or time is provided, our findings may change.

The TVC 2050 Project (Project) would establish a TVC 2050 Specific Plan to allow for continuation of an existing studio use and the modernization and expansion of media production facilities within the 25-acre project site.

Response to Comment No. 26-E.1-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.1-2**SUMMARY OF KEY FINDINGS**

Based on our review and analyses, the following key findings are noted:

Air Quality

- Comment 4. The proposed project did not conduct a detailed health risk assessment (HRA) to evaluate the potential health impacts (e.g., acute, chronic, and cancer risk) from construction or operational emissions and fails to provide evidence that its construction and operational TAC impacts would be less than significant. The project's construction and operations include sources of diesel particulate matter (DPM) and other TACs expected to be emitted in close proximity to existing residential land uses. Screening level analysis demonstrate that both construction and operational emissions may result in a significant health risk impact. Furthermore, the South Coast Air Quality Management District (SCAQMD) frequently requests projects to evaluate health risk impacts from construction and operations when they generate diesel emissions from long-term construction or attract diesel fuelled [sic] [sic] vehicular trips, especially heavy-duty diesel fuelled [sic] [sic] vehicles. Given the close proximity of sensitive receptors, the 20-year construction timeframe, and the numerous operational sources that will emit TACs, the DEIR should more thoroughly assess the health risk from both construction and operations. A screening analysis shows that the unmitigated construction impact may be significant, as

does a screening analysis of the operational generator emissions. This analysis should include all potential sources of construction and operational emissions and assess the impacts under a 20-year buildout scenario, as described in greater detail below.

- Comment 4 and 18. The proposed project contains a unique configuration of land uses in close proximity (<25 meters) to sensitive receptors and includes numerous internal roadways that could have over 1,000 peak one-way trips per hour including a number of trucks traveling on-site and loading areas on-site for the trucks traveling to the site. Furthermore, the building heights allowable under the proposed project's specific plan could impact peak pollutant concentrations for sensitive receptors adjacent to the project site. Traffic emissions in the wake of a development with a proposed height of 130–160 ft can result in an increase in annual concentrations of ~5% while peak concentration may increase by up to 15–20%. Given the proximity of the sensitive receptors, and potentially substantial mobile and diesel PM emissions in this location, the DEIR should evaluate the potential of these unique localized air quality impacts to ensure that the appropriate project design features or mitigation measures are implemented.

Response to Comment No. 26-E.1-2

As discussed on pages IV.A-68, IV.A-69, and IV.A-71 through IV.A-73 in Section IV.A, Air Quality, of the Draft EIR, Project construction would result in emissions below applicable localized impact thresholds, and the Project land uses would not constitute an operational land use identified by CARB or SCAQMD guidance which might be expected to result in substantial releases of TAC. As discussed therein, the SCAQMD CEQA Air Quality Handbook does not provide guidance requiring an HRA for short-term construction emissions associated with land use development projects.⁷⁴ Implementation of Mitigation Measure AIR-MM-1 (which requires the use of off-road diesel-powered construction equipment meeting Tier 4 Final standards) would result in an approximately 90- to 95-percent reduction in DPM emissions in comparison to Tier 3 standards. Furthermore, as discussed in Response to Comment No. 1-2, Mitigation Measure AIR-MM-1 is being further strengthened to include CARB Tier 5 equipment where commercially available. DPM is typically the driving risk contributor for carcinogenic health risk from vehicle activities; thus, such reductions in DPM emissions would result in commensurate reductions to carcinogenic health risk. This supporting information is consistent with *L.A. CEQA Thresholds Guide* in making a case-by-case basis determination of significance. As such, the Draft EIR correctly concluded that Project-related TAC emission impacts during construction would be less than significant and, consequently, not result in a potential health risk impact. Refer to Response to Comment No. 1-3 for additional clarification regarding the qualitative analysis included in the Draft EIR.

⁷⁴ SCAQMD, CEQA Air Quality Handbook, Chapter 10, Assessing Toxic Air Pollutants, 1993.

While the Draft EIR correctly concluded impacts would be less than significant based on the qualitative health risk analysis, further evaluation of TAC emissions in response to SCAQMD's comments is included in this Final EIR to confirm the conclusions of the Draft EIR.

The quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA includes an assessment of health risk impacts from both Project-related construction and operational activities. The HRA implements the HRA protocol that was submitted to SCAQMD. SCAQMD subsequently responded that concerns regarding health risk impacts related to the Project have been addressed. The HRA demonstrates that whether considered separately or combined, construction risk estimates and incremental operational risk estimates at the points of maximum impact (PMIs), even after accounting for increased truck traffic associated with future operations, would be below SCAQMD's risk thresholds, further affirming the statements on pages IV.A-69 and IV.A-71 in Section IV.A, Air Quality, of the Draft EIR that Project-related emissions of TACs would result in a less-than-significant impact. To be conservative, the HRA assumes outdoor exposure for the entire length of construction and operations and does not account for any reductions to TAC exposure from time spent indoors, where air quality tends to be better.

Page IV.A-74 in Section IV.A, Air Quality, of the Draft EIR acknowledges that construction activities could extend over 20 years. However, the overall amount of demolition, excavation/export, and square footage of building construction would not change due to a longer overall duration of construction activities. Thus, for the HRA, the 32-month, more intensive schedule was assumed, resulting in the greatest reasonably foreseeable Project-related TAC emissions occurring over the shortest anticipated construction period. This approach appropriately and conservatively accounts for the amplified exposure effects associated with childhood age sensitivities. Moreover, the 20-year buildout would benefit from future improvements in equipment efficiencies (more stringent regulatory requirements that would reduce future air emissions during Project construction), resulting in reduced TAC exposure relative to the 32-month buildout scenario. A comprehensive description of sources included in the HRA is included in the Health Risk Assessment Protocol, included as Appendix FEIR-10 of this Final EIR.

The commenter also suggests that Project-related truck traffic exhaust emissions could result in increased concentrations during future operations. While in large cities with multiple concurrent blocks of tall buildings (e.g., sky scrapers), "air canyon" effects can affect local meteorological conditions and pollutant dispersion, given the limited size of the Project Site and the low building heights of land uses surrounding the Project Site, "air canyon" effects would not be expected to occur. Moreover, as discussed above, the Project analysis has gone above and beyond what is necessary to confirm the less-than-significant health risk findings of the Draft EIR through the completion of an HRA. The Draft EIR air quality analysis and the HRA included as Appendix FEIR-10 of this Final EIR

were developed using reasonable assumptions based on the Project design and local meteorology. As stated in CEQA Guidelines Section 15204(a), “reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible, in light of factors such as magnitude of the project at issue, the severity of its likely environmental impacts, and the geographic scope of the project. CEQA does not require the lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters.” The Draft EIR appropriately determined that the localized air quality and human health risk impacts would be less than significant based on appropriate qualitative and screening methods in consideration of the Conceptual Site Plan, and no further analysis is required. The Draft EIR’s and Final EIR’s HRA analyses account for the maximum potential Project impacts and provide “decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences.” (CEQA Guidelines Section 15151.)

Comment No. 26-E.1-3

Greenhouse Gases

- Comment 24. The proposed project allows for a long-term buildout scenario spanning 20 years, but the DEIR only assess GHG emission standards for the near term 3-year buildout scenario. For example, given that the Project may not be built out until 2043, the DEIR should evaluate how the project will align zero-emissions (ZE) or near-zero emission (NZE) on-road haul truck requirements established in CARB’s regulations, which will establish in NZE and ZE sales requirements in future years. Similarly, the proposed project includes buildings that utilize natural gas for heating (e.g., space and water heating) and cooking, which could conflict with the State’s SIP strategy and the 2022 AQMP for the South Coast Air Quality Management District (SCAQMD). Assembly Bill 1279, The California Climate Crisis Act, was enrolled on September 2, 2022. The bill requires California to achieve “net zero greenhouse gas emissions” as soon as possible, but no later than 2045—a mere 2 years after Project buildout—and to achieve and maintain net negative greenhouse gas emissions thereafter. It also requires that statewide anthropogenic GHG emissions are reduced to at least 85% below 1990 levels. Given the evolving legal environment and existing regulations that include GHG provisions pushing the State to net zero GHG emissions by 2045, the DEIR should evaluate its GHG emissions and energy usage under the long-term buildout by considering the GHG requirements that will be applicable in future years.

Response to Comment No. 26-E.1-3

The commenter recommends evaluation of potential GHG emission reductions related to future regulations regarding NZE and ZE trucks; however, the Draft EIR concluded that GHG impacts would be less than significant, and therefore mitigation is not required. With that being said, please see Response to Comment No. 26-39 for a

discussion of use of ZE and NZE heavy-duty construction trucks and Response to Comment No. 26-E.1-38 for a discussion of ZE and NZE operational trucks. Please refer to Response to Comment No. 9-24 and Appendix FEIR-8, Details of Project Buildout and Construction Activities, of this Final EIR for a detailed discussion of the long-term buildout scenario. Under the long-term buildout scenario, no increases in the total amount of soil hauled or the square footage of structures to be demolished would occur in comparison to the 32-month schedule. In addition, the total number of hours that equipment would need to operate remains the same in either scenario since the scope of work would not change. Moreover, the 20-year buildout would benefit from future improvements in equipment efficiencies (more stringent regulatory requirements that would reduce future GHG emissions during Project construction). Therefore, GHG emissions would be expected to be the same, if not lower, under the long-term buildout scenario than under the 32-month buildout scenario. Refer to pages IV.E-85 to IV.E-86 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR for the analysis of GHG impacts under the long-term buildout scenario.

Refer to Response to Comment No. 45-1 regarding the Project's compliance with the City's new all-electric buildings ordinance.

Comment No. 26-E.1-4

Noise

- Comment 28. The Project, as defined in the DEIR, is not a specific project, but rather a proposed 20-year development framework for future re-development. As such, the environmental analyses presented in the DEIR are based on a "hypothetical development mix" that is stated to "generate the maximum impact for that environmental issue". [sic] As related to noise impacts, the buildout scenarios are not defined or detailed and therefore the selection of the "maximum impact" scenario cannot be reviewed and confirmed. Additionally, because of the lack of project buildout detail, operational and construction noise impact determinations do not reflect the ultimate project buildout.

Response to Comment No. 26-E.1-4

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR analyzed the Project described in Section II, Project Description, of the Draft EIR, the Project Description complies with CEQA and discloses all of the physical aspects of the Project, and the level of detail is commensurate with the level of detail for a specific plan project.

As discussed in Response to Comment No. 26-138, construction of the Project over a 32-month construction period is the maximum noise impact scenario (i.e., the

development scenario under the proposed Specific Plan that would result in the greatest noise impacts) and this scenario was analyzed in the Draft EIR. Noise impacts under the long-term buildout scenario would be similar to or less than that of the anticipated 32-month buildout as the 32-month schedule provides for the peak construction equipment mix used at a given time along with overlap of construction phases.

As discussed in Section IV.I, Noise, of the Draft EIR and in Response to Comment No. 26-138, with the exception of potential mobile noise impacts, a later buildout date would not affect the impacts or significance conclusions, as such impacts are not dependent upon buildout year. With regard to Project-related mobile noise impacts, with an extended buildout year, the Future Without Project noise levels would increase as a result of ambient traffic growth occurring between 2026 and 2043. Thus, the Project's contribution to increases in ambient noise levels would be diluted, and overall Project operational impacts related to mobile noise would be expected to be slightly reduced. Also refer to Topical Response No. 1 and Response to Comment No. 5-5 regarding how the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. As discussed in Response to Comment No. 26-135, the Draft EIR noise analysis was based on the Conceptual Site Plan, and future changes that are substantially different than the Conceptual Site Plan, including a proposal that involves a land use exchange, or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. Also note that implementation of the limited Land Use Exchange Program would not affect the noise analysis as exchanges for additional sound stage or production support uses in exchange for reductions in the other permitted uses would not change the outdoor noise environment, nor would the peak day construction assumptions be affected.

Comment No. 26-E.1-5

- Comment 30. The existing ambient conditions have not been fully assessed. The ambient sound level survey methodology used, specifically the measurement durations, is not consistent with typical community noise survey durations as specified and recommended in industry standards for assessing community noise. As such, impact determinations are likely underestimated.
- Comment 29. An additional noise-sensitive receptor (Rancho La Brea Adobe residence) located south of the project site was not included in the survey or impact assessment.

Response to Comment No. 26-E.1-5

As discussed on pages IV.I-19 and IV.I-21 in Section IV.I, Noise, of the Draft EIR, the ambient noise measurements were conducted in accordance with LAMC Section 111.01, which requires ambient noise measurements to be conducted over a period of at least 15 minutes. The ambient noise levels at nine of the ten receptor locations were determined based on two 15-minute period measurements, one measurement during the daytime hours, between 7 A.M. to 10 P.M., and one measurement during the nighttime hours between, 10 P.M. to 7 A.M. In addition, a 24-hour ambient noise measurement was performed at receptor R1. Thus, the ambient noise measurement survey is consistent with CEQA and City requirements, as well as other environmental noise studies conducted for the City. Contrary to the commenter's inaccurate assertion, Project impacts were not underestimated.

Regarding the inclusion of the Gilmore Adobe in the impact analysis, refer to Response to Comment No. 26-139.

Comment No. 26-E.1-6**Hydrology and Water Quality Report**

- Comment 47. There are several inconsistencies observed in the DEIR for the stormwater runoff evaluation. For example, there are discrepancies in the total runoff volume estimates. Also, it's unclear if these values represent annual, monthly, or daily capture volumes and how these are related to the 50-year frequency design storm event runoff calculations.

Response to Comment No. 26-E.1-6

As discussed in Section IV.G, Hydrology and Water Quality, of the Draft EIR and shown in Table IV.G-1, Stormwater Runoff Summary, on page IV.G-36 of the Draft EIR, the 50-year frequency storm event peak flow rate within the existing Project Site is 53.53 cfs.⁷⁵ As discussed on page IV.G-36 of the Draft EIR, per the City of Los Angeles Bureau of Engineering Special Order No. 007-1299, the City has adopted the LACDPW Hydrology Manual as its basis of design for storm drainage facilities. The Hydrology Manual requires projects to have drainage facilities to meet the Urban Flood level of protection, which is defined as runoff from a 25-year frequency storm falling on a saturated watershed. The L.A. CEQA Thresholds Guide, however, establishes the 50-year frequency design storm

⁷⁵ Table IV.G-1 in Section IV.G, Hydrology and Water Quality, of the Draft EIR included a clerical error that has been corrected in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The existing and proposed flow rate is 53.53 cfs.

event as the threshold to evaluate potential impacts on surface water hydrology. Therefore, to provide a more conservative analysis of the ability of storm drain infrastructure to accommodate the demand generated by the Project, the higher 50-year storm event threshold was used. As shown in Table IV.G-1, runoff flows during Project operation would remain the same at 53.53 cfs during a 50-year storm event. Accordingly, there would be no increase in runoff volumes into the existing storm drain system. The 50-year frequency design storm event flow rate pre- and post-Project (i.e., 53.53 cfs) is included in Table 2 within Section 6.2.1 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR.

As discussed in Response to Comment Nos. 3-4, 3-7, and 11-5, the Project would include the installation of a capture and reuse system to be used for irrigation purposes, consistent with the LID Ordinance. As stated in Section 5.2.2 of the Hydrology Report, the Project will capture and reuse up to approximately 625,000 gallons of water. Figure IV.G-1 of the Draft EIR and Figure 3 of the Hydrology and Water Quality Report demonstrate the proposed capture and reuse system for the capture volume to meet the LID 85th percentile design storm event. Figure IV.G-1 of the Draft EIR and Figure 3 of the Hydrology and Water Quality Report have been corrected to state that the capture volume is 625,000 gallons (refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR). This will provide ample capacity to capture the volume from the 85th percentile storm event in compliance with the LID Ordinance. This clarification does not change the impact analysis or significance conclusions in the Draft EIR because the Project will treat the required stormwater volume in compliance with the LID Ordinance.

Comment No. 26-E.1-7

- Comment 48. The DEIR recognizes the need for dewatering activities during project construction and mentions dewatering during operation. However, the report fails to describe the methodology/ quantitative analysis related to construction dewatering which is critical to demonstrate the basis for conclusions made about surface water and groundwater impacts and fails to include any analysis or conclusions for operation dewatering.

Response to Comment No. 26-E.1-7

As discussed in Response to Comment No. 3-7, the Project would include temporary construction dewatering and not permanent dewatering. For a detailed discussion of the Draft EIR's analysis of the Project's dewatering impacts, refer to Response to Comment Nos. 11-5 and 11-25.

As discussed in Addendum I, Response to Soils Report Review Letter (Appendix E.3 of the Draft EIR), the Project is currently in the pre-approval process, and the

dewatering system and methods will be determined during the City's building permit process.

As discussed in Response to Comment Nos. 26-53 and 26-58, during the design and construction phase, the specific temporary method of dewatering will be chosen after considering the following variables, among others: depth of intrusion required for each building foundation, the porosity and hydraulic conductivity of the soils in which the excavations occur, the potential to mobilize any existing groundwater contaminants, the potential for ground subsidence and/or liquefaction to occur, proximity to any existing production wells, and the volume of water to be dewatered on a daily basis. After evaluating each of these factors individually and collectively, a final excavation shoring methodology and dewatering strategy will be developed.

Nevertheless, a Dewatering Report was prepared in response to comments for informational purposes and confirms the conclusion in the Draft EIR that impacts related to construction dewatering would be less than significant; refer to Appendix FEIR-13 of this Final EIR. The analysis also confirms that impacts related to subsidence from dewatering would be less than significant and would not damage neighboring properties; refer to Appendix D of the Dewatering Report. The Dewatering Report relies upon published data and Project Site-specific conditions to estimate groundwater dewatering quantities and drawdown cones-of-depression. The analysis assumes that regulatory infiltration control measures will be implemented as needed. The analysis estimates a total of up to 26.4 million gallons (81 acre-feet) of groundwater may be pumped for the 21-month temporary dewatering period. For context, the local groundwater basin has a 200,000 acre-feet storage capacity and no other groundwater pumping is currently occurring within a one-mile radius of the Project Site.

Refer to Response to Comment Nos. 11-25 and 26-69 regarding the potential drawdown cone of depression dimensions.

The commenter's dewatering analysis overestimates the anticipated dewatering program, as it does not consider planned infiltration control measures, does not use a time-dependent analysis for the 21-month temporary dewatering period, and uses material properties that are not representative of the overall water bearing materials found at the Project Site.

Comment No. 26-E.1-8

- Comment 49. The evaluation of water supply assessment during project construction is missing in the DEIR. Also, the water supply during operations is assessed based on an optimistic future scenario presented in the Los Angeles Department of Water and Power (LADWP) 2020 Urban Water Management Plan

(UWMP). The UWMP assesses impacts for the next 25 years and is updated every five years. External studies indicate that this supply will be constrained in the future due to the concern of recurrent, cyclic droughts affecting the region. Project build-out is 2043 when the associated uncertainty is likely the greatest. The report should include additional discussion about anticipated climate impacts to make it clear these aspects have been considered when looking at future projections and contingency plans.

- Comment 50. The DEIR does not adequately substantiate the estimates of water savings as required by the City of Los Angeles ordinances. The report appears to be double-counting additional conservation savings of 4 AFY.

Response to Comment No. 26-E.1-8

Potential impacts related to water demand during construction are addressed on pages IV.M.1-34 to IV.M.1-36 of Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR. As discussed therein, based on a review of construction projects of similar size and duration, a conservative estimate of construction water use ranges from 1,000 to 2,000 gpd, which is considerably less than the amount LADWP analyzed in the WSA with regard to water demand during operation of the Project. As discussed below, LADWP has determined that the water demand associated with Project operations would be adequately accommodated by LADWP water supplies. Therefore, the Project's temporary and intermittent demand for water during construction could be similarly met by the City's available supplies during each year of Project construction. Thus, impacts would be less than significant.

The WSA, included as Appendix N of the Draft EIR, specifically addresses drought conditions and near-term drought risk management (refer to page 10 of the WSA, and the detailed discussion of drought conditions and plans to address such drought conditions throughout Appendix F of the WSA). In addition, as discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR, the 2020 LADWP UWMP takes into account the realities of climate change and the concerns of drought and dry weather and notes that the City of Los Angeles will meet all new demand for water due to projected population growth by expanding local water supply programs and reducing demands on purchased imported water. As discussed on page IV.M.1-27 of the Draft EIR, LADWP's 2020 UWMP provides water demand and supply projections in five-year increments to 2045, based on projected population estimates provided by the SCAG in its 2020–2045 RTP/SCS. Table IV.M.1-4 on page IV.M.1-28 of the Draft EIR shows LADWP's water demand and supply projections from 2025 through 2045. As shown in Table IV.M.1-4, LADWP's water supply would be equal to the water demand within LADWP's service area during average, single-dry and multi-dry years from 2025 through at least 2045. LADWP's 2020 UWMP, therefore, concludes that adequate water supplies would be available to meet the projected demands within the LADWP service area under average,

single-dry, and multi-dry year conditions through 2045. Therefore, the City's water supply projections in LADWP's 2020 UWMP are sufficient to meet the water demand for projects that are determined by the CEQA lead agency to be consistent with the 2020–2045 RTP/SCS adopted by SCAG. As discussed on page IV.M.1-50 of the Draft EIR, the Project is compared to LADWP's projected 2025 water demand and supply because this is the closest of the 2020 UWMP's five-year projections to the Project's anticipated buildout year of 2026. However, the Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043.

With regard to the assertion that water-conservation savings are double counted, the commenter provides no basis to demonstrate this claim. The water conservation savings within Table IV.M.1-5 of the Draft EIR and within the WSA that were calculated by LADWP account for both water savings associated with compliance with applicable City Ordinances and regulations regarding water conservation, including Ordinance No. 186488, Ordinance No. 184,248, the 2020 Los Angeles Plumbing Code, and 2020 Los Angeles Green Building Code, as well as additional conservation commitments made by the Applicant (Project Design Feature WAT-PDF-1). As shown in Tables IIA and IIB of the WSA, the water conservation associated with the commitments by the Applicant results in a water savings of approximately 4 afy.

Comment No. 26-E.1-9

Hazards

- Comment 52–59. The DEIR inadequately assesses or describes existing conditions and plans to monitor or mitigate conditions during construction and operation. Should evaluate the potential hazards associated with sensitive receptors.

Response to Comment No. 26-E.1-9

Refer to Response to Comment No. 26-78. As discussed therein, a detailed discussion of the existing conditions is included on pages IV.F-20 to IV.F-35 in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR. Refer to Response to Comment No. 26-86 for a discussion of the Draft EIR's analysis of potential impacts related to hazards and the mitigation measures proposed in response to impacts associated with hazardous waste generation, handling, and disposal during construction. The Soil Management Plan, which is included in Appendix G.1 of the Draft EIR, provides details on environmental monitoring, testing, handling, and proper disposal during excavation and construction.

Refer to Response to Comment Nos. 26-E.1-69 to 26-E.1-75, which discusses Comments 52 to 59 referenced in this comment.

Refer to Response to Comment No. 26-E.1-15 and the quantitative HRA in Appendix FEIR-10 of this Final EIR, which confirms the Draft EIR's conclusion that health risk impacts would be less than significant.

Comment No. 26-E.1-10

LAND USE

1. The DEIR relies on a proposed Specific Plan for the site in order to evaluate potential impacts related to consistency with plans and policies, notably the Los Angeles General Plan and City of LA zoning. The Specific Plan would govern future development in the TVC site and thus needs to reflect City of LA land use policies. The objective appears to be to give the site owner more flexibility in developing and modifying the site than the City planning process would normally allow. However, the Specific Plan is not included in the DEIR or described in any detail—it's essentially "to be determined" through a process that is not adequately disclosed to the public, as required by CEQA.

Response to Comment No. 26-E.1-10

Refer to Section IV.H, Land Use and Planning, of the Draft EIR for a thorough evaluation of the Project's consistency with the General Plan, LAMC and other applicable plans. Also refer to Response to Comment No. 26-22 regarding land use consistency. As demonstrated therein, the commenter is incorrect that the Draft EIR relied on the Specific Plan to evaluate land use consistency.

Refer to Response to Comment No. 5-3 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the purpose of a specific plan and the proposed Specific Plan. As discussed therein, all of the physical aspects of the proposed Specific Plan are fully addressed in the Draft EIR, and the Specific Plan was not required to be included as part of the EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website.

Comment No. 26-E.1-11

2. The DEIR's support for its claim that the project would comply with the Open Space and Conservation Chapter of the General Plan is not adequate. Widening and landscaping existing sidewalks does not add true open space (i.e., public park or recreation area) or promote conservation. Accordingly, this impact determination does not appear to be based on substantial evidence specific to the issue being considered.

Response to Comment No. 26-E.1-11

This comment provides no substantial evidence to support the statement that the analysis of the Project's potential to conflict with the Open Space and Conservation Chapter of the General Plan is inadequate. As a non-residential project, the Project is not required to provide public open space. Nonetheless, an analysis of the applicable policies of the Open Space and Conservation Chapter is included on page IV.H-40 in Section IV.H, Land Use and Planning, and pages 9 and 10 of Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR. As discussed therein, these applicable policies include Policy 6.3.3 that addresses utilization of development standards to keep spaces and facilities as safe as possible and Policy 6.4.8 regarding maximization of existing open space resources. As concluded in the Draft EIR, the Project would not conflict with these policies.

Many of the objectives and policies within the Open Space and Conservation Chapter are not applicable to the Project and, therefore, were appropriately not evaluated in the Draft EIR.

Comment No. 26-E.1-12

3. The DEIR's consideration of compliance with Citywide Design Guidelines, the GP Conservation Element/ Wilshire Community Plan, the LA Municipal Code, and elements of the Citywide Design Guidelines appear to rely on the proposed Specific Plan, which, as mentioned above, gives no details. Accordingly, there is no way for the public to verify the claimed compliance, and the impact determinations could be regarded as conclusory statements not based on substantial evidence.

Response to Comment No. 26-E.1-12

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3, the Draft EIR disclosed all of the physical elements of the proposed Specific Plan required by CEQA and comprehensively analyzed the Project's potential impacts in accordance with CEQA. As such, the analysis of the Project's potential to conflict with the elements of the Citywide Design Guidelines, General Plan Conservation Element, Wilshire Community Plan, and the LAMC is not conclusory as incorrectly asserted in this comment, and the Draft EIR correctly concluded that impacts related to the potential to conflict with land use plans and policies would be less than significant. Refer to Response to Comment No. 26-22 regarding the Project's consistency with applicable plans and policies.

Comment No. 26-E.1-13**AIR QUALITY**

4. The proposed project did not conduct a detailed health risk assessment (HRA) to evaluate the potential health impacts (e.g., acute, chronic, and cancer risk) from construction or operational emissions. The project's construction and operations include sources of diesel particulate matter (DPM) and other TACs expected to be emitted in close proximity to existing residential land uses. As shown in Figure IV.A-4, the closest sensitive receptors to the project site include the Broadcast Center Apartments adjacent to the project site on the east and the Rancho Brea Adobe located adjacent to the project site on the south. Additionally, the DEIR has not evaluated the following sensitive receptors that are in the vicinity of the Project site: the school located at 7659 Beverly Blvd, Los Angeles CA 90036, and the public park adjacent to the Project site. Given the large potential area with construction activity (25 acres), the close proximity to sensitive receptors (<25 meters), and the extensive length of construction (over 20 years), the emissions from construction could potentially have a significant health risk impact on the surrounding receptors. Furthermore, the South Coast Air Quality Management District (SCAQMD) frequently requests projects to evaluate health risk impacts from construction and operations^{1,2,3} when they generate diesel emissions from long-term construction or attract diesel fuelled [sic] vehicular trips during operation, especially heavy-duty diesel fuelled [sic] vehicles. In the case that a project is found to have a significant mobile source health risk, SCAQMD recommends strategies to reduce exposure that include enhanced building filtration systems with MERV 13 or MERV 15, building design and orientation, vegetation barriers, and landscape screening. The DEIR fails to provide evidence that its construction and operational TAC impacts would be less than significant.

- ³ SCAQMD Comment Letter on Notice of Preparation of an Environmental Impact Report for West LA Commons (Proposed Project). Available at: <http://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2022/june/LAC220519-01.pdf?sfvrsn=8>. Accessed: August 2022.

Response to Comment No. 26-E.1-13

This comment is similar to a portion of Comment No. 26-E.1-2. Refer to Response to Comment No. 26-E.1-2. This comment also incorrectly states that impacts were not

evaluated at two sensitive receptors. First, contrary to the comment, the Morasha Hebrew Academy (7651 & 7659 Beverly Boulevard) was specifically identified in the Draft EIR as a sensitive receptor on page IV.A-29 and was analyzed in Section IV.A, Air Quality, of the Draft EIR. Second, Pan Pacific Park is not a sensitive receptor under the SCAQMD LST methodology properly employed in the air quality analysis in the Draft EIR. As discussed in Response to Comment No. 26-26, the SCAQMD in their LST methodology identifies sensitive receptors to be a receptor, such as residence, hospital, convalescent facility, where it is possible that an individual could remain for 24 hours. Thus, Pan Pacific Park would not be included as a sensitive receptor. As shown in Table IV.A-10 and Table IV.A-11 of the Draft EIR, Project localized construction and operational emissions would remain below the significance thresholds for receptors located within 25 meters of the Project Site. It should be noted that a 25-meter receptor distance is the closest receptor distance on the SCAQMD LST lookup tables and may be used to analyze receptors located closer than 25 meters. Thus, as the Project would result in a less-than-significant impact at the closest receptor distance, impacts to receptors farther away from the Project Site would similarly be less than significant.

The cited SCAQMD Notice of Preparation comment letters are simply a form letter provided by SCAQMD outlining their recommendation on the analysis of potential air quality impacts from proposed projects. The SCAQMD examples provided by the commenter do not show that a quantitative HRA is required to evaluate health risk impacts from construction and operations. As discussed in Response to Comment No. 26-E.1-2, the Draft EIR provided a qualitative evaluation of potential health risks related to the Project. While the Draft EIR correctly concluded impacts would be less than significant based on the qualitative health risk analysis, further evaluation of TAC emissions in response to SCAQMD's comments is included in this Final EIR to confirm the conclusions of the Draft EIR. As discussed in Response to Comment No. 26-E.1-2, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms that health risks from the Project would remain below the applicable significance thresholds. Thus, the SCAQMD strategies listed in this comment are not applicable.

Comment No. 26-E.1-14

- a. **On-Site Construction Equipment:** Using the CalEEMod-generated unmitigated emissions reported in DEIR Appendix B, Ramboll completed a Tier 3 health risk assessment (HRA) for on-site construction equipment using the United States Environment Protection Agency (USEPA) AERSCREEN tool. Results of this HRA indicate that the diesel particulate matter (DPM) from on-site construction equipment would generate a maximum incremental cancer risk of **52.9 in a million** at the fenceline and **65.2 in a million** at a distance of 175 meters from the project site (see **Attachment A**). This far exceeds the 10 in a million threshold. While the use of Tier 4 construction

equipment as required by Mitigation Measure AIR-MM-1 could reduce the health risk impacts of these equipment, the DEIR did not evaluate and disclose the unmitigated impacts, nor demonstrate if the mitigation measure would mitigate the significant impact.

- i. Additionally, as noted below in Comment 9 the DEIR has failed to model the construction emissions that may result from the extended 20-year buildout scenario. The DEIR needs to reasonably estimate what the level of construction activity may be over the course of the 20-year construction period to characterize potential construction emissions. While the DEIR's assumed shorter construction period may provide an estimate for the maximum daily emissions from construction activities, there is no indication that that approach reasonably estimates the total construction emissions over 20-years. [sic] The additional construction emissions over 20-years [sic] would result in additional exposure to DPM and other TACs and could result in higher cancer risk for sensitive receptors. Given the much longer potential construction period, this is another reason that the DEIR should evaluate the potential health risk impact from construction and operations of the Project.

Response to Comment No. 26-E.1-14

The Draft EIR correctly concluded impacts would be less than significant based on the qualitative health risk analysis, and the screening analysis discussed in this comment was not warranted based on the number of diesel trucks associated with the Project. Further evaluation of TAC emissions in response to SCAQMD's comments is included in this Final EIR based on a quantitative HRA to confirm the conclusions of the Draft EIR. The commenter did not account for implementation of Mitigation Measure AIR-MM-1 (which requires the use of off-road diesel-powered construction equipment meeting Tier 4 Final standards) and would result in an approximately 95 percent reduction in DPM emissions in comparison to Tier 3 standards. The commenter cited the CalEEMod information from Appendix B of the Draft EIR, pages 315–324. The pages cited by the commenter included unmitigated and mitigated construction emissions. It is not clear why the commenter only included unmitigated health risk impacts. Updating Table A-1 (Maximum Individual Cancer Risk from Diesel Particulate Matter) from Attachment A of this comment letter using mitigated emissions instead of unmitigated emissions would result in the maximum cancer risk reduced from 65 in a million to 7.7 in a million (below the SCAQMD significance threshold of 10 in a million). Therefore, the commenter's screening level analysis further supports that the Draft EIR correctly concluded that Project-related TAC emission impacts during construction would be less than significant based on the qualitative health risk analysis and consequently not result in a potential health risk impact.

The commenter's health risk calculation also incorrectly relies on AERSCREEN, which is a "screening level" model. A screening level analysis may be appropriate to assess whether more detailed, refined modeling assessment is needed. Screening models typically rely on rough, very conservative assumptions to check if a project *could* cause a significant health impact. If, based on the screening, there is no potential for a significant impact, then no additional analysis is required. In this way, screening models may help save time and money by eliminating the need for some projects to complete more expensive, time-consuming dispersion modeling.

This use of screening models is consistent with industry standards and agency guidance. As recommended by OEHHA, page 4-25 of *The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* states "Screening models are normally used when no representative meteorological data are available and may be used as a preliminary estimate to determine if a more detailed assessment is warranted."⁷⁶

As noted above, screening level results that show a potential significant impact are only relevant to the extent they demonstrate that additional analysis using a refined model should be conducted. Notwithstanding, the quantitative HRA prepared in response to comments, included as Appendix FEIR-10 of this Final EIR, analyzed health risks consistent with SCAQMD methodology and used AERMOD to complete refined dispersion modeling. AERMOD accounts for a variety of refined, site-specific conditions that facilitate a more accurate assessment of Project impacts compared to the less refined AERSCREEN screening model used in the commenter's comments. The most important differences between AERSCREEN and AERMOD are the following:

- **Meteorological Data**—The AERSCREEN model uses user-defined conditions, which incorrectly assume meteorological conditions occurring 24 hours per day, 365 days per year for the entire construction and operation duration along with the maximum daily emissions occurring each of those days. The HRA prepared in response to comments instead used AERMOD, which allows for SCAQMD representative meteorological data (Central Los Angeles) to be used in the calculation of annual concentrations. This SCAQMD meteorological data provides hourly conditions (e.g., wind speed, wind direction, and stability class) over a five-year period (43,800 hours). With these conditions, the AERMOD model is more representative of likely Project impacts compared to the AERSCREEN model.

⁷⁶ California Environmental Protection Agency, Air Toxics Hot Spots Program Risk Assessment Guidelines, The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, February 2015.

- **Site-Specific Conditions**—AERMOD allows for analysis of multiple volume sources, which is required to adequately represent Project construction and operation. The use of a single rectangular source with a release height of 5 meters to represent construction activities provided in the comment does not adequately represent the Project Site or account for complex terrain conditions and, as such, likely overstates emissions because of the plume interaction with terrain. In addition, a volume source and not an area source is the type of source recommended by the SCAQMD for modeling construction equipment and diesel truck exhaust emissions (SCAQMD LST Guidelines). By accounting for site-specific conditions around the Project Site, the AERMOD model is more representative of likely Project impacts compared to the AERSCREEN model.

Consequently, the coarser AERSCREEN evaluation provides a much less accurate assessment of Project health risks compared to the refined AERMOD evaluation. Potential health risk impacts from the Project to nearby sensitive uses as the result of proposed construction activities are more accurately identified by the AERMOD evaluation included in the HRA prepared in response to comments and included as Appendix FEIR-10 of this Final EIR. As shown in the HRA, pollutant concentrations are highest near the Project Site and dissipate with distance. As demonstrated in the analysis therein, the Project would not result in a significant health risk impact, and the HRA confirms the Draft EIR's conclusion of less-than-significant impacts. The HRA prepared in response to these comments demonstrates that health risks from the Project would be a maximum of approximately 7.5 in one million for residences east of the Project Site (Broadcast Center Apartments), which is below the applicable SCAQMD significance threshold of 10 in one million. Of note, the construction related impact was approximately 6.3 in one million and the operational incremental risk was approximately 1.2 in one million (difference between the buildout operational impact of 7.4 in one million and existing impact of 6.2 in one million). The increase in operational risk is primarily the result of conservatively locating proposed new emergency generators in close proximity to residents east of the Project Site, whereas existing emergency generators are spread throughout the Project Site (see Response to Comment No. 1-3).

This comment references a more specific comment by the commenter regarding construction emissions that may result under the 20-year buildout scenario; refer to Response to Comment No. 26-E.1-24. As discussed therein, spreading diesel exhaust (DPM) emissions over a longer duration would result in less intensive activities on an annual basis. Cancer risk calculations consider early life exposure (infant, child, adult) where younger individuals are more sensitive to pollutant exposure. Less intensive activities based on a 20-year buildout scenario would result in lower concentrations for early life exposure. As a result, cumulative cancer risk would be reduced in comparison to a more intensive 32-month construction schedule.

Comment No. 26-E.1-15

- b. **TAC Emissions from Soil Off-gassing and Tar Pits:** Appendix G of the DEIR indicates that elevated concentrations of gasoline range organics and arsenic were observed in the soil at the Project site. Additionally, the site is within the City of Los Angeles Methane Zone (PDF Page 20 of DEIR Appendix G) and is therefore impacted by naturally occurring methane and hydrogen sulfide. These TACs—gasoline range organics, arsenic, and hydrogen sulfide—all pose health risks. The DEIR should evaluate the health risk impacts associated with the potential release of these TAC emissions during project construction (particularly during soil excavation) and operation (from the tar collection system in the southwestern corner of the Project site and methane mitigation systems for buildings on the Project site).

Response to Comment No. 26-E.1-15

Health risks from toxic air contaminants (TACs) were comprehensively evaluated in Section IV.A, Air Quality, of the Draft EIR. As discussed on pages IV.A-68 to IV.A-69 of the Draft EIR, the greatest potential for TAC emissions during construction would be from diesel particulate emissions associated with heavy equipment operations. According to SCAQMD methodology, the health effects from carcinogenic air toxics are usually described in terms of individual cancer risk. “Individual Cancer Risk” is the likelihood that a person continuously exposed to concentrations of TACs over a 70-year lifetime will contract cancer based on the use of standard risk assessment methodology. Given the short-term construction schedule of approximately 32 months (2.75 years), the Project would not result in a long-term (i.e., 70-year) source of TAC emissions. Furthermore, implementation of Mitigation Measure AIR-MM-1 (which requires the use of off-road diesel-powered construction equipment meeting Tier 4 Final standards) would result in an approximately 95-percent reduction in diesel particulate matter emissions in comparison to Tier 3 standards. Additionally, the SCAQMD CEQA Air Quality Handbook does not provide guidance requiring an HRA for short-term construction emissions. Therefore, it is not necessary to evaluate long-term cancer impacts from construction activities, which occur over a relatively short duration. In addition, there would be no residual emissions or corresponding individual cancer risk after construction. As such, Project-related TAC impacts during construction would be less than significant.

Potential TAC impacts during Project operation are discussed on pages IV.A-71 to IV.A-73 of the Draft EIR. As stated therein, when considering potential air quality impacts under CEQA, consideration is given to the location of sensitive receptors in close proximity to land uses that emit TACs. CARB published and adopted the Air Quality and Land Use Handbook: A Community Health Perspective, which provides recommendations regarding the siting of new sensitive land uses near potential sources of TAC emissions (e.g., freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry

cleaners, and gasoline dispensing facilities). SCAQMD adopted similar recommendations in its Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. Together, the CARB and SCAQMD guidelines recommend siting distances for both the development of sensitive land uses in proximity to TAC sources and the addition of new TAC sources in proximity to existing sensitive land uses. The primary sources of potential TACs associated with Project operations include diesel particulate matter from delivery and production trucks and, to a lesser extent, facility operations (e.g., natural gas fired boilers). However, these activities, and the land uses associated with the Project, are not considered land uses that generate substantial TAC emissions. SCAQMD recommends that HRAs be conducted for substantial individual sources of diesel particulate matter (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units) and has provided guidance for analyzing mobile source diesel emissions. The Project would not include these types of land uses and is not considered to be a substantial source of diesel particulate matter warranting an HRA since daily truck trips to the Project Site would not exceed 100 trucks per day or more than 40 trucks with operating transport refrigeration units. In addition, the CARB-mandated ATCM limits diesel-fueled commercial vehicles (delivery trucks) to idle for no more than five minutes at any given time, which would further limit diesel particulate emissions. Furthermore, there are no substantial sources of TACs within the Project vicinity. Typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes (e.g., chrome plating, electrical manufacturing, petroleum refinery). The Project would not include these types of potential industrial manufacturing process sources. It is expected that quantities of hazardous TACs generated onsite (e.g., cleaning solvents, paints, landscape pesticides, etc.) typical for the types of proposed land uses would be below the thresholds warranting further study under the California Accidental Release Program (CalARP). As such, the Project would not release substantial amounts of TACs, and impacts on human health would be less than significant. As the Project would not contain substantial TAC sources and is consistent with the CARB and SCAQMD guidelines, the Project would not result in the exposure of offsite sensitive receptors to carcinogenic or TACs that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0. As such, the Project would not expose sensitive receptors to substantial pollutant concentrations, and potential TAC impacts would be less than significant.

Nevertheless, in response to comments and for informational purposes, a quantitative HRA was prepared, which confirms the less than significant conclusions in the Draft EIR; refer to Appendix FEIR-10 of this Final EIR.

Refer to Response to Comment Nos. 13-4, 13-6, 16-28, 16-64, 16-85, 26-38, 26-78, and 26-86 regarding the Draft EIR's discussion and analysis of potential soil and groundwater contamination and hazards under existing conditions and the proposed Project.

The Soil Management Plan, included in Appendix G.1 of the Draft EIR, addresses the management of soils with elevated levels of arsenic, among other contaminants of concern.

Refer to Response to Comment Nos. 13-6, 16-28, and 26-38 regarding potential methane impacts and the proposed Project's methane mitigation system.

The tar collection system currently operating at the Project Site does not result in any emissions. Refer to pages 32–33 of the Phase I ESA, included in Appendix G of the Draft EIR, as well as Response to Comment No. 13-4.

Comment No. 26-E.1-16

- c. **Operational Truck Trips:** Ramboll estimated the total truck trips (light-heavy duty trucks, medium-heavy duty, and heavy-heavy duty trucks) during Project operation as 559 one-way trips/day using the average daily trip and fleet mix data from the CalEEMod model output for the Project operation (PDF Pages 102 and 103 of DEIR Appendix B). This is almost three times more than the 100 truck trips/day threshold cited in the DEIR that would trigger the need for a mobile air toxics health risk assessment. Hence, the DEIR should evaluate the health risk impacts of the truck trips on the sensitive receptors that are located within the vicinity of the project site.

Response to Comment No. 26-E.1-16

This comment cites the CalEEMod Version 2020.4.0 analysis presented in Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, which provides an estimated 11,346 weekday vehicle trips and assumes that the default CalEEMod fleet mix would be appropriate to evaluate localized impacts. This misconception is fundamentally flawed as the CalEEMod model is designed for calculation of regional emissions and not for the purpose the commenter is trying to use it for (developing a localized fleet mix). CalEEMod provides the fleet mix calculated using EMFAC based on the selected county. Specifically, EMFAC calculates the fleet mix by vehicle type based on the total trips and vehicle population data for the designated county. Thus, for Los Angeles County, CalEEMod would use the same default fleet mix for all land uses within the County regardless of land use type (i.e., CalEEMod uses the same fleet mix whether the user selects an industrial park, retail, or dwelling units). Furthermore, CalEEMod is designed to calculate regional emissions from a project based on regional data. It is fundamentally flawed to apply a regional fleet mix designed for all land uses within the region to represent a single project.

This Final EIR provides additional substantial evidence demonstrating that the Project would not constitute a land use that would result in substantial heavy-duty diesel trucks (i.e., the Project would result in less than 100 diesel trucks per day) based on siting criteria included in the CARB Handbook for evaluation of TAC emissions sources. Please refer to Response to Comment No. 1-4 for additional discussion of this siting criteria of TAC emissions sources. The diesel truck activity information from Gibson Transportation Consulting (GTC) is included as Appendix E of the HRA provided as Appendix FEIR-10 of this Final EIR. A summary of the information is provided below.

GTC prepared estimates of truck activity to and from the Project Site with completion of the Project. The estimates are based on counts of existing truck activity collected at the Project Site in year 2019. The counts identified “heavy” and “light” trucks, with the distinction being that heavy trucks had a trailer while light trucks were fixed frame, or “single-unit.” The existing site counts show an average of approximately 65 light truck trips per day (approximately 33 light trucks). There was an average of approximately 13 heavy truck trips per day (approximately 7 heavy trucks) and primarily operated during normal business hours.

The Project increases the size of the on-site development envelope and also increases the proportion of office space within the resulting land use mix. Therefore, the existing truck trips were used as a basis to estimate Project truck trips, accounting for the fact that the amount of sound stage and production support space (which generates the bulk of the truck activity) would be reduced proportionally due to the resulting land use mix. Buildout truck trips resulted in approximately 130 light truck trips per day (approximately 65 light trucks) and approximately 36 heavy truck trips per day (approximately 18 heavy trucks). When discounting the percentage of non-diesel trucks, which make up representative truck fleets (as calculated using the CARB Fleet Web Database), existing uses result in a total of 52 combined light/heavy diesel truck trips per day (a total of approximately 26 diesel trucks), and buildout uses result in a total of 114 combined light/heavy diesel truck trips per day (a total of approximately 57 diesel trucks). Thus, the Project would result in approximately 62 total net new diesel truck trips (approximately 31 total net new diesel trucks) and is substantially less than the 100 trucks criteria cited in the Draft EIR that would trigger the need for a mobile air toxics HRA (see page IV.A-72 of the Draft EIR). This information further supports that the Draft EIR correctly concluded that Project-related TAC emission impacts during operations would be less than significant and, consequently, not result in a potential health risk impact.

Comment No. 26-E.1-17

- d. **On-Site Trucks:** The DEIR does not appear to account for the air quality and GHG analyses emissions associated with the on-site trucks. As noted on PDF page 103 of Appendix M, there will be a number of trucks traveling on-

site and loading areas on-site for the trucks traveling to the site. Additionally, the health risk impacts from the on-site vehicle travel, including the diesel particulate matter that will result from on-site truck VMT and idling, must be assessed. Given the proximity to receptors and potential high volume of vehicle traffic the DEIR should evaluate localized impacts and the potential for health risk impacts from these sources of emissions.

Response to Comment No. 26-E.1-17

As discussed on page IV.A-41 in Section IV.A, Air Quality, of the Draft EIR, the Project's emissions were estimated using CalEEMod 2020.4.0 software, an emissions inventory software program recommended by SCAQMD. The CalEEMod 2020.4.0 software did not have the ability to calculate on-site vehicle travel exhaust emissions; accordingly, the CalEEMod 2020.4.0 calculations in the Draft EIR could not include such emissions. On-site vehicle travel exhaust is not considered a substantial source of emissions as travel and idle time would be limited in compliance with CARB-mandated ATCM limits. As further discussed on page IV.A-72 in Section IV.A, Air Quality, of the Draft EIR, the CARB-mandated ATCM limits diesel-fueled commercial vehicles (delivery and haul trucks) to idle for no more than five minutes at any given time, which would further limit diesel particulate emissions and TAC emissions.

CalEEMod 2022 was released for full launch on December 21, 2022, after publication of the Draft EIR, and provides the ability to calculate on-site vehicle travel exhaust emissions including additional on-site travel and idle time associated with staging activities. Updated Project construction and operational emissions evaluated with CalEEMod 2022.1.1 are included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). As shown therein, the construction and operational emissions inventories include on-site vehicle emissions, and none of the significance conclusions regarding air quality impacts would change, which confirms the conclusions in the Draft EIR. Furthermore, these emissions are included in the HRA provided as Appendix FEIR-10 of this Final EIR. In addition, the Project would comply with the City's Ordinance No. 187714 (passed in December 2022), which requires all newly constructed buildings to be all electric.

Comment No. 26-E.1-18

- e. **Diesel Generators and Spray Booths:** Based on publicly available data from the SCAQMD's Facility Information Detail (FIND) database, Television City currently operates numerous sources of TAC emissions, including six diesel emergency generators, four spray booths, and six boilers.⁴ Annual TAC emissions from these sources as reported to SCAQMD in calendar year 2021 are shown in **Table 1** below. **Table 1** shows that DPM emissions from

existing operations (i.e., diesel generators) were greater than 39 pounds per year (lbs/yr) in 2021. SCAQMD's Risk Assessment Procedures (Permit Application Package "N") establish annual tier 1 screening emission levels for DPM, which range from 0.0483 lbs/yr for a 25-meter (m) receptor distance to 0.404 lbs/yr for a 100m receptor distance.⁵ According to SCAQMD's Risk Assessment Procedures, these "screening levels are pollutant emission thresholds which are not expected to produce a MICR greater than one in one million nor a hazard index greater than one."⁶ The current operational DPM emissions are nearly 100 times greater than the DPM screening emission level at 100m and 800 times greater than the screening emission level at 25 meters, indicating that the MICR from DPM emission due to the operation of the existing diesel generators is likely far greater than the 10 in a million threshold.

Response to Comment No. 26-E.1-18

Please refer to Response to Comment No. 1-3 for additional clarification regarding the qualitative health risk approach used in the Draft EIR for these sources. The commenter correctly identifies that the SCAQMD FIND database includes existing permitted sources on the Project Site. Specifically, the FIND database includes six emergency generators, four spray paint booths, and six natural gas fired boilers. The information provided in this comment (Table 1) regarding existing emissions is consistent with SCAQMD's FIND database and SCAQMD's Risk Assessment Procedures are noted for the record and will be forwarded to the decision makers for their review and consideration. However, it should be of note that the Tier 1 screening emission levels for DPM cited in this comment are for use on new sources under SCAQMD Risk Assessment Procedures for Rules 1401, 1401.1, and 212 and not relevant to existing sources. Furthermore, a Tier 1 assessment involves a simple look-up table in which an exceedance simply means that an applicant would have to conduct a detailed risk analysis. In response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which confirms the less than significant conclusion in the Draft EIR.

As discussed on page IV.E-81 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would decommission five of the six existing emergency generators and replace them with new emergency generators on-site. Table IV.A-10 on page IV.A-70 in Section IV.A, Air Quality, of the Draft EIR showed that DPM from emergency generators would decrease under the Project. The emergency generator calculation sheet was inadvertently omitted from Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR. This worksheet is included as Appendix D of the Health Risk Assessment provided as Appendix FEIR-10 of this Final EIR. As shown therein, existing DPM emissions were provided based on Television City's 2019 through 2021 Annual Emissions Reports (available on SCAQMD's FIND database as referenced in this comment) and reflect actual number of hours each of the six emergency generators were operated (approximately nine hours of runtime per existing emergency generator on an annual basis). Annual average DPM emissions from existing emergency generators results in 41.8 pounds per year averaged over the three-year period. DPM from existing emergency generators results in the vast majority of the existing health risk condition from the Project Site.

With the exception of one emergency generator (ID 618456 (i.e., Big Blue)), all existing emergency generators will be decommissioned and replaced with up to seven new emergency generators. Since the seven new generators could be located within 50 meters (approximately 170 feet) of residential uses, the Project will be required to comply with the new requirements in Table 1 of SCAQMD Rule 1470. A PDF is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, requiring new generators to meet the new emission standards included in Table 1 of SCAQMD Rule 1470 regardless of whether the generator is within 50 meters of sensitive land uses. While the emergency generators will likely be permitted for 200 hours per year consistent with SCAQMD Rule 1470, it is conservative to limit the usage in the analysis to historical annual hours of use since future emissions from new generators will substantially decrease in comparison to existing emergency generators (i.e., resultant DPM emission factors substantially decrease for future Rule 1470 compliant generators in comparison to existing older generators). Analysis of both existing and proposed generators at the maximum permitted hours (200 hours per year) rather than actual hours would overestimate the reduction in future incremental DPM emissions and reduce the Project's potential incremental health risk impacts for hours of generator usage that would typically not occur on an annual basis. The average DPM emission factor for the five existing emergency generators that will be decommissioned is 0.40 g/hphr and would decrease to 0.02 g/hp-hr for the new generators. The existing generators result in 41.8 lbs/yr of DPM based on historical annual hours of use or 837.5 lbs/yr at 200 hours. Under the Project, the seven new emergency generators combined with the Big Blue generator would result in 8.2 lbs/yr of DPM based on historical annual hours of use or 140.5 lbs/yr at 200 hours. The ratio of Project/existing generators based on historical hours is 5.1 and is 5.9 at 200 hours per year. Thus, the difference in Project versus existing emissions increases with increased use of the emergency

generators and it is more conservative to analyze generator usage based on historical annual hours of operation. Based on this information, potential TAC emissions from proposed emergency generators would substantially decrease in comparison to the existing emergency generators.

Footnote b in Table IV.A-7 on page IV.A-64 in Section IV.A, Air Quality, of the Draft EIR shows that existing paint spray booths (four permitted sources) will be removed as part of the Project. The emission inventory from these sources is also provided in Television City's AERs (available on SCAQMD's FIND database as referenced in this comment). The AER emission inventory data from the existing spray booths are included as Appendix F of the HRA provided as Appendix FEIR-10 of this Final EIR. As further discussed in footnote b of Table IV.A-7 on page IV.A-64 in Section IV.A, Air Quality, of the Draft EIR, given the nature and logistics of production activities in newer studio facilities and how spray paint booths are operated at Manhattan Beach Studios, an affiliate of the Applicant, spray paint booth usage is assumed not to increase as a result of the Project. Therefore, as stated in the Draft EIR, spray paint booth usage would not increase in comparison to existing conditions. Furthermore, any new spray paint booths at the Project Site would include the most up-to-date equipment, which would comply with applicable SCAQMD regulatory requirements (e.g., more efficient paint sprayers and HEPA filtration) and SCAQMD permit conditions. Based on this information, potential TAC emissions from proposed spray paint booths would not exceed existing emissions on the Project Site.

Natural gas usage (e.g., boilers) on the Project Site was calculated within CalEEMod and presented in Table IV.A-7 on page IV.A-64 in Section IV.A, Air Quality, of the Draft EIR. As shown therein, the Project would result in a minimal increase in natural gas emissions and resultant TACs. TAC emissions from natural gas are not a substantial contributor to health risk impacts in comparison to DPM. This is supported by SCAQMD's MATES-V study. As discussed on page IV.A-23 in Section IV.A, Air Quality, of the Draft EIR, the MATES-V study was aimed at estimating the cancer risk from toxic air emissions throughout the Air Basin by conducting a comprehensive monitoring program, an updated emissions inventory of TACs, and a modeling effort to fully characterize health risks for those living in the Air Basin. The MATES-V study concluded that approximately 50 percent of the risk is attributed to diesel particulate emissions, approximately 25 percent to other toxics associated with mobile sources (including benzene, butadiene, and carbonyls), and approximately 25 percent of all carcinogenic risk is attributed to stationary sources (which include large industrial operations, such as refineries and metal processing facilities, as well as smaller businesses, such as gas stations and chrome plating). While the Draft EIR provided natural gas usage associated with the Project, the City of Los Angeles subsequently passed an all-electric buildings ordinance, which does not allow installation of new natural gas-powered equipment, with certain exceptions. The Project would comply with this ordinance.

While the Draft EIR correctly concluded impacts would be less than significant based on the qualitative health risk analysis, further evaluation of TAC emissions in response to comments is included in a quantitative HRA, provided as Appendix FEIR-10 of this Final EIR to confirm the conclusions of the Draft EIR.

Comment No. 26-E.1-19

On Page IV.A-72, the DEIR claims that the project would not contain substantial TAC sources and that it would not result in the exposure of off-site sensitive receptors to carcinogenic or toxic air contaminants that exceed the maximum incremental cancer risk (MICR) 10 in one million or an acute or chronic hazard index of 1.0. On Page IV.A-10, the DEIR states that sources of DPM during long-term operations may include heavy duty diesel-fuelled [sic] delivery trucks and stationary emergency generators, noting on Page IV.A-43 that stationary source emissions during operation are generated from proposed emergency generators during routine maintenance/testing. On Page IV.E-81, the DEIR states that the Project will replace five of the six existing emergency generators with new emergency generators on-site. Given that the proposed project therefore includes at least five emergency generators, the DEIR's claim that the project would not contain substantial TAC sources is unsupported. Because the DEIR fails to provide evidence to support its claims on page IV.A-73 that potential TAC impacts would be less than significant, the DEIR must perform an operational HRA to quantify health risk impacts from all operational emission sources expected as a part of the proposal project. Furthermore, if the proposed project expands operations relative to existing conditions or adds additional sources of TAC emissions, operational TAC emissions are likely to be greater than those reported in the 2021 AER.

Table 1. 2021 AER TAC Emissions for Television City Productions, LLC

Pollutant ID	Pollutant Description	Annual Emissions (lbs/yr)
106990	1,3-Butadiene	0.493
7664417	Ammonia	519.433
7440382	Arsenic	0.003
71432	Benzene	0.650
7440439	Cadmium	0.003
18540299	Chromium (VI)	0.000
9901	Diesel engine exhaust, particulate matter	39.024
50000	Formaldehyde	4.400
7439921	Lead (inorganic)	0.018
91203	Naphthalene	0.053
7440020	Nickel	0.008
1151	PAHs, total, with components not reported	0.084

Response to Comment No. 26-E.1-19

As discussed in Response to Comment No. 26-E.1-18, the Project would not create new substantial sources of TACs and would result in overall reductions to existing TAC emissions at the Project Site, and the Draft EIR correctly concluded that impacts would be less than significant based on the qualitative health risk analysis. However, in response to comments, further evaluation of TAC emissions is included in a quantitative HRA, provided as Appendix FEIR-10 of this Final EIR, which confirms the conclusions in the Draft EIR.

Comment No. 26-E.1-20

5. The air quality and health risk impacts of the truck activity in the truck staging areas (shown in Figures IV.I-4 and IV.I-5 of the DEIR) that will be used during project construction are not evaluated in the DEIR. As noted previously in Comment 4, the project is expected to generate over 100,000 truck trips during construction several of which would use these staging areas. Further, as shown in the attached Figures 2 and 3, there are numerous sensitive receptors including residences, schools, and a hospital that are located in the vicinity of these staging areas that would be exposed to criteria air pollutant and toxic air contaminant emissions including diesel particulate matter emissions from trucks that use these staging areas. Hence the project must assess and disclose these impacts in the DEIR.

Response to Comment No. 26-E.1-20

Refer to Response to Comment No. 26-24 regarding haul truck staging areas. As discussed therein, all haul truck staging would occur on-site per LADOT's approval letter dated June 30, 2022 (see the LADOT Haul Route Approval Letter included in Appendix M.5 of the Draft EIR). The two off-site staging locations described and evaluated in the Draft EIR are no longer proposed. Accordingly, there would be no off-site idling. As such, an HRA is not warranted for sensitive receptors near the two removed off-site staging areas. The removal of the staging locations is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 26-E.1-21

6. The DEIR relies on the use of SCAQMD's Localized Significant Thresholds (LSTs) to evaluate the localized impacts of criteria air pollutants (NO_x, CO, PM₁₀, and PM_{2.5}) during construction and operation. There are several issues with the DEIR's use of SCAQMD's LSTs, as described in greater detail below.
 - a. First, the use of SCAQMD's LSTs likely underestimates potential construction and operational project impacts as there are receptors located less than 25

meters from the project boundary (Figure IV.A-4) and the minimum distance available in the SCAQMD's LST is 25 meters. Therefore, it may be inappropriate to use the SCAQMD's LSTs with a receptor distance of 25 meters. The use of the 25-meter look-up table does not address unique features of the Project, including siting two new private streets adjacent to the western and southern boundaries of the Broadcast Center Apartments. These six-lane and four-lane streets would support traffic adjacent to the windows and balconies of Broadcast Center residents. Moreover, the new private streets would essentially create "canyons" between the Broadcast Center Building and the new buildings at the edges of the Project Site. The TAC emissions from diesel-fueled trucks could linger in the "canyons" for longer periods, rather than more quickly dispersing. The DEIR does not address these unique and potentially harmful conditions created by the Project on nearby sensitive receptors. We request that the modeling be updated to address this unique conditions. The LST analysis was not designed to address these unique circumstances, thus the DEIR should consider running a project-specific analysis using a model such as the AERMOD dispersion model or a computational fluid dynamic model which can more accurately evaluate this unique situation, which could further evaluate how the concentration of pollutants is dispersed from these emissions sources to nearby sensitive receptors. These models can be used to more accurately represent the unique situation of this project through representation of the buildings that the LST analysis has not accounted for.

- b. Second, according to Tables IV.A-9, IV.A-10, IV.A-11, and IV.A-13 the DEIR references thresholds from Source Receptor Area (SRA) 2 for both NO_x and CO emissions,⁷ however, the project location falls within SCAQMD SRA 1⁸. Additionally, the analysis does not address the federal 2010 1-hour NO₂ standard.⁹ The DEIR must evaluate the potential impact relative to the federal 2010 1-hour NO₂ [sic] standard.
- c. Lastly, according to Tables IV.A-9, IV.A-11, and IV.A-13, the LST thresholds the construction emissions are compared against an assumed 5-acre site. However, if the project does in fact pursue a phased approach to construction as is outlined in Table IV.A-12 and IV.A-13, the area of land under construction at any given time may be much less than 5 acres. The LST thresholds for smaller land sizes are more stringent, and thus the DEIR analysis is not conservative, and the Project construction could exceed LST thresholds. Given that the Project may have construction areas much smaller than 5 acres, the DEIR must evaluate the potential impact for construction areas less than 5 acres, which could be evaluating LSTs based on the smaller LST area thresholds or through performing of air dispersion modelling.

- ⁷ <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/appendix-c-mass-rate-lst-look-up-tables.pdf?sfvrsn=2>

Response to Comment No. 26-E.1-21

In part (a) of the comment, the commenter misconstrues the information provided in the SCAQMD's LST methodology for CEQA evaluations, suggesting that use of the analyzed 25-meter receptor distance may be inappropriate for projects with receptors within 25-meters of the site boundary and recommends the use of a computational fluid dynamic model instead. SCAQMD provides mass rate look-up tables with LSTs based on the distance between receptors and project site boundaries.⁷⁷ Page 3-3 of the SCAQMD LST methodology provides the following specific guidance: "The closest receptor distance on the mass rate LST look-up tables is 25 meters. It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters." The commenter's suggestion directly contradicts the SCAQMD LST methodology, which states that, for receptors closer than 25 meters to a project site, the 25-meter mass rate look-up table should be used. Table IV.A-10 in the Draft EIR demonstrates that incremental operational emissions would be below the respective SCAQMD LST emission limits. Table IV.A-11 in the Draft EIR demonstrates that incremental construction emissions with incorporation of mitigation measures would also be below the respective SCAQMD LST emission limits. See Response to Comment No. 26-E.1-2 for a discussion of why further investigation into speculative "air canyon" effects is not warranted. Nevertheless, since the publication of the Draft EIR, the City has adopted Ordinance 187714, requiring all newly constructed buildings to be all electric with certain exceptions, and new PDFs have been added, presented in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, requiring the use of all electric off-road operational equipment (including landscaping equipment) and providing electrical tie-ins at basecamps to remove the need for portable generators. These changes would result in even lower on-site operational emissions than presented in the Draft EIR. Thus, the commenter does not provide substantial evidence that SCAQMD's LSTs likely underestimate potential construction and operational Project impacts.

As discussed on page IV.A-68 in Section IV.A, Air Quality, of the Draft EIR, the maximum on-site daily emissions for NO_x, CO, PM₁₀, and PM_{2.5} were calculated using CalEEMod and compared to the applicable SCAQMD LSTs for the area (SRA 1) based on

⁷⁷ Refer to www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds for more information.

a site acreage of five acres. Although the Project Site exceeds five acres and would have active construction and operational activities that exceed five acres, it was conservatively assumed that all on-site emissions would occur within a 5-acre area. This approach is recommended by SCAQMD for a screening-level analysis and conservatively over-predicts potential localized impacts, since more pollutant emissions would occur within a smaller area (i.e., more pollutant emissions per square meter) and in closer proximity to potential sensitive receptors.⁷⁸ In addition, the shortest receptor distance provided in the SCAQMD look-up tables is 25 meters (82 feet). The SCAQMD recommends that projects with boundaries closer than 25 meters to the nearest receptor use the LSTs for receptors located at 25 meters as explained above.⁷⁹

Potential impacts were evaluated at the closest off-site sensitive receptor, which is the residential use located directly east of the Project Site boundary. The 25-meter distance was conservative as the vast majority of construction and operational activities would be located farther away from the property boundary. Thus, the localized air pollutant impact analysis provided in the Draft EIR was conservative and conducted consistent with the SCAQMD LST methodology for CEQA evaluations.

Please note that the commenter's assertion that the Project would include new "private streets" is incorrect. Refer to Response to Comment No. 35-111.

Part (b) of this comment correctly identifies that Tables IV.A-9, IV.A-10, IV.A-11, and IV.A-13 in the Draft EIR reference thresholds from SRA 2 for both NO_x and CO emissions. While the Project Site is in close proximity to SRA 2, this was an inadvertent error and SCAQMD LSTs should have been provided for SRA 1. The updated LSTs for SRA 1 are included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Specifically, the LST for NO_x is reduced from 221 to 161 pounds per day and the CO LST increased from 1,531 to 1,861 pounds per day. While the LSTs for NO_x and CO are different, the significance conclusions provided in Tables IV.A-9, IV.A-10, IV.A-11, and IV.A-13 of Section IV.A, Air Quality, of the Draft EIR remain unchanged. Localized impacts remain less than significant.

The federal 1-hour NO₂ standard is evaluated over a 3-year average duration. As discussed on page IV.A-59 in Section IV.A, Air Quality, of the Draft EIR, construction impacts were evaluated over a 32-month duration. As such, the federal 2010 1-hour NO₂ standard was not applicable. In response to this comment, the equivalent federal 1-hour

⁷⁸ Ian MacMillan, SCAQMD CEQA Program Supervisor, Telephone Conversation, November 10, 2011.

⁷⁹ SCAQMD, Localized Significance Thresholds, www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds, accessed November 7, 2023.

standard LST has been calculated based on the SCAQMD LST methodology. The calculated LST threshold for the federal 1-hour NO₂ standard is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As shown therein, the NO_x LST threshold would be reduced from 161 pounds per day to 119 pounds per day to account for the federal 1-hour NO₂ standard. The significance conclusions provided in Tables IV.A-9, IV.A-10, IV.A-11, and IV.A-13 of Section IV.A, Air Quality, of the Draft EIR remain unchanged when considering the calculated LST for the federal 1-hour NO₂ standard. Localized impacts remain less than significant.

Part (c) of this comment incorrectly assumes that the construction analysis under the long-term buildout scenario should have evaluated areas of land under construction of less than five acres. Please refer to Details of Project Buildout and Construction Activities included as Appendix FEIR-8 of this Final EIR for a detailed discussion of the long-term buildout scenario. As discussed therein, the Project would likely be developed according to the locations of proposed subterranean parking structures. It is impractical and inefficient to build subterranean parking structures in separate sections and similarly impractical to construct above-ground structures separately from the subterranean parking it sits on. Therefore, entire subterranean structures, as well as the surface development on top of those structures, would likely be built together, constituting a phase of construction. As shown in Figure 2 of Appendix FEIR-8, Details of Buildout and Construction, each of the defined areas of construction would be a minimum of approximately five acres. Thus, the Draft EIR correctly used the 5-acre SCAQMD LSTs.

Comment No. 26-E.1-22

7. On Page IV.A-53, the DEIR assumes VMT reduction features (e.g., TR-PDF-2) result in an approximately 37% reduction in overall VMT, citing RTP/SCS strategies as the basis of the reductions in the length and number of automobile trips. CARB's Draft 2022 Progress Report¹⁰ indicates that most trends (e.g., land use and housing trends, travel behavior, per capita VMT, etc.) "demonstrate limited progress in meeting the targets through 2019" and "many trends moved in the wrong direction, away from advancing climate goals and showing worsening inequality." The report concludes that "Californians are driving more... despite State planning statutes that encourage better transportation and planning decisions." The DEIR does not provide sufficient evidence that the VMT reduction features in TR-PDF-2 will achieve the stated VMT reductions and therefore may be overestimating the VMT reductions achievable in practice.

¹⁰ https://ww2.arb.ca.gov/sites/default/files/2022-06/2022_SB_150_Main_Report_Draft_1.pdf

Response to Comment No. 26-E.1-22

As discussed on page IV.A-44 of Section IV.A, Air Quality, of the Draft EIR, the Project-related VMT was calculated using the LADOT VMT Calculator. Previously, trip generation for land uses was calculated based on survey data collected by the Institute of Transportation Engineers (ITE). However, these ITE trip generation rates were based on data collected at suburban, single-use, free-standing sites, which may not be representative of urban mixed-use environments. Beginning in 2019, the USEPA sponsored a study to collect travel survey data from mixed-use developments in order provide a more representative trip generation rate for multi-use sites. Results of the USEPA survey indicate that trip generation and VMT are affected by factors, such as resident and job density, availability of transit, and accessibility of biking and walking paths. Based on these factors, the USEPA developed equations known as the EPA Mixed-Use Development (MXD) model to calculate trip reductions for multi-use developments. The LADOT VMT Calculator incorporates the USEPA MXD model and accounts for the Project's VMT-reducing features, such as increased density and proximity to transit. As shown on page 374 of the Supplemental VMT Analysis provided in Appendix E to the Transportation Assessment (Appendix M.1 of the Draft EIR), MXD factors results in a reduction from approximately 126,364 daily VMT to approximately 97,076 daily VMT. The TDM measures described in Project Design Feature TR-PDF-2 would further reduce VMT to approximately 79,629 daily VMT (an approximately 18-percent reduction in Project VMT after accounting for MXD factors). The overall reduction in VMT accounting for both MXD factors and implementation of Project Design Feature TR-PDF-2 would result in an approximately 37 percent reduction in VMT.

The comment's claim that the Project's TDM Program "has been found inadequate" is unsupported by the information in the referenced document. In fact, the CARB 2022 Progress Report shows that GHG and VMT per capita have decreased by 4 percent in the SCAG region between 2005 and 2019 (Table 1, page 17). Given that this is the overall average throughout six counties, 191 cities, and over 38,000 square miles of land area, the vast majority of which is far less densely developed than the Project vicinity, has limited transit service, and has no dedicated TDM program of any kind, it is not at all indicative of the likely success or failure of the Project's TDM Program. The Project trip adjustments are based specifically on research on the effectiveness of various TDM measures, as discussed in detail in Attachment G to the TAG, and are, thus, supported by substantial evidence. Refer also to Topical Response No. 11, Transportation Demand Management, regarding the effectiveness of TDM measures.

Comment No. 26-E.1-23

8. The DEIR does not appear to properly account for visitor trips that will result from the construction of additional sound stages and a new Mobility Hub. As a result, the analysis may underestimate the daily trip rate, and therefore may

underestimate the Project's operational VMT and associated mobile source operational emissions.

- a. In Table IV.K-4, it is noted that the Project will have 350,000 square feet of sound stages. Existing sound stages at the Project site have audience capacities that range from 100 to 300 people,¹¹ indicating that there is significant visitor traffic from audience members to this land use. The new sound stages presumably will have similar or greater audience capacities, and thus will also have significant visitor trips associated with their operation. However, on Page IV.K-73 it is stated that the total daily vehicle trips were estimated using the total employees associated with non-retail and studio-related land uses. Thus, the DEIR does not seem to account for non-employee trips to these land uses, and thereby does not account for the VMT and associated air quality impacts of visitor trips resulting from audiences visiting the new sound stages.
- b. Per Page II-26, the new Mobility Hub is designed to “encourage employee and visitor use of public transit through the provision of a shuttle service” and would “provide an off-street space for Project employees and visitors to access passenger pick-up/drop-off zones, carpools, vanpools, shuttles, ride-share services, taxis, and other commercial and non-commercial vehicles, as well as the temporary parking of buses”.¹² However, as noted above, the DEIR only accounts for employee trips in its vehicular trip analysis. Thus, the DEIR also does not seem to account for visitor trips associated with the use of the Mobility Hub, which may include shuttles, buses, and other commercial and non-commercial vehicles with a greater emissions intensity than passenger vehicles.

¹² TVC 2050 Project—Draft Environmental Impact Report—Project Description

Response to Comment No. 26-E.1-23

Contrary to this comment, the transportation analysis does not underestimate the daily trip rate for the Project and, therefore, does not underestimate the Project's operational VMT and associated mobile source operational emissions. Refer to Sections A, Empirical Data, and B, Visitor Trips, of Topical Response No. 10, Trip Generation, for a discussion of the data upon which the Project trip generation rates were based and a detailed explanation of visitor trips.

In part (a) of the comment, reference is made to statements in Table IV.K-4 and on page IV.K-73 of Section IV.K, Transportation, of the Draft EIR to the effect that the sound

stage trip generation was based on the number of employees and, therefore, excluded visitor trips, such as audience trips. That conclusion is incorrect. Table IV.K-4 shows that the trip rates used for the sound stages are based on square footage and Footnote (c) of that table shows that the rates are based on empirical data from other studios in Southern California. As further discussed in Topical Response No. 10, NBC Universal operated studios with audience components when the empirical trip data was collected, and audience participation trips were explicitly incorporated into the NBC Universal Vision Plan Project Trip Generation Model. Thus, audience and visitor trips are accounted for in the base trip rates used to estimate the overall Project trip generation, including the growth in the number of sound stages and audience stages in the Project.

Part (b) of the comment discusses the trips associated with the Mobility Hub. As described on page IV.K-74 of Section IV.K, Transportation, of the Draft EIR, the Project's VMT analysis (and the operational traffic impact analysis) excludes (i.e., does not take credit for) most of the elements of the TDM Program and, therefore, represents a conservative (i.e., high) estimate of total Project trips. The Mobility Hub would be responsible for directly connecting the Project Site to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction, which is expected to increase the effectiveness and utilization of transit to/from the Project over and above what is included in the Draft EIR transportation analysis. Thus, rather than increasing the number of Project vehicle trips as suggested by the comment, the Mobility Hub would reduce the number of Project trips below what was analyzed in the Draft EIR. Refer to Topical Response No. 7, Mobility Hub, for more information.

Comment No. 26-E.1-24

9. The DEIR does not properly evaluate the emissions from construction under the extended 20-year buildout scenario. While Table IV.A-13 on Page IV.A-78 in the DEIR shows emission estimates for overlapping construction and operation, the CalEEMod model runs for construction do not appear to be performed properly to reasonably estimate the construction impacts at different years.
 - a. On Pages IV.A-74 and IV.A-75, the DEIR states that the Project Applicant is seeking a development agreement with a term of 20-years, and that as a result it is likely that construction would happen over this extended period of time concurrent with operation. As a result, the emissions for construction presented in Table IV.A-12 and Table IV.A-13 are assumed to be 50% of the maximum daily emissions that were found in each respective CalEEMod run. However, the assumption that 50% of the max daily emissions reported in CalEEMod would apply to each 5-year period is arbitrary and the DEIR does not provide sufficient evidence to justify this assumption. The DEIR needs to reasonably estimate what the level of construction activity may be over the

course of the 20-year construction period to accurately characterize potential construction emissions and associated air quality and health risk impacts.

Response to Comment No. 26-E.1-24

Please refer to Details of Project Buildout and Construction Activities included as Appendix FEIR-8 of this Final EIR for a detailed discussion of the long-term buildout scenario. As discussed therein, at most, there could be approximately four total phases of below-grade construction, any of which individually would be substantially less intensive (in terms of required construction equipment, haul/delivery truck trips, and construction employees, as discussed further below) than a single phase of construction. Under the long-term buildout scenario, no changes in the total amount of soil hauled or the square footage of structures to be demolished would occur in comparison to the 32-month schedule. In addition, the number of hours equipment would need to operate remains the same in either scenario since the scope of work would not change. Under the long-term buildout scenario, the amount of equipment operated on a day-to-day basis would be reduced due to the reduction in square footage of construction built at any one time. The same amount of gross building square footage would be built in either scenario. Therefore, the same amount of material needed to be constructed and delivered to the Project Site would remain the same. However, the number of daily deliveries would be substantially reduced as less work would be conducted each day.

Impacts associated with a long-term buildout were analyzed in Subsection 3.e in Section IV.A, Air Quality, and Appendix B of the Draft EIR. Construction activities were conservatively assumed to occur at approximately 50 percent of the maximum daily intensity that would occur during the 32-month single-phase construction duration (2023–2026), with the exception of mat pour activities, which were assumed to be the same as under the 32-month single-phase construction duration. Specifically, as stated in footnote 90 on page IV.A-75 in Section IV.A, Air Quality, of the Draft EIR, with a long-term buildout and operation of some facilities on-site while construction is occurring, only a single excavation operation could be accommodated on-site, thus reducing the excavation activities and associated haul truck trips by half. A single excavation operation would only result in half the number of pieces of equipment operated and result in approximately 300 daily haul truck trips instead of 600 trips. Other construction activities, such as building construction and finishing, would likely occur at a further-reduced level but were still assumed to occur at 50 percent of the maximum daily intensity. The construction assumptions used in the Draft EIR for the long-term buildout conservatively analyzed potential air quality impacts, and the analysis is supported by substantial evidence provided above and in the Draft EIR.

From a health risk perspective, since both the 32-month and long-term buildout schedules would involve equal overall construction activity and, therefore, comparable total

Project emissions (with the long-term buildout benefitting from emission reductions associated with future efficiency and emission control advancements), the 32-month, more intensive schedule would result in the greatest reasonably foreseeable Project-related TAC emissions occurring over the shortest anticipated construction period. Age-related risk sensitivities amplify the exposure effects of TAC for children of various ages. The higher, shorter-term exposure of the 32-month schedule appropriately and most conservatively accounts for the amplified exposure effects associated with childhood age sensitivities.

Comment No. 26-E.1-25

10. The DEIR does not provide complete technical documentation in the appendices for the air quality and GHG analyses, so it is not clear if the peak daily emissions are accurately represented in the DEIR. The missing files (e.g., CalEEMod run outputs) prevent the reviewer from verifying the technical analyses and results of the analysis.
 - a. On PDF Page 2 of DEIR Appendix B provides a table of contents for all CalEEMod Output files corresponding to the 2026 Buildout and Long-Term Buildout scenarios. However, the actual output reports provided are incomplete. First, the CalEEMod model run output for TVC Operations—Total Permitted Land Uses on PDF Page 264 of DEIR Appendix B seems to have several pages missing. Second, the table of contents lists two runs as ‘2043 Buildout’ runs. However, the corresponding runs in the output files have 2045, not 2043, as the operational year. Thirdly and most importantly, the summer output reports for the CalEEMod mode runs are not provided in Appendix B. SCAQMD Mass Daily Air Quality Significance Thresholds¹³ are for maximum daily emissions, which should be calculated as the maximum daily emissions across both summer and winter seasons. Since no documentation is provided for summer emissions in the Appendix, maximum daily emissions have not been adequately estimated.

¹³ <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>

Response to Comment No. 26-E.1-25

Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR provided the necessary CalEEMod output files for review of potential air quality impacts. The commenter incorrectly asserts that the CalEEMod output file for TVC Operations—Total Permitted Land Uses is missing pages. As this CalEEMod output file was only for operational emissions, Section 3.0, Construction Detail, was not necessary and would have been confusing and misleading to include in the appendix. Regarding the table of contents, there are two CalEEMod output files for Year 2043. The first CalEEMod output file is for

Existing (Buildout 2043) and provides the emissions inventory for existing uses in Year 2043. The second CalEEMod output file is for Project (Buildout 2043) and provides the emissions inventory for the Project in Year 2043. It is noted that the operational year for CalEEMod output files shows 2045. CalEEMod 2020 only provides the ability to analyze five-year increments beginning with Year 2035 (e.g., 2035, 2040, 2045, 2050, etc.). Project operational emissions are provided on page 24 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR. As shown therein, there is no change in pollutant emissions between Year 2040 and Year 2045, with the exception of CO, which decreases from 142 to 141 pounds per day. Therefore, Year 2045 was correctly selected to represent Year 2043 operational emissions.

Regarding summer versus winter seasonal daily air pollutant emissions, it is important to note that CalEEMod emission calculations for on-site construction equipment (e.g., excavator) and operation sources (area, energy, and stationary [i.e., emergency generator]) are the same for both summer and winter. Project-related mobile source (construction and operational vehicular trips) summer emissions in comparison to winter emissions increase slightly for VOC and CO, decrease slightly for NO_x, and remain unchanged for PM₁₀ and PM_{2.5}.⁸⁰ Given that the Project results in regional construction and operational winter NO_x emissions that exceed the significance threshold and that mobile source NO_x emissions decrease for summer, winter emissions would represent worst-case daily emissions. Therefore, CalEEMod winter emission output files were provided in Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR.

As discussed above in Response to Comment No. 26-E.1-17, CalEEMod 2022 was released for full launch on December 21, 2022. In response to public comments on the Draft EIR, Project construction and operational emissions were subsequently evaluated with CalEEMod 2022.1.1 and included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). As shown therein, Project-related construction and operational emissions calculated using CalEEMod 2022.1.1 in comparison to CalEEMod 2020.4.0 results in a reduction in CO, PM₁₀, and PM_{2.5} and similar VOC, SO_x, and NO_x emissions. The updated analysis confirms the Draft EIR's conclusions that both winter and summer operational daily pollutant emissions would be below the applicable significance thresholds.

⁸⁰ Season selection affects emission rates because seasonal fuel composition differences lead to a difference in fuel Reid Vapor Pressure (RVP), and RVP affects evaporative emissions. In addition, idle emissions rates also vary by season (CARB, EMFAC2021 Volume II-Handbook for Project-Level Analysis (page 6), 2021).

Comment No. 26-E.1-26

11. The proposed project includes buildings that utilize natural gas for heating (e.g., space and water heating) and cooking, which could conflict with the State's SIP strategy¹⁴ and the 2022 AQMP for the South Coast Air Quality Management District (SCAQMD)¹⁵. These strategies include control measures that require the use of zero emission space and water heaters in new residential and commercial buildings starting in 2030 (well before long term build out date of 2043). Additionally, per the State's SIP strategy, the use of these fuels in buildings (primarily natural gas) for space and water heating can "contribute significantly to building-related criteria pollutant and GHG emissions and provide an opportunity for substantial emissions reductions where zero-emission technology is available". [sic]

- a. For example, the State's SIP strategy includes a zero-emission standard for space and water heaters. Under this measure, CARB intends to develop a zero-emission standard using its regulatory authority for GHGs (which includes consideration of related criteria pollutant reduction benefits) for space and water heaters sold in California. This measure would go into effect in 2030 and require 100% of new space and water heaters (for either new construction or replacement of burned-out equipment in existing buildings) sold in California to meet the zero-emission standard.
- b. Similarly, the SCAQMD's 2022 AQMP includes several building control measures intended to reduce emissions from water heating, space heating, cooking, and other combustion sources in both residential and commercial applications. In general, these control measures include the proposed development of rules to require installation of zero emission equipment and appliances in both new and existing buildings.

¹⁴ https://ww2.arb.ca.gov/sites/default/files/2022-08/2022_State_SIP_Strategy.pdf

¹⁵ <http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2022-air-quality-management-plan/07-ch4.pdf?sfvrsn=6>

Response to Comment No. 26-E.1-26

As discussed above in Response to Comment No. 26-E.1-17, the Project would comply with the City's Ordinance No. 187714 (passed in December 2022), which requires all newly constructed buildings to be all electric and would be considered consistent with the SCAQMD 2022 AQMP and the State's SIP strategy as discussed in the comment. The inclusion of natural gas space and water heaters in the Draft EIR analysis constitutes a conservative assessment of local emissions. The modeling output files, included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see

Appendix FEIR-9 of this Final EIR), present an updated estimate of operational emissions incorporating building electrification using CalEEMod Version 2022.1.1. Minor differences to in-built model assumptions contribute to commensurately minor differences in the overall emission estimates. The updated analysis confirms the Draft EIR's conclusions that daily pollutant emissions would be below the applicable significance thresholds.

Comment No. 26-E.1-27

12. The DEIR does not adequately evaluate the potential land uses allowable under the proposed project. On page 17 of Chapter D.II Project Description, the Project's Specific Plan is described as having flexible land uses. In addition to the permitted land uses of production-related and ancillary uses, the Specific Plan also does not explicitly prohibit related uses and facilities including: basecamps, communication facilities, conference facilities, modular offices and trailers, studio support facilities, parking, various ancillary commercial and retail uses, catering facilities, special events, audience and entertainment shows, museum exhibits and theatres, childcare and educational facilities, fitness facilities, emergency medical facilities, fuelling [sic] stations and vehicle repair, maintenance and storage facilities, mills/manufacturing, sleeping quarters for on-site personnel, restaurants and special event areas, security facilities, signs, storage and warehouses, and helipads. This is an extensive list of land uses, most of which are not analysed [sic] in the Project's CalEEMod runs, which only include the following land uses: production offices, sound stages, retail centres, [sic] and a restaurant. Several of the related land uses listed in Chapter D.II (including childcare and educational facilities, medical facilities, warehouses, and museum exhibits and theatres) would have different associated energy and water demands than the land uses currently analysed [sic] by the Project. As a result, the Project's estimated air quality and greenhouse gas emissions would not be accurate if any of these other land uses were constructed. Additionally, if other related land uses that are not directly ancillary to the production work are constructed, the Project's VMT analysis (Appendix M) would also be inadequate, since it only estimates the traffic generated by employees traveling to the Project Site for production-related work.

Response to Comment No. 26-E.1-27

As discussed in Topical Response No. 3, Permitted On-Site Uses, the proposed Specific Plan would allow five land uses (in addition to the ancillary sitewide uses that support the studio and the five land uses): sound stage, production support, production office, general office, and retail. Of the five land uses, only general office and restaurant uses have direct corresponding land use categories within the CalEEMod or LADOT VMT models. Therefore, it was necessary to utilize representative land uses within these models. Because representative uses are not exact representations of the Project's studio

land uses, representative uses which would result in a conservative estimate of operational water, energy, and VMT were selected. Refer to the Energy Consumption Memorandum by AMA Group included as Appendix C-4 in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR), which discusses and validates the CalEEMod land use assumptions in the Draft EIR.

General office and production office uses were represented by the General Office Building land use within CalEEMod. The CalEEMod strip mall land use type was used to represent retail uses and the CalEEMod high-turnover (sit-down) restaurant land use type was used to represent proposed restaurant uses. While CalEEMod provides 79 different land use types, some of the studio-related land uses that are proposed as part of the Project are not specifically included in CalEEMod. Therefore, sound stages and production support were represented by the land use types within CalEEMod that are most reflective of the types of operations which would occur on these portions of the Project facility. As an example, the CalEEMod strip mall land use type (electricity usage rate of 13.07 kWh/sf/yr) was selected to represent production support. Production support includes a wide variety of studio-related uses. To provide perspective, CalEEMod provides an electricity usage rate of 10.86 kW/sf/yr for general light industry uses and 12.5 kW/sf/yr for medical office buildings. As such, use of the CalEEMod strip mall land use type for production support uses is conservative and likely overstates utility usage. An electricity usage rate for the proposed sound stages was developed based on 2017–2018 utility bills from Manhattan Beach Studios (MBS) in which electricity bills were separately available for each sound stage. To develop a future stage kW/sf/yr rate that would reflect a more modern-energy efficient use, the total annual electricity usage for the MBS stages was divided by the total square footage of the sound stages, resulting in a rate of 11.34 kWh/sf/yr. Natural gas meters at MBS were not directly metered for each individual sound stage, and, therefore, the same calculation method was not available. Instead, the Draft EIR used the CalEEMod land use type of industrial park to represent the proposed sound stages.

The Land Use Exchange Program in the proposed Specific Plan would allow limited exchanges between certain land uses. The Land Use Exchange Program allows for limited increases in the size of sound stage and production support uses in exchange for equivalent decreases in the size of other uses but does not allow any increase in the square footage of production office, general office, or retail uses. Thus, a land use exchange to increase sound stage or production support would be reflected by increasing the modeled Industrial Park land use square footage and reducing the modeled General Office Building land use square footage. Please refer to pages IV.A-64 and IV.A-70 through IV.A-71 in Section IV.A, Air Quality, of the Draft EIR for the analysis of air quality impacts associated with the land use exchange scenarios.

Tables 8.1 and 9.1 in Appendix D of the CalEEMod 2020.4 User Guide present the energy and water use characteristics of these land uses and show that the General Office

Building land use subtype in the CalEEMod model results in greater (i.e., more conservative) energy and water demands than the Industrial Park land use subtype. Thus, the Draft EIR's analysis, which conservatively modeled the maximum allowable General Office Building, most conservatively estimates electrical and water needs of the Project facility even after accounting for potential land use exchanges. Similarly, as presented in Table 1 of the City of Los Angeles VMT Calculator Documentation, the General Office Building land use would result in greater VMT than the LADOT VMT model's representative Light Industrial land use, which also represents a conservative assessment of Project emissions. Therefore, contrary to the commenter's assertion, the Draft EIR's analysis of energy, water use, and VMT appropriately reflects a conservative assessment of Project operations.

Comment No. 26-E.1-28

- c. [sic] As noted in Pages II-1 (footnote 1) and II-13 (footnote a of Table II-2) of the DEIR, the Project uses a definition of square footage based on the TVC 2050 Specific Plan rather than the Los Angeles Municipal Code (LAMC) definition of floor area. This difference leads to an underestimation in the floor area of the project used in the CalEEMod analysis. The TVC 2050 Specific Plan square footage fails to include numerous land uses that would be captured as floor area under the LAMC definition of floor area, which leads to square footage of floor area potentially unaccounted for in the DEIR's air quality and GHG emissions analysis. Examples of these uses include the Mobility Hub, production trailers, basecamp areas, and the parking areas with associated driveways and ramps. A meaningful analysis should include all areas and uses that would generate pollutant emissions and thereby impact air quality.
- d. [sic] Additionally, it is not clear which definition of floor area was used to estimate the square footage of the existing land uses. If the CalEEMod runs for the existing conditions utilized the LAMC-defined floor area, the square footage of existing conditions could be overestimated. In turn, this could lead to an underestimation of the project emissions, which are estimated based on the incremental emissions between existing conditions and project buildout.

Response to Comment No. 26-E.1-28

As shown on pdf pages 25, 50, 98, 108, 118, 128, 153, 177, 202, 265, 275, 285, and 295 of Appendix B of the Draft EIR, and discussed in Response to Comment No. 26-E.1-27 above, a variety of land use categories available in the CalEEMod model were utilized to develop representative emissions for Project operations. Both the future Project operations and existing conditions were modeled utilizing consistent definitions of square footage and represent an apples-to-apples comparison of Project emissions. Refer to Topical

Response No. 2, Definition of Floor Area is Appropriate. As discussed therein, the additional square footage is related to the Mobility Hub; basecamp uses; outdoor eating areas (covered or uncovered); trellis and shade structures; covered walkways and circulation areas (including the existing marquee structure); and all temporary uses, including sets/facades, etc.

As shown on pdf page 98 (CalEEMod Output—TVC Operations—Total Permitted Land Uses) of Appendix B, Air Quality and Greenhouse Emissions, of the Draft EIR, Project-related operational emissions included approximately 2,600 parking spaces within enclosed parking (default of 1,040,000 square feet) and approximately 2,700 parking spaces within unenclosed parking (default of 1,080,000 square feet) for a total of 2,120,000 square feet of covered parking. However, as shown in Table IV.M.2-2 (Estimated Project Wastewater Generation—Proposed Development Program) of the Draft EIR, the Project would result in a total of approximately 1,503,600 square feet of covered parking. The Project would only include approximately 1,014,000 square feet of enclosed parking and approximately 489,600 square feet of unenclosed parking. From an electricity usage standpoint, unenclosed space requires lighting and enclosed space requires both ventilation and lighting. Based on this information, potential GHG emissions and electricity usage associated with parking were conservative and overstated by including 616,400 square feet of additional covered parking (2,120,000 square feet less 1,503,600 square feet).

The Project would result in approximately 213,500 square feet of covered basecamp areas (approximately 144,000 square feet enclosed and approximately 69,500 square feet unenclosed). The Project would also include 158,100 square feet of uncovered basecamp. However, the uncovered basecamp areas would not require mechanical ventilation or lighting. In addition, the Mobility Hub would include approximately 36,000 square feet of covered areas that would not be fully enclosed (Table IV.M.2-2, Estimated Project Wastewater Generation—Proposed Development Program, in Section IV.M.2, Utilities and Service Systems—Wastewater, of the Draft EIR). Basecamp and Mobility Hub would result in approximately 250,000 square feet of covered areas. Thus, the Draft EIR's GHG analysis, which conservatively included 616,400 square feet of additional covered parking, accounted for lighting electricity usage from uses in this area. In response to this comment, electricity from the ventilation of 118,000 square feet of the 144,000 square feet of enclosed basecamp areas was specifically accounted for in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). This clarification does not change any of the impact conclusions in the Draft EIR. Overall, lighting and ventilation associated with basecamp and Mobility Hub operations would represent approximately three percent of the total electricity usage from the Project.

While existing basecamp and production activities occasionally require the use of small portable generators when electrical hookups are not available, the Project will provide a sufficient number of electrical hookups in basecamp areas such that use of portable generators will not be needed. Project Design Feature GHG-PDF-3 is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of additional electrical hookups at all basecamp areas. Diesel trucks, including food trucks accessing basecamps, would travel on-site for short distances and would plug into electric power when parked in lieu of the use of small portable generators. For purposes of the analysis included as Appendix FEIR-9 of this Final EIR, electricity usage associated with the electrical hookups were all considered new (i.e., no credit for electricity usage associated with existing electrical hookups) to be conservative. In addition, a PDF is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to include four EV chargers at the Mobility Hub for future electrical shuttles.

As discussed on pages IV.A-43 to IV.A-44 of Section IV.A, Air Quality, of the Draft EIR, CalEEMod does not calculate criteria pollutant emissions from regional power plants associated with building electricity use. When electricity is used in buildings, the electricity generation typically takes place off-site at power plants, the majority of which burn fossil fuels. Because power plants are existing stationary sources permitted by air districts and/or the USEPA, criteria pollutant emissions are generally associated with the power plants themselves, and not individual buildings or electricity users.⁸¹ Additionally, criteria pollutant emissions from power plants are subject to local, state, and federal control measures, which can be considered the maximum feasible level of mitigation for stack emissions. Therefore, electricity usage associated with the basecamp areas and the Mobility Hub would not change air pollutant emissions presented in the Draft EIR. As discussed previously, vehicle traffic associated with basecamp activity, including vehicle trips, and idling, are already accounted for in the empirical trip generation parameters used in the Draft EIR. As discussed in Response to Comment No. 26-E.1-18, although the Draft EIR does not assume the construction of new paint booths, it is expected that VOC emission from operational activities, including VOCs from miscellaneous uses at basecamps, would be less than or equal to those of the existing conditions. Electricity associated with basecamp areas and the Mobility Hub, which were described in the Draft EIR, were further detailed and analyzed in response to comments on the Draft EIR and are included within the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR). This analysis confirms that impacts associated with basecamp and the Mobility Hub were accounted for in the air quality, GHG, and energy impact analyses in the Draft EIR, and there are no changed conclusions and no new significant impacts.

⁸¹ California Air Pollution Control Officers Association, CalEEMod User's Guide, Appendix C, Emission Calculation Details for CalEEMod (Page C-53), April 2022.

Comment No. 26-E.1-29

13. The DEIR does not evaluate the potential impacts of phased construction and off-site emissions sources on sensitive receptors such as childcare and education facilities and residences that will be located on the Project site.
- a. As noted in Pages II-33 and II-34 of the DEIR, the Project Applicant is seeking a development agreement with a term of 20-years which could allow for a phased construction that could extend the full buildout year to approximately 2043. This indicates that the initial phases of the project may be operational before construction begins for the later phases. Hence, the air quality and health risk impacts associated with the construction of the later Project phases on the sensitive land uses that would be operational on the project site should be evaluated.
 - b. As described in Chapter II of the DEIR, the project will include sensitive land uses such as childcare and education facilities and residences (sleeping quarters for on-site personnel). As noted in Chapter 5 of SCAQMD's CEQA Handbook,¹⁶ the DEIR should evaluate the potential air quality and health risk impacts on these sensitive receptors from emission sources in the vicinity of the project and integrate site design features to mitigate these impacts.
 - c. As noted in Comment 4, there are several sources of toxic air contaminants during the project's operation. The impacts of these sources on the sensitive receptors that will be located on the Project site should be evaluated in the DEIR.

¹⁶ SCAQMD. 1993. CEQA Air Quality Handbook.

Response to Comment No. 26-E.1-29

Please refer to Response to Comment No. 26-26, which discusses impacts to potential on-site receptors (i.e., a potential childcare use). In addition, the commenter's statement that the Project Description includes residences or educational facilities is incorrect. Refer to Topical Response No. 3, Permitted On-Site Uses. The Project would not include uses where individuals could stay for extended periods (years) but would, instead, as listed on page II-16 in Section II, Project Description, of the Draft EIR, include sleeping quarters for certain on-site personnel, such as security guards with long overnight shifts. These uses would not be considered sensitive receptors.

Refer to Response to Comment No. 26-E.1-24 regarding the Draft EIR's analysis of the long-term buildout scenario.

As discussed in Response to Comment No. 26-E.1-2, in response to comments, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA assesses health risk impacts from both Project-related construction and operational activities. Sources analyzed in the HRA include diesel exhaust, architectural coatings, char broilers and other fugitive emissions. Receptors analyzed in the HRA include sensitive uses and commercial uses adjacent to the Project Site. Although not required for CEQA purposes, Project on-site receptors were also analyzed for informational purposes. As discussed in Response to Comment No. 26-E.1-2, the HRA confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds. As discussed in Response to Comment No. 26-E.1-24, the 32-month buildout scenario modeled for the HRA reflects a conservative assessment of potential Project health risk impacts as compared to the 20-year buildout scenario. See Response to Comment No. 26-E.1-18 for a detailed discussion of on-site operational sources of TAC.

Comment No. 26-E.1-30

14. On Page IV.G-28 of Chapter D_IVG, the DEIR states that construction and operational activities evaluated with respect to groundwater quality and hydrology include potential dewatering activities during construction. In Chapter D_IVG the DEIR further states that dewatering activities are anticipated during construction, which would require the installation and operation of temporary pumps and filtration in accordance with NPDES requirements. Additionally, as discussed in greater detail in our comments on Hydrology and Water Supply, since the groundwater depth is quite shallow, and with artesian conditions, there is a potential need for dewatering activities both during project construction and operation. However, the DEIR does not appear to account for dewatering activities in its construction and operational air quality analysis. Because the DEIR acknowledges in Chapter D_IVG that dewatering activities are anticipated, emissions from these equipment (e.g., pumps, trucks, etc.) must be accounted for in the DEIR's air quality, greenhouse gas, and energy analyses.

Response to Comment No. 26-E.1-30

As discussed above in Response to Comment No. 26-E.1-7, the Project will require temporary construction dewatering but not permanent dewatering. The proposed subterranean structures will be designed to resist the hydrostatic pressure and will be waterproofed, such that a permanent dewatering system (post-construction dewatering) will not be required. The temporary dewatering system will be decommissioned and removed following completion of the individual subterranean structures.

The commenter is inaccurate in their statement that the Draft EIR did not account for dewatering during construction activities. Please see the CalEEMod modeling output files

(specifically pdf page 31) provided in Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, which shows that the excavation phase includes four pumps, the mat foundation phase includes six pumps, and the structure/enclosure phase includes two pumps, some of which would be used for dewatering. Moreover, the grading phase includes approximately 40 delivery trips and would include any delivery trips necessitated by dewatering activities. In addition, prior to dewatering, some additional shoring would be required during pre-excavation (concurrent with demolition activities), along with electricity associated with pumping activities. This additional equipment and electricity usage is analyzed and included within Appendix FEIR-9 of this Final EIR and does not change any of the impact conclusions in the Draft EIR.

Comment No. 26-E.1-31

15. As described previously, the Project site is within the City of Los Angeles Methane Zone and is therefore impacted by naturally occurring hydrogen sulfide. In addition to posing health risks, hydrogen sulfide is a highly odorous gas. The DEIR should evaluate the potential impacts associated with the release hydrogen sulfide and other odorous compounds released during project construction (particularly during soil excavation) and operation (from the tar collection system in the southwestern corner of the Project site and methane mitigation systems for buildings on the Project site). Note also that the DEIR is not clear if additional collection systems will be required, and the DEIR should more clearly evaluate this issue. And in that case if additional systems are required, the DEIR should evaluate and disclose the potential air quality impacts associated with those.

Response to Comment No. 26-E.1-31

Refer to Response to Comment No. 26-38 regarding odor monitoring.

In regard to additional collection systems, following extensive subsurface investigations and sampling, documented in the Site Summary Report (Appendix G.1 of the Draft EIR), naturally-occurring tar was noted only in an isolated area near the southwest boundary of the Project Site where the existing tar collection system is located; refer to Figure IV.F-1, Hazards and Hazardous Materials Site Map, on page IV.F-26 of the Draft EIR (and revised Figure IV.F-1 in Section III, Revisions, Clarifications, and Corrections to the Draft EIR). Testing and proper disposal of any excavated soil impacted by naturally occurring oil and/or tar will follow the sampling, testing and disposal procedures described in the Soil Management Plan (Appendix B of the Site Summary Report). For more information, refer to Response to Comment Nos. 13-4, 13-6, and 16-28. Based on the sampling performed, additional tar collection systems would not be necessary.

Comment No. 26-E.1-32

16. The building heights allowable under the proposed project's specific plan could impact peak pollutant concentrations for sensitive receptors adjacent to the project site. Because the dominant wind direction is from the south-west, the wake region from the new development will cover the roadway and thus create potential recirculation of the pollutants emitted in that region. The emissions from the traffic at the crossing between West Beverly Boulevard and Fairfax Ave and at the crossing West Beverly Boulevard and the Grove Dr could accumulate in the region behind the new development. Traffic emissions in the wake of a development with a proposed height of 130–160 ft can result in an increase in annual concentrations of ~5% while peak concentration may increase by up to 15–20%. The impact will be greater for particulate matter (PM) concentrations as compared to NO_x concentrations. Given the proximity of the sensitive receptors, and potentially substantial mobile and diesel PM emissions in this location, the DEIR should evaluate the potential of these unique localized air quality impacts to ensure that the appropriate project design features or mitigation measures are implemented.

Response to Comment No. 26-E.1-32

The content of this comment is similar to the content of Comment No. 26-E.1-2. Please see Response to Comment No. 26-E.1-2.

Comment No. 26-E.1-33**GREENHOUSE GAS**

17. On page 39 of Chapter D_IV.E, the calculations involving the existing solar array are inaccurate, resulting in an underestimate of the existing GHG inventory. In Table IV.E-5 on this page, the annual emissions reduction from the existing solar array is estimated as 544 MT CO₂e. This calculation uses the 2019 LADWP grid intensity factor, and thus assumes an operational year of 2019 for the solar array. However, all other emissions in Table IV.E-5 are estimated from the CalEEMod run for existing conditions, which has an operational year of 2021. To align with the CalEEMod run, the solar emissions should be estimated using the 2021 LADWP grid intensity.
18. In Table IV.M1-6, footnote L, the total water demand for the existing site and the proposed project are estimated based on billing records obtained by Los Angeles Department of Water and Power (LADWP). The DEIR has not incorporated any natural gas and electricity data for the existing uses. The DEIR included such information for water. It is not clear why this effort was only made for water and

not natural gas and electricity. The DEIR should provide greater transparency on this issue and for consistency also use existing data on natural gas and electricity usage for the existing conditions.

Response to Comment No. 26-E.1-33

Please refer to Response to Comment No. 26-73 regarding the existing solar array.

With regard to the commenter's suggestion to use existing utility bills to estimate the Project's natural gas and electricity assumptions, the Draft EIR utilized CalEEMod default energy usage rates, based on 2005 Title 24 standards (applicable to buildings built in 2005), which conservatively do not reflect the age of the existing buildings (which are 50+ years old and less energy efficient in comparison to 2005 standards). Based on CalEEMod default energy usage factors, energy usage for the existing uses would be lower than what would be estimated assuming the 2021 utility data. Thus, the Draft EIR's use of CalEEMod to estimate the baseline emissions was conservative because it resulted in a lower level of baseline emissions and, by extension, a larger incremental change in emissions caused by the Project. This additional context to clarify the conservative rationale for using CalEEMod default energy usage factors is explained in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR) and does not result in changes to the existing GHG emissions inventory. Updated emissions, estimated using CalEEMod 2022.1.1 and 2021 utility data, are presented in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR).

Comment No. 26-E.1-34

19. There are numerous assumptions in the CalEEMod analysis that do not appear to be internally consistent or accurate.
 - a. The GHG analysis does not provide sufficient detail on how the electricity intensity factors for the analysis were estimated. While PDF Page 310 of DEIR Appendix B presents the electricity intensity factors, this table calculates the CO2 emission factor based on Renewable Portfolio Standard (RPS) benchmarks without consideration of the current electricity intensity factor for LADWP and does not provide substantial evidence regarding the methodology used to derive the final emission factor used in the analysis. Additionally, the table is internally inconsistent presenting a carbon intensity of 520 lbs/MWh for 2026 in the first part of the table, but then presenting 585 lbs/MWh for 2026 in the second part which is then used in the CalEEMod runs.

- b. On page IV.E-78, Table IV.E-11, footnote c, it is claimed that CalEEMod defaults were used for all land uses, however, there are differences between the CalEEMod defaults and the resulting electricity usage factors for each land use used in the CalEEMod runs.
- c. On PDF Page 10 in DEIR Appendix D, it is noted that the energy intensity factor for the Industrial Park land use was changed from CalEEMod 2020 defaults to “MBS (2017-2018 average demand)”. [sic] This same comment is provided in the CalEEMod runs on PDF Pages 99, 109, 119, 266, 276, 286, 296, 341, 350, and 359 of DEIR Appendix B. However, there is no evidence or documentation provided to substantiate this value, which is 9% lower than the CalEEMod2020 default electricity factor.

Response to Comment No. 26-E.1-34

As discussed on PDF page 15 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR, the carbon intensity (lbs/MWh) for electricity generation was calculated for the Project’s 2026 buildout year based on LADWP projections for year 2026 (approximately 585 lbs of CO_{2e} per MWh). LADWP’s carbon intensity projections take into account SB 100 and SB 350 RPS requirements for renewable energy and include RPS percentages by milestone year mandated in SB 100, along with LADWP-specific historical data (RPS percentage and corresponding carbon intensity). The forecast function within Microsoft Excel was used to forecast future year LADWP carbon intensity factors. While the forecasted value for Year 2026 shows 520 lbs of CO_{2e} per MWh (LADWP, 2016 IRP goal for 2026), the calculated value of 585 lbs of CO_{2e} per MWh was based on historical and projected years (Year 2015-2020, 2026, 2030, 2036, 2045). Thus, the table in Appendix B of the Draft EIR referenced in this comment is not internally inconsistent as the carbon intensity of 520 lbs/MWh for 2026 was only one of many data points used to calculate the carbon intensity factor for 2026 (585 lbs/MWh). The CalEEMod runs correctly used a carbon intensity factor of 585 lbs/MWh for 2026.

The Draft EIR provides substantial evidence (LADWP, 2016 IRP goal for 2026) to use a 2026 carbon intensity factor of 520 lbs of CO_{2e} per MWh based on the provided data. However, the calculated value based on all of the historical and projected years of data was 585 lbs of CO_{2e} per MWh. Thus, the Draft EIR conservatively used an LADWP 2026 carbon intensity factor of 585 lbs of CO_{2e} per MWh as it would result in more Project-related GHG emissions from the use of electricity than a carbon intensity factor of 520 lbs of CO_{2e} per MWh. Subsequent to the publication of the Draft EIR, LADWP’s 2021 Power Content Label was released and shows that LADWP has a CO_{2e} intensity of 609 lbs/MWh and 35.2 percent renewables. Since the 2026 RPS is 46 percent, it would convert as follows: $609 / (1 - 0.352) * (1 - 0.46)$ which equals approximately 508 lbs of CO_{2e} per MWh, notably lower than the 585 lbs of CO_{2e} per MWh used in the Draft EIR.

Thus, the Draft EIR provided a conservative LADWP CO_{2e} intensity factor for 2026 (585 lbs of CO_{2e} per MWh).

CalEEMod default energy usage factors were used for most of the Project's land uses with some exceptions. Please refer to PDF page 308 of the Draft EIR Appendix B for parking structure energy usage calculations, which included an adjustment to the electricity usage factors related to ventilation and lighting, in order to reflect more recent requirements not included in the CalEEMod 2020 default factors and to provide more refined electricity usage from parking structure areas. The ventilation and lighting energy usage factors reflect consistency with Section 120.6(c) of the 2013 Building Energy Efficiency Standards (Mandatory Requirements for Enclosed Parking Garages) and energy use data provided in the updated 2018 Energy Star Reference.⁸²

With regard to modification of default CalEEMod energy usage factors for the Industrial Park use, an electricity usage rate for the proposed sound stages was developed based on 2017-2018 utility bills from Manhattan Beach Studios (MBS) in which electricity bills were separately available for each sound stage. To develop a future sound stage kW/sf/yr rate that would reflect a more modern-energy efficient use, the total annual electricity usage for the MBS stages (built in 1999) is representative of modern sound stages) and was divided by the total square footage of the sound stages, resulting in a rate of 11.34 kWh/sf/yr. Since natural gas meters at MBS were not directly metered for each individual stage, the same calculation method was not available. Instead, the Draft EIR used the CalEEMod land use type of industrial park to represent the proposed sound stages for natural gas. The 2017–2018 utility bills from MBS are included within the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR).

Comment No. 26-E.1-35

20. The DEIR does not utilize the most recent version of CalEEMod and the Emission FACTor (EMFAC) model.

- a. As noted on Page IV.A-44 of the DEIR, the CalEEMod2020.4.0 model uses EMFAC2017 emission factors. EMFAC2021, which is available in CalEEMod2022, has been available for over a year.
- b. On Page IV.E-48 of the DEIR, it is noted that CalEEMod defaults are used for the electricity usage factors, which is referenced as CalEEMod2020.4.0 on

⁸² USEPA, Energy Star Portfolio Manager, Technical Reference, Parking and the ENERGY STAR Score in the United States and Canada, August 2018.

Page IV.E-47. The DEIR should evaluate if electricity usage factors for each land use should incorporate the CalEEMod 2022 default electricity usage factors, which are based on 2019 consumption estimates using the California Energy Commissions' (CEC's) 2018–2030 Uncalibrated Commercial Sector Forecast and 2019 Residential Appliance Saturation Survey (RASS).¹⁷ CalEEMod2020.4.0 relies on a 2009 RASS and 2002 CEC sponsored California Commercial End Use Survey (CEUS) for non-residential land uses¹⁸.

¹⁷ CalEEMod2022 Appendix D, Technical Source Documentation for Emissions Calculations. Available at: https://www.caleemod.com/documents/user-guide/05_Appendix%20D.pdf. Accessed: August 2021.

¹⁸ CalEEMod2020.4.0 Appendix E, Technical Source Documentation for Emissions Calculations. Available at: <http://www.aqmd.gov/docs/default-source/caleemod/user-guide-2021/appendix-e2020-4-0.pdf?sfvrsn=6>. Accessed: August 2021.

Response to Comment No. 26-E.1-35

Please see Response to Comment No. 26-E.1-34 regarding energy usage factors used for calculating energy usage.

CalEEMod 2020.4.0 was the most current model available at the time the Draft EIR was published. CalEEMod 2022.1 was released on May 27, 2022, as a soft release (commonly referred to as a beta test version). CalEEMod 2022.1.1 was approved for full launch on December 21, 2022, after 17 separate updates. Therefore, it was reasonable to prepare the Draft EIR using the then-current stable version of the CalEEMod model available. Nonetheless, Project emissions using CalEEMod 2022.1.1 have been prepared and are included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR). Overall, the results of CalEEMod 2022.1.1 in comparison to CalEEMod 2020.4.0 are similar. However, increased electrification of the Project to account for the City's new all-electric buildings ordinance (which was adopted after the Draft EIR was published) would increase GHG emissions in comparison to what was reported in Table IV.C-11 (Annual Project (Conceptual Land Use Program) GHG Emissions Summary (2026 Buildout Year)) of the Draft EIR. Electricity generation only takes into account carbon intensity at the buildout year and does not take into account decreasing carbon intensity in subsequent years required by SB 100, which accelerated the State's Renewable Portfolio Standard (RPS) target dates. The RPS requires utilities to supply 100 percent renewable energy by 2045. Thus, overall Project-related GHG emissions would similarly decrease over time as increased renewable energy is available. Without increased electrification of the Project under the City's all-electric buildings ordinance, GHG emissions from natural gas use would not be reduced in future years. As discussed in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would continue to support GHG reduction measures detailed in the SCAG 2020-2045 RTP/SCS, LA's Green New Deal and Senate Bill 375. Therefore, increased

electrification of the Project would not have a significant impact with respect to GHG emissions, and it would not create any new significant impacts related to GHG emissions or result in a substantial increase in the severity of a previously identified significant impact in the Draft EIR. The updated analysis confirms the Draft EIR's conclusions of less-than-significant impacts and does not affect any of its significance determinations.

Comment No. 26-E.1-36

21. On PDF Page 309 of Appendix B, the DEIR provides an unsubstantiated GHG emission reduction for electric vehicle parking. This calculation notes in footnote 4 that 20% of the miles charged would be driven by the electric vehicle. However, in the actual calculation a value of 10% is used, with no basis given for either of these values. The DEIR also reduces the energy consumption of the charging stations by 90% thereby underestimating the total electricity usage for the charging stations by 90%. As a result, the DEIR has failed to substantiate the Project's electricity demand on-site and the emissions generated from electricity.
22. On Pages IV.E-39, IV.E-78 and IV.E-84, the DEIR provides unsubstantiated GHG emissions for emergency generator use in the existing conditions, project buildout, and land use exchange scenarios. In Page 13 of DEIR Appendix B, the equation to calculate annual emergency generator GHG emissions is provided, and it is noted that the total emissions are estimated based on the generator horsepower and hours of usage. However, the DEIR does not provide the generator horsepower or usage data in any of the report sections or appendices, and therefore the DEIR lacks substantial evidence to support these assumptions and the reported emissions.

Response to Comment No. 26-E.1-36

The calculation of GHG emissions reduction for electric vehicle parking in the Draft EIR is consistent with City policy. In addition, the same methodology included in Table 5-4 (GHG Emissions Reductions for Commercial Development Area Electric Vehicle Charging Stations) was utilized by the commenter and included in Appendix 2.1-A, Ramboll Environ, Greenhouse Gas Emissions Technical Report, for Mission Village, Los Angeles County, California, October 2016. This same methodology was also used in the AB 900 Application for the Hollywood & Wilcox Mixed-Use Project prepared by the City and Eyestone in 2019. In the AB 900 application process, CARB expressed a concern that the reduction in GHG emissions related to EV chargers may be overstated as it would assume that all chargers would be used 100 percent of the time and all charged miles would be consumed by trips related to the project. Based on directions from CARB and the City, an assumption that 20 percent of the miles charged at the project's EV charger stations would be driven by the charged vehicles on project-related trips was used in the AB 900 Application for the

Hollywood & Wilcox Mixed-Use Project. This direction from CARB and the City takes into account that fully-charged electric vehicles are typically driven from their homes and do not meaningfully deplete their charge by commuting to work, so that any charge, if any, at the work location is minimal (e.g., in the range of 0 to 30 percent). Accordingly, the lower percentage utilized for this EV charger calculation results in a higher estimate of overall GHG emissions associated with any project analysis.

The EV charger calculation in the Draft EIR assumes that each electric vehicle that charges at a charging stall on the Project Site would displace ten percent of the VMT for an equivalent combustion (gasoline, diesel) powered vehicle arriving and departing the Project Site. Ten percent was chosen for the Project analysis to be extra conservative for purposes of overall GHG emissions based on prior direction from CARB and the City. Energy usage for EV chargers was based on the amount of VMT displaced from combustion vehicles, which is ten percent. This low percentage assumption results in a lower estimated GHG emission reduction for the proposed electric vehicle parking and is therefore more conservative. As an example, an employee traveling to work with a partially charged EV that then decides to plug-in at TVC while at work is unlikely to change parking spaces once fully charged. As a result, the EV charger that has a capacity to charge 25 miles per hour (250 miles over a 10-hour period) would be occupied for the work day, but would not be charging at full capacity. Based on this information, it was assumed on average that each charger would displace 25 miles of VMT or 10 percent of the total capacity of the EV charger.

As discussed above, assuming 100 percent would overstate potential GHG emission reductions associated with the EV chargers. Therefore, energy usage from EV charging was not underestimated, as incorrectly stated in this comment. Please note that Footnote 4 on PDF page 309 of Appendix B of the Draft EIR included a typographical error and has been corrected to state that 10 percent, and not 20 percent, of the miles charged would be driven by the charged vehicles on Project-related trips in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. This does not result in changes to the Draft EIR GHG emissions inventory, energy calculations, or any of the significance conclusions in the Draft EIR. Regarding the energy consumption of the charging stations, the assertion that the chargers would be at 100 percent load for the entire 10 hours of use per day as suggested in this comment is unsupported and unrealistic, and the assumptions utilized would not underestimate electricity consumption by 90 percent. Refer to the Energy Consumption Memorandum by AMA Group included in Appendix FEIR-9 of this Final EIR, which discusses and validates the energy consumption related to the charging stations used in the Draft EIR.

Information regarding emergency generator horsepower and usage data was inadvertently not included in Appendix B of the Draft EIR. This information is provided in FEIR-9 of this Final EIR. This information provides substantial evidence to support the

assumptions and the reported emissions and does not change any conclusion included in the Draft EIR.

Comment No. 26-E.1-37

23. The DEIR should consider how the Proposed Project's GHG evaluations fits relative to SCAQMD's tiered approach. SCAQMD staff proposed a multiple tier analysis to determine the appropriate threshold to be used for greenhouse gas analyses. The draft proposal suggests the following tiers: Tier 1 is any applicable CEQA exemptions, Tier 2 is consistency with a GHG reduction plan, Tier 3 is a screening value or bright line, Tier 4 is a performance-based standard, and Tier 5 is GHG mitigation offsets.^{19,20} The proposed SCAQMD tiers are as follows:

Tier 1: Determine if CEQA categorical exemptions are applicable. If not move to Tier 2;

Tier 2: Consider whether or not the proposed project is consistent with a locally adopted GHG reduction plan (often called a Climate Action Plan) that has gone through public hearings and CEQA review, which has an approved inventory that includes monitoring, etc. If not move to Tier 3;

Tier 3: For all land use types, if projects are less than 3,000 metric tons/year of CO₂e, the project is presumed to be less than significant for GHGs. If the project exceeds 3,000 metric tons of CO₂ equivalent per year (MTCO₂e/yr); move to Tier 4. More specific screening thresholds were also provided, which include 1,400 MTCO₂e/yr for commercial projects and 3,500 MTCO₂e/yr for residential projects. These thresholds were based on a review of the Office of Planning and Research database which included 711 CEQA projects using a 90% capture approach;

Tier 4: The proposed performance standards include three options:

- a. Percent Emission Reduction Target (no further recommendation)
- b. Early Implementation of Applicable AB 32 Scoping Plan Measures (incorporated into option 3)
- c. SCAQMD Efficiency Target
 - i. For option 3, there are targets for 2020 and 2035, using an approach similar to the BAAQMD Thresholds. The proposed 2020 target is a 4.8 MT/year CO₂e per service population project-level threshold (land use employment only). The proposed 2035 target is a 3.0 MT/year CO₂e per

service population project-level threshold and incorporation of Sustainable Communities and Climate Protection Act of 2008 or SB 375 regional targets.

Tier 5: Off-site mitigation for life of project (30 years), if this threshold is to be used, GHG emissions must be mitigated to less than the Tier 3 screening significance threshold. The SCAQMD clarified that offsets should have a 30-year project life, should be real, quantifiable, verifiable, and surplus and will be considered in the following prioritized manner:

- Project design feature/onsite reduction measures;
- Offsite within neighborhood;
- Offsite within district;
- Offsite within state;
- Offsite out of state; and
- Substitution allowed via enforceable commitment (e.g., when an offset project ends prematurely).

If the Project cannot meet any of the Tiers, it is presumed to be significant for GHG emissions.

Accessed: August 2022.

Response to Comment No. 26-E.1-37

On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim 10,000 MTCO₂e/yr GHG significance threshold for projects for which the SCAQMD is lead agency (e.g., stationary sources, rules, and plans). This comment references SCAQMD's proposed, but not adopted, tiered approach and significance thresholds. This comment's logic that the Draft EIR should have relied upon SCAQMD's draft tiered approach and thresholds proposed nearly 13 years ago, even though SCAQMD has taken no further action since to seek approval of this tiered approach and significance thresholds, is flawed. The Draft EIR did not use this tiered approach and significance thresholds, as neither the City of Los Angeles nor SCAQMD has adopted them and made

them applicable to the Project. Instead, a significance determination was made based on the Project's consistency with applicable regulatory plans and policies to reduce GHG emissions.

As discussed on pages IV.E-39 to IV.E-41 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, Section 15064.4 of the CEQA Guidelines provides that a lead agency shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate, or estimate the amount of GHG emissions resulting from a project. Lead agencies should consider several factors in determining the significance of GHG emissions from a project: the extent to which the project may increase or reduce GHG emissions; whether a project exceeds an applicable significance threshold; and the extent to which the project complies with regulations or requirements adopted to implement a reduction or mitigation of GHGs.

CEQA Guidelines Section 15064.4 does not establish a threshold of significance. Lead agencies have the discretion to establish significance thresholds for their respective jurisdictions, and in establishing those thresholds, a lead agency may appropriately look to thresholds developed by other public agencies, or suggested by other experts, such as the California Air Pollution Control Officers Association (CAPCOA), as long as any threshold chosen is supported by substantial evidence (see CEQA Guidelines Section 15064.7(c)). The CEQA Guidelines also clarify that the effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for a cumulative impact analysis (see CEQA Guidelines Section 15130(f)). The CEQA Guidelines were amended in response to SB 97. In particular, the amendments specify that compliance with a GHG emissions reduction plan may appropriately be used as a threshold to determine whether a project's cumulative GHG impact is less than significant.

Thus, per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found as being not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plans [and] plans or regulations for the reduction of greenhouse gas emissions."⁸³ Thus, CEQA Guidelines

⁸³ CEQA Guidelines Section 15064(h)(3).

Section 15064(h)(3) allows a lead agency to make a finding of less-than-significant impact on GHG emissions if the project complies with adopted programs, plans, policies and/or other regulatory strategies to reduce GHG emissions.

In the absence of any adopted numeric threshold, the significance of a project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b)(2) by considering whether the project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. For this Project, as a land use development project, the most directly applicable adopted regulatory plan to reduce GHG emissions is the 2020–2045 RTP/SCS, which is designed to achieve regional GHG reductions from the land use and transportation sectors as required by SB 375 and the State's long-term climate goals. This analysis also considers consistency with regulations or requirements adopted by the AB 32 Climate Change Scoping Plan, which meets the criteria for appropriate analysis under the CEQA Guidelines.

The Draft EIR provides a thorough analysis of the Project's GHG impacts within Section IV.E, Greenhouse Gas Emissions, of the Draft EIR in compliance with CEQA and City policy. The analysis includes a quantification of construction and operational GHG emissions, quantification of applicable reduction measures, and analysis of consistency with applicable local plans and policies. However, the threshold of significance adopted by the City for the CEQA GHG analysis is qualitative and based on the Project's consistency with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. Thus, although provided for informational purposes only, the quantitative data and analysis demonstrate with substantial evidence that the Project's consistency with applicable laws, regulations, plans, and policies in fact results in notable GHG emissions reductions. Furthermore, SCAQMD did not provide Draft EIR comments on potential GHG impact nor did SCAQMD recommend the tiered approach for analysis of GHG impacts cited in this comment. Please refer to Comment Letter No. 1 for SCAQMD's comments.

Comment No. 26-E.1-38

24. SCAQMD has suggested several greenhouse gas mitigation measures in its comments²¹ on proposed project DEIRs and NOPs. Some examples are listed below for the DEIR to consider and address:

- a. Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NO_x emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the project buildout

of 20423 the DEIR should evaluate how the Project will align with these standards.

- i. Given the project buildout of 2043 the DEIR should evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. For example, there have been a number of recent ZE truck regulations that have been passed or are currently being considered by CARB, which will result in an increasing number of ZE trucks in future years. Charging stations for ZE trucks can have a large energy demand (upwards of 1 MW per charger) which could substantially increase the demand on existing electricity infrastructure at the project site. Given that the proposed project includes a long-term buildout scenario, the DEIR must evaluate the impact on Energy and Utilities and Service Systems from increased penetration of ZE trucks in future years, including an assessment of impacts if ZE or NZE trucks are included as a project mitigation measure.
- ii. Include the requirement in applicable bid documents, purchase orders, and contracts.
- b. Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- c. Use light colored paving and roofing materials.

²¹ SCAQMD Comment Letters—Year 2022. Available at: <http://www.aqmd.gov/home/rules-compliance/ceqa/commenting-agency/Comment-Letters2022>. Accessed: August 2022.

Response to Comment No. 26-E.1-38

In a comment letter submitted on the Draft EIR (Comment Letter No. 1), the SCAQMD did not recommend the measures cited in this comment to reduce GHG emissions.

As presented in Table IV.E-9 on pages IV.E-72 and IV.E-73, and discussed on page IV.E-83 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would result in less than significant emissions of GHGs and would be consistent with applicable plans, policies, and regulations and, thus, no mitigation is required. Furthermore, SCAQMD has not recommended these GHG mitigation measures for this Project in their comment letter. Nonetheless, as stated on page IV.E-51 of the Draft EIR, the Project

would be designed to support the EV charging requirements of the City's Green Building Ordinance.

For a discussion of ZE and NZE hauling trucks during construction, please see Response to Comment No. 26-39. With respect to operations, the Draft EIR concluded that air quality and GHG impacts would be less than significant during operations, and no mitigation is required. Further, while ZE and NZE truck use will occur in the future, it is not within the Project's operational influence to ensure that only ZE or NZE vehicles operate at the Project Site. During operations, numerous independent productions will utilize on-site facilities, each with their own unique operational needs. These productions will utilize various independent contractors, who may themselves subcontract other entities, including small businesses, to provide goods and services to meet those needs. There is simply no feasible mechanism to fairly apply and enforce such a requirement given the diverse needs of, and multitudes of entities involved in, the Project's unique studio operational uses.

Development of commercial ZE and NZE technologies is ongoing and further development is necessary to meet the requirements of CARB's adopted Advanced Clean Trucks program, in-development Advanced Clean Fleets program, and any other future ZE and NZE vehicle programs or policies. Moreover, the needs of commercial ZE and NZE vehicles have changed dramatically over the past decade, and, as the adoption of ZE and NZE trucks increases and new ZE and NZE vehicles technologies emerge, the needs will continue to evolve. Thus, as stated on page IV.E-51 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project will be constructed in compliance with the City's Green Building Ordinance, which reflects the applicable ZE and NZE vehicle charging and support infrastructure needs projected at the time of Project construction. Additionally, although not all future ZE and NZE vehicles may be powered by electricity, Project Design Feature GHG-PDF-2 requires the Project to incorporate, at a minimum, 2 million kilowatt-hours of annual photovoltaic generation capacity, which would reduce the Project's electrical demand.

As discussed on page IV.A-44 in Section IV.A, Air Quality, and on page IV.E-48 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, mobile source operational emissions were estimated using emission rates from the current version of CalEEMod, which do not account for the use of ZE and NZE trucks and do not account for improvements to fuel economy or emissions standards beyond 2026. Therefore, Project operational mobile source emissions conservatively overestimate emissions for this source. The truck trips estimated for the Project in the Draft EIR represent the reasonably foreseeable trips which could be associated with Project operations. Due to the conservative vehicle emissions estimates in the Draft EIR, actual future operational mobile source emissions are expected to be lower than those presented in the Draft EIR. Further, as discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan would include a regulatory framework for implementation

of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

In support of future ZE and NZE trucks, Project Design Feature GHG-PDF-3 is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of electrical hookups at basecamp areas during operations. Trucks accessing basecamps would travel on-site for short distances and would plug into electric power when parked in lieu of use of small portable generators (e.g., food trucks). These electric hookups could also be used for charging ZE and NZE trucks. Project Design Feature GHG-PDF-3 also includes a provision to include four EV chargers at the Mobility Hub for future electrical shuttles.

Refer to Response to Comment No. 26-40 regarding light colored paving and roofing.

Comment No. 26-E.1-39

25. The California Air Resources Board (CARB) has also presented GHG mitigation measures in comment letters on project EIRs,²² which are also listed below for the DEIR to consider and address:

Construction Measures

- a. Ensure the cleanest possible construction practices and equipment are used. This includes eliminating the idling of diesel-powered equipment and providing the necessary infrastructure (e.g., electrical hookups) to support zero and near-zero equipment and tools.
- b. Implement, and plan accordingly for, the necessary infrastructure to support the zero and near-zero emission technology vehicles and equipment that will be operating onsite. Necessary infrastructure may include the physical (e.g., needed footprint), energy, and fueling infrastructure for construction equipment, onsite vehicles and equipment, and medium-heavy and heavy-heavy duty trucks.
- c. In construction contracts, include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) used during project construction be battery powered.

- d. In construction contracts, include language that requires all heavy-duty trucks entering the construction site, during the grading and building construction phases be model year 2014 or later. All heavy-duty haul trucks should also meet CARB's lowest optional low-NOx standard starting in the year 2022.

Operation Measures

- a. Include contractual language in tenant lease agreements that requires tenants to use the cleanest technologies available, and to provide the necessary infrastructure to support zero-emission vehicles and equipment that will be operating on site.
 - b. Include contractual language in tenant lease agreements that requires future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans.
 - c. Include contractual language in tenant lease agreements that requires all heavy-duty trucks entering or on the project site to be model year 2014 or later, expedite a transition to zero-emission vehicles, and be fully zero-emission beginning in 2030.
 - d. Include contractual language in tenant lease agreements restricting trucks and support equipment from idling longer than five minutes while on site.
26. Additionally, CARB's 2017 Scoping Plan Update Appendix B²³ provides GHG mitigation measures which have been listed here for the DEIR to consider and address:

Construction Measures

- a. Divert and recycle construction and demolition waste, and use locally-sourced building materials with a high recycled material content to the greatest extent feasible.
- b. Minimize tree removal, and mitigate indirect GHG emissions increases that occur due to vegetation removal, loss of sequestration, and soil disturbance.
- c. Utilize existing grid power for electric energy rather than operating temporary gasoline/diesel powered generators Increase use of electric and renewable fuel powered construction equipment and require renewable diesel fuel where commercially available.

Operation Measures

- a. Allow for new construction to install fewer on-site parking spaces than required by local municipal building code, if appropriate.
- b. Provide on- and off-site safety improvements for bike, pedestrian, and transit connections, and/or implement relevant improvements identified in an applicable bicycle and/or pedestrian master plan.
- c. Prohibit wood-burning fireplaces in new development, and require replacement of wood-burning fireplaces for renovations over a certain size developments.
- d. Require organic collection in new developments.
- e. Achieve Zero Net Energy performance targets prior to dates required by CALGreen.
- f. Require the design of bike lanes to connect to the regional bicycle network.
- g. Expand urban forestry and green infrastructure in new land development.
- h. Require gas outlets in residential backyards for use with outdoor cooking appliances such as gas barbeques if natural gas service is available.
- i. Require the installation of electrical outlets on the exterior walls of both the front and back of residences to promote the use of electric landscape maintenance equipment.
- j. Require the design of the electric boxes in new residential unit garages to promote electric vehicle usage.
- k. Provide electric outlets to promote the use of electric landscape maintenance equipment to the extent feasible on parks and public/quasi-public lands.
- l. Require large-scale residential developments and commercial buildings to report energy use, and set specific targets for per-capita energy use.
- m. Require each residential and commercial building to utilize low flow water fixtures such as low flow toilets and faucets.
- n. Incorporate water retention in the design of parking lots and landscaping.
- o. Require the development project to propose an off-site mitigation project which should generate carbon credits equivalent to the anticipated GHG emission reductions. This would be implemented via an approved protocol

for carbon credits from California Air Pollution Control Officers Association (CAPCOA), the California Air Resources Board, or other similar entities determined acceptable by the local air district.

- p. Require the project to purchase carbon credits from the CAPCOA GHG Reduction Exchange Program, American Carbon Registry (ACR), Climate Action Reserve (CAR) or other similar carbon credit registry determined to be acceptable by the local air district.
- q. Encourage the applicant to consider generating or purchasing local and California-only carbon credits as the preferred mechanism to implement its offsite mitigation measure for GHG emissions and that will facilitate the State's efforts in achieving the GHG emission reduction goal.

Response to Comment No. 26-E.1-39

The commenter recommends a number of GHG mitigation measures; however, the Draft EIR concluded that GHG impacts would be less than significant, and therefore mitigation is not required. Accordingly, consideration of the suggested measures is not required under CEQA. The Draft EIR details various PDFs and mitigation measures included in the Project which already incorporate many of the suggested measures. All recommended measures have been considered, compared to existing PDFs and mitigation measures, and, if not already present in the document, analyzed for applicability and feasibility as follows:

25.Construction.a. The suggested measure is already addressed through Project Design Feature AIR-PDF-1, which requires the use of grid-power in lieu of portable generators. Additionally, CARB's ATCM already require vehicle idling to be limited to no more than five minutes.

25.Construction.b. The suggested measure is already addressed through Project Design Feature AIR-PDF-1, which requires the use of grid-power in lieu of portable generators, and through Mitigation Measure AIR-MM-4, which requires that equipment be maintained and operated in accordance with manufacturer specifications. This includes, as applicable, the specified infrastructure necessary to support the safe and proper operation of Project equipment.

25.Construction.c. The suggested measure is a duplicate of a measure suggested in Comment No. 26-40. See Response to Comment No. 26-40.

25.Construction.d. The suggested measure is a duplicate of a measure suggested in Comment No. 26-40. See Response to Comment No. 26-40.

26.Construction.a. The suggested measure is already addressed through the City's Green Building Ordinance. As stated on page IV.E-51 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would be constructed consistent with the requirements of the City's Green Building Ordinance which, among other requirements, mandates the recycling and/or salvage and reuse of a minimum of 65 percent of non-hazardous construction materials and demolition debris.

26.Construction.b. The suggested measure is already addressed in the Project Description, which, as discussed on page II-25 of the Draft EIR, would include, at a minimum, 28,900 square feet of public-facing open space along the Project Site boundary which would include landscaping with drought tolerant native tree and shrub species, shade trees, and would incorporate existing street tree and plant selections where feasible.

26.Construction.c. The suggested measure is already addressed through Project Design Feature AIR-PDF-1, which requires the use of grid-power in lieu of portable generators. Renewable diesel fuel may be used during Project construction. However, due to uncertainties in the Project construction schedule and commercial availability of renewable diesel fuel in the Project area, it is not possible to ensure that such fuel will be available in the necessary quantities during the Project construction period.

As presented in the Draft EIR and discussed above, implementation of the Project would not result in significant operational GHG impacts and thus, no mitigation is required. Nonetheless, many of the measures recommended by the commenter are already included in the Project through PDFs, and through mitigation measures incorporated pursuant to other environmental topics as discussed below.

25.Operation.a. The suggested measure is already addressed through the City's Green Building Ordinance. As detailed on page IV.E-51 in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would be designed consistent with the City's Green Building Ordinance EV charging infrastructure requirements. Additionally, a PDF is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, requiring all on-site operational equipment (e.g., forklifts, aerial lifts, carts, street sweepers, and landscaping equipment) to be powered by electricity.

25.Operation.b. and c. Please see Response to Comment No. 26-E.1-38. As discussed therein, operational requirements for ZE and NZE trucks would be infeasible.

25.Operation.d. CARB ATCM requirements already limit the idling of trucks to no more than five minutes and no additional measure is necessary.

26.Operation.a., b., and f. The suggested measures are addressed through Project Design Feature TR-PDF-2.

26.Operation.c., h., i., j., and k. The suggested measures are not applicable to the Project (i.e., no residential or public lands).

26.Operation.d. The suggested measure would largely be implemented through compliance with the City of Los Angeles Space Allocation Ordinance (Ordinance No. 171,687), which requires that development projects include an onsite recycling area or room of specified size.

26.Operation.e. The Project would comply with the requirements of CALGreen and additionally comply with the City's new all-electric buildings ordinance.

26.Operation.g. and m. The suggested measure is already addressed through Project Design Feature GHG-PDF-1, which mandates that new buildings to be designed to meet the equivalent of LEED Gold or higher sustainability standards. These standards require design elements, like those suggested by the commenter, to include green infrastructure in new land development and reduce operational water consumption including the use of low flow fixtures.

26.Operation.n. The suggested measure is already addressed in the Project Description, as discussed on page II-33 of the Draft EIR, which states that the Project would incorporate water-efficient plantings with drought-tolerant species and would incorporate permeable paving where appropriate.

26.Operation.l., o., p., and q. As presented in Subsection IV.E.3.d (pages IV.E-52 through IV.E-85) in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, the Project would not result in significant emissions of GHGs and would be consistent with applicable plans, policies, and regulations and thus, no mitigation is required.

Comment No. 26-E.1-40**NOISE**

27. **Page IV.I-15... (4) Local.** *Operation of Loudspeaker and Sound-amplifying Equipment.* This DEIR section does not address the applicable regulations specified within the Los Angeles Municipal Code (LAMC) Section 115 (Amplified Sound), which regulates the installation, use, and operation of loudspeaker and sound amplifying equipment. Since the DEIR indicates the proposed project will include the use of loudspeakers and amplified sound in outdoor spaces, the DEIR should address LAMC Section 115, specifically as related to the following requirements; commercial use of sound amplifying equipment within 500 feet of residential zones is prohibited, commercial use of sound amplifying equipment within 200 feet of non-residential zones is prohibited between 9:00 P.M. and 8:00 A.M. of the following day, any use of amplifying equipment upon any property adjacent to and within 200 feet of any hospital grounds, school, or church building while in use is prohibited, and sound shall not be audible at a distance in excess of 200 feet from the sound equipment.

- a. The DEIR should also address LAMC 112.01 regarding radios, television sets, and similar devices. Notably the LAMC 112.01 indicates “Any noise level caused by such use or operation which exceeds the ambient noise level on the premises of any other occupied property, or if a condominium, apartment house, duplex, or attached business, within any adjoining unit, by more than five (5) decibels shall be a violation of the provisions of this section.” Given that such sources may exist with the Project, the DEIR should assess if this would be exceeded.

Response to Comment No. 26-E.1-40

LAMC Article 5 (Amplified Sound) does not apply to the Project, as the regulations under LAMC Section 115.02 only apply to amplified sound use “in or upon any public street, alley, sidewalk, park or place, or other public property.”

With respect to amplified sound, the Project’s significance criterion is based on LAMC Section 112.01, which limits the amplified sound levels so as not to exceed the ambient noise level at sensitive receptors by more than 5 decibels. As analyzed on page IV.I-45 in Section IV.I, Noise, of the Draft EIR, the amplified sound system was analyzed as part of the outdoor gathering spaces. In addition, Project Design Feature NOI-PDF-4 establishes the noise limits for any amplified sound system for outdoor gatherings on roof decks as to not exceed the City’s noise limit (i.e., an increase of 5 dBA above the ambient noise level) at any offsite noise-sensitive receptor location, consistent with LAMC Section 112.01. As provided in Table IV.I-13 in Section IV.I, Noise, of the Draft EIR, the estimated

noise levels from the outdoor uses, including amplified sound, would be below the 5-dBA significance criterion and noise impacts would be less than significant. Also note that any other outdoor amplification systems would be required to comply with Section 112.01 of the LAMC.

Comment No. 26-E.1-41

28. **Page II-16.** *Hypothetical Development Mix versus Maximum Environmental Impact.* How were the environmental operational noise impacts of the selected “hypothetical development mix” determined to be the “maximum impact”? What other development mixes were considered and how did those environmental operational noise impacts compare to the selected development mix? The “Project”, [sic] as defined in the DEIR, is not a specific project, but rather a proposed 20-year development framework for future re-development of the Television City property. In the absence of a specific project buildout/development, the environmental analyses presented in the DEIR are based on a “hypothetical development mix” that is stated to “generate the maximum impact for that environmental issue”. [sic] As related to noise impacts, the buildout scenarios are not defined or detailed and therefore the selection of the “maximum impact” scenario cannot be reviewed and confirmed. The DEIR should also evaluate and represent if noise impacts from increased operations with construction throughout the potential 20-year development may result in impacts greater than currently evaluated.

Response to Comment No. 26-E.1-41

Refer to Response to Comment No. 26-138 for the discussion of the maximum environmental impacts and the buildout timeline.

With regard to the portion of this comment regarding noise impacts from increased operations together with construction activities, note that the construction noise analysis assumed all construction activities would operate at a maximum capacity and take place at construction areas closest to the off-site receptor locations. Ongoing operations, including outdoor production activities, would generate operational noise levels that would be a minimum of 10 dBA below the construction-related noise levels. The composite effect of the concurrent occurrence of the two noise sources (i.e., operation and construction) would not generate a substantial increase in noise levels when the noise levels at the two noise sources are more than 10 dBA apart, as the addition of sound levels are performed on a logarithmic basis. Specifically, as provided by Caltrans, when two noise levels are greater than 10 dBA apart, the lower noise source does not contribute significantly (less than

0.5 dB) to the total noise level.⁸⁴ Therefore, potential concurrent operational and construction activities would not result in a substantial effect on the estimated noise impacts.

Comment No. 26-E.1-42

29. Page IV.I-18... (1) Noise-Sensitive Receptors. *Missing Noise-sensitive Receiver.* An additional noise-sensitive receptor (Rancho La Brea Adobe) located south of the project site was not included in the survey or impact assessment. Noise-sensitive receptors surrounding the project site were identified and formed the basis of the noise impact evaluation. These receptors surround the projects site to the east, north, and west. This missing residential receptor is located approximately 130 feet from the project property boundary, will be within proximity to construction activities and proposed building structures, and should be evaluated for existing conditions, potential impacts, and necessary mitigation measures.

Response to Comment No. 26-E.1-42

Refer to Response to Comment No. 26-139 regarding Project construction and the Gilmore Adobe.

Comment No. 26-E.1-43

30. Page IV.I-19... (2) Ambient Noise Levels. *Assessment of Existing Ambient Community Sound Levels.* The survey methodology used, specifically the measurement durations, is not consistent with typical community noise survey durations as specified and recommended in industry standards for assessing community noise (e.g., ANSI S12.9-1992/Part 2 (R2018)—Quantities and Procedures for Description of Environmental Sound). The existing conditions (ambient noise levels) within the community surrounding the subject property were established based on sound level measurements at 10 receptor locations. At all but one receptor location, the measurement duration was only 15 minutes during daytime hours and/or 15 minutes during late evening hours on a Monday. As such, the survey results likely do not reflect the current existing conditions during quieter weekday nighttime hours (e.g., between midnight and 6:00 A.M.) and quieter weekend daytime and nighttime hours. (The DEIR states that 15-minute measurement periods were employed as required by the City's standards. While this would be appropriate relative to determining a noise

⁸⁴ Caltrans, Technical Noise Supplement, Table 2-3, September 2013.

source's compliance with the City's standard, one 15-minute measurement is not adequate to define community sound level trends over daytime, nighttime, weekday, and weekend periods.) A more representative sampling method consistent with the ANSI standard would be over a longer period of time (e.g., up to 72 hours) including noise sensitive periods of the week such as a weekend. It should be noted that the DEIR indicates outdoor studio production activities may occur at any time and any day of the week, including weekends (Page IV.I-44).

Response to Comment No. 26-E.1-43

The ANSI S12.9-1992/Part 2 (R2018) is a recommended standard and protocol in the absence of an adopted local standard. The ANSI has not been adopted by the City and therefore is not applicable. As explained in Response to Comment No. 26-E.1-5, the existing ambient noise measurement survey conducted for the Project is consistent with City requirements as specified in LAMC Section 111.01(a). Therefore, the requested ambient noise measurement in accordance with ANSI S12.9-1992/Part 2 (R2018) is not required by CEQA or City policy. Ambient noise measurements were conducted on a typical weekday, to represent the typical ambient noise environment during which both construction activities and studio operations would occur. Also note that LAMC Section 111.0 does not specify when measurements should be taken.

As discussed on page IV.I-19 in Section IV.I, Noise, of the Draft EIR, both daytime and nighttime ambient noise measurements were conducted. As discussed therein, the nighttime ambient noise measurements at receptors R2 to R8 were conducted between 10 P.M. and 1:00 A.M. Based on the 24-hour ambient noise measurement at receptor R1 (page 4 of Appendix J, Noise Calculations Worksheets, of the Draft EIR), the lowest hourly noise level occurred at 12:00 A.M. Therefore, the measured 15-minute ambient noise measurements are representative of the quieter ambient noise levels during the nighttime hours (between 10:00 P.M. and 7:00 A.M.).

Comment No. 26-E.1-44

31. **Page IV.I-19... (2) Ambient Noise Levels.** *Assessment of Existing Production Facility Sound Levels.* What are the existing ambient sound levels within the community due to the activities and operations associated with the current production facility? Are current activities and operations compliant with all applicable noise ordinances? What is the recent history, if any, of noise complaints related to activities and operations associated with the production facility? CEQA screening and assessment processes include evaluation of substantial temporary or periodic increases in ambient noise levels in the project vicinity above levels existing without the project. While the existing production facility has been part of the ambient conditions for quite some time now (since

1952), the DEIR has not addressed the expected increase in the overall production facility's noise emissions due to the proposed redevelopment and modifications that will increase the overall production facilities. Rather, the DEIR has considered the existing production facility noise emissions as part of the existing (baseline) community.

Response to Comment No. 26-E.1-44

The Project Site has operated as a studio use since 1952 and would continue to operate as a studio upon completion of the Project. The studio has not been cited for noise complaints. As stated on page IV.I-44 in the noise analysis included in Section IV.I, Noise, of the Draft EIR, outdoor studio production activities currently occur throughout the Project Site and the same activities would continue to occur upon completion of the Project. However, as discussed in detail in the Draft EIR and in Response to Comment No. 26-140, the future noise levels associated with outdoor studio production activities would be lower than the existing conditions, due to the reduction in the outdoor areas used for studio production activities and associated shielding provided by new buildings along the perimeter of the Project Site. Also refer to Response to Comment No. 26-146 for additional analysis of the outdoor production activities that confirms the Draft EIR's conclusion that Project noise impacts associated with outdoor studio production activities would be less than significant.

Comment No. 26-E.1-45

32. **Page IV.I-24... Table IV.I-6.** *Basis of Community Noise Equivalent Levels (CNEL).* Since CNEL is a 24-hour average sound level, estimating it based on one short measurement conducted during noisier daytime or evening hours potentially misrepresents the actual conditions. Note (a) within the table describes that the Community Noise Equivalent Level (CNEL) was estimated based on the short-term (15 minute) noise measurements per FTA procedures. Appendix E of the referenced FTA procedure provides guidance on the accuracies associated with long-term versus short-term measurements.

Response to Comment No. 26-E.1-45

As stated in Table IV.I-6 in Section IV.I, Noise, of the Draft EIR, the existing ambient noise levels in terms of CNEL were estimated based on the short-term noise measurements consistent with FTA procedures in Appendix E (Option 4) of the 2018 FTA guidance. Per the FTA, use of this option would moderately underestimate existing CNEL noise levels due to the use of the adjustment constant in the equations (i.e., a 2-dBA adjustment). Therefore, the noise impact analysis in the Draft EIR is conservative, as future CNEL noise levels are compared with the existing CNEL noise level. In addition, the estimated CNEL levels are consistent with the calculated traffic noise levels. Specifically,

the estimated CNEL levels of 65.9 dBA (CNEL) at receptor R2, 70.9 dBA (CNEL) at receptor R4, and 70.1 dBA (CNEL) at receptor R8 (as provided in Table IV.I-6 of the Draft EIR) are consistent with the calculated existing roadway traffic noise levels (Table IV.I-8 of the Draft EIR) of 66.1 dBA (CNEL) along The Grove Drive (in front of receptor R2), 71.0 dBA (CNEL) along Beverly Boulevard (in front of receptor R4), and 71.2 dBA (CNEL) along Fairfax Avenue (in front of receptor R8). As such, the estimated existing CNEL ambient noise levels are appropriate for use in the noise analysis.

Comment No. 26-E.1-46

33. Page IV.I-34... Project Design Feature NOI-PDF-4. *Operation of Loudspeaker and Sound-amplifying Equipment.* This Project Design Feature is not based on the minimum setback distances, the audibility provision, and the hours of operation limitations required by Los Angeles Municipal Code (LAMC) Section 115. Outdoor rooftop amplified sound systems must comply with the applicable provisions specified in Los Angeles Municipal Code (LAMC) Section 115. While NOI-PDF-4 establishes maximum noise level design limits for the speaker sound systems, regulatory compliance and the potential impact on nearby noise-sensitive neighbors are not detailed in the DEIR. This Project Design Feature should be based on the minimum setback distances, the audibility provision, and the hours of operation limitations required by the code.

Response to Comment No. 26-E.1-46

As discussed above in Response to Comment No. 26-E.1-40, LAMC Section 115 does not apply to the Project. Per Project Design Feature NOI-PDF-4, the specified noise limits for the amplified sound system are based on the distances from the Project property lines (i.e., 15 feet from the northern, southern and western property lines and 40 feet from the eastern property line). In addition, the noise limits for the amplified sound system provided in Project Design Feature NOI-PDF-4 are based on compliance with LAMC Section 112.01. As such, the speaker systems would be set back from building edges and directed away from residences.

Comment No. 26-E.1-47

34. Page IV.I-35... Construction Noise. *Construction Duration and Associated Noise Impacts.* How would construction noise impacts change if the 32-month construction period assessed in the DEIR extends through the full 20-year period to 2043 as requested in the DEIR? The DEIR does not present an evaluation that supports the conclusion that noise impacts associated with a 32-month construction schedule would be more significant than those associated with an extended 240-month construction schedule such that no other construction schedules need to be evaluated. While construction “intensity” may be slightly

lower over the 240-month construction schedule, similar construction activities that have been deemed potentially significant would still occur throughout the project site in proximity to neighbors. Additionally, at that point, construction noise impacts would no longer be considered temporary or periodic in nature given the 20-year duration. Since the noise impacts are driven by not only the magnitude of the noise but also the duration of the noise, an extended construction time frame of 20 years could be deemed significant. Lastly the DEIR does not address potential future construction noise impacts or mitigation measures relative to possible changes in the future ambient/background conditions that may occur over 20-years.

Response to Comment No. 26-E.1-47

Refer to Response to Comment No. 26-138 for the discussion of noise impacts associated with the 32-month and 20-year construction period. As stated in Response to Comment No. 26-138, the estimated noise levels were calculated based on a conservative scenario in which all pieces of construction equipment were assumed to operate simultaneously and assumed to be located at the construction area nearest to the sensitive receptors. As construction is completed and moves to another location, the construction noise levels would be further reduced due to distance attenuation and additional noise reduction provided by the newly constructed building located between the new construction area and the receptor. Therefore, construction noise impacts would be reduced to a less-than-significant level once construction activity is moved further away.

Comment No. 26-E.1-48

35. **Page IV.I-42... Table IV.I-11. Off-Site Construction Truck Noise.** The increases in the ambient sound levels due to off-site construction truck noise are likely underestimated. Since the existing ambient conditions are not based on the quietest time of day or week, the actual increases to the existing ambient conditions are unknown and likely underestimated. As such, the identified exceedances over the significance criteria are potentially higher than reported. Additionally, cases reported as no significant impact are possibly potentially significant. This is particularly critical during the mat foundation stage of construction when truck traffic may occur 24 hours per day for 5 days at a rate of 50 trucks per hour (1,000 trucks per day).

Response to Comment No. 26-E.1-48

Refer to Response to Comment No. 26-E.1-5 for a discussion of the City's ambient noise measurement requirements. It is unclear from the commenter as to what cases the commenter is referring to that may have been incorrectly reported. Rather, Section IV.I,

Noise, of the Draft EIR comprehensively evaluates potential noise impacts of the Project and discloses those impacts that may be potentially significant.

Per the L.A. CEQA Thresholds Guide, the significance criterion is equivalent to the measured daytime ambient noise levels (see Table IV.I-1-6 in Section IV.I, Noise, of the Draft EIR) plus 5 dBA. As provided on page IV.I-19 in Section IV.I, Noise, of the Draft EIR, the daytime ambient noise levels were measured in the middle of the day (between 10:00 A.M. and 2:00 P.M.) and the nighttime ambient noise levels were measured between 10:00 P.M. and 1:00 A.M. The ambient noise measurements were measured in accordance with the City's standards, which require ambient noise to be measured over a period of at least 15 minutes.⁸⁵ The daytime hour noise measurements represent the typical ambient noise level during the grading/excavation phase (the peak period with maximum number of trucks per hour), between 7:00 A.M. and 4:00 P.M. In addition, the measured ambient noise levels during the daytime hours (between 10:00 A.M. and 2:00 P.M.) would typically represent the quieter ambient during the daytime hours, as it is outside of the peak traffic hours (generally with higher ambient noise levels). As discussed in Response to Comment No. 26-E.1-43, the measured nighttime ambient noise levels during the nighttime hours represent the quieter ambient noise levels during the nighttime hours (between 10:00 P.M. and 7:00 A.M.). As provided on page IV.I-41 in Section IV.I, Noise, of the Draft EIR, the mat foundation pour could occur during the nighttime hours, if permitted by the Executive Director of the Board of Police Commissioners. As analyzed therein, the estimated noise levels due to concrete trucks for the mat foundation concrete pour, would exceed the nighttime ambient noise levels along Fairfax Avenue, La Brea Avenue, and San Vicente Boulevard, by 6.7 dBA L_{eq} , 5.7 dBA L_{eq} , and 5.1 dBA L_{eq} , respectively. This considers the noise penalties associated with human sensitivity to noise during evening and night hours. As such, the off-site construction vehicle noise analysis within the Draft EIR does not underestimate off-site construction truck noise as the baseline ambient noise levels were measured during the quieter time (for both daytime and nighttime hour measurements).

Comment No. 26-E.1-49

36. **Page IV.I-43... (iii) Summary of Construction Noise Impacts.** *Construction Noise Management Plan.* DEIR concludes that temporary noise impacts associated with the Project's construction activities would be potentially significant. How will these community impacts be managed? Consideration should have been given to implementing a Construction Noise Management Plan to facilitate direct communication with the neighboring community and immediate action related to construction noise complaints?

⁸⁵ LAMC Section 111.01.

- a. DEIR Section V (Page V-13) outlines rejected alternatives related to construction noise and vibration mitigation. While measures to reduce construction noise impacts on the apartment building (Broadcast Center Apartments) along the eastern boundary of the Project Site would be challenging, they would not be infeasible. With respect to construction noise, the two alternatives included moving all construction activities 700 feet away from boundary or moving all construction activities 100 feet away from boundary and erecting a 30-foot sound barrier wall. Given the lack of project-specific buildout details available at this time, the specifics around construction activities and phasing are unknown. As such, the rejection of the alternatives may be premature without further detailed considerations of construction noise planning focused on the specific buildout design. Versions of these alternatives with detailed consideration of an overall plan that includes practical measures such as imposing minimum allowable distance to the boundary for specific activities, phasing activities, employing reduced-noise equipment (for both small, powered hand tools as well as large combustion engine equipment), sequencing the use of noise barrier walls along the boundary, employing mobile noise control barriers or enclosures to shield activities, etc., may be feasible. Similar consideration applies to construction vibration mitigation.

Response to Comment No. 26-E.1-49

Please refer to Response to Comment No. 26-137, which discusses the additions to Project Design Feature NOI-PDF-1 in response to comments, including a telephone hotline for the public to communicate with the Project construction team, and the use of alternative construction equipment to minimize construction noise, where feasible.

As discussed on pages IV.I-56 to IV.I-59 in Section IV.I, Noise, of the Draft EIR, noise Mitigation Measure NOI-MM-1 will be implemented to reduce the construction noise impact to the off-site noise-sensitive receptors to the extent feasible. Specifically, implementation of Mitigation Measure NOI-MM-1 (installation of temporary sound barriers) would reduce the noise generated by on-site construction activities at the grade-level of off-site sensitive uses by a minimum of 16 dBA at the residential uses adjacent to the Project Site to the east (receptor location R1), by a minimum of 16 dBA at Pan Pacific Park on the east side of The Grove Drive (receptor location R2), by a minimum 9 dBA at the motel uses on the north side of Beverly Boulevard (receptor location R3), by a minimum of 5 dBA at the school uses on the north side of Beverly Boulevard (receptor location R4), by a minimum of 8 dBA at the residential uses on Ogden Drive (receptor location R5), by a minimum of 15 dBA at the residential use on Hayworth Avenue (receptor location R7), and by a minimum of 10 dBA at the residential and hotel uses on the west side of Fairfax Avenue (receptor location R8). As presented in Table IV.I-19 on page IV.I-58 in Section

IV.I, Noise, of the Draft EIR, the estimated construction-related noise levels at the uses represented by off-site sensitive receptor locations R2, R3, R4, R5, R7, and R8 would be reduced to a less-than-significant level with the implementation of Mitigation Measure NOI-MM-1.

See Response to Comment No. 26-136 regarding modification to Mitigation Measure NOI-MM-1 to specify a sound barrier of 30 feet in height along the shared property line with the Broadcast Center Apartments (i.e., the Shared Eastern Property Line). As discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the 30-foot-high sound barrier would further reduce noise levels at the Broadcast Center Apartments by up to 5 dBA at Level 3.

As analyzed in the Draft EIR, the estimated vibration levels associated with human annoyance due to on-site construction equipment would exceed the significance threshold at one of the receptor locations (receptor location R1). The impacts would occur when heavy construction equipment (e.g., large bulldozer, caisson drilling, and loaded trucks) operate within 80 feet of the affected building. As discussed on pages IV.I-66 and IV.I-67 in Section IV.I, Noise, of the Draft EIR, mitigation measures considered to reduce vibration impacts included the installation of a wave barrier. However, as stated therein and confirmed by AECOM (see Appendix FEIR-17 of this Final EIR), the installation of the wave barrier would be cost prohibitive, as the wave barrier must be very deep and long to be effective, and is considered infeasible.⁸⁶ In addition, constructing a wave barrier to reduce the Project's construction-related vibration impacts would, in and of itself, generate ground-borne vibration from the excavation equipment, e.g., drill rig and large excavator. As discussed in the Section V, Alternatives, of the Draft EIR, providing an 80-foot buffer zone to reduce the temporary construction vibration impacts would render a substantial portion of the Project Site undevelopable, and a significant construction-related noise impact would continue to occur. As such, it was determined to be infeasible.

Therefore, the Draft EIR correctly concluded that there are no feasible mitigation measures to reduce the potential vibration human annoyance impacts during construction.

Comment No. 26-E.1-50

37. Page IV.I-43... (b) Operational Noise. *Limited Consideration of Noise-producing On-site Mechanical (Building) Equipment.* The specifics of the building design and various equipment (specific location, type, size, operation, etc.) are not detailed in the DEIR but are necessary to verify the analyses and results presented within the DEIR. The DEIR only generally identifies project

⁸⁶ Caltrans, Transportation- and Construction-Induced Vibration Guidance Manual, June 2004.

operational noise sources as outdoor mechanical equipment, loading dock, and trash compactors. The DEIR does not detail specific mechanical equipment likely to be included on-site such as rooftop fans, rooftop air-conditioning units, building ventilation louvers, emergency power generators, electrical transformers, etc.

- a. The results of the limited operational analysis are carried through to the DEIR's cumulative impacts discussion (Page IV.I-72, Part (i)). Accordingly, the on-site stationary noise source cumulative impacts determination of less than significant is not based on an analysis of a specific project design that includes all planned mechanical equipment.

Response to Comment No. 26-E.1-50

Mechanical equipment was included in the evaluation of noise impacts in Section IV.I, Noise, of the Draft EIR. The analysis is based on Figure II-4, Conceptual Site Plan, of the Draft EIR and also Project Design Feature NOI-PDF-3, which requires that outdoor mounted mechanical equipment be screened from the view of the offsite noise-sensitive receptors. By breaking the line-of-sight from adjacent sensitive receptors, this measure would shield noise from the rooftop equipment and reduce exposure for sensitive receptors. In addition, as stated on page IV.I-43 in Section IV.I, Noise, of the Draft EIR, the Project would comply with LAMC Section 112.02, which limits the noise levels from the building mechanical equipment, so as to not increase the ambient noise levels at the offsite receptor locations by more than 5 dBA. As all mechanical equipment would be required to comply with LAMC Section 112.02, no Project-level or cumulative noise impacts would occur from onsite mechanical equipment.

Comment No. 26-E.1-51

38. **Page IV.I-43... (b) Operational Noise.** *Limited Consideration of Studio-related Production Activities.* Outdoor production activities occurring throughout the facility, including within proximity to property boundaries and nearby noise-sensitive neighbors, can create significant and discernible noise. The potential noise emissions associated with these types of activities (specifically the worst-case scenario) as well as the occasional unique nature of the noise (such as impulse noise from stage doors slamming, stage gun shots, explosions, etc.) are not considered in the operational noise analysis presented in the DEIR. The DEIR notes that these activities will occur at any time and any day of the week, including weekends.

- a. In particular, the operational analysis does not consider the potential operational noise impacts on the nearest residential neighbors (Broadcast Center Apartments) as related to both production activities and internal traffic

given the addition of new adjacent drive areas and entry points from both Beverly Boulevard and The Grove Drive. Noise impacts on the neighboring residences/apartments from internal traffic and operational/studio-production activities in these adjacent areas should be evaluated. Specific consideration should be given to the acoustical effects created by the Project's potential 160-foot tall buildings positioned approximately 37 feet from the Broadcast Center building as sound reflections will affect the resulting sound levels at the upper apartment elevations.

- b. On-site production activities will include the movement and use of heavy trucks. These trucks are anticipated to operate within proximity to neighboring noise-sensitive receivers (residences). The DEIR has not specifically included potential truck noise and vibration as part of the Project operational impacts. Assuming the usage of these trucks during late night production activities, noise and vibration may be significant.

Response to Comment No. 26-E.1-51

As discussed in Response to Comment No. 26-146, studio production activities currently occur throughout the Project Site and would continue to occur sitewide with implementation of the Project. However, as discussed pages IV.I-44 to IV.I-45 in Section IV.I, Noise, of the Draft EIR, the noise levels associated with outdoor studio production would be lower than the existing conditions, due to the reduction in the outdoor area used for studio production activities. Also, refer to Response to Comment Nos. 26-145 and 26-146 for the additional quantitative noise analysis that was completed in response to public comments that confirms that noise levels associated with outdoor production activities would be less than significant at all off-site sensitive receptors, including the Broadcast Center Apartments.

Please refer to Response to Comment No. 26-141 for the additional noise analysis regarding onsite trucks. As demonstrated therein, noise impacts associated with onsite trucks would be less than significant. Therefore, the Draft EIR correctly concluded that noise impacts associated with outdoor studio production activities would be less than significant.

Comment No. 26-E.1-52

- 39. **Page IV.I-43... (b) Operational Noise. Helipad Operations.** As part of the Project, the helipad would be upgraded (elevated) and would continue to operate in the same general location. While potential noise impacts have been identified as less than significant, no detail is provided regarding the existing sound levels associated with flights as well as the potential change in frequency of flights, times of departures and arrivals, and the type of equipment. Based on the

potential increase in studio production activities within the Project property, it is reasonable to assume helipad activities may increase as well, which would increase sound level exposure on noise-sensitive neighbors during flight activities.

Response to Comment No. 26-E.1-52

Refer to Response to Comment Nos. 16-87 and 26-15 for a discussion of helipad operations.

Comment No. 26-E.1-53

40. **Page 44... Table IV.I-12. *Mechanical Equipment Noise*.** The potential noise level increase due to the proposed project mechanical equipment and subsequently the impact, may be underestimated Existing ambient noise levels listed in the table are each based on one 15-minute measurement conducted between the hours of 10:00 PM and 1:00 AM on a weekday (Monday into Tuesday). This window of time is typically not the quietest time of the day when people are the most sensitive to noise. As such, the potential noise level increase due to the proposed project mechanical equipment may be underestimated.

Response to Comment No. 26-E.1-53

Refer to Response to Comment No. 26-E.1-5 for a discussion of ambient noise measurement standards.

Based on the 24-hour ambient noise measurement conducted at receptor location R1 (provided in Appendix J of the Draft EIR), the ambient noise levels between 10:00 P.M. and 1:00 A.M. (51.9 to 54.1 dBA) are similar to the ambient noise levels between 2:00 A.M. and 4:00 A.M. (52.1 to 53.7 dBA). Therefore, the measured short-term ambient noise levels between 10:00 P.M. and 1:00 A.M. would be representative of the nighttime ambient noise levels. In addition, as discussed above in Response to Comment No. 26-E.1-50, the Project would comply with LAMC Section 112.02, which regulates noise from mechanical equipment.

Comment No. 26-E.1-54

41. **Page IV.I-44... Studio-Related Production. *Sound Stage Shell Structure Design*.** The DEIR indicates “The sound stage shell structures would be designed to provide sound insulation to ensure that any noise generated is contained within the sound stages.... As such, noise impacts associated with the operation of additional sound stages would be less than significant.” This

conclusion does not appear to be based on a quantitative analysis. The sound insulation (i.e., acoustical design requirements) for the sound stage buildings should be identified and specified as requirements. The DEIR should also incorporate into its analysis, the situations where the stage is not closed. The shell will not protect offsite sources from sound when the stage is open, which can occur during set loading/construction/unloading when you will have sound from equipment, people, music, etc.

42. **Page IV.I-44... Studio-Related Production.** *Studio Production Activities Set-back.* NOI-PDF-5 limits studio-related activities to no closer than 200 feet to the apartments along the east property boundary during nighttime hours, however the noise associated with these outdoor activities are not quantified to confirm 200 feet is an adequate set-back. Additionally, there is no 200-foot set-back requirement during daytime hours and the nighttime set-back only applies to the apartments along the east boundary. Additional detail and analysis should be presented to assess the adequacy of this design feature. And other noise-sensitive receptors, such as the residence near the south boundary, should be considered. The DEIR indicates these activities may occur at any time and day of the week, including weekends. The DEIR does not define “outdoor studio production activities” in NOI-PDF-5, therefore it’s not clear what activities would be allowed within the 200 foot setback.

Response to Comment No. 26-E.1-54

Please refer to Response to Comment No. 26-145 regarding noise associated with open stage doors. Also refer to Response to Comment No. 26-135 regarding noise impacts associated with Project operations and to Response to Comment No. 26-146 for the additional quantitative noise analysis associated with the outdoor studio production activities. This analysis confirms that potential impacts associated with outdoor studio production activities would be less than significant for both daytime and nighttime hours. Note that Project Design Feature NOI-PDF-5 provides for the continued prohibition of outdoor studio activities within 200 feet of the Shared Eastern Property Line during nighttime hours. This is the only portion of the Project Site that is adjacent to residential uses. With this PDF and the overall reduction in outdoor production activities, there would not be an increase in noise levels at the Broadcast Center Apartments due to outdoor production activities. Currently, there are no residential uses near the southern boundary. However, additional noise analysis was also conducted for the Gilmore Adobe, located south of the Project Site, for informational purposes in response to public comments. Refer to Response to Comment No. 26-139 for further discussion of the Gilmore Adobe. With regard to the definition of outdoor production activities, refer to pages IV.I-44 to IV.I-45 in Section IV.I, Noise, of the Draft EIR.

Comment No. 26-E.1-55**43. Page IV.I-54... (iii) Composite Noise Level Impacts from Project Operations.**

The evaluation of potential impacts related to the LAMC Leq(hourly) significance threshold of < 5 dBA due to the composite on-site operations (including mechanical equipment, production activities, etc., but exclusive of roadway noise sources) is not presented. This should be evaluated and presented to supplement Table IV.I-18. Of concern, is the fact the existing hourly Leq is unknown at all locations except R1. In that case, LAMC Section 111.03 prescribes an assumed ambient noise level of 50 dBA for residentially-zoned [sic] receivers and 60 dBA for commercially-zoned receivers. Under those assumptions, the non-roadway levels listed in the referenced table result in non-roadway composite sound levels that exceed the significance threshold at some locations.

Response to Comment No. 26-E.1-55

Refer to Response to Comment No. 26-E.1-5 above regarding how the existing ambient noise levels have been properly identified in accordance with applicable LAMC requirements. Also note that the noise levels in LAMC Section 111.03 are utilized when the existing ambient noise levels are not known, which is not the case for the Project. Refer to Response to Comment No. 26-143 regarding the composite noise analysis that was accurately completed for the Project in accordance with the 2006 L.A. CEQA Thresholds Guide.

Comment No. 26-E.1-56**44. Page IV.I-56... Mitigation Measure NOI-MM-1. *Construction Noise Barrier Walls.*** This mitigation measure requires temporary and impermeable sound barrier walls at specific locations during construction activities. The performance specification for each wall and wall location is based on a noise reduction at the ground level of each receptor location. How will construction noise impacts be minimized at elevated levels at each receptor location, as applicable?

- a. Additionally, the DEIR states a construction noise barrier wall between the apartment building (R1—The Broadcast Center) and the Project would need to be as tall as the apartment building to be an effective barrier of construction noise and indicates it would not be feasible. However, the details around the effectiveness of the noise barrier wall will depend on the design and construction details of the building to be constructed, which are unknown at this time. The effectiveness and reasonableness of a temporary construction noise barrier to reduce construction noise impacts at the

apartment building should be determined based on the specific construction to occur along that boundary.

- b. The new buildings adjacent to the Broadcast Center Apartments may be constructed up to 160 feet tall. As this structure is built and increases in height throughout construction, construction noise mitigation measures at increasing elevations should be considered to mitigate the noise impacts to the elevated apartment levels. This might include temporary noise barrier screening along the east face of the new building.

Response to Comment No. 26-E.1-56

As provided on page IV.I-56 in Section IV.I, Noise, of the Draft EIR, noise reduction performance for the temporary construction noise barriers is specified at the ground level, as this is location where the noise reduction performance can be verified. The construction noise barrier performance would not be as effective at the upper levels of the off-site noise-sensitive receptor location R1, as discussed in the Draft EIR. Therefore, construction noise impacts at the upper levels of receptor location R1 would remain significant. Mitigation Measure NOI-MM-1 requires that the design of the temporary construction noise barrier be verified by a noise consultant for compliance with the measure as part of the plan check approval process.

Construction noise levels are dominated by the major construction equipment (i.e., major noise sources) located at the ground level (e.g., excavator, tractor, loader, backhoe, bore/drill rig, grader, scraper, and dozers). Construction activities that take place at the upper levels of the Project buildings would involve smaller construction equipment (i.e., hand tools), which would generate lower noise levels than the large earth-moving equipment at the ground level. As the construction progresses vertically, interior fit-out and exterior enclosure activities progress simultaneously. Generally speaking, interior activities have a longer duration than that for the exterior enclosure. In most cases, the exterior is fully enveloped long before the interior activities are complete. It is impractical to erect a large scale, perimeter noise barrier and remove/relocate it at a frequency necessary to maintain a suitable buffer to prevent a deterrent to safe exterior wall installation activities. Specifically, exterior wall installation involves working near a building edge that presents a fall safety hazard. Regulatory requirements require that suitable safety equipment be utilized to address the fall potential in addition to equipment that expedites the installation. As such, the addition of a temporary perimeter noise barrier could impede safety and/or the installation of equipment. Furthermore, based on typical construction logistics for multi-level buildings, the exterior enclosure will provide the necessary sound reduction. Therefore, there is no need for temporary noise barriers at the façade.

Also note that Mitigation Measure NOI-MM-1 has been augmented to include a 30-foot-high sound barrier along the Shared Eastern Property Line to further reduce noise levels at the Broadcast Center Apartments, as discussed in Response to Comment No. 26-136.

Comment No. 26-E.1-57

45. **Appendix J—Noise Calculation Worksheets.** *Sound Level Assumption for all Mechanical Equipment.* The SoundPlan noise modelling information, specifically the mechanical equipment sound level data, indicates all project mechanical equipment (heating, ventilating, air-conditioning, etc.) were modelled as a simple point source with a sound power level (Lw) of 90 dBA. This is a very simplistic modelling approach. As stated within other comments herein, the specifics of the project design and this associated equipment is not included within the DEIR, therefore the adequacy of these results cannot be directly confirmed. There is concern some off-site project sound levels and possibly the associated impacts may be underestimated.

Response to Comment No. 26-E.1-57

Over 40 locations where mechanical equipment could be located were modeled in SoundPLAN (see Appendix J, Noise Calculation Worksheets, of the Draft EIR, pdf page 149 for a list of these point sources and the sound power of each piece of equipment on the interior and perimeter of buildings). Detailed information on the sound power levels for the building mechanical equipment are not available at this stage of the Project, as the design of the individual buildings are developed during the City's regulatory building permit process. Therefore, sound power levels for typical commercial buildings, 90 dBA (as provided in pdf pages 149 and 150 of Appendix J of the Draft EIR), were used for the noise analysis. This level of analysis within the Draft EIR is consistent with City policy and CEQA and does not rely on undue speculation of building designs, though the location of equipment on the perimeter of buildings ensures a conservative analysis in forecasting noise exposure at off-site receptors. In addition, the noise levels for mechanical equipment (HVAC equipment) are typically modeled as individual point sources. Furthermore, as stated on page IV.I-43 in Section IV.I, Noise, of the Draft EIR, the Project would be required to comply with the LAMC Section 112.02, which limits the noise levels from building mechanical equipment so as to not increase the ambient noise levels at the off-site receptor locations by more than 5 dBA.

Comment No. 26-E.1-58

46. **Appendix J—Noise Calculation Worksheets.** *Calculation Methodology and Results.* The DEIR fails to provide adequate detail regarding input assumptions, sound propagation assumptions, and environmental sound modelling results for

the specific proposed project development to adequately assess the appropriateness of the calculation results. It is anticipated the noise modelling methodology utilized may not have accounted for acoustical parameters such as sound source directionality, building reflections, ground reflection, etc.

Response to Comment No. 26-E.1-58

As discussed on page IV.I-33 in Section IV.I, Noise, of the Draft EIR, the onsite stationary noise levels were calculated using the SoundPLAN (Version 8.2) computer noise prediction model. SoundPLAN is a three-dimensional computer noise prediction model, which calculates sound (noise) propagation using approved engineering procedures and incorporates national and international noise standards. In addition, SoundPLAN also considers the specifics of land topography and sound reflections from the ground and nearby buildings. This calculation tool is widely used by acoustical engineers as a noise modeling tool for environmental noise analysis. Noise source input levels and results from the SoundPLAN are provided in Appendix J of the Draft EIR (pdf pages 149 to 209). This includes an itemized list of point and area sources assumed in the modeling of noise impacts. Sound sources, including outdoor mechanical equipment, loading and trash compactors, are based on omnidirectional sources (i.e., sound radiating to all directions). Amplified sound systems are based on point sources with directivity based on a typical outdoor loudspeaker. People at outdoor gathering spaces and parking areas are modeled as area sources that generate a cumulative amount of noise from a given area. As discussed above, the SoundPLAN model accounts for building reflections and ground reflections (based on hard surfaces) (i.e., the model calculates the potential noise reflection from the noise sources due to the building's adjacency to such noise sources to the receptor locations).

Comment No. 26-E.1-59

HYDROLOGY AND WATER SUPPLY

Stormwater Run-off—Volume Estimates and Discharge Management

47. The DEIR presented the existing and proposed stormwater runoff flows for the 50-year storm event in **Table IV.G-1 on Page IV.G-36**. The DEIR section, on page IV.G-35 and in Table IV.G-1, cites the Hydrology Report, which is included as Appendix H to the DEIR, as the source for the surface flow rate data. **Table 2, PDF Page 35 in Appendix H** presented the existing and proposed peak flow rates for stormwater for the 50-year frequency design storm event runoff (Q_{50}). The table has the flow rate of 53.47 cubic feet per second (cfs), and further shows no increase in stormwater runoff due to the project. **PDF Page 44-48, Figure 4 in Appendix H** provided the stormwater runoff estimates using

HydroCalc for the existing and proposed Project Site. There are several inconsistencies observed in the report which are described below:

- a. The report should explain how Figure 4 relates to Table 2 and the key outputs used to make the Q_{50} calculations. There doesn't appear to be any change between the existing and proposed scenarios and given no change to the inputs there is no value in providing separate results in Figure 4.

Response to Comment No. 26-E.1-59

As illustrated in Figure IV.G-1 on page IV.G-21 of the Draft EIR (and as revised in Section III, Revisions, Clarifications, and Corrections to the Draft EIR), the existing drainage areas and overall drainage patterns would remain unchanged as a result of Project implementation. As discussed in Section IV.G, Hydrology and Water Quality, of the Draft EIR and the Hydrology and Water Quality Report (Appendix H of the Draft EIR), the Project Site would continue to be comprised of approximately 90 percent impervious surfaces following Project buildout. In addition, as determined in the Hydrology and Water Quality Report and as summarized in Table IV.G-1 on page IV.G-36 of the Draft EIR, the overall surface water flow rate would not change with implementation of the Project. Specifically, existing runoff flows during a 50-year storm event are 53.53 cfs.⁸⁷ As shown in Table IV.G-1 of the Draft EIR and Tables 1 and 2 of the Hydrology and Water Quality Report, runoff flows during Project operation would remain the same at 53.53 cfs during a 50-year storm event. Accordingly, there would be no increase in runoff volumes into the existing storm drain system. Furthermore, the Project's stormwater infrastructure would be designed to convey the 50-year storm to the designated discharge location. Inlets within the Project Site would be sized to eliminate the potential for ponding. Accordingly, drainage within the Project Site during operations would be similar to current conditions.

As discussed on pages IV.G-27 to IV.G-28 of the Draft EIR and pages 27 to 28 of the Hydrology and Water Quality Report, as part of the surface water hydrologic analysis, stormwater runoff generated from the Project Site was quantified using the Modified Rational Method. The equation used in the Modified Rational Method is $Q=C \times I \times A$, where "Q" equals the volumetric flow, "C" equals the runoff coefficient, "I" equals the rainfall intensity, and "A" equals the basin area. The Modified Rational Method assumes that the runoff coefficient (C) remains constant during a storm. The runoff coefficient is a function of both the soil characteristics and the percentage of impervious surfaces in the drainage area. The Modified Rational Method assumes that a steady, uniform rainfall rate will

⁸⁷ Table IV.G-1 in Section IV.G, Hydrology and Water Quality, of the Draft EIR included a clerical error that has been corrected in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The existing and proposed flow rate is 53.53 cfs.

produce maximum runoff when all parts of the basin area are contributing to outflow. This occurs when the storm event lasts longer than the time of concentration. The time of concentration (T_c) is the time it takes for rain in the most hydrologically remote part of the basin area to reach the outlet. As part of its Hydrology Manual, the Los Angeles County Department of Public Works developed a time of concentration calculator, HydroCalc, to automate time of concentration calculations as well as the peak runoff rates and volumes using the Modified Rational Method design criteria. The data input requirements include: sub-area size, soil type, land use, flow path length, flow path slope and rainfall isohyet. HydroCalc was used to calculate the storm water peak runoff flow rate for the Project Site by evaluating an individual sub-area independent of all adjacent subareas. Figure 4 of the Hydrology and Water Quality Report sets forth the HydroCalc results and shows the analysis of the existing drainage areas and the proposed drainage areas using the existing impervious area percentage and the proposed Project's maximum impervious area percentage, which are the same. The other inputs used to determine the surface water hydrology include the area in acres, the flow path length and slope, the rainfall depth, and the soil type. Since the Project Site will have the same physical area in the pre- and post-Project condition, the area is the same as well as the rainfall depth and soil type which are determined by the Los Angeles County Hydrology Manual.

The flow path length and slope in the final, built condition will likely be longer and shallower as the storm water will follow a more circuitous path through collection and conveyance systems. Flow path lengths that are longer and shallower reduce the peak flow, so the analysis in the Draft EIR, which keeps the flow path length and slope the same as existing conditions, is a conservative calculation. The runoff peak flow values are associated with the 50-year 24-hour storm event. Refer to Section 2 of the Hydrology and Water Quality Report.

Comment No. 26-E.1-60

- b. **PDF Page 43, Figure 3 of Appendix H** provided estimates for the volume of stormwater captured (mitigated volume of 567,854 gallons) that do not align with the data presented on **PDF Page 30** of this Appendix, which states that "The Project will need to capture and use up to 625,000 gallons of water on-site". [sic] It is unclear if these values represent annual, monthly, or daily capture volumes and how these values are related to estimates provided in Table 2.

Response to Comment No. 26-E.1-60

Refer to Response to Comment No. 26-E.1-6 and Section III, Revisions, Clarifications, and Corrections to the Draft EIR, which clarifies the volume of the stormwater treatment as up to 625,000 gallons. The stormwater volume required for LID

treatment is unrelated to the values in Table 2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR, which analyzes the 50-year 24-hour storm event in the pre- and post-Project conditions.

Comment No. 26-E.1-61

- c. **PDF Page 22, Appendix H**, reported that stormwater runoff from the project will discharge toward City catch basins and underground stormwater drain pipes to ultimately discharge to Ballona Creek. There is no indication of whether the existing 24-inch stormwater pipe that connects to the Fairfax Avenue stormwater pipe would continue to convey stormwater after redevelopment. The potential impacts to surface water need to be considered unless it can be demonstrated that the stormwater runoff will be captured and used on-site.

Response to Comment No. 26-E.1-61

Refer to Response to Comment No. 26-E.1-59. The Project would implement LID BMPs, as required by the LID Ordinance; refer to Response to Comment Nos. 3-4, 3-6, 3-7, 13-6, 16-74 and 26-86. Refer to Response to Comment No. 26-111 regarding stormwater management. As discussed therein, BMP systems will be designed within the property to capture the typical urban contaminants found in stormwater. As the current stormwater is discharged without any such controls, the BMPs installed as part of the Project will be an improvement over the current conditions. In addition, the peak discharge rate of the 50-year storm event is unchanged. Therefore, the existing municipal storm drain system, including the existing 24-inch stormwater pipe that connects to the Fairfax Avenue stormwater pipe, will continue to perform as it does in the existing condition.

Comment No. 26-E.1-62

- d. **PDF Page 29. Appendix H** cites footnote #22 but does not include the footnote. The footnote is associated with the statement “According to the Preliminary Geotechnical Investigation prepared for the Project Site, groundwater infiltration is not feasible for the Project Site”. [sic] The rationale for this statement should be better explained, as it relates to the preceding paragraph.

Response to Comment No. 26-E.1-62

See footnote 22 below, which was inadvertently omitted and has been added to the Hydrology and Water Quality Report (Appendix H of the Draft EIR) as noted in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

- ²² Preliminary Geotechnical Engineering Investigation by Geotechnologies, Inc. dated March 29, 2019, and updated April 22, 2021, p. 49. Refer to the TVC 2050 Project Draft EIR, Section IV.D, Geology and Soils, for further discussion.

This Preliminary Geotechnical Engineering Investigation was included as Appendix E.1 of the Draft EIR and discussed in Section IV.D, Geology and Soils, of the Draft EIR. The inadvertent omission of this footnote does not change any analysis or conclusion in the Draft EIR.

Refer to Response to Comment No. 26-111 regarding stormwater management systems.

Comment No. 26-E.1-63

- e. **PDF Page 24 of Appendix H** states that, "...it is assumed that pollutants such as sediment, nutrients, pesticide, metals, pathogens, and oil and grease occur in the existing surface water runoff." However, there is no assessment of the level of these pollutants in the surface water runoff resulting from the proposed Project in the report. While we understand that there is no existing implementation of stormwater management best practices (BMPs) for the project site, the additional new land uses in the proposed Project could result in changes to the levels of the pollutants in the surface water runoff that would trigger the need to develop and implement BMPs.

Response to Comment No. 26-E.1-63

As discussed throughout the Draft EIR, the Project would continue the existing studio use. Refer to Response to Comment Nos. 3-7, 13-8, 16-74, and 26-111 regarding pollutants in stormwater runoff and stormwater BMPs. The current stormwater is discharged without any controls, and the BMPs installed as part of the Project would be an improvement over the current conditions. BMPs will be installed to capture and reuse the 85th percentile storm event which will significantly improve the quality of the runoff from the Project Site in accordance with LID requirements. Therefore, as stated on page IV.G-30 of the Draft EIR, with the incorporation of LID BMPs, operation of the Project would not result in discharges that would violate any surface water quality standards or waste discharge requirements, and impacts to surface water quality during operation of the Project would be less than significant.

Comment No. 26-E.1-64

- f. **PDF Page 35 of Appendix H** presents FEMA information specific to the Project Site and describes that a portion of the site is within minimal flood hazard and the rest of the site is within a 0.2 percent annual chance flood

hazard zone. It would be beneficial to include the FEMA panel (1605F)²⁴ and legend to the report.

²⁴ <https://msc.fema.gov/portal/search?AddressQuery=television%20city%2C%20los%20angeles#searchresultsanchor>

Response to Comment No. 26-E.1-64

The FEMA Map has been added to the Hydrology and Water Quality Report (Appendix H of the Draft EIR) in response to this comment. This addition is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 26-E.1-65

48. **Groundwater Dewatering:** The DEIR addresses the potential groundwater impacts from construction dewatering on **Pages IV.G-29, 30–31, 33, and 43**. However, impacts related to the potential for operational dewatering activities are not addressed. **PDF Page 25 of Appendix H** states that the depth-to-water measurements on the Project site vary from 8-30 feet. **PDF Page 34, Appendix H**, states that the project construction activities would include the excavation to a depth of approximately 15 to 45 feet below existing Project Site grade. The report further mentioned that the Project is expected to excavate 723,000 cubic yards of subsurface soil. Since the groundwater depth is quite shallow, and with artesian conditions, there is a potential need for dewatering activities both during project construction and operation. The DEIR has not adequately evaluated the potential impacts from dewatering.

- a. A potentiometric map would inform the reader about the direction of groundwater flow and temporal conditions of the water table (i.e., seasonal influence and/or localized mounding). This information should be incorporated into the DEIR evaluation of potential impacts on groundwater direction and/or flow. Without this assessment, the DEIR has not adequately evaluated the groundwater impacts.
- b. Dewatering can cause the development of hydraulic gradients that are also necessary for drawing out water towards the Site. With the possibility of off-site contamination in groundwater, dewatering can result in mobilizing the contaminants towards the Site. The DEIR limited its analysis of groundwater quality impacts from construction dewatering to the discharge of pumped groundwater and ignores potential impacts related to the subsurface migration of contaminated groundwater. (Page IV.G-31) Thus, the DEIR should provide additional analysis for potential impacts on groundwater quality due to dewatering.

- c. **PDF Page 21 of Appendix H** states that the discharges from dewatering operations during Project construction could lead to high level of fine sediments that exceed NPDES requirements. While the Appendix states that the developer must submit a Notice of Intent to discharge groundwater from these dewatering operations in accordance with the requirements of NPDES Permit No. CAG994004, the required treatment or mitigation measures that the developer would use to meet the permit limits are not documented nor discussed in the DEIR or Appendix H.
- d. **PDF Page 38 of Appendix H** states that, "...no water supply wells, spreading grounds, or injection wells are located within a one-mile radius of the Project Site..." without any reference. It is important to understand the source information and its date to verify that it is current and valid information. Per DEIR Pages IV.G-33-34, this statement forms the basis for the assessment that the Project will not have an adverse impact on groundwater levels. There is no substantial evidence provided in the DEIR to support the analysis. With significant groundwater dewatering (and expected dewatering during operations), a potential for impacts to groundwater levels in the vicinity is expected.
- e. The DEIR fails to describe the methodology that would be employed to manage these dewatering operations without impacts to surface and/or groundwater. The depth of excavation can be variable, impacting estimates of the depth of the groundwater table. A more thorough evaluation of construction and operational dewatering is required to adequately understand the impact of dewatering on the groundwater levels in the vicinity of the Project Site, including the quantity and quality of water discharged.
- f. The groundwater dewatering design and the related impacts are not adequately evaluated in the DEIR. The DEIR should at a minimum evaluate the volume of the dewatering and the radius of influence of such dewatering. To illustrate, based on some generalized assumptions of one possible dewatering scenario at the Project site, below is one estimate of the potential volume of dewatering, which indicates that there is potential large, dewatered volume that could have significant impacts to the groundwater.
- g. an [sic] estimate of the anticipated volume of dewatering (ed), there could have potentially significant impacts to the groundwater.
 - i. Range of depth of excavation: 15 feet to 45 feet (assuming average depth of 30 feet²⁵)
 - ii. Assumed Average depth of groundwater: 20 feet

- iii. Assumed Area of Site to be excavated²⁶: 25 acres (1.1 X 10⁶ square feet)
- iv. Assumed Soil Porosity: 30%²⁷ (unitless)
- v. Dewatered Volume: Average excavated saturated thickness X Area X Porosity = 3.3 X10⁶ cubic feet, or approximately 24.2 million gallons of water.

While the inputs may vary based on actual water levels, soil properties, depth, and extent of excavation, etc., project excavation to the anticipated depth with the presumed water levels indicates that the dewatering could have potentially significant impacts.

²⁵ The depth of excavation can be variable.

²⁶ Assuming the whole site area is excavated to a constant depth of 30 feet below site grade.

²⁷ Page 4, Appendix E—Geology and Soil

Response to Comment No. 26-E.1-65

As discussed in Response to Comment No. 3-7, the Project would require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment Nos. 11-5 and 11-25 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts. As discussed therein, the temporary dewatering system would be installed and operated in accordance with the NPDES discharge permit or industrial sewer permit requirements, and the specific dewatering system will be determined during the City's building permit process. Nevertheless, in response to comments regarding the Draft EIR's dewatering analysis, an evaluation of simulated dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction would be less than significant.

Refer to Response to Comment No. 26-94 regarding Project Site groundwater levels.

Response to (a): Refer to page 8 of the Site Summary Report, included in Appendix G.1 of the Draft EIR, for a discussion of the historical investigations of the Project Site, including an evaluation of groundwater flow. The desktop study referenced therein was based on historical groundwater potentiometric maps from groundwater monitoring reports for the former Texaco station that was located within the Project Site boundary, which are available in the State of California Geotracker database. Review of the groundwater monitoring reports indicates groundwater flow is generally from the northeast to southwest with a range of hydraulic gradients generally between 0.005 to 0.01 feet/foot.

Per the Dewatering Report, the average hydraulic gradient is estimated to be approximately 0.008 feet/foot, and the depth to groundwater is encountered on average at approximately 10 feet below ground. Example potentiometric maps are provided in Appendix C of the Dewatering Report.

Response to (b): Refer to Response to Comment Nos. 3-7, 11-5, and 11-25 for a detailed discussion of construction dewatering and potential cone of depression and gradients estimates. In response to comments regarding the Draft EIR's dewatering analysis, an evaluation of simulated dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction would be less than significant. Refer to Response to Comment Nos. 11-5 and 16-85 regarding the Draft EIR's groundwater analysis.

Response to (c): The comment conflates the Construction Stormwater General Permit and the General Permit for the discharge of construction dewatering. See Response to Comment No. 11-5 for a discussion of the temporary construction dewatering, which notes that the dewatering will be subject to either a separate NPDES permit or an industrial sewer permit, depending on the point of discharge. Either permit will include effluent limitations, and may require treatment, including for sediment.

Response to (d): Refer to Response to Comment Nos. 3-7, 11-5, and 11-25 for a detailed discussion of construction dewatering. In response to comments regarding the Draft EIR's dewatering analysis, an evaluation of simulated dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction would be less than significant.

The State of California well database Geotracker/GAMA lists and shows the locations of supply wells (i.e., pumping wells for domestic, municipal, agricultural, industrial, and process purposes) in the State. A review of the database on February 14, 2023 found no active supply wells within 1 mile of the Project. Review of the LADWP Urban Water Management Plan (2020) found no reference to spreading grounds within 1 mile of the Site.

Response to (e): See response to item d.

Response to (f): See response to item d.

Response to (g): See response to item d.

Refer to Response to Comment No. 26-69 regarding the inaccuracies within the commenters' dewatering analysis.

Comment No. 26-E.1-66

49. **Appendix N—Water Supply Assessment** does not evaluate the water use during Project construction. **PDF Page 16, Appendix N** states that the Project would require an additional water supply of up to 301 acre-feet per year (AFY).

Response to Comment No. 26-E.1-66

Refer to Response to Comment No. 26-E.1-8 with regard to the evaluation of impacts related to water demand during construction. The statement that the Project would result in an additional (net) water demand of up to 301 afy is correct and is included in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR.

Comment No. 26-E.1-67

50. **Water Conservation Assessment:** The LADWP requires its customers to show water-saving systems and technologies in buildings and landscapes to conserve and reduce water usage. As part of this requirement, **PDF Page [sic] 17–18, Tables IA/IB, of Appendix N** include approximately 75 AFY water savings from required City of Los Angeles ordinances, 2020 Los Angeles Plumbing Code, and Los Angeles Green Building Code. A savings of approximately 4 AFY of from additional conservation measures is listed in Table IIA and IIB (PDF Page 19). The DEIR does not adequately substantiate that water conservation is accurately calculated.

- a. **PDF Page [sic] 17–18, Table IA/IB** shows that out of the total 75 AFY of savings, approximately 38 AFY (33,907 gpd) is applied to water conservation for the cooling towers. This saving is roughly 20% of the base demand of 169,533 gpd. There is no substantial evidence to demonstrate these calculations in the report are accurate.
- b. Based on the regulations cited, the DEIR appears to be double-counting additional conservation savings of 4 AFY (as listed in **Table IIA and IIB, PDF Page 19**), via plumbing fixtures and landscaping. The water savings with dishwashers, toilets, and showerheads are already included in the calculated savings of 75 AFY, as demonstrated in the City of LA ordinance.²⁸

²⁸ https://clkrep.lacity.org/online/docs/2015/15-0458_ORD_184248_6-6-16.pdf, page 17, TABLE 99.04.303.4.2

Response to Comment No. 26-E.1-67

The WSA calculations for the Project were prepared by LADWP, the governing authority for WSAs in the City, and are based on calculated savings gained through compliance with applicable City Ordinances and Codes (refer to pages IV.M.1-14 and IV.M.1-15 of the Draft EIR). The water savings within Tables IIA and IIB of the WSA included as Appendix N of the Draft EIR are mandatory commitments that are above and beyond City regulatory requirements. These commitments are more specifically described in Appendix B of the WSA and incorporated in Project Design Feature WAT-PDF-1. The water conservation associated with the commitments by the Applicant results in a water savings of approximately four afy. There is no double counting of water savings.

As stated by LADWP in their written correspondence dated June 9, 2023 (included as Appendix C-5 in Appendix FEIR-9), with regard to cooling tower calculations, the cooling tower water demand was estimated using the requirements from Section 99.05.305.3 “Cooling Tower” of the City of Los Angeles Ordinance No. 184248 (codified in the Los Angeles Municipal Code Chapter IX Article 9 Division 5 Section 99.05.305.3), which requires cooling towers to have a minimum of six cycles of concentration. Before the Ordinance became effective in 2016, cooling towers had operated at three cycles of concentration; therefore, the increase to six cycles reduces water by 20 percent.

As further stated by LADWP in their written correspondence referenced above, with regard to double counting, as shown in Table IA and Table IB of the WSA, the Required Ordinances Water Savings are due to the codes and ordinances listed in footnote 4 of the tables. The Additional Conservation is due to the Applicant’s selection of water conservation items that save more water than required by the codes and ordinances. Please see Appendix B of the WSA (PDF pages 50–52) for the list of the Applicant’s voluntary water savings measures for the Project.

Comment No. 26-E.1-68

BIOLOGICAL RESOURCES

51. The biological resources section of the Initial Study lacks an appropriate level of detail to justify the findings of no impacts/less than significant impact.
 - a. For instance, the DEIR indicates that due to the urbanized and disturbed nature of the Project Site and the surrounding areas, it is “unlikely” any special status species would be present on site. The DEIR should provide specific data to support this conclusion such as the data provided by USFWS,

CDFW, CNPS that documents and illustrates that SSS do not occur in this area.

- b. This comment also applies to potential impacts on riparian habitat or other natural communities. The DEIR should have described more clearly the information available to support a conclusion of No Impact rather than just stating that there is no riparian/sensitive habitat in this location. For example, the DEIR did not identify the location of the nearest wetland or natural community.

Response to Comment No. 26-E.1-68

Pursuant to Section 15063(a)(3) of the CEQA Guidelines, the analysis of biological resources in the Initial Study, which is included as Appendix A of the Draft EIR, meets the requirements of CEQA. Citations containing supportive data from the California Department of Fish and Wildlife (CDFW) and the United States Fish and Wildlife Service (USFWS) with regard to potential impacts to biological resources are included therein. With respect to special status species, as discussed in the Initial Study, the Project Site is located in an urbanized area and is currently developed with the Television City studio. Landscaping within the Project Site is limited to minimal ornamental landscaping and hardscape features. There is no habitat mapped by either the CDFW or the USFWS located within or near the Project Site. The nearest habitat that could support special status species is located within Topanga State Park approximately 10 miles west of the Project Site.⁸⁸ Furthermore, as stated on page 45 of the Initial Study, the Project Site is not located in or adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City or County of Los Angeles.^{89,90} Due to the urbanized and disturbed nature of the Project Site and the surrounding areas, species likely to occur on-site are limited to small, common terrestrial and avian species typically found in urbanized developed settings. Based on the lack of habitat on the Project Site or nearby, which is documented by CDFW, USFWS, and the City, there is no evidence of any special status species at the Project Site. Therefore, as discussed under Biological Resources Threshold (b), the Initial Study correctly concluded that it is unlikely any special status species would be present on-site.

⁸⁸ U.S. Environmental Protection Agency, NEPAassist, <https://nepassisttool.epa.gov/nepassist/nepamap.aspx?wherestr=7716+Beverly+Bouelvard+Los+Angeles>, accessed June 7, 2023.

⁹⁰ Los Angeles County, Los Angeles County General Plan, Figure 9.3 Significant Ecological Areas and Coastal Resource Areas Policy Map, October 6, 2015.

With respect to habitat, as noted above and discussed in the Initial Study, no riparian or other sensitive natural community exists on the Project Site or in the surrounding area.^{91,92} Furthermore, the Project Site and surroundings are not located in or adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City or County of Los Angeles.^{93,94} In addition, there are no other sensitive natural communities identified by the CDFW or the USFWS.^{95,96,97} Therefore, as concluded in the Initial Study, the Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. The nearest natural community mapped by the USEPA is in Runyon Canyon Park approximately two miles northeast of the Project Site.⁹⁸

With respect to wetlands, as stated in the Initial Study, “[n]o water bodies or state or federally protected wetlands exist on the Project Site or in the immediate vicinity.”⁹⁹ The nearest wetlands mapped by the USFWS National Wetlands Inventory mapper are located within the Wilshire Country Club approximately 1.6 miles east of the Project Site.¹⁰⁰

Contrary to the commenter’s assertion, pages 45–48 of the Initial Study adequately analyzed impacts to biological resources and provided a detailed discussion of the reasons that biological resources is not further analyzed in the Draft EIR.

Comment No. 26-E.1-69**HAZARDS****Chapter IV.F—Hazards and Hazardous Materials**

52. **Section IV.F.2.b(11) (p. 34)** compares detected concentrations in subsurface investigations to commercial/industrial standards, consistent with information presented in the Site Summary Report in Appendix G. Documentation elsewhere in the DEIR indicates that an on-site daycare may be present, as well as overnight accommodations. As such, all subsurface investigation results should be compared to residential screening levels. It is also noted that the soil vapor screening levels cited in Table 4 (p. 31 of Appendix G) for gasoline range organics (GRO) and trichlorofluoromethane (TCFM) are incorrect.

Response to Comment No. 26-E.1-69

Residential screening levels will be applied for any potential childcare location. The remainder of the Project Site would include studio uses; therefore, it is appropriate for the remainder of the Project Site to use commercial/industrial screening levels. Further, engineering and design controls may be considered such as locating a potential childcare use above the ground floor or incorporating a green roof design, or clean fill import for the use. Any potential childcare use would be sited and constructed in accordance with all applicable regulatory requirements to ensure no exposure to soil, soil vapor, and/or groundwater exceeding residential screening levels would occur. Project Design Feature AIR-PDF-2 has been added to Section IV.A, Air Quality, of the Draft EIR, in response to comments. This PDF requires any future childcare use to be located a minimum of 330 feet from the existing Big Blue emergency generator to the extent it remains in use. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 26-E.1-70

53. **Section IV.F.3.b (p. 37)** indicates that the Soil Management Plan (SMP) included in Appendix G “details protocols to be implemented during design, construction, and **post-construction** of the Project in order to protect human health and the environment during any development activities that involve **soil disturbance**.” Given the expected dewatering activities, the DEIR should adequately evaluate and discuss if a groundwater management is necessary due to dewatering activities during construction and post-construction is warranted (i.e., Soil and Groundwater Management Plan). The SMP (p. 65 of Appendix G pdf) currently indicates that Section 6.2.4 will be updated as plans are further developed. The SMP indicates that the General Contractor shall implement any

required treatment of groundwater, but it is not clear if a permanent dewatering system will be required, and if so, what type of treatment will be required.

Response to Comment No. 26-E.1-70

Refer to Response to Comment No. 3-7. As discussed therein, the Project will require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment No. 16-64 regarding how the extracted groundwater during construction dewatering would be chemically analyzed to determine contamination and the appropriate treatment and/or disposal method.

Comment No. 26-E.1-71

54. **Section IV.F.3.d(1)(a) (p. 40)** indicates an excavation depth of 45 feet. While the presence of tar is discussed, along with a brief discussion of a current tar removal system (IV.F.2.b(3). [p. 30]), there is no discussion of whether a tar removal system will be required during construction and how the tar will be managed.

Response to Comment No. 26-E.1-71

Refer to Response to Comment Nos. 13-4 and 16-64 regarding the tar collection system and the testing and disposal requirements for any impacted soil.

Comment No. 26-E.1-72

55. **Section IV.F.3.d Threshold (b)(1)(a)(i) (p. 42)** includes a discussion of hazardous waste generation, handling, and disposal during construction. There is no discussion of the current photovoltaic (PV) panels on the shade canopies in surface parking lots along Beverly Boulevard and Fairfax Avenue (as discussed on page 23). PV modules may contain heavy metals and be classified as hazardous waste. The DEIR should address the PV modules' relocation or waste characterization procedures.

Response to Comment No. 26-E.1-72

Refer to Response to Comment No. 26-84 regarding the existing solar panels. As discussed therein, the existing solar panels will be removed as part of the Project. Any construction waste, including the solar panels and photovoltaic cells, will be disposed of in accordance with all applicable regulatory requirements.

Comment No. 26-E.1-73

56. **Section IV.F.3.d(b)(1)(a)(i) (pgs. 43–44)** indicates that chlorinated VOCs (tetrachloroethylene [PCE] and trichloroethylene [TCE]) were detected in groundwater below their maximum contaminant levels (MCLs), with the exception of “PCE” that slightly exceeded the MCL. Based on Table 9 in the Site Summary Report (p. 36 of Appendix G), concentrations of cis-1,2-DCE, pentachlorophenol, and TCE exceeded MCLs in at least one sample. In January 2012, PCE was reported at concentrations as high as 13 µg/L and TCE at concentrations as high as 11 µg/L in groundwater in the northeast corner of the site at concentrations above MCLs. This section should be modified to accurately represent all VOC exceedances in groundwater.
57. **Section IV.F.3.d(b)(1)(a)(i) (pg. 44)**—“VOCs detected in groundwater at the Project Site are likely related to an off-site upgradient release.” No obvious upgradient source is identified in the Phase I in Appendix G or in Section IV.F.2.b(2)(b). Low-level chlorinated VOCs have been reported in groundwater beneath the eastern portion of site and are attributed to off-site source/dry cleaner (2021 Site Summary Report pgs. 10, 12, and Figure 3 [Appendix G pgs. 17, 19, and 42]). No dry cleaners to the north of the site were mentioned in either of the two previous Phase I’s. Based on EDR report for 2018 Phase I, there were two potential cleaners identified on EDR’s HIST CLEANER database from the 1930s, although there is no confirmation of actual dry cleaning activities. In January 2012, PCE was reported at concentrations as high as 13 µg/L in groundwater in the northeast corner of the site at concentrations above MCLs (2018 Phase I pgs. 17–18 [Appendix G pgs. 95-96]; 2017 Phase I p. 20 [Appendix G pg. 703]). In November 2018, TCE (12 µg/L) and cis-1,2-DCE (6.4 µg/L) were identified in groundwater above MCLs (5 µg/L and 1 µg/L, respectively) at B-1 (near eastern site boundary south of adjacent apartments) (2021 Site Summary Report, Table 9 [Appendix G, pg. 36]). From the ASTM Phase I perspective, this would be considered a Recognized Environmental Condition (REC). A more detailed analysis of the potential off-site source(s) is required, as the Phase I reports do not support that assumption. If the VOC contamination is the result of an off-site source, future dewatering activities may result in additional contamination being pulled on-site and/or beneath adjacent residences and/or schools. The 2018 Phase I identifies various adjacent properties that were listed on the Leaking Underground Storage Tank (LUST) databases and have received regulatory closure. Multiple adjacent properties were closed with methyl tertiary butyl ether (MTBE) and tertiary butyl alcohol (TBA) remaining in groundwater. (2018 Phase I, pgs. 19–20 [Appendix G pgs. 97–98]) The Hazards section does not address the effect of dewatering on these, or others within the radius-of-influence, off-site properties.

Response to Comment No. 26-E.1-73

Phase I and Phase II investigations, which are included in Appendix G of the Draft EIR and documented in the Site Summary Report (Appendix G.1 of the Draft EIR), among others, have been performed to evaluate Project Site environmental conditions pertaining to the nature and extent of impacts to soil, soil vapor, and groundwater, including the former dry cleaners upgradient of the Project Site and the presence of low levels of chlorinated VOCs, and LUST cleanup and closures at adjacent properties. Refer to Response to Comment Nos. 13-4, 13-6, 16-28, 16-64, 16-85, 26-78, 26-83, and 26-87 regarding the Draft EIR's discussion of soil and groundwater contamination, including among other things, the extent and source of contamination, under existing conditions and the proposed Project. As explained therein, some of the contamination comes from on-site sources (e.g., low levels of PAHs and aromatic VOCs from the former Texaco station), whereas other contamination likely comes from off-site sources (e.g., chlorinated VOCs from off-site properties), as fully and adequately explained in the Draft EIR. For a detailed description of the impacts to groundwater and their source, see the Site Summary Report (Appendix G.1 of the Draft EIR).

Because the Project includes excavation below the water table, temporary construction dewatering will be required. As discussed in Response to Comment No. 11-5, temporary construction dewatering impacts were analyzed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR. As stated on page IV.F-44 of the Draft EIR, during construction-phase dewatering, any discharge of groundwater would comply with the applicable NPDES permit or industrial user sewer discharge permit requirements. Pursuant to such regulatory requirements, the extracted groundwater would be chemically analyzed to determine whether the groundwater is contaminated and the appropriate treatment and/or disposal methods, if any. Thus, with compliance with applicable regulatory requirements, Project construction activities would not create or exacerbate a significant hazard to the public, neighboring properties or the environment involving the handling and disposal of extracted groundwater, and impacts would be less than significant.

Comment No. 26-E.1-74

58. **Section IV.F.3.d(b)(1)(a)(ii) (pg. 44)**—"The status of any former USTs at the former Anderson V L gas station is unknown; however, geophysical surveys have confirmed no tanks remain in the location of this former gas station." Limited details are provided in the Site Summary report regarding the geophysical investigation (i.e., area of the survey, as the Phase I notes that the Anderson gas station relocated to the south and it is not clear if both locations of the former gas station were surveyed, the effective depth of the GPR survey is not discussed). Similarly, Section IV.F.3.d(b)(1)(b)(ii) indicates "additional USTs are not anticipated as part of the Project." The possibility of encountering former

USTs should not be dismissed. The SMP addresses known below-grade structures and “unknown structures” (Section 6.4, page 66 of Appendix G). It is recommended that additional discussion regarding encountering USTs be added (e.g., potential permitting, sampling, and analysis requirements).

Response to Comment No. 26-E.1-74

The possibility of encountering USTs is not “dismissed” as claimed by the commenter. The history of the Project Site as it relates to USTs is provided on page IV.F-31 of Section IV.F, Hazards and Hazardous Materials, of the Draft EIR and this comment quotes directly from the Draft EIR’s analysis of the potential to encounter USTs later in the section. Refer to pages IV.F-44 and IV.F-45 of the Draft EIR and Response to Comment No. 13-6 regarding the former USTs identified on-site. The removal of USTs is a matter of regulatory compliance, and the Draft EIR correctly concluded that with compliance with applicable regulations and requirements, impacts related to USTs would be less than significant. The requested details of the geophysical investigation do not affect the analysis or conclusion in any way because even if a known UST was present on the Project Site, its removal would still be a matter of regulatory compliance and the conclusion would not change. A summary of regulatory measures related to hazards and hazardous materials, including those pertaining to USTs, that are applicable to the Project is provided in Appendix FEIR-11 of this Final EIR.

Comment No. 26-E.1-75

59. Section [sic] **IV.F.3.d(b)(1)(a)(vi) (pgs. 46–47 of pdf)** relates to methane gas and identifies it as “potentially significant,” which will be mitigated by Mitigation Measure HAZ-MM-2(p. 53), which includes controls to mitigate the effects of subsurface gases and impacted soil and groundwater on workers and the public, including:
- a. “Monitoring devices for methane and benzene shall be present to alert workers of elevated gas concentrations when basement or subsurface soil disturbing work is being performed.” Additional detail regarding what plans will specify monitoring equipment, number of monitors based on size of excavation, plans for monitoring for potential emissions to nearby workers or residents, action levels, frequency of observation, etc. should be provided.
 - b. “Contingency procedures will be in place if elevated gas concentrations are detected such as the mandatory use of PPE, evacuating the area, and/or increasing ventilation within the immediate work area where elevated concentrations are detected.” Similarly, specify what plans will the contingency procedures be identified in. Specify if the General Contractor will be responsible for preparation of an overall HASP that addresses these

procedures. Specify what procedures will be in place to confirm that consistent procedures are used by all contractors.

- c. "Workers shall be trained to identify exposure symptoms and implement alarm response actions." Related to the contingency procedures above, specify the symptoms and who will be responsible for providing training.
- d. "Soil and groundwater exposed during excavations shall be minimized to reduce the surface area which could off-gas. This shall be achieved by staggering exposed excavation areas." Provide details regarding what an acceptable area of excavation will be and what the assumed time for off-gassing is.
- e. "Soil removed as part of construction shall be sampled and tested for off-site disposal in a timely manner. If soil is stockpiled prior to disposal, it shall be managed in accordance with the Project's Storm Water Pollution Prevention Plan (SWPPP)." The SMP indicates that areas with chemicals of concern above screening levels will be excavated prior to site-wide excavation and stockpiled on-site; it is not clear if this is in accordance with the SWPPP. The stockpiles will only be covered if left on-site for greater than 48 hours. Given the adjoining residential and commercial properties, stronger mitigation should be included (e.g., covering all stockpiles with chemicals of concern unless actively adding to the stockpile or loading for off-haul).
- f. "Fencing shall be erected to limit public access and allow for gas dilution." It is not clear how fencing allows for gas dilution. State what the minimum required setbacks will be (i.e., how far away do members of the public need to be and is that feasible).

A discussion of public protection/notification measures, particularly for adjoining properties, should be included.

Response to Comment No. 26-E.1-75

As discussed in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, Mitigation Measure HAZ-MM-2 requires the installation of controls during Project construction to mitigate the effects of subsurface gases on workers and the public. Implementation of Mitigation Measure HAZ MM-2 would ensure potential impacts related to subsurface gases and associated potential impacts to soil and groundwater would be less than significant.

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding hydrocarbons and the Project Site's location within an oil field. Refer to Response to Comment No. 26-38 regarding applicable SCAQMD rules and regulations.

Mitigation Measure HAZ-MM-1 specifically requires the General Contractor to comply with the monitoring, notification and reporting requirements of SCAQMD Rule 1166, which includes notification to adjoining properties. Mitigation Measure HAZ-MM-2 states that, among other mitigation measures, air monitoring to detect any elevated levels of volatile organic compounds will be performed. Both Rule 1166 and the California Construction Safety Orders set forth acceptable levels of constituents of concern. The HASP is prepared in accordance with California Code of Regulations, Title 8, Section 5192 for the safety of the workers, as explained in the DEIR.

Contingency procedures will be specified in the HASP that will be prepared by the General Contractor. The HASP will specify training for identifying conditions that would require a contingency response. The contingency procedures detailed in the HASP will include procedures to confirm that consistent contingency procedures are used by all contractors.

Comment No. 26-E.1-76

AESTHETICS, AGRICULTURE, MINERAL RESOURCES, POPULATION AND HOUSING, RECREATION, AND WILDFIRE

60. Aesthetic issues were dismissed in the Initial Study primarily on the grounds that the new and altered buildings and other improvements would be consistent with the character of the neighbourhood [sic] and would not introduce substantial new sources of lighting or glare. The IS analysis did not consider the possibility that new buildings up to 225 high (proposed to be constructed on either side of the primary studio building) would shade areas of adjacent properties, such as the parcel on which the historic Gilmore Adobe stands. Ramboll suggests that the DEIR evaluate the shade and shadow impacts of the Project given the height of the buildings could create impacts on the adjacent residential and commercial areas.

Response to Comment No. 26-E.1-76

As explained in the Initial Study (included in Appendix A of the Draft EIR) and in Section VI, Other CEQA Considerations, of the Draft EIR, SB 743 [Public Resources Code (PRC) Section 21099(d)] sets forth the following: "Aesthetic and parking impacts of a residential, mixed use residential, or employment center project on an infill site within a transit priority area (TPA) shall not be considered significant impacts on the environment."

Pursuant to PRC Section 21099, the Project is an employment center project that would be located on an infill site within a TPA. The Project is considered an employment center project because it is located on property that is zoned to permit commercial uses with a maximum FAR greater than 0.75. In addition, the Project Site is located on an infill site, as that term is defined in PRC Section 21099(a)(4), because the Project Site includes lots located within an urban area that has been previously developed. Lastly, the Project Site is located within a TPA, as that term is defined in PRC Section 21099(a)(7), because it is located within 0.5 mile of an existing “major transit stop.” Specifically, a number of bus lines provide transit service throughout the Project area, with bus stops located adjacent to the Project Site on both Beverly Boulevard and Fairfax Avenue, as well as within a one-block radius; these include Los Angeles County Metropolitan Transportation Authority (Metro) Bus Lines 14, 16, 17, 217, 218, 316, and 780, several of which have headways of 15 minutes or less during the morning and afternoon peak commute periods; and LADOT DASH Fairfax Line. In addition, Metro transit facilities planned in the area include the Metro D (Purple) Line extension. The City’s Zone Information and Map Access System (ZIMAS) also confirms the Project Site’s location within a TPA, as defined in ZI No. 2452. Therefore, in accordance with PRC Section 21099(d)(1), the Project’s aesthetic impacts are not considered to be significant impacts on the environment and therefore do not require further evaluation under CEQA. However, an analysis of the Project’s potential aesthetics impacts is included in the Initial Study for informational purposes only and not for determining whether the Project will result in significant impacts on the environment. The analysis therein concludes that in the absence of SB 743, aesthetic impacts of the Project would be less than significant. Nonetheless, with regard to shading and shadows, note that the Gilmore Adobe would be located approximately 167 feet from the nearest Project buildings. Given the location of the Project Site to the north of the Gilmore Adobe and the angle of the sun, shadows from Project buildings would generally extend to the north, not to the south towards the Gilmore Adobe.

Comment No. 26-E.1-77

CLOSING

We appreciate the opportunity to perform this review. Please feel free to call Eric Lu at (949) 798-3650 if you have any comments or questions.

Response to Comment No. 26-E.1-77

This comment, which concludes the letter and provides a point of contact, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision makers prior to any action on the Project.

Comment No. 26-E.1-78

Attachments:

Figures [4 pages]

Attachment A—Ramboll tables and worksheets [8 pages]

Response to Comment No. 26-E.1-78

This comment provides a list of attachments, as well as tables and worksheets. These materials were reviewed and responded to as appropriate in connection with the response to comments above.

Comment No. 26-E.2-1**Exhibit 2—Statistical Research, Inc. letter**

Statistical Research, Inc. (SRI), has reviewed portions of the Draft Environmental Impact Report (DEIR) and supporting technical appendices for the TVC 2050 Project (Project) located at 7716– 7860 West Beverly Boulevard, Los Angeles, California (Project Site).

DEIR sections reviewed include:

- Section II Project Description
- Section IV Environmental Impact Analysis
- B. Cultural Resources
 - D. Geology and Soils
 - H. Land Use and Planning
 - L. Tribal Cultural Resources

Technical appendices reviewed include:

- Appendix C.1: Historical Resources Technical Report
- Appendix C.2: Tribal Cultural Resources Report
- Appendix C.3: AB 52 Notification Letter and Delivery Confirmations

- Appendix C.4: Historic Signage Guidance
- Appendix F: Paleontological Resources Review Memorandum

Overall, SRI concludes that all reviewed sections of the DEIR and technical appendices fail to adequately identify and analyze the effects of the TVC 2050 Project on cultural resources (historic built environment and archaeological resources), tribal cultural resources, and paleontological resources. Glaring errors, omissions, and organizational problems are apparent in each of these sections and technical appendices. These deficiencies make the overall DEIR inadequate as a disclosure document as required by the California Environmental Quality Act (CEQA) and in some respects make it impossible to adequately review. Deficiencies of the DEIR and technical appendices are summarized below and further explained in the attached Table 1.

Response to Comment No. 26-E.2-1

The issues raised by the commenter are addressed in Response to Comment Nos. 26-E.2-2 through 26-E.2-153, below. As demonstrated therein, the analysis in the Draft EIR meets the requirements of CEQA.

Comment No. 26-E.2-2

Historic Built Environment

Material Impairment of Existing Historical Resources. It is difficult to assess the potential impacts of the Project as the proposed development is undefined. The central element of the Project is described as the TVC 2050 Specific Plan (Specific Plan), but the Specific Plan was not provided with the DEIR. The DEIR includes a Conceptual Site Plan in Figure II-4 of the DEIR, but the DEIR states this is only one possible development scenario and is simply “illustrative.”

In any event, the development of the Project in accordance with the Conceptual Site Plan, as well as the Height Zone Map in Figure II-5 of the DEIR and Proposed Development Program in Table II-2 of the DEIR, would materially impair the historic significance of the Primary Studio Complex because (1) 58-foot-tall buildings could be constructed to the north of the Primary Studio Complex; (2) it appears that a substantial portion of the Service Building (one of the two buildings, along with the Studio Building, that comprise the Primary Studio Complex) would be removed, as well as a portion of the Studio Building; (3) the 1969 Mill Addition and the 1976 Support Building (collectively, Additions), which are the two existing additions to the Primary Studio Complex, would be demolished; (4) the development of the Project would otherwise significantly impair the integrity of the Primary Studio Complex with respect to setting, feeling, and association; and (5) the DEIR improperly defers environmental review of what would actually be constructed in proximity

to the Primary Studio Complex, as well as preparation of a historic structure report that is critically needed here to guide the rehabilitation of the existing historical resources on the Project Site. Each of these significant concerns is addressed below.

Response to Comment No. 26-E.2-2

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 26-119, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the Project. A draft Specific Plan is not necessary for evaluation of the Project. Please note that the Preliminary Draft Specific Plan includes the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. The Preliminary Draft Specific Plan has been made publicly available for informational purposes prior to the release of this Final EIR on the Department of City Planning's website. Please note that this draft is not final and has not been approved by City decision-makers.

Refer to Topical Response No. 5, Historical Resources, specifically Section C, Potential New Construction North of the Primary Studio Complex, regarding the impact analysis of new construction in the Viewshed Restoration Area; Section A, Existing Evaluation and Designation of the Primary Studio Complex, regarding the HCM designation and how the 1969 Mill Addition and 1976 Support Building are not a part of the designation; and Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, regarding preparation of the HSR. Refer to Response to Comment No. 26-46 regarding the removal of the southern portion of the Service Building and how the volume of the Studio Building would be restored.

An analysis of the Project's potential impacts on the integrity of the Primary Studio Complex is included on pages IV.B-54 to IV.B-55 of the Draft EIR and pages 76 to 81 of the Historic Report (Appendix C.1 of the Draft EIR). As discussed in detail in the Historic Report, after the Project is constructed, the Primary Studio Complex would retain most of the aspects of integrity, including location, design, materials, workmanship and association. Integrity of setting has been lost over time prior to this Project, and integrity of feeling would be compromised by the Project. However, because integrity of location, design, materials,

workmanship, and association would be retained, the Primary Studio Complex would still be able to convey its overall historic character, appearance, and association with its historical period when it became the first large-scale, purpose-built television facility. Moreover, with Project Design Feature CUL-PDF-2, the Project would include an HSR to guide the rehabilitation of the Primary Studio Complex in compliance with the Rehabilitation Standards, which would support the preservation of the Primary Studio Complex and maintain its integrity. Mitigation is not required as compliance with the Rehabilitation Standards would be ensured by OHR, who would review the construction documents prior to approving the building permits pursuant to the Cultural Heritage Ordinance and the Specific Plan. After construction of the Project, the Primary Studio Complex would retain sufficient integrity to convey its significance. As such, the Primary Studio Complex would not be materially impaired by the Project because the Primary Studio Complex would remain eligible for designation as an HCM and for listing in the National Register and the California Register. Thus, the Project would not result in a substantial adverse change in the significance of the Primary Studio Complex, and impacts would be less than significant. Contrary to this comment, the Draft EIR did not defer review of development in proximity to the Primary Studio Complex.

Comment No. 26-E.2-3

First, the casual reader of the DEIR would assume that almost no above-grade new construction would occur to the north of the Primary Studio Complex. For example, the Conceptual Site Plan includes mainly landscaping, open space, and parking to the north of the Primary Studio Complex. The Conceptual Site Plan, however, is just one of a limitless number of development options, and, in fact, new buildings are allowed in this area. On the Height Zone Map in Figure II-5 of the DEIR, the substantial area between Beverly Boulevard and the Primary Studio Complex is designated as “Height Zone A—Viewshed Restoration Area.” We understand that the applicant negotiated with the Los Angeles Conservancy for certain restrictions that would preserve in part the view of the Primary Studio Complex from Beverly Boulevard. Specifically, the Cultural Heritage Commission’s discussion of findings in support of a Historic-Cultural Monument designation for the Primary Studio Complex (see Appendix C: Adopted HCM Designation in the Historic Resources Group technical report for the TVC 2050 Project [Appendix C.1 of the DEIR]) lists the *future* exterior viewshed features as seen from adjacent public right-of-way along Beverly Boulevard. These include the central entryway bridge, signage on the central entryway bridge, the view of the intersection between the western portion of the Service Building and Studio Building, and the signage at the western corner of the Service Building. Regarding the restoration of the historic viewshed from Beverly Boulevard, the Commission wrote: “It is expressly understood that in order to achieve meaningful views, any future development within this Future Viewshed Restoration Area should not reduce views of the enumerated Exterior Viewshed Features to mere slivers or glimpses.” However, Height Zone A does not accomplish “viewshed restoration” because buildings up to 58 feet in height are permitted in Height Zone A. If the goal here is actually to preserve historic views

from Beverly Boulevard, why are one or more six-story buildings allowed directly north of the Primary Studio Complex?

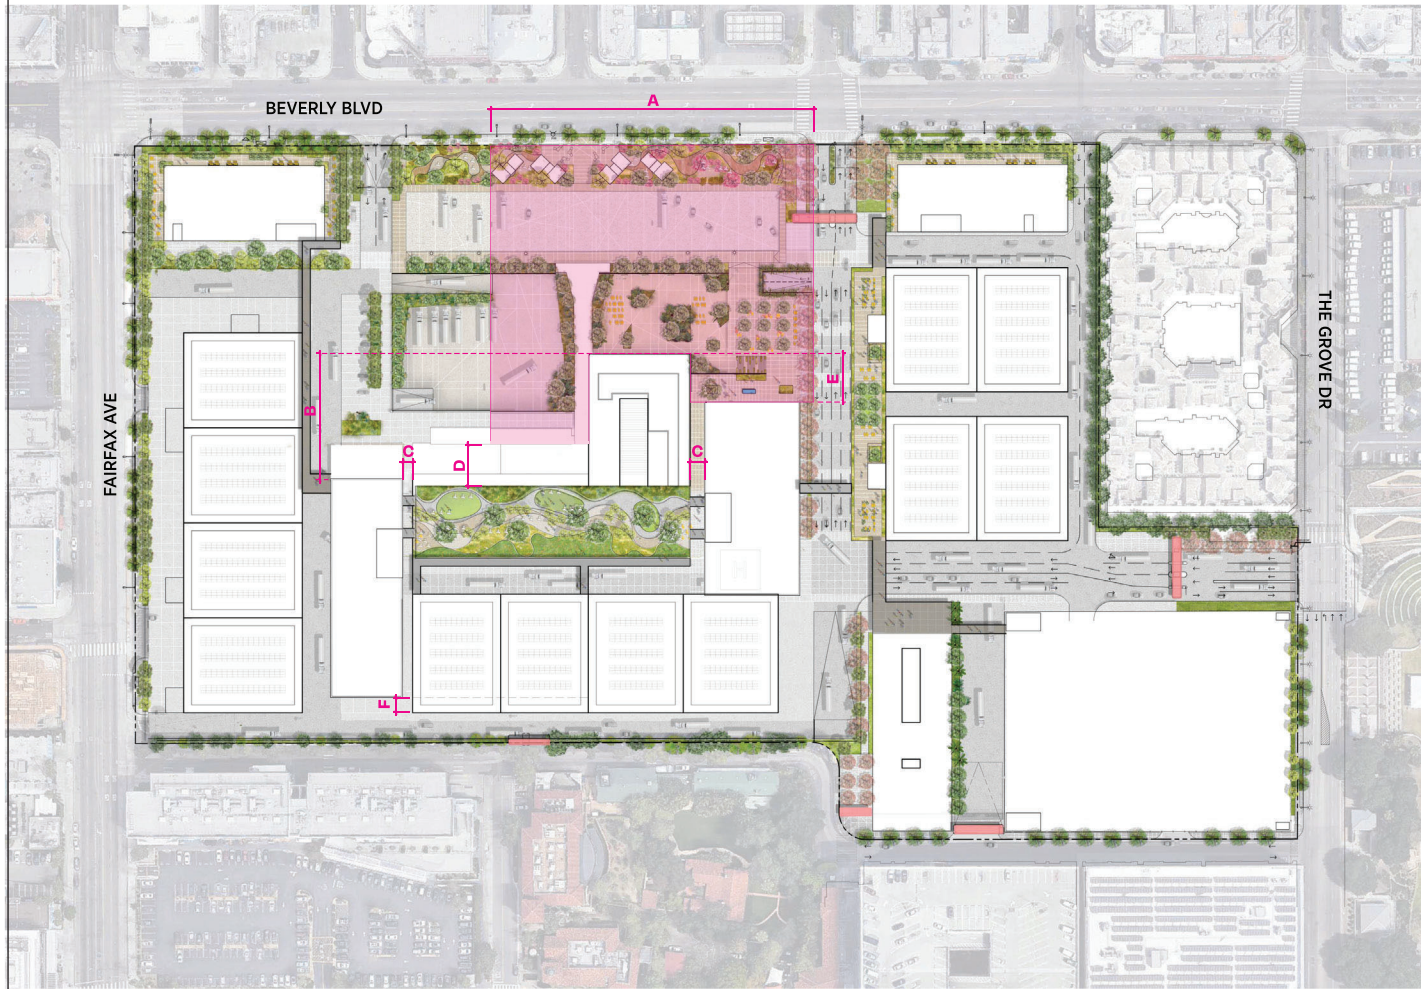

In this regard, we note that one of the items in Project Design Feature CUL-PDF-1 states that “new buildings immediately adjacent to the Primary Studio Complex [should be located] to the east and south of the Service Building and to the west of the Studio Building.” This implies that new buildings could not be constructed immediately north of the Primary Studio Complex, but it does not expressly prohibit such construction. Moreover, the most charitable reading of this provision is that it would preclude new construction to the north that was “immediately adjacent” to the Primary Studio Complex. This would not preclude a new building 5 feet, or 10 feet, or 20 feet from the Primary Studio Complex.

Response to Comment No. 26-E.2-3

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the preservation of the Primary Studio Complex. As discussed in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. As discussed in Section B, Historic Structure Report and Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, any substantial alteration to a designated HCM would require OHR review and compliance with the Rehabilitation Standards pursuant to Section 22.171.14 of the Cultural Heritage Ordinance.

For additional information regarding the agreement with the Los Angeles Conservancy, refer to Response to Comment No. 26-19.

Project Design Feature CUL-PDF-1 (i.e., the Project Parameters) establishes maximum permitted development areas, heights limits and setback requirements for adjacent new buildings and additions to the Primary Studio Complex, as well as massing limitations to ensure that the Primary Studio Complex is not adversely affected. As discussed on page IV.B-52 of the Draft EIR, the Conceptual Site Plan is consistent with the Project Parameters set forth under Project Design Feature CUL-PDF-1 (refer to Figure II-10 on page II-957), and Project Design Feature CUL-PDF-1 would apply to any development scenario permitted under the proposed Specific Plan.

LEGEND

- A** 430' width of Viewshed Restoration Area as defined in HCM designation (CHC-2018-476-HCM)
- B** 150' set back from north facade of Service Building
- C** 15' separation from east facade of Service Building and 10' separation from west facade of Studio Building

- This figure depicts the Conceptual Site Plan's compliance with the Project Parameters (Project Design Feature CUL-PDF-1) set forth on pages IV.B-38 to IV.B-40 of the Draft EIR.

Figure II-10
Proposed Historic Project Parameters

Comment No. 26-E.2-4

Second, contrary to the DEIR and underlying Historic Resources Technical Report (Historic Report) for the Project, it is likely that both of the Additions are historical resources. The DEIR and Historic Report attempt to disqualify the Additions as historical resources by artificially limiting the period of significance to 1952–1963 and then concluding that the Additions are not historical resources because they were constructed in 1969 and 1976 (i.e., after 1963). The sole justification offered for using 1952–1963 as the period of significance is that the Primary Studio Complex was constructed in 1952, and, in 1963, “CBS abandoned its vision of a single unified production facility and moved its filmed programming operations to the CBS Studio Center lot in Studio City.” (DEIR, IV.B-24; Historic Report, p. 34)

However, the period of significance for the Project Site obviously did not end in 1963. “Period of significance” refers to the dates when a property achieved the historic significance necessary to qualify for listing in the California Register of Historical Resources (CRHR) or National Register of Historic Places (NRHP). Therefore, the period of significance for the television studio on the Project Site is the span of time when the property actively contributed to the growth and popularity of commercial television. That period did not end in 1963. To the contrary, CBS was just getting started. As discussed in more detail in Table 1, and as recognized in the Historic Report, a variety of groundbreaking and innovative television shows were shot there with live studio audiences throughout the 1960s and 1970s, including *The Smothers Brothers Comedy Hour* (1967–1970), *All in The Family* (1971–1979), *Maude* (1972–1978) and *The Carol Burnett Show* (1967–1978). Any assessment of the historic significance of CBS’s television programming cannot credibly omit these and other television shows that became part of the nation’s shared cultural experience during these two decades.

The brief discussion of the period of significance in the DEIR and Historic Report actually undercuts the artificially shortened period. They state that, during the 1952–1953 period, television use was growing rapidly, and networks expanded their operations and facilities nationwide, as evidenced by the development of Television City. They also claim that 1952–1963 “captured the postwar evolution of CBS and with the construction of Television City” and “represents the maturation of commercial television.” But none of this was less true in 1979 than it was in 1963. CBS continued to grow and increase its domination of American television throughout the 1960s and 1970s, and most would say that the 1970s represented the “maturation of commercial television” to a considerably greater extent than the 1952–1963 period. CBS’s construction of the Additions in 1969 and 1976 reflected its continuing need to expand its television production facilities.

Furthermore, there is an inexplicable disconnect between the stated reason for ending the period of significance and the evidence cited to support it. The stated reason is that in

1963, CBS decided to move filmed programming to Studio City. But the subsequent discussion focuses entirely on the expansion of television programming, not on moving filming to Studio City. This disconnect arises because the reliance on a decision to abandon a unified facility is an artificial construct that has no bearing on the making of some of CBS's most historically significant television shows throughout the 1960s and 1970s. In other words, the period of significance cannot be based on what did not happen at Television City, but what *did* happen there.

In consideration of these associative values, the period of significance of the CBS television studio certainly ended no earlier than 1979. In addition, sufficient time has passed to provide a scholarly perspective on the potential historical significance of the 1969 Mill Addition and the 1976 Support Building addition. We note that Gin Wong, who coordinated the architectural design and construction of the Primary Studio Complex for Pereira and Luckman, also designed the Additions and is a master architect. Given that the Additions were summarily excluded from consideration as historical resources based solely on the artificially limited 1952–1963 period of significance, the Additions must be reevaluated under the more appropriate period of significance of 1952–1979 to determine if, as we think likely, they are historical resources that augment the overall historical significance of the Primary Studio Complex.

Response to Comment No. 26-E.2-4

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 19-12, 26-41, and 26-E.2-82 regarding the period of significance determined for Television City and the Draft EIR's discussion of Gin Wong. As discussed therein, the assertion that the period of significance must be expanded to accommodate years of additional television production incorrectly conflates continued use with historic significance. Furthermore, the suggested end date of 1979 has no apparent meaning and appears to be randomly selected. The claim that the period of significance should extend to "at least" 1979 is also contrary to NPS guidance for another reason. That guidance states that "[f]ifty years ago is used as the closing date for periods of significance where activities begun historically continued to have importance and no more specific date can be defined to end the historic period." Thus, if the 2018 HCM Findings had determined that the period of significance concluded at 50 years, the end date for the period of significance would have been 1968, meaning the 1969 Mill Addition and the 1976 Support Building would still have been excluded.

With regard to Gin Wong, the commenter expresses a fundamental misunderstanding of the significance criteria for association with a master architect. NPS guidance states that not every property designed by a master architect is necessarily significant. To be eligible, the property "must express a particular phase in the development of the master's career,

an aspect of his or her work, or a particular idea or theme in his or her work.”¹⁰¹ For the record, the 1969 Mill Addition was designed by Pereira and Luckman, while Wong was the project coordinator. The 1976 Support Building and 1992 East Studio Building were designed by Gin Wong Associates. There is no evidence provided by the commenter that 1976 Support Building and 1992 East Studio Building represent an architectural achievement or played an important role in Wong’s career.

The HCM Findings, as well as the supporting documents, were consistent with industry standards and arrived at the appropriate conclusions with regard to the period of significance and contributions of Wong. Therefore, the Primary Studio Complex does not require re-evaluation.

Comment No. 26-E.2-5

Third, the DEIR and Historic Report downplay or ignore the Project’s overall impact on the integrity of the existing resources. As discussed in the DEIR, integrity is the ability of a historical resource to convey its historic significance. The seven aspects of integrity are location, setting, design, materials, workmanship, feeling, and association.

To start with, as previously discussed, it is likely that the Additions do in fact qualify as historical resources and augment the overall historic and architectural significance of the Primary Studio Complex. If so, their proposed demolition alone would materially impair the overall historical resource with respect to all aspects of integrity and result in a significant historical resources impact.

In addition, as stated in the DEIR (p. IV.B-42), the Project includes the demolition of the southern portion of the Service Building, which would “alter the building’s overall form and volume.” The DEIR claims that this acknowledged loss “would be counterbalanced by the removal of the 1976 Support Building,” but that bootstraps off its claim that the 1976 Support Building addition is not a historical resource, when the opposite is likely true. In addition, the applicant apparently intends to remove up to two bays of the Studio Building’s west wall. (DEIR, p. IV.B-38) These substantial losses would further compromise the integrity of the overall historical resource by detracting from the overall form, massing, and configuration of the Primary Studio Complex, which are important character-defining features as identified in the Cultural Heritage Commission’s support of a Historic-Cultural Monument designation for the property.

¹⁰¹ Patrick Andrus and Rebecca Shrimpton, National Register Bulletin #15: How to Apply the National Register Criteria for Evaluation (Washington D.C.: U.S. Department of the Interior, 1997), 20.

Furthermore, with the broad flexibility afforded by the Specific Plan, the Primary Studio Complex could be encircled in all three dimensions by new buildings and structures. As previously discussed, the developer could construct one or more new buildings up to 58 feet in height directly north of the Primary Studio Complex. In addition, most of the area to the west, east, and south of the Primary Studio Complex is in Height Zone D, which has a base height limit of 88 feet, but allows a maximum of 225 feet over 40 percent of the Project Site. In fact, the DEIR states (p. IV.B-50) that the Project “would” include two new buildings to the east and west of the Primary Studio Complex (referred to in the DEIR as the “East Building” and the “West Building”) that “would have potential heights of 225 feet,” but “would also be constructed as distinct volumes, physically separated from the Primary Studio Complex by a minimum of 15 feet on the east and 10 feet on the west.” The Conceptual Site Plan also shows new buildings to the south of the Primary Studio Complex, which apparently would consist of an office building and sound stages.

To complete the three-dimensional picture, new construction would also be permitted on top of the Primary Studio Complex. According to the Height Zone Map and related text in the DEIR (pp. II-18–20), Height Zone E is a rooftop zone that would apparently allow a rooftop addition of up to 36 feet above the existing parapet of the Studio Building for a length of approximately 350 feet. In addition, Height Zone F is a rooftop zone that would apparently permit a variety of non-occupiable structures on top of the Primary Studio Complex north of Height Zone E.

So, even if construction proceeded in accordance with the Conceptual Site Plan, it would not be the case, as the DEIR claims (p. IV.B-52) that “the architectural features [of the Primary Studio Complex] would remain visible.” To the contrary, this new construction would envelop the Primary Studio Complex and result in a significant loss of integrity with respect to setting, feeling, and association.

At present, the setting of the television studio includes the relationships of surrounding features, reflects the designer’s intent, and indicates function. The new development envisioned in the Conceptual Site Plan would diminish integrity of setting by changing dramatically the existing physical environment and character of place by surrounding the Primary Studio Complex both horizontally and vertically with new construction.

Response to Comment No. 26-E.2-5

The integrity of the Primary Studio Complex after implementation of the Project was thoroughly analyzed in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), and it was determined that the Primary Studio Complex would retain sufficient integrity to convey its historic significance. Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for further information. The 1969 Mill Addition and 1976 Support

Building were not identified as eligible for historic listing and were not included in the HCM Findings or designation. As such, the removal of the two additions would not result in a loss of integrity to the Primary Studio Complex; rather, the removal of these additions would restore the integrity of the Primary Studio Complex. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance determined for Television City. As discussed therein, the HCM nomination identified the 1952 Primary Studio Complex (including alterations through 1963) as eligible for designation. The 1969 Mill Addition, the 1976 Support Building and any other buildings and structures constructed after 1963 were not included in the designation. Furthermore, in preparing the Historic Report, HRG reviewed all of the relevant materials for consistency with best practices and concluded the period of significance was appropriate.

Refer to Response to Comment No. 26-46 regarding the analysis of impacts from demolition of the southern portion of the Service Building. In reference to concerns regarding potential new construction north of the Primary Studio Complex, any new construction would be limited by the HCM Findings and the Cultural Heritage Ordinance, notwithstanding the 58-foot height limit in Height Zone A, which is taken directly from the HCM Findings. Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for more information.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Draft EIR's analysis of Project and the regulatory framework under the proposed Specific Plan for implementation of the Project.

Comment No. 26-E.2-6

The immediate physical context of the Primary Studio Complex is its setting, and the surrounding area is defined as viewshed. Viewsheds are intended to provide a buffer zone to exclude intrusions that negatively impact the setting of historical resources. An intrusion is anything that negatively impacts a historical resource, either by blocking a view or by modifying a defining characteristic by the imposition or insertion of non-historic material. Buildings or structures of inappropriate scale are intrusions. For example, the proposed height limit of 58 feet in Height Zone A, confusingly named the Viewshed Restoration Area, would have the consequence of positioning one or more intrusive structures on the axis between Beverly Boulevard and the north facade of the Primary Studio Complex. New construction in Height Zone A would undoubtedly cause major visual intrusions and interrupt the continuity of the historic setting. The same is true with respect to the development of large buildings on all other sides of the Primary Studio Complex and substantial new buildings and structures above it.

Feeling refers to the expression of a historic sense or a conveyance of historic character. The new development allowed in Height Zones C (160-foot maximum height) and D (225-foot maximum height) would dwarf the Primary Studio Complex and substantially impair the original relationship with neighboring buildings and structures, thereby impairing integrity of feeling.

Association refers to the link between an important event or trend and a resource, wherein the resource conveys that relationship. Like setting, integrity of association would be impaired through additions and subtractions to the Primary Studio Complex and surrounding new development by altering the essential physical features that conveyed its appearance during the period of significance.

Having said all this, it is not the case, as the DEIR repeatedly suggests, by using the word “would,” that the Project would proceed in accordance with Conceptual Site Plan. While development would apparently be subject to the restrictions in the Height Zone Map, the actual development could be even more impactful to integrity of setting, feeling, and association than the Conceptual Site Plan, which is an illustrative scenario. As previously discussed, while the Conceptual Site Plan includes mainly landscaping, open space, and parking to the north of the Primary Studio Complex, the developer could choose to construct buildings there as tall as the Primary Studio Complex.

Response to Comment No. 26-E.2-6

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding construction within the Viewshed Restoration Area. Also refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5 regarding integrity of *feeling*, *setting*, and *association*, and how the Primary Studio Complex would retain most of the aspects of integrity after implementation of the Project. As discussed therein and on pages IV.B-52 to IV.B-54 in Section IV.B, Cultural Resources, of the Draft EIR, the changes to the immediate surroundings of the Primary Studio Complex over time have altered the immediate on-site surroundings such that the immediate setting no longer contributes to the historic significance or integrity of the Primary Studio Complex as noted in the 2018 Historic Resource Assessment. The Project involves new construction in areas that have already been altered since the period of significance.

In addition, as discussed on pages IV.B-51 to IV.B-52 in Section IV.B, Cultural Resources, of the Draft EIR, the Project would include the construction of the “East Building” and “West Building” (refer to Figure II-4(a), Aerial Rendering of Conceptual Site Plan—View South, of Section III, Revisions, Clarifications, and Corrections to the Draft EIR). Both buildings are located in Height Zone D and would have potential heights of up to 225 feet above Project Grade (i.e., approximately 201 feet above mean sea level). Both

the East Building and West Building would also be constructed as distinct volumes, physically separated from the Primary Studio Complex by a minimum of 15 feet on the east and 10 feet on the west. Small bridges would provide pedestrian access from the East and West Buildings to the Primary Studio Complex and any rooftop addition. Any portion of the East Building rising higher than the height of the Service Building would be set back southerly from the north façade of the Service Building by a minimum of approximately 60 feet. This setback/height limitation of the East Building would allow the full articulation of the Service Building's three-story office portion and its steel frame and glass curtain walls to be revealed when viewed from the northeast. Similarly, any portion of the West Building rising higher than the Service Building would be set back southerly from the north façade of the Service Building by a minimum of approximately 150 feet. This would allow the currently obstructed west wall of the Studio Building, which would be restored by the Project, to become fully visible. The simple, rectangular massing of the East Building and West Building (in conjunction with any rooftop addition) would provide a deferential backdrop to the Primary Studio Complex in order to be compatible with the Primary Studio Complex. An axon diagram of the Conceptual Site Plan is included on page 45 in the Applicant's presentation included in Exhibit 6 of this comment letter (Comment Letter No. 26).

Overall, the bulk and mass of the East Building and West Building would be concentrated towards the south, away from the primary (north) façade of the Primary Studio Complex, thereby ensuring that the Primary Studio Complex retains its visual prominence. Ultimately, construction of the East Building and West Building would not destroy any of the important historic materials or features that characterize the Primary Studio Complex. After Project buildout, the distinctive form and design of the Primary Studio Complex would remain intact, and its architectural features would remain visible. For these reasons, construction of the East Building and the West Building would not materially alter in an adverse manner the physical characteristics that convey the historical significance of the Primary Studio Complex. Thus, impacts from new construction adjacent to the Primary Studio Complex would be less than significant.

As discussed in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. The Conceptual Site Plan shown in Figure II-4 in Section II, Project Description, of the Draft EIR is consistent with the Project Parameters set forth under Project Design Feature CUL-PDF-1 (refer to Figure II-10 on page II-957 associated with Response to Comment No. 26-E.2-3, above), and Project Design Feature CUL-PDF-1 would apply to any development scenario permitted under the Specific Plan. Project

Design Feature CUL-PDF-1 includes maximum permitted development areas, setbacks and heights for adjacent new buildings and additions to the Primary Studio Complex, as well as massing limitations to ensure that the Primary Studio Complex is not adversely affected.

Furthermore, as discussed in Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, the Project would comply with Section 22.171.14 of the Cultural Heritage Ordinance. Pursuant to the Cultural Heritage Ordinance, building permits for substantial alterations to a historical resource may only be issued after OHR has confirmed that the plans comply with the Rehabilitation Standards. For these reasons, the Project would not result in a substantial adverse change in the significance of the Primary Studio Complex by altering its immediate surroundings. Thus, impacts to the Primary Studio Complex from Project buildout would be less than significant.

With regard to the comment about the use of “will” versus “would,” note that the City typically uses the term “would” when discussing a project in its environmental documents to reflect the fact that the project has not been approved by the decision-maker.

Comment No. 26-E.2-7

Inadequate Mitigation to Protect Historic Resources. The historic resource analysis in the DEIR includes Project Design Feature CUL-PDF-2 (DEIR, p. IV.H-20), which requires the preparation of a Historic Structure Report (HSR) after the entitlements for the Project have been approved. However, in the absence of an HSR that is prepared now with comprehensive existing conditions information, the public and decisionmakers cannot understand how the proposed rehabilitation of the Primary Studio Complex would impact the historic fabric and overall character of the historical resource. One purpose of an HSR is to provide a forum to address changes to a property during the planning phase to minimize adverse effects to the character-defining features of the historic resource, either materially or visually. An HSR should inform the development of mitigation measures and parameters. However, the applicant plans to remove the Additions, two bays of the Studio Building, the southern portion of the Service Building, and other elements of the Primary Studio Complex. (DEIR, pp. IV.H-38–39) A detailed HSR should be required as part of the DEIR to clarify what mitigation measures are necessary. Preparation of the HSR should follow the National Park Service’s *Preservation Brief 43: The Preparation and Use of Historic Structure Reports*, which provides guidance on how to document—textually and graphically—the physical history and existing condition of a property. The need for a HSR as part of the DEIR is particularly important because the Project has an undefined development plan. The Conceptual Site Plan is not a reflection of what might actually be developed. Without an HSR, the DEIR’s analysis and conclusions regarding the Project’s potential impacts on historical resources is unsupported.

Response to Comment No. 26-E.2-7

The assertion regarding inadequate mitigation is incorrect and is not consistent with the City of Los Angeles regulations for the treatment of designated HCMs as well as the standard purpose and use of an HSR. Refer to Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding Project Design Feature CUL-PDF-2 and implementation timing of the HSR.

Comment No. 26-E.2-8

Impacts on Surrounding Historical Resources. The DEIR and underlying Historic Report minimally address existing and potential visual conditions and scenic integrity. Although the DEIR focuses on retaining the visual prominence of the north facade of the Primary Studio Complex (i.e., the view to the building from Beverly Boulevard), there is no consideration of the Project's adverse visual effects on surrounding historic properties resulting from new construction. (*Note:* The surrounding historic properties include the Original Farmers Market, Rancho La Brea Adobe, Chase Bank, Fairfax Theater, Air Raid Siren No. 25, Beverly Fairfax Historic District, and the Miracle Mile North Historic Preservation Overlay Zone.) An in-depth visual-resource, or viewshed, analysis study is needed for that purpose. This study should document existing visual conditions to, from, and within the Project Site, and evaluate, as the DEIR and Historic Report have not, scenic integrity, visual quality, and viewer sensitivity regarding the existing landscape/streetscape characteristics.

It seems apparent that the development of the Project in accordance with the Height Zone Map in Figure II-5 of the DEIR and Proposed Development Program in Table II-2 of the DEIR would materially and/or visually impair the historic significance of the Rancho La Brea Adobe (HCM 543) and Original Farmers Market (HCM 543) just south of the Project Site. Considering the heights of proposed new construction in Height Zones B, C, and D (between 130 and 225 feet above "Project Grade," which is already up 15 feet above existing grade adjacent to the Adobe), any interruption of the existing horizon line would have an obstructive effect on the historic properties by altering the character, setting, feeling, and viewshed that make them eligible for listing in the NRHP and/or CRHR. Furthermore, the Project would have a demonstrably negative aesthetic effect (i.e., an effect that diminishes the character or quality of the historic property) by introducing buildings, signage, and nighttime lighting that are incompatible, out of scale and proportion, and/or out of character with the Adobe and Farmers Market.

Response to Comment No. 26-E.2-8

As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, impacts to aesthetics are

based on different criteria and thresholds than those used for historical resources. This comment incorrectly conflates the two. As set forth in Appendix G of the CEQA Guidelines and in the Initial Study for the Project included as Appendix A of the Draft EIR, aesthetic impacts under CEQA include the consideration of: scenic vistas; scenic resources, including historical resources, within a scenic highway; for urban projects, consistency of the project with applicable regulations regarding scenic quality; and light and glare. Thus, the analysis of aesthetics considers the experiences of people who may view a scenic resource, while the analysis of historic impacts considers whether a project would adversely affect the integrity of an historical resource.

As described in Section 4.I on pages 30 to 31 in the Initial Study, provided in Appendix A of the Draft EIR, the Project is an employment center project located on a developed site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2542, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact,” unless evaluation is required under other land use regulations in the LAMC. An evaluation of aesthetic impacts is not required under the LAMC. As such, no further analysis was required in the Draft EIR for this topic. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

The Draft EIR fully and adequately analyzed potential impacts to historical resources in the Project Site vicinity based upon the thresholds in Appendix G of the CEQA Guidelines. Potential impacts to The Original Farmers Market and the Gilmore Adobe are specifically addressed on page IV.B-55 of Section IV.B, Cultural Resources, of the Draft EIR. This comment does not provide any explanation as to what aspects of the immediate surroundings are instrumental in conveying the historic significance of any of the nearby historical resources or how changes to the urban landscape would diminish the integrity of the nearby historical resources, and no attempt is made to explain how the character, setting, feeling, and viewshed would be altered, or how these attributes make the resources in the vicinity of the Project Site eligible for historic listing.¹⁰² Indeed, the immediate surroundings of all the nearby historical resources have been subject to continual change and alteration over time as is typical of urban environments. As such, the physical aspects of these resources that are critical to conveying their historic significance are largely contained to their respective properties. No alteration to a hypothetical

¹⁰² U.S. Department of the Interior, National Park Service, National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, (Washington, DC: 1990; revised for Internet, 2002), www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf, accessed October 13, 2023.

“viewshed” or the larger setting of these resources would diminish their integrity such that their eligibility for historic listing is threatened.

Comment No. 26-E.2-9

Relatedly, ground-borne vibrations from construction-related activities could adversely affect the structural integrity of the Rancho La Brea Adobe. This historical resource is constructed of unreinforced masonry and has characteristics—such as the compressive strength of the adobe blocks and cracking and settlement issues—which apparently have not been investigated. Consequently, we question the accuracy of the construction-vibration impact assessment of the adobe building as presented in Table IV.I-20 of the DEIR. Because this historical resource is located within 130 feet of the Project Site, a preconstruction survey of the building should be performed by a structural engineer who specializes in adobe architecture to identify structural and seismic deficiencies that may be worsened by ground-borne vibration during construction. Additionally, the applicant should develop a vibration management and monitoring plan to ensure against damage caused by vibration or differential settlement caused by vibration during construction and operation activities.

Response to Comment No. 26-E.2-9

Refer to Response to Comment No. 26-139 for a discussion of the Gilmore Adobe. As discussed therein, impacts would be less than significant.

Comment No. 26-E.2-10

Located to the north of the Project Site is the Beverly Fairfax Historic District (listed in the NRHP in 2018), a high-density grouping of residential buildings with shared aesthetic and associative values that is historically significant in the areas of ethnic heritage (as an early Jewish enclave in Los Angeles), social history (as a haven for Holocaust survivors who settled in the Los Angeles area following World War II), and architecture (for its dwellings designed in Period Revival styles such as Spanish Colonial Revival, Mission Revival, and Tudor Revival). Anticipated cut-through traffic in the neighborhood from the Project, which is documented in the Transportation Assessment for the Project, is an unstudied impact on the historic district. Absent from the DEIR is a residential neighborhood protection plan or a neighborhood traffic-management plan to mitigate traffic and spillover-parking impacts to the historic district. With its narrow residential streets, increased traffic through the historic district would have an adverse effect on the pedestrian environment and the indirect effect of a diminished integrity for the Beverly Fairfax Historic District that should be addressed in the DEIR.

Response to Comment No. 26-E.2-10

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding impacts to the Beverly Fairfax Historic District. The Beverly Fairfax Historic District does not include any parcels on Beverly Boulevard directly across the street from the Project Site, and therefore it is not located within the Project Site vicinity for the purposes of the historical resources analysis, as discussed in the Historic Report (Draft EIR Appendix C.1) and Section IV.B, Cultural Resources, of the Draft EIR. More importantly, existing and future development within the Project Site do not have the potential to directly or indirectly impact the Beverly Fairfax Historic District due to the distance between the Beverly Fairfax Historic District and the Project Site. Nevertheless, for informational purposes, a discussion of the Beverly Fairfax Historic District is included on page IV.B-31 of the Draft EIR.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the NTMP that would be implemented by the Project as a non-CEQA measure. The NTMP would implement traffic calming measures to address potential cut-through trips. With regard to the comment regarding diminished integrity of the Beverly Fairfax Historic District associated with trips, as discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, potential cut-through trips would not diminish the integrity of the Beverly Fairfax Historic District. This comment fails to provide an explanation as to how increased trips through the Beverly Fairfax Historic District might translate to physical demolition, destruction relocation, or alteration such that the significance of the Beverly Fairfax Historic District would be materially impaired as defined by CEQA. Refer also to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply and that spillover parking into adjacent neighborhoods and properties is not anticipated.

Comment No. 26-E.2-11**Archaeological Resources**

The DEIR and supporting technical appendices are inadequate regarding the identification and analysis of Project effects on archaeological resources, principally because the DEIR lacks an archaeological resources report that identifies and evaluates archaeological resources in the Project area. The two-paragraph impact analysis of archaeological resources in the DEIR (p. IV.B-57–IV.B-58) relies on information from the Tribal Cultural Resources (TCR) report (Appendix C.2). Instead of completing an archaeological resources report, the DEIR references the TCR report, which is an incomplete treatment of the full range of expected archaeological resources in the Project area. The TCR report omits consideration of archaeological resources from the protohistoric and historical periods, provides only a cursory evaluation for the potential for buried resources to be

present, and fails to proactively look for specific types of buried cultural resources that have a high likelihood of being present. Standard practice, *especially in an area expected to contain archaeological resources*, is to prepare as part of the environmental review process a cultural resources technical report that includes the identification and evaluation of the full range of archaeological resources that might be expected in a project area and to use that information to assess project effects on buried historical resources. The DEIR lacks such a report and instead relies on the incomplete TCR report and offers mitigation measure CUL-MM-1 that incorrectly and improperly defers identification and evaluation of subsurface archaeological resources to construction monitoring during Project implementation rather than proactively identifying and evaluating archaeological resources as part of the analysis of Project effects. Such inadvertent discovery mitigation instead of thorough identification in the DEIR is wholly inappropriate in this case. This failure to adequately identify archaeological resources increases the likelihood of the Project to have a significant effect on buried historical resources.

Identifying and evaluating archaeological resources is particularly important in this area, given the known extent of archaeological resources present in this area. The TVC 2050 Project area has been urbanized for more than 70 years, and the lack of archaeological review presumes without support that archaeological deposits have been destroyed. To the contrary, the location of the Project Site and anticipated depth of excavation indicates that Project construction is likely to impact archaeological resources. It is necessary when conducting studies in urban settings, particularly when resources are anticipated, to follow a rigorous methodology to identify and evaluate likely archaeological resources. Proper analysis of Project effects on archaeological resources involves: (1) preparing a historic context for understanding past human land use, as well as the physical remains these uses create, and identifying where those remains would have likely been located; (2) conducting a geoarchaeological study evaluating the possibility that these remains could be preserved despite past environmental and development disturbances; (3) identifying if archaeological remains exist within the Project area and if they are a historical resource as defined by CEQA; and (4) analyzing the effects of the proposed Project on any archaeological historical resources. The minimal standards against which archaeological studies are assessed under CEQA are outlined in *Archaeological Resource Management Reports (ARMR): Recommended Contents and Format* published by the California Office of Historic Preservation in 1990. This level of study, which was not conducted here, is required by CEQA during the EIR preparation process, and the methods, results, and recommendations from that research should be documented in an archaeological resources report.

Response to Comment No. 26-E.2-11

Refer to Response to Comments Nos. 13-7, 26-42, and 26-44 regarding the adequacy of the identification and analysis for archaeological and tribal cultural resources,

including those from all time periods that could be preserved below ground. These responses also provide an explanation for why the available evidence presented in multiple data sources were sufficiently detailed to provide a reasonable characterization of the existing conditions and the types of resources most likely to be encountered, and why the provisions included in the revised Mitigation Measure CUL-MM-1 are appropriate and adequate for avoiding or reducing potentially significant impacts to less than significant levels. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

Refer to Response to Comment No. 26-42 regarding the adequacy of the Project Site land use history and how geoarchaeological data were already considered in the analysis, which has been further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo also includes additional clarifications on why the resources described in the Draft EIR as being most likely to occur are unlikely to be considered historical resources under CEQA, and upon further review did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Regarding the use of the Archaeological Resource Management Reports (ARMR) Guidelines, as stated by the Office of Historic Preservation in the preface to that document, these are a set of guidelines and not a state mandated program. Conformance to the ARMR Guidelines is not specifically cited in any of the state or local regulations addressing archaeological or tribal cultural resources under CEQA. Refer to Response to Comment No. 26-42 regarding the standards for a CEQA review. Nonetheless, as the commenter has noted, the ARMR Guidelines can serve as a useful reference to help guide the preparation of an archaeological study and help non-specialists to assess technical reports. As the document was initially released in 1990 before the category of a tribal cultural resource was created, it does not address technical reports for tribal cultural resources as such but is still largely compatible. In the preface for the ARMR Guidelines, the Office of Historic Preservation also makes it clear that only specific portions of the guidelines may be relevant to a given report, and that it is at the discretion of the author to make this determination based upon the scale and complexity of a project. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides clarification and expert opinion on why professional judgment is necessary and how it is used when preparing technical reports based upon the ARMR Guidelines.

The Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) already incorporates many elements recommended in the ARMR that were determined by Dudek's qualified archaeological staff as being appropriate to the scale and type of the Project. Page 1 of the ARMR Guidelines specifies that the "content appropriate for any report

should be determined by the type and scale of a project, by the nature and scheduling of cultural resources studies, and by the complexity of the resources and the information under consideration.” This is reflected in the overall structure of the report and the inclusion of the sections that are relevant to an analysis of a fully developed urban location, i.e., one that did not require a fieldwork component. Examples of this include the following: the introductory pages are consistent with the ARMR Guidelines recommendations for the title page and management summary; an introduction is included on pages 1–5; a description of the regulatory, environmental, and cultural are provided on pages 11–22; methods are described in respective sections presented in the background research sections on pages 23–41; findings and management recommendations are recommended as separate sections in the ARMR Guidelines but have been combined into a single section on pages 43–44; the bibliography on pages 45 to 50 is consistent with the ARMR Guidelines section recommending references cited; and appendices with confidential information are included as recommended. Because the ARMR Guidelines are intended to address the full range of possible studies, the recommended contents within each of these sections are quite broad and include a substantial amount of detail that is not relevant to the analysis for the current Project. As such, the Tribal Cultural Resources Report, included in Appendix C.2 of the Draft EIR meets the required professional standards and provides substantial evidence relevant to the analysis of archaeological resources, which are otherwise presented in Section IV.B, Cultural Resources, of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides further analysis of why there was an appropriate level of professional judgement and expertise used to determine which parts of the ARMR Guidelines were relevant to include in the Tribal Cultural Resources Report, including the overall structure and content within each section.

Comment No. 26-E.2-12

Cultural Setting

The Cultural Setting section in the TCR report is a wholly inadequate historic context because it fails to identify the full range of human land-use history of the Project area as it relates to the potential for archaeological resources to be present. Numerous fatal flaws exist in this section.

First and foremost, a poor command of local archaeological literature is evident in the report. The cultural setting for the prehistoric period incorrectly focuses on the San Diego and the Mojave Desert regions instead of the Los Angeles Basin. The minimal discussion of the Los Angeles Basin relies on outdated information and ignores recent research in downtown Los Angeles and the nearby coastal communities. The section fails to cite many well-known scholarly studies and reports and contains omissions, incomplete information, and incorrect information. For example, the report fails to mention the early burial at

nearby La Brea Tar Pits, states incorrect dates for the introduction of mortars and pestles, and misrepresents the burial practices of the Gabrielino tribe.

Second, no Project-specific information is presented on historical-period use of the Project area as it relates to the potential for archaeological resources. This information is critical for anticipating the kinds of buried cultural resources that potentially exist. For example, the DEIR fails to consider land use prior to the construction of Television City. The Project area and adjacent properties have a long and rich history starting in the early Mexican Rancho Period with the founding of Rancho La Brea in 1828; the construction of the Rancho LA Brea Adobe (also known today as Gilmore Adobe) around 1852; the development of the local oil industry in the early twentieth century; the development of the early sports entertainment industry, especially Gilmore Field, Gilmore Stadium, and related businesses; and culminating with the development of Television City in 1952. None of this history is included in the archaeological analysis section of the DEIR or the TCR report. Conspicuously absent is any meaningful discussion on the Rancho La Brea Adobe, located approximately 130 feet from the TVC 2050 southern property line. There is no discussion in the TCR report on the history of the Adobe and the extent of activities related to the Adobe that might have included portions of the Project area. Nor does the TCR report consider if Native American labor was used to construct the original adobe building or if Native Americans were used as domestic help or ranch hands at the Adobe and adjacent lands, which was a common occurrence in the 1850s.

Response to Comment No. 26-E.2-12

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the issue of the historic context and the adequacy of the identification and analysis of archaeological and tribal cultural resources, including those from the La Brea Tar Pits and those associated with the Gilmore Adobe.

Refer to Response to Comment No. 26-42 regarding the land use history considered in the analysis, including the ventures pursued by the Gilmore family—oil operations, Gilmore Field and Gilmore Stadium—and the conversion to Television City.

Regarding the introduction of mortars and pestles and Gabrielino burial practices, the comments are referring to details that are matters of scholarly research rather than misrepresentations as the commenter has stated. Discrepancies that may exist do not invalidate the analysis, given the substantial evidence presented in Section IV.B, Cultural Resources, and Section IV.L, Tribal Cultural Resources, of the Draft EIR, and Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional discussion and expert opinion regarding the introduction of mortar and pestles in the archaeological record and how this is presented in the Tribal Cultural Resources Report as a matter of on-going

research and subject to scholarly debate. The Supplemental Cultural Memo also gives expert opinion confirming that valid scholarly sources were used to describe Gabrielino burial practices and why this one topic is considered to be one of many factors within the larger background on Gabrielino lifeways presented in the Tribal Cultural Resources Report.

Regarding the potential contribution of Native American labor in the construction of the Gilmore Adobe, the topic relates to a particular aspect of the land use history that is indirectly related to the consideration of potential archaeological or tribal cultural resources. The role of Native American labor in Los Angeles and California history is an important subject that is worthy of continued scholarly research and consideration by archaeologists where specific data have been identified. Were the Gilmore Adobe located within the Project Site, this subject would potentially warrant further consideration as part of the environmental review. As the Gilmore Adobe is located outside of the Project Site, any relevance to the analysis of archaeological or tribal cultural resources for the Project Site would necessarily be related to activities that occurred in association with its construction or use that happened to have occurred in the portion of the property to the north of the building, most of which was used as pasture.

Additional information on the Gilmore Adobe and the associated archaeological site (CA-LAN-3045H) were discussed at length in the reports by Cogstone, which were prepared after having monitored the construction of The Grove at Farmers Market commercial development that directly involved the Gilmore Adobe and immediate surroundings. These results were already referenced as having been considered in the original analysis and none of these sources has ever identified evidence indicating that Native Americans played a role in constructing the adobe or conducting any associated activities that were carried out within the Project Site and would be likely to have produced physical evidence identifiable as a tribal cultural resource. While the topic of Native American labor during Spanish colonization and periods of Mexican and American governance is important to consider in our understanding of the history during and after Spanish colonization, there has not been substantial evidence identified that suggests the development of the Gilmore Adobe was significantly supported by Native American labor. This is not to imply that such a connection may not exist, but given the lack of any prior substantial evidence previously discussed by reports that were focused exclusively on the building and its activities, there is no reason that further research would need to be conducted to provide an adequate characterization of the existing conditions or potential for impacts to tribal cultural resources within the Project Site. Therefore, further analysis is unwarranted and additional information would only constitute a minor detail specifically regarding the analysis of tribal cultural resources. Furthermore, the omission of a more detailed investigation of this specific research question in the Draft EIR and the Tribal Cultural Resources Report does not invalidate the analysis or conclusions, especially when the larger body of evidence and information presented in the analysis is considered.

Additional explanation of how these results further support the analysis presented in the Section IV.B, Cultural Resources, of the Draft EIR are described in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-13

Background Research

The Background Research section of the TCR report lacks basic information and is completely disconnected from the cultural setting. The Background Section of the TCR report includes the results of a records search at the South Central Coastal Information Center. The records search was compiled by means of looking at all previously recorded cultural resources and reports within a 0.5-mile radius of the Project area. This search area is wholly inadequate for the TVC 2050 property because Los Angeles was urbanized long before cultural resources studies were required for development projects, and little is known regarding the distribution of archaeological sites in the vicinity. Consequently, a 0.5-mile-radius records search fails to characterize the archaeological sensitivity of the Project area and contributes little to the historic context. In this setting, a wider radius records search area, like 10 miles, for archaeological resources is necessary. Supplemental research using academic literature is also required to locate archaeological sites that were documented prior to the 1950s.

The section relies exclusively on HistoricAerials.com for the topographic map and aerial photograph review. As a result, the report fails to consult historic rancho maps, General Land Office (GLO) maps, Sanborn Fire Insurance maps, and other historical maps that show the locations of previous structures and activity areas. The TCR report also fails to review other sources of historical aerial imagery such as those contained in the Project proponent's Hazards and Hazardous Materials report (Appendix G). These aerial photographs extend the time depth of the imagery from 1948 back to 1923. Other historical aerial photographs by Spence and Fairchild are readily available but were not reviewed. Of the few aerial photographs reviewed, the TCR report does not contextualize any of the structures identified in the images and fails to even identify Gilmore Stadium.

Response to Comment No. 26-E.2-13

Refer to Response to Comment No. 26-42 regarding the records search radius and why 0.5 mile was sufficient for acquiring the data necessary to substantiate the assessment of archaeological and tribal cultural resources based on the presence of CA-LAN-3045H and the studies completed in association with its recording for a parcel adjacent to the Project Site.

Regarding the need for supplemental research using academic literature, the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR includes a substantial amount of academic literature that are listed in the references cited.

Refer to Response to Comments Nos. 13-7 and 26-42 regarding the entire body of evidence considered in the assessment of cultural and tribal cultural resources, broader discussions of the historical context and specific analysis of the development of the Project Site. Using the existing historical context and data obtained from multiple sources, including but not limited to those cited in the comment, substantial evidence was identified and indicated sensitivity for archaeological resources. Based upon the description of existing conditions and available evidence presented in the Draft EIR and technical reports, the analysis of archaeological resources does not require additional evidence to support the conclusion and define an appropriate mitigation measure. An exhaustive map search of all available historical maps and a more detailed analysis of the aerial imagery would only contribute minor details that serve to further reinforce the conclusions already reached and be unlikely to identify any new or substantially more significant impacts than what were disclosed in the Draft EIR, or considered in the Tribal Cultural Resources Report, Historic Report (Appendix C.1 of the Draft EIR), Preliminary Geotechnical Engineering Investigation (Appendix E.1 of the Draft EIR), and Phase I Environmental Site Assessment (included in Appendix G of the Draft EIR). Nonetheless, further review of the land use history (including a review of all data sources referenced in the Draft EIR) was done while preparing the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. After having reconsidered the available evidence, the Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-14

A Sacred Lands Files Search requested of the California Native American Heritage Commission (NAHC) was conducted as part of the background research. Sacred Lands Files searches are generally done as part of the information gathering process for archaeological studies dealing with the prehistoric period. While the NAHC Sacred Lands File search did not locate any tribal cultural resources within the Project area, follow-up with affiliated tribes is necessary. The standard letter from the NAHC states that negative results do not negate the possibility of those types of resources being present and therefore suggests reaching out to tribes and individuals affiliated with the area listed with the Sacred Lands Files search results. No tribal outreach was conducted, as recommended by the NAHC; instead, the study relied on the results of AB-52 government-to-government consultation to obtain relevant information. However, the NAHC list for AB-52 consultation is a separate list from the Sacred Lands Files list. In the case of the TVC 2050 property, although the named tribes are the same for both lists, three individuals named by the NAHC in the Sacred Lands File search request results are not named on the

AB-52 consultation list and were not contacted. These two forms of Native American engagement serve different purposes, and one should not be substituted for the other.

Response to Comment No. 26-E.2-14

Six of the nine contacts on the contact list returned with the NAHC's SLF results (NAHC Contact List) were also listed on the City's list of tribes who requested notification under Public Resources Code (PRC) Section 21080.3.1, as amended by AB 52 (AB 52 List). Three of the individuals listed on the NAHC Contact List were also not listed on the AB 52 List. In two of the cases, a second contact with the same tribal organization was included in the AB 52 List and were sent written notifications that received no reply. Lovina Redner of the Santa Rosa Band of Mission Indians was the only individual or tribal organization on the NAHC Contact List who was not contacted. As a tribal organization affiliated with the Cahuilla, the ancestral territory of the Santa Rosa Band of Mission Indians is located more than 50 miles to the east, within parts of what are now Riverside, San Bernardino, San Diego, and Imperial Counties. The Project Site is within the Gabrielino ancestral territory and the western part of what is now Los Angeles County. Although there is overlap in the areas where ancestral territories met, the Project Site is not near the Cahuilla even when accounting for any overlap. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides expert opinion confirming that the Project Site is situated within the traditional territory of the Gabrielino and not the Cahuilla, who are otherwise unlikely to contribute substantial information not already considered.

As indicated in Comment No. 26-E.2-14, the NAHC Contact List is distinct from the City's AB 52 List and the NAHC recommends conducting the SLF follow-up outreach as an information gathering effort rather than fulfilling the other stipulations required in government-to-government consultation; however, the intent of notifying the tribal members on the AB 52 List is to seek consultation, and information gathering is a fundamental component of that process. Therefore, the efforts made to seek information on potential resources in the Project Site through the notifications sent to individuals on the AB 52 list is part of the City's good-faith effort to seek this information from tribes, especially those who are more likely to have knowledge of a specific resource because they are more local to the Project Site.

The City's efforts to fulfill the NAHC's recommendation to request information from all tribal organizations on the NAHC Contact List was substantially adequate. Further, the tribal cultural resource analysis for the Project is adequate given that substantial information on the potential for resources within the Project Site was able to be obtained during preparation of the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR), as is presented in the Section IV.B, Cultural Resources, and Section IV.L, Tribal Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-15**Preservation Issues and Geoarchaeological Studies**

Wholly missing from the DEIR and TCR report is any kind of a geoarchaeological study analyzing the likelihood for buried prehistoric or historical-period resources in the Project area. Findings of the geotechnical investigation should also be used in a meaningful way to analyze the potential for intact buried archaeological deposits in the Project area. The TCR report fails in this regard by only providing a cursory review of the soils data in the Project geotechnical report without interpreting those data as they relate to the potential for buried archaeological deposits. For example, the logs of several borings document dark-gray to black or dark-brown to black sediments present immediately below the fill. Dark sediments can sometime indicate the presence of anthrosols or other soils with potential for containing cultural resources. This information is not discussed in the TCR report. The TCR report acknowledges that a drainage crossed the west side of the Project area prior to modern development but does not discuss how this drainage may have affected Native American settlement patterns in the area.

The DEIR and TCR report also fail to consider known buried historical-period resources in the Project area. Footnote 145 on Page 63 of CBS Television City, Los Angeles Historic Resource Assessment—prepared by ARG in 2018 and part of Appendix C.1 of the DEIR—states that remnants of Gilmore Field dugouts were encountered during excavation for the East Studio Building in 1991. This information is omitted from the TCR report and from the cultural resources section of the DEIR. The fact that archaeological remains from Gilmore Field were encountered as recently as 1991 shows the high sensitivity of the Project area for buried archaeological deposits and is further evidence that the DEIR and TCR report are inadequate for analyzing the effects of the Project on archaeological resources.

Response to Comment No. 26-E.2-15

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the data sources used to characterize the potential for buried prehistoric and historical-period resources—also referred to as a geoarchaeological study—as discussed in Section IV.B, Cultural Resources, of the Draft EIR. The results of the geotechnical investigation were reviewed and summarized on pages 29 to 30 in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, which notes the presence of the darker sediments and identifies them as being among the “native soils,” meaning formed through natural depositional processes, and are distinguished from those defined as “artificial fill soils” that are formed as the results of mechanical alteration. After having considered all sources of evidence, including review of the subsurface exploratory boring investigations, the Tribal Cultural Resources Report concluded that subsurface soils are unlikely to support intact tribal cultural resources. This is further supported by the lack of any Native American archaeological finds being identified during monitoring by Cogstone and Greenwood and Associates

during development of The Grove at Farmers Market in the parcels to the south of the Project Site. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides further clarification of how the information presented in the Draft EIR and various technical reports support the impact analysis and conclusions presented in the Section IV.B, Cultural Resources, of the Draft EIR.

Regarding the drainage crossing the west side of the Project Site that was mentioned in Tribal Cultural Resources Report using the information from the geotechnical investigation, proximity to stream courses as a factor in Gabrielino or Tongva settlements is mentioned on page 17 of the Tribal Cultural Resources Report and repeated on page IV.L-7 of Section IV.L, Tribal Cultural Resources, of the Draft EIR. There are several reasons why this possible correlation was not discussed at length in the Tribal Cultural Resources Report or Section IV.L, Tribal Cultural Resources, of the Draft EIR. This correlation should not be confused with causation, which is to say that because Native American settlements are often found near stream courses, this does not mean that all stream courses had settlements established along them or that all places where settlements were established produce physical evidence that survived as an archaeological deposit. The former stream course described in the geotechnical investigation and Tribal Cultural Resources Report extended to the south of the Project Site. Response to Comment Nos. 13-7 and 26-42 address the data sources used to characterize the potential for buried Native American sites, which includes the recording of CA-LAN-3045H directly south of the Project Site. Given that no Native American components were found during the recording of CA-LAN-3045H, this suggests that whatever correlation there was between Native American settlement patterns and former stream courses, this did not result in the preservation of any physical remains that could be identified here. Accordingly, the Tribal Cultural Resources Report provides a reasonable characterization of the existing conditions that adequately supports the analysis for potential impacts of the Project on tribal cultural resources. In making these correlations more explicit here, no new or substantially more significant impacts were identified than what were disclosed in the Section IV.L, Tribal Cultural Resources, of the Draft EIR and considered in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, further summarizes the information and provides expert opinion on the former drainage and did not identify any new or substantially more significant impacts.

Refer to Response to Comment Nos. 13-7 and 26-42 for a summary of the efforts made to obtain substantial evidence used to assess the potential for tribal cultural resources within the Project Site. These responses also provide an explanation for why the available evidence presented in multiple data sources were sufficiently detailed to provide a reasonable characterization of the existing conditions and the types of resources most likely to be encountered.

Refer to Response to Comments Nos. 13-7 and 26-42 regarding the overall analysis of buried historical-period resources, generally, and the acknowledgement of the sensitivity made in Section IV.B, Cultural Resources, of the Draft EIR.

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the historical land uses, including those associated with the Gilmore family's business ventures, and how these were accounted for in the analysis presented in Section IV.B, Cultural Resources, of the Draft EIR. Regarding the specific reference to the Gilmore Field dugout, the presence of this only further reinforces the conclusion that there is sensitivity for historical archaeological resources, as was stated on page IV.B-58 of Section IV.B, Cultural Resources, of the Draft EIR. Thus, the existing body of evidence is adequate for characterizing the existing conditions within the Project Site and provides a reasonable means of identifying mitigation measures capable of reducing or avoiding potentially significant impacts, including those that could be associated with Gilmore Field. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional detail and expert opinion addressing the historical land uses and how the provisions of Mitigation Measure CUL-MM-1 provide a reasonable and feasible means of mitigating potentially significant impacts to archaeological resources that may be encountered, including resources assessed as having the greatest likelihood of being present. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

Comment No. 26-E.2-16

Identifying Buried Archaeological Deposits

Identification efforts for archaeological resources failed to consider buried deposits from development and activities prior to 1952. The development of a thorough historic context along with in-depth archival research and a geoarchaeological study would identify the types and locations of archaeological resources likely to exist in the Project area. These locations should be explored through remote sensing, such as ground-penetrating radar, or through mechanical excavation like backhoe trenching. As noted above, remnants of Gilmore Field dugouts were encountered during excavation for the East Studio Building foundation in 1991, indicating that buried deposits are present. Archaeological monitoring during grading as recommended in CUL-MM-1 is useful for identifying and treating unanticipated resources but should not be used in lieu of active searching when there are anticipated buried resources likely to be present. Failing to adequately identify anticipated archaeological resources prior to construction greatly increases the potential for the Project to have a significantly [sic] effect on historical resources.

Because insufficient effort was made to identify and evaluate such resources, the DEIR fails to adequately analyze the effects of the proposed TVC 2050 Project on archaeological resources. Failure to develop a thorough historic context, failure to adequately consider archaeological preservation issues and prepare a geoarchaeological study, and failure to search for likely buried archaeological deposits renders the environmental analysis incomplete.

Response to Comment No. 26-E.2-16

Refer to Response to Comment Nos. 13-7, 26-42, and 26-44 regarding the methods by which subsurface archaeological potential was assessed and the consideration of historical land uses in the analysis, including the period in which Gilmore Field Stadium was operated.

Refer to Response to Comment No. 26-42 regarding the reasons why methods such as remote sensing or mechanical excavation are infeasible and unnecessary to support the findings in the Draft EIR, which considers the substantial evidence already presented concerning the likelihood of archaeological resources and the proposed means of mitigating the potential for impacts. This evidence includes building materials identified in geotechnical cores presented in the geotechnical investigation in Appendix E.1 of the Draft EIR and reviewed in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Refer to Response to Comment No. 26-44 regarding the discussion of how the provisions of Mitigation Measure CUL-MM-1 allow for adequate means of identification, evaluation, and treatment of any resources that may be present, and supports the conclusion that with implementation of the proposed mitigation, the potential impacts to archaeological resources would be less than significant.

The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional detail and expert opinion addressing the methods used to assess the potential for buried resources and how the provisions of Mitigation Measure CUL-MM-1 provide a reasonable and feasible means of mitigating potentially significant impacts to archaeological resources that may be encountered, including resources assessed as having the greatest likelihood of being present. Specifically, by identifying the qualification standards for retaining a Qualified Archaeologist, specifying the criteria by which the CRMTTP shall be prepared, requiring a worker training program, and identifying the timing necessary for each of these steps, implementation of Mitigation Measure CUL-MM-1 provides a reasonable means by which potential impacts to resources would be mitigated: a Qualified Archaeologist would: identify any archaeological resources that may be present; evaluate them as a historical resource and unique archaeological resource; and proceed in implementing mitigative treatment measures that either avoid or allow for the recovery of scientifically consequential information, among other potential actions that could be

appropriate based on the specific type of resource identified. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

Comment No. 26-E.2-17

Tribal Cultural Resources

Native American consultation as documented in the DEIR and the TCR report fails to comply with the regulatory requirements of SB 18, and although the consultation efforts do comply with the regulatory requirements of AB 52, this consultation is inadequate because it does not meet the good-faith effort standard recommended by the California Office of Historic Preservation and the NAHC. Furthermore, the cultural setting in the TCR report is deficient in basic information.

Native American Consultation

One defining characteristic of a tribal cultural resources is that the resource has cultural value to a California Native American tribe. Because of this, tribal cultural resources can only be identified by California Native American tribes. Archaeologists can identify resources that are likely to have cultural value to a tribe, but only the tribes have the expertise to identify and determine the importance of specific resources and landscapes that may not be recognized even by an experienced archaeologist. Because of this, meaningful engagement with tribal governments is necessary to adequately understand and mitigate the impacts to tribal cultural resources.

The AB-52 consultation described in the TCR report consisted of sending a notification letter to those tribes listed on the City's AB-52 Consultation Contact List. No tribes responded to the consultation request within the prescribed 30-day response period. However, the letters were sent near the height of the COVID-19 pandemic when, like most of the nation, tribal representatives may have been working remotely, and they might not have received the notification letters. Appendix C.3 contains an example of an AB-52 notification letter sent to the tribes and contains copies of "Delivery Confirmations." It is unclear if the delivery confirmations are merely a document that the letters were sent by certified mail, or if the receipts are meant to confirm that the letters were received by the intended recipients. Best practices for meaningful engagement as recommended in 2005 by the *State of California Tribal Consultation Guidelines Supplement to General Plan Guidelines* holds that written correspondence requesting consultation with a tribe may not be sufficient and that telephone calls or more direct forms of contact may be required. Similarly, the NAHC in *Tribal Consultation Under AB52: Requirements and Best Practices* recommends lead agencies consult with tribes about cultural resources in advance of AB

52 consultation and also to send more than one consultation notice. Standard practice is to follow up the consultation notification letters with e-mail notification and then to follow up further by telephone with each tribal entity who has not responded by letter or e-mail. There is no documentation in the DEIR to indicate this standard practice of outreach was followed.

Because the Project is being implemented through a Specific Plan and General Plan amendment, tribal consultation following the requirements of SB-18 is also required. There is no documentation of SB-18 consultation in any of the cultural resource documents. SB-18 consultation is not the same as AB-52 consultation or the NAHC Sacred Lands Files Search request process and involves its own schedule and timeline for tribes to respond to the notification. This is a serious and fatal flaw that must be corrected, and the DEIR recirculated with any new information that is obtained during a SB-18 consultation. The City must comply with its separate SB-18 obligations.

Response to Comment No. 26-E.2-17

Refer to Response to Comment No. 26-E.2-14 regarding the City's efforts to contact tribal parties and the Response to Comment Nos. 13-7, 26-42, and 26-44 on the efforts made to obtain substantial evidence used to assess the potential for archaeological and tribal cultural resources within the Project Site and put forward mitigation measures capable of avoiding or reducing potentially significant impacts to less than significant levels.

Regarding the adequacy of the City's tribal consultation efforts, written notifications were sent to all tribal parties included on the City's AB 52 List pursuant to the requirements of PRC Section 21080.3.1, as amended by AB 52. No responses were received after 30 days nor have any responses been received since. By sending the written notification letters via certified mail through the U.S. Postal Service with complete information on the Project description and within the timeframe specified by the PRC, the City has acted in good faith in their compliance to fulfill their obligations under PRC Section 21080.3.1. The City also considered evidence presented in the Tribal Cultural Resources Report, which is included in Appendix C.2 of the Draft EIR, and included a standard condition of approval that includes a provision ensuring tribal involvement should a resource be identified. These actions demonstrate the City's good-faith effort to analyze the potential for impacts to tribal cultural resources and mitigate any potentially significant impacts consistent with their standard practices under CEQA. USPS tracking slips were included in Appendix C.3, AB 52 Notification Letter and Delivery Confirmations.

The commenter states that making phone calls as a supplement to written tribal notification letters and consulting with culturally affiliated tribes before AB 52 consultation

are standard practices, and that these are recommended as best practices in the *State of California Tribal Consultation Guidelines Supplement to General Plan Guidelines*¹⁰³ published in 2005 by the Governor's Office of Planning and Research (OPR), and in an NAHC presentation titled *Tribal Consultation Under AB52: Requirements and Best Practices*.¹⁰⁴ However, OPR's guidance document and the NAHC's presentation identify supplemental phone calls and advanced consultation as optional steps, but neither are needed to meet the requirements of PRC Section 21080.3.1. City Planning does not routinely conduct follow-up phone calls to verify receipt of letters since it is not legally required to do so as part of the process to comply with PRC Section 21080.3.1. Considering the information presented in the Tribal Cultural Resources Report, which did not find a high likelihood for a tribal cultural resource to be identified in the Project Site and concluded that the potential for impacts was less than significant, City Planning did not have a reasonable basis to make an exception to the standard process used to meet regulatory compliance. Regarding the City's obligations for compliance with SB 18, the City of Los Angeles is a charter city, and Government Code Section 65700 exempts charter cities from compliance with everything in Chapter 3 of the State Planning and Zoning Law except for a handful of provisions, including Section 65302 for the required elements in a General Plan, the requirement for other plans to be consistent with the General Plan, and Article 10.6 (the Housing Element provisions), and Section 65400(a)(2) (annual report). SB 18 added Sections 65352.3 and 65352.4 to the Government Code. These sections are in Chapter 3 of the Government Code and are therefore, not required of charter cities under Section 65700. As a general matter, Section 65700 exempts a charter city from compliance with the tribal consultation process in Sections 65352.3 and 65352.4.

Comment No. 26-E.2-18

Cultural Setting

The cultural setting in the TCR report is wholly inadequate for the reasons explained in the discussion of archaeological resources above. Namely, the discussion of the prehistoric period (1) focuses on the wrong region, (2) contains outdated information, (3) ignores recent research, (4) fails to cite many well-known scholarly studies and reports, and (5) contains omissions and incomplete and wrong information. The cultural setting also fails to include Project-specific history as it relates to Native American use of the property during the historical period. Specifically, Rancho La Brea Adobe is located less than

¹⁰³ Governor's Office of Planning and Research, State of California Tribal Consultation Guidelines, Supplement to General Plan Guidelines, November 14, 2005, www.opr.ca.gov/docs/011414_Updated_Guidelines_922.pdf.

¹⁰⁴ Native American Heritage Commission, Tribal Consultation Under AB 52: Legal Requirements and Best Practices for Tribes, April 20, 2017, Public Hearing, <https://nahc.ca.gov/wp-content/uploads/2017/04/AB52-Tribal-Consultation-For-Tribes-NAHC.pdf>.

130 feet from the TVC 2050 property and yet there is no discussion in the TCR report regarding whether there was a Native American presence at the Adobe either during the original construction or later during occupation of the Adobe and operation of any attendant agricultural activities.

Response to Comment No. 26-E.2-18

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the issue of the regional historical context, the adequacy of the background research, identification, and analysis for archaeological and tribal cultural resources, including the discussion of the Gilmore Adobe.

Refer to Resource to Comment No. 26-E.2-12 regarding the issue of Native American labor, alternative source materials omitted from the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR), and discrepancies that may exist concerning minor details for topics that are either matters of scholarly debate or are only indirectly related to the background setting.

Comment No. 26-E.2-19

Paleontology

The Geology and Soils section of the DEIR (Section IV.D.) fails to discuss the depths at which native sediments occur beneath the Project area and the nature of the underlying geology, especially as they relate to paleontological resources. This section uses a variety of geologic units (i.e., “older, elevated Quaternary alluvial deposits,” “Pleistocene age alluvial deposits,” “older Quaternary age sedimentary deposits,” “Pleistocene alluvium,” “Pleistocene age older alluvial deposits,” and “Palos Verdes Sand”) interchangeably to describe the sediments underlying the Project area, when those terms have specific meanings and are not necessarily interchangeable. Due to this variability in terminology, the nature of the underlying geology within the Project is not made clear, nor are the depths at which each geologic unit is expected to be encountered during construction. In other words, the DEIR wholly fails to clearly characterize the paleontological potential of the Project site and vicinity.

To add to this confusion, the DEIR uses outdated definitions for significant fossiliferous deposits and significant paleontological resources provided by the Society of Vertebrate Paleontology (SVP 1995 vs. SVP 2010). Though it is not clear which schema for assigning paleontological resource potential was used for this section, it is implied to be the SVP system. However, the geology underlying the Project area is assigned a “moderate to high” paleontological sensitivity, which is a designation that does not exist within SVP.

Response to Comment No. 26-E.2-19

Regarding the nature of the underlying geology and terminology used in Section IV.D of the Draft EIR concerning the type of deposits that have a higher potential to contain paleontological resources, namely, older Quaternary age sedimentary deposits known as Pleistocene, refer to Response to Comment No. 35-90 and the Paleontological Resources Review Memorandum (contained in Appendix F of the Draft EIR). As stated therein, those documents conservatively assumed that Pleistocene age alluvial deposits could exist immediately below the artificial fill at the Project Site, as discussed on page two therein. Also, the Preliminary Geotechnical Engineering Investigation, attached as Appendix E.1 of the Draft EIR, identified the Pleistocene age alluvial deposits below the artificial fill as shallow as three feet below grade.

To clarify, the critical aspect of the nature of the underlying geology is the presence of Pleistocene age alluvial deposits. The Los Angeles Basin is filled with a thick sequence of sedimentary deposits that, at the surface, is capped by sedimentary deposits from the Quaternary Period. The Quaternary Period includes the Holocene Epoch and the Pleistocene Epoch, with the Holocene Epoch following the Pleistocene Epoch. Cohen et al. 2021 lists the Pleistocene as being 2.58 million to 11,700 years old, with the late Pleistocene being 129,000 to 11,700 years old, as mentioned on page 1 of the Paleontological Resources Review Memorandum. The Holocene deposits (less than 11,700 years ago) are generally too young to contain paleontological resources. However, Holocene deposits are often underlain by Pleistocene deposits. It is these Pleistocene, or “Ice Age” deposits that have the potential to contain paleontological resources, which are the remains or traces of prehistoric life. Thus, these Pleistocene age deposits are likely to yield some paleontological resources during construction and are thus assigned high paleontological resources sensitivity or potential.¹⁰⁵

To evaluate the presence of Holocene and Pleistocene age deposits at the Project Site, the Paleontological Resources Review Memorandum first reviewed the published mapping for the general area previously prepared by Dibblee and Ehrenspeck, which was then utilized to prepare the report for the Draft EIR.¹⁰⁶ The Project Site is mapped as being underlain by older Quaternary alluvial deposits that are late Pleistocene in age

¹⁰⁵ Society of Vertebrate Paleontology, Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources, 2010.

¹⁰⁶ Dibblee, T.W. and H.E. Ehrenspeck. 1991. Geologic map of the Hollywood and Burbank (south 1/2) quadrangles, Los Angeles, California, Dibblee Geological Foundation, Dibblee Foundation Map DF-30, 1:24,000.

(approximately 129,000 to 11,700 years old).^{107,108} These same deposits are mapped to the south, in the area of the La Brea Tar Pits and Museum.

However, the published mapping does not provide details as to the Project Site with respect to the estimated depths below grade surface of the Holocene and Pleistocene age deposits. Accordingly, the Paleontological Resources Review Memorandum references the Preliminary Geotechnical Engineering Investigation prepared for the Project Site, prepared by Geotechnologies, Inc. and provided in Appendix E.1 of the Draft EIR. The Preliminary Geotechnical Engineering Investigation states that “native soils consist of older alluvial deposits,” which is associated with Pleistocene age deposits. The report states that such alluvial deposits are present at the Project Site beginning at 3 to 20 feet below grade surface. The report also states that “the native soils consist predominantly of sediments deposited by river and stream action typical to this area of Los Angeles County.”

A confidential record search from the Natural History Museum of Los Angeles was also analyzed as part of the Paleontological Resources Review Memorandum. Geological units at localities near the Project Site were reported to include: older alluvium, unknown formation (Pleistocene, muddy sands); Palos Verdes Sand; Palos Verdes Sand, submember A (claystone and siltstone interbedded with sandstone); and unknown formation (Pleistocene; green clay).

The common link between each of these geological units is their time period, which is the Pleistocene Epoch. As to the Palos Verdes Sand, that is a geological unit from which resources from some of the nearby localities were recovered according to the records search conducted by the Natural History Museum of Los Angeles County. The Palos Verdes Sand is a terrace deposit found in the Los Angeles Basin,¹⁰⁹ which was recorded at 46 feet below the surface at one nearby project site according to the records search results.¹¹⁰ As mentioned, this named geological unit is Pleistocene in age and is assigned high paleontological resources sensitivity or potential per the 2010 SVP Guidelines.

¹⁰⁷ Dibblee, T.W. and H.E. Ehrenspeck. 1991. Geologic map of the Hollywood and Burbank (south 1/2) quadrangles, Los Angeles, California, Dibblee Geological Foundation, Dibblee Foundation Map DF-30, 1:24,000.

¹⁰⁸ Cohen, K.M., S.C. Finney, P.L. Gibbard, and J.-X. Fan. 2023. The ICS International Chronostratigraphic Chart.” Episodes 36: 199—204. 2013.

¹⁰⁹ Woodring, W. P., Bramlette, M. N., and Kew, W. S. W., 1946, Geology and paleontology of Palos Verdes Hills, California: U. S. Geological Survey Professional Paper 207, 145 p.

¹¹⁰ Natural History Museum of Los Angeles County (LACM). 2021. Paleontological Resources for the TVC 2050 Project, in the City of Los Angeles, Los Angeles County, Project Area. Unpublished Records Search Results Letter from A. Bell of the Natural History Museum of Los Angeles County, Los Angeles, California.

The Paleontological Resources Review Memorandum for the Project Site anticipated that similarly aged Pleistocene deposits may be encountered at depth below the artificial fill at the Project Site, which ranges from 3 to 20 feet in depth across the Site. Accordingly, the revised mitigation measure (refer to Response to Comment No. 35-91) makes clear that the qualified paleontological resource monitor shall monitor all ground disturbance activities within “high sensitivity deposits (e.g., Pleistocene age deposits).”¹¹¹

Refer to Response to Comment No. 35-90 regarding the references to the 1995 and 2010 SVP Guidelines, and the analysis of paleontological sensitivity.

Comment No. 26-E.2-20

Finally, this section calls for a single mitigation measure for paleontology (DEIR p. IV.D-27, GEO-MM-1) calling for construction monitoring by a paleontologist. In addition, the mitigation measure fails to provide the entirety of the qualifications set out by SVP for a project paleontologist and does not set forth any qualifications for that of a paleontological monitor. Due to the geologic units underlying the Project area and the proximity to “La Brea”-type asphaltic deposits, an experienced professional monitor should be required during Project construction (DEIR, pp. IV.D-15–16).

Importantly, given the known extent of paleontological resources present in this area, the mitigation measure also lacks other important stipulations of mitigation measures approved for recent projects (LACMA Permanent Collections Building [Eyestone Environmental 2019] and Academy Museum of Motion Pictures [Los Angeles City Planning Department, Environmental Review Section 2015]) in close proximity to the Project area and in the same geologic unit, including requirements for fossil preparation, assignment of an approved repository, donation of significant paleontological resources to the approved repository, review of the Mitigation and Treatment Plan by curatorial staff of the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County and at the Natural History Museum La Brea Tar Pits & Museum, mandate of a Worker Environmental Awareness Program (WEAP), authority of the paleontological monitor to divert/direct ground-disturbing activities in the event of discovery, and preparation of a final report at the conclusion of monitoring.

¹¹¹ Note that the mitigation measure for paleontological resources has also been revised to include the definition of a Qualified Paleontological Resource Monitor according to SVP (2010) guidelines. Refer to Response to Comment No. 35-91 and Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Response to Comment No. 26-E.2-20

Refer to Response to Comment No. 35-91 regarding the revision of Mitigation Measure GEO-MM-1 to expressly incorporate the qualification requirements for both a Qualified Professional Paleontologist and Qualified Paleontological Resource Monitor as defined by the 2010 SVP Guidelines and include (a) a worker environmental awareness program, (b) the authority of the monitor to stop construction work if resources are discovered, and (c) the preparation of a post-monitoring report.

The commenter also recommends that the mitigation measures listed for the LACMA, Academy Museum of Motion Pictures, and Metro D (Purple) Line projects be reviewed and certain elements from those measures be incorporated into the mitigation measure (Mitigation Measure GEO-MM-1) for the Project.

The Los Angeles County Museum of Art, or LACMA (2019), outlined mitigation measures for paleontological resources including:

...retain a qualified paleontologist, who meets the qualifications established by the Society of Vertebrate Paleontology (SVP), to develop and execute a Paleontological Resources Monitoring and Mitigation Plan (PRMMP) for ground-disturbing activities. The PRMMP shall be in conformance with SVP guidelines (2016) [sic] and prepared to the satisfaction of the curatorial staff of the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County and the curatorial staff of the Natural History Museum La Brea Tar Pits & Museum...

The LACMA (2019) mitigation measures also stipulate that “...the paleontologist shall prepare a Worker Environmental Awareness Program (WEAP)...” Also, the “...monitor, under the supervision of the paleontologist, shall monitor all ground-disturbing activities...” and “...if paleontological resources are encountered during monitoring, all construction activities in the area of the find...shall be temporarily halted so that the paleontologist can evaluate the find....” The mitigation measures for LACMA (2019) also provide for final reporting, which is now provided in the revised Mitigation Measure GEO-MM-1 for the Project.

As discussed in Response to Comment No. 35-91, Mitigation Measure GEO-MM-1 has been revised and now expressly includes elements from the mitigation program for other nearby projects, including the measures for LACMA (2019). In particular, Measure GEO-MM-1 now includes (a) a Worker Environmental Awareness Program Worker Environmental Awareness Program.

The mitigation measures for the Academy Museum of Motion Pictures (2015) were also reviewed since, much like LACMA, the Academy Museum of Motion Pictures is located just west of the La Brea Tar Pits and Museum. The measures for the Academy Museum of Motion Pictures (2015) require that a qualified paleontologist be retained with a minimum of five years of experience excavating asphaltic soils of Hancock Park. The qualified paleontologist would be approved and supervised by the Page Museum (now known as the La Brea Tar Pits and Museum) and supervise monitoring by a qualified paleontological monitor. The measures also provide that data regarding resource locations and stratigraphy be collected, and that recovered fossils would need to be processed, cataloged, and curated. The mitigation measures also list qualifications for the qualified paleontologist and qualified paleontological monitor, which match the revised mitigation measure (revised Mitigation Measure GEO-MM-1) for the Project. The mitigation measures for the Academy Museum of Motion Pictures (2015) also require the preparation of a Paleontological Resources Monitoring and Mitigation Plan, or PRMMP, subject to the approval by the City, the Page Museum (i.e., the La Brea Tar Pits and Museum, which is now provided in revised Mitigation Measure GEO-MM-1 for the Project), and the applicant. A WEAP is also required, which is included in the revised Mitigation Measure GEO-MM-1 for the Project.

Similarly, revised Mitigation Measure GEO-MM-1 in Response to Comment No. 35-91 is also consistent with the following mitigation measure elements from the Westside Subway Extension Mitigation and Monitoring and Reporting Plan (2012): retain the services of a Qualified Principal Paleontologist, development of a Paleontological Resources Mitigation and Treatment Plan required activities for recovered fossils in the Plan, preparation of a report on paleontological resources recovered, and curation of identified and prepared fossils.

Comment No. 26-E.2-21

Conclusion

Based on a review of the DEIR and technical appendices, SRI finds that the DEIR fails to adequately identify and analyze the effects of the TVC 2050 Project on cultural resources of the built environment, archaeological resources, tribal cultural resources, and paleontological resources. As provided above, the DEIR needs to be revised, including but not limited to an analysis of the effects on the viewshed of historical resources; an analysis of the effects of vibration from construction on historical resources; an analysis of cultural resources from the protohistoric and historical periods; additional identification efforts for archaeological, tribal, and paleontological resources; and a meaningful evaluation of appropriate mitigation measures.

Response to Comment No. 26-E.2-21

This comment concludes the main comment letter and summarizes the commenter's concerns addressed above. Specific issues raised by the commenter are addressed in Response to Comment Nos. 26-E.2-2 through 26-E.2-153. As demonstrated therein, the analysis in the Draft EIR meets the requirements of CEQA.

The references in this comment have been reviewed as part of the responses to the specific comments above that cite these documents. No individual response is necessary.

Comment No. 26-E.2-23

Comment Number	Section or Appendix	Page, Table, or Figure No.	Passage	Comment
1.	DEIR Section II Project Description	Page II-1	Entire Section	The Introduction on Page II-1 summarizes the goals of the project and specifies the maximum square footage of development excluding those facilities and spaces listed in Footnote 1. This same description was adapted for the TCR report and AB-52 Consultation Letter. Later in the Project Description on Page II-17 what follows, the DEIR specifies that much of the project site would be subject to a base height limit of 88 feet, consistent with the height of the existing HCM. However, Table II-3 on Page II-19 shows that allowable heights in significant portions of the

				project area will far exceed the 88-foot base height, with some construction having a maximum height of 225 feet above grade, which is 2.5 times the base-height limit. This is a significant feature of the proposed development and should be included in all of the cultural resource technical evaluations. The reports should be updated accordingly.
--	--	--	--	--

Response to Comment No. 26-E.2-23

Regarding the assessment of archeological resources, which are assessed in Section IV.B, Cultural Resources, of the Draft EIR, the base height component of the Project description has no influence on the impact analysis, proposed mitigation measures, or the conclusions presented in the Draft EIR. Regarding the assessment of historic resources, the integrity of the Primary Studio Complex after implementation of the Project was thoroughly analyzed in Section IV.B, Cultural Resources, of the Draft EIR, and it was determined that the Primary Studio Complex would retain sufficient integrity to convey its historic significance. Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources.

Comment No. 26-E.2-24

2.	DEIR Section II—Project Description	Historic Preservation (Pages II-22 and II-23)	Discussion of historic preservation	Normally, historic preservation relates to cultural resources of all sorts, not simply built environment. This section, and the entire project description in general, does not discuss archaeological or tribal resources at all. The missing archaeological or tribal resources information and analysis should be added and the document recirculated.
----	-------------------------------------	---	-------------------------------------	---

Response to Comment No. 26-E.2-24

Section II, Project Description, of the Draft EIR has been completed in full compliance with CEQA. The Project Description is not required to provide a discussion of archaeological or tribal cultural resources. These topics are appropriately addressed in Sections IV.B, Cultural Resources, and IV.L, Tribal Cultural Resources, respectively, of the Draft EIR. As this information is not absent from the Project Description, recirculation of the Draft EIR based on this comment is not warranted. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-25

3.	DEIR Section II	Figure II-4	Conceptual Site Plan	This is not very informative: no indication of where the Primary Studio Complex (the HCM) is located within this plan, where the new buildings are located, or the elevations of the buildings. It is unclear what project is being evaluated. Without more specificity, the analysis and impacts assessment is unsupported.
----	-----------------	-------------	----------------------	--

Response to Comment No. 26-E.2-25

The Conceptual Site Plan provides key information to assist in the preparation of environmental analyses throughout the Draft EIR. The commenter fails to note that there are numerous other graphics included in the Draft EIR to support the various analyses. In particular, the Historic Report, which is provided as Appendix C.1 to the Draft EIR, contains numerous figures of the Primary Studio Complex that support the impacts analysis. Pages 55 to 56 therein show the removal of non-historic additions, pages 61 to 63 show areas that would be restored, page 70 shows additions, and page 73 shows adjacent new construction.

Comment No. 26-E.2-26

4.	DEIR Section II	Figure II-5	Height Zone Map	This indicates that the Primary Studio Complex will be surrounded on 3 sides by 13–22-story towers that would overwhelm the HCM. The map also indicates the north side of the HCM could be obscured by buildings and structures of 58 feet tall. This would clearly not preserve the integrity of the HCM, and the latter would have a significant impact on the viewshed restoration area.
----	-----------------	-------------	-----------------	---

Response to Comment No. 26-E.2-26

Refer to Sections C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, as well as Response to Comment No. 26-E.2-6 regarding the Draft EIR's demonstration that impacts from Project buildout and new construction adjacent to the Primary Studio Complex would be less than significant.

The commenter is referred to the Height Zone Map in Figure II-5 of the Draft EIR that shows the correct building height limits and provides an envelope of building heights across the Project Site, further specifying that maximum heights in certain zones would be limited to a specific percentage. The Height Zone Map does not reflect the overall massing of the Project. As discussed in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. As discussed in Section B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, any substantial alteration to a designated HCM would require OHR review and compliance with the Rehabilitation Standards pursuant to Section 22.171.14 of the Cultural Heritage Ordinance.

Comment No. 26-E.2-27

5.	DEIR Section II	Page II-12	At full buildout, the Specific Plan would permit a total of up to a maximum of 1,874,000 sq ft, but a retention of only up to 247,820 sq ft of existing buildings	This is more than twice the existing square footage and a sitewide floor area ratio of 1.75:1. This buildout can only be achieved by building high-rise towers that would overwhelm the Primary Studio Complex.
----	-----------------	------------	---	---

Response to Comment No. 26-E.2-27

Refer to Sections C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, as well as Response to Comment No. 26-E.2-6 regarding the analysis of impacts to the Primary Studio Complex that accounts for building heights and demonstrates that potential impacts would be less than significant.

Comment No. 26-E.2-28

6.	DEIR Section II	Page II-22	First mention of exclusion from HCM of 1969 Service Building addition and 1976 Support Building and the period of significance between 1952 and 1963	Rationale for period of significance not presented here. These additions are now over 50 years old or will be by the time of project completion. Their exclusion from HCM must be considered more carefully and justified with more evidence. Why such a narrow period of significance for a complex that has been functioning for 70 years?
----	-----------------	------------	--	--

Response to Comment No. 26-E.2-28

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for a detailed discussion regarding the period of significance that concluded in 1963.

Comment No. 26-E.2-29

7.	DEIR Section II	Page II-25	Discussion of proposed vehicular and pedestrian access.	Bicycles mentioned as a preferred vehicular form, but no discussion of any special bicycle access lanes or secure parking.
----	-----------------	------------	---	--

Response to Comment No. 26-E.2-29

As indicated on pages IV.K-37 to IV.K-40 of Section IV.K, Transportation, of the Draft EIR, as part of Project Design Feature TR-PDF-2, the Project would implement a series of TDM measures that exceed the requirements established in the current TDM Ordinance. Included in Project Design Feature TR-PDF-2 is the following (refer to page IV.K-38 of the Draft EIR): “Project and Bicycle Parking and Amenities: In order to facilitate bicycle use, the Project will provide short-term and long-term bicycle parking spaces in accordance with the Los Angeles Municipal Code (LAMC), as well as valet service, showers, lockers, and bicycle service areas and repair stands within the Project Site. The Project will incorporate features for bicyclists, such as exclusive access points and secured bicycle parking facilities. The Applicant will also contribute toward the implementation of bicycle improvements within the Study Area in accordance with the Mobility Plan.” Refer to Topical Response No. 11, Transportation Demand Management, for further discussion of the TDM Program.

Comment No. 26-E.2-30

8.	DEIR Section IV Environmental Impact Analysis	B. Cultural Resources, 1. Introduction	This section of the Draft EIR provides an analysis of the Project impacts to historical and archaeological resources. The analysis of historical resources is based on the Historical Resources Technical Report TVC 2050 Project (Historic Report) prepared by Historic Resources Group (HRG), and the analysis of archaeological resources is based on information within the Tribal Cultural Resources Report prepared by Dudek	The TCR report is not an archaeological resource report and cannot be used as the basis of analysis of archaeological resources. Sufficient information exists to know that the site has a very high likelihood for the presence of archaeological resources. An archaeological resources assessment must be completed, and the results included in a recirculated DEIR for public review and comment.
----	---	--	--	--

Response to Comment No. 26-E.2-30

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the multiple data sources that were used identify substantial evidence in the analysis of archaeological resources within the Project Site, including but not limited to the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR).

Refer to Response to Comment No. 26-42 regarding the need for additional technical reports and availability of substantial evidence to inform the assessment of archaeological resources.

Refer to Response to Comment Nos. 13-7 and 26-42 on the likelihood for archaeological resources and the substantial evidence used to support the conclusions in the analysis as presented in Section IV.B, Cultural Resources, of the Draft EIR. This includes the results of the review presented in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-31

9.	DEIR Section IV Environmental Impact Analysis	B. Cultural Resources, Historic Period Overview, Page IV.B-32	Entire Section	This section is inadequate and includes no project-specific history to inform on historical use of the project area as it relates to the potential for archaeological resources. The section must be revised to include such information and the DEIR recirculated for public review and comment.
----	---	---	----------------	---

Response to Comment No. 26-E.2-31

Refer to Response to Comment No. 26-42 regarding the considerations of historical land uses incorporated into the analysis of archaeological resources as discussed in Section IV.B, Cultural Resources, of the Draft EIR, and further assessed in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-32

10.	DEIR Section IV Environmental Impact Analysis	B. Cultural Resources, Page IV.B-34	As discussed in the Tribal Cultural Resources Report, while numerous historical period resources were	Rancho La Brea was founded in 1828 by Jose Antonio Rocha, constructed around 1852 by James Thompson, and modified in 1880 by
-----	---	-------------------------------------	---	--

			identified during the records search, no prehistoric archaeological resources or historical-period Native American resources were identified within the Project Site or within 0.5 mile of the Project Site.	A. F. Gilmore. It is not known if Thompson built the Adobe on the foundation of an earlier structure. The TCR does not consider if Native American labor was used to construct the original building or if Native Americans were used as domestic help or ranch hands at the Adobe and adjacent lands, which was common in the 1850s. The Adobe property is located approximately 130 feet from the project area. This is a significant omission in the understanding of the project site and the potential for the project to have significant impacts on cultural resources.
--	--	--	--	--

Response to Comment No. 26-E.2-32

Refer to Response to Comment No. 26-42 regarding the consideration of historical context related to Rancho La Brea and the Gilmore Adobe and the means by which this was incorporated into the analysis of archaeological resources as discussed in Section IV.B, Cultural Resources, of the Draft EIR, and further assessed in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Refer to Response to Comment No. 26-E.2-12 regarding the subject of Native American labor in the construction of the Gilmore Adobe and the applicability of this to the analysis.

Comment No. 26-E.2-33

11.	DEIR Section IV Environmental Impact Analysis	B. Cultural Resources, Page IV.B-34–IV.B.35	<p>In accordance with Appendix G of the CEQA Guidelines, the Project would have a significant impact related to cultural resources if it would:...</p> <p>Threshold (c): Disturb any human remains, including those interred outside of dedicated cemeteries.</p> <p>Threshold (c) was scoped out of the Draft EIR in the Initial Study, which is included in Appendix A of this Draft EIR. As demonstrated therein, impacts would be less than</p>	There is no discussion or justification presented for scoping this threshold out of the Draft EIR, given that archaeological resources are not adequately considered in the technical reports or the DEIR itself as highlighted herein.
-----	---	---	--	---

			significant, and no further analysis is required.	
--	--	--	---	--

Response to Comment No. 26-E.2-33

Contrary to the assertion of the commenter, the Draft EIR does contain justification for why impacts related to human remains were scoped out in the Initial Study (included in Appendix A of the Draft EIR). As discussed on page VI-24 of Section VI, Other CEQA Considerations, of the Draft EIR, the Project Site is located within an urbanized area and has been subject to previous grading and development. No known traditional burial sites have been identified on the Project Site. Nevertheless, as the Project would require excavation at depths greater than those that have previously occurred on-site, the potential exists to uncover existing but undiscovered human remains. In the unlikely event human remains are discovered during Project construction, compliance with existing regulatory requirements would ensure appropriate treatment of any potential human remains. Specifically, if human remains are discovered during Project construction, work in the immediate vicinity of the construction area would be halted, and the County Coroner, construction manager, and other entities would be notified per California Health and Safety Code Section 7050.5. In addition, disposition of the human remains and any associated grave goods would occur in accordance with PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e), which requires that work stop near the discovery until a coroner can determine that no investigation into the cause of death is required and if the remains are Native American. Specifically, in accordance with CEQA Guidelines Section 15064.5(e), if the coroner determines the remains to be Native American, the coroner shall contact the Native American Heritage Commission who shall identify the most likely descendent. The most likely descendent may make recommendations regarding the treatment of the remains and any associated grave goods in accordance with PRC Section 5097.98. Therefore, as concluded in the Initial Study, due to the low potential that any human remains are located on the Project Site and because compliance with the regulatory standards described above would ensure appropriate treatment of any potential human remains unexpectedly encountered during grading and excavation activities, Project impacts related to human remains would be less than significant. This information has been further summarized in the Supplemental Cultural Memo, included as Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo provides expert opinion reinforcing the conclusions that human remains are unlikely to be encountered and that compliance with existing regulations is sufficient to avoid potentially significant impacts in the unlikely event any human remains are discovered during Project construction.

Comment No. 26-E.2-34

12.	DEIR Section IV Environmental Impact	B. Cultural Resources, Analysis of	Threshold (b): Would the Project cause a substantial adverse change in the	The DEIR fails to consider known buried historical-period resources in the project area. Page 63 of CBS

	Analysis	Project Impacts, Page IV.B-57	<p>significance of an archaeological resource pursuant to §15064.5?</p> <p>And discussion following.</p>	<p><i>Television City, Los Angeles Historic Resource Assessment</i> prepared by ARG in 2018 and part of Appendix C.A of the DEIR states:</p> <p>“Although the subject property has already been substantially excavated and graded as part of its development, it may contain intact subsurface deposits relating to historic occupations including Gilmore Field, Gilmore Stadium, the Gilmore Adobe of Rancho La Brea, and smaller properties like the drive in and gas station known to have been present prior to 1952.¹⁴⁵ The area is also known to have a high occurrence of subsurface paleontological deposits,¹⁴⁶ which are sometimes accompanied by archaeological deposits containing evidence of prehistoric human activity. Because a comprehensive archaeological assessment was not included in the scope of this report, the property’s potential to yield information important in prehistory or history is currently unknown.</p> <p>According to Footnote 145 in this passage, remnants of Gilmore Field dugouts were encountered during excavation for the East Studies Building in 1991. This clearly demonstrates that buried historical-period archaeological remains are present in the project area.</p> <p>Identification efforts for archaeological resources failed to consider buried deposits from development and activities prior to 1952. Archaeological monitoring during grading is an appropriate mitigation measure for identifying and treating unanticipated resources but should not be used in lieu of active searching when there is a very high likelihood for buried resources to be present. Given the very high likelihood for buried resources, a geoarchaeological study should have been completed. This level of study, which was not conducted here, is required by CEQA during the EIR preparation process, and the methods, results,</p>
--	----------	-------------------------------	---	---

				and recommendations from that research should be documented in an archaeological resources report.
--	--	--	--	--

Response to Comment No. 26-E.2-34

Regarding the assessment of buried historical-period resources, Response to Comments Nos. 13-7, 26-42, and 26-44 address the identification and analysis for archaeological resources from all time periods that could be preserved below ground. Response to Comment No. 26-42 specifically addresses historical land uses and how information including but not limited to the content in ARG's Historic Resource Assessment was already considered in the analysis. This information has been further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo also includes additional clarifications on why the resources described in the Draft EIR as being most likely to occur are unlikely to be considered historical resources under CEQA, and upon further review did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the issue of the historic context and the adequacy of the identification and analysis of archaeological and tribal cultural resources, including those associated with the Gilmore Adobe, and the various business ventures pursued by the Gilmore family—oil operations, Gilmore Field, and Gilmore Stadium. These are also further summarized as part of Response to Comment No. 26-E.2-15.

Refer to Response to Comment No. 26-44 regarding how the provisions put forward in Mitigation Measure CUL-MM-1 provide an adequate means of reducing potentially significant impacts to archaeological resources. Response to Comment No. 26-44 also provides further clarification regarding the meaning of unanticipated resources and the relationship to the assessment of potential impacts to archaeological sites and how the proposed mitigation avoids or reduces potentially significant impacts. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, adds further detail to the analysis of buried resources, use of archival data, and adequacy of Mitigation Measure CUL-MM-1; the conclusion stated therein further reinforces the findings presented in the Draft EIR. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

In addition to the topics referenced above regarding the analysis of archaeological addressed, refer to Response to Comment No. 26-42 specifically regarding the level of study required to support an analysis under CEQA.

Comment No. 26-E.2-35

13.	DEIR Section IV Environmental Impact Analysis	B. Cultural Resources, Project Impacts with Long Term Buildout Page IV.B-59	While Project buildout is anticipated in 2026, the Project Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043...Additionally, given that historic and archaeological resources are site-specific and do not typically vary over the course of a 20-year timeframe, a later buildout date would not affect the impacts or significance conclusions presented above	We disagree with the statement that “a later buildout date would not affect the impacts or significance conclusions presented above.” To qualify for eligibility to the CRHR, resources generally need to be at least 50 years old in order to understand the historic importance of a resource, because sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. Given the 20-year time frame for buildout of the proposed project, resources that are today too young to be placed in the proper perspective might be considered eligible in the future. The DEIR must include a mechanism for future evaluation of cultural resources prior to their alteration or destruction.
-----	---	---	--	---

Response to Comment No. 26-E.2-35

The proposed Specific Plan includes a provision that prior to the demolition or alteration of any building over 45 years old that has not already been designated as a historical resource, written verification from the Office of Historic Resources that the building is not an historical resource under CEQA or an HCM under the City’s code shall be required. Thus, the mechanism suggested by the Commenter has been incorporated.

Comment No. 26-E.2-36

14.	DEIR Section IV.B Cultural Resources	Pages IV.B-1–IV.B-16	Discussion of pertinent federal, state, and local regulations	<p>This DEIR section goes into tremendously more detail than the Tribal Cultural Resources Report on applicable regulations. One has to wonder which of these regulations discussed in the DEIR were not taken into account in the technical report analysis. For example, the Tribal Cultural Resources Report did not discuss the City of Los Angeles CEQA Thresholds, as the DEIR does.</p> <p>One also has to wonder why certain federal regulations are being discussed in the DEIR. Is there a federal nexus that has not been made clear? Is there federal money</p>
-----	--------------------------------------	----------------------	---	---

				being used in the project? Why is the DEIR discussing acts like the Archaeological Resources Protection Act (ARPA), which only applies to federal land? Why is the Native American Graves Protection and Repatriation Act (NAGPRA) being discussed at all in a California-based DEIR? If federal NAGPRA is being discussed, should Cal NAGPRA also be discussed?
--	--	--	--	--

Response to Comment No. 26-E.2-36

The Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR provides a summary of the regulations pertinent to the analysis of tribal cultural resources. The section of the report discussing the regulatory framework is not intended to be an exhaustive analysis of regulations. Such an analysis is provided in the Draft EIR on pages IV.B-1 through IV.B-16 in Section IV.B, Cultural Resources, of the Draft EIR, and pages IV.L-1 through IV.L-4 in Section IV.L, Tribal Cultural Resources, of the Draft EIR. There is no evidence that the tribal cultural resource analysis did not follow the applicable regulations; rather, the evidence confirms that the Tribal Cultural Resources Report adheres to professional standards and provides substantial evidence to support the conclusions in accordance with Appendix G of the CEQA Guidelines. As the City of Los Angeles CEQA Thresholds were published in 2006 before the category of tribal cultural resources was created in the CEQA Guidelines, the discussion of tribal cultural resources is omitted and the 2006 L.A. CEQA Thresholds Guide refers exclusively to archaeological resources. As such, the City of Los Angeles CEQA Thresholds are included in Section IV.B, Cultural Resources, of the Draft EIR.

Regarding the inclusion of federal regulations in Section IV.B, Cultural Resources, of the Draft EIR, there is not a federal nexus for the proposed Project or a federal funding source. The inclusion of the Archaeological Resources Protection Act (ARPA) and the Native American Graves Protection and Repatriation Act (NAGPRA) are not directly applicable, but their inclusion does not invalidate the findings otherwise presented. References to both of these regulations are not repeated in the analysis sections below, which otherwise focus on the application of state and City regulations and guidelines. As with the inclusion of federal regulations such as the National Register of Historic Places (NRHP), which have relevance in CEQA because of the relationship to the California Register of Historical Resources (CRHR) criteria, among other topics, the federal regulations can sometimes provide reasonable guidance or standards where an equivalent state or local regulation is absent.

Regarding the applicability of Cal NAGPRA, this regulation applies to state agencies and museums who have possession or control over collections of Native American human remains or cultural items and requires them to provide a process for the identification and repatriation of these items to the appropriate tribes. Any discovery of Native American human remains would be subject to the process defined by the California Health and Safety Code Section 7050.5 and PRC Section 5097.98, which requires coordination with the NAHC and designation of a Most Likely Descendant, and only as a part of this process would the treatment and disposition of any human remains and any associated items be determined.

Comment No. 26-E.2-37

15.	DEIR Section IV.B Cultural Resources	Page IV.B-57	Discussion of Threshold (b): Would the Project cause a substantial adverse change in the significance of an archaeological resource?	<p>The underlying data for answering this question comes from the Tribal Cultural Resources Report. That work apparently did not involve a pedestrian survey of the property and relied on AB-52 consultation, rather than also contacting tribes listed by the NAHC as having potential knowledge of sacred lands in the vicinity of the Project area. Why? The pedestrian survey and contact of tribes should be completed. There may also be the potential for buried resources based upon filled-in natural drainages within the project area.</p> <p>While the DEIR does state that due to ground-disturbing activity, there is the potential for encountering unknown archaeological resources within the Project area, additional investigation is warranted.</p>
-----	--------------------------------------	--------------	---	--

Response to Comment No. 26-E.2-37

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the multiple data sources, that were used identify substantial evidence in the analysis of archaeological resources within the Project Site and the potential for impacts, which includes but is not limited to the use of the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR).

Refer to Response to Comment No. 26-42 regarding the justification for not conducting an additional pedestrian survey and the methodology used to characterize the existing conditions within the Project Site, including but not limited to assessing the potential for resources buried in former drainages or any other location within the Project Site.

Refer to Response to Comment No. 26-E.2-14 regarding the efforts made to contact tribes for information on sacred lands pursuant to the NAHC's recommendations.

Comment No. 26-E.2-38

16.	DEIR Section IV.B Cultural Resources	Pages IV.B-31 and IV.B-55–IV.B-57	Potential Impacts to Historical Resources in the Project Site vicinity	<p>The draft EIR states that other historical resources in the project site vicinity—the Original Farmers Market, Rancho La Brea Adobe, Chase Bank, Fairfax Theater, Air Raid Siren No. 25, and the Beverly Fairfax Historic District—would not be adversely affected by project construction, in terms of their visual and spatial relationships with their immediate surroundings.</p> <p>Considering the heights of proposed new construction (between 160 and 225 feet above project grade) and in the absence of a visual-resource, or viewshed, analysis study, these assumptions are unsupported and suspect. Given the acknowledged transportation impacts to the Beverly Fairfax Historic District, these assumptions are unsupported and suspect. Additionally, the Miracle Mile North Historic Preservation Overlay Zone (HPOZ) lies immediately east of Pan Pacific Park. There is the potential for adverse visual effects to this HPOZ and a change in setting, feeling, and association. Impacts to this HPOZ should be added to the analysis and the DEIR recirculated.</p>
-----	--------------------------------------	-----------------------------------	--	---

Response to Comment No. 26-E.2-38

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the Project's less-than-significant impacts to historical resources in the Project Site vicinity and aesthetics impacts. Also refer to Response to Comment No. 26-E.2-6 for a discussion of the safeguards and other development standards that will prevent an unrestricted buildout scenario that would impact historical resources in the vicinity of the Project Site.

As discussed in Section IV.K, Transportation, of the Draft EIR, the Project would not result in significant transportation impacts to the Beverly Fairfax Historic District or any other geographic area under CEQA.

In response to concerns about impacts to the Miracle Mile North HPOZ that might amount to a change in setting, feeling, or association of the HPOZ, Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, also explains that a thorough analysis was conducted of potential impacts to historical resources in the vicinity of the Project Site. As discussed on page IV.B-27 of the Draft EIR, the Historic Report (Appendix C.1 of the Draft EIR) defines an area surrounding the Project Site where potential direct or indirect impacts could reasonably be expected to occur (i.e., the Project Site vicinity). In determining the Project Site vicinity, the Historic Report considered three factors: (1) the existing setting of the Project Site; (2) the scale and nature of the proposed Project; and (3) the impacts the Project could have on historical resources, if such resources exist. The Historic Report defined the Project Site vicinity as all parcels immediately adjacent to the Project Site, as well as all parcels located directly across the street from the Project Site. Properties beyond the Project Site vicinity were not analyzed because the Project would have no potential to directly or indirectly impact those properties. The western boundary of the Miracle Mile North HPOZ sits more than 800 feet from the easternmost edge of the Project Site and cannot be reasonably considered to be part of its environmental setting under CEQA, nor is there any potential for significant impacts to the Miracle Mile North HPOZ from the Project. Therefore, impacts to the Miracle Mile North HPOZ were not analyzed as part of the Draft EIR.

Further, this comment does not demonstrate how the visibility of new construction would result in a substantial adverse change such that the physical characteristics of any historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, historic listing would be materially impaired. As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, the mere visibility of a new building, structure, or feature from various vantage points alone would not result in a significant impact to any of the historic resources located in the vicinity of the Project Site. For a significant impact to occur, the integrity of the historical resource would have to be diminished to the degree that it would no longer be able to convey its significance.¹¹² The Draft EIR and Historic Report correctly considered the impact the Project could have on the integrity of the historical resources in the vicinity, including their integrity of *setting*, and concluded that any impacts would be less than significant.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

¹¹² CEQA Guidelines Section 15064.5(b)(2).

Comment No. 26-E.2-39

17.	DEIR Section IV.B Cultural Resources	Page B-19	Again 1969 expansion of Service Building and 1976 Support Building excluded from HCM	No rationale for their exclusion presented here either. See other information regarding artificial exclusion of resources.
-----	--------------------------------------	-----------	--	--

Response to Comment No. 26-E.2-39

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance determined for Television City. As discussed therein, the HCM nomination identified the 1952 Primary Studio Complex (including alterations through 1963) as eligible for designation. The 1969 Mill Addition, the 1976 Support Building and any other buildings and structures constructed after 1963 were not included in the designation. It is incorrect to say that “no rationale” was presented. The year of 1963 was selected as the end date because that is the year CBS ended its vision of a single unified production facility and moved its filmed programming operations to the CBS Studio Center lot in Studio City. The period of significance also captures the maturation of commercial television in the post–World War II period. Furthermore, in preparing the Historic Report (Appendix C.1 of the Draft EIR), HRG reviewed all of the relevant material for consistency with industry standards and determined that the period of significance was appropriate.

Comment No. 26-E.2-40

18.	DEIR Section IV.B Cultural Resources	Page B-21	The attached Support Building, which was constructed on the west side of the Studio Building in 1976, and the three story, detached East Studio Building constructed in 1993, are not a part of the original Primary Studio Complex and are not included as part of the HCM designation	Simply excluding them because they are not part of the original complex is insufficient rationale. An assessment of their significance must be included and the DEIR recirculated.
-----	--------------------------------------	-----------	---	--

Response to Comment No. 26-E.2-40

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance determined for Television City. As discussed therein, the HCM nomination identified the 1952 Primary Studio Complex (including alterations through 1963) as eligible for designation. The 1969 Mill Addition, the

1976 Support Building and any other buildings and structures constructed after 1963 were not included in the designation.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-41

19.	DEIR Section IV.B Cultural Resources	Page B-22	The Primary Studio Complex is primarily accessed by a distinctive bridge that spans the sunken plaza,	When was this bridge constructed, and is it part of the HCM? Additional information should be included and the DEIR recirculated.
-----	--------------------------------------	-----------	---	---

Response to Comment No. 26-E.2-41

The central concrete entry bridge was included in the original 1952 design of the Primary Studio Complex and, as stated in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), is included as a character-defining feature of the Primary Studio Complex in the HCM designation. The bridge is discussed on page IV.B-22 of the Draft EIR, which states that “the Primary Studio Complex is primarily accessed by a distinctive bridge that spans the sunken plaza, terminating on the concourse at a point between the Studio Building and Service Building. This concrete bridge is supported by tall, angled, steel pipe ‘X’ supports, which extend through the center of the bridge to a flat canopy of corrugated steel decking with a T-shaped plan. The north end of the canopy bears signage reading ‘TELEVISION CITY.’ The bridge has low walls of corrugated steel topped by metal pipe handrails with angled fin stanchions. The north end of the bridge has low corrugated steel planters. Landscaped areas and a small water feature sit below the bridge’s south end where it meets the Primary Studio Complex.” Photographs of the bridge are included in Appendix A of the Historic Report. The Project would preserve all character-defining features of the Primary Studio Complex, including the bridge.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-42

20.	DEIR Section IV.B Cultural	Page B-23	The Project Site contains approximately 30 ancillary	When were these buildings constructed? Additional information
-----	----------------------------	-----------	--	---

	Resources		buildings and structures	is necessary to assess their significance.
--	-----------	--	--------------------------	--

Response to Comment No. 26-E.2-42

The existing ancillary buildings are discussed on page IV.B-23 in Section IV.B, Cultural Resources, of the Draft EIR. As stated therein, the Project Site contains approximately 30 (temporary and permanent) ancillary buildings and structures, in addition to other structures including equipment pads, carports with solar panels, and satellite dishes. The largest ancillary buildings are storage warehouses clustered in the southeast portion of the Project Site. These storage warehouses are one-story rectangular buildings with low pitched gabled roofs and corrugated metal wall cladding. Temporary one-story studio bungalows are located adjacent to the east and south sides of the Primary Studio Complex. Several of the bungalows are attached to each other, creating long, rectangular footprints. Temporary bungalows of a different type are found in a four-building cluster in the southeast portion of the Project Site. The temporary bungalows are one-story modular buildings which were repurposed as production offices. As stated on page IV.B-42 of the Draft EIR, all of these buildings and structures were constructed after the period of significance associated with the Primary Studio Complex, have not been identified as historically significant contributing elements of the property, and are not considered historical resources. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 for additional information regarding the preservation of the Primary Studio Complex.

Comment No. 26-E.2-43

21.	DEIR Section IV.B Cultural Resources	Page B-23	The Primary Studio Complex was formally designated as HCM No. 1167 on June 26, 2018 (CHC-2018-476-HCM). According to the HCM adoption resolution, the HCM is limited to: (1) the original 1952 Service Building; (2) the original 1952 Studio Building; (3) the enclosure of the Service Building's north façade in 1959; and (4) the addition of a small compressor room to that building's east façade.	Actually, this designation was made by Cultural Heritage Commission on May 3, 2018, and was formalized in a letter dated May 22. Limitations are as follows: The CBS Television City proposed Historic-Cultural Monument is limited to the exterior of the original 1952 buildings (the "Studio Building" on the west, and the "Service Building" on the east) and the CBS logo tiles in the main entry lobby and adjacent corridor. No mention is made of the 1959 building, compressor room, or the 1952–1963 period of significance (see Appendix C, pg. 133).
-----	--------------------------------------	-----------	---	---

Response to Comment No. 26-E.2-43

The Cultural Heritage Commission does not designate HCMs; rather, the Cultural Heritage Commission makes recommendations for their designation to the decision-making body, the City Council. As such, the City Council designated the Primary Studio Complex as an HCM on June 26, 2018, as correctly stated in the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR). Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for a detailed discussion of the formal designation of the Primary Studio Complex.

Comment No. 26-E.2-44

22.	DEIR Section IV.B Cultural Resources	Page B-24	Evaluation of Significance	Did the studio's function change after 1963?
-----	--------------------------------------	-----------	----------------------------	--

Response to Comment No. 26-E.2-44

Television City has been a studio since its original construction in 1952. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the period of significance determined for Television City. As discussed therein, the period of significance for Television City was defined as 1952 to 1963, beginning with the year the original Primary Studio Complex was constructed and ending with the year that CBS abandoned its vision of a single unified production facility and moved its filmed programming operations to the CBS Studio Center lot in Studio City.

Comment No. 26-E.2-45

23.	DEIR Section IV.B Cultural Resources	Page B-24	The 1969 and 1976 additions are architecturally compatible with the Primary Studio Complex, but do not reflect functional adherence to Pereira & Luckman's original master plan for the Project Site.	The additions are compatible, but how do they depart from the original master plan?
-----	--------------------------------------	-----------	---	---

Response to Comment No. 26-E.2-45

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the evaluation and designation of the Television City Property. As explained therein, the original master plan for Television City—a seminal design by the

lauded architectural firm of William Pereira and Charles Luckman—represented state-of-the-art thinking regarding television production as it was understood in the early 1950s. Significant to its design was the “intentional divergence from the familiar film studio property type” traditionally conceived as a disparate collection of individual building types and sets arranged on a large walled lot. Instead, Television City was conceived as a single, integrated, and self-contained building complex.

As explained in the 2018 Historic Resource Assessment (attached to the Historic Report in Appendix C.1 of the Draft EIR), the utility of specialized, purpose-built television production facilities had come into question by the late 1950s, as pre-filmed television production overcame the live and taped methods that purpose-built facilities like Television City were optimized for. By 1963, CBS had abandoned its original concept for Television City and became the primary tenant of the former Republic Pictures film studio lot in Studio City, changing its name to CBS Studio Center and moving its filmed production there. Thus, the additions made after 1963 were no longer intended to follow the original master plan for Television City.

Comment No. 26-E.2-46

24.	DEIR Section IV.B Cultural Resources	Page B-24	the East Studio Building is not clearly associated with the historical pattern of development of Television City, and sufficient time has not passed in order to have a scholarly perspective on its potential historical significance	This may be acceptable for a building constructed in 1993, but why is there no scholarly perspective on the potential historical significance of the 1969 and 1976 additions for which sufficient time has passed?
-----	--------------------------------------	-----------	--	--

Response to Comment No. 26-E.2-46

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding why 1963 is the appropriate end date for the period of significance based on extensive research by technical experts and the correct application of evaluation criteria.

Comment No. 26-E.2-47

25.	DEIR Section IV.B Cultural Resources	Page B-42	As part of the rehabilitation of the Primary Studio Complex, the 1976 Support Building located on the west side of the Primary Studio Complex may be demolished. The 1969 Mill Addition on the east side of the Primary Studio	The significance of the 1969 and 1976 additions have not been considered, but these buildings have been summarily excluded as historic resources even though they are within the historical period. Assessment of the significance of these buildings and the impacts of
-----	--------------------------------------	-----------	--	--

			Complex may also be demolished. The Support Building and the Mill Addition were constructed after the period of significance, have not been identified as historically significant contributing elements of the property, and are not considered historical resources. The removal of these buildings would not materially impair the historic significance and integrity of the Primary Studio Complex.	the project to them must be included and the DEIR recirculated.
--	--	--	--	---

Response to Comment No. 26-E.2-47

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance determined for Television City. As discussed therein, the HCM nomination identified the 1952 Primary Studio Complex (including alterations through 1963) as eligible for designation. The 1969 Mill Addition, the 1976 Support Building and any other buildings and structures constructed after 1963 were not included in the designation. Thus, these additions were in fact considered but rejected as character-defining features of the Primary Studio Complex based upon extensive research and the appropriate application of criteria for listing as an historic resource by technical experts. Furthermore, in preparing the Historic Report, HRG reviewed all of the relevant material for consistency with industry standards and determined that the period of significance was appropriate.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-48

26.	DEIR Section IV.B Cultural Resources	Page B-42	The demolition of the portion of the Service Building south of the three-story office portion would remove some original material and alter the building's overall form and volume.	The plan is to demolish over half of this building, which is considered a historic resource. Why is demolition necessary? This is a significant impact that would severely damage the integrity of the Service Building and the HCM. Were alternatives to retain the full building evaluated?
-----	--------------------------------------	-----------	---	---

Response to Comment No. 26-E.2-48

Refer to Response to Comment No. 26-46 for a discussion of how the demolition of the south façade of the Service Building would only minorly affect the integrity of the Service Building and would improve the integrity of the Primary Studio Complex overall. The Draft EIR correctly concluded that the Project would have a less-than-significant impact on the Primary Studio Complex.

The alternatives analysis in Section V, Alternatives, of the Draft EIR included an alternative that did not involve any demolition; refer to the analysis of Alternative 2, Development in Accordance with Existing Zoning Alternative, beginning on page V-32 of the Draft EIR. As discussed on pages V-37 to V-38 of the Draft EIR, like the Project, Alternative 2 would result in less-than-significant impacts with respect to historical resources. Such impacts would be less than the less-than-significant impacts of the Project as no demolition activities would occur. However, the Project benefits relating to the HCM would not be achieved under Alternative 2. Specifically, the Primary Studio Complex would not be rehabilitated, and the currently compromised character-defining features, as well as the visibility and prominence of the Primary Studio Complex from Beverly Boulevard, would not be restored.

Comment No. 26-E.2-49

27.	DEIR Section IV.B Cultural Resources	Page B-42	Despite some loss of integrity by removing the southern portion of the Service Building, on balance, the integrity of the Primary Studio Complex would be improved overall.	This is a specious argument. There is no support for the conclusion. Removal of over half of the buildings appears to be a significant impact. Additional assessment is required and should be included in a recirculated DEIR.
-----	--------------------------------------	-----------	---	---

Response to Comment No. 26-E.2-49

Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the preservation of the Primary Studio Complex. Also, refer to Response to Comment No. 26-46 regarding the analysis of impacts from demolition of the southern portion of the Service Building. As discussed therein, removal of the southern portion of the Service Building would be counterbalanced by the removal of the 1976 Support Building, which would restore the original form and volume of the Studio Building and restore and reveal its original west wall. Because the majority of the original volume of the Studio Building would be restored, the overall form and volume of the original Primary Studio Complex would be improved as compared to existing conditions.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-50

28.	DEIR Section IV.B Cultural Resources	Page B-52	The Primary Studio Complex is significant under National Register Criterion A, California Register Criterion 1, and Los Angeles HCM Criterion 1 for its association with the television industry and its significant role in the economic development of Los Angeles. The Primary Studio Complex is also eligible under National Register Criterion C, California Register Criterion 3 and Los Angeles HCM Criterion 3 as an excellent example of an International Style television broadcasting studio and as a significant work of master architects Pereira & Luckman. It was also found eligible under Los Angeles HCM Criterion 2 for its association with important persons in the television and entertainment industry. The period of significance for the Primary Studio Complex has been defined as 1952-1963.	Why are the 1969 and 1976 buildings excluded as they are also eligible under Criterion A/1/1, Criterion C/3/3 and LA HCM Criterion 2. They weren't designed by Pereira & Luckman, but by one of their associates, who was also a master architect and participated in original construction (see Historic Resources Assessment).
-----	--------------------------------------	-----------	--	--

Response to Comment No. 26-E.2-50

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance determined for Television City. Also refer to Response to Comment No. 26-41 regarding Gin Wong and Associates who designed the non-historic 1976 Support Building and 1992 East Studio Building.

Comment No. 26-E.2-51

29,	DEIR Section IV.B Cultural Resources	Page B-58	Given that the Project would include excavations to a maximum depth of approximately 45 feet below	Appendix F clearly points to the likelihood of finding paleontological resources and calls for a paleontological mitigation plan. Why
-----	--------------------------------------	-----------	--	---

			ground surface, there may be a potential to encounter unknown archaeological resources that could be present at the Project Site.	is it not included as mitigation measure here?
30.	DEIR Section IV.D Geology and Soils	Page IV.D-6	(e) California PRC Section 5097.5	Given that this Project is on private property, why would PRC 5097.5 apply in this case? The section cited indicates that the law only applies to archaeology and paleontology located on public lands.

Response to Comment No. 26-E.2-51

Refer to Response to Comment Nos. 13-7 and 26-42 regarding archaeological resources and revised Mitigation Measure CUL-MM-1.

Public Resources Code Section 5097.5 (b) states: “As used in this section, ‘public lands’ means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.” As the Project Site is under the jurisdiction of the City of Los Angeles, this section is applicable to the Project.

Comment No. 26-E.2-52

31.	DEIR Section IV.L. Tribal Cultural Resources	L. Tribal Cultural Resources	Entire document	The tribal Cultural Resources section of the DEIR suffers from many of the same deficiencies noted for the TCR report.
-----	--	------------------------------	-----------------	--

Response to Comment No. 26-E.2-52

This comment generally references an overall deficiency of Section IV.L, Tribal Cultural Resources, of the Draft EIR but does not specify any specific deficiencies. Specific issues raised by the commenter are addressed in Response to Comment Nos. 26-E.2-53 through 26-E.2-134, below.

Comment No. 26-E.2-53

32.	DEIR Section IV.L. Tribal Cultural Resources	Pages IV.L-1–IV.L-2	Discussion of AB-52	Given that this Project intends to create a Specific Plan, does SB-18 also apply in this case? There is no mention of SB-18 in this document. Has the project complied with SB-18?
-----	--	---------------------	---------------------	--

Response to Comment No. 26-E.2-53

Refer to Response to Comment No. 26-E.2-17 regarding the exemption from SB 18.

Comment No. 26-E.2-54

33.	DEIR Section IV.L. Tribal Cultural Resources	Page IV.L-9	AB 52 Consultation	Given the pandemic, one has to wonder if simply sending letters and receiving no response was sufficient to receive input from tribes. No tribes based on the Sacred Lands File search were contacted by the contractor, although the NAHC recommended doing so.
-----	--	-------------	--------------------	--

Response to Comment No. 26-E.2-54

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the tribal outreach efforts completed for the Project, including notification to individuals on the NAHC contact list returned with the SLF results, and the Project's compliance with PRC Section 21080.3.1, as amended by AB 52, which was fulfilled by sending written notification through the U.S. Post Office via certified mail to tribes on July 21, 2021. An executive order was signed by Governor Newsom on April 22, 2020 that temporarily suspended the requirement for tribes to respond to AB 52 notification letters within the 30 days because of the impacts from COVID-19, which allowed for additional time for responses to be sent. This order had elapsed by the time the notification letters were submitted for the Project, but a period beyond the 30-day minimum had elapsed in which no responses were received, and allowed for a similar measure of extended response time for any on-going difficulties potentially presented by the pandemic. Therefore, no further steps were required to fulfill the tribal consultation requirements under PRC Section 21080.3.1.

Comment No. 26-E.2-55

34.	DEIR Section IV.L. Tribal Cultural Resources	Page IV.L-11	CA-LAN-003045H is documented as a historic site consisting of the Gilmore Adobe, built in 1852	Construction of TVC 2050 will require a large amount of over-excavation and this adobe structure is within 130 feet of the project boundary. How will vibration from construction affect the integrity of the structure?
-----	--	--------------	--	--

Response to Comment No. 26-E.2-55

Refer to Response to Comment No. 26-139 for a discussion of the Gilmore Adobe. As discussed therein, impacts would be less than significant.

Comment No. 26-E.2-56

35.	DEIR Section IV.L. Tribal Cultural Resources	Pages IV.L-12–IV.L-13	Sacred Lands File Review	Much like the technical report, this section does not mention that the normal language in NAHC Sacred Lands File review result letters state that even if no sacred lands are identified in their files for the project area, this does not preclude that there may be one present; this is why the NAHC recommends contacting the tribes on the attached list. Was contact made with those tribes during the process? If not, why?
-----	--	-----------------------	--------------------------	---

Response to Comment No. 26-E.2-56

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the steps taken to contact tribal parties, including notification to tribes who were on the NAHC's contact list returned with the SLF search results. None of the tribes who were sent notification letters responded, and having satisfied the requirements of PRC Section 21080.3.1, no additional outreach by the City was required.

Comment No. 26-E.2-57

36.	DEIR Section IV.L. Tribal Cultural Resources	Page L-7	The largest and best documented ethnographic Tongva village in the region was that of Yanga (also known as Yaangna, Janga, and Yabit), which was in the vicinity of downtown Los Angeles.	This, like much of the historical and prehistoric background, is very limited and out of date. Archaeological research at Guaspet provides much better documentation of Tongva history and archaeology than does Yanga, and it is equidistant from the project area. Furthermore, there is no discussion here of Native American land use of the project area and what types of sites or archaeological resources might be expected. This information should be included in a recirculated DEIR.
-----	--	----------	---	--

Response to Comment No. 26-E.2-57

Refer to Response to Comments Nos. 13-7 and 26-42 regarding the adequacy of the discussion of the historical and prehistory background, including Native American land uses and the types of archaeological resources expected.

Regarding the discussion of Gabrielino or Tongva history and archaeology in Section IV.L, Tribal Cultural Resources, of the Draft EIR, a discussion of Guaspet would add to the background information already presented, which includes the reference to Yaangna (also spelled Yanga and Yangna), but the omission does not make the background information deficient as a means of conveying that significant Gabrielino sites and settlements have been documented in the Los Angeles Basin. While certain sites and settlements were elaborated upon in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and the City of Los Angeles Ethnographic Overview subsection in Section IV.L, Tribal Cultural Resources, of the Draft EIR, Guaspet and many of the other settlements in the region are represented in the map on page 41 in the Tribal Cultural Resources Report. The background information presented in Section IV.L, Tribal Cultural Resources, of the Draft EIR provides a reasonable characterization of the Gabrielino cultural history for the Los Angeles Basin for purposes of analyzing tribal cultural resources under CEQA.

The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional detail on the consideration of Native American land uses and expert opinion confirming that the level of detail included in the Draft EIR was adequate for purposes of characterizing the cultural setting for the Project Site.

Comment No. 26-E.2-58

37.	DEIR Section IV.L. Tribal Cultural Resources	Page L-11	CA-LAN-003045H is documented as a historic site consisting of the Gilmore Adobe, built in 1852	Totally inadequate historical-period discussion of project area. Who actually built this Adobe? Was it part of a Hispanic or Anglo ranch? Who was Gilmore, and when did he arrive in area? Did he actually build the Adobe? What was the Rancho La Brea that was mentioned here? Was it a Spanish Land Grant? What land use was the Adobe associated with? Again, there is no discussion of early historical (post-Native American) land use of the project area or record of ownership.
38.	DEIR Section IV.L. Tribal Cultural Resources	Page L-11	The Gilmore Adobe was in use until 1880.	Additional information should be included regarding the status of this building, its current use, condition, etc.

Response to Comment No. 26-E.2-58

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the discussion of the historical context, including background on Rancho La Brea, the Gilmore Adobe, the role of the Gilmore family, nineteenth and twentieth century land uses, and their

relevance to the analysis of tribal cultural resources. The commenter is responding specifically to the mention of CA-LAN-3045H as part of the CHRIS records search results presented in Section IV.L, Tribal Cultural Resources, of the Draft EIR. Noting that a historic-period site lacking any Native American components was in the CHRIS records search results supports the conclusion that tribal cultural resources are unlikely to occur. Most of these topics are relevant to the discussion of archaeological resources and are addressed as such in the same responses to comment referenced above. The consideration of historical land uses in the assessment of tribal cultural resources was specifically considered in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR), which expands upon the information on existing conditions presented in pages IV.B-16 through IV.B-34, IV.B-57, and IV.B-58 in Section IV.B, Cultural Resources, of the Draft EIR. Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 summarize how these were considered in the Draft EIR.

The Tribal Cultural Resources Report includes at least three other places in which historical land uses are considered in the analysis. Firstly, in the discussion of the Environmental Setting and Current Conditions on pages 11–12, the report notes the development of Television City in 1952 and that its development has been the predominant land use since its creation. Secondly, in the section describing the CHRIS records search results on pages 23–28, the Tribal Cultural Resources Report summarizes the previously recorded resources that contained archaeological evidence of the twentieth century historical land uses. Thirdly, on pages 28–29, the Tribal Cultural Resources Report provides a review of historical maps and aerial photographs. The information in the Preliminary Geotechnical Engineering Investigation provided in Appendix E.1 of the Draft EIR that identified fill soils above native soils was also factored into the final analysis of tribal cultural resources. Based on the information presented in the Tribal Cultural Resources Report, the analysis found sufficient evidence to support the following conclusion:

The history of past disturbance within and in the vicinity of the Project Site, as reflected by the records searches, review of historical topographic maps and aerial photographs, and the subsurface exploratory boring investigations, suggest that subsurface soils are unlikely to support intact TCRs. (page 43)

For purposes of analyzing the potential for impacts to tribal cultural resources, the Tribal Cultural Resources Report includes an adequate level of detail describing the historical context for the Project Site. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, further reinforces the findings of the impact analysis presented in the Draft EIR and Tribal Cultural Resources Report.

Comment No. 26-E.2-59

39.	DEIR Section IV.L. Tribal Cultural Resources	Page L-11	The property was subsequently used as a dairy farm until 1904, when oil drilling and refining procedures began.	No context is presented for the dairy or oil industry in the project area. Can we expect any associated archaeological materials? Sounds like they are likely to be present.
-----	--	-----------	---	--

Response to Comment No. 26-E.2-59

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the discussion of the historical land uses, including operation of the dairy and oil extraction and processing, and the relationship to archaeological resources potentially present. These responses include reference to the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo further summarizes the historical land uses and did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-60

40.	DEIR Section IV.L. Tribal Cultural Resources	Page L-11	According to the map, the Project Site is not situated within close proximity to any mapped village sites	What exactly does “within close proximity mean”? Are there any Native American sites anywhere close or in proximity; that is, beyond 0.5 miles of the project area? Where is the nearest recorded site or group of sites? Sole dependence on the Kirkman-Harriman Historical Map is completely inadequate. There are other resources available. Additional information is required here.
-----	--	-----------	---	--

Response to Comment No. 26-E.2-60

Regarding the reference to village sites not being mapped in “close proximity,” the use was intended in a colloquial sense of a non-specific geographical distance. This was stated in a good-faith effort to describe the visual assessment of multiple maps, which contain subtle variations that are difficult to precisely convey in narrative form. Specifically, the statement is made in the context of the maps cited in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The 1938 Kirkman-Harriman Historical Map was specifically referenced on page IV.L-11 in Section IV.L, Tribal Cultural Resources, of the Draft EIR. However, the discussion of existing conditions draws upon the results of the analysis from the Tribal Cultural Resources Report, which includes the Kirkman-Harriman Historical Map and two additional maps that show the locations of Native American settlements and sites. Including copies of these maps in the report visually conveys that

none of those sites are plotted within the Project Site or in a reasonable distance, hence within close proximity. The meaning of this phrase in the context of the Ethnographic Research and Review of Academic Literature subsection was also meant to convey that the distances from the Project Site to any of these village locations was not close enough to warrant further consideration. As mentioned here, other maps and several other sources were used to inform the tribal cultural resources analysis. Refer to Response to Comment Nos. 13-7 and 26-42 for a summary of the efforts made to obtain substantial evidence used to assess the potential for tribal cultural resources within the Project Site. These responses also provide an explanation for why the available evidence presented in multiple data sources were sufficiently detailed to provide a reasonable characterization of the existing conditions and the types of resources most likely to be encountered.

Regarding the question of sites being located beyond a 0.5-mile radius, as mentioned in the above response, several of the maps note the presence of sites in the region even if they are not all specifically referenced in this section. Refer to Response to Comment No. 13-7 on the mention of the site at the La Brea Tar Pits, and Response to Comment No. 26-E.2-57 on the village of Yaangna, which are both sites located outside a 0.5-mile radius of the Project Site.

Comment No. 26-E.2-61

41.	DEIR Section IV.L. Tribal Cultural Resources	Page L-16	Based on this information, the City, in its discretion and supported by substantial evidence, finds that the Project Site does not contain any known or reasonably foreseeable resources determined by the City to be significant	While a monitoring plan may be appropriate, historical-period archaeological resources are much more likely to be present, and a monitoring plan is not adequate in this circumstance. An archaeological testing plan should be developed for any major ground-disturbance activities to identify historical-period archaeological materials.
-----	--	-----------	---	---

Response to Comment No. 26-E.2-61

Refer to Response to Comment No. 26-42 regarding the assessment of historical archaeological resources discussed in Section IV.B, Cultural Resources, of the Draft EIR, including the infeasibility and lack of necessity for an archaeological testing plan. Also refer to Response to Comment No. 26-44 on how the provisions included in the proposed Mitigation Measure (CUL-MM-1) provide a reasonable and feasible means of avoiding or reducing potentially significant impacts during ground-disturbing activities. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate,

and appropriately treat any archaeological resources identified during ground disturbing activities.

Comment No. 26-E.2-62

42.	Appendix C.1 Historical Resources Technical Report	Section 1.3, Impacts Analysis Assessment; Section 3, Methodol- ogy		The HRG report was focused on built-environment resources, and so does not take into account the potential for intact, buried archaeological deposits. This is not a shortcoming in the HRG report, but it should be noted that the absence of data related to archaeology in the report does not indicate a finding that the project will have no impact on archaeological resources. Section 1.3, Impacts Analysis Assessment, and Section 3, Methodology, only consider built-environment resources. The Archaeological and Tribal Cultural Resources report (Appendix C.2) must make similar Impacts Analysis Assessments regarding potential impacts to buried archaeological deposits. Such an analysis in the Archaeological and Tribal Cultural Resources report should include pertinent data from the archival research (historical photographs, aerial photographs, Sanborn maps) compiled for the HRG report that can assist in the assessment of potential sensitivity for intact archaeological deposits across the project area.
-----	--	--	--	---

Response to Comment No. 26-E.2-62

The analysis presented in Section IV.B, Cultural Resources, of the Draft EIR was informed by the content in the Historic Report (Appendix C.1 of the Draft EIR) but was not the basis for making any assertion that there is an absence of an archaeological resource.

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-15 regarding the efforts made to obtain substantial evidence used to assess the potential for buried archaeological resources within the Project Site, which includes review of historical photographs, aerial imagery, and maps. Additional explanation of how these results further support the analysis presented in the Section IV.B, Cultural Resources, of the Draft EIR are described in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final

EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-63

43.	Appendix C.1 Historical Resources Technical Report	General Comment	Entire Document	<p>Visual-resource analysis and landscape analysis studies are missing. These analyses are needed to identify potential threats to the viewshed (e.g., regarding scenic integrity, visual quality, and viewer sensitivity [i.e., the level of public interest in the existing landscape/streetscape characteristics and concern over potential changes]) and suggest management strategies.</p> <p>A viewshed analysis study would identify character-defining features looking from the project site, evaluate scenic integrity, and document existing visual conditions both to and from the project site. The goal is to minimize the degree of contrast between new construction and surrounding historical resources. It should be noted that while retaining the visual prominence of the north facade of the primary studio complex is discussed (i.e., the view to the building from Beverly Boulevard), there is no consideration of adverse visual effects to this historic-cultural monument and surrounding historic properties from new construction.</p> <p>Furthermore, a landscape analysis study of the adjacent Pan Pacific Park is recommended to determine if it is a historically significant cultural landscape, in terms of its natural systems and features, spatial organization, land use, cultural traditions, cluster arrangement, circulation, vegetation, buildings and structures, views and vistas, small-scale features, archaeological sites, etc. If historically significant and eligible for listing in the NRHP and/or CRHR, then the impacts, visual or otherwise, from project construction must be considered.</p>
-----	--	--------------------	-----------------	---

Response to Comment No. 26-E.2-63

Refer to Sections C, Potential New Construction North of the Primary Studio Complex, D, Analysis of Impacts to the Primary Studio Complex, and E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, which include consideration of impacts associated with new construction within the Project Site.

This comment incorrectly conflates aesthetic and historic impacts. Under CEQA, impacts to aesthetics are based on different criteria and thresholds than those used for historical resources. As set forth in Appendix G of the CEQA Guidelines and in the Initial Study for the Project included as Appendix A of the Draft EIR, aesthetic impacts under CEQA include the consideration of: scenic vistas; scenic resources, including historical resources, within a scenic highway; for urban projects, consistency of the project with applicable regulations regarding scenic quality; and light and glare. Thus, the analysis of aesthetics considers the experiences of people who may view a scenic resource, while the analysis of historic impacts considers whether a project would adversely affect the integrity of an historical resource.

As described in Section 4.I on pages 30-31 in the Initial Study, provided in Appendix A of the Draft EIR, the Project is an employment center project located on an infill site within 0.5 mile of an existing major transit stop pursuant to SB 743 (Public Resources Code Section 21099). As such, as discussed in ZI File No. 2542, “[v]isual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City’s CEQA Threshold Guide shall not be considered an impact,” unless evaluation is required under other land use regulations in the LAMC. An evaluation of aesthetic impacts is not required under the LAMC. As such, no further analysis was required in the Draft EIR for this topic. However, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Additionally, this comment does not demonstrate or provide any evidence that the visibility of new construction would result in a substantial adverse change such that the physical characteristics of any historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, historic listing would be materially impaired. As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, mere visibility of a new building, structure, or feature from various vantage points alone would not result in a significant impact to any of the historical resources located in the vicinity of the Project Site. Furthermore, detailed visual resource analyses are not needed, and the analysis is properly focused on the integrity of historical resources. For a significant impact to occur, the integrity of the historical resource would have to be diminished to the degree that it would no longer be

able to convey its significance.¹¹³ The Draft EIR and Historic Report correctly considered the impact the Project could have on the integrity of the historical resources in the vicinity, including their integrity of *setting*, and concluded that any impacts would be less than significant.

Contrary to the claims of the commenter, a landscape analysis of Pan Pacific Park, including an assessment of its potential historic significance, is not required under CEQA. The park itself, which did not begin to take on its present form until the 1980s, has not been identified as historically significant in any previous study, including SurveyLA. More importantly, Pan Pacific Park is located outside the Project Site and the Project will not include any material alteration to the park.

Comment No. 26-E.2-64

44.	Appendix C.1 Historical Resources Technical Report	Page 24	The massive Rancho La Brea (Rancho). Most of the Salt Lake Oil Field	Historic context information is lacking. What was this? A Spanish Land Grant? What area did it cover, who controlled it, when was it granted? How was it used? What was the oil field and when was it developed and by whom. Who are the Hancocks and Gilmores? When did they arrive in LA and from where? We need a historic context, not this brief summary. There is no discussion of Gilmore Stadium or Gilmore Field, which directly impinge on Project area. This omission is especially disturbing.
-----	--	---------	--	--

Response to Comment No. 26-E.2-64

Relevant information regarding the early history of the Project Site and surrounding areas is included in Sections 5 and 6 of the Historic Report (Appendix C.1 of the Draft EIR) and, by attachment, the 2018 Historic Resource Assessment. Because the existing condition of the Project Site only dates back to 1952, detailed context regarding Spanish Land Grants, previous owners of surrounding properties, Gilmore Stadium and Gilmore Field (both long demolished) is not required in order to examine potential impacts to historical resources.

¹¹³ CEQA Guidelines Section 15064.5(b)(2).

Comment No. 26-E.2-65

45.	Appendix C.1 Historical Resources Technical Report	Page 33	Rationale for the period of Significance finally presented. 1952 to 1963 captures the postwar evolution of CBS as it grew into one of the country's 3 largest television networks and with the construction of Television City as the first large-scale, purpose-built television production facility in Los Angeles. "Extensive research" did not indicate that any of Television City's post-1963 additions contribute to the historical significance of the Primary Studio Complex	This is very weak justification. Where is the extensive research presented? Not in this document.
-----	--	---------	---	---

Response to Comment No. 26-E.2-65

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the clear rationale for the period of significance. Additionally, a copy of the 2018 Historic Resource Assessment is attached to the Historic Report (Appendix C.1 of the Draft EIR).

Comment No. 26-E.2-66

46.	Appendix C.1 Historical Resources Technical Report	Page 34	The 1969 and 1976 additions "are architecturally compatible with the Primary Studio Complex but do not reflect functional adherence" to Pereira & Luckman's original master plan.	Exact restatement of conclusion in Cultural Resources report pg. B-24 (see above) without any additional argument about how these buildings deviate from the original plan. Additional assessment and recirculation of the DEIR is required.
-----	--	---------	---	--

Response to Comment No. 26-E.2-66

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance. Also refer to Response to Comment No. 26-E.2-45 for a discussion of how the post-1963 additions were not intended to align with the original master plan for Television City.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section

15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-67

47.	Appendix C.1 Historical Resources Technical Report	Figure 4	Primary Studio Complex Existing Condition	Very difficult to read. Figure should be revised.
-----	--	----------	--	---

Response to Comment No. 26-E.2-67

This graphic is legible. The comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.2-68

48.	Appendix C.1 Historical Resources Technical Report	Figure 6	Removal of Portions of the Primary Studio Complex	Over half of the Service Building, which is part of the HCM (see also pgs. 58 and 64) is being removed. This is a significant impact that would severely damage the integrity of the Service Building and the HCM.
-----	--	----------	--	--

Response to Comment No. 26-E.2-68

Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-46 regarding the analysis of impacts from demolition of the southern portion of the Service Building. As discussed therein and demonstrated by the analysis within Section IV.B, Cultural Resources, of the Draft EIR, impacts to the Primary Studio Complex would be less than significant and the overall form and volume of the original Primary Studio Complex would be improved as compared to existing conditions with implementation of the Project.

Comment No. 26-E.2-69

49.	Appendix C.1 Historical Resources Technical Report	Figure 7	Primary Studio Complex Roof Retention, etc.	Is there an area of restoration in this figure, as indicated in key?
-----	--	----------	--	--

Response to Comment No. 26-E.2-69

No areas of restoration are shown in Figure 7 on page 61 of the Historic Report (Appendix C.1 of the Draft EIR). However, these areas are shown in Figure 8 and Figure 9 on pages 62 and 63 of the Historic Report, which share the same map key.

Comment No. 26-E.2-70

50.	Appendix C.1 Historical Resources Technical Report	Page 65	Primary Studio Complex Rooftop Addition	This is another major impact to HCM that could severely damage its integrity. Additional assessment and recirculation of the DEIR is required.
-----	--	---------	--	--

Response to Comment No. 26-E.2-70

As analyzed in Section 9.6 of the Historic Report (Appendix C.1 of the Draft EIR), a rooftop addition that conforms to Project Design Feature CUL-PDF-1 would still maintain the integrity of the Primary Studio Complex.

As discussed in Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-10, the potential impacts from any rooftop addition were thoroughly analyzed in the Draft EIR (see page IV.B-50 in Section IV.B, Cultural Resources, of the Draft EIR) and Historic Report (see Appendix C.1 of the Draft EIR, pages 65–68), and the Draft EIR correctly concluded that with Project Design Feature CUL-PDF-1, any rooftop addition would not materially alter in an adverse manner the physical characteristics that convey the historic significance of the Primary Studio Complex. As such, impacts associated with any rooftop addition were clearly demonstrated in the Draft EIR to be less than significant.

Comment No. 26-E.2-71

51.	Appendix C.1 Historical Resources Technical Report	Figure 10	Additions and Service Building Replacement Volume	This rooftop addition is much larger and more massive than the earlier ones it will replace. It impacts the facade much more than suggested in text. The other additions are also covering up all the walls that will supposedly be rehabilitated.
-----	--	-----------	--	--

Response to Comment No. 26-E.2-71

As discussed in Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-10, the

potential impacts from any rooftop addition were thoroughly analyzed in the Draft EIR (see page IV.B-50 in Section IV.B, Cultural Resources, of the Draft EIR) and Historic Report (see Appendix C.1 of the Draft EIR, pages 65–68), and the Draft EIR correctly concluded that impacts associated with any rooftop addition would be less than significant.

The analysis of the rooftop addition is not predicated on existing additions. The existing rooftop additions, many of which date after the period of significance for the Primary Studio Complex, are not relevant to the analysis of potential impacts from the proposed rooftop addition, and their location, scale, and massing do not represent any framework, standard, or building envelope for potential future additions. Any rooftop addition proposed by the Project is correctly analyzed independently for its potential physical alteration of the Primary Studio Complex as defined by CEQA. Contrary to the assertion of the commenter, the primary façade of the Primary Studio Complex would be fully restored by the Project.

Reference to the “other additions... covering up all the walls that will supposedly be rehabilitated” is unclear, but the East Building and West Building analyzed as part of the Conceptual Site Plan on pages IV.B-52 to IV.B-53 in Section IV.B, Cultural Resources, of the Draft EIR and the Historic Report (Appendix C.1 of the Draft EIR, pages 71–73) would be constructed as distinct and separate volumes that will not “cover up” the east and west walls of the Primary Studio Complex. Contrary to the assertion of the commenter, the west wall of the Studio Building and the northern portion of the Service Building’s east wall would be rehabilitated and made fully visible by the Project.

Comment No. 26-E.2-72

52.	Appendix C.1 Historical Resources Technical Report	Figure 11	New Construction Adjacent to Primary Studio Complex (For illustrative purposes only)	This is very deceptive. What are “illustrative purposes”? It is actually what a full build out of proposed construction would be like (cf. Fig. II-5 in Project Description). It is massive and completely overwhelms the original complex. This will seriously compromise the integrity of the HCM.
-----	--	-----------	--	--

Response to Comment No. 26-E.2-72

Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-6 regarding the Draft EIR’s analysis of impacts to the Primary Studio Complex from buildout of the Project and adjacent new construction.

As discussed in Response to Comment No. 19-3, the historic analysis in the Draft EIR was based on the Conceptual Site Plan (Figure II-4 on page II-14 of the Draft EIR). Future changes in and around the HCM and Viewshed Restoration Area that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, including review by OHR and the Department of City Planning, as well as potential CEQA compliance review. The Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website for informational purposes prior to the release of this Final EIR. Please note that this draft is not final and has not been approved by City decision-makers. In addition, as discussed in Response to Comment No. 5-13 above, Figure 11, New Construction Adjacent to Primary Studio Complex, on page 73 of the Historic Report (Appendix C.1 of the Draft EIR) is an illustrative massing diagram of the Conceptual Site Plan. The Conceptual Site Plan complies with the height zone limitations shown in Figure II-5, Height Zone Map, in Section II, Project Description, of the Draft EIR.

Further, as discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, any site plan or massing diagram included in an EIR or other CEQA document is inherently conceptual and is provided for illustrative purposes, as plans are finalized during the building permit process, which occurs after a project is approved and its EIR certified.

The assertion by the commenter that adjacent new construction as illustrated in the conceptual plan is "massive" and "completely overwhelms" the Primary Studio Complex is the opinion of the commenter, which is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project. No additional analysis or evidence is provided to support the claim that adjacent construction will compromise the integrity of the Primary Studio Complex such that its eligibility for historic listing is threatened as required by CEQA.

Comment No. 26-E.2-73

53.	Appendix C.1 Historical Resources Technical Report	Figure 12	Conceptual Site Plan	This does not look anything like Fig. 11 or what is suggested in Fig. II-5 of Project Description.
-----	--	-----------	----------------------	--

Response to Comment No. 26-E.2-73

As discussed in Response to Comment No. 26-E.2-72, Figure 11, New Construction Adjacent to Primary Studio Complex, on page 73 of the Historic Report (Appendix C.1 of the Draft EIR) is an illustrative massing diagram of the Conceptual Site Plan (Figure 12 of

the Historic Report). The Conceptual Site Plan complies with the height zone limitations shown in Figure II-5, Height Zone Map, in Section II, Project Description, of the Draft EIR.

Please note that the Historic Report inadvertently included an earlier version of the Conceptual Site Plan (the correct version is included in Figure II-4, Conceptual Site Plan, on page II-14 in Section II, Project Description, of the Draft EIR). The only difference between the two versions is that the flex stage to the northeast of the Service Building is removed in Figure II-4 in the Project Description. However, this does not change any of the analysis or impact conclusions in the Draft EIR.

Comment No. 26-E.2-74

54.	Appendix C.1 Historical Resources Technical Report	Page 81	The Primary Studio Complex would retain its original location, concrete and steel construction, the majority of its original plan and massing and all of its character-defining features after implementation of the proposed Project.	Fails to acknowledge that full build-out would overwhelm and obscure most of the Primary Studio Complex and would likely impact the View Restoration area. This is a significant impact.
-----	--	---------	--	--

Response to Comment No. 26-E.2-74

The commenter asserts that the Project has the potential to “overwhelm” or “obscure” the Primary Studio Complex but does not demonstrate how the Project will result in demolition or material alteration of the physical characteristics of the Primary Studio Complex that justify its eligibility for listing in the California Register and designation as an HCM as defined in CEQA Guidelines Section 15064.5(b). Refer to Sections C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, as well as Response to Comment No. 26-E.2-6 regarding the Draft EIR’s comprehensive analysis of impacts to the Primary Studio Complex from buildout of the Project and new adjacent construction.

Comment No. 26-E.2-75

55.	Appendix C.1 Historical Resources Technical Report	Page 86	The Project would also include the construction of two buildings adjacent to the Primary Studio Complex to the east and west. Both buildings would have potential heights of up to 225 feet above Project Grade. Both the East Building and West	This is part of the full build-out illustrated in Figure 11. 10 feet as separation between the Studio and a 225-foot-high building is insufficient. The new construction would clearly overwhelm and obscure the HCM and seriously compromise its integrity.
-----	--	---------	--	--

			Building would also be constructed as distinct volumes, physically separated from the Primary Studio Complex by a minimum of 15 feet on the east and 10 feet on the west.	
--	--	--	---	--

Response to Comment No. 26-E.2-75

The commenter asserts that the Project has the potential to “overwhelm” or “obscure” the Primary Studio Complex but does not demonstrate how the Project will result in demolition or material alternation of the physical characteristics of the Primary Studio Complex that justify its eligibility for listing in the California Register and designation as an HCM as defined in CEQA Guidelines Section 15064.5(b). Refer to Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-6 regarding the Draft EIR’s comprehensive analysis of impacts to the Primary Studio Complex from buildout of the Project and new adjacent construction. The analysis accounted for the 10-foot separation cited in this comment.

Comment No. 26-E.2-76

56.	Appendix C.1 Historical Resources Technical Report	PDF pages 120–125	Construction Plans	Not clear what these actually illustrate. Further explanation is needed.
-----	--	----------------------	--------------------	--

Response to Comment No. 26-E.2-76

As discussed in Section D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources, the Draft EIR analyzed the proposed development program described in Section II, Project Description, of the Draft EIR (refer to Table II-2, Proposed Development Program, on page II-13 and Figure II-4, Conceptual Site Plan, on page II-14 of the Draft EIR). As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, Figure II-4, Conceptual Site Plan, of the Draft EIR is based on the architectural plans included as Appendix B in the Historic Report (Appendix C.1 of the Draft EIR), as stated in this comment. These plans are part of the administrative record and have been publicly available on the Department of City Planning’s website, as evidenced by this comment.

Comment No. 26-E.2-77

57.	Appendix C.1 Historical	CHC-2018- 476-HCM,	Viewshed; It is expressly understood that in order to	HCM designation based almost entirely on narrow 430-foot-long
-----	----------------------------	-----------------------	---	---

	Resources Technical Report,	May 22, Page 2 and 3; Appendix C, Pages 134–135	achieve meaningful views, any future development within this Future Viewshed Restoration Area should not reduce views of the enumerated Exterior Viewshed Features to mere slivers or glimpses.	viewshed of Primary Studio Complex as seen from Beverly Blvd. Even with this narrow viewshed, overall integrity of the complex could be seriously compromised by the Project.
--	-----------------------------	---	---	---

Response to Comment No. 26-E.2-77

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, which includes a discussion of the regulations and procedures for new construction in the Viewshed Restoration Area that will preserve and restore the historic viewshed along Beverly Boulevard.

The characterization of the 430-foot-wide viewshed corridor as “narrow” is merely the opinion of the commenter and is not supported by facts or analysis, nor is it demonstrated how this presumed narrowness will result in substantial adverse change to the Primary Studio Complex as required by CEQA. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.2-78

58.	Appendix C.1 Historical Resources Technical Report,	CHC-2018-476-HCM, May 22	it is assumed that such buildings would not exceed two-thirds the height of the existing Primary Studio Complex, and that one-story buildings would be acceptable throughout the Future Viewshed Restoration Area. Notwithstanding the foregoing, this requirement does not absolutely prohibit structures that are higher than the two thirds limit, so long as such structures do not interfere with the mandated view corridors.	The viewshed and view corridors described are inadequate to reduce the significant impacts of the Project's multistory towers.
-----	---	--------------------------	---	--

Response to Comment No. 26-E.2-78

Refer to Section C, Potential New Construction North of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, which includes a discussion of

the regulations and procedures for new construction in the Viewshed Restoration Area that will preserve and restore the historic viewshed along Beverly Boulevard.

Comment No. 26-E.2-79

59.	Appendix C.1 Historical Resources Technical Report	Page 5; Appendix C, Page 137	CEQA Findings Purpose of the HCM designation is to prevent significant impacts	The Project is inconsistent with the HCM designation, as the proposed full build-out would result in significant impacts.
-----	--	------------------------------------	---	--

Response to Comment No. 26-E.2-79

This comment incorrectly claims that the Project is inconsistent with the HCM designation. Rather, as discussed in Section IV.B, Cultural Resources, of the Draft EIR and Topical Response No. 5, Historical Resources, the Project would fully comply with the HCM designation. Refer specifically to Sections B, Historic Structure Report and the Future Preservation of the Primary Studio Complex, C, Potential New Construction North of the Primary Studio Complex, and D, Analysis of Impacts to the Primary Studio Complex, of the topical response. As discussed in the topical response and demonstrated by the analysis in the Draft EIR, buildout of the Conceptual Site Plan would not result in any significant impacts to historical resources.

Comment No. 26-E.2-80

60.	Appendix C.1 Historical Resources Technical Report,	CHC-2018- 476-HCM, May 3, Page 2; Appendix C, Page 141	Since construction in 1952, the TV building has been the site of filming many important shows including the Smothers Brothers Comedy Hour and All in the Family	These shows had an important impact on culture and politics and continued well into the 1970s, long after the “period of significance” ended. As noted herein, the period of significance is artificially limited, and the technical report should be revised to include this period.
-----	---	--	--	--

Response to Comment No. 26-E.2-80

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for a detailed discussion regarding the period of significance.

Comment No. 26-E.2-81

61.	Appendix C.1 Historical Resources	Pages 188– 189	several programs produced at CBS Television City played significant roles in changing	The Historic Commission Nomination Form, March 1, Statement of Significance, clearly indicates that
-----	---	-------------------	---	---

	Technical Report		the social and political character of the nation. These include the Smothers Brothers Comedy Hour (1967-1970), which pushed the boundaries of political speech during the Vietnam War, and producer Norman Lear's [sic] All in the Family (1971–1979), which injected controversial social issues into the mass media and mass culture... Situation comedies have always been popular productions, from the first broadcast from Television City in 1952 through the 1970s sit-coms produced in front of a live studio audience	the period of significance should extend through the 1970s.
--	------------------	--	---	---

Response to Comment No. 26-E.2-81

The discussion of ongoing television production into the late 20th century was not specifically expressed as a period of significance in the HCM application. This discussion was, however, considered as part of the designation process, and construction dating after 1963 was ultimately not included in the HCM designation. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the period of significance.

Comment No. 26-E.2-82

62.	Appendix C.1 Historical Resources Technical Report	Page 191	Gin Wong (1922-2017) was the original project coordinator on CBS Television City. Also considered a master architect, he was honored in the 2012 exhibit "Breaking Ground: Chinese American Architects in Los Angeles" at the Chinese American Museum in Los Angeles	Wong designed the 1969 and 1976 additions. The technical report should be revised to include a discussion of Gin Wong and his connection to the Project Site. Removal of these buildings is a significant impact.
-----	--	----------	--	---

Response to Comment No. 26-E.2-82

Gin Wong was discussed on pages IV.B-18 to IV.B-19 in Section IV.B, Cultural Resources, of the Draft EIR and page 27 of the Historic Report (Appendix C.1 of the Draft EIR). As stated therein, Television City was originally developed in 1952 in accordance with a master plan, conceptualized as 2.5 million square feet of total development designed

by the local architectural team of William Pereira and Charles Luckman. In a supporting role, Gin Wong, who would go on to become an important architect in his own right, was the project coordinator for Television City. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources. As discussed therein, Gin Wong's contribution to the design and construction of Television City are acknowledged in the 2018 Historic Resource Assessment (included as Appendix D of the Historic Report) and the HCM designation (included as Appendix C of the Historic Report).

As discussed in Section IV.B, Cultural Resources, of the Draft EIR, the 1969 eastern expansion of the Service Building (referred to as the Mill Addition) and the attached Support Building, which was constructed on the west side of the Studio Building in 1976, were added to the Primary Studio Complex after 1963 and are not part of the HCM. The adopted HCM designation limited the HCM to the original 1952 Primary Studio Complex, which consists of the Studio Building on the west and the Service Building on the east. As stated in the HCM Findings, "[t]he CBS Television City proposed Historic-Cultural Monument is limited to the exterior of the original 1952 buildings (the 'Studio Building' on the west, and the 'Service Building' on the east) and the CBS logo tiles in the main entry lobby and adjacent corridor." The HCM Findings are included in Appendix C of the Historic Report. Thus, the Draft EIR and Historic Report correctly concluded that the demolition of the non-historic 1969 Mill Addition and the 1976 Support Building would not materially impair the historic significance and integrity of the Primary Studio Complex.

Comment No. 26-E.2-83

63.	Appendix C.1 Historical Resources Technical Report	Letter from Gibson Dunn Page 2	The attached report, prepared for CBS by Architectural Resources Group in 2018, is where the 1952–1963 period of significance is first introduced. Terminal date is based on CBS' "abandoned its vision of a single unified television production facility and moved its filmed productions to the CBS Studio Center Lot in Studio City,"	It is important to recognize that this period of significance is not included in the final HCM designation and TV City continued to produce many important and popular "live" programs such as the above-mentioned Smothers Brothers and All in the Family at least through the 1970s (see pg. 36 [Appendix C, pg. 303]).
-----	--	---	---	---

Response to Comment No. 26-E.2-83

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, for a detailed discussion regarding the period of significance that concluded in 1963.

Comment No. 26-E.2-84

64.	Appendix C.1 Historical Resources Technical Report	Pages 6–7; Appendix C, Page 273– 274	“CBS Television City occupies three parcels totaling approximately 25 acres and comprises four main buildings: a complex of three attached studio, service, and support buildings constructed between 1952 and 1976”	Establishes these three buildings as a single unified complex, although subsequently excludes Support building from “Primary Studio Complex.”
-----	--	---	--	---

Response to Comment No. 26-E.2-84

The reference to three attached buildings describes the existing condition. The reference to the “Primary Studio Complex” describes only those portions of the existing building that are historically significant and are included in the HCM designation, which excludes the 1963 Mill Addition and the 1976 Service Building. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the adopted HCM designation and the period of significance. The Primary Studio Complex includes two adjoining buildings constructed in 1952 (the Service Building on the east and the Studio Building on the west), the 1959 enclosure of the Service Building’s north façade, and a small compressor room addition to the Service Building’s east façade.

Comment No. 26-E.2-85

65.	Appendix C.1 Historical Resources Technical Report	Page 14; Appendix C, Page 281	1950 CBS purchases a 15 acre parcel at the southeast corner of Beverly Boulevard and Fairfax Avenue containing Gilmore Stadium from Earl Gilmore’s daughters Elizabeth Hilty and Frances L. Hiler. It also takes an option on a six acre parcel east of Genesee Avenue containing Gilmore Field.	TV City built on Gilmore Stadium and Field, but the history or construction of these important features are not addressed in any of these analyses. This is a significant omission. The technical report should be revised to correct this omission.
-----	--	-------------------------------------	--	--

Response to Comment No. 26-E.2-85

Refer to Response to Comment No. 26-E.2-64. Relevant information regarding the early history of the Project Site and surrounding areas is included in Sections 5 and 6 of the Historic Report (Appendix C.1 of the Draft EIR) and, by attachment, the 2018 Historic Resource Assessment.

Comment No. 26-E.2-86

66.	Appendix C.1 Historical Resources Technical Report	Page 16; Appendix C, Page 283	1976 Support Building addition constructed at west elevation of Studio Building (LADBS LA19446, 1/9/76; LA23283, 3/10/76).10 Architect: Emmanuel I. Aguilera of Gin Wong Associates.	Gin Wong Associates are the architects of the Support Building. The technical report should be revised to include a discussion of Gin Wong and his connection to the Project Site. Removal of this building is a significant impact.
-----	--	-------------------------------------	--	--

Response to Comment No. 26-E.2-86

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-82 regarding the period of significance and Gin Wong's contributions to Television City. As discussed therein, removal of the 1976 Support Building is not a significant impact under CEQA.

Comment No. 26-E.2-87

67.	Appendix C.1 Historical Resources Technical Report	Page 53; Appendix C, Page 320	The 1969 and 1976 expansions: "their simple rectangular massing and cladding of unornamented concrete and corrugated metal matched the rest of the complex; was faithful to the appearance of the existing complex. The Support Building retained the massing, cladding, and perimeter concourses characterizing the Studio Building	The 1969 additions continued the function of the original studio in filming important live TV shows. They were designed by master architects (one affiliated with the original construction) and were compatible with the original construction. So, why are they excluded from the "period of significance" and the HCM designation?
-----	--	-------------------------------------	--	---

Response to Comment No. 26-E.2-87

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 19-12 regarding the period of significance and non-historic post-1963 additions. As discussed therein, the period of significance was defined by the adopted HCM designation. Also refer to Response to Comment No. 26-E.2-4 for a discussion of why continued use does not equate to a continued period of significance.

Refer to Response to Comment No. 26-E.2-82 for a discussion of why the relevant additions are not representative of the architectural achievements Gin Wong is well known for, and removal of these buildings is not a significant impact.

Comment No. 26-E.2-88

68.	Appendix C.1 Historical Resources Technical Report	Page 60; Appendix C, Page 327	Extensive research did not indicate that any of Television City's post 1963 additions contribute to its historical significance. These include the 1969 eastern expansion of the Service Building, the 1976 addition of the Support Building west of the Studio Building... The 1969 and 1976 additions are architecturally compatible with the 1952 buildings but do not reflect functional adherence to Pereira & Luckman's original master plan for the site	The above comments suggest otherwise. This report should have included more research on how the studio was used in the late 1960s and 1970s rather than only on its architectural elements (which they admit are compatible).
-----	--	-------------------------------------	---	---

Response to Comment No. 26-E.2-88

Construction dating after 1963 was not included in the HCM designation. Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding the existing evaluation and designation of the Primary Studio Complex. Additionally, a copy of the 2018 Historic Resource Assessment is attached to the Historic Report (Appendix C.1 of the Draft EIR). The historical and architectural significance of Television City were considered in the evaluation of eligibility as a historical resource.

Comment No. 26-E.2-89

69.	Appendix C.1 Historical Resources Technical Report	Page 63; Appendix C, Page 330	The subject property is also an important work of master architect Gin Wong, who worked for Pereira & Luckman and served as project coordinator for the initial phase of the property's master plan. Wong was made partner at William Pereira and Associates after Pereira dissolved his partnership with Luckman, eventually becoming president of the firm.	The 1976 expansion was designed by a master architect involved in the original construction of the HCM. The technical report should be revised to include a discussion of Gin Wong and his connection to the Project Site.
-----	--	-------------------------------------	---	--

Response to Comment No. 26-E.2-89

Refer to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, and Response to Comment No. 26-E.2-82 regarding the period of significance and Gin Wong's contributions to Television City.

Comment No. 26-E.2-90

70.	Appendix C.1 Historical Resources Technical Report	Pages 63– 64; Appen- dix C, Pages 330–331	Although the subject property has already been substantially excavated and graded as part of its development, it may contain intact subsurface deposits relating to historic occupations including Gilmore Field, Gilmore Stadium, the Gilmore Adobe of Rancho La Brea, and smaller properties like the drive in and gas station known to have been present prior to 1952. ¹⁴⁵ The area is also known to have a high occurrence of subsurface paleontological deposits, ¹⁴⁶ which are sometimes accompanied by archaeological deposits containing evidence of prehistoric human activity. Because a comprehensive archaeological assessment was not included in the scope of this report, the property's potential to yield information important in prehistory or history is currently unknown.	No comprehensive archaeological or paleontological assessment was completed. This is a significant omission. The assessments must be included in the DEIR and the DEIR recirculated.
-----	--	--	--	--

Response to Comment No. 26-E.2-90

This comment refers to the omission of an archaeological analysis in the Historic Report (Appendix C.1 of the Draft EIR), but this study is not intended to provide an authoritative review of these resources and is not presented as the definitive source for either, although it does assist the analysis to characterize aspects of the historical setting relevant to the assessment of archaeological resources. Refer to Response to Comment Nos. 13-7 and 26-42 regarding the efforts made to obtain substantial evidence used to assess the potential for buried archaeological resources within the Project Site.

Refer to Response to Comment No. 13-7 regarding the Draft EIR's comprehensive analysis of the Project's potential impacts to paleontological resources.

The Draft EIR contained a comprehensive evaluation of paleontological resources that may be present at the Project Site. As discussed in Response to Comment No. 35-90, this evaluation was based on a records search from the Natural History Museum of Los Angeles and the Paleontological Resources Review Memorandum prepared by Dudek (included as Appendix F of the Draft EIR). Refer to Response to Comment No. 35-90 for additional discussion of the Draft EIR's analysis of paleontological resources.

This comment does not provide substantial evidence that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.2-91

71.	Appendix C.2 Tribal Cultural Resources Report	Page 15; Appendix C, Page 418	The appearance of mortars and pestles is difficult to place in time because most mortars are on bedrock surfaces. Some argue that the Ethnohistoric intensive acorn economy extends as far back as AD 500 (Bean and Shipek 1978). However, there is no substantial evidence that reliance on acorns, and the accompanying use of mortars and pestles, occurred before AD 1400. Millingstones and handstones persisted in higher frequencies than mortars and pestles until the last 500 years (Basgall and Hall 1990);	Statements are not supported and appear inaccurate. One hallmark of the Intermediate period is the introduction of the mortar and pestle. Additionally, the Basgall and Hall report referenced is regarding a Mojave Desert site. What is the relevance of information for a Mojave Desert site?
-----	--	-------------------------------------	--	--

Response to Comment No. 26-E.2-91

Refer to Response to Comment No. 26-E.2-12 regarding the discussion of mortar and pestle and its relevance to the discussion of existing conditions.

Refer to Response Comment No. 26-42 regarding the discussion of regional context for Southern California. The Tribal Cultural Resources Report draws on broader regional patterns that are documented through review and some of these expand the discussion to the Mojave Desert, which is only indirectly relevant to this discussion of existing conditions

that is otherwise supported by the broader summary of Native American history and ethnography that provide an adequate means of characterizing the existing conditions. Response Comment Nos. 26-42 and 26-E.2-12 include references to the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which provides additional discussion and expert opinion regarding the chronological typologies used to describe the cultural setting and the topic related to the introduction of the mortar and pestle in the Native American archaeological record.

Comment No. 26-E.2-92

72.	Appendix C.2 Tribal Cultural Resources Report	Page 19; Appendix C, Page 422	Inhumation of deceased Tongva was the more common method of burial on the Channel Islands while neighboring mainland coast people performed cremation (Harrington 1942; McCawley 1996)	Inhumation much more common, especially on mainland coast, as documented at a Guaspet, LAN-47, the ARCO site, and other sites. Cremation may have been more common in Intermediate and earlier periods, but inhumation also common in those times. Mourning ceremony continued into Mission period.
-----	---	-------------------------------	--	---

Response to Comment No. 26-E.2-92

Refer to Response to Comment No. 26-E.2-12 regarding the topic of Gabrielino burial practices and the discussion of existing conditions. This topic involves matters of scholarly research and is one of many details within the larger discussion of the cultural setting and the body of evidence used to characterize the existing conditions of the Project Site. Response to Comment No. 26-E.2-12 includes a reference to the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which provides additional discussion and expert opinion regarding Gabrielino burial practices. After having further considered the information presented in the Tribal Cultural Resources Report and the Draft EIR, the Supplemental Cultural Memo did not identify any new or substantially more significant impacts than what were disclosed in the Section IV.L, Tribal Cultural Resources, of the Draft EIR and in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Comment No. 26-E.2-93

73.	Appendix C.2 Tribal Cultural Resources Report C	III	This report was prepared to assist in the identification and documentation of potential impacts to Tribal Cultural Resources	Does not address non-tribal resources. This is a significant omission. The assessments must be included in the DEIR and the DEIR recirculated.
-----	---	-----	--	--

Response to Comment No. 26-E.2-93

Refer to Response to Comment Nos. 13-7, 26-42, 26-44, and 26-E.2-11 regarding the efforts made to obtain substantial evidence used to analyze the potential for impacts to archaeological resources within the Project Site, including but not limited to non-tribal archaeological resources. The information presented in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) is one information source among many that were considered. Additional explanation of how these results further support the analysis presented in the Section IV.B, Cultural Resources, of the Draft EIR are described in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-94

74.	Appendix C.2 Tribal Cultural Resources Report C	III	tribal consultation completed by the City pursuant to California Assembly Bill (AB) 52	SB-18 also applies. Is project in compliance with SB-18?
-----	---	-----	--	--

Response to Comment No. 26-E.2-94

Refer to Response to Comment No. 26-E.2-17 regarding the explanation of why SB 18 does not apply.

Comment No. 26-E.2-95

75.	Appendix C.2 Tribal Cultural Resources Report	2	However, the Project Applicant is seeking a Development Agreement with a term of 20 years	As noted herein, more resources may become eligible during this time. Further evaluation must be required through an appropriate mitigation measure.
-----	---	---	---	--

Response to Comment No. 26-E.2-95

The buildout year does not change the findings of the analysis of tribal cultural resources. As discussed on page IV.L-17 of Section IV.L, Tribal Cultural Resources, of the Draft EIR, in the event of an extended buildout, any development on the Project Site would be subject to the City's standard Condition of Approval for the inadvertent discovery of tribal cultural resources. Thus, impacts would be less than significant, and no mitigation is required.

Comment No. 26-E.2-96

76.	Appendix C.2 Tribal Cultural Resources Report C	13–14	4.1.1 Paleoindian Period	<p>Because there was no pedestrian survey completed of the project area and Los Angeles is mostly paved, the records-search area of ½-mile radius needs to be increased to 10 miles to capture relevant cultural sites. Sites in the LA Basin such as LAN-64, LAN-138, LAN-159, LAN 171, LAN-172, and the Clovis site in Malibu recorded by E. Gary Stickel approximately 10 years ago need to be addressed.</p> <p>Section as a whole is focused on the San Dieguito culture. Why is the San Diego area discussed? What's the relevance? The TCR must be revised to include discussion of LA Basin.</p>
-----	--	-------	--------------------------	--

Response to Comment No. 26-E.2-96

Refer to Response to Comment No. 26-42 regarding the records search radius and discussion of the regional context, including sites from the San Diego area.

Regarding the discussion of the Paleoindian Period presented in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, this section and those that follow it are intended to provide a reasonable overview of Native American history across different time periods for the region at large and the Project Site. This is accomplished without the addition of a detailed discussion of the six sites referenced in the comment (which are between approximately 3.6 and 25 miles from the Project Site), or an exhaustive search of all Native American archaeological sites within a 10-mile radius or within the entire Los Angeles Basin and surrounding geographies like Malibu. Refer to Response to Comment Nos. 13-7 and 26-42 regarding the data sources used to characterize the potential for buried sites on a more detailed scale, for example CA-LAN-3045H and CA-LAN-159, and the approach taken in the discussion of the regional context. Additional information on the sites referenced in the comment or others in the region would only serve to further reinforce the conclusions already reached based upon the existing source material and would be unlikely to identify any new or substantially more significant impacts than what were disclosed in the Draft EIR, the Tribal Cultural Resources Report, Historic Report, Preliminary Geotechnical Engineering Investigation, and Phase I Environmental Site Assessment. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional discussion and expert opinion regarding the information obtained in the CHRIS records search results, standard units used to conduct the CHRIS records

search, and why this information adequately characterized the existing conditions of the Project Site.

Comment No. 26-E.2-97

77.	Appendix C.2 Tribal Cultural Resources Report C	14	4.1.2 Archaic Period	Chronology covers 8,500 years and is outdated. Section again is focused on San Diego area. Why? Information relevant to the project area needs to be included in the TCR and the DEIR recirculated.
-----	--	----	----------------------	---

Response to Comment No. 26-E.2-97

Refer to Response to Comment No. 26-42 regarding the approach taken in the discussion of the regional context, including consideration of sites in the San Diego area.

Refer to Response to Comments Nos. 13-7 and 26-42 regarding the entire body of evidence considered in the assessment of tribal cultural resources, broader discussions of the historical context and specific analysis of the Project Site. Also refer to the summary of these topics in Response to Comment No. 26-E.2-96.

Comment No. 26-E.2-98

78.	Appendix C.2 Tribal Cultural Resources Report C	15	4.1.3 Late Prehistoric Period	Section does not cite any site reports from this time period. Information must be included and assessed.
-----	--	----	-------------------------------	--

Response to Comment No. 26-E.2-98

Refer to Response to Comment No. 26-42 regarding the approach taken in the discussion of the regional chronologies and Response to Comment No. 26-E.2-96 addressing how this is also applied to discussion of specific periods referenced in the analysis. Additional information on the Late Prehistoric Period would only serve to further reinforce the conclusions already reached based upon the existing source material and would be unlikely to identify any new or substantially more significant impacts than what were disclosed in the Section IV.L, Tribal Cultural Resources, of the Draft EIR and the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Comment No. 26-E.2-99

79.	Appendix C.2 Tribal Cultural	15	4.2 Ethnographic Overview	Section is outdated and does not cite Playa Vista, which is relevant to an
-----	---------------------------------	----	---------------------------	--

	Resources Report C			understanding of ethnography in the LA area. The TCR must be revised to include a comprehensive analysis of the ethnography in the LA area and the DEIR recirculated.
--	--------------------	--	--	---

Response to Comment No. 26-E.2-99

The Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR outlines key features of Gabrielino culture as described in ethnographic works and summarized in seminal publications over the last 50 years. This summary provides a reasonable characterization of Gabrielino history as part of the baseline conditions necessary to assess tribal cultural resources. Additional information on the research completed for Native American sites in the Playa Vista area would only serve to further reinforce the conclusions already reached based upon the existing source material and would be unlikely to identify any new or substantially more significant impacts than what were disclosed in the Section IV.L, Tribal Cultural Resources, of the Draft EIR and the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional discussion and expert opinion regarding the information presented in the Ethnographic Overview of the Tribal Cultural Resources Report and why it adequately characterizes the cultural setting and existing conditions of the Project Site.

Comment No. 26-E.2-100

80.	Appendix C.2 Tribal Cultural Resources Report C	17	The largest, and best documented, ethnographic Tongva village in the vicinity was that of Yanga	Does not mention 5-volume report on Guaspet. Information must be included and assessed.
-----	---	----	---	---

Response to Comment No. 26-E.2-100

Refer to Response to Comment No. 26-E.2-57 regarding the omission of Guaspet.

Comment No. 26-E.2-101

81.	Appendix C.2 Tribal Cultural Resources Report C	18	The La Brea Tar Pits area (CA-LAN-159) was a known area of Native American use for hunting and the gathering of tar (Westec 1983).	Does not mention early burial at this site. Information must be included and assessed.
-----	---	----	--	--

Response to Comment No. 26-E.2-101

The Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR emphasizes the utilitarian aspect of the La Brea Tar Pits in terms of the importance as an asphaltum (tar) source for Native Americans. As the commenter notes, the archaeological record—designated as CA-LAN-159—includes the remains of a Native American female, historically referred to as the La Brea Woman. The details of the discovery have been disclosed to the public since the time they were encountered in 1914. The presence of the human remains is one of several reasons why CA-LAN-159 is an important Native American site, which also includes many other cultural items. Even though the presence of the human remains was not made explicit in the references to CA-LAN-159, it is precisely because of the importance and uniqueness of the site that the La Brea Tar Pits are repeatedly mentioned in the Tribal Cultural Resources Report and Section IV.L, Tribal Cultural Resources, of the Draft EIR. The addition of this detail about the human remains from CA-LAN-159 does not substantially change the significance or prominence of the site. Instead, this detail only further emphasizes the importance of the La Brea Tar Pits that is already recognized in the Tribal Cultural Resources Report and Section IV.L, Tribal Cultural Resources, of the Draft EIR.

Page VI-24 of Section VI, Other CEQA Considerations, of the Draft EIR states that the potential exists to uncover existing but undiscovered human remains, and then cites existing regulations that address the discovery of human remains interred outside of dedicated cemeteries. As mentioned on page IV.L-5 in Section IV.L, Tribal Cultural Resources, of the Draft EIR, the La Brea Tar Pits are located approximately 0.6 mile south of the Project Site. At this distance, the additional information about the human remains from CA-LAN-159 are not directly relevant to the analysis of impacts of the proposed Project on tribal cultural resources, and incorporating this information does not result in any new or substantially more significant impacts than what were analyzed and disclosed in the Tribal Cultural Resources Report and Section IV.L, Tribal Cultural Resources, of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional discussion and expert opinion regarding Native American land uses at the La Brea Tar Pits and the archaeological record designated as CA-LAN-159. The Supplemental Cultural Memo discusses why the information presented in the Tribal Cultural Resources Report adequately considered the influence of the site in characterization of existing conditions and analysis of potential impacts to tribal cultural resources.

Comment No. 26-E.2-102

82.	Appendix C.2 Tribal Cultural Resources Report C	20	4.3.1 Spanish Period	Section is focused on missions in San Diego area. Why? What's the relevance? While, inexplicably, irrelevant information is included, relevant information regarding LA
-----	--	----	----------------------	---

				Basin is missing. Information must be included and assessed.
--	--	--	--	--

Response to Comment No. 26-E.2-102

The mention of Mission San Diego de Alcaláin is expressly stated in terms of the mission being the first of 21 that were constructed in California by the Spanish in the eighteenth century. The final paragraph of this section, which is on page 20 of the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, specifically discusses the elements of the Spanish colonial system that were constructed in what became the greater Los Angeles Area, namely Mission San Gabriel Arcángel and Mission San Fernando Rey de España. The section also cites the origin of the placename Los Angeles by way of reference to the Spanish name given to the river: Nuestra Señora la Reina de los Angeles de la Porciúncula. Refer to Response to Comments Nos. 13-7 and 26-42 regarding how the historical background and context were adequately considered in the Draft EIR, which includes an account of the Spanish Period.

Comment No. 26-E.2-103

83.	Appendix C.2 Tribal Cultural Resources Report C	20	Junípero Serra returned to the valley to establish a Catholic mission, the Mission San Gabriel Arcángel, on September 8, 1771 (Kyle 2002).	Mission San Gabriel was the most important mission in the area and is barely mentioned. The TCR should be revised to include a comprehensive analysis of the importance of the Mission San Gabriel to the area.
-----	--	----	--	---

Response to Comment No. 26-E.2-103

As the commenter states, Mission San Gabriel plays an important role in California history during the Spanish Period. The discussion of the historical periods is explicitly presented as an overview in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and as referenced in Section IV.B, Cultural Resources, and Section IV.L, Tribal Cultural Resources, of the Draft EIR. The historical overview is intended to provide generalized summaries of critical points, which is why Mission San Gabriel is mentioned here, and maps showing its location are included in the Tribal Cultural Resources Report, for example on pages 35, 37, and 39. A comprehensive analysis of Mission San Gabriel is not warranted because it is only indirectly related to the analysis of the potential for impacts to cultural and tribal cultural resources. Refer also to Response to Comments Nos. 13-7 and 26-42 regarding the other considerations given to the historical context where it is more directly related to the Project Site, which provides a reasonable account of the existing conditions for the Project Site. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides additional discussion and expert opinion

regarding the relevance of Mission San Gabriel to the analysis of the Project Site and how the existing conditions are adequately characterized. Additional information on the Mission San Gabriel would only serve to further reinforce the conclusions already reached based upon the existing source material and would be unlikely to identify any new or substantially more significant impacts than what were analyzed and disclosed in the Tribal Cultural Resources Report and Section IV.L, Tribal Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-104

84.	Appendix C.2 Tribal Cultural Resources Report C	23	5.1.1 Previously Conducted Cultural Resource Studies	½-mile radius records search is too small to capture relevant resources.
-----	--	----	---	--

Response to Comment No. 26-E.2-104

Refer to Response to Comment No. 26-42 regarding the records search radius.

Comment No. 26-E.2-105

85.	Appendix C.2 Tribal Cultural Resources Report C	28	The Gilmore Adobe was constructed in 1852 and was in use until 1880.	The Adobe was possibly constructed in 1828. This date is stated in a Getty Center report regarding damage from the 1994 Northridge earthquake. Further research and documentation of the adjacent the Adobe complex is warranted.
-----	--	----	--	---

Response to Comment No. 26-E.2-105

Refer to Response to Comment Nos. 13-7, 26-42, 26-E.2-12 regarding the considerations given to the Gilmore Adobe, specifically, and the historic context in general. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, provides further information concerning the discrepancy in the date for the construction of the Gilmore Adobe. The Supplemental Cultural Memo reinforces that the construction date of 1852 is based on reliable sources and that further discussion of the alternative interpretations for this date do not offer substantively new information on the potential for archaeological or tribal cultural resources within the Project Site. Thus, this is a minor detail specific to the Gilmore Adobe, which has otherwise been adequately described as part of the existing conditions and where relevant to the analysis of potential tribal cultural resources in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and Section IV.L, Tribal Cultural Resources, of the Draft EIR. Additional analysis of the Gilmore Adobe is unlikely to result in any new or substantially more significant impacts to cultural or

tribal cultural resources than what were analyzed in the Section IV.B, Cultural Resources, and Section IV.L, Tribal Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-106

86.	Appendix C.2 Tribal Cultural Resources Report	30	Artificial fill soils: characterized as dark brown to dark gray mixture of silty clays, sandy silts, silty and clayey sands, and sands	Geotechnical report does not call these “artificial fill.” This inconsistency should be corrected.
-----	--	----	--	--

Response to Comment No. 26-E.2-106

Response to Comment No. 26-E.2-15 addresses the terminology used to characterize interpretation of the soil stratigraphy based on the results of the geotechnical investigation. Page 30 of the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) refers to “artificial fill” as distinct from “native soils,” and in this context is intended as an interpretation of sediment profiles presented in the Preliminary Geotechnical Engineering Investigation (Appendix E.1 of the Draft EIR). The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, gives further discussion on why the difference in terminology between the two reports is a minor detail that has no bearing on the conclusions of the analysis for potential impacts to archaeological and tribal cultural resources. As this comment is clarifying a minor detail related to the discussion of existing conditions and does not result in any new or more substantial impacts to tribal cultural resources, no further response is warranted. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.2-107

87.	Appendix C.2 Tribal Cultural Resources Report	30	The report states that the one boring (Boring #8) that encountered fill up to 20 feet below ground surface was most likely the result of backfill within a previous drainage that originally traveled through the west side of the Project Site.	The presence of a drainage greatly increases the chance of cultural material being present in the project area. Additional assessment should be completed.
-----	--	----	--	--

Response to Comment No. 26-E.2-107

Refer to Response to Comment No. 26-E.2-15 regarding the presence of the drainage and the assessment of potential archaeological and tribal cultural resources.

Comment No. 26-E.2-108

88.	Appendix C.2 Tribal Cultural Resources Report C	35	Figure 3	This is the oldest map in the report and is from 1937. Additional research is needed. Does the original <i>diseño</i> exist?
-----	--	----	----------	--

Response to Comment No. 26-E.2-108

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the sources and evidence used to provide an adequate characterization of the existing conditions, including the periods prior to 1937.

Refer to Response to Comment No. 26-E.2-13 regarding the analysis of historical maps, which applies to the “diseño,” or design, for Rancho La Brea, and the relationship to the analysis of archaeological and tribal cultural resources. A digital copy of the 1840s diseño for Rancho La Brea, titled “Diseño del sitio llamado La Brea,” directly translated to “Design of the site called La Brea,” is available through the Bancroft Library at the University of California, Berkeley.

Comment No. 26-E.2-109

89.	Appendix C.2 Tribal Cultural Resources Report C	40	Figure 6	This map shows many villages in the area, but the section of the text referring to this map says there are no villages in the area. This inconsistency should be corrected. Additional information regarding the villages should be provided and the DEIR recirculated.
-----	--	----	----------	---

Response to Comment No. 26-E.2-109

Refer to Response to Comment No. 26-E.2-60 regarding the discussion of villages from the map analysis and use of terminology used to characterize geographic proximity to the Project Site.

Comment No. 26-E.2-110

90.	Appendix C.2 Tribal Cultural Resources Report	Pages 7–10		Evaluation of potential project impacts to historical archaeological resources is required under CEQA and the Los Angeles Cultural Heritage Ordinance. The report does not include adequate evaluation or treatment
-----	--	------------	--	---

				considerations for potential archaeological resources from the historical period.
--	--	--	--	---

Response to Comment No. 26-E.2-110

Refer to Response to Comment Nos. 13-7, 26-42, and 26-44 regarding the analysis of archaeological resources, including historical archaeological resources under CEQA. Also refer to Response to Comment Nos. 26-E.2-11 and 26-E.2-93 for summaries of the same topic in terms of why the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) is one of many sources used to inform this analysis.

Comment No. 26-E.2-111

91.	Appendix C.2 Tribal Cultural Resources Report	Pages 20– 22		<p>The section presenting the historical-period cultural setting for the project area is a general history of the Los Angeles area. This section should include a narrative of historical events and land use patterns within the project area. For example, these topics should be included: Rancho La Brea, Salt Lake Oil Field/La Brea Oil Field/Hancock and Gilmore oil exploration and development, Gilmore Ranch/Adobe, Beverly-Fairfax neighborhood, Original Farmers Market, Gilmore Stadium/Gilmore Field, commercial development in the project area (gas stations, restaurants, miniature golf course, etc.), and development of Television City.</p> <p>The TCR report only invokes the Citywide Historic Context Statement with regard to the Entertainment Industry Context. Other contexts pertaining to earlier land use in the project area should be included in the TCR and the DEIR recirculated.</p>
-----	--	-----------------	--	---

Response to Comment No. 26-E.2-111

The commenter suggests that a more detailed discussion of past development on the Project Site and surrounding uses (the majority of which has long since been demolished save for the Gilmore Adobe and The Original Farmers Market) is necessary. However, this discussion was included in the 2018 Historic Resource Assessment prepared by ARG, which was included as Appendix D in the Historic Report (Appendix C.1

of the Draft EIR). In addition, information relative to the historical uses of the Project Site and surrounding uses was provided on pages IV.B-16 through IV.B-19 of the Draft EIR and pages 13 through 39 of the 2018 Historic Resource Assessment prepared by ARG. The commenter does not provide a reason as to why additional detail about those matters is necessary for the purposes of CEQA. Refer to Response to Comment No. 26-E.2-58 addressing why further analysis of the historical information specifically dealing with the Gilmore Adobe and Rancho La Brea were adequately described on pages IV.B-16 through IV.B-34, IV.B-57, and IV.B-58 in Section IV.B, Cultural Resources, of the Draft EIR, and considered in Section IV.L, Tribal Cultural Resources, of the Draft EIR. Further information on historical land uses is provided in Response to Comment Nos. 13-7, 26-42, and 26-E.2-12. Regarding the need for the Tribal Cultural Resources Report to address the historical context topics referenced in the comment, the level of detail already included in the Tribal Cultural Resources Report is adequate for purposes of characterizing the existing conditions and analyzing tribal cultural resources.

The commenter states that the Tribal Cultural Resources Report should expand the discussion of the historical land uses and incorporate a variety of distinct historical context sections. Response to Comment No. 26-E.2-58 addresses how the Tribal Cultural Resources Report includes an adequate level of detail describing the historical context for the Project Site. Response to Comment No. 26-42 provides additional information regarding those historical land uses were incorporated into the analysis of archaeological resources as discussed in Section IV.B, Cultural Resources, of the Draft EIR. The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, also provides a further summary of the sources used in the description of the historical context and characterization of the existing conditions for the Project Site, which is applicable to the analysis of both archaeological and tribal cultural resources. Having further considered these sources, the Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR. The Supplemental Cultural Memo provides expert opinion confirming that including more information on the historical land uses in the Tribal Cultural Resources Report would also not result in new or substantially more significant impacts being identified to tribal cultural resources.

Comment No. 26-E.2-112

92.	Appendix C.2 Tribal Cultural Resources Report	Section 5, Background Research Pages 23–28		CHRIS/SCCIC Records Search. The lack of previously recorded resources identified during the CHRIS records search does not indicate a lack of sensitivity for important buried archaeological deposits across the project area. The TCR report must include an analysis of archaeological sensitivity based on (1) the results of the SCCIC records search, (2) field
-----	--	---	--	--

			observations, and (3) archival and background research.
--	--	--	---

Response to Comment No. 26-E.2-112

The summary of the CHRIS records search results from the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR summarizes some information that is used in the assessment of archaeological resources presented in Section IV.B, Cultural Resources, of the Draft EIR, but it does not offer an opinion on the archaeological sensitivity. Refer to Response to Comments Nos. 13-7, 26-42, and 26-44 regarding the multiple data sources used to characterize the potential for buried archaeological deposits and the adequacy of the identification and analysis as presented in Section IV.B, Cultural Resources, and Section IV.L, Tribal Cultural Resources, of the Draft EIR. As specified in these responses, the sources include the CHRIS records search results, a substantial photographic record of recent Project Site conditions, and research materials presented in the technical reports appended to the Draft EIR. Refer to Response to Comment No. 2644 regarding the interpretation of the CHRIS records search results in terms of archaeological sensitivity. As specified in this response, Section IV.B, Cultural Resources, of the Draft EIR acknowledges the Project Site's sensitivity for archaeological resources and references the content of the CHRIS records search to support this conclusion. The Supplemental Cultural Memo included in Appendix FEIR-14 of this Final EIR provides further clarification of how the information presented in the Draft EIR and various technical reports support the impact analysis and conclusions presented in the Section IV.B, Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-113

93.	Appendix C.2 Tribal Cultural Resources Report	Section 6, Findings and Recom- mendations, Page 43		<ol style="list-style-type: none"> 1. This section contains no findings or recommendations for potential intact, buried archaeological resources dating from the historical period. The section should include an analysis of sensitivity for such resources across the project area. 2. Mitigation Measure CUL-MM-1 does not adequately provide for the treatment of potential impact to buried archaeological resources dating from the historical period. Archaeological construction monitoring is an insufficient treatment for these potential resources. Adequate analysis of archival data can provide the needed information to prevent unanticipated discoveries
-----	--	--	--	--

				during construction.
--	--	--	--	----------------------

Response to Comment No. 26-E.2-113

Regarding the assessment of the likelihood for buried resources, see Response to Comment No. 26-42 for the discussion of the process for characterizing the existing conditions and identifying the potential for buried archaeological resources, especially those similar in nature to those recorded for CA-LAN-3045H. Response to Comment No. 13-7 addresses which archival information was considered in the analysis of archaeological and tribal cultural resources, including data on historical uses. Response to Comment Nos. 13-7 and 26-42 also address the use of the data acquired during preparation of and presented in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) in terms of its use in the analysis of archaeological resources, including those that are historic-in-age, in Section IV.B, Cultural Resources, of the Draft EIR. Refer to Response to Comment No. 26-44 regarding how the provisions put forward in Mitigation Measure CUL-MM-1 provide an adequate means of reducing potentially significant impacts to archaeological resources. Response to Comment No. 26-44 also provides further clarification regarding the meaning of unanticipated resources and the relationship to the assessment of potential impacts to archaeological sites and how the proposed mitigation avoids or reduces potentially significant impacts. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

The Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, adds further detail to the analysis of buried resources, use of archival data, and adequacy of the proposed mitigation measure Mitigation Measure CUL-MM-1; the conclusion stated therein further reinforces the findings presented in the Draft EIR.

Comment No. 26-E.2-114

94.	Appendix C.2 Tribal Cultural Resources Report	Introduction, Project Description, Pages 1–2	Entire Section 1.3	The Project Description in the TCR report does not match the DEIR project description in that it fails to include the maximum height of the proposed construction. This inconsistency must be corrected.
-----	--	---	--------------------	--

Response to Comment No. 26-E.2-114

As discussed on pages IV.H-24 through IV.H-26 of Section IV.H, Land Use and Planning, of the Draft EIR, the proposed Project would have various floor levels and building heights, ranging from one-story high-bay sound stages to an office building with a

maximum height of 225 feet. Since there is sufficient space available across the studio campus, the subterranean parking garage can extend throughout the majority of the campus to meet the parking demands, and, therefore, requiring shallower excavations and providing a more efficient design. The Project would not exceed the maximum building height of 225 feet or the maximum excavation depth of 45 feet. Any discrepancies in the reporting of the maximum height of the proposed construction would have no influence on the impact analysis for tribal cultural resources that have only been identified as below grade in this fully urbanized portion of Los Angeles. No such tribal cultural resources were identified within a 0.5-mile radius of the Project Site were identified in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and there is no indication that a variation in the maximum height of Project elements would have any influence on the analysis of tribal cultural resources as reported in Section IV.L, Tribal Cultural Resources, of the Draft EIR. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.2-115

95.	Appendix C.2 Tribal Cultural Resources Report	Regulatory Setting, Section 2.1.1, Page 7	According to PRC Section 5024.1(c)(1-4), a property may be listed as a historical resource in the CRHR if it meets at least one of the following NRHP criteria:	<p>While it is true that the criteria for the CRHR and the NRHP are similar, the focus of the CRHR is very different than the NRHP, with a much more California-focused emphasis.</p> <p>The criteria listed in this section state they are the NRHP criteria, but this specifically mentions California, which the NRHP does not mention. The TCR report has a muddled and confused discussion on the relationship between CEQA and NRHP criteria for historic properties/historical resources.</p> <p>The CRHR criteria are the correct ones to list.</p>
-----	--	--	---	---

Response to Comment No. 26-E.2-115

The commenter states that despite the similarity in eligibility criteria, the focus of the CRHR and NRHP are very different because the CRHR emphasizes California. The commenter states that this distinction between the CRHR is not clearly stated in the summary of the CRHR in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR), although the CRHR criteria are noted as being correctly stated.

The Tribal Cultural Resources Report presents the CRHR criteria in a context emphasizing the fact that when the state criteria were created, they were based upon a pre-existing set of federal criteria. This is established by the sentence preceding the commenter's quoted passage on page 7 of the Tribal Cultural Resources Report: "The criteria for listing resources in the CRHR were developed in accordance with the criteria for listing in the NRHP, enumerated below." Before listing the CRHR criteria, the Tribal Cultural Resources Report cites the correct section of the PRC in defining a historical resource as any property listed on the CRHR. As the commenter notes, the CRHR criteria are then correctly listed. A subsequent passage on the same page of Tribal Cultural Resources Report then goes on to clarify that the "criteria for the CRHR are nearly identical to those for the NRHP" and correctly states that properties listed or eligible for listing on the NRHP are automatically listed in the CRHR. Elsewhere in the discussion of the CRHR in the Tribal Cultural Resources Report, passages are included that recognize other ways in which a resource may be listed as eligible CRHR that are specific to California, that is, being listed as a state historical landmark, point of interest, listing under local ordinances, and identified through local historical resource surveys.

When placed in the context of the broader discussion of the CRHR, the confusion noted by the commenter appears to derive from the reference to the NRHP in the quoted sentence: "According to PRC Section 5024.1(c)(1–4), a property may be listed as a historical resource in the CRHR if it meets at least one of the following *NRHP* criteria" (emphasis added). Removing "NRHP" from this sentence would clarify that these are the CRHR criteria given in PRC Section 5024.1(c), which were originally derived from the NRHP criteria and are very similar in wording but would not substantially change the summary of the CRHR and how CRHR status factors into the definition of a tribal cultural resource. It is also noted that this specific wording was not incorporated into the discussion of the CRHR given on page IV.B-10 of Section IV.B, Cultural Resources, of the Draft EIR.

Response to Comment No. 26-E.2-36 gives additional context in terms of the relationship of federal and State regulations to the analysis of archaeological and tribal cultural resources.

Comment No. 26-E.2-116

96.	Appendix C.2 Tribal Cultural Resources Report	Regulatory Setting, Section 2.1.2, Page 8	PRC Section 21083.2(g) defines "unique archaeological resource."	The definition of unique archeological resource should be included in the report text.
-----	--	---	--	--

Response to Comment No. 26-E.2-116

The passage on page 8 of the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) that is referenced by the commenter is taken from a bulleted list of regulations that are introduced as having relevance under CEQA when analyzing “archaeological, historic, and TCRs.” The report focuses upon the analysis of tribal cultural resources. The Tribal Cultural Resources Report cites PRC Section 21074 as the regulation defining a tribal cultural resource and summarizes two of the critical criteria. The summary level description in the Tribal Cultural Resources Report omitted subsection c of PRC Section 21074, which clarifies the law and fact that a resource can be designated as a tribal cultural resource irrespective of the status as a unique archaeological resource. Thus, omission from the summary of PRC Section 21074 or further analysis in the Tribal Cultural Resources Report is appropriate. Notably, the definition of a unique archaeological resource is included on page IV.B-10 of Section IV.B, Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-117

97.	Appendix C.2 Tribal Cultural Resources Report	Environment al Setting, Section 3.1, Page 11	Soils within the Project Site are dominated by the Urban land–Biscailuz–Pico complex followed by Urban land–Azuvina–Montebello complex in the southeastern corner of the Project Site (USDA 2021).	How is this meaningful? The report should explain the relevance of these soil types to the chances for buried archaeological resources to be present in the project area.
-----	--	---	--	---

Response to Comment No. 26-E.2-117

The soil types are referenced here as a means of supplementing the description of physical setting and sediments otherwise stated in the Preliminary Geotechnical Engineering Investigation report in Appendix E.1 of the Draft EIR, and summarized in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The analysis of the potential for buried archaeological resources considers all the available sources, although specific reference back to the USDA classifications cited in the comment are not incorporated into the analysis. Refer to Response to Comment No. 26-42 regarding how geoarchaeological considerations were utilized in the analysis, which were further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 26-E.2-118

98.	Appendix C.2 Tribal Cultural	Environment al Setting,	Entire Section 3.1	Report fails to discuss the two drainages that existed on the
-----	---------------------------------	----------------------------	--------------------	---

	Resources Report	Section 3.1, Page 11		property prior to development. The report also fails to discuss the floral and faunal resources that would have been on the property during prehistory. Also, what resources were here that attracted the people who built Rancho La Brea Adobe? The TCR report should be revised to include a discussion on these issues.
--	------------------	----------------------	--	--

Response to Comment No. 26-E.2-118

Refer to Response to Comment No. 26-E.2-15 regarding the relationship of former stream courses and the assessment of potential archaeological and tribal cultural resources.

Regarding the historical ecology, including flora and fauna, page 19 of the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and page IV.L-8 of Section IV.L, Tribal Cultural Resources, of the Draft EIR, reference the types of plant and animal resources that were important to the Gabrielino (or Tongva).

Regarding the historical context related to the Gilmore Adobe (referenced in the comment as Rancho La Brea Adobe), the topic is only indirectly relevant to the analysis of tribal cultural resources, and as such, this is not discussed in detail in the Tribal Cultural Resources Report. Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the multiple sources included in the Draft EIR that consider the history of the Gilmore Adobe and the manner in which this was factored into the analysis of archaeological resources, as presented in Section IV.B, Cultural Resources, of the Draft EIR.

Comment No. 26-E.2-119

99.	Appendix C.2 Tribal Cultural Resources Report	Cultural Setting, Pages 13–15	Entire Section	The prehistory of the project area is also lacking. Yangna is mentioned but not Guaspet, which was equidistant. It is also close to the Baldwin Hills sites for earlier prehistory. How would the project area have been used during the different periods of prehistory? No discussion is included and should be added. There are also errors in the prehistoric background as discussed herein; e.g., mortars and pestles not introduced until 500 B.P. and the Gabrielino only cremated their dead.
-----	---	-------------------------------	----------------	--

			No mention of La Brea Woman.
--	--	--	------------------------------

Response to Comment No. 26-E.2-119

Refer to Response to Comment No. 26-E.2-57 regarding the subject of Guaspet and the characterization of the prehistoric overview.

Refer to Response to Comment No. 26-E.2-12 regarding the discussion of mortar and pestle and its relevance to the discussion of existing conditions.

Refer to Response to Comment Nos. 26-E.2-12 and 26-E.2-92 regarding the topic of Gabrielino burial practices.

Refer to Response to Comment No. 26-E.2-101 regarding La Brea Woman.

Comment No. 26-E.2-120

1. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Section 5.1 SCCIC Records Search	Entire Section	Six previous studies overlap the project area. Due to restrictions imposed by the COVID-19 pandemic, the SCCIC only provided copies of two of these reports. Are those restrictions still in place? Did the TCR report authors attempt any other means of acquiring the reports such as internet searches, library searches, contacting report authors, or contacting other cultural resource consulting firms?
------	---	---	----------------	---

Response to Comment No. 26-E.2-120

Refer to Response to Comment No. 26-42 regarding the studies identified in the CHRIS that were not available at the time originally requested.

Comment No. 26-E.2-121

2. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Page 27, LA-1057	Review of <i>Technical Report—Historical/Architectural Resources—Los Angeles Rail Rapid Transit Project “Metro Rail” Draft Environmental Impact Statement and Environmental Impact Report</i> (Westec Services, Inc. 1983)	The TCR states that the property located at 7800 Beverly Blvd., which was included as a subject of study in the Westec Services report, is located in the TVC 2050 project area and that a resource at that address was found to appear not eligible for listing in the NRHP at that time. The reasons for the finding of not eligible
------	---	---------------------------------------	--	--

				is not explained. Now that nearly 40 years has lapsed since that evaluation, the TCR report should consider if it might now be eligible with the passage of time.
--	--	--	--	---

Response to Comment No. 26-E.2-121

As noted in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR), the report by Westec Services references a property located at 7800 Beverly Boulevard, which they note as “CBS Television City Parking Lot.” This is in reference to a potential historical resource and not an archaeological or tribal cultural resource. The Project Site, including the buildings that compose Television City, have since been recorded and the Primary Studio Complex has been designated as a historical resource. Discussion of the 1983 results is irrelevant to the analysis of archaeological and tribal cultural resources. Further analysis of this topic is provided in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which confirmed that the analysis of this property is not relevant to the analysis of archaeological or tribal cultural resources.

A full account of the historical resources assessed for the Project is included in the Historic Report in Appendix C.1 of the Draft EIR and Section IV.B, Cultural Resources, of the Draft EIR. Refer also to Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, regarding evaluation and designation of the Primary Studio Complex. As discussed therein, the entire Project Site was evaluated and only the Primary Studio Complex was determined to be eligible.

Comment No. 26-E.2-122

3. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Table 2, Page 27	Previously recorded resource CA-LAN-3045H	Previously recorded resource CA-LAN-3045H (Gilmore Adobe) is noted as being located less than 50 feet away from the TVC 2050 property, but there is no discussion in the TCR report on the history of the Adobe and the extent of activities related to the Adobe that might have included portions of the project area. This is a significant omission.
------	---	---------------------------------------	---	--

Response to Comment No. 26-E.2-122

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the issue of archaeological resources and the historical activities associated with the Gilmore Adobe.

Comment No. 26-E.2-123

4. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Section 5.2, Historical Maps	Entire Section	The TCR report relies exclusively on HistoricAerials.com for the topographic map and aerial photograph review. The report fails to consult rancho maps, GLO maps, Sanborn Fire Insurance maps, and other historical maps. The TCR also fails to review other sources of historical aerial imagery such as those contained in the project proponents Phase 1 Hazmat report. Historical aerial photographs by Spence and Fairchild are readily available. Overall, more archival research is necessary.
------	---	---	----------------	---

Response to Comment No. 26-E.2-123

Refer to Response to Comment No. 26-E.2-13 regarding the use of historical maps, including topographic maps, aerials, rancho, GLO, and Sanborn maps. Refer to Response to Comment Nos. 13-7 and 26-42 regarding a more comprehensive discussion of the archival sources used to assess archaeological and tribal cultural resources.

Comment No. 26-E.2-124

5. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Section 5.2, Historical Maps	Entire Section	The report fails to include any relevant tax assessor's data regarding past land use. For example, was any part of the project area prior to the construction of Gilmore Stadium in 1932 taxed on any improvements?
------	---	---	----------------	---

Response to Comment No. 26-E.2-124

Tax assessor data from the early twentieth century would be more appropriate to include in an analysis of archaeological resources. Incorporating this level of detail in the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) is unnecessary given that the report focuses on tribal cultural resources. Regarding the analysis of archaeological resources, refer to Response to Comment No. 26-42, which discusses the analysis of the land use history at the Project Site. This analysis includes but is not limited to data presented in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. The land use history is further assessed in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR. Given the available evidence

already incorporated into the analysis, even if the tax assessor information were available, it would merely add a minor amount of detail to the substantive evidence already compiled and used to characterize the existing conditions and inform the analysis and recommended mitigation to archaeological resources. Therefore, such information would not change the ultimate conclusions in the Draft EIR concerning impacts to archaeological resources and the recommended mitigation measure.

Comment No. 26-E.2-125

6. 6	C Appendix C.2 Tribal Cultural Resources Report 2	Background Research, Table 3	The first historic aerial photo from 1948 reveals a large oval-shaped structure in the northwest section of the Project Site. There is also an indiscernible structure in the southeastern portion of the Project Site.	The TCR report fails to contextualize the aerial photograph data. For example, a quick internet search shows the “large oval-shaped structure” is Gilmore Stadium. The report should attempt to identify each structure or feature visible in the historical aerials.
------	---	------------------------------	---	---

Response to Comment No. 26-E.2-125

The review of aerial photographs included in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR is intended to convey a basic sense of ground disturbances, especially those represented by the presence of new structures, regardless of their specific historical context. Thus, in this example noted by the commenter, the relevant information about the presence of Gilmore Stadium was the existence of a large structure in the northwest portion of the Project Site. As a report focused on a review of tribal cultural resources, the historical developments and ground disturbances are relevant in that they influence the likelihood any previously buried Native American cultural items may have been physically displaced or destroyed, as well as reflecting general changes in the environmental setting. In providing an overview of the aerial photograph sample, the Tribal Cultural Resources Report provided a reasonable basis on which to assess alterations to the Project Site. The historical ground disturbances are one of the factors supporting the conclusion that subsurface soils are unlikely to support intact tribal cultural resources. Therefore, additional interpretation of the aerial images would only serve to further support this conclusion and there would not be any new or substantially more significant impacts identified. The comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.2-126

7. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Section 5.3 Geotechnica	Entire Section	The review of the project geotechnical report should include a map showing the location of each boring location. Further, the TCR
------	---	--	----------------	---

		I Report Review, Pages 29–30		<p>report merely summarizes the general finding of the geotechnical report regarding soils and does not interpret the soils data regarding the potential for buried archaeological deposits to be present. For example, the logs of several borings document the presence of dark gray to black or dark brown to black sediments present immediately below the fill. Dark sediments can sometime indicate the presence of anthrosols or other sediments with potential for containing cultural resources.</p> <p>This section also mentions that a previous drainage originally crossed through the west side of the project site, but this information is not included in the Environmental Setting section.</p>
--	--	------------------------------	--	---

Response to Comment No. 26-E.2-126

A map of the geotechnical bores is included as attachments, or enclosures, to the Preliminary Geotechnical Engineering Investigation report in Appendix E.1 of the Draft EIR. Refer to Response to Comment No. 26-42 regarding the considerations given to geoarchaeological data, and Response to Comment Nos. 26-E.2-15 and 26-E.2-117 regarding the analysis of specific soils referenced in the geotechnical bore logs.

Refer to Response to Comment No. 26-E.2-15 regarding the discussion of the former stream course identified within the Project Site and the characterization of the environmental setting provided in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Comment No. 26-E.2-127

8. 6	Appendix C.2 Tribal Cultural Resources Report	Background Research, Section 5.4 Native American Correspondence, Page 31	Entire Section	<p>The NAHC Sacred Lands File search request identified eight Native American individuals who would potentially have specific knowledge pertaining to Native American cultural resources in the project area region. Typically, each individual should be contacted by mail, e-mail, and telephone by the archaeologists as part of their records-search/information-gathering process. The TCR report states that no additional tribal outreach was conducted, and</p>
------	---	--	----------------	---

				<p>the report instead relies on the AB-52 Consultation conducted by the City. The Sacred Lands File search tribal list is not identical to the AB-52 list and at least three individuals named by the NAHC who might have information relevant to the project area were not contacted during the AB-52 consultation. What additional outreach was taken? If none, why not?</p> <p>The project is being implemented through a Specific Plan and General Plan amendment. This requires tribal consultation following the requirements of SB-18. There is no documentation of SB-18 consultation in any of the cultural resource documents. SB-18 consultation is not the same as AB-52 consultation and involves different time frames for tribes to respond to the notification. Has the project complied with SB-18?</p>
--	--	--	--	--

Response to Comment No. 26-E.2-127

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the tribal outreach efforts completed for the Project, the means by which tribal consultation requirements were fulfilled pursuant to PRC Section 21080.3.1, as amended by AB 52, and why the requirements of SB 18 do not apply.

Comment No. 26-E.2-128

9. 6	Appendix C.2 Tribal Cultural Resources Report	Findings and Recommendations, Section 6.1, Summary of Impacts, Page 43	The history of past disturbance within and in the vicinity of the Project Site, as reflected by the records searches, review of historical topographic maps and aerial photographs, and the subsurface exploratory boring investigations, suggest that subsurface soils are unlikely to support intact TCRs	There is no meaningful discussion in the body of the report regarding the potential for subsurface resources to be present. This “summary” is presenting this opinion for the first time that buried resources are unlikely. While the NAHC Sacred Lands File search did not locate any tribal cultural resources within the project area, follow-up with affiliated tribes is necessary. The standard letter from the NAHC states that negative results do not negate the possibility of those types of resources being present and therefore suggests reaching out to tribes affiliated with the area (the
------	---	--	---	--

				NAHC provided a contact list). It appears that no tribal outreach was conducted, as recommended by the NAHC. What tribal outreach was conducted?
--	--	--	--	--

Response to Comment No. 26-E.2-128

Refer to Response to Comment No. 26-42, regarding the analysis of potential subsurface tribal cultural resources presented in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, and Section IV.L, Tribal Cultural Resources, of the Draft EIR. Additional consideration of the geoarchaeological data is given in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR, which did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the efforts made to contact tribes for information on sacred lands pursuant to the NAHC's recommendations and the tribal consultation requirements that were fulfilled pursuant to PRC Section 21080.3.1.

Comment No. 26-E.2-129

10. 6	Appendix C.2 Tribal Cultural Resources Report	Section 2— Regulatory Setting	Discussion of AB 52	Another regulation that applies to the project is SB 18, as there is a specific plan proposed for the TVC. There is no mention of SB 18 in this section of the report. Has the project complied with SB-18?
-------	--	-------------------------------------	---------------------	---

Response to Comment No. 26-E.2-129

Refer to Response to Comment No. 26-E.2-17 addressing why the requirements of SB 18 do not apply to the Project.

Comment No. 26-E.2-130

11. 6	Appendix C.2 Tribal Cultural Resources Report	Section 2— Regulatory Setting	Discussion of the California Register of Historical Resources (CRHR)	Is there any federal nexus for this project? If so, there is no substantive mention of the National Register of Historic Places outside of similarities to the CRHR.
-------	--	-------------------------------------	--	--

Response to Comment No. 26-E.2-130

Refer to Response to Comment No. 26-E.2-36 regarding the subject of a federal nexus and discussion of the regulatory framework, including the relationship between the NRHP and CRHR. The Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR focuses upon state regulations in terms of defining a tribal cultural resource, and as such, the detailed discussion of NRHP eligibility thresholds was excluded in the Tribal Cultural Resources Report.

Comment No. 26-E.2-131

12. 6	Appendix C.2 Tribal Cultural Resources Report	Section 2.1.3— Regulatory Setting	Discussion of Health and Safety Code Section 7050.5	The NAHC not only notifies the MLD, it also will specifically appoint an MLD for a particular project.
-------	--	--	--	--

Response to Comment No. 26-E.2-131

The distinction between appointing and notifying an MLD in the NAHC's duties pursuant to the Health and Safety Code has been noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Because the summary included in Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR faithfully reflects the process that must be followed in the event human remains are discovered and confirmed to be Native American in origin, no further response is required. Please note that the discussion of PRC Section 5097.98 included on page IV.L-3 of Section IV.L, Tribal Cultural Resources, of the Draft EIR specifically recognizes that the NAHC designates and notifies the MLD.

Comment No. 26-E.2-132

13. 6	Appendix C.2 Tribal Cultural Resources Report	Section 4— Cultural Setting	Discussion of prehistoric overview	This section appears to principally use work out of San Diego. Why? Importantly, the section does not specifically include a number of local data points, including Playa Vista, important sites in Orange County (like ORA-64 and ORA-264), and Clovis occupation in Malibu, as just a few examples. No mention of early occupation of northern Channel Islands. The prehistoric overview must be revised to include this information.
-------	--	-----------------------------------	---------------------------------------	---

Response to Comment No. 26-E.2-132

Refer to Response to Comment No. 26-42 regarding the discussion of the regional context and relevance of sites from the San Diego area. Refer to Response to Comment Nos. 26-E.2-96 and 26-E.2-99 regarding the methodology used to characterize the existing conditions at regional and local levels, although specific sites in Playa Vista, Orange County, Malibu, and the northern Channel Islands are not specified.

Comment No. 26-E.2-133

14. 7	Appendix C.3 AB 52 Notifi- cation Letters and Delivery Confirmations	AB 52 Notifi- cation Letter and Delivery Confirma- tions	Notification Letter	The Project Description does not match the DEIR project description in that it fails to include the maximum height of the proposed construction. This is a critical piece of information to allow the tribes to consider if the proposed project will have an adverse visual effect on any offsite tribal cultural resources.
-------	--	--	---------------------	---

Response to Comment No. 26-E.2-133

Refer to Response to Comment No. 26-E.2-114 regarding the lack of relevance between the proposed maximum construction height and the analysis of tribal cultural resources.

Comment No. 26-E.2-134

15. 7	Appendix C.3 AB 52 Notifi- cation Letters and Delivery Confirmations	AB 52 Notifi- cation Letter and Delivery Confirma- tions	Certified Mail Receipts	It is unclear if the "Delivery Confirmations" merely document that the letters were sent by certified mail, or if the receipts are meant to confirm that the letters were actually received by the intended recipient. Were any of the letters returned as undeliverable?
-------	--	--	-------------------------	---

Response to Comment No. 26-E.2-134

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the tribal outreach efforts completed for the Project and the means by which tribal consultation requirements were fulfilled pursuant to PRC Section 21080.3.1, as amended by AB 52. In compliance with PRC Section 21080.3.1, which requires written notification, the City mailed notification letters to the addresses provided by each of the tribal parties on the City's AB 52 contact list, dated June 1, 2021, and included in Appendix C of the Draft EIR. The City did not receive any returned letters. The Delivery Confirmations from the U.S. Postal

Service validate that the notification letters were sent via certified mail and are not meant to convey whether the letters were physically received by the intended recipients.

Comment No. 26-E.2-135

16. 1	Appendix C.4 Historic Sign Guidelines		Entire Appendix	The Historic Signage Guidance (Appendix C.4) does not include the required visual-resource analysis and landscape analysis studies to consider the effects of the proposed signage on the view shed of the Gilmore Adobe or other historical resources.
-------	---	--	-----------------	---

Response to Comment No. 26-E.2-135

Refer to Response to Comment No. 26-E.2-63 regarding aesthetic and historic impacts. Refer to Response to Comment No. 26-129 regarding the Historic Sign Guidelines and proposed signage. As discussed therein, the mere presence of signs within the Project Site (with the exception of those that are located on the Primary Studio Complex or within the Viewshed Restoration Area, which are discussed in Appendix C.4, Historic Sign Guidelines, of the Draft EIR) would not result in impacts to historical resources pursuant to the thresholds in Appendix G of the CEQA Guidelines.

Comment No. 26-E.2-136

17.	DEIR Section IV.D. Geology and Soils	Pages 15– 16; 17–18; 26–28	N/A	The EIR lacks any description of the depths and locations within the project area at which the artificial fill, quaternary alluvium, and (alleged) Palos Verdes Sands are exposed or are expected to be encountered. These data are provided in the geotechnical report (Appendix E).
18. 3	DEIR Section IV.D. Geology and Soils	Page 15	These Pleistocene age alluvial deposits have a moderate to high potential to yield paleontological resources.	See above comment.
19. 3	DEIR Section IV.D. Geology and Soils	Page 15	Previously discovered fossils in the area have been located in older Quaternary age sedimentary deposits known as Pleistocene alluvium and the Palos Verdes Sand	No evidence has been provided that the project area is underlain by the Palos Verdes Sands. In fact, both the geotechnical report and the geologic map used in the paleontological assessment report (Appendix F) seem to provide evidence against the presence of this unit at construction depths. The Palos Verdes Sands are a marine-

				terrace deposit, and the sediments underlying the project area were interpreted as being deposited by fluvial (i.e., river) action (Appendix E, Page 5, Paragraph 1). The apparent inconsistency between DEIR Section IV.D and the information in Appendix F must be corrected.
20. 3	DEIR Section IV.D. Geology and Soils	Page 11	Native soils of older alluvial deposits were encountered beneath the fill soils at the Project Site and are comprised of sandy to silty clays, sandy silts, silty to clayey sands, and sands which are moist to wet, firm to stiff, dense to very dense, fine to coarse-grained, with occasional gravel and cobbles. These native soils consist predominantly of sediments deposited by river and stream action typical to the area of Los Angeles in which the Project Site is located.	The depths at which these native sediments are present beneath the project area is important and should be discussed.

Response to Comment No. 26-E.2-136

Regarding the nature of the underlying geology of the Project Site and the depths of native sediments, refer to Response to Comments Nos. 35-90 and 26-E.2-19. In addition, regarding the potential for the Project area to be underlain by Palos Verdes Sands, the records search results from the Natural History Museum of Los Angeles County reported on fossil localities collected nearby from the Palos Verdes Sand. For instance, one nearby locality, LACM VP 7478, was reported from a depth of 46 feet below the ground surface within the Palos Verdes Sand. Please note that the results of the records search are confidential and cannot be made public since they contain sensitive fossil locality data. However, the results of the records search are on file at the City for review by qualified individuals and are part of the administrative record for the Project.

Comment No. 26-E.2-137

21. 3	DEIR Section IV.D. Geology and Soils	Page 3	As defined by the SVP, significant nonrenewable paleontological resources are:... lead agencies or local governments.	This is an outdated definition and is conflating two separate topics: significance of different paleontological resources and the renewability of paleontological resources. By definition, <i>all</i> paleontological resources (regardless of significance) are
-------	--------------------------------------	--------	---	---

				nonrenewable, but not all are significant. It would be much more appropriate to include the definition for “significant paleontological resources” from SVP (2010; pg. 11), as it stresses that significant paleontological resources are not just vertebrate remains (which is far less clear in the provided definition).
--	--	--	--	---

Response to Comment No. 26-E.2-137

Refer to Response to Comment No. 35-90 for a discussion of the Draft EIR references to the 1995 and 2010 SVP Guidelines, as well the definition of “significant paleontological resources” from the SVP Guidelines. Also, the comment refers to the discussion in the Draft EIR of the regulatory framework for paleontological resources, including the SVP Guidelines. That section quoted the definition from the 1995 SVP Guidelines of the term “significant nonrenewable paleontological resources.” That definition correctly describes significant paleontological resources as “nonrenewable” because fossils are not considered to be renewable since they require thousands to millions of years to be preserved (greater than approximately 5,000 years per the 2010 SVP Guidelines). The 2010 SVP Guidelines also expressly recognize that significant paleontological resources are “nonrenewable.” The first sentence of the 2010 SVP Guidelines states:

Fossils are nonrenewable paleontological resources that are afforded protection by federal, state, and local environmental laws and regulations.

Comment No. 26-E.2-138

22. 3	DEIR Section IV.D. Geology and Soils	Page 4	only [sic] rarely will a fossil locality yield a statistically significant number of specimens of the same genus	It is not clear what is meant by this. Statistically significant in what way and/or relative to what? In context, this does not seem to make sense.
-------	--------------------------------------	--------	--	---

Response to Comment No. 26-E.2-138

The commenter refers to a portion of a sentence in the section of the Draft EIR that provides background information on the applicable regulatory framework, including the SVP Guidelines. In particular, this sentence in the Draft EIR, located on page IV.D-4 of Section IV.D, Geology and Soils, states that discovery of “vertebrate fossils are relatively uncommon” because the number of such discoveries are statistically rare and isolated in nature. Accordingly, discoveries of such resources typically do not yield a significant number of specimens of the same type. Accordingly, the Draft EIR correctly concludes that

“every vertebrate fossil found has the potential to provide significant new information on the taxon it represents, its paleoenvironment, and/or its distribution.”¹¹⁴ Based on the principle that every vertebrate fossil found can be significant, regardless of the number of fossils found, Mitigation Measure GEO-MM-1 applies to each discovery of a paleontological resource that may be discovered at the Project Site.

Comment No. 26-E.2-139

23. 3	DEIR Section IV.D. Geology and Soils	Page 6	N/A	The EIR regulation section lacks reference to CEQA stipulations regarding paleontological resources, including CEQA Guidelines Appendix G, Section VII[f].
-------	--------------------------------------	--------	-----	--

Response to Comment No. 26-E.2-139

The CEQA Guidelines Appendix G thresholds of significance for geology and soils, which includes paleontological resources, are included on pages IV.D-16 and IV.D-17 of the Draft EIR and are used to analyze potential environmental impacts on paleontological resources in Section IV.D, Geology and Soils, of the Draft EIR. Specifically, the threshold for paleontological resources provided on page IV.D-17 of Section IV.D, Geology and Soils, of the Draft EIR is presented as follows:

Threshold (f): Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature

Comment No. 26-E.2-140

24. 3	DEIR Section IV.D. Geology and Soils	Pages 15–16; 26–28	N/A	The EIR uses the terms “older, elevated Quaternary alluvial deposits,” “Pleistocene age alluvial deposits,” “older Quaternary age sedimentary deposits,” “Pleistocene alluvium,” “Pleistocene age older alluvial deposits,” and “Palos Verdes Sand” but never addresses whether these are separate geologic units or are being used interchangeably. This text needs to be clarified in order to make it clear what geology
-------	--------------------------------------	--------------------	-----	---

¹¹⁴ Notably, this same description of the significance of vertebrate fossils that may be found at a site has been concluded in other paleontological resources assessments. See ESA, Inglewood Basketball and Entertainment Center, City of Inglewood, California, Paleontological Resource Assessment Report, May 2019.

				actually underlies the project area and what is its paleontological potential. This issue is partially a holdover from the lack of clarification of the geology/paleontology in Appendix F.
--	--	--	--	---

Response to Comment No. 26-E.2-140

Refer to Response to Comment Nos. 35-90 and 26-E.2-19 for a discussion of the underlying geology at the Project Site, as well as a discussion of the geologic terminology used to describe the sediments underlying the Project Site.

Comment No. 26-E.2-141

25. 3	DEIR Section IV.D. Geology and Soils	Page 27	The services of a Project paleontologist who meets the Society of Vertebrate Paleontology standards... as assistant to a Project paleontologist)	<p>SVP standards for what? This is presumably the SVP standards for a "Qualified Professional Paleontologist," but this needs to be explicitly stated, if so. This also does not include a complete list of qualifications for that position, as stated by SVP (2010). Those qualifications are as follows:</p> <ol style="list-style-type: none"> 1. A graduate degree in paleontology or geology, and/or a publication record in peer reviewed journals; and demonstrated competence in field techniques, preparation, identification, curation, and reporting in the state or geologic province in which the project occurs. An advanced degree is less important than demonstrated competence and regional experience. 2. At least two full years professional experience as assistant to a Project Paleontologist with administration and project management experience; supported by a list of projects and referral contacts. 3. Proficiency in recognizing fossils in the field and determining their significance. 4. Expertise in local geology, stratigraphy, and biostratigraphy. <p>Experience collecting vertebrate</p>
-------	--------------------------------------	---------	--	---

				fossils in the field.
--	--	--	--	-----------------------

Response to Comment No. 26-E.2-141

As noted in the comment, Mitigation Measure GEO-MM-1 requires a site-specific Paleontological Resource Mitigation and Treatment Plan prepared by “a Project paleontologist who meets the Society of Vertebrate Paleontology standards.” Refer to Response to Comment No. 35-91 regarding revisions to Mitigation Measure GEO-MM-1. As discussed therein, Mitigation Measure GEO-MM-1 has been clarified to explicitly state the definition of a Qualified Professional Paleontologist under the 2010 SVP Guidelines.

Comment No. 26-E.2-142

26. 3	DEIR Section IV.D. Geology and Soils	Page 27	This Project paleontologist shall supervise a paleontological monitor who shall monitor all ground disturbance activities	<p>No qualifications standards are provided for a paleontological monitor. The SVP (2010) qualifications for a monitor are as follows:</p> <ol style="list-style-type: none"> 1. BS or BA degree in geology or paleontology and one year experience monitoring in the state or geologic province of the specific project. An associate degree and/or demonstrated experience showing ability to recognize fossils in a biostratigraphic context and recover vertebrate fossils in the field may be substituted for a degree. An undergraduate degree in geology or paleontology is preferable, but is less important than documented experience performing paleontological monitoring, or 2. AS or AA in geology, paleontology, or biology and demonstrated two years' experience collecting and salvaging fossil materials in the state or geologic province of the specific project, or 3. Enrollment in upper division classes pursuing a degree in the fields of geology or paleontology and two years of monitoring experience in the state or geologic province of the specific project.
-------	--------------------------------------	---------	---	---

				5. Monitors must demonstrate proficiency in recognizing various types of fossils, in collection methods, and in other paleontological field techniques.
--	--	--	--	---

Response to Comment No. 26-E.2-142

As noted in the comment, Mitigation Measure GEO-MM-1 requires that the “Project paleontologist shall supervise a paleontological monitor who shall monitor all ground disturbance activities.” Refer to Response to Comment No. 35-91 regarding revisions to Mitigation Measure GEO-MM-1. As discussed therein, Mitigation Measure GEO-MM-1 has been clarified to explicitly state the definition of a Qualified Paleontological Resources Monitor under the 2010 SVP Guidelines.

Comment No. 26-E.2-143

27. 3	DEIR Section IV.D. Geology and Soils	Page 27	The Paleontological Resource Mitigation and Treatment Plan shall also include a description of the professional qualifications required of key staff, communication protocols during construction, fossil recovery protocols, sampling protocols for microfossils, laboratory procedures, reporting requirements, and curation provisions for any collected fossil specimens.	4. The minimum information provided by the Paleontological Resource Mitigation and Treatment Plan need to include stipulations for fossil preparation, assignment of an approved repository, and donation of significant paleontological resources to the approved repository.
-------	--------------------------------------	---------	---	--

Response to Comment No. 26-E.2-143

Refer to Response to Comment No. 35-91 regarding revisions to Mitigation Measure GEO-MM-1. As provided on page IV.D-27 of the Draft EIR, the Paleontological Resource Mitigation and Treatment Plan, required as part of Mitigation Measure GEO-MM-1, “shall specify ... laboratory procedures,” which would generally include preparation of paleontological resources to the point of taxonomic identification. It would also include, but not be limited to, “curation provisions” which outline the museum, for instance, that will serve as the accredited repository of the discovered paleontological resources. The clarified version of the mitigation measure presented in Response to Comment No. 35-91 expressly includes (a) a worker environmental awareness program; (b) the authority of the monitor to stop construction work if resources are discovered; and (c) the preparation of a post-monitoring report.

Comment No. 26-E.2-144

28. 3	DEIR Section IV.D. Geology and Soils	Page 27	Mitigation Measure GEO-MM-1: The services of a... and the Los Angeles Department of City Office of Historic Resources.	The provided mitigation measure misses many portions of mitigation measures appropriate for the project area and geologic unit. This includes review of the Mitigation and Treatment Plan by curatorial staff of the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County and at the Natural History Museum La Brea Tar Pits and Museum, mandate of a Worker Environmental Awareness Program (WEAP), authority of the paleontological monitor to divert/direct ground-disturbing activities in the event of discovery, and preparation of a final report at the conclusion of monitoring, among others. For examples, see the paleontological mitigation measures in the EIRs for the Metrorail Purple Line (westside subway extension), Academy Museum of Motion Pictures and the Los Angeles County Museum of Art.
-------	--------------------------------------	---------	--	---

Response to Comment No. 26-E.2-144

Refer to Response to Comment Nos. 35-91 and 26-E.2-20, which discuss the clarified version of Mitigation Measure GEO-MM-1 and consistency with other mitigation measures for projects in the area. The clarified version of Mitigation Measure GEO-MM-1 expressly includes (a) a WEAP; (b) the authority of the monitor to stop construction work if resources are discovered; and (c) the preparation of a post-monitoring report. Refer to Response to Comment No. 35-91 in particular for the text of the clarified mitigation measure.

Comment No. 26-E.2-145

29. 9	Appendix F Paleontological Resources Review Memorandum	General	N/A	The paleontological assessment report lacks description of many of the laws and regulations governing the protection of paleontological resources for the project area. This information should be added.
-------	--	---------	-----	---

Response to Comment No. 26-E.2-145

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Refer also to Response to Comment No. 35-90 for additional discussion regarding the SVP Guidelines. Additionally, Section IV.D, Geology and Soils, of the Draft EIR contains a regulatory framework subsection on pages IV.D-2 through IV.D-8, which includes a discussion of laws and regulations related to paleontological resources, including the SVP Guidelines, California Penal Code Section 622.5, California Public Resources Code Section 5097.5, and the City of Los Angeles Conservation Element.

Comment No. 26-E.2-146

30. 9	Appendix F Paleontol- ogical Resources Review Memorandum	General	N/A	The paleontological assessment report lacks definition of what are paleontological resources and paleontological significance. This information should be added.
31. 9	Appendix F Paleontol- ogical Resources Review Memorandum	General	N/A	The paleontological assessment report lacks discussion of how paleontological significance is assigned and what significance is assigned to (and for what reasons). This information should be added.

Response to Comment No. 26-E.2-146

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with the CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Definitions of paleontological resources and the basis for assigning paleontological significance are both discussed on pages IV.D-3 and IV.D-4 of the Draft EIR, and are based on the SVP Guidelines. The Appendix G significance threshold for impacts to paleontological resources and the L.A. CEQA Thresholds Guide criteria for evaluating impacts to paleontological resources are included on pages IV.D-17 to IV.D-18 of the Draft EIR.

Comment No. 26-E.2-147

32. 9	Appendix F Paleontol- ogical Resources Review Memorandum	General	N/A	The paleontological assessment report lacks definition of the SVP standards for paleontological sensitivity. This information should be added.
-------	---	---------	-----	--

Response to Comment No. 26-E.2-147

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with the CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Refer to Response to Comment No. 35-90 regarding the SVP Guidelines, definitions, and the analysis of paleontological sensitivity in the Draft EIR.

Comment No. 26-E.2-148

33. 9	Appendix F Paleontol- ogical Resources Review Memorandum	General	N/A	The paleontological assessment report lacks description of the mapped geology within the project area or the geology reported in the geotechnical report (Appendix E). This information should be added.
-------	---	---------	-----	--

Response to Comment No. 26-E.2-148

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with the CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. The Preliminary Geotechnical Engineering Investigation (included in Appendix E.1 of the Draft EIR) as well as Draft EIR Section IV.D, Geology and Soils, pages IV.D-11 through IV.D-15, both contain discussions of the mapped geology within the Project Site. Additional information, including the Dibblee map, is included in the Phase I and Phase II investigations included in Appendix G of the Draft EIR. Refer to Response to Comment Nos. 35-90 and 26-E.2-19, which address the underlying geology of the Project Site as it relates to paleontological resources.

Comment No. 26-E.2-149

34. 9	Appendix F Paleontol- ogical Resources Review Memorandum	General	N/A	The paleontological assessment report lacks any description of the depths and locations within the project area at which the artificial fill, quaternary alluvium, and (alleged) Palos Verdes Sands are exposed or are expected to be encountered. This information should be added.
-------	---	---------	-----	--

Response to Comment No. 26-E.2-149

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Refer to Response to Comment Nos. 13-7, 35-90, and 26-E.2-19 regarding the nature, depth and location of the underlying geology of the Project Site.

Comment No. 26-E.2-150

35. 9	Appendix F Paleontol- ogical Resources Review Memorandum	Page 1	These Pleistocene age alluvial deposits have moderate to high potential to yield paleontological resources.	It is not clear what paradigm for paleontological sensitivity is being used here, but it is assumed that the SVP sensitivity scale is being used, as it is the only one discussed within the assessment. However, there is no "moderate" level for paleontological sensitivity within the SVP sensitivity scale. Under SVP, the Quaternary alluvial deposits have a "high potential" for paleontological resources. The statement should be clarified and supported.
36. 9	Appendix F Paleontol- ogical Resources Review Memorandum	Page 2	A paleontological resources program is recommended for excavation within moderate to high sensitivity geological units	See above comment.

Response to Comment No. 26-E.2-150

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Refer to Response to Comment No. 35-90, which addresses the Project Site's paleontological sensitivity and the terminology used when discussing the type of deposits that have a higher potential to contain paleontological resources.

Comment No. 26-E.2-151

37. 9	Appendix F Paleontol- ogical Resources Review Memorandum	Page 2	Previously discovered fossils in the area have been in older Quaternary age sedimentary deposits known as Pleistocene alluvium and the Palos Verdes Sand.... rodent,	Within this paragraph, it is not clear which localities were recovered from the Quaternary alluvial deposits vs. the Palos Verdes Sands. This is important because the Palos Verdes Sands are a marine terrace deposit
-------	---	--------	--	--

			skunk, horse, and camel at an unstated depth.	and almost certainly do not underlie the project area at construction depths, based on the data from the geotechnical report.
38. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	“Pleistocene alluvium” and the “Palos Verdes Sand”	The Palos Verdes Sands are mentioned multiple times throughout the report, but it is not clear what the authors mean when reporting on this unit. The Palos Verdes Sands have a complicated and contentious definition and nomenclatural history. The lack of discussion of the geology underlying the project area and current understanding of these deposits only serves to muddy the waters here. It is also not clear what the relevance of the Palos Verdes Sands are for the project area, as there appears to be no evidence that they underlie the project area at construction depths (and shouldn't really be expected to, given the modern understanding of this unit). This information should be clarified.

Response to Comment No. 26-E.2-151

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Refer to Response to Comment Nos. 13-7, 35-90, and 26-E.2-19, which address the nature of the underlying geology and sedimentary deposits at the Project Site and the Palos Verdes Sands. Refer to Response to Comment No. 26-E.2-136 regarding the potential for Palos Verdes Sands to occur in the Project area.

Comment No. 26-E.2-152

39. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded	Due to (1) the proximity of the project area to the La Brea asphalt deposits, (2) the fact that Dibblee maps the project area within the same geologic unit as those underlying the Hancock Park, and (3) Dibblee maps the project area within the influence of the Salt Lake Oilfield, it is important to more adequately describe the scientific importance of these asphalt deposits, where they are present, and any geological association.
-------	--	--------	---	--

			millions of Pleistocene fossil plant, insect, and animal specimens.	
40. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded millions of Pleistocene fossil plant, insect, and animal specimens.	It would be prudent to discuss the possibility of localized asphalt-impregnated deposits within the project area. The possibility of pockets of such deposits within the project area should be discussed and evaluated in the paleontological assessment report.
41. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded millions of Pleistocene fossil plant, insect, and animal specimens.	Although the Page Museum is approximately 4,000 feet from the project area, there are multiple La Brea-type known localities that are significantly (>25%) closer to the project area. This includes, at a minimum, localities north of 6th Street (approximately 3,000 feet south of the project area). Additional information should be included.

Response to Comment No. 26-E.2-152

The Paleontological Resources Review Memorandum was prepared in support of the Draft EIR and was written in accordance with CEQA Guidelines and 2010 SVP Guidelines, as stated in the memorandum. Section IV.D, Geology and Soils, of the Draft EIR outlines the existing soil conditions under Subsection 3, Local Geology (in the first and second paragraphs on page IV.D-11). This discussion details fill deposit thickness, depth, and native deposits that lie underneath. Additionally, refer to Response to Comment Nos. 35-90 and 26-E.2-19 for a discussion of the geology underlying the Project Site. Boring logs are provided as part of the Preliminary Geotechnical Engineering Investigation in Appendix E.1 of the Draft EIR. As stated in Response to Comment No. 26-103, “[f]ollowing

extensive subsurface investigations and sampling, tar was noted only in an isolated area near the southwest boundary of the Project Site where a tar collection pit is located and currently collected and disposed of according to applicable regulations on a regular basis when passively filled. It is not expected that any tar will be encountered during construction nor is construction expected to encounter tar seeps or increase tar removal rates.” In addition, revised Mitigation Measure GEO-MM-1 (refer to Response to Comment No. 35-91) calls for a Paleontological Resource Mitigation and Treatment Plan that will provide protocols for high sensitivity deposits, including asphaltic deposits.

The Dibblee maps referred to in this comment were reviewed and discussed in the Paleontological Resources Review Memorandum. As noted in the comment, both the Draft EIR (page IV.D-15) and the Paleontological Resources Review Memorandum (page 2) acknowledge the presence of fossil localities from Park La Brea approximately 4,000 feet south of the Project Site. The analysis contained in both the Paleontological Resources Review Memorandum (refer to pages 1 and 2 of Appendix F) and Section IV.D, Geology and Soils, of the Draft EIR also addresses the presence of fossil localities closer to the Project Site, including those at distances that are less than 4,000 feet away.

Comment No. 26-E.2-153

39. 9	Appendix F Paleontol- ogical Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded millions of Pleistocene fossil plant, insect, and animal specimens.	Due to (1) the proximity of the project area to the La Brea asphalt deposits, (2) the fact that Dibblee maps the project area within the same geologic unit as those underlying the Hancock Park, and (3) Dibblee maps the project area within the influence of the Salt Lake Oilfield, it is important to more adequately describe the scientific importance of these asphalt deposits, where they are present, and any geological association.
40. 9	Appendix F Paleontol- ogical Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in	It would be prudent to discuss the possibility of localized asphalt-impregnated deposits within the project area. The possibility of pockets of such deposits within the project area should be discussed and evaluated in the paleontological assessment report.

			Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded millions of Pleistocene fossil plant, insect, and animal specimens.	
41. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	Approximately 4,000 feet south of the Project Site, localities LACM 7513-7516 from Park La Brea included fossil specimens of snake, sloth, rabbit, rodent, skunk, horse, and camel at an unstated depth. Numerous additional localities are known from the Rancho La Brea asphalt deposits located in Hancock Park approximately 4,000 feet south of the Project Site, a National Natural Landmark that has yielded millions of Pleistocene fossil plant, insect, and animal specimens.	Although the Page Museum is approximately 4,000 feet from the project area, there are multiple La Brea-type known localities that are significantly (>25%) closer to the project area. This includes, at a minimum, localities north of 6th Street (approximately 3,000 feet south of the project area). Additional information should be included.
42. 9	Appendix F Paleontological Resources Review Memorandum	N/A	N/A	The paleontological assessment report does not appear to connect the “older, elevated Quaternary alluvial deposits” with the “older Quaternary age sedimentary deposits,” “Pleistocene alluvium,” and “Palos Verdes Sands.” It should be stated what is meant by each of these terms, their relevance, and how they interrelate. Some of these units are functionally (and practically) equivalent, but this is not stated in the report. As of now, it is not made clear in the report if <i>any</i> of the localities reported by the records search are from the same geologic unit mapped by Dibblee as underlying the project area.
43. 9	Appendix F Paleontological Resources Review Memorandum	Page 2	have been in older Quaternary age sedimentary deposits	As written, it is not clear whether this is saying that the deposits are older than the ones mapped under the project area or if this is referring to a geologic unit termed the “older Quaternary age sedimentary deposits.” This issue (as well as the one described above) stems from the lack of discussion of the geology within and around the project area.

Response to Comment No. 26-E.2-153

Refer to Response to Comment Nos. 35-90 and 26-E.2-19 for a discussion of the underlying geology at the Project Site, as well as a discussion of the geologic terminology used to describe the sediments underlying the Project Site.

Comment No. 26-E.3-1**Exhibit 3—Shannon & Wilson letter**

This letter presents our geotechnical review and hydrological review of a portion of the Draft Environmental Impact Report (DEIR) for the Television City 2050 Specific Plan (Project). Our understanding of the Project is based on our review of the DEIR and our respective expertise in geology and soils discipline and hydrology and stormwater systems.

Our detailed comments with direct references to the DEIR Sections are also provided in the attached Exhibits 1a and 1b. We have summarized our review comments of the DEIR Sections below in italics.

Response to Comment No. 26-E.3-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 26-E.3-2

- **Excavation Support**—The DEIR states that Project excavations may extend to 45 feet below surface. The specific areas of excavation and depths for the Project are not described in the DEIR. Temporary shoring to support proposed excavations is described in the DEIR Sections, consisting of soldier piles with the potential for tieback anchors.

Excavations could impact the properties adjacent to the property line. Temporary shoring should be monitored during excavation along the property line with mitigation plans prepared should ground movement at these locations exceed established thresholds. Tieback anchors, if installed to support the temporary shoring, and could extend into the adjacent properties and should be reviewed and approved by the adjacent property owners prior to their installation. Excavation proposed for the “Project” should be included in revisions to the DEIR. Absent such information, the potential impacts of excavations cannot be adequately assessed.

Response to Comment No. 26-E.3-2

Contrary to the commenter's assertion, the specific areas of excavation and depths are included in the Draft EIR; refer to Figure 3 of the Soil Management Plan, which is included in Appendix G.1 of the Draft EIR.

As discussed in Addendum I, Response to Soils Report Review Letter, prepared by Geotechnologies dated June 3, 2021 (included in Appendix E.3 of the Draft EIR), the Project is currently in the pre-approval process. Preliminarily, a temporary cut-off wall system may be installed for shoring and excavation of the proposed below-grade levels.. Refer to Response to Comment No. 26-71 regarding tiebacks.

The Project's potential impacts associated with excavation were addressed in accordance with CEQA and City policy in Sections IV.A, Air Quality, IV.B, Cultural Resources, IV.C, Energy, IV.D, Geology and Soils, IV.E, Greenhouse Gas Emissions, IV.F, Hazards and Hazardous Materials, IV.G, Hydrology and Water Quality, IV.I, Noise, IV.L, Tribal Cultural Resources, and IV.M, Utilities and Service Systems, of the Draft EIR.

Weekly surveying of the shoring system and the immediate surrounding properties during shoring installation and excavation are required as part of LADBS permit approval process. If ground movement exceeds the regulatory established threshold, the shoring and dewatering design will be re-evaluated and corrective measures will be taken to ensure safety to the Project and to the surrounding properties. As described in the Dewatering Report (Appendix FEIR-13 of this Final EIR), as part of the regulatory requirements for temporary shoring and excavation, construction surveying and monitoring of the surrounding properties immediately surrounding the Project are required for compliance with the Los Angeles Building Code.

Comment No. 26-E.3-3

- **Excavation Dewatering**—Dewatering of groundwater from the excavations is proposed for the Project during construction. Information regarding post-construction dewatering is absent from the DEIR. Our review of the construction dewatering indicates that the drawdown created by unrestrained (i.e., no cut off walls) dewatering could create a cone of depression that would extend hundreds of feet beyond the excavation(s).

Response to Comment No. 26-E.3-3

As discussed in Response to Comment No. 3-7, per Project Design Feature GEO-PDF-1, which is included on pages IV.D-18 to IV.D-19 in Section IV.D, Geology and Soils, of the Draft EIR, the below-grade parking structures will be designed to withstand hydrostatic pressure so that post-construction dewatering will not be necessary.

As described in the Draft EIR and the Dewatering Report in Appendix FEIR-13 of this Final EIR, the temporary dewatering system would include regulatory infiltration control measures, as necessary. Refer to Response to Comment No. 26-69 regarding the incorrect assumptions and methodologies used in the dewatering analysis included in this comment letter, and how the analysis overestimates the nature and extent of the estimated groundwater drawdown.

Comment No. 26-E.3-4

As an example, Figures 1A&B show the estimated drawdown limits based on a preliminary review of the geologic conditions below the Project site and anticipated excavation depths for construction of a parking garage with 3-levels below grade in the southeast portion of the Project site. The distance-drawdown relationships are an approximation of the Theis equation and are considered reasonable for unconfined aquifers when an appropriately large storage coefficient is used.

Response to Comment No. 26-E.3-4

As described in the Dewatering Report (Appendix FEIR-13 of this Final EIR), the Project includes a 21-month temporary dewatering period. The equation referenced in the comment describes a theoretical, ultimate distance drawdown and does not consider infiltration control measures or a time-dependent transient period, which would apply to the temporary dewatering program. While the “appropriately large storage coefficient” value is not reported by the commenter in its analysis, it does not appear to reflect the actual geology of the Project Site, which consists of predominantly fine-grained clays, silts, sandy silts, clayey sands, silty sands with limited sands without fine-grained matrix mixtures. As such, and as described in Appendix FEIR-13 of this Final EIR, the storage coefficient in an unconfined aquifer corresponds to the specific yield (Sy).¹¹⁵ The specific yield (or ratio of pore water to soil volume that can be drained by gravity in an unconfined aquifer) for the predominantly clay- and silt-bearing soils can be low (the Dewatering Report estimates an overall Sy of 10 percent for the bulk water bearing materials). See Section 3.3 of the Dewatering Report for a discussion of the specific yield analysis and rationale. Thus, the inappropriate assumptions and methodology used in the commenters’ analysis combine to overestimate the nature and extent of the estimated temporary groundwater drawdown conditions. Refer to Response to Comment No. 26-69 with regard to this topic.

¹¹⁵ Todd, D. and Mays, L., Groundwater Hydrology, 2005.

Comment No. 26-E.3-5

For the analysis, we have assumed an aquifer thickness of 70 feet, which corresponds to the deepest borings reported to have been completed for the DEIR. Larger than predicted drawdowns can be expected if the saturated thickness is appreciably smaller than has been assumed, or if dewatering were to occur at multiple sites at the same time. The assumed hydraulic conductivity (K) range of 1 foot/day to 10 feet/day generally encompasses the expected values for silty-sand underlying the Project site.

Response to Comment No. 26-E.3-5

As described in the Dewatering Report included in Appendix FEIR-13 of this Final EIR, cone penetrometer (CPT) and hydraulic profiling tool (HPT) results found approximately 85 percent of Project Site soils tested showed hydraulic conductivity (K) values of 0.1 feet/day or less. The data demonstrates that the bulk K values for the Project Site are much less than the K values of 1 and 10 feet/day used in the commenter's analysis. The K value of 10 feet/day used in the commenter's analysis is more representative of a sand, and their assumption of 1 to 10 feet/day is 10 to 100 times greater than the results of the Project Site-specific analysis in the Dewatering Report. Accordingly, the distance-drawdown estimates in Figures 1A and 1B of this comment letter overstate the nature and extent of the estimated drawdown.

Comment No. 26-E.3-6

The distances are representative of isolated construction. The drawdown depressions and limits would be greater for additional excavations proceeding concurrently, which may be necessary to develop the Project per the conceptual site plan.

Response to Comment No. 26-E.3-6

Concurrent excavation dewatering of the excavation areas shown in Figure 3 of the Soil Management Plan (included in Appendix G.1 of the Draft EIR) is anticipated to occur. As described in Appendix FEIR-13 of this Final EIR, the Dewatering Report provides a conservative distance-drawdown analysis for the largest of the deep excavations on the north property boundary (Area 2). Given the variable depth and location of the excavations, drawdown limits would not be greater than that stated in the Dewatering Report. For example, because of the shallow depths (7.5 to 11 feet bgs), excavation Areas 4A, 4B, and 5 are expected to require limited dewatering and create limited groundwater drawdown. Also, excavation Area 6, which is located in the southeast portion of the Project Site, is expected to have limited hydraulic influence (i.e., overlapping drawdown) with the other excavations. Table 1 in the Dewatering Report lists the estimated groundwater dewatering volumes for each proposed excavation area, based on the conservative

assumption that each excavation area would be dewatered on its own. If excavation areas are dewatered simultaneously, the estimated dewatering quantities in Table 1 of the Dewatering Report would likely be reduced due to the merging and overlap of excavation cones of depression. Further, as stated in Appendix D of the Dewatering Report, since the Area 2 excavation represents the largest by volume of the deeper excavations of the Project, approximately the same groundwater cone of depression could be anticipated to extend radially from the edges of the overall excavation if all excavation areas are dewatered simultaneously.

Comment No. 26-E.3-7

Lowering of the groundwater table could result in ground settlement. Dewatering of the excavations could have a significant impact on adjacent properties, which could include building distress on unreinforced structures with shallow foundations. Drawdown of the groundwater table proposed for the excavations could induce settlement at the adjacent properties.

Response to Comment No. 26-E.3-7

The Dewatering Report included in Appendix FEIR-13 of this Final EIR uses a numerical groundwater model to evaluate the depth and extent of groundwater drawdown during temporary construction dewatering. The estimated temporary cone of depression for 8 months and 21 months is provided in Figures 8A and 8B of the Dewatering Report. The temporary cone of depression estimates in the Dewatering Report were compared to historical groundwater level fluctuations recorded at the Project Site. Based on a comparison of these data and analyses, the report confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction, including settlement and subsidence effects, would be less than significant. Refer to the Subsidence Technical Memorandum prepared by Geotechnologies included as Appendix D of the Dewatering Report.

Comment No. 26-E.3-8

The DEIR should include a comprehensive discussion of ground settlement potential due to dewatering and evaluation of proposed cut-off wall design. In the absence of such information, it is impossible to accurately gauge the risk of construction dewatering. We recommend development of mitigation measures to address the potential for offsite lowering of the groundwater table, and monitoring and reporting of groundwater levels during construction.

Response to Comment No. 26-E.3-8

Refer to Response to Comment Nos. 3-7, 11-5, and 11-25 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts, and Response to Comment Nos.

11-25, 16-74, and 16-85 for further discussion of settlement and subsidence. Also refer to Response to Comment No. 26-E.3-7. As discussed therein, the Dewatering Report confirms the Draft EIR's conclusions that impacts related to dewatering and settlement would be less than significant. Thus, no mitigation or other measures is required.

Comment No. 26-E.3-9

Mitigation plans should be developed if ground movement at the perimeter of the Project exceed established thresholds.

Response to Comment No. 26-E.3-9

Refer to Response to Comment No. 26-E.3-2 with regard to surveying and monitoring of the shoring system and ground movement.

Comment No. 26-E.3-10

- **Mobilization of Contaminant Plumes**—Dewatering is likely to induce offsite expansion of potential contaminant plumes nearby or adjacent to the site.

Groundwater contamination has been reported at the Project site and vicinity (GeoTracker, 2022). Dewatering at the Project site has the potential for existing contaminant plumes to be enlarged and possibly brought under adjacent properties, which could include the Broadcast Center Apartments, Farmers Market and The Grove. Existing plumes would extend towards the areas of pumping for dewatering of excavations. Discussion of existing groundwater contamination and plume migration due to dewatering is not addressed in the DEIR. The DEIR should analyze the potential impacts of dewatering on plume migration.

Response to Comment No. 26-E.3-10

In response to comments regarding the Draft EIR's dewatering analysis, an evaluation of dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction would be less than significant. Refer to Response to Comment Nos. 26-88 through 26-93 and 26-113 regarding groundwater contaminant movement. While there have been a number of groundwater cleanup projects in the area, at this time the appropriate regulatory agencies have reviewed and approved either no-further-action or completion of remediation activities

for these sites.¹¹⁶ No Further Action indicates the appropriate regulatory agency has deemed the cleanup to be acceptable within regulatory standards. Thus, while there can be low-level concentrations of residual chemicals dissolved and detected in groundwater, there are no known off-site contaminant plumes near or upgradient of the Project Site (within approximately 1,300 feet of the Project Site) as incorrectly asserted in the comment, and therefore no such plume would be mobilized by temporary dewatering during construction.

Comment No. 26-E.3-11

- **Oil Production**—From our experience in the Project vicinity, there is potential for past oil production to impact the Project site. There is no mention of the previous oil production activity adjacent to, and potentially on site in the geotechnical report (Geotechnologies, 2022). There is no discussion of tar in the geotechnical report text, but tar is noted in at least one boring, and dark gray to black soil descriptions in the boring logs suggest naturally occurring petroleum is present at other borings.

There is the potential to encounter buried and unplugged or poorly abandoned wells or petroleum saturated soils during Project construction. The potential for damage from petroleum saturated soils on the Project site, including obnoxious odors, dust, and staining transported by wind or water to adjacent properties during construction, should be evaluated in the DEIR.

Response to Comment No. 26-E.3-11

Refer to Response to Comment No. 13-4 regarding oil and testing and disposal requirements for any contamination encountered.

Refer to Response to Comment No. 26-38 regarding odor monitoring. As discussed therein, any residual concentrations would be appropriately managed during all soil disturbance activities through implementation of the protocols described in the Soil Management Plan (included in Appendix G.1 of the Draft EIR) set forth in Mitigation Measure HAZ-MM-1. Required protocols would address soil sampling and analysis, stockpiling of affected soils, soil re-use, decontamination, and dust control.

Comment No. 26-E.3-12

- **Liquefaction Potential**—We noted discrepancies in the data analyzed for the liquefaction potential, including field and laboratory data not matching the

¹¹⁶ California State Water Quality Control Board, GeoTracker, <https://geotracker.waterboards.ca.gov>, accessed February 2023.

information included in the analyses tables provided in the DEIR Sections. Therefore, there is a potential for liquefaction and related distress at the Project site.

The potential for liquefaction at the Project site could impact the Project site and adjacent properties. If liquefaction does exist and is not mitigated during Project design and construction, resulting distress to the Project from liquefaction-induced ground movement could include, for example, damage to underground utilities. Our review of the data indicates up to four inches of potential ground settlement. The Project geotechnical engineer should review their data to confirm the potential for liquefaction. The DEIR should be revised to correct the discrepancies noted and recirculated.

Response to Comment No. 26-E.3-12

Minor typographic errors and discrepancies in some of the data presented in the boring logs and the liquefaction analyses were discovered by the commenter as discussed in Comment No. 26-E.3-15. Since the borings for the Draft EIR were performed in 2019, the soil samples have already been disposed of, which is standard practice, and are therefore no longer available for additional laboratory testing.

In response to this comment, two additional borings were drilled at the Project Site to confirm the geotechnical analysis and conclusions in the Draft EIR. Refer to Appendix FEIR-19. The additional borings were excavated on November 3, 2022, and November 4, 2022. The two additional geotechnical borings, identified as B20 and B21, were drilled adjacent to B12 and B14, respectively.

The boring locations are shown in the boring location graphic included as Appendix FEIR-19. Consistent with the Draft EIR liquefaction analysis, which is discussed on pages 9 to 11 of the Preliminary Geotechnical Engineering Investigation, included as Appendix E.1 of the Draft EIR, the supplemental and confirmatory liquefaction analyses were performed for the two additional borings following the California Geologic Survey Special Publication 117A.¹¹⁷ Based on the additional explorations and analyses, the potential for liquefaction at the Project Site remains low, and the geotechnical recommendations and conclusions provided in Appendix E.1 of the Draft EIR remain applicable for the Project. Thus, the Draft EIR correctly concluded that impacts associated with liquefaction would be less than significant.

¹¹⁷ California Geological Survey (CGS), 2008, Special Publication 117A Guidelines for Evaluating and Mitigating Seismic Hazards in California.

Comment No. 26-E.3-13

- **Expansive Soil Potential**—Mitigation of the expansive soil potential is poorly explained.

The potential for damage from expansive soils at the Project site should be better defined so that any mitigation measures do not affect the adjacent properties.

Response to Comment No. 26-E.3-13

The Draft EIR comprehensively analyzed potential geologic and soils hazards in Section IV.D, Geology and Soils, of the Draft EIR, including the potential for the Project to cause or exacerbate direct or indirect impacts associated with existing environmental conditions, including fault rupture, ground shaking, soil liquefaction, soil expansion, and/or landslide. Impacts regarding these topics are based on the Preliminary Geotechnical Engineering Investigation, Addendum I—Response to Soils Report Review Letter (Geotechnical Addendum I), and Addendum II—Additional Geotechnical Comments (Geotechnical Addendum II), all prepared by Geotechnologies, Inc. and provided in Appendix E of the Draft EIR. The Preliminary Geotechnical Engineering Investigation and Geotechnical Addendum I were reviewed and approved by LADBS in May and August 2021.

As analyzed on pages IV.D-19 to IV.D-28 in Section IV.D, Geology and Soils, of the Draft EIR, in accordance with CEQA Guidelines Appendix G, the Project would not directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving fault rupture, strong seismic ground shaking, seismic-related ground failure (including liquefaction), or landslides; result in substantial soil erosion or the loss of topsoil; be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse; be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property; have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of wastewater; or directly or indirectly destroy a unique geologic feature. Therefore, impacts related to geology and soils would be less than significant, and no mitigation is required.

See page 17 of the Preliminary Geotechnical Engineering Investigation (Appendix E.1 of the Draft EIR), which describes the approach for addressing expansive soils. The soils underlying the Project Site consists of stratified layers of silty and clayey sands, sands, sandy silts, sandy clays and silty clays. The Expansion Index for the surficial soils in the upper 5 feet are in the range of 35 to 130, corresponding to low to very high expansion range. The recommended grading for the proposed at-grade building pads will blend the onsite fill soils. Additional testing will be performed during the grading process to

determine the expansion potential of the fill pad below the at-grade structures. At a minimum, LADBS Information Bulletin P/BC 2017-116 (Foundation Design for Expansive Soils) will be implemented into the final building design to address potential expansive soils, as necessary. The proposed subterranean structures will be designed to address the effects of expansive soils and hydrostatic pressure. All structural plans will be submitted for review and approval by the local jurisdiction prior to construction. Expansive soil conditions will be considered and evaluated when determining the appropriate shoring and dewatering methods. Preservation of the neighboring properties, in addition to other design factors, will be considered in the decision and design process. Final shoring plans for individual buildings will be submitted to the City for review and approval prior to construction. Compliance with applicable regulatory requirements will be ensured by the plan check review process.

Comment No. 26-E.3-14

- **Groundwater Characteristics**—There is insufficient information to support the hydrology and groundwater quality determinations of non-significant impact. For example, information on direction and rate of groundwater movement is lacking.

As noted above, there could be significant groundwater-related impacts to surrounding properties during construction of the Project. In addition, if post-construction dewatering is required, there could be significant impacts during Project operation.

Response to Comment No. 26-E.3-14

Refer to Response to Comment No. 11-5 regarding groundwater quality. Refer to the Hydrology and Water Quality Report included as Appendix H of the Draft EIR for a detailed discussion of the hydrology of the Project Site. As discussed in Response to Comment No. 3-7, the Project would require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment No. 11-25 regarding the Draft EIR's analysis of impacts related to dewatering.

Comment No. 26-E.3-15

- **Stormwater Detention**—Our review indicates that implementation of Low Impact Development (LID) stormwater standards may require the detention of up to 636,000 gallons on Project site, which could require additional excavation or above ground water storage structures (e.g. tanks) beyond that required for Project buildings.

Stormwater detention could require additional excavation that would likely require dewatering and associated impacts with groundwater drawdown. Evaluation of

this potential impact should consider all planned subsurface structures, including those needed for stormwater detention.

Response to Comment No. 26-E.3-15

As discussed in Response to Comment Nos. 3-4, 3-7, and 11-5, the Project would include the installation of a capture and reuse system to be used for irrigation purposes, consistent with the LID Ordinance. As stated in Section 5.2.2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR, the Project will capture and reuse up to approximately 625,000 gallons of water; refer to Response to Comment No. 26-E.1-6.

Furthermore, excavation for the capture and reuse retention tanks is accounted for in the overall excavation volumes. Excavation means and methods for Project Site stormwater retention will be similar to those used in other parts of the Project consisting of either laid back earth berms, located within the cut-off wall system, or soldier piles with lagging. Similarly, dewatering needs during the excavation for storage tanks will be included in the dewatering plan for individual buildings. The development of these systems will take into account the precise geology of the specific locations. Therefore, construction methods for subsurface elements have been addressed.

Comment No. 26-E.3-16

- **Cumulative Impacts**—To determine potential significance of Cumulative Impacts, the L.A. CEQA Thresholds Guide calls for identification of “the related projects that could affect the same surface water body or flood plain as the proposed project” and “those located over the same groundwater basin” and analysis of the combined effect of the Project and the others so identified. Although there is a list and map of related projects on pages III-9 to III-15 of DEIR section III (Environmental Setting), there are no descriptions in DEIR section IV.G (Hydrology and Water Quality) of the subset of those projects that might affect the same surface water bodies or groundwater basins and how they might do so, nor of the potential cumulative impact of the Project with those other specific projects. Further it is unclear if the list of related projects includes all projects that could impact the same groundwater basin and the DEIR does not consider other related projects through 2043 buildout that could impact the same basin.

Cumulative impacts to hydrology and water quality are not fully analyzed.

Response to Comment No. 26-E.3-16

As discussed in Sections 6.2.1 and 5.2.2 of the Hydrology and Water Quality Report, included as Appendix H of the Draft EIR, the Project, as well as related projects, will be required to comply with both the City of Los Angeles LID Ordinance for stormwater quality

and the Los Angeles County Hydrology Manual for management of stormwater volume/discharge. All projects required to comply with the City of Los Angeles LID Ordinance are required to implement post construction BMPs that will reduce total suspended solids and pollutants leaving the Project Site. Collectively, these BMPs would improve water quality when compared with existing conditions. As discussed in Section 6.2.1 of the Hydrology and Water Quality Report, the Project Site is currently approximately 90 percent impervious, and is expected to remain approximately 90 percent impervious post-construction. Therefore, the Project will not increase the peak flow rate discharge from the Project Site, and cumulative impacts associated with the Project and related projects will be less than significant.

Refer to Response to Comment No. 26-112 for a discussion of the potential impacts to groundwater and the LA CEQA Threshold Guide.

Refer to Response to Comment No. 26-159 regarding the related projects that were analyzed in the Draft EIR.

Comment No. 26-E.3-17

- **Surface Water**—Additional information is needed to support the hydrology and quality determination of non-significant impact.

Response to Comment No. 26-E.3-17

Refer to Response to Comment Nos. 11-5, 13-8, and 26-111.

Comment No. 26-E.3-18

The above comments should be used as general guidance with respect to conflicts relative to the potential impacts of the proposed construction and development of the Project. Based on the lack of specific design specifications in the DEIR Sections, additional concerns could be raised as the Project design advances.

We appreciate the opportunity to be of continued service to you on this project. Please call if you should have any questions or if we can be of further assistance.

Response to Comment No. 26-E.3-18

The issues raised by the commenter are addressed in Response to Comment Nos. 26-E.3-2 through 26-E.3-17. As demonstrated therein, the analysis in the Draft EIR meets the requirements of CEQA.

Comment No. 26-E.3-20

Exhibit 1a—CBS Television City DEIR Review of Geology and Soils Discipline Report

Section IV.D—Geology and Soils			
Page #	Section	Text	Comment
IV.D-11	2.b (3) b	“...groundwater level in all of the boreholes rose to depths between eight and 15.5 feet bgs, indicating an artesian groundwater condition...”	How was groundwater measured? How long were the boreholes left open between drilling and backfill? At what depth is the “relatively impermeable clay layers”? Were wells and/or vibrating wire piezometers installed in any of the

			borings? Given the proposed dewatering for the excavations, additional data should be collected to better define the groundwater pressures in the different aquifers and the depth/continuity of the aquitards.
--	--	--	---

Response to Comment No. 26-E.3-20

Refer to pages 3 to 12 of Draft EIR Appendix E.1, Preliminary Geotechnical Engineering Investigation and the site plan and boring logs attached thereto, beginning on PDF page 71, for details on the geotechnical investigation. Refer also to page 8 of the Site Summary Report, included in Appendix G.1 of the Draft EIR, for a discussion of the historical investigations of the Project Site, including an evaluation of depth to groundwater. The desktop study referenced therein was based on historical groundwater potentiometric maps from groundwater monitoring reports for the former Texaco station that was located within the Project Site boundary, which are available in the State of California Geotracker database. Additional information on the Project Site subsurface hydrogeology and groundwater conditions is provided in the Dewatering Report (Appendix FEIR-13 of this Final EIR). Also refer to Response to Comment No. 26-69 with regard to this topic. Additional groundwater studies are expected to be performed during the City's regulatory permitting process (see LABC Sections 1803.5.4 and 1805.1.3).

Comment No. 26-E.3-21

IV.D-12	2.b (3)c	Liquefaction analyses were performed at five-foot intervals within 12 of the 19 exploratory borings conducted on-site.	In our review of the liquefaction analyses provided in Appendix E, we noted discrepancies in the data analyzed for the liquefaction hazard. Specifically, laboratory data did not match what was inputted on the spreadsheet table. Based on review of the data provided in the logs and laboratory testing of Borings 12 and 14, our analyses indicate liquefaction occurring in both borings, resulting in up to four inches of potential ground settlement.
---------	----------	--	--

Response to Comment No. 26-E.3-21

Refer to Response to Comment No. 26-E.3-12.

Comment No. 26-E.3-22

IV.D-14	2.b(3)d	Subsidence and ground failure, “No large-scale extraction of groundwater, gas, oil, or geothermal energy currently occurs or is planned at the project site.” “Based on the age of the older surficial sediments that underlie the Project site, subsidence is not anticipated on-site.	The site is at the western boundary of a previously active oil field. Is there evidence of continued subsidence from past extraction? Dewatering is proposed for the project during construction. Drawdown of the groundwater table proposed for the excavation could induce settlement on adjacent properties
---------	---------	---	---

Response to Comment No. 26-E.3-22

As stated in the Geotechnical Addendum II, included in Appendix E.5 of the Draft EIR, the Project Site is not located within an area of known subsidence due to withdrawal of oil or any other fluid. According to the Geologic Map of the Hollywood and Burbank (South ½) Quadrangles, Los Angeles, California (Dibblee, Map DF-30), the Project Site is underlain by Older Surficial Sediments. Due to the age of the sediments, subsidence is not anticipated for the Project Site soils. Refer to Response to Comment Nos. 3-7, 11-5, 11-25, 16-74, and 16-85 with regard to the temporary construction dewatering and potential for subsidence. The Dewatering Report, included as Appendix FEIR-13 of this Final EIR, confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction, including settlement and subsidence effects, would be less than significant.

Comment No. 26-E.3-23

IV.D-14	2.b(3)d	Expansive soils	
IV.D-24	3.d. Threshold (c).(1)	“Although dewatering operations are expected during construction, such activities would be limited and temporary and would not involve large-scale water extraction”	What is considered large-scale? Will dewatering reduce groundwater table on adjacent properties?

Response to Comment No. 26-E.3-23

Refer to Response to Comment Nos. 11-5, 11-25, and 26-61 for a summary of the drawdown and radius of influence estimates resulting from temporary dewatering during construction of the Project. The Dewatering Report included in Appendix FEIR-13 of this Final EIR provides estimates of pumping rates, water-level drawdown, and cone of depression radius of influence for the estimated 21-month temporary dewatering period. See Figures 8A and 8B of the Dewatering Report for the estimated temporary cones of depression and Table 1 of the Dewatering Report for estimated groundwater dewatering

quantities. As discussed in the Dewatering Report, approximately 40,600 gpd would be dewatered during the 21-month dewatering period. In comparison, the maximum projected operational water demand for the Project is approximately 269,123 gpd (see Table IV.M.1-6 in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, of the Draft EIR).

Comment No. 26-E.3-24

IV.D-24	3.d. Threshold (c).(1)	"...localized fill was encountered at a depth of 20 feet...[with] highly saturated and soft soils"	Clarify if the soils will remain in place or excavated. If the latter, will unacceptable soil be exported offsite?
---------	------------------------	--	--

Response to Comment No. 26-E.3-24

Soil or fill excavated as a result of the construction will be exported. Refer to Response to Comment No. 13-4 in regard to off-site disposal of potentially impacted soils.

Comment No. 26-E.3-25

General	Oil Wells and Natural Gas	The City of LA CEQA Threshold Guidelines requires review of active or planned oil or natural gas extraction.	The project site is located at the boundary of a previously active oil field Proximity to oil wells (active or abandoned) and other potential impacts to the site and surrounding properties are not addressed in the geologic section of the DEIR.
---------	---------------------------	--	---

Response to Comment No. 26-E.3-25

Refer to Response to Comment Nos. 13-4 and 13-6 for a discussion of the investigation of and potential impacts from naturally occurring oil, petroleum or tar at the Project Site.

Comment No. 26-E.3-26

Page 9 of 4/22/2021 Report	Liquefaction Analyses	"...groundwater level for the Project site is approximately 8 feet below the ground surface..."	Artesian groundwater conditions are indicated in the reports, suggesting a higher groundwater table (at or near the ground surface). However the artesian aquifer depth is not identified.
----------------------------	-----------------------	---	--

Response to Comment No. 26-E.3-26

Refer to Response to Comment No. 26-E.3-20 regarding groundwater levels. Artesian groundwater conditions or aquifers (also known as confined or pressure aquifers)

refers to when groundwater is confined under pressure greater than atmospheric by overlying relatively impermeable strata. In a well penetrating such an aquifer, the water level will rise above the level of the confining bed (from Groundwater Hydrology, Todd and Mays, 2005). Overall, the shallow aquifers in the Hollywood Subbasin, including the semi-perched zone found at the Project Site, are reported to exhibit unconfined conditions (not confined or artesian conditions) with an average depth to groundwater ranging from approximately 8 to 10 feet bgs.¹¹⁸ During borehole drilling, some borings may have encountered limited, temporary semi-confined conditions or very slow groundwater recharge, that appeared to suggest limited artesian rising water levels. Based on the extensive groundwater monitoring and subsurface investigations performed to date to approximately 80 feet bgs, overall unconfined conditions are not expected to cause a higher water table than is currently projected.

Comment No. 26-E.3-27

Page 18 of 4/22/2021 Report	Methane Zones	The project is located in a methane zone.	The project is located in the Salt Lake oil field, and will likely encounter methane and hydrogen sulfide gas. Mitigation measures in accordance with the City of LA should be implemented to protect the project and surrounding properties as discussed in the report.
-----------------------------	---------------	---	--

Response to Comment No. 26-E.3-27

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Project's location within a methane zone and methane mitigation.

Comment No. 26-E.3-28

Page 37 of 4/22/2021 Report	Temporary Dewatering	"it is recommended that a qualified dewatering consultant should be retained during the design phase of the project."	Preliminary calculations indicate that the cone of depression created by dewatering the proposed excavations could create a large cone of depression that would extend hundreds of feet beyond the excavation(s) and onto adjacent properties.
-----------------------------	----------------------	---	--

¹¹⁸ DWR, California's Groundwater Bulletin 118, Coast Plain of Los Angeles Groundwater Basin, Hollywood Subbasin, 4-11.02, 2004

Response to Comment No. 26-E.3-28

Refer to Response to Comments Nos. 11-25, 26-64, and 26-69 regarding the dewatering system and the cone of depression estimates.

Following completion of construction, dewatering will cease, and groundwater conditions are expected to recover to general pre-construction conditions, although seasonal groundwater fluctuations will continue to occur.

Comment No. 26-E.3-29

Boring Log Number 7—Plate A-7c of 4/22/2021 Report	Tar is in the Description	Tar is encountered below 60 feet.	There is no discussion of tar in the report text, but tar is noted in at least one boring. The reports should address risks of tar being encountered to the project.
--	---------------------------	-----------------------------------	--

Response to Comment No. 26-E.3-29

Refer to Response to Comment Nos. 13-4, 16-64, and 26-80 regarding the limited extent of tar being detected in subsurface soils to date and the management of any tar discovered during construction.

Comment No. 26-E.3-30

Exhibit 1b—CBS Television City DEIR Review of Hydrology & Water Quality Discipline Report

Section IV.G—Hydrology & Water Quality			
Page #	Section	Text	Comment
IV.G-1–IV.G-18	2.a	Regulatory framework	Regulations are well-described, but lack clear explicit statement of applicability to Project, or lack thereof. This could be remedied in most instances by a simple statement of the way that the regulation constrains the project or the DEIR

Response to Comment No. 26-E.3-30

All of the regulations described in Subsection 2.a of Section IV.G, Hydrology and Water Quality, of the Draft EIR are applicable to the Project, and the descriptions are consistent with City policy and CEQA.

Comment No. 26-E.3-31

IV.G-20	2.b.2.a	The average wet weather flow is at least 10 times higher during large storms	“average” wet weather flow and flow “during high storms are not likely to be the same thing, unless average wet weather is constant large storms. Delete word “average”. [sic]
---------	---------	--	--

Response to Comment No. 26-E.3-31

The language on page IV.G-20 of the Draft EIR is from page 21 of the Hydrology and Water Quality Report, included as Appendix H of the Draft EIR. Appendix H includes Footnote No. 13 citing the source of the information as the City of Los Angeles Stormwater Program’s website on the Ballona Creek Watershed.

Comment No. 26-E.3-32

IV.G-21	Figure IV.G-1		<p>Potential runoff locations are all at south edge of property, which makes sense. But it means that any excavation that might be required to accommodate, for instance, the Oldcastle STORMCAPTURE or cistern (see Hydrology Report section 522 comments), will be right at the south boundary, with corresponding potential to affect off-site groundwater levels, at least during construction.</p> <p>Also, given lack of catch-basin and conveyance from southwest corner of Drainage Area A-2. where will captured water go from there?</p>
---------	---------------	--	--

Response to Comment No. 26-E.3-32

Refer to Response to Comment Nos. 3-4, 3-7, and 26-111 regarding hydrology and water quality.

It is expected that the depth to groundwater ranges from approximately 8 and 10 feet bgs, and the depth of the cistern will range between approximately 8 and 12 feet bgs. It is estimated that the potential feature will have limited intrusion into groundwater, if any. Overall, it is estimated that the potential feature will have minimal effect on groundwater flow if it intercepts groundwater because it is not expected to extend more than 2 feet. Proper drainage infrastructure, including but not limited to catch basins, pipes, etc., will be used to capture and convey the storm water from the drainage areas to the LID treatment system with an ultimate discharge to the City of Los Angeles storm drain system.

Comment No. 26-E.3-33

IV.G-24	2.b.4.c	There are no groundwater production wells or public water supply wells within the Project Site or in the surrounding vicinity.	Define “vicinity”
---------	---------	--	-------------------

Response to Comment No. 26-E.3-33

As stated on page IV.G-32 in Section IV.G, Hydrology and Water Quality, of the Draft EIR, “there are no existing groundwater production wells or public water supply wells within one mile of the Project Site.”

Comment No. 26-E.3-34

IV.G-28	3.c	No specific Project design features are proposed...	<p>Lack of specific design features makes it intrinsically difficult to assess significance of potential impacts.</p> <p>DEIR Section V. Alternatives has some differentiation with respect to Hydrology & Water Quality impacts; how were these determined if not by comparison of specific design features, and where is the rationale for the differences presented if not in this section?</p> <p>Also, DEIS [sic] Section II. Project Description describes some specific design features; do none of these have any possibility of affecting Hydrology & Water Quality, and are there no anticipated design features that might (such as location/depth of underground parking or cisterns)?</p>
---------	-----	---	--

Response to Comment No. 26-E.3-34

All of the relevant information, including physical parameters and design of the Project, needed to evaluate potential impacts associated with hydrology and water quality is included in Section II, Project Description, Section IV.G, Hydrology and Water Quality, and Appendix H, Hydrology and Water Quality Report, of the Draft EIR. Refer to page IV.G-30 of the Draft EIR for an overview of the system that would be used on-site to manage drainage and runoff. The Draft EIR concluded that potential impacts related to hydrology and water quality would be less than significant without PDFs or mitigation measures. As described in detail in Section V, Alternatives, of the Draft EIR, the differing impacts associated with hydrology and water quality between the Project and the alternatives are based on the differing physical elements, including but not limited to the

amount of impervious surfaces, depth of grading, overall amount of development, and amount of grading and overall construction activities. As stated on page V-14 of the Draft EIR, the alternatives analysis assumed that the alternatives would implement the same PDFs and mitigation measures as the Project.

Comment No. 26-E.3-35

4	2	"plans, policies, and programs... include"	Is this an exhaustive list? If it is, say so. As written, it leaves reader unclear if there may be any other relevant plans, programs, or policies.
5–20	2.1–202	Description of plans/policies/programs	All subsections lack clear explicit statement of applicability to Project, or lack thereof.

Response to Comment No. 26-E.3-35

The pages of the Hydrology and Water Quality Report (Appendix H of the Draft EIR) referenced in this comment include the applicable regulatory plans, policies, and programs related to the CEQA analysis of hydrology and water quality impacts. This description is consistent with City policy and CEQA.

Comment No. 26-E.3-36

20	3.1.1	Watershed description	Should include a map showing Project site watershed and sub-watershed w/landcover, precipitation, streams, and drains. (Figure 1 is inadequate to orient reader)
----	-------	-----------------------	---

Response to Comment No. 26-E.3-36

Section 3.1.1 of the Hydrology and Water Quality Report describes the regional surface water hydrology, and Figure 1 therein shows the Project location in the designated, regional (Los Angeles County) Ballona Creek watershed map.

Comment No. 26-E.3-37

20–21	3.1.1	Average dry weather flow is 25 cfs Average wet weather flow is 10x, (-250 cfs), even more during large storms Ballona Ck 50-yr design discharge 71,400 cfs	Is 250 cfs a winter base flow? How big are typical large storms? What is the frequency/duration of wet weather? Are peak flows flashy or sustained?
-------	-------	--	--

			It is difficult to get a sense of the surface water regime from this section.
--	--	--	---

Response to Comment No. 26-E.3-37

Section 3.1.1 of the Hydrology and Water Quality Report (Appendix H of the Draft EIR) describes in detail the existing Ballona Creek watershed flow conditions, as published by the City of Los Angeles Storm Water Program. See footnotes 13 and 14 in Appendix H, Hydrology and Water Quality Report, of the Draft EIR for publicly available information on the Ballona watershed and stormwater. This information pertains to the Ballona Creek watershed, not the Project.

Comment No. 26-E.3-38

21	3.1.2	Project Site slope, aspect, and drainage system description	This is project site description, which would fit better in section 3.1.3; what is local hydrology like? Anything drain into the site?
----	-------	---	--

Response to Comment No. 26-E.3-38

Section 3.1.2 of the Hydrology and Water Quality Report (Appendix H of the Draft EIR) describes the conditions local to the Project Site and the surrounding streets. Section 3.1.3 therein describes the tributary areas on the Project Site.

Comment No. 26-E.3-39

22	3.1.3 Table 1	Existing drainage runoff calculations	How were these numbers generated? Assuming it is explained elsewhere. provide section reference. What total volumes are generated during this storm?
----	---------------	---------------------------------------	---

Response to Comment No. 26-E.3-39

The calculations were completed using the Los Angeles County Department of Public Works Hydrology manual. Calculations are included in Figure 4 of the Hydrology and Water Quality Report, Appendix H, of the Draft EIR. Refer to Response to Comment No. 16-74 regarding drainage and stormwater runoff.

Comment No. 26-E.3-40

22	3.2.2	In general urban stormwater runoff occurs following precipitation events, with volume... depending on the intensity and duration...	The section statement shows why some information on storm timing and intensity would be appropriate in section 3 1
----	-------	---	--

Response to Comment No. 26-E.3-40

Refer to pages IV.G-34 through IV.G-37 of Section IV.G, Hydrology and Water Quality, of the Draft EIR for the evaluation of the change in surface water runoff patterns and quantity of the Project Site due to the construction and operation of the Project, and the impact of these changes on the existing downstream stormwater system. As part of the surface water hydrologic analysis, stormwater runoff generated from the Project Site was quantified using the Modified Rational Method, which accounts for storm timing and intensity.

Comment No. 26-E.3-41

23	3.3	Groundwater Hydrology	Section 12 states this is about GWL; use same term(level or hydrology) in both locations; this section has more than just GW "level", [sic] but less than is needed for GW "hydrology". [sic]
----	-----	-----------------------	---

Response to Comment No. 26-E.3-41

Refer to Response to Comment Nos. 3-4, 3-7, and 16-85 for a detailed discussion of groundwater hydrology and groundwater resources.

Comment No. 26-E.3-42

23	3.3.2	Local	What direction(s) does GW flow locally? LA CEQA Thresholds Guide calls for identification of "direction of flow" along with other groundwater characteristics.
----	-------	-------	--

Response to Comment No. 26-E.3-42

Refer to Response to Comment No. 26-E.1-65 regarding the information about groundwater flow and other characteristics that was included in the Draft EIR.

Comment No. 26-E.3-43

24	3.3.3	Project Site	Describes GW levels, but not (inferred) direction of flow. The latter could be important. We can assume that groundwater water is flowing from north to south, but there may be some gradient direction changes on site, which should be discussed if dewatering is going to occur.
----	-------	--------------	---

Response to Comment No. 26-E.3-43

Refer to Response to Comment No. 26-E.1-65 regarding the information about groundwater flow and other characteristics that was included in the Draft EIR.

Comment No. 26-E.3-44

24	3.4.1, 3.4.2	Regional and Local constituents of concern	What is the current state of groundwater quality? There is no data or discussion either on site quality or adjacent off-site quality in this section of the DEIR. Does a constituent of concern imply widespread presence, or just potential for contamination?
----	--------------	--	--

Response to Comment No. 26-E.3-44

Refer to Response to Comment Nos. 13-4, 26-79, and 26-87 with regard to the investigation of the Project, including off-site groundwater quality. Refer to Response to Comment Nos. 16-28, 26-111, and 26-113 regarding the Draft EIR's analysis of impacts related to groundwater quality. A constituent of concern is generally defined as follows: constituent of concern means any substance defined as a hazardous substance, hazardous waste, hazardous material, pollutant or contaminant by any environmental law or regulation. It does not imply widespread presence. Also see pages IV.F-1 to IV.F-20, Regulatory Framework, of the Draft EIR regarding definitions of hazardous wastes (i.e., Safe Drinking Water and Toxic Enforcement Act (HSC Section 25249.5 et seq.)).

Comment No. 26-E.3-45

24	3.4.3	Pervious parking 10% of site	Minimal contribution to groundwater recharge (due to small area) does not necessarily mean minimal contribution to groundwater pollution. That would depend on concentration of pollutants and their ability to get through
----	-------	------------------------------	---

			permeable pavement and down 10 or so feet to groundwater. Insubstantial contribution argument needs more support.
--	--	--	---

Response to Comment No. 26-E.3-45

The pavement at the Project would not be permeable as the underlying soils are not suitable for infiltration per the Preliminary Geotechnical Engineering Investigation (Appendix E.1 of the Draft EIR). Refer to Response to Comment Nos. 3-4, 3-7, and 11-5 for a discussion of the installation of a capture and reuse system to be used for irrigation purposes, consistent with the LID Ordinance. As discussed in Section 5.2.2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR, the stormwater management system will be designed in accordance with the LID Ordinance. Since the Preliminary Geotechnical Engineering Investigation has ruled infiltration infeasible to comply with the LID Ordinance, stormwater percolation will be limited to incidental rain falling directly on landscaped areas. Therefore, potential impacts to groundwater quality would be minimal and less than significant as stated in the Draft EIR.

Refer also to Response to Comment No. 26-E.3-44.

Comment No. 26-E.3-46

26	4.3	Adversely change the rate or direction of flow of groundwater	To evaluate this we need to know what the rate and direction of groundwater flow are under existing and proposed conditions.
27	4.3	Affect the rate or contaminants & following text	These duplicate bullet points from 4.4, where they belong.
27	4.4	Affect the rate or change the direction of movement of existing contaminants	Again, to evaluate this we need to know direction and rate of groundwater movement under existing and proposed conditions.

Response to Comment No. 26-E.3-46

Refer to Response to Comment No. 26-E.3-42. The Project's impact on groundwater flows is discussed on pages IV.G-33 to IV.G-34 in Section IV.G, Hydrology and Water Quality, of the Draft EIR.

Comment No. 26-E.3-47

27-28	5.1	LACDPW Hydrology Manual requires facilities to handle 25-yr storm.	HydroCalc output in Figure 4 is for 50-yr pre- and post- (no difference), and 85th
-------	-----	--	--

		LA CEQA Thresholds Guide establishes 50-yr design storm for development impact analysis	<p>%-ile storm post—(with LID)</p> <p>Need to list and justify (source reference) input parameters here, not just show values in output table.</p> <p>Based on statement that post-Project conditions will be 90% impervious or greater, we re-ran HydroCalc for 100% impervious and got minimal difference (~0.1 cfs) from pre-Project 50-year peak flow rates, but more substantial changes to 85th %-ile flow rates and 24-hr runoff volume (+0.3 - 0.4 cfs, + 56,000 gallons 24-hr runoff volume respectively).</p>
--	--	---	---

Response to Comment No. 26-E.3-47

The Draft EIR included a typographical error regarding the impermeability of the Project Site. The first sentence in Section 6.2.1 on page 33 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR has been revised to change increase to decrease as follows: “The Project is expected to decrease or maintain the overall percentage of impervious area from the current condition of the Project Site.” The Project Site is approximately 90 percent impervious under existing conditions and is expected to remain approximately 90 percent impervious post-construction. This correction is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Thus, the calculations in this comment are incorrect.

The Project Site area, slope, percentage impervious, and other factors required to evaluate the existing Project Site and proposed Project have been analyzed. The calculations have taken into consideration these known factors. These input parameters are found in Figure 4 of the Hydrology and Water Resources Report included as Appendix H of the Draft EIR.

Comment No. 26-E.3-48

28	5.2.1	Construction BMPs...	Implicit argument that SWPPP will result in no significant impact should be made explicit, perhaps by reference to SWPPP standards relating to surface water discharge/ contamination.
----	-------	----------------------	--

Response to Comment No. 26-E.3-48

Refer to Sections 5 and 6 of the Hydrology and Water Quality Report (Appendix H of the Draft EIR) regarding methodology and the impact analysis, respectively. The Project will comply with the State of California Water Resources Control Board Construction

General Permit (Adopted Order 2009-0009-DWQ and amendments 2010-0014-DWQ and 2012-0006-DWQ) for stormwater discharge from construction sites. A SWPPP will be developed as the method for compliance and will result in a less-than-significant impact.

Comment No. 26-E.3-49

29	5.2.2	Project will need to capture an2d use up to 625,000 gallons	<p>How was the 625k figure calculated? From Figure 4 LID output we calc ~580k gallons, or 636k gallons if site goes to 100% impervious.</p> <p>How large of a storage facility would this require, and is that feasible? A 600,000 gallon tank is 61 ft in diameter and 28 feet tall; will that be excavated or above ground, where on the site would it be placed, or would multiple smaller storage structures be dispersed across the site, above or below ground?</p>
----	-------	---	---

Response to Comment No. 26-E.3-49

As stated in Section 5.2.2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR, the Project will capture and reuse up to approximately 625,000 gallons of water. Figure IV.G-1 of the Draft EIR and Figure 3 of the Hydrology and Water Quality Report demonstrate the proposed capture and reuse system for the capture volume to meet the LID 85th percentile design storm event. The Project is proposing a storage capacity of up to approximately 625,000 gallons to provide ample capacity to capture the volume from the 85th percentile storm event in compliance with the LID Ordinance. This clarification is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The calculation yielding 636,000 gallons of stormwater storage is incorrect as the Project will not be 100 percent impervious, as stated in the Draft EIR and previous responses to comments. Stormwater detention structures will be designed to fit within the Project Site footprint.

Comment No. 26-E.3-50

29	5.2.2	If capture and use is later determined not to be feasible...	<p>How will feasibility be determined? Can it not now be determined? If capture and re-use is not feasible, how could bio-filtration/bio-retention be feasible? Would it require less volume, have a smaller footprint?</p>
----	-------	--	---

Response to Comment No. 26-E.3-50

Refer to Response to Comment Nos. 3-4, 13-8, 26-111, 26-E.1-6, 26-E.1-63, 26-E.3-15, 26-E.3-45, and 26-E.3-49. As discussed therein, the Project will comply with the City of Los Angeles' LID Ordinance, which describes infeasibility criteria. Feasibility of treatment is confirmed by the City of Los Angeles during the regulatory plan check process. If biofiltration/bioretenion is used for LID treatment, volume and footprint requirements will be finalized subject to the approval of the City of Los Angeles during the plan check process. See Section 5.2.2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR.

Comment No. 26-E.3-51

30	5.3	Existing condition and proposed impact analysis, second bullet points	Reads like "boilerplate" where it should be actual methodology. State actual vicinity used for this assessment, not what is "usually" done
----	-----	---	---

Response to Comment No. 26-E.3-51

As stated on page 30 of Appendix H, Hydrology and Water Quality Report, of the Draft EIR, the Project's underlying groundwater basin is the Coastal Plain of Los Angeles–Hollywood Groundwater Basin, as discussed in Response to Comment No. 26-112. Section 5.3 of the Hydrology and Water Quality Report lists the considerations that were reviewed and analyzed to determine the significance of the Project as it relates to the level of the underlying groundwater table of the Coastal Plain of Los Angeles–Hollywood Groundwater Basin. These considerations are discussed throughout the impact analysis in Section 6 of the Hydrology and Water Quality Report.

Comment No. 26-E.3-52

30	5.4	In addition to... discusses the impact... on groundwater quality...	No methodology described. What methods were used to assess possible groundwater quality impacts?
----	-----	---	--

Response to Comment No. 26-E.3-52

The methodology used to assess groundwater quality and hydrology is discussed on page IV.G-28 of the Draft EIR and in Section 6.1.4 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR.

Comment No. 26-E.3-53

32-33	6.1.3	...It is anticipated that... impacts... would be less than significant	Section discusses treatment and conveyance of dewatering discharge, but not at all the potential impact of that dewatering on groundwater hydrology. Does not support anticipation that impacts on groundwater hydrology during construction would be less than significant.
-------	-------	--	--

Response to Comment No. 26-E.3-53

Refer to Response to Comment Nos. 11-25 and 16-68 regarding groundwater quality. As discussed in Response to Comment No. 3-7, the Project would require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment No. 11-5 regarding the Draft EIR's analysis of impacts related to dewatering. Also refer to the Dewatering Report (Appendix FEIR-13 of this Final EIR) that was prepared in response to comments on the Draft EIR, which confirms the conclusion in the Draft EIR that impacts associated with temporary dewatering during construction would be less than significant.

Comment No. 26-E.3-54

33	6.1.4	...Project would not result in any substantial increase in groundwater contamination through the release of hazardous materials...	Could the project result in increase in groundwater contamination by attracting nearby contaminant plumes (if any) during dewatering operations? This is not addressed.
----	-------	--	---

Response to Comment No. 26-E.3-54

Refer to Response to Comment No. 26-E.3-10 regarding groundwater contamination and plumes.

Comment No. 26-E.3-55

33	6.2.1	The Project is expected to increase or maintain from 90% impervious. At full project buildout... the Project Site will be 90% impervious or less.	Inconsistent. Which is it: increase or maintain impervious %, or maintain Or [sic] decrease? If possibly increase, then proposed Hydro-Calc output needs to be reported for impervious > 90%. See comment under 5.1 above.
----	-------	---	--

Response to Comment No. 26-E.3-55

Refer to Response to Comment No. 26-E.3-47 regarding the amount of impervious area.

Comment No. 26-E.3-56

34	6.2.1	With Project BMPs in place... not cause flooding during 50-yr storm event...	HydroCalc assumes no impervious % increase, but text states there may be increase. Is there flooding under existing conditions? Does that matter? Is significant impact only if there is additional flooding, or if there is any flooding?
----	-------	--	---

Response to Comment No. 26-E.3-56

Refer to Response to Comment No. 26-E.3-47 regarding the amount of impervious area. There is no flooding under existing conditions.

Comment No. 26-E.3-57

35-36	6.2.3	Groundwater Hydrology	Argument for less-than-significant impact on groundwater recharge may be credible. Groundwater hydrology needs development. Will there be no operational groundwater pumping to keep the below-ground structures dry, or will it be so minimal as to not matter much? Could the below ground structures change GW flow rate or direction in any significant way?
-------	-------	-----------------------	---

Response to Comment No. 26-E.3-57

The Project will require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment Nos. 16-85 and 26-E.1-65 regarding groundwater recharge and groundwater flow, respectively.

Comment No. 26-E.3-58

36	6.2.4	The Project does not... an area of known GW contamination...	This would be easier to evaluate/accept if there [sic] a groundwater contamination map was presented that showed its lack in the vicinity, either here or in section 3.4.
----	-------	--	---

Response to Comment No. 26-E.3-58

Refer to Response to Comment Nos. 13-4, 13-6, and 16-28 regarding the Draft EIR's analysis of groundwater contamination. The commenter has provided no evidence to support their claim that the information presented in the Draft EIR is inaccurate.

Comment No. 26-E.3-59

37	6.3.1	...the Project could cumulatively increase stormwater runoff flows...	Statements are inconsistent. If the project won't have a net impact on stormwater flow volumes or drainage patterns, then it won't contribute to any cumulative impacts.
----	-------	---	--

Response to Comment No. 26-E.3-59

Appendix H, Hydrology and Water Quality Report, of the Draft EIR has been updated to state that cumulative impacts associated with the Project would be less than significant and would not cumulatively increase stormwater runoff flows. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 26-E.3-60

37	6.3.3	The Project... could cumulatively increase groundwater demand.	How could it increase demand? This is the first place there is the implication that the project might affect groundwater hydrology at all after construction drawdowns.
----	-------	--	---

Response to Comment No. 26-E.3-60

Appendix H, Hydrology and Water Quality Report, of the Draft EIR has been updated to restate that cumulative impacts associated with the Project will be less than significant and would not cumulatively increase groundwater demand. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 26-E.3-61

37	6.3.3	Project would maintain or increase amount of impervious surface... have a less than significant impact on GW recharge... highly urbanized area... minimal in context of regional GW basin	This requires further explanation.
----	-------	---	------------------------------------

Response to Comment No. 26-E.3-61

The Project would not increase the amount of impervious area, and the text referenced in this comment has been revised; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The regional groundwater basin is much larger than the Project, and since the Project is not proposing an increase in the amount of impervious surface and is small in scale when compared to the much larger regional groundwater basin, the Project would have a less-than-significant impact on groundwater recharge.

Comment No. 26-E.3-62

38	6.3.4	The Project would comply... therefore would be less than significant	Assumption that compliance with laws, rules, and regulations assures lack of significant impact should be supported, rather than assumed.
----	-------	--	---

Response to Comment No. 26-E.3-62

The language referenced by the commenter in Section 6.3.4 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR is preceded by a discussion of applicable regulations that the Project would be required to comply with. The groundwater quality impact analysis on pages IV.G-30 to IV.G-33 of the Draft EIR discusses how compliance with applicable regulations would result in a less-than-significant impact. Typically, laws, rules, and regulations for hydrology and water quality have been shown to empirically improve upon the desired outcomes so compliance with the laws, rules, and regulations does lead to a less-than-significant impact.

For example, according to the Bureau of Sanitation website, in November 2011, the City of Los Angeles adopted the Stormwater LID Ordinance (Ordinance No. 181,899, updated September 2015 by Ordinance No. 183,833) with the stated purpose of:

- Requiring the use of LID standards and practices in future developments and redevelopments to encourage the beneficial use of rainwater and urban runoff;

- Reducing stormwater/urban runoff while improving water quality;
- Promoting rainwater harvesting;
- Reducing offsite runoff and providing increased groundwater recharge;
- Reducing erosion and hydrologic impacts downstream; and
- Enhancing the recreational and aesthetic values in our communities.

Comment No. 26-E.4-1**Exhibit 4—Linscott, Law & Greenspan letter**

Linscott, Law & Greenspan, Engineers (LLG) is submitting these comments on the Transportation section study and underlying Transportation Assessment in the Draft Environmental Impact Report¹ (the “Draft EIR”) prepared for the TVC 2050 Project (the “TVC Project”) located at 7716–7860 West Beverly Boulevard (the “Project Site”) in the City of Los Angeles. The Transportation section is provided within Section K of the Draft EIR and is based in part on the Transportation Assessment² prepared for the TVC Project. The Transportation Assessment is included in Appendix M-1 of the Draft EIR.

Pages IV.K-28 and IV.K-29 of the Draft EIR provide four Thresholds³ for assessing whether the TVC Project would result in a significant impact related to transportation/traffic:

“Threshold (a): Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;

“Threshold (b): Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) [i.e., Vehicle Miles Traveled or VMT];

“Threshold (c): Substantially increases hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. [sic] farm equipment); or

“Threshold (d): Result in inadequate emergency access.”

As discussed herein, the Transportation section in the Draft EIR erroneously, inaccurately, and/or without substantiation concludes that the TVC Project would have less than significant impacts related to each of the four thresholds. These analytical errors are not minor differences in assumptions or modeling choices but are fundamental flaws that go to the core of the traffic analysis.

- ¹ *Draft Environmental Impact Report—TVC 2050 Project*, Environmental Case: ENV-2021-4094-EIR and State Clearinghouse No. 2021070014, City of Los Angeles, July 2022.
- ² *Transportation Assessment for the Television City 2050 Specific Plan Project*, Gibson Transportation Consulting, Inc., October 2021, Appendix M to the Draft EIR.
- ³ Other Thresholds may be applicable to the Project that were not assessed in the Draft EIR.

Response to Comment No. 26-E.4-1

The comment represents an introductory statement, which repeats the thresholds of significance used in the transportation analysis (refer to page IV.K-29 of Section IV.K, Transportation, of the Draft EIR). This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

As discussed in Response to Comment Nos. 26-E.4-2 through 26-E.4-19, the transportation analysis is not fundamentally flawed and properly addresses all relevant CEQA thresholds of significance. The four thresholds identified in the comment, from the State's CEQA Appendix G Environmental Checklist Form, are the only four transportation thresholds of significance recognized by the City. The transportation analysis has been completed under the direction of LADOT and in accordance with CEQA and guidance from OPR.

Comment No. 26-E.4-2

The Project Site is located in a highly congested area. It is bounded by Fairfax Avenue to the west, Beverly Boulevard to the north, private property and The Grove Drive to the east and private property and a private alleyway to the south (referred to in the Draft EIR as the "shared access drive"). Fairfax Avenue is a designated Avenue II, Beverly Boulevard is a designated Modified Avenue I, and the Grove Drive is a designated Collector Street.

Two of the streets adjacent to the Project Site—Beverly Boulevard and Fairfax Avenue—are listed in the City's High Injury Network and are represented on the graphic pasted below. Third Street, located immediately south of the Project Site, is also on the City's High Injury Network. As explained on the Vision Zero page on the website⁴ for the City's Department of Transportation (LADOT) "The High Injury Network represents 6% of city streets that account for 70% of deaths and severe injuries for people walking." Accordingly, per LADOT's own statistics and policies, pedestrians immediately adjacent to the Project Site are already vulnerable and impacted related to safety.

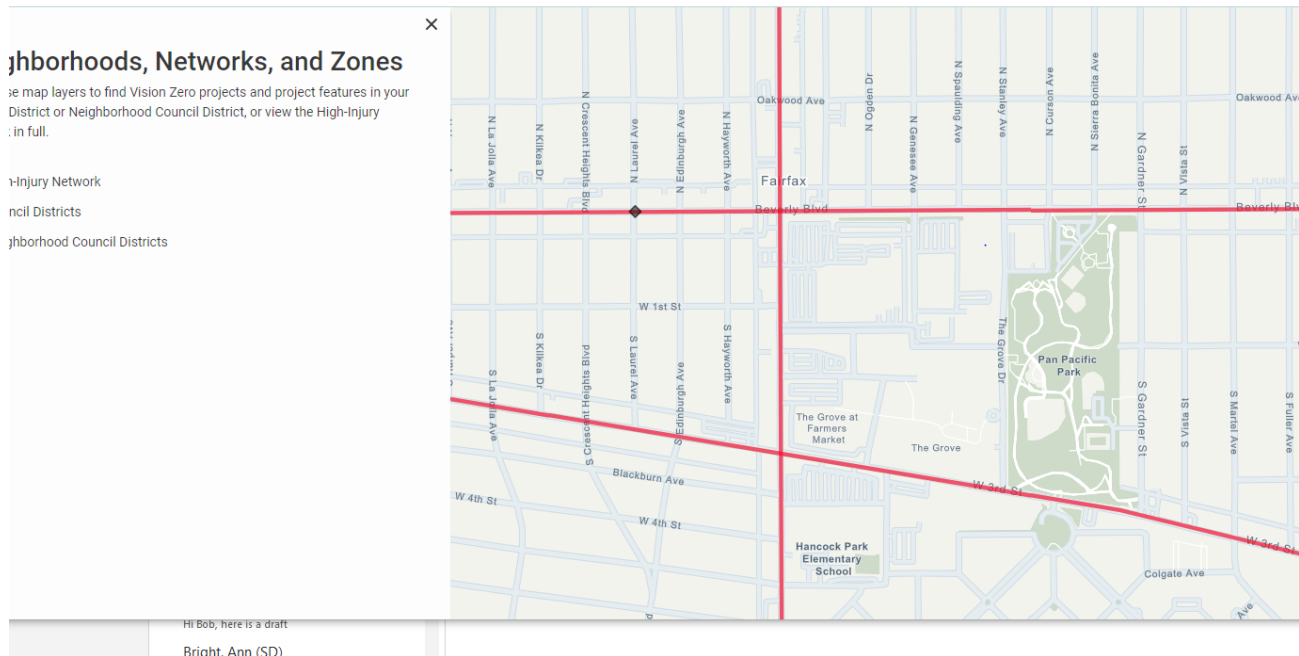

VISION ZERO

Maps

The High-Injury Network (HIN) represents 6% of city streets (over 450 miles) that account for 70% of deaths and severe injuries for people walking. LADOT focuses comprehensive safety improvements on a subset of the HIN where the highest concentrations of traffic deaths and severe injury crashes occur, represented by the Priority Corridors and Intersections.

Use this map to explore safety projects across the city (click **Projects**) and understand the distribution of different safety treatments (click **Project Features**).

Click **Memorial Map** to see traffic deaths in Los Angeles between 2012 and 2018. If you know someone who was the victim of a traffic fatality, please email visionzero@lacity.org to create a digital memorial.

- 4 <https://ladotlivablestreets.org/programs/vision-zero-zero/maps> and <https://ladotlivablestreets.org/programs/vision-zero-zero/maps>

Fairfax Avenue, Beverly Boulevard and The Grove Drive are designated part of the Pedestrian Enhanced Network that aims to promote walking. The northern portion of The Grove Drive is part of the Neighborhood Enhanced Network of the Mobility Plan, which reflects the synthesis of the bicycle and pedestrian networks and serves as a system of local streets that are *slow moving and safe enough* to connect neighborhoods through active transportation. The southern portion of The Grove Drive is part of the Bicycle Enhanced Network that is intended to provide a low-stress network of bicycles paths and lanes.

Existing vehicular access to the Project Site is from two driveways on Fairfax Avenue and the main entrance at the signalized intersection of Beverly Boulevard and Genesee Avenue.

The following comments explain some of the key reasons why the Draft EIR fails to report potentially significant impacts related each threshold.

Response to Comment No. 26-E.4-2

This comment provides a description of the streets surrounding the Project Site and existing Project Site access. Section IV.K, Transportation, of the Draft EIR accurately identifies existing Project Site access, the existing streets in the Project vicinity, their designations as set forth by the Mobility Plan, and the streets that are part of the City's High Injury Network. Note that the Project Site is bounded to the south by the Southern Shared Access Drive. To clarify the commenter's description of "private property and a private alleyway to the south," as discussed on page II-2 of Section II, Project Description, of the Draft EIR, the Southern Shared Access Drive is a privately owned right-of-way that is partially located on the Project Site and partially located off-site on the adjacent properties to the south. While not a component of the Project, the Southern Shared Access Drive provides shared access to the Project Site and the adjacent properties to the south from The Grove Drive. In addition, note that 3rd Street is not located "immediately" to the south of the Project Site as stated by the commenter. Also note that, as discussed on page IV.K-23 of Section IV.K, Transportation, of the Draft EIR, there are two driveways along Beverly Boulevard with existing curb cuts that are not currently used for access. These two driveways were not mentioned by the commenter.

The transportation analysis in the Draft EIR comprehensively evaluates each of the transportation significance thresholds included on page IV.K-28 of Section IV.K, Transportation, of the Draft EIR, as set forth by Appendix G of the CEQA Guidelines. As demonstrated in the following response to comments, the commenter does not provide any substantial evidence to support the claim that the Draft EIR fails to report significant impacts related to these thresholds.

Comment No. 26-E.4-3**Threshold (a): Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities**

The assessment of potential conflicts with a transportation program, plan, ordinance or policy begins in the Draft EIR on page IV.K-45, including in Table IV.K-1 (consistency with Mobility Plan 2035) beginning on page IV.K-47, and Table IV.K-2 (consistency with Wilshire Community Plan) beginning on page IV.K-58. The Draft EIR's evaluation of the Project's consistency with Mobility Plan 2035 is vague, conclusory and incorrect in multiple respects.

Mobility Plan 2035 Policy 1.1, Roadway User Vulnerability

In Table IV.K-1, Policy 1.1, Roadway User Vulnerability is stated as follows: "Design, plan, and operate streets to prioritize the safety of the most vulnerable roadway user." The first sentence in response to Policy 1.1 states: "No Conflict. The most vulnerable roadway user

is typically a pedestrian, and the Project would include several improvements that prioritize pedestrian safety and the pedestrian experience, including landscaping, sidewalk improvements, and bus stop improvements around the Project Site perimeter.” Further, according to Policy 1.1 in Mobility Plan 2035 (page 62), “Roadways should operate in a manner that considers the presence of **people who walk and bike, children, the elderly, and the mobility-impaired**” [emphasis added]. The Draft EIR ignores the fact that the Project proposes the following which will imperil pedestrians:

- Construct two new driveways along Beverly Boulevard, including a new private street for Project cars and trucks immediately adjacent to the existing Broadcast Center apartments and Erewhon Market, which each currently generate a substantial number of pedestrians along Beverly Boulevard;
- Construct a new fully signalized private street intersection on The Grove Drive at the location of an existing pedestrian-only crossing on The Grove Drive that currently provides access for pedestrians to the existing Pan Pacific Park and Holocaust Museum LA, thereby forcing pedestrians to be in conflict with the forecast 5,600 daily cars and trucks⁵ entering and exiting the Project Site; and
- Construct two new driveways for vehicles and trucks from the southern alleyway, along with introducing passenger loading and pedestrian and bicycle access in this service alleyway that has limited visibility.

The Draft EIR also fails to evaluate potential impact to bicyclists, also a vulnerable roadway user as recognized by Policy 1.1. Beverly Boulevard, as well as Fairfax Avenue are designated for Tier 3 separated bike lanes, and the southerly segment of The Grove Drive connecting to Third Street are Tier 2 separated bike lanes (Map D2 in Mobility Plan 2035). In addition, The Grove Drive is part of the Neighborhood Enhanced Network and Bicycle Enhanced Network. Additional driveways proposed by the Project will create hazards to current and future bicyclists which have not been evaluated in the Draft EIR.

As a starting point, the Project should be required to utilize its existing Beverly Boulevard signalized driveway opposite Genesee Avenue and existing driveways on Fairfax Avenue for vehicular access and not construct new driveways along Beverly Boulevard and/or on The Grove Drive that would otherwise significantly impact pedestrian safety.

The Project also proposes (e.g., on page II-21 in Section II. Project Description of the Draft EIR) to introduce pedestrian circulation and access along the north side of the southerly alleyway drive. The alleyway is an east-west private alley between The Grove Drive and Fairfax Avenue separating the Project Site on the north side and, moving east to west on the south side, a self-storage facility, The Grove, and the Farmer’s Market service area. There are currently no sidewalks or other walking paths along the entire extent of the alleyway. Introducing pedestrian facilities onto the alleyway as proposed by the Project

creates significant hazards to both pedestrians and motorists as it will likely encourage pedestrians to travel on the alleyway drive beyond the future walking paths. This Project-related hazard to future pedestrians on the alleyway is not disclosed in the Draft EIR.

The Project also appears to propose a new pedestrian crossing on The Grove Drive at its intersection with the service alleyway. As described on page 31 of the Transportation Assessment and depicted on Figure 17, page 54 of the Transportation Assessment, this new pedestrian crossing would be uncontrolled (i.e., no traffic signal control or other features to prioritize and promote safe pedestrian crossings). These features currently exist at the existing pedestrian crossing on The Grove Drive at the location of the Project's proposed new private street intersection. As the controlled pedestrian crossing would be removed by the Project, and the proposed new pedestrian crossing would be uncontrolled, the Project would further degrade pedestrian safety. Further, there are no sidewalks on the east side of The Grove Drive for pedestrians to safely utilize if a pedestrian crossing was provided at the service alleyway. Finally, this proposed new pedestrian crossing would further encourage pedestrians at the service alleyway utilized by cars and trucks and therefore create new hazards which have not been evaluated or disclosed in the Draft EIR.

As proposed, the Project is in conflict with the Mobility Plan resulting in a significant impact under Threshold (a).

⁵ Estimate based on 35% of Project Site traffic using the Project's new The Grove Drive private street per Figure 19B of the Transportation Assessment and the forecast of 16,044 daily trips generated by the Project per Table 12 in the Transportation Assessment. This estimate is likely understated for the reasons set forth in these comments.

Response to Comment No. 26-E.4-3

The comment contains several inaccurate and unsupported conclusory statements and assertions. The comment does not provide any evidence supporting its statement that the new driveways along Beverly Boulevard, The Grove Drive, and the Southern Shared Access Drive would conflict with Mobility Plan Policy 1.1. Further, the comment incorrectly states that the Project would construct a new private street adjacent to Broadcast Center Apartments and Erewhon Market; it should be noted that internal circulation paths are not streets. The Project does propose to construct a new signalized driveway along The Grove Drive, but that new signal will not eliminate the protected crosswalk that currently exists near the north end of the Holocaust Museum and Pan Pacific Park. Rather, the new signal will improve the protected crosswalk into a signalized intersection. The unprotected crosswalk at The Grove Drive and the Southern Shared Access Drive was proposed by the Holocaust Museum expansion and is simply repeated in Figure 17 of the Transportation Assessment (included in Appendix M.1 of the Draft EIR) for continuity.

The comment incorrectly calculates the number of vehicles at the signalized entrance on The Grove Drive. Based on the Project trip distribution percentages shown in Figure 19B of the Transportation Assessment and the gross daily trip generation in Table IV.K-5 of the Draft EIR, approximately 2,287 Project vehicles per day would cross the north crosswalk, not 5,600. The pedestrian crosswalk is proposed for the north leg of the signalized intersection, and, therefore, there would be no conflict between pedestrians and any Project vehicles entering/leaving the Project Site to/from the south. In addition, the majority of these vehicles will enter the Project Site during the morning peak hours ahead of the standard operational hours for the Holocaust Museum and The Grove. The crosswalk across the north leg of the intersection would be fully controlled by the intersection traffic signal, and the intersection would be equipped with WALK/DONT WALK indications. Additionally, LADOT would evaluate the need for countdown pedestrian displays and advanced pedestrian indications (API).

Figure 22 on page 80 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that the volume of Project vehicles that will use the Southern Shared Access Drive is minimal, even during the peak hours of the day. There are no pedestrian sight distance issues nor are there sight distance restrictions for vehicles entering the Southern Shared Access Drive from either northbound or southbound off The Grove Drive. Eastbound pedestrians and vehicles exiting the Southern Shared Access Drive will have a clear view of southbound traffic on The Grove Drive because the southeast parking structure would be set back from The Grove Drive's westerly curb, and the Project would widen the existing sidewalk, as described on page IV.K-50 of the Draft EIR. The Project driveways from the Project onto the Southern Shared Access Drive would be designed with adequate sight distance to meet City standards in order to be approved by LADOT. Therefore, contrary to the statement in the comment, the Southern Shared Access Drive or its intersection with The Grove Drive does not have limited visibility problems.

As discussed in Section IV.K, Transportation, of the Draft EIR, although the Project would result in more ingress and egress points than existing conditions, the Project driveways would be designed to minimize vehicle conflicts with other vehicles, pedestrians, and bicyclists and provide safer pedestrian crossings through pedestrian signal phasing and continental crosswalks. The Project driveways along Fairfax Avenue and Beverly Boulevard would not interfere with the planned bicycle facilities in the Citywide Bicycle Plan and each driveway would be designed with sufficient sight distance to allow exiting traffic to be able to see bicycles in the bike lanes. Additionally, the Project would construct a new signalized access point on The Grove Drive, a Collector Street, thereby distributing vehicular access more evenly along the street frontages and across the Project Site.

The Project supports bicycle facilities in the Study Area and does not conflict with the long-range plans for additional bicycle lanes along Fairfax Avenue and Beverly Boulevard although LADOT indicates that these two improvements are at least 5 to

10 years away. The Draft EIR has considered the bicycle plan, and the Project would not in any way interfere with or discourage the provision of these facilities and leaves the same amount of available roadway space for future bicycle lanes as is available today. Contrary to the implication in the comment, vehicular access points on streets with existing or proposed on-street bicycle lanes do not automatically constitute a conflict or a safety hazard. Driveways and bicycle lanes can be designed to co-exist by following standards and best practices, and plans for all Project access points would be fully reviewed and approved by City staff and LADOT prior to installation.

Refer to Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, for additional discussions of pedestrian safety, access to The Grove Drive and the ramifications of eliminating the proposed driveway on The Grove Drive as suggested in the comment.

The Project has joint access rights to the Southern Shared Access Drive and the two vehicular driveways proposed onto the roadway would have many fewer vehicle trips as compared to the signalized driveways.

In terms of pedestrian access along the southern portion of the Project Site, this pedestrian access has existed for decades to provide a direct connection for the employees of the Project Site with the commercial uses at The Grove and The Original Farmers Market. As discussed on page IV.K-57 of the Draft EIR, along portions of the southern property line, sidewalks, screening, and/or planting areas would be introduced. In particular, along the Southern Shared Access Drive, the Conceptual Site Plan includes a 10-foot-wide frontage area.

If a new pedestrian gate is constructed in the southeast portion of the Project Site, it would be accompanied by a sidewalk along the north side of the Southern Shared Access Drive connecting the pedestrians entering/leaving the Project Site to The Grove Drive. This sidewalk would be constructed north of the current Project Site fence line and, thus, would not affect the existing width of the Southern Shared Access Drive.

Refer to Response to Comment No. 26-165 regarding the Draft EIR's comprehensive analysis of the Project's consistency with the Mobility Plan and conclusion that the Project would not conflict with the Mobility Plan.

Refer to Response to Comment Nos. 9-29 and 26-E.4-12 regarding transportation-related hazards and safety.

Comment No. 26-E.4-4*Mobility Plan 2035 Policy 1.8, Goods Movement Safety*

The Draft EIR does not at all address Mobility Plan 2035 Policy 1.8, Goods Movement Safety. This policy in Mobility Plan 2035 states (page 69) “Truck movement should be limited to the arterial street network as much as possible since these streets have the lanes and wider turning radii to accommodate these large vehicles. Land use along heavily used truck routes should also coincide with goods movement priorities and limit interaction with residential uses.”

The Project is not consistent with Policy 1.8 as it proposes truck movements via a new signalized private street on The Grove Drive (a designated Collector Street, not an arterial), a private alleyway that itself is accessed from Grove Drive, as well as via a new driveway on Beverly Boulevard immediately adjacent to an existing residential building. As discussed in a following section, it is demonstrated that large trucks will not be able to complete turns to and from the proposed driveway on The Grove Drive or the alleyway. The Draft EIR fails to disclose all of these impacts. The Project should be revised to limit truck activity to its existing driveways on Beverly Boulevard and Fairfax Avenue which are better suited to handle truck movements and is consistent with the Mobility Plan 2035 policy.

As proposed, the Project is in conflict with the Mobility Plan resulting in a significant impact under Threshold (a).

Response to Comment No. 26-E.4-4

Refer to Response to Comment No. 26-165 regarding Mobility Plan Policy 1.8, which is not applicable to the Project. The Project’s access and circulation plan allows trucks to enter/leave the Project Site via The Grove Drive, which is designated as a Collector Street. From that driveway, trucks travel directly to the arterial street system—either Beverly Boulevard or 3rd Street. This is consistent with the function of a Collector Street.

Refer to Response to Comment No. 26-170 for a discussion of truck movements in and out of the Project along The Grove Drive. The commenter presents examples of truck turns made by a WB-67 truck, which is the largest truck allowed on California roadways. This vehicle type represents a very infrequent occurrence at the Project Site, as most production vehicles are smaller. The Project is proposing a two-foot roadway widening on The Grove Drive to provide a dedicated northbound left-turn lane into the Project driveway, which will allow trucks to utilize The Grove Drive signalized entrance without any

operational problems. Trucks of any other size can be accommodated at The Grove Drive entrance or along the Southern Shared Access Drive driveways.

Refer to Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, for an additional discussion of the utilization of the various driveways serving the Project Site.

Comment No. 26-E.4-5

Wilshire Community Plan Policy 11-2, Promote Pedestrian Safety

Similar to Mobility Plan 2035 Policy 1.1, Roadway User Vulnerability, Table IV.K-2 in the Draft EIR references Wilshire Community Plan Policy 11-2 which states: “Promote pedestrian mobility, safety, amenities, and access between employment centers, residential areas, recreational areas, schools, and transit centers.” As detailed above, the Project would cause significant safety impacts to pedestrians based on the Project’s proposed new driveways for cars and trucks on Beverly Boulevard and The Grove Drive which would adversely affect pedestrian movements to existing residential areas, recreational centers and schools adjacent to the Project Site. The Project, therefore, is in conflict with the Policy 11-2, contrary to the conclusion in Table IV.K-2, resulting in a significant impact under Threshold (a).

Response to Comment No. 26-E.4-5

Refer to Response to Comment No. 16-11 and Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding the number and location of the proposed driveways at the Project Site and pedestrian safety at those driveways. As discussed therein, the number of driveways chosen is appropriate for the amount of development proposed, and all driveways would be designed in accordance with LADOT design standards to ensure pedestrian safety. Refer to pages IV.K-59 and IV.K-60 of the Draft EIR for an analysis of the Project’s consistency with Wilshire Community Plan Objective 11-2 and Policy 11-2.1. The commenter fails to provide any evidence to support its conclusions regarding pedestrian safety and movements or inconsistency with Policy 11-2.

Comment No. 26-E.4-6

Wilshire Community Plan Policy 15-1.1, Minimize the Number of Ingress and Egress Points

In Table IV.K-2, Policy 15-1.1 is stated as follows: “Minimize the number of ingress and egress points to and from all Boulevards II and Avenues in the Wilshire Community Plan Area.” The corresponding response acknowledges the Project Site is adjacent to Avenues as designated by Mobility Plan 2035 (i.e., Beverly Boulevard is an Avenue I and Fairfax

Avenue is an Avenue II), but fails to acknowledge the Project would *add* driveways to the adjacent Avenues: two new driveways on Beverly Boulevard and one new driveway on Fairfax Avenue that apparently would connect to multiple new private streets if developed as shown on the illustrative conceptual plan for the Project. There is no explanation in the Draft EIR regarding the feasibility of developing the Project without adding driveways and internal private streets at those locations. The finding of consistency with this policy is not supported from a traffic or engineering perspective, resulting in a significant impact under Threshold (a).

There appears to be no reason the Project could not have a successful circulation program without adding driveways. A recirculated Draft EIR should specifically analyze whether it is feasible to develop the Project without additional driveways and private streets and, if not, whether there are any policies or City priorities that would justify adding the new driveways and private streets.

Response to Comment No. 26-E.4-6

Refer to Response to Comment No. 16-11 and Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding the number and location of the proposed driveways at the Project Site and pedestrian safety at those driveways. As discussed therein, the number of driveways chosen is appropriate for the amount of development proposed and all driveways would be designed in accordance with LADOT design guidelines to ensure pedestrian safety. The analysis of the Project's consistency with Objective 15-1 and Policy 15-1.1 is included on page IV.K-63 of the Draft EIR, and the Draft EIR correctly concluded that the Project would not conflict with this objective and policy. Contrary to the commenter's statement, the analysis acknowledges the proposed new driveways. Please note that the comment incorrectly refers to internal circulation paths as "private streets."

The largest concentrations of pedestrians along the periphery of the Project Site are by far along the Fairfax Avenue and Beverly Boulevard frontages. Consolidating driveways and eliminating the driveway along The Grove Drive would increase the number of vehicles across the heaviest pedestrian frontages of the Project Site.

The Draft EIR analysis included a non-CEQA LOS evaluation of the operational performance of the four busiest driveways serving the Project Site. Table 18 on pages 162–163 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows that the signalized Project driveways would all operate at acceptable LOS. Accordingly, CEQA does not require the Draft EIR to analyze the Project without adding driveways. Contrary to the commenter's assertion, recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 26-E.4-7*Mobility Plan Policy 2.17, Street Widening*

In Table IV.K-1, Policy 2.17, Street Widening is stated as follows: “Carefully consider the overall implications (costs, character, safety, travel, infrastructure, environment) of widening a street before requiring the widening... [if] the resulting roadway would be less than the standard dimension.” The corresponding response incorrectly states “No conflict” even though it is acknowledged that the Project’s proposed widening of The Grove Drive (which would result in a 10-foot wide sidewalk, less than the required 13-foot wide sidewalk adjacent to the Project Site based on Mobility Plan 2035) to accommodate the Project’s signalized private street, thereby resulting in a substandard roadway street dimension on The Grove Drive.

As noted above, The Grove Drive is part of the City’s Neighborhood Enhanced Network (Map C4). According to Mobility Plan 2035 (page 81) “The Neighborhood Enhanced Network is a selection of streets that provide comfortable and safe routes for localized travel of slower-moving modes such as walking, bicycling, or other slow speed motorized means of travel.” Improvements to promote movements by pedestrians should be prioritized on the Neighborhood Enhanced Network, and not degraded to facilitate substantial increased travel by cars and trucks on The Grove Drive as proposed by the Project.

It is further noted that The Grove Drive is unique (and not properly evaluated in the Draft EIR) as there is no continuous sidewalk provided on the east side for the entire block between Beverly Boulevard and Third Street. This provides further emphasis on the need to provide standard sidewalks on the west side of The Grove Drive based on the lack of pedestrian facilities on the east side.

The response in the Draft EIR states the Project is seeking a waiver of the required street dedication of The Grove Drive resulting in the substandard sidewalk. There is no justification as to why the Project cannot provide the required sidewalk width per Mobility Plan 2035. Further, LADOT’s July 2020 Transportation Assessment Guidelines (the “TAG”) states in Attachment D: Plan Consistency Worksheet “If the project dedications and improvements asking to be waived are necessary to meet the City’s mobility needs, the project may be found to conflict with a plan that is adopted to protect the environment.” It is incorrect for the Draft EIR to claim a “no conflict” conclusion related to Policy 2.17, resulting in a significant impact under Threshold (a).

Response to Comment No. 26-E.4-7

The comment appears to misunderstand Mobility Plan Policy 2.17, the purpose of which is to only widen streets, even substandard streets, after considering the overall implications. The comment suggests that because The Grove Drive is part of the City's Neighborhood Enhanced Network, it should be required to provide 13-foot sidewalks in accordance with Mobility Plan standards. However, as described on page IV.K-56 of the Draft EIR, the Project would widen the sidewalk on The Grove Drive from 9 feet to 10 feet (including a 3-foot private easement), and the Project would also provide a 4-foot landscaped area behind the sidewalk for a total of 14 feet of sidewalk and landscaping. Additionally, it should be noted that the sidewalk in front of the Project Site on The Grove Drive is already the widest portion of the sidewalk along the entire stretch of The Grove Drive between Beverly Boulevard and 3rd Street and would be even wider with the Project. City staff have determined that the City's mobility needs along the Project frontage on The Grove Drive would be met even without further dedication. As stated on page IV.K-50 of the Draft EIR, careful consideration has been given to the implications (including costs, character, safety, travel, infrastructure, and environment) of all proposed street widenings, including when the resulting roadway would be less than the standard dimension. Therefore, as determined by LADOT and Bureau of Engineering, there is no conflict with Policy 2.17 and no significant impact as incorrectly stated by the comment. Based on the absence of any policies in the Mobility Plan that conflict with the Project, the Project is not inconsistent with the Mobility Plan regardless of any future determination (approval or dismissal) of the proposed waiver of dedication.

Comment No. 26-E.4-8

Wilshire Community Plan Policy 16-1.1, Acceptable Levels of Service

In Table IV.K-2, Policy 16-1.1 is stated as follows: "To the extent feasible and consistent with the Mobility Plan's 2035's and the Community Plans' policies promoting multimodal transportation (e.g. [sic] walking bicycling, driving and taking public transit) and safety, maintain a satisfactory Level of Service (LOS) above LOS "D" for Boulevards II, especially those which serve Regional Commercial Centers and Community Commercial Centers; and above LOS "D" for Avenues and Collector Streets." The corresponding response incorrectly states "No conflict" even though the analyses provided in the Draft EIR (for example, Tables 17 and 18 in the Transportation Assessment) shows a significant degradation of Levels of Service on adjacent Avenues and Collector Streets due to the Project. For example, **Figure 1** attached to this memorandum shows three intersections on designated Avenues with current operations at LOS E or F during the weekday AM and/or PM peak hours.

Figure 2 shows that the number of intersections operating at LOS E or F during one or both peak hours is expected in the Transportation Assessment to double in the future

condition with Project traffic. As stated on page 159 of the Transportation Assessment, LOS E operations are reported as “POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.” Similarly, the Transportation Assessment states for LOS F “FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.”

The response in the Draft EIR to Policy 16-1.1 which claims that Project traffic alone would not itself cause an intersection to move to LOS E or F is factually incorrect and inconsistent with the Transportation Assessment. The response in the Draft EIR contradicts the data provided in Table 17, page 160 of the Transportation Assessment. Table 17 shows the Fairfax Avenue/Beverly Boulevard intersection degrading during the AM peak hour from LOS D in Existing Conditions to LOS E for Existing with Project Conditions. Similarly, Table 17 shows the Stanley Avenue–The Grove Drive/Beverly Boulevard intersection degrading during the AM peak hour from LOS D in Existing Conditions to LOS E for Existing with Project conditions.

Under future conditions, Table 18 (pages 162 and 163 in the Transportation Assessment) shows that Project-traffic will significantly degrade already poor operations. For example, at the Stanley Avenue–The Grove Drive/Beverly Boulevard intersection, Table 18 reports that average motorist delay at this location due to Project traffic will increase from 104.9 seconds to 141.3 seconds during the PM peak hour (based on the Project’s trip generation estimates which are understated). Because the City’s Department of Transportation (LADOT) does not acknowledge service levels beyond LOS F (e.g., LOS F+ or LOS G), this magnitude of added delay would have certainly degraded the intersection to a worse service level. Further examination of Table 18 shows that two intersections on Fairfax Avenue—at Beverly Boulevard and at 3rd Street—are borderline crossing into the LOS F service level due to Project traffic based on the increased motorist delay caused by Project traffic. As the Transportation Assessment undercounts Project trips, if properly counted, it is anticipated that the level of service at these intersections would degrade to LOS F.

Accordingly, the “no conflict” response to Policy 16-1.1 provided in the Draft EIR is incorrect as the Project will not maintain existing service levels at nearby Avenues and Collector Streets.

Further, it is noted that while SB 743 does establish VMT as the metric for assessing potential transportation impacts due to development projects under CEQA, SB 743 does not preclude jurisdictions from establishing level of service goals/targets on its transportation network as part of land use policy making.

The Project therefore, is not consistent with the service level policy for Avenues and Collector Streets in the Wilshire Community Plan resulting in a significant impact under Threshold (a).

Response to Comment No. 26-E.4-8

As an initial matter, while SB 743 does not preclude jurisdictions from establishing LOS goals as noted in the comment, it *does* prohibit making those the basis of CEQA transportation impact findings. As discussed in Response to Comment No. 16-18, the intent of the CEQA Threshold T-1 is to ensure that development projects and plans do not preclude the City from implementing adopted programs, plans and policies. As stated in Section 2.1.4 of the TAG, a project that generally conforms with, and does not obstruct, the City's development policies and standards will generally be considered consistent. Strict conformity with all aspects of a plan is not required. The Project would not preclude the City's implementation of any future improvements to the street system or infrastructure, and the Draft EIR provided substantiating information that adequately addresses the CEQA Threshold T-1 in accordance with the methodology outlined in the TAG.

The Transportation Assessment included in Appendix M.1 of the Draft EIR provided a detailed non-CEQA operational LOS analysis of the surrounding street system in accordance with the methodology and guidelines outlined in the TAG. Specifically, Section 5B of the Transportation Assessment provided a detailed assessment of the operating LOS conditions and vehicular queuing within the Study Area during the commuter peak hours under both the existing and future intersection conditions. The commenter refers to Table 17, which details the LOS operating conditions under Existing with Project Conditions, which is a theoretical scenario in which the entire Project is completed in year 2021. In the Project's anticipated Opening Year of 2026 (even assuming full buildout of the Project by opening day), several intersections on arterial streets would operate at LOS E or F before and after the Project (Table 18 of the Transportation Assessment).

The comment states, without evidence, that the Transportation Assessment undercounts Project trip generation. Refer to Topical Response No. 10, Trip Generation, for a detailed description of the validity of the Project trip generation estimates. As such, the intersection level of service results presented in the Transportation Assessment are also valid.

Policy 16-1.1 states "to the extent feasible" to maintain a satisfactory LOS D operating conditions along Boulevards, Avenues, and Collector Streets. The Project would not cause any location to change from LOS D or better to LOS E or F during either peak hour under 2026 conditions. The Project would also implement a comprehensive TDM Program that would further reduce Project-related trips, which was not accounted for in the operational LOS evaluation. As stated in LADOT's Assessment Letter provided in

Appendix M.2 the Draft EIR, LADOT has reviewed the non-CEQA operational evaluation and determined it adequately discloses operational effects. Thus, the Draft EIR and Transportation Assessment contained in Appendix M.1 of the Draft EIR fully evaluated and disclosed the operating conditions of the street system in accordance with the City's guidelines.

Thus, the Draft EIR correctly concluded that the Project would not conflict with Policy 16-1.1, and impacts related to consistency with applicable plans, policies and goals would be less than significant.

Comment No. 26-E.4-9

Threshold (b): Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) [i.e., Vehicle Miles Traveled or VMT]

The analysis of the Project's potential transportation impacts based on VMT is provided in the Draft EIR beginning on page IV.K-72. On page IV.K-73, it states "...LADOT's VMT Calculator was used to evaluate Project VMT and compare it to the VMT impact criteria." This is a critical error within the Draft EIR as LADOT documentation explicitly states that its VMT Calculator is not to be used for evaluating the transportation impacts of this type of Specific Plan entertainment project.

It is noted that the Draft EIR repeatedly describes the Project as adoption of a Specific Plan. In fact, the term "Specific Plan" appears in over 50 places in Section II. Project Description of the Draft EIR. The Project Description also states under its Project Objectives (page II-11) "Promote local and regional economic growth by creating a wide range of entertainment jobs..." In addition, the Project Description states on Page II-15 "The following types of related uses and facilities would also be permitted, as detailed in the Specific Plan: ...special events, audience and entertainment shows, museum exhibits and theaters... recreational facilities... and special event areas including the sale of alcoholic beverages..." And the Project seeks a General Plan Amendment to Regional Center purportedly based on the regional serving nature of the Project.

Within LADOT's VMT Calculator User Guide (Version 1.3, May 2020), it states on pages 2 and 3 "Although the tool [VMT Calculator] may be useful for other purposes, it is not designed to the following... Evaluate VMT impacts of regional-serving retail projects, entertainment projects, or event center... Evaluate VMT impacts of land use plans (e.g., general plans, community plans, and specific plans)."

Further, LADOT's TAG (page 2-1) provides specific instructions for evaluating the VMT impacts of land use plans (which would include specific plans per the definition provided in the User Guide) outside of the VMT Calculator:

To determine whether the land use changes and transportation system measures that are included in a proposed land use plan would have an impact on VMT, run the community plan's sub-area TDF [Travel Demand Forecasting] model for the baseline year 'no project' scenario and the future 'plus project' scenario. The future 'no project' scenario should represent the adopted RTP/SCS cumulative year conditions as incorporated into the City's model (SCAG's horizon year socioeconomic forecast for the plan area and the remainder of the City and base transportation networks not including the Mobility Plan 2035). The future cumulative 'plus project' scenario should represent the reallocation of the population and/or employment growth based on the land supply changes associated with the proposed plan and the transportation system measures included in the proposed plan (including transportation system measures included in the Mobility Plan 2035 within the plan area and incorporated into the plan). Total VMT per service population would be calculated for all scenarios generated by land use within the project area, which is generally the plan area.

In addition, the TAG (page 2-9) states:

Event center and regional-serving entertainment projects should be evaluated to determine whether the project would result in a net increase in total VMT. A project-specific customized approach will be required to estimate VMT for such projects. The methodology should be developed in consultation with and approved by LADOT staff at the outset of the study.

These instructions to evaluate the Project based on a change in total VMT differ from the VMT per Employee metric utilized in the Draft EIR.

In summary, the VMT analysis for the Project, which is a Specific Plan for a self-described regional-serving entertainment project: (1) should not have used the VMT Calculator as explicitly stated in LADOT's VMT Calculator User Guide; and (2) should not have utilized a VMT per Employee metric. The VMT analysis as provided in the Draft EIR is incorrect and instead should follow the procedures prescribed in LADOT's TAG including utilizing LADOT's TDF model and calculating VMT based on VMT per service population and/or total VMT (and not VMT per Employee).

Response to Comment No. 26-E.4-9

Refer to Topical Response No. 8, Vehicle Miles Traveled, for a detailed discussion of the appropriateness of using the City's VMT Calculator for the Project. Topical Response No. 8 includes an explanation of why a development project implemented under a specific plan can and should be analyzed using the VMT Calculator. It also explains why

the City's definition of an "entertainment project" is not applicable to the Project and provides examples of other studio projects in the Los Angeles area that used the VMT Calculator, including Sunset Gower Studios and 8th and Alameda Studios. Contrary to the claims in the comment, and as discussed in Section A, Appropriateness of Using VMT Calculator, of Topical Response No. 8, Vehicle Miles Traveled, the Project would not attract regional visitor-based trips in significant quantities or frequencies. Because the Project's primary function is the production of entertainment media, and the vast majority of its trips are employee trips, it is entirely appropriate to evaluate VMT impacts on the basis of work VMT per employee. Topical Response No. 8 also includes a detailed discussion of the specific assumptions used in the Project's VMT analysis in the Draft EIR and Transportation Assessment (Appendix M.1 of the Draft EIR) that were reviewed and approved by LADOT.

As discussed in Topical Response No. 3, Permitted On-Site Uses, uses allowed within the Project Site must be consistent with the five permitted land uses (sound stage, production support, production office, general office, and retail) and the ancillary sitewide uses that support the studio and the five permitted land uses.

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation.

Comment No. 26-E.4-10

The results presented in the Draft EIR are without substantiation. For example, there is readily available transportation data to the Draft EIR preparers based on the existing 700,000+ square feet of development on the Project Site, consisting of sound stages, production support, production offices, and general office, all uses that are proposed as part of the Project. The Draft EIR preparers should have obtained travel data for existing employees at the Project Site including current trip lengths (e.g., obtained through residential zip code data), number of workdays at the Project Site, relative use of public transit (if any), etc.

The Draft EIR asserts, based on the incorrectly used VMT Calculator, that the VMT per employee is 6.7 miles. Stated otherwise, it means that the average employee on the Project Site is forecast to travel a one-way distance of 3.35 miles each day. When plotted on a map as shown on **Figure 3**, 3.35 miles is generally bounded by Beverly Glen Boulevard to the west, the I-10 Freeway to the south, Normandie Avenue to the east, and the Hollywood Hills/101 Freeway to the north/northeast. It excludes areas of high residential concentration as shown on **Figure 4** such as West LA/Santa Monica to the west, South LA and the South Bay to the south, Downtown LA and the San Gabriel Valley to the east, and the San Fernando Valley to the north.

The average commute length of 3.35 miles produced by the VMT Calculator is not accurate for the Project. As explained above, given the Specific Plan and regional-serving entertainment nature of the development, the VMT Calculator is not applicable to this Project. Project Site data substantiates that the VMT Calculator produces inapplicable results for the Project, supporting the User Guide's direction to not use the VMT Calculator for this type of project.

For example, data obtained from the U.S. Census Bureau OnTheMap feature⁶ shows that more than 50% of persons employed at the Project Site commuted more than 10 miles one-way per day: 24.5% commuted 10–24 one-way miles per day, 13.0% commuted 25–50 one-way miles per day, and 13.3% commuted greater than 50 one-way miles per day.

In addition, LLG used Big Data analytics provided by StreetLightData (SLD) which obtains data from GPS devices, such as cellphones and connected vehicles. SLD also uses other location-based data from cellphone applications actively tracking location, public census, traffic counts, and other third-party suppliers. This is an online software that provides users with powerful information to measure travel patterns and behaviors. In this study LLG used SLD to calculate the average length of vehicle trips to and from the Project Site. It is noted that the SLD represents trips by all vehicles: employees, visitors, live-taping audience members, delivery vehicles, etc. SLD normalizes all of its metrics to provide trip length, trip speed, trip circuitry, trip duration, and average daily trips. The data periods used for this analysis were Tuesdays, Wednesdays, and Thursdays for the month of April 2022, which is the latest available data. The SLD results show that the daily average one-way trip length measured to and from the Project Site is 17.1 miles.

In addition, cell phone tracking data from the traffic analytics company Placer was compiled for calendar years 2018 and 2019 related to persons (assumed to be employees) making 75 visits to the Project Site. As shown in the tables below, more than 65% of the trips to the Project Site were greater than seven (7) miles in length one-way.

TOTAL 1029

The Transportation Assessment preparers do not explain why they did not obtain empirical data related to trip lengths and other travel patterns by existing employees at the Project Site as part of the VMT evaluation. Without such data/substantiation, it is unsubstantiated that employees of this Project would only commute an average of only 3.35 miles one-way per day.

⁶ <https://onthemap.ces.census.gov/>

Response to Comment No. 26-E.4-10

The comment that the results in the Draft EIR are without substantiation is incorrect. Section IV.K, Transportation, of the Draft EIR comprehensively evaluated the potential transportation impacts of the Project using conservative assumptions and supporting evidence and concluded that impacts would be less than significant.

Refer to Topical Response No. 10, Trip Generation, for a discussion on the validity of the empirical data used to estimate trip generation for sound stage, production support and production office uses, including a comparison of actual driveway counts of existing trips at the Project Site to estimates using those trip rates. Also refer to Response to Comment Nos. 20-3 and 26-156.

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. This topical response includes additional details and an example regarding how work VMT per employee is calculated in the VMT analysis. It should also be noted that the work VMT per employee analysis presented in the Draft EIR is presented in terms of one-way trips; specifically, as stated on page IV.K-30 of the Draft EIR, "*These thresholds—and the VMT analysis to which the thresholds apply—are based on specific types of **one-way trips**...*" (emphasis added). As shown in Table IV.K-5 of the Draft EIR, the Work VMT per Employee is 6.7 miles, which represents a one-way trip. The commenter's assertion that the one-way trip length is 3.35 miles is incorrect and contrary to the facts presented in the Draft EIR transportation analysis. Refer to Response to Comment No. 26-156, which includes an explanation regarding why the VMT Calculator's estimate of 6.7 work VMT per employee does not mean that the average commute distance is half of that distance.

The alternative data sources cited in the comment (Census data, StreetLightData, Placer) are based on small, non-representative samples, cannot be isolated to employee trips, do not provide precise data, and are not approved for use by the City's traffic experts, LADOT, in VMT analysis in the City. Moreover, there is no recommendation in City or State guidance on VMT analysis to use empirical trip lengths when a model-based solution that combines trip thresholds and Project analysis is available. More importantly, it is necessary in conducting VMT analysis that both the thresholds of significance and the Project-level VMT estimates are developed using the same data source in order to ensure an apples-to-apples comparison. Therefore, the VMT analysis presented in the Draft EIR is appropriate and accurate and is consistent with CEQA and the TAG.

Lastly, as discussed in Section A, Appropriateness of Using VMT Calculator, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 26-E.4-9, the Project is a continuation and expansion of an existing studio, not an "entertainment center," and would not attract regional visitor-based trips.

Comment No. 26-E.4-11

In addition to the basic inapplicability of the VMT Calculator, the assumptions fed into the VMT analysis provided in the Draft EIR are erroneous and/or are not substantiated. For example:

- The Transportation Assessment explains that the trip generation forecasts for sound stages, production support, and production office uses were based on detailed empirical studies of trip generation from actual NBCUniversal operations collected in 2009 and reported in March 2010. NBCUniversal and Television City are very different studios, with different locations and types of studio uses.

Television City, for example, is all television production stages with audience participation. NBCUniversal is a larger studio complex for an international studio company with principally film and television production without audiences. Even though Television City is an operating studio with sound stages, production support, and production office uses today and data is available from those operations, there is no empirical data from the Project Site existing operations provided in the Transportation Assessment to support the trip generation rates for the existing uses that are consistent with the rates used in the Transportation Assessment. Empirical data from the Project Site should have been collected and reported in the Transportation Assessment.

- Tables 6 and 12 of the Transportation Assessment both note that the trip generation forecasts for the Project land uses were derived based on prior trip generation studies conducted at Universal Studios. A reduction of 15% is then applied in Tables 6 and 12 to the gross trip forecasts derived from the Universal trip rates based on the Project's proximity to public transit services and the expectation that some Project employees (as well as visitors) will utilize public transit in lieu of a personal automobile for travel. However, it is noted that Universal Studios is immediately adjacent to the Metro B (Red) Line station and related transit bus station. It is reasonable to assume, therefore, that utilization of public transit services by employees and visitors at Universal Studios are already accounted for in the empirical trip rates derived from these uses. Applying a second reduction for public transit use in the Draft EIR's trip generation forecast for the Project (as noted by example in Tables 6 and 12 of the Transportation Assessment) therefore results in a significant error in the VMT calculation as the number of vehicle trips generated by the Project are understated.
- An input to the Project's VMT analysis in the Draft EIR as summarized in Table 12 of the Transportation Assessment includes 7,752 employees for the 1,854,000 square feet of studio production and office facilities (or a density of 4.18 employees per 1,000 square feet of building floor area) which was provided by the Project applicant (footnote (e) in Table 12). There is no substantiation of the Project's employee estimate. In fact, as the metric used in the VMT analysis (VMT per Employee) is an average (i.e., total vehicle miles divided by the number of employees), artificially increasing the number of employees in LADOT's VMT Calculator while holding the vehicle miles constant would result in a lower VMT per Employee calculation. The Draft EIR should have, for example, consulted existing employee density data at the Project Site, which could be derived by comparing the historic employee counts to the existing building floor area.
- There is a discrepancy in the methodology for estimating the number of Project Site employees within the Draft EIR. In order to arrive at an estimated 7,752 non-retail Project Site employees for the 1,854,000 square feet of studio-related land uses that were input into the VMT Calculator, the Draft EIR and Transportation Assessment reference Table 3 of the Initial Study. (Draft EIR,

p. 72; Appendix M.3 [Table 2]) However, Table 3 of the Initial Study, bases its employee generation rate on the City's VMT Calculator but uses a completely different approach than the VMT Calculator inputs relied on by the Transportation Assessment and the Draft EIR. To arrive at the employee estimate, Table 3 of the Initial Study "[a]ssumes general retail rate for production support; general office rate for production office and general office." (Draft EIR, Appendix A, p. 68 fn. A [Table 3].) The employee estimate based on these VMT calculator land use inputs is then fed back into the VMT Calculator in combination with different, custom land use inputs in the Transportation Assessment and Draft EIR.

Finally, the trip generation forecasts for the Project as used in VMT analysis and elsewhere in the Draft EIR understate the vehicle trip generation potential of the Project because it does not include vehicle trips related to live audience studio productions. Television City is unique in that all of the existing stages at the Project Site are audience rated.⁷ For example, the Price is Right, currently taped at the Project Site, accommodates 325 audience attendees.⁸ Assuming two persons per car, this is approximately 160 inbound trips and 160 outbound trips for this show alone. Multiple live audience tapings occurring in a single day at the site would generate additional vehicle trips not accounted for in the trip generation forecast. The Project proposes 350,000 square feet of stages. With an average stage size of 18,000 square feet that would represent 19 stages and over 3,000 additional trips from audience shows.

For all the reasons noted above, the Project is not consistent with the CEQA VMT guidelines resulting in a significant impact under Threshold (b).

⁸ https://www.tripadvisor.com/ShowUserReviews-g32655-d560759-r11286741-CBS_Television_City-Los_Angeles_California.html

Response to Comment No. 26-E.4-11

Refer to Topical Response No. 10, Trip Generation, for a discussion on the validity of the empirical data used to estimate trip generation for production office, sound stage, and production support uses at the Project, including a comparison of actual driveway counts of existing trips at the Project Site to estimates using those trip rates. As discussed therein, the use of empirically developed rates from other studios is fully consistent with the LADOT TAG and CEQA. Specifically, the trip generation rates used for the proposed studio uses were established in 2009 as part of the NBC Universal Vision Plan Project Trip Generation Model (NBCU Trip Model) and have been used in a variety of more recent analyses for production studios in Los Angeles. The applicability of these rates was tested by applying the rates to the existing on-site land uses within the Project Site and comparing those results to empirical driveway counts collected at the Project Site driveways over multiple days. Based on these data, the NBCU model rates were approved by LADOT for

use in the Project's Transportation Assessment (included in Appendix M.1 of the Draft EIR).

The commenter claims that the number of Project trips was understated because transit usage may have been double-counted. Refer to Topical Response No. 11, Transportation Demand Management, for a discussion of the appropriateness of applying a 15 percent transit/walk-in adjustment to the Project trip generation estimates. Importantly, this adjustment was used to estimate the peak hour trip generation for the non-CEQA LOS analysis, which is not relevant to the analysis of transportation impacts under CEQA. The CEQA VMT analysis used daily trip estimates without the application of any adjustments, as the VMT Calculator makes its own internal assumptions regarding alternative travel modes based on the Project's location that are consistent with the City's VMT thresholds of significance. Regarding the non-CEQA LOS analysis, while the peak hour trip generation estimates did assume a 15 percent reduction attributed to the use of public transit or walking trips, it did not assume any reduction for the robust TDM program to be implemented at the Project Site. As described in Topical Response No. 11, this program is estimated to reduce trip generation between 6.9 percent and 40 percent, and therefore supports the 15 percent reduction in trips assumed in the non-CEQA LOS analysis.

The comment incorrectly claims that the estimate of Project Site employees is unsubstantiated and that existing Project Site employee density should have been scaled up to estimate employees for the Project. The employee estimate was provided in Table 3 of the Initial Study (included in Appendix A of the Draft EIR) and is based directly on employee densities from the VMT Calculator, except for the sound stage use, which was separately estimated by the Applicant using information from the Applicant's experience with other studio properties. The application of existing employee density as a single site-wide ratio would be incorrect because the mix of uses at the Project Site today is different than proposed with the Project. The Project proposes substantially more office space (both general and production office), which has a different employee density than sound stages and production support space.

There is no discrepancy in the estimation of Project Site employees and the inputs to the VMT Calculator. The VMT Calculator's custom land use feature, which was used to calculate VMT per employee for the Project, requires three inputs: daily trip generation, total employees, and trip purpose percentages. With this approach, the VMT Calculator does not separately calculate trip generation or employee totals based on the Project land uses, and, thus, there is no discrepancy. It should be noted that the employee assumptions in the VMT calculations for the Transportation Assessment and Draft EIR are the same as what was estimated in Table 3 of the Initial Study (i.e., approximately 7,752 non-retail employees and approximately 80 retail employees for a total of approximately 7,832).

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for a detailed discussion of the trip generation rates, which accounted for audience shows. Section B, Visitor Trips, of Topical Response No. 10 includes accurate data about the existing audience shows. As shown therein, *The Price is Right* only hosts approximately 100 studio audience members per show, not 325 as incorrectly stated in this comment. Studio audience trips would make up a small percentage of the total daily trip generation to the Project Site and, thus, are an exceedingly small part of overall Project trip generation and VMT. As described in Topical Response No. 8, Vehicle Miles Traveled, the VMT analysis is specifically based on employee home-to-work trips (“home-based-work attraction” trip type), as recommended by the OPR Technical Advisory, because these trip types generate the vast majority of VMT in a development, such as the Project, and, thus, should be the focus of analysis and potential VMT reduction measures.

Section IV.K, Transportation, of the Draft EIR comprehensively evaluated the potential VMT impacts of the Project using conservative assumptions and supporting evidence and correctly concluded that impacts would be less than significant.

Comment No. 26-E.4-12

Threshold (c): Substantially increases hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. [sic] farm equipment)

Page IV.K-78 of the Draft EIR provides a one paragraph assessment (excluding the Caltrans-required freeway safety analysis) of the Project’s potential generation of hazards. The Draft EIR provides a conclusory statement that the Project’s potential impacts related to hazards would be less than significant.

The Draft EIR is substantially flawed in its assessment of safety by ignoring:

1. Safety impacts to pedestrians adjacent to the Project Site due to new and inappropriate driveways introduced by the Project;
2. Safety impacts to motorists, bicyclists and pedestrians related to the flawed geometric design of the Project’s new private street intersection on The Grove Drive;
3. Safety impacts to pedestrians related to the introduction of new driveways, passenger loading and pedestrian activity at the alleyway; and

4. Safety impacts to motorists, bicyclists and pedestrians at off-site intersections resulting from the increased vehicular traffic generated by Project's incompatible use.

Pedestrian Safety Impacts Caused by the Project

As previously described, the Project will cause significant safety impacts to pedestrians by introducing three new driveways to existing designated Avenues: Beverly Boulevard and Fairfax Avenue. One of the two new driveways along Beverly Boulevard for Project-related cars and trucks will be immediately adjacent to the Broadcast Center building which contains existing pedestrian-generating uses—apartments and a grocery store—causing the potential for pedestrian/vehicle conflicts.

In addition, the Project's proposed new signalized private street on The Grove Drive—to be used by over 5,600⁹ Project-related cars and trucks per day—would cause significant safety impacts to pedestrians who use the existing pedestrian signal to access Pan Pacific Park and Holocaust Museum LA.

⁹ As explained above this estimate is based on information in the Project's Transportation Assessment and is likely understated for the reasons set forth in these comments.

Response to Comment No. 26-E.4-12

Refer to Response to Comment Nos. 9-29 and 26-E.4-3 regarding the analysis of traffic hazards and safety. The Initial Study (included in Appendix A of the Draft EIR) provided a discussion addressing hazards due to a geometric design feature or incompatible uses on pages 73 to 74. As discussed therein, all Project access points would be designed to meet all applicable City Building Code and Fire Code requirements and would incorporate pedestrian warning systems, as appropriate. The Project was concluded to have a less-than-significant impact on safety hazards, requiring no further analysis in the Draft EIR. Nonetheless, the Transportation Assessment (Appendix M.1 of the Draft EIR) provided a detailed discussion of potential safety hazards associated with Project access (see Section 4C). As concluded therein by LADOT and Gibson, the Project driveways would not present any geometric design hazards related to traffic movement. Refer to Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, which discusses pedestrian safety.

Figure IV.K-22 on page 80 of the Transportation Assessment shows the peak hour volumes assigned to each of the driveways around the Project Site. As shown therein, the driveway adjacent to the Broadcast Center Apartments mentioned in the comment would accommodate a total two-way flow of approximately one vehicle per minute. This low volume is not expected to result in pedestrian safety problems.

The new driveway on The Grove Drive would provide a standard T-intersection, signalized intersection design which would not “cause significant safety impacts to pedestrians who use the existing pedestrian signal” as incorrectly stated in the comment. The existing pedestrian crosswalk would be incorporated into the new traffic signal in a design approved by LADOT and in effect at hundreds of signalized T-intersections across the City. Lastly, the commenter has offered no substantiation of the alleged “significant safety impacts.”

Comment No. 26-E.4-13

Hazards Caused by the Project's Proposed Private Street on The Grove Drive

The introduction of a new Project private street intersection on The Grove Drive, as well as the proposed use by the Project of the existing alleyway located along the south side of the Project Site for vehicle access, will cause substantial hazards which have not been disclosed in the Draft EIR.

- The Intersection of the Project's New Private Street with The Grove Drive Does Not Meet Standard Warrants for Traffic Signal Control. Page 147 of the Transportation Assessment acknowledges that the forecast traffic volumes at the intersection of the Project's new private street and The Grove Drive does not meet standard warrants used by LADOT, as well as generally by traffic engineers nationwide for considering installation of traffic signals. The MUTCD manual¹⁰ in Chapter 4C. Traffic Control Signal Needs Studies states very clearly “A traffic signal control signal should not be installed unless one or more of the factors described in this Chapter are met.” This is due in part based on research that has shown that installing unwarranted traffic signals would likely result in an increase in collisions. As an example, one study¹¹ concluded:

The objective of this study was to determine the change in crash history at intersections after installation of a traffic signal. Signals installed based on the warrants from an engineering study resulted in a decrease in angle collisions with an increase in less severe rear end collisions. At intersections where signal warrants were not met, there was a smaller decrease in angle collisions and a larger increase in rear end collisions...The analysis shows that the warrants given in the MUTCD should be followed when determining the need for a traffic signal installation with the installation based on an engineering study.

The Transportation Assessment states the non-warranted traffic signal is needed “...to provide safe pedestrian crossings, safe operations for vehicles entering and exiting the Project Site, and safe and orderly operations for vehicles traveling on The Grove Drive. Additionally, since the existing pedestrian crossing on The Grove Drive is signalized, maintaining this form of traffic control is recommended

so as not to degrade the existing pedestrian operation.” This is contrary to the University of Kentucky Transportation Center study noted above. What the Transportation Assessment fails to clearly state is that in fact it is the Project and its proposed private street on The Grove Drive that will “degrade the existing pedestrian operation.” Exacerbating the condition by installing a non-warranted traffic signal will not resolve the degraded safety condition, but potentially make traffic safety worse for all users (motorists, bicyclists, and pedestrians). It is further noted that the City would be potentially liable for post-Project incidents at the intersection should the non-warranted traffic signal be installed. Installing the Project private street intersection and its related non-warranted traffic signal is a hazard resulting in a significant impact under Threshold (c) that is not disclosed in the Draft EIR.

¹⁰ *California Manual on Uniform Traffic Control Devices*, Caltrans, 2014.

¹¹ *Crash History After Installation of Traffic Signals (Warranted vs. Unwarranted)*, University of Kentucky Transportation Center, January 2008.

Response to Comment No. 26-E.4-13

The comment incorrectly claims that the installation of a traffic signal to control the proposed private driveway on The Grove Drive would result in an unidentified safety hazard and degrade the existing pedestrian safety condition. The study cited in the comment is a before-and-after study of intersections which already had a history of collisions. Critically, every intersection reviewed as part of that study conducted by the University of Kentucky included a State (of Kentucky) or Federal highway for at least one of the intersecting roadways. These Kentucky highways generally have speed limits of 45 to 70 miles per hour (mph) and are often two-lane highways in rural areas with limited or nonexistent street lighting. There are often miles of uncontrolled highway (i.e., no intervening traffic signals or stop sign controls) between traffic signals.

On the other hand, The Grove Drive is a four-lane Collector street, well under 0.5 mile long, with a speed limit of 35 mph, in a highly urbanized and controlled environment in the City of Los Angeles where municipal traffic signals are typically spaced every 300 to 600 feet. There is no existing intersection with a history of angle or rear-end collisions in the section of The Grove Drive under consideration. In addition, there is an existing traffic signal to protect pedestrians crossing at this location. For these reasons, it is not remotely comparable to the conditions analyzed in the Kentucky crash study cited in the comment.

As discussed in the Transportation Assessment included as Appendix M.1 of the Draft EIR, the intersection formed by the Project driveway and The Grove Drive did not meet the signal warrants for a traffic signal based on the average shopping day conditions at The Grove and at The Original Farmers Market. Refer to pages 147–148 of the

Transportation Assessment. However, as noted therein, on the many busy shopping days of the year, the volumes along The Grove Drive increases to the point that the peak hour warrant would be met. As discussed on page 5 of the LADOT Assessment Letter (Appendix M.2 of the Draft EIR), LADOT stated that although warrants were not met for a new signal on The Grove Drive and the Project driveway, signalization is recommended by LADOT in order to provide safe pedestrian crossings, safe operations for vehicles entering and exiting the Project Site, and safe and orderly operations for vehicles traveling on The Grove Drive.

In addition, access considerations along The Grove Drive, the overall distance between control points on The Grove Drive, and pedestrian connections between the Pan Pacific Park and the Broadcast Center Apartments, the Holocaust Museum, and the Project Site all combine to support the use of a traffic signal as the best traffic control and safety strategy. LADOT reviewed these points and agreed that the traffic signal was the most appropriate traffic control alternative for this location.

Refer to Response to Comment No. 9-29 regarding the Project's less-than-significant impacts related to traffic hazards. Also refer to Topical Response No. 12, Safety and Congestion.

Comment No. 26-E.4-14

- The Proposed Private Street That Would Intersect with The Grove Drive and the Parking Entrance for the Broadcast Center Would be Blocked by Vehicle Queues from Beverly Boulevard. The Transportation Assessment acknowledges on page 146 that vehicle queues on northbound The Grove Drive "...could extend past adjacent property access points including [the Broadcast Center's driveways and] the Project's proposed signalized driveway." Review of the intersection operations analysis provided in Appendix G of the Transportation Assessment provides further data regarding the extent of the vehicle queueing, which is shown on Figure 5 for illustration and context.

As shown in *Figure 5* and based on the data in the Transportation Assessment, the northbound vehicle queue on The Grove Drive in the weekday PM peak hour is calculated to extend from 930 feet without the Project to 1,020 feet with the Project (including its proposed signalized private street intersection on The Grove Drive). As shown on Figure 5, this queue extends well past the location of the proposed Project Site private street intersection and essentially reaching the Grove shopping center parking structure. Therefore, a signalized private street intersection on The Grove Drive as proposed by the Project would introduce substantial new hazards to all roadway users. For example, when the traffic signal turns red for Grove Drive traffic, it is likely that: 1) some northbound The Grove Drive cars will be blocked within the Project's private street intersection due to the 1,020-foot queue from Beverly Boulevard; and 2) even if motorists

respect Do Not Block Intersection or similar regulatory signage, there would be no roadway capacity available on The Grove Drive for vehicles exiting the Project Site to turn into, thereby potentially trapping these motorists within the intersection when the traffic signal turns green for The Grove Drive traffic.

Figure 5 also notes that the proposed Project private street intersection will result in southbound vehicle queues on The Grove Drive blocking the existing Broadcast Center residential driveway based on the vehicle queuing data provided in Appendix G of the Transportation Assessment. This blocked residential driveway represents a roadway hazard as it will likely cause motorists to attempt unsafe vehicle maneuvers to avoid or bypass the queue of cars on The Grove Drive.

This new hazard created by the Project results in a significant impact under Threshold (c) that was not disclosed in the Draft EIR.

Response to Comment No. 26-E.4-14

Refer to Response to Comment No. 26-171 and Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding queuing along The Grove Drive. Access to the Broadcast Center Apartments' driveways is blocked at certain peak times under existing conditions. The Broadcast Center Apartments' lack of enforcement of the red curb along the west side of The Grove Drive south of Beverly Boulevard and illegal loading operations cause periodic backups on Beverly Boulevard and contribute to the signal not clearing in time to process the northbound cars traveling from The Grove Drive or the eastbound through traffic queue using Beverly Boulevard.

The additional queues along The Grove Drive caused by Project vehicles do not represent a hazard because The Grove Drive Project entrance would be signalized, and if the northbound queue from Beverly Boulevard reaches back to the Project driveway, the traffic signal will regulate vehicles leaving the Project Site until capacity on The Grove Drive is available to accommodate the additional Project vehicles. Refer to Response to Comment No. 9-29 for additional details regarding hazards.

Comment No. 26-E.4-15

- Trucks Could Not Safely Maneuver to and from the Project Site via The Grove Drive. **Figures 6A, 6B, 6C, and 6D** demonstrate that a standard interstate truck (with a 53-foot long trailer) cannot turn to and from the private alleyway or the proposed Project private street intersection without creating hazards to current and future motorists, bicyclists, and pedestrians both on The Grove Drive as well as within the Project Site. For example,

- *Figure 6A* shows that a truck cannot physically turn into the alleyway from The Grove Drive. In addition, an inbound truck on the alleyway cannot maneuver into the Project Site.
 - *Figure 6B* shows an outbound truck exiting the alleyway and turning right to southbound Grove Drive would need to cross into northbound travel lanes, creating significant hazards to all users of The Grove Drive.
 - *Figure 6C* shows that a truck turning right into the Project Site from The Grove Drive would need to cross into the private street's outbound travel lanes, creating significant hazards to all users on the Project Site.
 - *Figure 6D* shows an outbound truck exiting the alleyway and turning right to southbound Grove Drive would need to cross into northbound travel lanes, creating significant hazards to all users of The Grove Drive.

This new hazard created by the Project results in a significant impact under Threshold (c) that was not disclosed in the Draft EIR.

To be consistent with the Mobility Plan and to avoid creating significant hazards the Project should be redesigned to limit truck related activity to existing gates.

Response to Comment No. 26-E.4-15

Refer to Response to Comment No. 9-29 regarding hazards.

The comments regarding truck maneuvers into and out of the Project Site are made with numerous invalid assumptions, including:

1. That the Southern Shared Access Drive would remain at its current width if Project access were taken from that street. The Conceptual Site Plan shown in Figure II-4 of the Draft EIR shows that the Southern Shared Access Drive would be widened with implementation of the Project such that it would be able to accommodate Project vehicles. Thus, Figures 6A and 6B from the comment are inaccurate.
2. That trucks turning right into or out of the Project Site would only use the right-hand lane (and, in the case of Figure 6C from the comment, the truck is shown turning from the rightmost edge (curbside) of a wide lane rather than the left edge).

In fact, the WB-67 large trucks of the types described in the comment routinely swing wide to enter and exit driveways throughout the City, including inbound trucks swinging across the area designated for outbound traffic and vice versa. These

movements are expected, as codified in State and City guidelines. The *California Commercial Driver Handbook* (California Department of Motor Vehicles, 2019-2021) states in Section 2.7.6, Space for Turns, that drivers of large vehicles may encroach into other vehicle lanes. The *City of Los Angeles Supplemental Street Design Guide* (Los Angeles Bureau of Engineering & LADOT, May 2020) states on page 25, “The intersection corner [radius] should be designed so that the most common vehicle can negotiate a turn without encroachment into an adjacent or oncoming motor vehicle lane.” (Emphasis in original text.) It further states on page 26, “Large trucks are assumed to be able to use adjacent lanes on the departing and receiving street at all intersections.” These movements are made out of necessity by experienced drivers with extremely limited frequency compared to passenger vehicle movements, and they are not considered to be an unusual safety hazard.

Figure II-11 on page II-1148 provides an accurate depiction of WB-40 semi-trucks accessing the Project Site via the Project driveways including The Grove Drive and the Southern Shared Access Drive driveways. The trucks shown in the figure are classified as WB-40, the most common types of semi-trucks expected at the Project Site. Turning movements by WB-67 trucks described in the comment would be an infrequent occurrence at the Project Site since most of the trucks in/out of the Project Site would be WB-40 or single unit (SU) trucks under both existing and future Project conditions. Figure II-12 on page II-1149 shows the turning movement paths for WB-67 trucks turning in and out of the Project Site driveways.

It is also important to note that large trucks already use The Grove Drive. Figure II-13 on page II-1150 shows the turning movement path for a WB-40 truck turning between the Southern Shared Access Drive and The Grove Drive. These size trucks currently serve Farmers Market and The Grove shopping center and make these turns on a daily basis. In addition, the Grove shopping center has a loading dock located on The Grove Drive south of the Project Site, which requires large delivery trucks to back in from the street. When those trucks arrive and depart, they block all southbound travel lanes and, in some cases, all northbound travel lanes at the same time, but are not considered safety hazards. Traffic counts with vehicle classifications were conducted at the loading dock and at the Southern Shared Access Drive and found that trucks (not associated with the existing studio) currently use both locations during business hours. Notably, we are not aware of any safety hazards or issues associated with the existing operations of The Grove shopping center.

The Project, on the other hand, is designed so that all vehicles, including trucks, would head in and out of all designated access points (i.e., no backing in or out of the facility would be required), limiting their effect on surrounding streets, including The Grove Drive. Due to the adequate size of the Project driveways and turning radii, the addition of Project trucks would not result in a new significant safety hazard.

Comment No. 26-E.4-16

- Proposed Travel Lane Geometry at The Grove Drive/Project's Private Street Intersection Would Substantially Increase Vehicle Collisions. The proposed geometry of The Grove Drive/Project Private Street intersection as provided in Appendix H of the Transportation Assessment will create hazardous conditions by substantially increasing vehicle collisions. Figure 7 has been prepared using the plan provided in the Transportation Assessment as a base, with LLG's comments provided directly thereon. These comments include:
- The proposed new left-turn lane on northbound The Grove Drive at the Project's private street intersection is shown in the Transportation Study to line up directly with the oncoming southbound No. 1 through lane. To avoid a collision southbound through traffic would need to transition approximately 10 feet to the west across the intersection, a condition that LADOT should not and would not allow (from LLG's experience, vehicles should be required to transition no more than one to two feet across an intersection). It is noted that if the intersection roadway striping is redesigned and the southbound The Grove Drive travel lanes are shifted to the west, it would cause the removal of nearly all the existing curbside street parking spaces adjacent to the Broadcast Center building and conflict with the use of curbside space for existing residential and supermarket users as occurs under existing conditions.
 - Directly across from the proposed Project's private street intersection, there is an existing curbside drop-off/pick-up lane on the east side of The Grove Drive that serves visitors (including school and tour buses) to the Holocaust Museum LA and Pan Pacific Park. If the private street intersection is constructed and traffic signal installed, the drop-off lane would no longer be able to safely function because vehicles, including buses, attempting to exit the drop-off lane would be in the middle of the intersection and not know at any time which movement (e.g., The Grove Drive traffic or Project private street traffic) has a green light. This new hazard introduced by the Project results in a significant impact under Threshold (c) that was not disclosed in the Draft EIR.

Response to Comment No. 26-E.4-16

The comment presents a critique of a conceptual striping plan for the proposed signalized Project Site driveway on The Grove Drive, claiming it would increase vehicle collisions. The conceptual striping plan is not an engineering drawing and should not be interpreted as such. After Project entitlement is complete, the detailed engineering of the driveway would be conducted during the regulatory building permit process as part of the Project's construction drawing set, which would be thoroughly reviewed by the City, including LADOT and the Bureau of Engineering, for compliance with regulatory standards, including standards that ensure safe operations.

As to the specific items identified in the comment, the detailed construction design would include the following components, as also reflected in Figure II-14 on page II-1153:

1. The 9-foot northbound left-turn lane shown may be widened to 10 feet, reducing the curb lanes in both directions to 11.5 feet.
2. The southbound approach would shift west prior to the limit line, reducing the offset across the intersection to an acceptable level. This would require removing several street parking spaces adjacent to the Broadcast Center Apartments, as noted in numbered comment 5 in Figure 7.
3. Operations for the existing passenger loading area on the east side of The Grove Drive would be considered in the intersection design.
4. See Figure II-12 on page II-1149, which shows how large trucks would access the Project Site on The Grove Drive.

As noted above, the final engineered design for this driveway would be thoroughly reviewed by LADOT and the Bureau of Engineering, and the Applicant will work with City staff to ensure that the final design meets operational and safety standards for all users. No significant impact as a result of new hazards would occur. Refer to Response to Comment No. 9-29 regarding hazards.

Refer to Response to Comment No. 26-170 regarding how the Project would not conflict with Holocaust Museum operations or create safety issues.

 Conceptual Striping Plan
 The Grove Drive & Project Driveway

Comment No. 26-E.4-17

- Arriving Vehicles to Project Site Related to Live Audience Shows Will Queue onto Adjacent Streets. Based on Section II. Project Description of the Draft EIR, the Project would accommodate the continuation of live audience productions at the Project Site, yet the Draft EIR does not disclose attendance figures or state how issues such as arriving and departing vehicle traffic associated with this activity will be accommodated. Further, related to hazards caused by the Project and not disclosed in the Draft EIR, arriving vehicles at the Project Site's security gates for audience tapings will cause vehicles to queue onto adjacent streets such as The Grove Drive and Beverly Boulevard, increasing the likelihood of vehicle collisions, as well as safety impacts to pedestrians and bicyclists.

A vehicle queuing analysis was prepared to evaluate the potential vehicle queues at the Project Site's security gates associated with live audience tapings at the Project Site. As an example, the analysis was based on vehicle queueing that might be expected related to a show similar to The Price is Right. As previously noted, tapings of this show are produced in a studio accommodating approximately 325 guests. Assuming two guests per vehicle, this is equivalent to approximately 160 arriving guest vehicles.

In preparing the queuing analysis, the 95th percentile vehicle queue was estimated using a Poisson distribution. The 95th percentile vehicle queue is typically used by traffic engineers to determine, for example, the required length of left-turn pockets at intersections. This design parameter is based on the expectation that the left-turn pocket will be able to accommodate vehicle queues in the left-turn lane 95% of the time during the peak hour. The Poisson distribution is used to estimate the rate of vehicle arrivals over the course of the peak hour. For example, 60 peak hour left-turn vehicles will typically not arrive at the left-turn lane at a regular rate of one car per minute. In some minutes during the peak hour, two or three vehicles may arrive, while in other minutes, no vehicles will arrive. Accordingly, the Poisson distribution was used to estimate the variations in vehicle arrival rates over the analyzed peak hours.

In addition to the rate of vehicle arrivals, vehicle queueing at the Project Site's security gates will be influenced by: 1) the number of security gates attendants available to handle arriving live audience; and 2) the estimated service or processing time of each vehicle at the security gates. For this analysis, it was assumed live audience guests will be pre-instructed to arrive at the Project's proposed Grove Drive security gate. According to Figure II-4 in the Draft EIR, the proposed Grove Drive gate appears to provide three inbound lanes set back approximately 100 feet from the back of the Grove Drive sidewalk. To provide the most optimistic result for the Project, it was assumed that all three lanes would be available to process arriving live audience gates.

An M/M/s queuing model¹² was used to estimate vehicle queuing based on the number of arriving vehicles (160 vehicles arriving in a one hour period), the number of available security lanes (3)¹³, and the average service/processing time (assumed to be one minute per arriving vehicle for the security person to check-in the guest and provide instructions for parking, etc.). The M/M/s queuing model calculates average vehicle queuing during the analyzed peak hour, as well as peak queues during the hour at the 95th percentile confidence level.¹⁴

The M/M/s queuing calculations prepared for the Project's The Grove Drive security gates related to arriving live audience guests are provided in **Appendix A**. As shown in *Appendix A*, the average queue during the arrival hour of guests is six vehicles per lane. In addition, the 95th percentile (i.e., design) queue is approximately 26 vehicles per lane. Assuming approximately 22 feet per queued vehicle, this results in an *average* queue of 132 feet per lane and design queue length of approximately 572 feet, which would mean vehicles would queue onto The Grove Drive, well beyond the Project's private street intersection just for audience members for one audience show. This stopped line of cars waiting to enter the Project Site would adversely impact vehicle traffic flow on The Grove Drive and adversely affect safety for all users of The Grove Drive: motorists, bicyclists, and pedestrians. This hazard introduced to The Grove Drive by the Project was not analyzed or disclosed in the Draft EIR.

It is noted that this analysis only evaluated arriving audience members at the Project Site for one taping. Multiple simultaneous or overlapping tapings at the Project Site with live audiences, as well as other arriving vehicles requiring processing by security (visitors, trucks, etc.) will further add to the queue of vehicles waiting to enter the site. Thus, the forecast vehicle queues is a limited example and does not reflect the extent of potential vehicle stacking at the Project's The Grove Drive security gates.

¹² *Tutorial on Queuing Theory*, Kardi Teknomo, 2014.

¹³ If the number of security lanes is less, as shown on the conceptual plan, the queue lengths will be substantially longer.

¹⁴ M/M/s queuing models are appropriate tools to evaluate queues at peak utilization periods and have been used in many practical applications. For example, these models are used to determine the number of servers needed to accommodate queues of people in drive-thru lanes at fast-food restaurants, as well as lines at airline ticket counters, arenas, etc. In transportation assessments, the M/M/s queuing models have been used to estimate vehicle queuing at schools during student drop-off and pick-up, and how queues can be managed based on the number of available curbside spaces and/or valet attendants, and the number of adult monitors to assist students to and from vehicles.

Response to Comment No. 26-E.4-17

The comment makes a series of assumptions about the arrival patterns of studio audience members and the Project's operational plan to accommodate those arrivals and

concludes that there would be queuing onto the streets. The assumptions, however, are incorrect, and, therefore, so are the conclusions.

As an initial matter, the comment assumes that The Price is Right has 325 studio audience members per taping, which is incorrect. As stated in Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, which includes accurate data about the existing audience shows, The Price is Right accommodated approximately 100 studio audience members per show in year 2019 prior to the COVID pandemic. (Since the pandemic began, studio audience attendance has been lower at the smaller, more frequent shows according to the Applicant, though all audience data described in Section B are from prior to the pandemic.)

The comment also assumes that all of the studio audience members would be directed to The Grove Drive driveway to park, when in fact there are at least three locations where they could be directed (the signalized driveways on Beverly Boulevard, Fairfax Avenue and The Grove Drive). Further, the on-site audience parking areas would be accessible from all three signalized driveways.

The comment also assumes that each vehicle transaction would require 60 seconds at the security gate. While some transactions may require that length of time, the majority of transactions would be substantially quicker, as audience members would be pre-registered and the security check would merely need to match guests to a list. Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, including Table II-12 therein, which shows that the average processing time ranges from approximately 9 to 60 seconds per vehicle, with employee vehicles (i.e., the large majority of vehicles) being processed at 9 seconds per vehicle.

Refer to Topical Response No. 12, Safety and Congestion, for a detailed discussion and analysis of potential queuing at gates. It includes a Poisson analysis of morning peak hour queuing at The Grove Drive similar to that produced in the comment but with accurate data. It assumes arrival of 289 employee vehicles, 33 studio audience and visitor vehicles, and six trucks sharing two security lanes. The resulting 95th percentile queue would be three vehicles per lane, which would be accommodated within the proposed 160 feet of storage per lane. As demonstrated in Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, the non-CEQA queuing analysis in the Transportation Assessment accounted for all inbound Project trips, including audience trips, and correctly concluded that vehicular entrance gate locations and queuing areas are adequate.

Further, The Grove Drive driveway is proposed to have five total lanes, including two dedicated inbound lanes, two dedicated outbound lanes, and one lane that can be operated in either direction depending on traffic flows. Thus, in the event that studio

audience vehicles for multiple simultaneous shows were directed to the driveway on The Grove Drive, there would be sufficient capacity for security screening and space to accommodate this volume of audience vehicles. Finally, the Project would have the operational flexibility to direct or distribute studio audience vehicles as needed between various driveways in order to avoid the potential for queues onto public streets.

Therefore, the concerns expressed in the comment are unfounded and based on incorrect assumptions.

Refer to Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment No. 16-11 regarding pedestrian safety. Refer to Response to Comment No. 9-29 regarding the Project's less-than-significant impacts related to traffic hazards.

Comment No. 26-E.4-18

Hazards Caused by the Project at Off-Site Intersections Due to Incompatible Uses

The Project Site is located in a highly congested area and additional vehicular traffic generated by the Project would cause safety hazards as vehicles are expected to queue outside of available left-turn and right-turn pockets, which would be exacerbated by Project-related traffic. Due to the proposed uses and its substantial generation of vehicle trips, the hazards are directly related to the proposed Project, which have not been disclosed in the Draft EIR.

Beginning with the forecast of vehicle traffic at the off-site intersections evaluated in the Transportation Assessment, LLG identified the following errors which likely have caused an under-reporting of the relative hazards caused by the Project:

- Based on Tables 6 and 7 of the Transportation Assessment, a "pass-by" trip credit was incorporated into the trip generation forecast related to the 20,000 square feet of retail/restaurant use proposed on the Project Site. As the Project Site is surrounded by security gates and generally available only to employees and their guests, there will likely be no "impulse" trips to the on-site retail and restaurant uses. Thus, no pass-by trip reductions should apply.
- Trip generation related to the proposed Mobility Hub use, as well as other uses such as the basecamp and production support that is not included in floor area, etc. have not been included in Tables 6 and 7 of the Transportation Assessment.
- As previously stated, the trip generation forecast does not include vehicle trips generated by live audience tapings at the Project Site.

- The forecast of ambient traffic growth in the Transportation Assessment is only until year 2026 yet the Project proposes a Development Agreement with the City allowing development to occur over a 20-year period (page II-36 of the Draft EIR). Thus, background traffic should have been forecasted to a period 20 years beyond possible approvals (e.g., to 2043).

Even with the under-reported trip forecasts on the street network analyzed in the Transportation Assessment, the Project land uses are forecast to create or exacerbate potentially hazardous conditions at the intersections based on the data provided in Appendix G. Below is a sample of the potentially hazardous locations:

- Intersection No. 1, Fairfax Avenue/Melrose Avenue
- Southbound Left-Turn: The Project will increase the AM peak hour queue by 0.7 vehicles, resulting in a 168-foot queue. Assuming a 150-foot storage area, the queue will exceed the available storage area by 18 feet.
 - Southbound Left-turn: The Project will increase the PM peak hour queue by 1.9 vehicles, resulting in a 325-foot queue. Assuming a 150-foot storage area, the queue will exceed the available storage area by 175 feet. This queue will spill back into adjacent southbound travel lanes.
- Intersection No. 7, Fairfax Avenue/3rd Street
- Northbound Left-Turn: The Project will increase the AM peak hour queue by 0.3 vehicles, resulting in a 240-foot queue. Assuming a 150-foot storage area, the queue will exceed the available storage area by 90 feet. This queue will spill back into adjacent southbound travel lanes.
 - Northbound Left-Turn: The Project will increase the PM peak hour queue by 0.3 vehicle lengths, resulting in a 220-foot queue. Assuming a 150-foot storage area, the queue will exceed the available storage area by 70 feet. This queue will spill back into adjacent southbound travel lanes.
 - Southbound Left-Turn: The project will increase the PM peak hour queue by 1.1 vehicle lengths, resulting in a 415-foot queue. Assuming a 310-foot storage area, the queue will exceed the available storage area by 105 feet. This queue will spill back into adjacent travel lanes, and may interfere with the operations of the upstream signal (Fairfax Avenue/Farmers Market Place).
- Intersection No. 10, Fairfax Avenue/6th Street
 - Southbound Left-Turn: The Project will increase the AM peak hour queue by 0.2 vehicles, resulting in a 303-foot queue. Assuming a 200-foot storage area, the queue will exceed the available storage area by 103 feet. This

queue will spill back into adjacent travel lanes, and may interfere with access at upstream unsignalized intersections.

- Intersection No. 14, Stanley Avenue–The Grove Drive /Beverly Boulevard
 - Westbound Left-Turn: The Project will increase the PM peak hour queue by 1.1 vehicles, resulting in a 160-foot queue per lane. The resulting queue will exceed the available storage area by 80 feet. This queue will spill back into adjacent travel lanes and may interfere with the operations of the upstream signal (Curson Avenue/Beverly Boulevard).
- Intersection No. 20, La Brea Avenue/Beverly Boulevard.
- Northbound Left-Turn: The Project will increase the AM peak hour queue by 1.3 vehicles, resulting in a 213-foot queue. Assuming a 200-foot storage area, the queue will exceed the available storage area by 13 feet.
 - Southbound Left-Turn: The Project will increase the PM peak hour queue by 1.8 vehicles, resulting in a 385-foot queue. Assuming a 245-foot storage area, the queue will exceed the available storage area by 140 feet. This queue will spill back into adjacent travel lanes.

It is noted the Draft EIR fails to provide a vehicle queuing analysis at all the Project Site driveways, as well as for the intersection of The Grove Drive and private alleyway, which the Project proposes to use for vehicular access. Missing from the Transportation Assessment is vehicle queuing analysis/data for the following intersections:

- Project driveway on Fairfax Avenue south of First Street
- Project driveway on Beverly Boulevard west of Genesee Avenue
- Project driveway on Beverly Boulevard across from Spaulding Avenue
- The Grove Drive and Private Alleyway

The TAG (page 3-6) requires evaluation of vehicle queuing at “All primary project driveway(s)” and “Unsignalized intersections that are adjacent to the project or that are expected to be integral to the project’s site access and circulation plan.”

Additionally, the Transportation Assessment does not evaluate whether vehicle from adjacent signalized intersections may extend through the proposed Project driveways. For example, it is expected that vehicle queues on the eastbound Beverly Boulevard approach to the Stanley Avenue–The Grove Drive intersection will extend into and through the Spaulding Avenue-proposed Project driveway intersection, impeding traffic movements to

and from the driveway and creating new safety impacts. Without the queuing data provided at all the Project access locations, the potential safety impacts caused by the Project may not be fully disclosed in the Draft EIR.

It is noted that at the intersection of Spaulding Avenue and Beverly Boulevard, all traffic movements are currently permitted, including left-turns to and from Spaulding Avenue. The Project proposes that traffic movements to and from the proposed Project driveway on Beverly Boulevard be limited to rights-turns in and right-turns out only (e.g., as depicted on Figure 22, page 80 of the Transportation Assessment). However, the Transportation Assessment does not disclose how these turning movement restrictions will be enforced. Physical barriers on Beverly Boulevard are not possible because they would otherwise prohibit currently permitted traffic movements to and from Spaulding Avenue.

Response to Comment No. 26-E.4-18

Contrary to the comment, as concluded in the Initial Study (included in Appendix A of the Draft EIR), the Project would have a less-than-significant impact related to increased hazards due to a design feature or incompatible use, and no further analysis of this topic was required in the Draft EIR. Nonetheless, the Transportation Assessment included as Appendix M.1 of the Draft EIR provides a detailed discussion of Threshold T-3 in Section 4C (see pages 124-128 of the Transportation Assessment); refer to Response to Comment No. 9-29. The commenter attempts to create a safety hazard impact under CEQA by using incorrect assumptions and unsupported assertions in the non-CEQA queuing analysis presented in the Draft EIR.

The comment also makes a number of inaccurate claims about the Project trip generation estimates and transportation analysis. The following corrects those claims:

- A. The retail portion of the Project would be open to the public and not behind security gates as described in the comment. Therefore, the application of pass-by trip discounts is appropriate. Moreover, if it were behind security gates making it difficult for customers to access, it is reasonable to assume that it would get fewer customers and, thus, fewer trips.
- B. The trips associated with basecamp areas, production support space, and the Mobility Hub are accounted for in the transportation analysis. Refer to Topical Response No. 10, Trip Generation, for a more detailed explanation of the derivation of the trip generation estimates for the Project. Topical Response No. 10, provides a discussion on the validity of the empirical data used to estimate trip generation for production office, sound stage, and production support uses at the Project Site. This includes a comparison of actual driveway counts of existing trips at the Project Site to estimates using the empirical data.

Refer to Section D, Basecamp Trips, of Topical Response No. 10, Trip Generation, for a discussion of basecamp trips. As discussed in Response to Comment No. 26-160, the Mobility Hub would not generate trips; rather, it would reduce single-occupant vehicle trips to and from the Project Site and, thus, reduce VMT. The comment incorrectly states that there is production support that is not included as floor area. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate. Basecamp and outdoor production activity areas are related to and dependent upon sound stages; those areas do not separately generate production activity. As such, even though basecamp and outdoor production activities are not counted as floor area, these activities were fully accounted for in the Draft EIR's transportation analysis.

- C. The Project's trip generation estimates include trips associated with sound stage audiences. See Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for a discussion of visitor and audience trips.
- D. As described in Response to Comment No. 26-159, projection of background traffic to Year 2043 would substantially overestimate future traffic conditions. The combination of related projects and a 1-percent assumed growth rate resulted in a 12.8-percent increase in background trips between existing traffic levels and Future 2026 Traffic without Project shown in Figure 21 (page 77) of the Transportation Assessment (Appendix M.1 of the Draft EIR). The SCAG 2040 travel demand model predicts a smaller traffic increase between years 2018 and 2040 than the Transportation Assessment assumed between years 2021 and 2026. Thus, an operational analysis using the SCAG 2040 base traffic levels would not have had substantially different results than the same analysis shown in the 2026 operational analysis in the Project Transportation Assessment.

The comment then repeats intersection queuing information and analyses presented in the Transportation Assessment included in Appendix M.1 of the Draft EIR. These analyses were provided as part of the non-CEQA transportation analysis in accordance with the TAG. This information has been reviewed by LADOT, and the Transportation System Management and Vision Zero improvements included in the Transportation Improvement Program (see Topical Response No. 15, Transportation Improvement Program) have been added to the improvement program to address potential queuing effects. In every example provided in the comment, the Project would add incrementally (and minimally by 0.2 to 1.9 vehicles) to queues already forecast to exceed turn pockets during peak hours; thus, the Project would not introduce new turn pocket exceedances or result in any queues that are considered to be safety hazards by the City's traffic experts, LADOT. The Transportation Assessment includes a comprehensive analysis of traffic hazards beginning on page 124. As concluded therein by LADOT and Gibson, the Project would not increase hazards due to geometric design features, including from safety,

operational or capacity effects (taking into account a number of compatibility factors, including, among others, the relative amount of pedestrian activity, visibility factors, physical conditions, roadway lanes, roadway utilization/capacity and permitted speeds).

Figure 22 of the Transportation Assessment (page 80) shows the minor volumes of inbound/outbound trips on the unsignalized Project driveways cited in the comment. Most of them only permit right-turns, and none of these locations are likely to result in queues that would affect the traffic along the public streets adjacent to the Project. LADOT reviewed these minor driveway volumes and determined that additional queuing studies were not required.

There is no intent to prohibit any of the existing movements into or out of Spaulding Avenue north of Beverly Boulevard. Right-turn in and out access is proposed for the unsignalized driveways on Beverly Boulevard. This restriction can be enforced through turn restriction signage since these vehicles will all be subject to Project Site access and security.

Comment No. 26-E.4-19

Threshold (d): Result in inadequate emergency access

The Draft EIR does not consider or disclose the Project's significant impacts to emergency access. Beverly Boulevard is a designated Disaster Route¹⁵ in Los Angeles County. Emergency access is particularly important in consideration that the Project Site is located on Beverly Boulevard and is only a mile away from Cedars-Sinai Medical Center. Cedars-Sinai's Emergency Department provides one of the few Level I Trauma Centers in Los Angeles County and its ambulance entry is located immediately south of Beverly Boulevard. As previously shown on *Figure 2*, even with the Draft EIR's understated trip generation forecast, the Project will add motorist delay, vehicle queuing, and overall congestion at a minimum of three LOS E/F intersections along the important Beverly Boulevard ambulance route, significantly increasing travel times for ambulances to access Cedars-Sinai, as well as adversely affecting response times for all emergency vehicles in the Project Site vicinity.

Other routes around the Project Site will experience significant impacts to emergency vehicle access. Again, using the Draft EIR's understated vehicle queuing analysis, the Project will add to an already existing northbound vehicle queue that consumes nearly two-thirds of the block of The Grove Drive between Beverly Boulevard and Third Street. There is no center left-turn lane for much of the block on The Grove Drive, so northbound emergency vehicles would need to drive in the oncoming southbound vehicle lanes in order to access Beverly Boulevard.

It is demonstrated herein that trucks will have great difficulty in turning to and from The Grove Drive at the Project's proposed new private street. Most trucks will need to stop in the middle of The Grove Drive and complete multiple back-and-forth maneuvers, thereby impeding movements by emergency vehicles.

Finally, as also demonstrated herein, extensive vehicle queues are expected at the Project's new private street at The Grove Drive related to the regular arrival of live audience tapings. In addition to adversely impacting movements by emergency vehicles on The Grove Drive, it will significantly impact emergency vehicle access to the Project Site.

¹⁵ <http://dpw.lacounty.gov/dsg/disasterroutes/map/Los%20Angeles%20Central%20Area.pdf>

Response to Comment No. 26-E.4-19

The Initial Study (Appendix A of the Draft EIR) included an analysis of emergency access and determined impacts would be less than significant. Emergency access is also analyzed in the Draft EIR on page IV.J.1-22 of Section IV.J.1, Public Services—Fire Protection, and page IV.J.2-14 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR. Refer also to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, which discusses emergency access along the streets in the vicinity of the Project. Topical Response No. 12 also includes a detailed analysis of inbound gate queuing at each driveway, including on The Grove Drive, showing that even considering studio audience visitors there would be no queuing on the public street. As described in Topical Response No. 12 and Response to Comment Nos. 9-29 and 16-36, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations to the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

Truck maneuvers in and out of the Project driveway on The Grove Drive will not have to make multiple-point turns to access the Project Site. It should be noted that all trucks to and from the Project Site would head in and out of all designated access points, preventing time-consuming and disruptive back-in maneuvers, as exists with the loading operations of The Grove shopping center. Refer to Response to Comment No. 26-E.4-15 for further discussion regarding truck maneuvers and the lack of safety hazards. Therefore, this would not negatively affect emergency access.

Comment Letter No. 27

Michael S. Dea
Business Manager
LiUNA Local 1184
1128 E. La Cadena Dr.
Riverside, CA 92507-8695

Comment No. 27-1

On behalf of LiUNA! Local 1184, our nion [sic] enthusiastically supports TVC 2050: The Los Angeles Studio Plan.

This plan to modernize the 70-year-old Television City will bring more than 4,200 construction jobs to Los Angeles at a time when the city is continuing to recover from the impacts of COVID-19 and confronts increasing competition from other global production centers.

The modernization of Television City will ensure the future of the studio, create thousands of jobs, generate more than \$2.4 billion in new, annual economic output, and maintain Los Angeles' status as the entertainment capital of the world.

TVC 2050 represents a massive investment in one of the city's biggest industries and it will produce new, well-paying constructions jobs. Televison [sic] City has agreed to employ union constructon [sic] workers for the project which means new job opportunieis [sic] for the skilled and trained men and women of the Building Trades.

We're pleased to support this important project that will bring more jobs and revenue to Los Angeles.

Response to Comment No. 27-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 28

Allan J. Abshez
Partner
Loeb & Loeb LLP
10100 Santa Monica Blvd., Ste. 2200
Los Angeles, CA 90067-4120

Comment No. 28-1

We are writing on behalf of our client, the A.F. Gilmore Company, to provide comments to the Draft Environmental Impact Report (DEIR) for the TVC 2050 Specific Plan and associated actions (collectively, the “Project”).

In light of the numerous fundamental defects of the DEIR identified in this letter it appears that the lead agency has not complied with the plain mandate of Public Resources Code Section 21082.1. Specifically, and as further discussed in this letter, it appears that the lead agency has not independently reviewed or analyzed the plans, reports, and declarations submitted by the Developer and its consulting team with even the most basic critical eye as required by CEQA and the Los Angeles Municipal Code. This in turn supports the conclusion that the DEIR, in whole or part, does not reflect the independent judgment of the lead agency, and that the Developer has improperly been allowed to use the CEQA process as its own mouthpiece.

Response to Comment No. 28-1

This introductory comment incorrectly claims that the Draft EIR does not comply with Public Resources Code (PRC) Section 21082.1, which relates to lead agency review, without providing any evidence or support. The Draft EIR is a City of Los Angeles document, prepared by independent professionals with extensive coordination and independent review and approval by the Department of City Planning.

Comment No. 28-2

The Project is characterized as a “Specific Plan to allow for the continuation of an existing studio use and the modernization and expansion of media production facilities.” However, no Specific Plan has been provided for public review. The following questions must be answered:

- 1) Has the lead agency prepared, received, reviewed, and or analyzed the Specific Plan?

- 2) If the lead agency has received and reviewed the Specific Plan, why was it not released to the public at the same time as the publication of the DEIR so that the public could review and comment?
- 3) If the lead agency has not received and reviewed the Specific Plan, how did the lead agency verify the representations made by the DEIR regarding the Specific Plan so that those representations may be said to be accurate and reflect the City's independent judgment?

Response to Comment No. 28-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 regarding the proposed Specific Plan, the fact that CEQA and City policy do not require the aSpecific Plan to be included in the Draft or Final EIR, and how the physical aspects of the proposed Specific Plan are consistent with those in Section II, Project Description, of the Draft EIR. Refer also to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR. The comparison presented therein confirms that the physical elements were discussed and analyzed in the Draft EIR. An initial draft of the Specific Plan that was provided by the Applicant has been publicly available since 2021 and is part of the administrative record. Although not required by CEQA or City policy, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning's website prior to the publication of this Final EIR.

Comment No. 28-3

The DEIR fails to provide an accurate, stable and finite description of the Project; thus failing CEQA's most basic requirement. *County of Inyo v. City of Los Angeles*, (1977) 71 Cal.App.3d 185,193. Accordingly, the DEIR is fundamentally defective. Since the Project is "a Specific Plan" and not an actual development proposal, the public must be afforded an opportunity to review the proposed Specific Plan together with the new or recirculated DEIR that contains an environmental impact analysis of the actual Specific Plan. What does the Developer actually intend to build and operate? There is no way of determining this with any certainty from the DEIR despite its thousands of pages.

The DEIR's Project Description Chapter uses the word "conceptual" repeatedly in caveating that the Project presented in the DEIR is not actually the project that may be developed. A "Conceptual" Site Plan is provided as Figure II-4 of the DEIR But—

- At page II-13, the DEIR states that the "Conceptual Site Plan" illustrates only "one possible development scenario that could be developed..." "The specific mix of uses ultimately constructed will depend on market demands..." **Actual**

development would be governed by the requirements of the proposed Specific Plan and not the conceptual site plan... (emphasis added);

- At page II-15, the DEIR states that the buildings depicted in the Conceptual Site Plan illustrate one possible buildout scenario—not an actually proposed project;
- At page II-20, the DEIR states that the DEIR’s “height zones” and buildings shown in the Conceptual Site Plan do not represent actual development footprints;
- At page II-26, the DEIR states that only “some” internal circulation routes are depicted on the Conceptual Site Plan;
- At page II-9, the DEIR states that mobility hub depicted is only “Conceptual”; and
- At page II-30, the DEIR states that the Conceptual Site Plan illustration of parking location is only “Conceptual” and that parking could be located anywhere on the Project site.

The lack of a Specific Plan for public review as part of the DEIR, together with the uncertainty as to what will actually be built and operated, how what actually is built and operated will actually be accessed by vehicles and public transportation, how what actually is built and operated will actually be served by internal circulation, and where parking actually will be built to serve what is actually built results in what the Inyo court describes as “[a] curtailed, enigmatic or unstable project description [that] draws a red herring across the path of public input.” *Id.* at pp. 197, 198. Thus, the DEIR is fundamentally defective.

We note that the Director of Planning’s April 16, 2021 consent to the initiation of the proposed plan amendment was conditioned on “**finalization of the site plan** and project description to be analyzed in the Environmental Impact Report.” (emphasis added) However, as discussed above, there is no final site plan. Why has the Planning Department allowed the preparation of an Environmental Impact Report despite the fact that the Developer has not provided a final site plan which the Director’s April 16, 2021 required as part of the Director’s consent to initiate the general plan amendment? The failure to require the Developer to comply with the conditions of the Director of Planning’s consent indicates that the lead agency is not exercising proper oversight over the Developer’s proposal.

Response to Comment No. 28-3

The Draft EIR analyzed the Project described in Section II, Project Description, of the Draft EIR (refer to pages II-12 through II-35 of the Draft EIR). Any substantial changes from the Project that was analyzed in the EIR, including proposals that include a land use exchange, would be subject to further discretionary review and CEQA compliance per the

Preliminary Draft Specific Plan. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-11, and 26-5 regarding how the Project Description provided in Section II, Project Description, of the Draft EIR is accurate, stable, and finite and a draft Specific Plan was not required to be included as part of the EIR. Also refer to Topical Response No. 1 and Response to Comment Nos. 5-5, 9-12, and 9-13 regarding the Conceptual Site Plan, the conceptual nature of all site plans in an EIR, and the level of detail required for analysis within a draft EIR for a specific plan project. Refer to Topical Response No. 1 and Response to Comment Nos. 9-13 and 26-16 regarding the mix of uses. Refer to Response to Comment Nos. 9-16 and 26-7 regarding the established height zones. With regard to the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. With regard to locations of parking, refer to Topical Response No. 13, Parking, and Response to Comment No. 9-2.

Regarding internal circulation routes, the commenter does not provide the full sentence on page II-26 of the Draft EIR, which states: "While some of the circulation routes are depicted in the conceptual site plan, some would be partially subterranean and/or internal to the new buildings, thus providing internal connectivity between production spaces and supporting uses." See Figure II-4 on page II-14 of the Draft EIR, which shows the Conceptual Site Plan, including the internal circulation system within the Project Site. Due to their subterranean nature and/or integration with buildings, the grade level Conceptual Site Plan does not depict all of the internal site circulation. Refer to Figure IV.K-3 on page IV.K-43 of the Draft EIR, which further depicts vehicular Project Site access at the grade level.

Note that the commenter misconstrues the intent of the comment provided in the General Plan Amendment Initiation Request Form dated April 16, 2021. Prior to the initiation of the General Plan Amendment, the Director of Planning's designee requested refinement of building massing and building placement near the existing HCM located on-site. In accordance with the direction of the Department of City Planning, these refinements were incorporated into the application materials. The Conceptual Site Plan included in the Draft EIR reflects these refinements. As discussed in Topical Response No. 1, the massing and locations of the proposed buildings is depicted on the Conceptual

Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, *CPC-2021-4089-AD-GPA-ZC-SN-SP*.

Contrary to this comment, the City has exercised proper oversight over the Applicant's proposal since the time the application was filed.

Comment No. 28-4

The lead agency's failure to provide an accurate, stable, finite project description is more than a CEQA failure; it is a failure by the lead agency to comply with the requirements of the City's Municipal Code. The Project Description states that "a Vesting Zone Change from the existing C1.5-2D-O and C2-1-O zones to the TVC 2050 Specific Plan Zone (TVC zone), and to assign the TVC zone to an approximately 0.63-acre portion of the Project Site located in unincorporated Los Angeles County to be annexed to the City of Los Angeles" is required to implement the Project. However, LAMC Section 12.32.Q.3(a) provides that "in all vesting zone change cases a site plan and a rendering of the architectural plan of the building envelope **shall be submitted**. The plans and renderings shall show the proposed project's height, design, size and square footage, number of units, the use and location of buildings, driveways, internal vehicular circulation patterns, loading areas and docks, location of landscaped areas, walls and fences, pedestrian and vehicular entrances, location of public rights-of-way and any other information deemed necessary by the Director of Planning.in [sic] connection with a vesting zone change." (emphasis added)

The Developer's "Conceptual" plan approach is not permitted by LAMC Section 12.32.Q.3(a), which requires specific and definite plans with respect to all required items. Accordingly, the Developer's application for a Vesting Zone Change should have been, and should be, deemed incomplete, and CEQA review (which may only begin after an application and all required information is properly deemed complete) should be terminated.

Compliance with the informational requirements of LAMC Section 12.32.Q.3(a) is not only necessary for bureaucratic purposes, but also to facilitate meaningful public participation by informing the public about what exactly is proposed to be built and proposed to be vested,¹ as well as to enable the conduct of meaningful CEQA review. Why did the Planning Department accept the Developer's applications when the plain requirements of LAMC Section 12.32.Q.3(a) have not been supplied? How can the Planning Department support the "vesting" of a project, when no specific project is actually proposed? All of the information required by LAMC Section 12.32.Q.3(a) must be supplied and included in a recirculated DEIR if the Developer continues its proposal.

Similarly, the Developer has requested a Vesting Tract Map. However, under the City's subdivision ordinance, and in accordance with the Advisory Agency's long-standing practice, an applicant for a Vesting Tract Map must depict building envelopes, showing the height of the buildings, their size, number of units, the location of buildings, their driveways and exterior garden walls. A certified parking plan is also required. The DEIR states that the "Conceptual Site Plan" does not represent the Developer's plan for development. The Developer has not provided the location of any buildings, any building height, any building size, the location of any driveway or parking areas as required by the City's subdivision ordinance. Accordingly, the Developer's application for a Vesting Tract Map should have been, and should be, deemed incomplete, and CEQA review (which may only begin after an application and all required information is properly deemed complete) should be terminated.

Compliance with the informational requirements of the City's subdivision ordinance is not only necessary for bureaucratic purposes, but also to facilitate meaningful public participation by informing the public about what exactly is proposed to be built and proposed to be vested,² as well as to enable the conduct of meaningful CEQA review. Why did the Advisory Agency accept the Developer's applications for a Vesting Tract Map when the plain requirements of the City's subdivision ordinance and Advisory Agency practice have not been met. How can the Advisory Agency support the "vesting" of a project, when no specific project is actually proposed? All of the information required by the City's subdivision ordinance must be supplied and included in a recirculated DEIR if the Developer continues its proposal.

These failures again support the conclusion that the lead agency is not exercising proper oversight over the Developer's proposal, and that the DEIR, in whole or part, does not reflect the independent judgment of the lead agency, which has improperly allowed the Developer to use the CEQA process as its own mouthpiece.

- ¹ "Vesting" against changes in planning and zoning rules is a special privilege, requiring the submission of more detailed information than a non-vested application for entitlements.
- ² "Vesting" against changes in planning and zoning rules is a special privilege, requiring the submission of more detailed information than a non-vested application for entitlements.

Response to Comment No. 28-4

Refer to Response to Comment No. 32-3 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the timing of environmental review under CEQA.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section

15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Contrary to the commenter's assertion, the Project has been submitted and processed in accordance with all applicable LAMC regulations. The commenter is correct that the Project has sought vesting rights; however, the commenter has incorrectly analyzed the method in which the Project has secured vesting rights. On May 13, 2021, the Applicant filed a request for multiple legislative approvals and a subdivision approval with the Department of City Planning. On June 3, 2021, the Department of City Planning completed its review of the application materials and issued a "Deemed Complete" letter finding that the case file "contain[ed] sufficient information to satisfy the processing of the requested entitlements...." Refer to the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, *CPC-2021-4089-AD-GPA-ZC-SN-SP*.

The Project also applied for a Vesting Tentative Tract Map. In accordance with Section 12.36 C.5 of the LAMC, "if a project requiring multiple approvals also requires a Subdivision Approval by the Advisory Agency, that Subdivision Approval and any appeals shall be decided and governed by the rules set forth in Article 7 of Chapter 1 of this Code." Article 7 of Chapter 1 of the LAMC incorporates what the commenter referred to as the City's subdivision ordinance. Within Article 7 of Chapter 1 of the LAMC, Section 17.15 B.1(a) outlines the process for preparing, submitting, and processing Vesting Tentative Tract Maps, stating that "a subdivider shall provide all information required in connection with the filing of a tentative map by this Code, including the information required by LAMC Section 17.06 B and C."

Furthermore, "where the proposed subdivision is in a designated Hillside area, the Advisory Agency shall require the filing of a proposed grading plan pursuant to Section 17.05 L and may not waive the requirement to file preliminary soils report pursuant to Section 17.05 U. A subdivider shall also indicate whether the proposed subdivision is in the vicinity of the Mulholland Scenic Parkway and the dedication of land for such purposes may be necessary. In addition, if design review of the proposed subdivision is required by the applicable community or district plan or by a specific plan, the subdivider shall provide the information necessary for such review. The plan of building envelope shall be submitted, showing the height, size, number of units and approximate location of buildings, driveways and any proposed exterior garden walls."

Contrary to the commenter's assertion, the requirements in the preceding paragraph do not apply to the Project. The Project is not in a Hillside Area, not in the vicinity of the Mullholland Scenic Parkway, and not within an existing specific plan, Design Review Board, or other special zoning overlay, and is not a Small Lot Subdivision. Therefore, none of the additional requirements for preparation and submittal of a VTTM beyond the base

requirements for tentative maps are applicable. Thus, the Project needs to only comply with the information required by the LAMC, including Sections 17.06 B and C. The Project fully complies with the tentative map requirements of Sections 17.06 B and C of the LAMC because the VTTM submitted includes all 16 technical requirements for preparation of tentative maps and because no protected tree or shrub is planted on-site or in the adjoining right-of-way of the Project Site. All of the information that meets these 16 requirements is consistent with the Conceptual Site Plan analyzed in the Draft EIR. The commenter has not provided any information to substantiate that the Project is noncompliant with the applicable code sections analyzed above. Vague commentary about “longstanding practices” of the Advisory Agency does not constitute noncompliance with the LAMC. The Project’s VTTM has been vested since its filing with the Department of City Planning on May 13, 2021.

The Project has also requested a Vesting Zone Change to designate the entirety of the Project Site, including an approximately 0.63-acre portion of the Project Site located in an unincorporated area of the County to be annexed to the City of Los Angeles, to the TVC Zone. Section 12.32 Q of the LAMC lists the code requirements for applications requesting approval of a vesting zone change. As restated by the commenter, the requirements for a vesting zone change application include plans containing information on the proposed height, design, size and square footage, number of units (not applicable), the use and location of buildings, driveways, internal vehicular circulation patterns, loading areas and docks, location of landscaped areas, walls and fences, pedestrian and vehicular entrances, and location of public rights-of-way. Although the commenter has restated the requirements of Section 12.32 Q of the LAMC, the commenter has not identified any specific deficiency in the Project application to demonstrate noncompliance with Section 12.32 Q of the LAMC. The application for the Project and Vesting Zone Change contained information that satisfied the requirements for application of for a vesting zone change and that information is consistent with the Conceptual Site Plan analyzed in the Draft EIR. Further, it should be noted that all applications submitted to any City agency for entitlements or permits are inherently conceptual until approved. Characterization of an exhibit as a “concept” by an applicant does not constitute noncompliance with applicable LAMC regulations.

The Project’s multiple legislative actions and subdivision of land requests are subject to the Multiple Approvals Ordinance codified in Section 12.36 of the LAMC. As described herein, the Project has been properly submitted, reviewed, and processed by the City pursuant to the Multiple Approvals Ordinance, and all requested entitlements will be set for public hearing concurrently in the future. Finally, the Project’s application is vested as a result of compliance with LAMC requirements governing vesting rights of tentative maps and zone changes, and the application is vested in whole pursuant to Section 12.36 G.3 of the LAMC. Contrary to this comment, the City has exercised proper oversight over the Applicant’s proposal since the time the application was filed.

Comment No. 28-5

From the DEIR's description, the public cannot understand whether the Developer is proposing to develop a closed-campus movie and television studio, like the 20th Century Fox campus, or whether the Developer is merely seeking to increase and 'bank' commercial development rights of various types for speculative future use. The uncertain and unnecessarily long time frame for development and such statements as "the specific mix of uses ultimately constructed will depend on market demands..." and the "[a]ctual development would be governed by the requirements of the proposed Specific Plan and not the conceptual site plan..." prevents the public from understanding the Developer's actual intentions. This raises the following questions, which must be answered:

- 1) What "market demands" would permit the Developer to construct something other than what is depicted in the Conceptual Site Plan?
- 2) What are the "requirements" of the proposed Specific Plan that would govern development, and where may they may [sic] be reviewed by the public?

At page II-12 of the DEIR, the Project Description states that "[u]nder the Specific Plan, **portions** of the Project Site would be redeveloped with new studio-related uses, circulation improvements, parking facilities, landscaping, and open space." (emphasis added) This indicates that portions of the Project site will not be redeveloped with new studio-related uses. This raises the following questions, which must be answered:

- 1) Where does the DEIR analyze and disclose the environmental impacts of the Project, if it is not developed as depicted in Figure II-4?
- 2) Which portions of the Project Site would be redeveloped with other than new studio- related uses? What specifically would be developed in those portions of the Project Site?
- 2) [sic] Is there a phasing plan for the Project?
- 3) Is the Developer committed to building any additional studios and sound stages? If so, how many? Where is this commitment found, if anywhere?
- 4) Is the Developer committed to develop the entire structured "base camp" level of the Project shown in the Conceptual Site Plan as phase one of the Project?
- 5) If not, what is the phasing plan for the "base camp"?
- 6) Will the structured "base camp" level of the Project be developed before any new studio or office square footage is occupied?

- 7) Is it possible the structured “base camp” level will not be developed in whole or part?
- 8) Where does the DEIR describe the environmental impacts of the Project, if the structured “base camp” level is not developed as depicted in the Conceptual Site Plan?
- 9) Does the proposed Specific Plan allow the Developer to develop, lease and or operate “general office” and/or retail space that is not part of a closed-campus movie and television studio?
- 10) Will the mobility hub be built and opened before any new studio or office square footage is occupied?
- 11) What is the difference between Production Office and General Office?
- 12) How will the lead agency assure that Production Office is not utilized by the Developer as General Office?³

³ In this regard, that General Office generates more than twice the peak hour trips than Production Office.

Response to Comment No. 28-5

Regarding Items 1 and 2 on the commenter’s first list, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-12 regarding the Conceptual Site Plan and the proposed Specific Plan, how the physical aspects of the proposed Specific Plan were fully disclosed and analyzed in the EIR, and the regulations and procedures under the proposed Specific Plan. With regard to the mix of uses and market demands, refer to Response to Comment Nos. 9-12 and 26-16.

With respect to Items 1, 8, and 12 on the commenter’s second list, the entirety of the Draft EIR analyzes the proposed development program as defined Section II, Project Description, of the Draft EIR.

The comment regarding “portions of the Project Site would be redeveloped” (i.e., Item 2 on the commenter’s second list) is misconstruing the information in the Draft EIR. The use of the word “portions” is intended to account for the fact that the Project Site includes the Primary Studio Complex, an HCM that would be retained as part of the Project, as discussed throughout the Draft EIR.

Regarding the duplicate Item 2 and Items 4, 5, 6, 7, and 10 on the commenter’s second list, there is no specific phasing plan for construction of the Project components, including the basecamp area. Refer to Response to Comment Nos. 5-12 and 9-24

regarding the Project timeframe. Refer to Topical Response No. 7, Mobility Hub, regarding the timing of the Mobility Hub.

Regarding Item 9 on the commenter's second list, all Project uses have been analyzed irrespective of ownership and/or operations. The potential impacts associated with all uses have been studied and discussed throughout the Draft EIR.

Regarding the difference between production office and general office uses (i.e., Item 11 on the commenter's second list), refer to Response to Comment Nos. 26-14 and 26-122 that explain these uses and discuss the definitions of the permitted uses in the proposed Specific Plan. The approval of the Specific Plan would ensure that, consistent with the Project as described in the Draft EIR, production office and general office would be limited to a maximum of 700,000 square feet of floor area each. Refer to Response to Comment Nos. 5-6, 5-15 and 9-13 regarding the underlying purpose of the Project to continue the use of the Project Site as an operating studio. Refer to Topical Response No. 3, Permitted On-Site Uses, regarding the five permitted studio uses.

Comment No. 28-6

Compounding all of this unacceptable uncertainty, is the uncertainty of what uses will actually occur at the Project Site. At page IV.H-20, the DEIR states that "[t]he types of land uses and facilities permitted on-site would be set forth in the Specific Plan. These would **include** such uses as motion picture, television, and broadcast studios and related uses..." (emphasis added). From this description, it is evident that uses other than motion picture, television, and broadcast studios and related uses may be allowed and are envisioned by the Developer.

Moreover, the list of related uses provided at pages IV.H-20-21 fails in terms of basic informational disclosure. For example,

- Special events? What type? How frequent? How large? How many include the sale of alcoholic beverages?
- Audience and entertainment shows? What is the difference between the two types of shows? How many and how frequent would each be? How large? Are audience and entertainment shows considered in the Project's traffic and parking analysis? Where is the analysis of these items in the DEIR?
- Museum exhibits and theaters? What kind of museum? How large? Would it be open to the public? What kind of theaters? How many? How large? Would they be open to the public?

- Manufacturing? What kind of manufacturing? What types of materials will be used? What kind of emissions will result?
- Medical Offices (including emergency medical facilities)? How many? How large? Why would medical offices other than emergency offices be included in a studio project? Would medical offices be open to the general public?
- “All other uses permitted in the C2 zone unless expressly prohibited in the Specific Plan”? We note that no Specific Plan has been provided to the public, so that the public is unable to understand what other uses permitted by the C2 zone would be allowed. Where does the DEIR analyze “all other uses permitted in the C2 zone?” Please revise the DEIR to provide an environmental impact analysis of “all other uses permitted in the C2 zone.”

All of these questions (and related questions regarding the random use list provided in the DEIR must be answered), and environmental impact analysis of all of the uses must be supplied in a revised and recirculated DEIR. Through its uncertainties and its vacillating descriptions, the DEIR subjects the public to a veritable ‘shell game’ that is not permitted by CEQA, which again underlines the fact that the lead agency is not exercising critical oversight of the Project and the DEIR as required by Public Resources Code Section 21082.1.

Response to Comment No. 28-6

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment Nos. 5-6, 5-15, and 9-13 regarding the underlying purpose of the Project to continue the use of the Project Site as an operating studio, the clarified list of permitted uses proposed as part of the Project, and special events. Contrary to this comment, the Draft EIR has been prepared in full compliance with CEQA.

Refer to Topical Response No. 8, Vehicle Miles Traveled, and Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, regarding how audience shows (which could include audience entertainment or experience shows) were accounted for in the trip generation estimates and VMT calculations in the Draft EIR. As discussed in detail in Topical Response No. 10, the studio audience trips are inherent in the empirical trip generation rates that were used in the Transportation Assessment (Appendix M.1 of the Draft EIR) to estimate Project trips. Moreover, audience trips represent a small percentage of the overall total gross daily trip generation. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project.

Theaters, displays, and exhibitions in connection with production activities would be permitted under the sound stage use. Other than retail uses and audience shows, the permitted uses would not generally be open to the public.

Set/façade manufacturing associated with production activities would be permitted under the production support use; refer to the Preliminary Draft Specific Plan and page II-16 of the Draft EIR. As discussed in Response to Comment Nos. 26-E.1-27 and 26-E.1-28, emissions associated with on-site activities associated with operation of the Project, including, but not limited to, the use of emergency generators and paint spray booths, are fully accounted for in the Project's estimated air quality emissions. These estimated emissions are presented in Tables IV.A-7 and IV.A-10 of Section IV.A, Air Quality, of the Draft EIR.

As discussed in Response to Comment No. 28-5 and Topical Response No. 3, Permitted On-Site Uses, the Specific Plan would permit production office and general office uses. As stated on page II-16 of the Draft EIR, emergency medical facilities to serve the on-site employees and visitors would be permitted. These uses would not be open to the public.

Based on the comments received on the Draft EIR, and as discussed in Topical Response No. 3, Permitted On-Site Uses, the permitted uses were clarified to reflect the Project's studio objectives, including, among other things, removing the C2 zone text referenced in this comment (even though C2 uses are currently permitted); refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-7

Compounding the failure to comply with LAMC Section 12.32.Q.3(a) and the City's subdivision ordinance, the lack of a Specific Plan, the uncertainty as to what will actually be built, the uncertainty of uses that are to be permitted, and the limited analysis of the DEIR to the 'Conceptual Plan,' is the failure to include the proposed development agreement as part of the DEIR. The development agreement is not a discretionary approval necessary for the Project. Rather, it requests a special privilege: a 20-year vested right to develop the Project Site free of potential changes in planning and zoning requirements, and free of regulations that may be adopted to protect the public and the environment after the development agreement is approved. Without an understanding of what this right entails, and what protections—if any—are included to protect against environmental impacts not

disclosed in the DEIR, the public cannot intelligently participate in the CEQA process and evaluate the environmental impacts of granting the Developer a 20-year vested right to exercise the “unknown” rights of an “undisclosed” Specific Plan. This raises the following questions, which must be answered:

- 1) Has the Planning Department prepared, received, reviewed, and/or analyzed the proposed Development Agreement?
- 2) Why has the proposed Development Agreement not been released to the public in conjunction with the publication of the DEIR?
- 3) What rights would the proposed Development Agreement grant to the Developer?
- 4) What is the proposed consideration for the City entering into the proposed Development Agreement?
- 5) Does the proposed Development Agreement reflect the lead agency’s independent judgment?

Response to Comment No. 28-7

Refer to Response to Comment Nos. 28-2 through 28-4 regarding the Specific Plan and Project Description.

Refer to Response to Comment No. 9-24 regarding the Development Agreement. The component of the proposed Development Agreement that is relevant to the environmental analysis under CEQA is its 20-year term, which could extend vesting of entitlements for 20 years and related buildout of the Project to approximately 2043. The Draft EIR conservatively assumes a 32-month construction duration that includes overlapping activities and construction phases and more intense activities on a daily basis. In addition, to be comprehensive and account for all potential impacts associated with the Project, an analysis of the impacts associated with a 20-year buildout is also included for each of the environmental topics studied in the Draft EIR. For further information, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Please note that the Development Agreement would only allow for development consistent with the Project described in the certified EIR. Other provisions of the Development Agreement would be contractual issues between the City and the Applicant, which do not constitute physical impacts on the environment. A draft Development Agreement will be made publicly available on the Department of City Planning’s website prior to hearings for the Project.

Comment No. 28-8

Compounding the foregoing uncertainties, it is apparent that the City has not reviewed the Developer's plans with a critical eye in order to establish the actual square footage of the Project for environmental analysis purposes. Specifically, the Developer has excluded—and the lead agency has improperly allowed the Developer to exclude—from CEQA analysis the area of so-called “base camp” from the Project's floor area even though the Municipal Code requires that such area be included in analysis and regulation of the Project, and even though the Developer's own information discloses that such area will be actively used as studio space and production support space.

The foregoing illustration produced by the Developer shows “base camp” area (observe the truck parked in the background) being utilized for a photo-shoot of a Rolls Royce automobile outside of a stage area.

The foregoing illustration produced by the Developer shows “base camp” area being used for assembly and meetings, among other things.

The requirements of CEQA analysis cannot be avoided by the lead agency by engaging in “definitional” games. The fact that the lead agency has issued a DEIR which does not analyze the environmental impacts of all of the Project’s operational floor area again reinforces the conclusion that the DEIR, in whole or part, does not reflect the independent judgment of the lead agency, which has improperly allowed the Developer to use the CEQA process as its own mouthpiece.

The DEIR is fundamentally misleading and defective for its failure to include all of the area of the so-called “base camp” in DEIR’s environmental impact analysis. Although the DEIR fails to provide detailed Project plans depicting all of the area constituting “base camp,” we conservatively estimate that such area comprises at least 360,000 square feet, if not more. Because “base camp” areas plainly are actively operated areas, the lead agency must treat all of such area as “floor area” as defined the Los Angeles Municipal Code, accurately quantify the amount of such area (supported by plans made available to the public in the DEIR), disclose the amount of such floor area to the public, revise the environmental impact analysis of the Project so that it analyzes all of the Project, and recirculate the DEIR for public review.

Response to Comment No. 28-8

The Draft EIR was prepared by the Los Angeles Department of City Planning, as Lead Agency, in accordance with CEQA and the CEQA Guidelines. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

This comment is similar to Comment No. 26-16, and the renderings in this comment are included in Comment No. 26-16; as such, refer to Response to Comment No. 26-16 for further discussion of the renderings. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 26-121 regarding why basecamp areas are not considered floor area and how basecamp activities were included in the impact analyses throughout the EIR. Also refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR, for the graphics depicting the existing and proposed basecamp areas, which is consistent with the architectural plans that were submitted as part of the Project's application. As stated in the Draft EIR, the Project would include a net increase of approximately 194,600 square feet of basecamp areas within the Project Site.

As discussed in Response to Comment No. 26-16, basecamp is a subset of production activities, which has been clarified in the Final EIR; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The first rendering included in this comment depicts an outdoor production activity area at Project Grade, which includes active filming, as well as basecamp activities. As shown in Figure II-4(c) of Section III, Revisions, Clarifications, and Corrections to the Draft EIR, this area is located at Project Grade outside of the existing sound stages in the Primary Studio Complex. The second rendering depicts typical basecamp uses as discussed in Section II, Project Description, of the Draft EIR, and does not depict "assembly and meetings" as suggested by the commenter.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-9

The DEIR is fundamentally defective for its failure to identify, analyze and disclose the Project's conflict with the Housing Crisis Act of 2019 (SB 330, codified in part as Government Code Section 66300, the "Housing Crisis Act"), which prohibits an Affected City, such as the City of Los Angeles, from changing the general plan land use designation, specific plan land use designation, or zoning of a parcel of parcels [sic] of property where

housing is an allowable use to a less intensive use that would lessen the intensity of housing permitted on the parcel or parcels of property.

The Project violates the Housing Crisis Act by entirely eliminating housing where it is currently allowed by the City's General Plan and by the C2 Zone and the C1.5 Zone which apply to all of the Project Site within the City of Los Angeles.⁴ The C2 Zone permits multi-family housing at a density of one dwelling unit per 400 square feet of lot area. The C1.5 Zone also permits multi-family housing at a density of one dwelling unit per 400 square feet of lot area. Furthermore, in addition to eliminating housing as a permitted use, the Project proposes a 20-year development agreement which would prohibit the City from re-planning or re-zoning the Project Site to allow, or require, housing to be developed.

Moreover, the permitted intensity of the Project Site for housing is greater than one dwelling unit per 400 square feet of lot area because the entirety of the Project Site is eligible for density bonus, not only pursuant to Government Code 65915 (and the City's implementing ordinances), but also pursuant to Ordinance No. 184,745 (implementing Measure JJJ, known as the "Build Better LA Initiative"), which is implemented by the City's Transit Oriented Communities (TOC) Affordable Housing Incentive Program. Under the TOC Affordable Housing Incentive Program the Project Site is designated for Tier 2 and Tier 3 density bonus. Areas of the Project Site designated Tier 2 are eligible for a 60% density bonus for projects containing the required percentage of affordable housing. Areas of the Project Site designated Tier 3 are eligible for a 70% density bonus for projects containing the required percentage of affordable housing.

The Housing Crisis Act contains no exemption for projects, such as the proposed Project, that purport to "contribute to Los Angeles' status as a global creative capital..." Rather, the legislature has declared that (i) there is a statewide housing emergency, to be in effect until January 1, 2025; (ii) "California needs an estimated 180,000 additional homes annually to keep up with population growth, and the Governor has called for 3.5 million new homes to be built over the next 7 years;" and (iii) "reusing existing infrastructure and developed properties, and building more smaller homes with good access to schools, parks and services, will provide the most immediate help with the lowest greenhouse gas footprint to state residents."

In this regard, Section 66300(i)(I) provides that "[t]his section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county **concurrently** changes the development standards, policies, and conditions applicable to **other parcels** within the jurisdiction to ensure that there is **no net loss in residential capacity**." (emphasis added) However, the Project does not propose, and the DEIR does not identify, "other parcels" within the City of Los Angeles that would be concurrently up-zoned to offset the residential capacity lost if the

Project is approved. Approval of the Project as proposed would plainly violate the Housing Crisis Act.

It should be noted that the Housing Crisis Act concerns a matter of statewide concern and prevails over any conflicting law. Moreover, the legislature has declared that the Housing Crisis Act shall “be broadly construed so as to maximize the development of housing within this state. Any exception to the requirements of this section, including an exception for the health and safety of occupants of a housing development project, shall be construed narrowly.”

- ⁴ The DEIR repeatedly states that no residential uses are proposed as part of the Project, and no residential uses are analyzed as part of the Project by the DEIR.

Response to Comment No. 28-9

The commenter refers to the Housing Crisis Act enacted by the California Legislature in 2019, commonly known as SB 330, which is codified in various sections of the California Government Code. As stated in the Legislative Counsel’s Digest of this legislation, SB 330 imposes new requirements concerning “housing development projects,” which is defined as projects that include residential uses for at least two-thirds of the square footage of the project.¹¹⁹ (Government Code Section 65589.5(h)(2).) The Project does not propose to develop any residential uses.

Government Code Section 66300(b) also prohibits a local agency from changing the “general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use,” with the term “less intensive use” being defined as changing a land use regulation or development standard that “that would lessen the intensity of housing.” The proposed Specific Plan for the Project would not lessen the intensity of housing on the Project Site. Currently there is no housing on the Project Site. Refer to Response to Comment No. 16-2 with regard to the allowable residential density and required process for future potential environmental review and discretionary approval outlined in the Specific Plan.

Refer to Response to Comment No. 16-53 regarding Measure JJJ.

¹¹⁹ Senate Bill 330, Housing Crisis Act of 2019, https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201920200SB330, accessed August 23, 2023.

Comment No. 28-10

CEQA requires that an environmental impact report identify a project's conflict with plans, policies, or regulations adopted for the purpose of avoiding environmental impacts. The Housing Crisis Act is also a plan, policy or regulation adopted for the purpose of avoiding environmental impacts. As the legislature has declared:

- “The lack of housing, including emergency shelters, is a critical problem that threatens the economic, **environmental**, and social quality of life in California.” Government Code Section 65589.S(a)(I)(A).
- “California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing.” Government Code Section 65589.S(a)(I)(B).
- “Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, **imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration.**” Government Code Section 65589.S(a)(I)(C).
- “California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and **homelessness, and undermining the state's environmental and climate objectives.**” Government Code Section 65589.5(a)(2)(A).
- “An additional consequence of the state's cumulative housing shortage is a significant increase in **greenhouse gas emissions** caused by the displacement and redirection of populations to states with greater housing opportunities, particularly working- and middle-class households. California's cumulative housing shortfall therefore has not only national but **international environmental consequences.**” Government Code Section 65589.5(a)(2)(I).

The DEIR is fundamentally defective and basically inadequate for its failure to identify, disclose and analyze the Project's conflict with the Housing Crisis Act as a significant and unavoidable land use impact. The DEIR is further fundamentally and basically inadequate for failing to identify, disclose and quantify the loss of housing capacity (including, but not limited to the loss of housing capacity in accordance with TOC density bonus applicable to the Project Site). The DEIR is further fundamentally and basically inadequate for its failure to identify, disclose and analyze the indirect environmental effects of the Project's approval

in violation of the Housing Crisis Act would cause, including but not limited to, homelessness and its environmental impacts, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration. The DEIR must be revised and recirculated to address these issues as required by CEQA.

Response to Comment No. 28-10

As discussed in Response to Comment No. 28-9, the Project is not in conflict with the Housing Crisis Act because the Project would not result in a loss of housing capacity under the proposed zoning and land use designations as compared to existing conditions. Further, the commenter should note that although the Housing Crisis Act is intended to address the lack of a sufficient Statewide housing supply, the Housing Crisis Act also does not force every current and future development project to be comprised of housing units. As discussed in Section II, Project Description, of the Draft EIR, the Project is the creation of a specific plan to permit the continuation of an existing studio use and the modernization and expansion of media production facilities within the Project Site.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-11

The DEIR concedes that the Wilshire Community Plan was adopted for the purposes of avoiding or mitigating environmental impacts, but fails to provide an adequate discussion of the Community Plan, particularly in light of the Developer’s proposal to change the general plan designations of the Project Site from Community Commercial, Neighborhood Commercial and Limited Commercial to Regional Commercial, as well as the Project’s elimination of critically needed housing capacity at the Project Site in violation of the Housing Crisis Act.

The DEIR is fundamentally deficient and misleading for representing that the Project is “Consistent” with Community Plan Policy 16-1.1., which provides in relevant part “[t]o the extent feasible... maintain a satisfactory Level of Service (LOS)... above LOS “D” for Avenues and Collector Streets.” This Community Plan Policy was not changed by the adoption of Senate Bill 743, but remains an adopted core policy of the Wilshire Community Plan. Beverly Blvd., Fairfax Avenue, and 3rd Street are designated as Avenue II, and La Brea Avenue is designated as an Avenue I in Mobility Plan 2035, and The Grove Drive is designated as a “Collector” street. This leads to the following questions, which must be answered:

- 1) What is the current Level of Service for each of the intersections within the Study Area along Beverly Blvd.?
- 2) What is the projected cumulative Level of Service for each intersection within the Study Area along Beverly Boulevard with the Project completed?
- 3) With the development and operation of the Project and cumulative traffic, will a satisfactory Level of Service above LOS “D” be maintained at each intersection along Beverly Boulevard within the Study Area?
- 4) At which intersections along Beverly Boulevard within the Study Area will a satisfactory Level of Service above LOS “D” not be maintained?
- 5) Is the Project consistent with Policy 16-1.1 as to each intersection along Beverly Boulevard within the Study Area?
- 6) Which intersections along Beverly Boulevard within the Study Area will be inconsistent with Policy 16-1.1 with the development and operation of the Project and cumulative traffic?
- 7) Does LADOT concur that the Project is Consistent with Policy 16-1.1 with respect to intersections along Beverly Boulevard within the Study Area? Please provide LADOT’s statement on this question.
- 8) What is the current Level of Service for each of the intersections within the Study Area along 3rd Street?
- 9) What is the projected cumulative Level of Service for each intersection within the Study Area along 3rd Street with the Project completed?
- 10) With the development and operation of the Project and cumulative traffic, will a satisfactory Level of Service above LOS “D” be maintained at each intersection along 3rd Street within the Study Area?
- 11) At which intersections along 3rd Street within the Study Area will a satisfactory Level of Service above LOS “D” not be maintained?
- 12) Is the Project consistent with Policy 16-1.1 as to each intersection along 3rd Street within the Study Area?
- 13) Which intersections along 3rd Street within the Study Area will be inconsistent with Policy 16-1.1 with the development and operation of the Project and cumulative traffic?

- 14) Does LADOT concur that the Project is Consistent with Policy 16-1.1 with respect to intersections along 3rd Street within the Study Area? Please provide LADOT's statement on this question.
- 15) What is the current Level of Service for each of the intersections within the Study Area along Fairfax Avenue?
- 16) What is the projected cumulative Level of Service for each intersection within the Study Area along Fairfax Avenue with the Project completed?
- 17) With the development and operation of the Project and cumulative traffic, will a satisfactory Level of Service above LOS "D" be maintained at each intersection along Fairfax Avenue within the Study Area?
- 18) At which intersections along Fairfax Avenue within the Study Area will a satisfactory Level of Service above LOS "D" not be maintained?
- 19) Is the Project consistent with Policy 16-1.1 as to each intersection along Fairfax Avenue within the Study Area?
- 20) Which intersections along Fairfax Avenue within the Study Area will be inconsistent with Policy 16-1.1 with the development and operation of the Project and cumulative traffic?
- 21) Does LADOT concur that the Project is Consistent with Policy 16-1.1 with respect to intersections along Fairfax Avenue within the Study Area? Please provide LADOT's statement on this question.
- 22) What is the current Level of Service for each of the intersections within the Study Area along Grove Drive?
- 23) What is the projected cumulative Level of Service for each intersection within the Study Area along Grove Drive with the Project completed?
- 24) With the development and operation of the Project and cumulative traffic, will a satisfactory Level of Service above LOS "D" be maintained at each intersection along Grove Drive within the Study Area?
- 25) At which intersections along Grove Drive within the Study Area will a satisfactory Level of Service above LOS "D" not be maintained?
- 26) Is the Project consistent with Policy 16-1.1 as to each intersection along Grove Drive within the Study Area?

- 27) Which intersections along Grove Drive within the Study Area will be inconsistent with Policy 16-1.1 with the development and operation of the Project and cumulative traffic?
- 28) Does LADOT concur that the Project is Consistent with Policy 16-1.1 with respect to intersections along Grove Drive within the Study Area? Please provide LADOT's statement on this question.

Response to Comment No. 28-11

The comment states that the Draft EIR fails to provide an adequate discussion of the Wilshire Community Plan. The Wilshire Community Plan and the land use designations for the Project Site are discussed on page IV.H-8 in Section IV.H, Land Use and Planning, of the Draft EIR. The Project's consistency with the applicable goals, objectives, and policies in the Wilshire Community Plan adopted for the purpose of avoiding or mitigating an environmental impact is discussed on pages IV.H-44 to IV.H-45 of the Draft EIR. To support that discussion, a detailed list of the goals, objectives, and policies of the Wilshire Community Plan applicable to the Project is provided in Table 2 of Appendix I of the Draft EIR, along with an analysis of the Project's consistency with each particular goal, objective, or policy. As stated on page IV.H-17 of the Draft EIR, under State Planning and Zoning Law (Government Code Section 65000, et seq.), strict conformity with all aspects of a plan is not required. Generally, plans reflect a range of competing interests, and agencies are given great deference to determine consistency with their own plans. Per OPR's State of California General Plan Guidelines (2017), a proposed project should be considered consistent with a general plan or elements of a general plan if it furthers one or more policies and does not obstruct other policies. Generally, given that land use plans reflect a range of competing interests, a project should be compatible with a plan's overall intent but need not be in perfect conformity with every plan policy. As discussed in Section IV.H, Land Use and Planning, and Appendix I of the Draft EIR, the Project would not conflict with the objectives and policies that support the goals of the Wilshire Community Plan.

Refer to Response to Comment Nos. 5-8 and 11-29 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the proposed Regional Commercial designation, and Response to Comment No. 28-9 regarding housing and the Housing Crisis Act.

As discussed on page IV.K-1 in Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, changes in driver delay are not considered to be transportation impacts under CEQA, and "conflicts" with LOS policies under the Wilshire Community Plan are not significant transportation impacts under CEQA. Refer to Response to Comment No. 26-E.4-8 regarding the Project's consistency with Wilshire Community Plan Policy

16-1.1. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

In response to Question Nos. 1 through 4, 8 through 11, 15 through 18, and 22 through 25 asking for specific LOS conditions for intersections in the Study Area, see Table 17 on page 160 and Table 18 on page 162 of the Transportation Assessment. As shown in Table 18, a total of six intersections were found to operate at LOS E or F during one or both peak hours *with or without the completion of the Project*. These include:

- Intersection #5, Fairfax Avenue & Beverly Boulevard
- Intersection #7, Fairfax Avenue & 3rd Street
- Intersection #10, Fairfax Avenue & 6th Street
- Intersection #11, Fairfax Avenue & Wilshire Boulevard
- Intersection #14, Stanley Avenue / The Grove Drive & Beverly Boulevard
- Intersection #20, La Brea Avenue & Beverly Boulevard.

The Project would not worsen the LOS at any of these intersections under Future with Project Conditions compared to Future without Project Conditions.

In response to Question Nos. 5, 6, 12, 13, 19, 20, 26, and 27 asking whether the Project is consistent with Policy 16-1.1 as to each intersection in the Study Area, see page IV.K-64 in Section IV.K, Transportation, of the Draft EIR. Policy 16-1.1 states “to the extent feasible” to maintain a satisfactory LOS D operating conditions along Boulevards, Avenues, and Collector Streets. The Project would not cause any location to change from LOS D or better to LOS E or F during either peak hour under 2026 conditions. The Project would also implement a comprehensive TDM Program that would further reduce Project-related trips, which was not accounted for in the operational LOS evaluation. Therefore, the Project does not conflict with Policy 16-1.1.

Finally, in response to Question Nos. 7, 14, 21, and 28 asking whether LADOT concurs with the Project’s consistency with Policy 16-1.1, as stated in LADOT’s Assessment Letter provided in Appendix M.2 of the Draft EIR, LADOT has reviewed the non-CEQA operational evaluation and determined that it adequately discloses operational effects. Thus, the Transportation Assessment included in Appendix M.1 of the Draft EIR fully evaluated and disclosed the non-CEQA operating conditions of the street system in accordance with the TAG.

Comment No. 28-12

The Project Transportation Study area has been improperly constrained. The Project would take primary freeway access to and from the 10 Freeway from Fairfax Avenue at Venice Blvd., which is within the Wilshire Community Plan. Fairfax Avenue between Venice Blvd. and Pico Blvd. is primarily a single-family and multiple-family residential neighborhood. Fairfax Avenue and Wilshire Blvd. is projected to operate at LOS F with the Project and cumulative traffic. LOS F equates to “FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.” Yet the Transportation Study Area inexplicably fails to analyze the Project’s impacts upon Fairfax south of Wilshire Boulevard. The failure to include intersections along Fairfax Avenue between Wilshire Boulevard and the boundary of the Wilshire Community Plan is particularly egregious because this segment of Fairfax Avenue is commonly known as a notorious traffic ‘bottleneck’ that is severely impacted by gridlock traffic during business hours on weekdays and on weekends. Beyond delay, this gridlock condition affects the physical environment in numerous ways (including noise and air quality), quality of life, pedestrian and vehicular safety. The DEIR’s failure to analyze the Project’s impacts on this segment of Fairfax Avenue deprives the public of critical information and understates the environmental impacts of the Project. Will the Project’s 18-wheel trucks be using Fairfax to travel to and from the Project Site from the freeway? If so, how will they impact Fairfax Avenue. If not, what route will they use to travel to and from the freeway from the Project Site? The Project’s impact on this segment of Fairfax Avenue will also contribute to increased cut-through traffic, which is already a problem that impacts the community surrounding Fairfax Avenue, which impact must be analyzed in a revised and recirculated DEIR analysis. The DEIR should be revised and recirculated to provide an analysis of the Project’s environmental effects on Fairfax Avenue intersections between Wilshire Blvd. and the boundary of the Wilshire Community Plan where Fairfax provides access to the 10 Freeway. The DEIR’s analysis should address consistency with the Wilshire Community Plan’s policies, and indirect environmental effects on the community on and adjacent to Fairfax Avenue in the expanded Transportation Study area.

Response to Comment No. 28-12

The comment claims that the Project’s Transportation Assessment included in Appendix M.1 of the Draft EIR should have conducted analysis further south on Fairfax Avenue. However, the CEQA transportation analysis is based on VMT. As stated above in Response to Comment No. 28-11, vehicle delay and LOS are not environmental impacts under CEQA following the passage of SB 743. Similarly, cut-through traffic is not considered an environmental impact under CEQA. Therefore, the comment claiming that the Draft EIR must be recirculated to include such analysis has no basis in CEQA. Regardless, the Transportation Assessment includes both analyses as part of its non-CEQA analysis. Refer to Section B, Level of Service, of Topical Response No. 12,

Safety and Congestion, and Response to Comment Nos. 9-29, 16-36, and 26-E.4-8 regarding the non-CEQA LOS analysis. Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12 regarding queuing. Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips.

Refer to Response to Comment No. 26-156 regarding the Study Area analyzed in the Transportation Assessment. Specifically, the Transportation Assessment complied with City requirements identified in the TAG. The TAG requires analysis of automobile delay and LOS outside of the CEQA process at locations around the Project Site, including intersections where the Project would add 100 or more net new peak hour trips (page 3-7 of the TAG). The intersection Study Area analyzed in the Transportation Assessment—consisting of 31 intersections shown in Figure 6 of the Transportation Assessment—included the intersection of Fairfax Avenue and Wilshire Boulevard, located approximately 0.8 mile south of the Project Site. Figure 21 of the Transportation Assessment shows Project-only peak hour trips at each study intersection. As shown based on Intersection #11 (Fairfax Avenue and Wilshire Boulevard), during the morning peak hour, the Project is estimated to add approximately 41 trips south of Wilshire Boulevard (32 northbound and 9 southbound), and, during the afternoon peak hour, the Project is estimated to add approximately 45 trips south of Wilshire Boulevard (12 northbound and 33 southbound). This is less than half of and does not meet the 100-trip threshold identified in the TAG for the analysis of additional locations. Further, it can be expected that a portion of those trips on Fairfax Avenue south of Wilshire Boulevard use San Vicente Boulevard, located approximately 0.35 mile south of Wilshire Boulevard, and, thus, would not travel through the stretch of Fairfax Avenue between Venice Boulevard and Pico Boulevard (beginning approximately 1.6 miles south of the Project Site) referenced in the comment. As a result, Project trips on Fairfax Avenue south of Wilshire Boulevard are well under the City's threshold for the required non-CEQA analysis.

Other types of potential CEQA impacts, such as noise and air quality, are subject to different criteria for the determination of study areas, unrelated to the geographic extent of traffic analysis required by the City. Refer to Sections IV.A, Air Quality, and IV.I, Noise, of the Draft EIR for discussions of air quality and noise impacts, respectively.

As discussed in Section E, Truck Trips, of Topical Response No. 10, Trip Generation, daily truck trip generation is estimated to be approximately 166 trips, which is slightly over 1 percent of the total daily Project trip generation. Some of these trucks may travel on Fairfax Avenue south of Wilshire Boulevard. Project consistency with the Wilshire Community Plan's policies and objectives was discussed beginning on page IV.K-57 in Section IV.K, Transportation, of the Draft EIR and the Project was found to not be in conflict with the Wilshire Community Plan; refer to Response to Comment No. 26-165. The majority of the key transportation-related policies and objectives in the Wilshire Community

Plan deal with promoting transit and multi-modal mobility. Refer to Topical Response No. 7, Mobility Hub, and Topical Response No. 11, Transportation Demand Management, for details on the features and measures the Project is taking to reduce vehicular travel to and from the Project Site.

Comment No. 28-13

Has Council District 10 been consulted as to the potential impacts of the Project on the community adjacent to Fairfax Avenue within the 10th Council District? Has Council District 10 provided comments to the DEIR? Please share the input of the 10th Council District regarding these issues.

Response to Comment No. 28-13

The Project Site is not located in Council District 10 but was located in Council District 4 prior to 2021 redistricting of the City of Los Angeles and is now located in Council District 5. Accordingly, the Applicant has consulted with both Council District 4 and Council District 5. Moreover, as part of the Applicant's community outreach throughout the life of the Project, the Applicant has briefed State and local elected officials, including Council District 10, and has also conducted over two years of direct engagement with local residents, community stakeholders. This includes over 100 community meetings, presentations, and open house events (in addition to the many small group meetings with neighboring homeowners and property owners), over 100 local businesses and over 20,000 residents canvassed within a one-mile radius of the Project Site, and over 50,000 Project brochures mailed to local residents.

Comment No. 28-14

Given that La Brea Avenue provides the only alternative access to the 10 Freeway aside from Fairfax Avenue, and that 40% of trip distribution is forecast to come from the east and southeast, why was only one La Brea intersection included in the Study Area? The DEIR should be revised and recirculated to provide an analysis of the Project's environmental effects on La Brea Avenue intersections between Beverly Blvd. and the boundary of the Wilshire Community Plan to the south proximate to the 10 Freeway. The DEIR's analysis should address consistency with the Wilshire Community Plan's policies, and indirect environmental effects on the community on and adjacent to La Brea Avenue in the expanded Transportation Study area.

Response to Comment No. 28-14

The comment claims that additional intersections should have been analyzed on La Brea Avenue. The Project's non-CEQA analysis, presented in the Transportation Assessment included as Appendix M.1 of the Draft EIR, fully analyzed the surrounding

street system in accordance with LADOT's non-CEQA analysis requirements. As discussed in Response to Comment Nos. 26-156 and 28-12, the TAG requires analysis of the intersections where the Project would add 100 or more net new peak hour trips. The Project-only peak hour traffic volumes are shown in Figure 21 of the Transportation Assessment. Based on the volumes shown at Intersection #20, La Brea Avenue and Beverly Boulevard, only approximately 16 morning peak hour and 21 afternoon peak hour trips would travel on La Brea Avenue south of Beverly Boulevard. An additional approximately 60 morning peak hour and 68 afternoon peak hour trips would travel on 3rd Street east of the intersection of Martel Avenue and Hauser Boulevard (see Intersection #28), a portion of which can be assumed to use La Bea Avenue. However, even if all of those trips used La Brea Avenue, there would still be well under 100 peak hour Project trips on La Brea Avenue south of Beverly Boulevard. Therefore, the Study Area analyzed in the Transportation Assessment is consistent with the TAG. Accordingly, the Draft EIR does not have to be recirculated as incorrectly stated in the comment. Refer to Response to Comment No. 9-4 regarding recirculation.

Project consistency with the Wilshire Community Plan's policies and objectives was discussed beginning on page IV.K-57 of the Draft EIR and Response to Comment Nos. 26-165 and 28-12.

Comment No. 28-15

Has Council District 10 been consulted as to the potential impacts of the Project on the community adjacent to La Brea Avenue within the 10th Council District? Has Council District 10 provided comments to the DEIR? Please share the input of the 10th Council District regarding these issues.

Response to Comment No. 28-15

This comment is identical to Comment No. 28-13. Refer to Response to Comment No. 28-13.

Comment No. 28-16

In light of the deficiencies of the DEIR's transportation impact analysis and the foregoing questions, the DEIR improperly concludes that the Project is "Consistent" with Policy 16-2.1 of the Community Plan, which provides:

"No increase in density shall be effected by zone change, plan amendment, subdivision or any other discretionary action, unless the Decision-makers make the following findings or a statement of overriding considerations: The transportation infrastructure serving the project site and surrounding area,

presently serving the affected area within the Wilshire Community Plan, have adequate capacity to accommodate the existing traffic flow volumes, and any additional traffic volume which would be generated from projects enabled by such discretionary actions.”

Indeed, how did the lead agency reach a conclusion of “Consistency” before the Decision-makers have made any of the findings required by Policy 16-2.1?

Response to Comment No. 28-16

Refer to Response to Comment No. 16-18 regarding the Project’s consistency with Wilshire Community Plan Policy 16-2.1. As described in the Draft EIR, the Specific Plan would allow up to a maximum of 1,874,000 square feet of floor area within the Project Site. As discussed in Section IV.K, Transportation, of the Draft EIR, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, a project’s CEQA transportation-related analysis and resulting impacts are assessed via the VMT methodology. As stated above in Response to Comment No. 28-11, LOS methodology is no longer applicable for the purposes of identifying a project’s CEQA transportation-related impacts. Notwithstanding, upon the Project’s anticipated completion in 2026, several intersections on arterial streets would operate at LOS E or F, both before and after the addition of Project trips. The Project would not cause any location to change from LOS D or better to LOS E or F during morning or afternoon peak hours. The Project would provide pedestrian enhancements around the Project Site, including landscaping, sidewalk and crosswalk improvements, and bus stop improvements. Bus stops would be upgraded along Fairfax Avenue and Beverly Boulevard to include adequate benches, shelters, lighting, LED displays, and signage to the extent feasible under the City of Los Angeles’ current bus shelter contract. The Project would also provide first-mile/last-mile services at the Mobility Hub, which includes Project shuttles to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction. The potential effectiveness of the shuttle bus to the Metro D (Purple) Line subway station is discussed in Section A, TDM Effects on Trip Generation, in Topical Response No. 11, Transportation Demand Management. The Mobility Hub would also support future shuttle services to provide a connection to existing and/or future transit stations (e.g., the Metro B (Red) Line or Crenshaw North Extension). Additionally, the Project’s TDM Program would encourage travel via alternative transportation modes and reduce single-occupancy vehicle trips. Furthermore, the Applicant would contribute toward signal improvements at nearby intersections and the implementation of bicycle improvements within the Study Area. Lastly, the Project would be fully reviewed by City departments, the Planning Commission, and City Council prior to a decision being made. Thus, the Draft EIR correctly concluded that the Project would not conflict with Policy 16-2.1.

Comment No. 28-17

The Draft EIR's transportation assessment concedes that the Project will subject several residential streets of the north and west of the Project to "excessive traffic burden" due to cut-through traffic caused by the Project. However, the DEIR provides no substantial evidence for limiting its assessment of cut-through traffic to the very few residential streets considered in the transportation assessment. Fairfax/Beverly is projected to operate at LOSE with Future Project conditions, 3rd/Fairfax is projected to operate at LOS FIE, and La Brea/Beverly is projected to operate at LOS FIE. According to LADOT, LOSE equates to "POOR. Represents the most vehicles intersection approaches can accommodate; **may be long lines of waiting vehicles through several signal cycles.**" According to LADOT, LOS F equates to "FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. **Tremendous delays with continuously increasing queue lengths.**" Given this unacceptable level of congestion, the following additional streets present attractive cut-through routes and should be evaluated for cut-through impacts (both north and south of Beverly Drive):

- Curson Avenue
- Sierra Bonita Avenue
- Gardener Street
- Vista Street
- Fuller Avenue
- Poinsettia Place
- Alta Vista Blvd.
- Formosa Avenue
- Detroit Street

Response to Comment No. 28-17

A project's effect on automobile delay, including cut-through trips, is not a CEQA issue following the passage of SB 743 and, therefore, cannot constitute a significant environmental impact. Nonetheless, a residential street cut-through analysis is included as part of the Transportation Assessment's non-CEQA transportation analysis. Specifically, Section 5C (pages 167 to 173) of Appendix M.1, Transportation Assessment, of the Draft EIR summarizes the residential street cut-through analysis for the Project, which includes a description of the basis for the selection of specific residential street segments to evaluate.

Refer to Sections B, Cut-Through Effects on Adjacent Neighborhoods, and C, Boundaries of the NTMP Areas, of Topical Response No. 9, Neighborhood Traffic Management Plan, for additional discussion of the street segment selection and the boundaries of the neighborhoods addressed in the analysis. As stated therein, although not required under CEQA, the Project would fund the implementation of an NTMP in order to minimize potential residential cut-through trips generated by the Project in accordance with the TAG.

In addition, as described in Response to Comment No. 10-1, the cut-through analysis included the streets that have the potential to experience a level of cut-through traffic that rises to the City's non-CEQA thresholds for requiring an NTMP. This included five streets north of Beverly Boulevard and east of Fairfax Avenue. Additional streets farther to the east, including those mentioned in the comment, may sporadically carry a small number of additional trips as a result of the Project, but none would approach the City's minimum threshold of 120 cut-through trips per day (which is over 1 percent of the Project's net increase of approximately 9,733 daily trips as shown in Table 13 of the Transportation Assessment).

Comment No. 28-18

Cut-through traffic affects the quality of life and the physical environment in residential neighborhoods. It also affects vehicular and pedestrian safety. Yet, despite LADOT's conclusion that the Project cut-through traffic will cause "excessive traffic burden" to several of the very few streets that have been analyzed for cut-through traffic to date, the DEIR concludes that the Project is "Consistent" with Guidelines 1 and 2 of the Citywide Design Guidelines:

- "Design projects to be safe and accessible and contribute to a better public right-of-way for people of all ages, genders, and abilities, especially the most vulnerable—children, seniors, and people with disabilities."
- "Design to avoid pedestrian and vehicular conflicts and to create an inviting and comfortable public right-of-way. A pleasant and welcoming public realm reinforces walkability and improves the quality of life for users."

Given LADOT's own conclusions as to the "excessive traffic burden" to residential streets adjacent to the Project that have been analyzed where "the most vulnerable—children, seniors and people with disabilities" actually live and play (and putting aside the additional residential streets that should be analyzed for cut-through traffic as discussed above), the DEIR's nearsighted conclusions are especially embarrassing.

No specific improvements are identified to protect the streets that the DEIR concedes will be impacted by "excessive traffic burden." CEQA does not permit the analysis and

recommendation of mitigation measures necessary to mitigate project impacts to be deferred until after project approval. Moreover, the transportation assessment recognizes that potential improvements may not be implemented at all, as well as that—even if they are implemented—potential improvements to one impacted street may merely divert the “excessive traffic burden” to other residential streets. However, the DEIR fails to analyze or disclose the residential streets that would be impacted by such diversion.

The DEIR should be revised and recirculated to analyze and disclose all of the residential streets that may be impacted by cut-through “excessive traffic burden,” and recognize that the cut-through traffic resulting from the Project will result in significant and adverse land use impacts (i.e., conflicts with land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating environmental effects). The DEIR should also discuss that “excessive traffic burden” to residential streets may foreseeably lead to indirect impacts of disinvestment, decay and degradation of the physical environment of impacted residential streets. See Bakersfield Citizens for Local Control v. City of Bakersfield 124 CA4th 1184 (2004) (“Case law already has established that in appropriate circumstances CEQA requires urban decay or deterioration to be considered as an indirect effect of a proposed project.”)

Response to Comment No. 28-18

The Project’s potential to conflict with the Citywide Design Guidelines is fully analyzed in Section IV.H, Land Use and Planning, of the Draft EIR. Refer to pages IV.H-45 through IV.H-55 of the Draft EIR. As an initial matter, consistency with the Citywide Design Guidelines has to do with the design of the Project and, in particular, how the physical Project Site integrates with the immediately surrounding public realm. The Project would improve the public realm through widened sidewalks (on Fairfax Avenue and The Grove Drive), enhanced landscaping on all frontages, and improved pedestrian activation with implementation of up to 20,000 square feet of retail space. Refer to Response to Comment No. 16-72 regarding the Project’s public realm enhancements and pedestrian-oriented design. Additionally, as described on page IV.K-71 of the Draft EIR, the Project would include upgraded crosswalks and bus stops and integrated first-mile/last-mile improvements, including the Mobility Hub, to help encourage non-vehicular travel to and from the Project Site, thus aligning with pedestrian-first principals. Thus, as concluded in Section IV.H, Land Use and Planning, of the Draft EIR, the Project would not conflict with the Citywide Design Guidelines, including Guidelines 1 and 2. As discussed in Response to Comment No. 26-165, the Draft EIR correctly concluded that the Project would not conflict with land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating environmental effects, and impacts would be less than significant.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips in the Transportation Assessment

(Appendix M.1 of the Draft EIR). As discussed therein, cut-through effects are not environmental impacts under CEQA. The comment includes several incorrect claims about “conclusions” reached by the LADOT, such as that the Project cut-through traffic will cause “excessive traffic burden” to several of streets that were analyzed for cut-through traffic, and the Project’s “excessive traffic burden” to residential streets adjacent to the Project would occur “where ‘the most vulnerable—children, seniors and people with disabilities’ actually live and play.” LADOT reached no such conclusions. Within the Assessment Letter issued by the LADOT for the Project’s Transportation Assessment, as presented in Appendix M.2 of the Draft EIR, LADOT acknowledged that the transportation analysis included examination of specific residential streets that could be used as a cut-through route to avoid arterial congestion and concluded that preparation and implementation of a neighborhood traffic management plan, as funded by the applicant, is needed to address the potential effects. Although not required under CEQA to mitigate a significant transportation impact, the Project would fund the implementation of an NTMP in order to minimize potential residential cut-through trips generated by the Project in accordance with the TAG. Refer to Sections A, Deferred Mitigation, and B, Cut-Through Effects on Adjacent Neighborhoods, of Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the development process for the NTMP to minimize the Project’s potential effects related to cut-through trips on residential streets.

Refer to Topical Response No. 12, Safety and Congestion, regarding pedestrian and vehicular safety.

Please note that “quality of life” is not an impact category under CEQA. In addition, the commenter fails to provide any evidence of potential disinvestment, decay, and degradation of the physical environment associated directly or indirectly with the Project’s transportation impacts, which are less than significant, or with respect to potential residential cut-through trips. Nevertheless, this comment will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

The Project’s transportation Impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR, in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Thus, recirculation is not required, as incorrectly stated in this comment. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-19

The DEIR must also be revised and recirculated to analyze and disclose the historic resource impacts of the Project’s cut-through “excessive traffic burden” to the residential streets located in the Beverly Fairfax National Historic District, as well as the potential cut-through “excessive traffic burden” impacts to the potential Orange Grove Avenue-Gardner

Street Multi- Family Residential Historic District (found eligible for listing in the National Register in SurveyLA) and the Miracle Mile North Historic Preservation Overlay Zone.

Response to Comment No. 28-19

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the effects of cut-through trips, including cut-through trips within the Beverly Fairfax Historic District. In addition, as discussed in Response to Comment No. 26-E.2-38, the Miracle Mile North HPOZ was not included in the Project Site vicinity because the Project would have no potential to directly or indirectly impact this historical resource. The western boundary of the Miracle Mile North HPOZ sits more than 800 feet from the easternmost edge of the Project Site and cannot be reasonably considered to be part of its environmental setting under CEQA, nor is there any potential for the Project to result in significant impacts to the Miracle Mile North HPOZ.

The commenter implies that the Beverly Fairfax Historic District and the Orange Grove Avenue–Gardner Street Multi-Family Residential Historic District are two different historical resources. The Beverly Fairfax Historic District includes most of the Orange Grove-Gardner Historic District. Based upon a closer investigation, however, the boundaries were adjusted to exclude some areas and add other areas. Refer to Figure II-15 and Figure II-16 on pages II-1201 and II-1202, which show the boundary of these districts.

As discussed in Response to Comment No. 26-E.2-10, this comment also fails to provide an explanation as to how increased trips through the Beverly Fairfax Historic District might translate to physical demolition, destruction, relocation, or alteration such that the significance of the Beverly Fairfax Historic District would be materially impaired, which is the threshold for significant impacts on historical resources per Appendix G of the CEQA Guidelines. While the transportation analysis makes clear that a potential result of the Project, which would include an NTMP and would not result in significant transportation impacts under CEQA, is more vehicle trips within the Beverly Fairfax Historic District, no evidence has been identified to suggest that a potential increase of vehicle trips will result in the demolition or material alteration of the physical characteristics of the Beverly Fairfax Historic District that convey its historic significance and that justify its inclusion in, or eligibility for, listing as a historical resource as defined by CEQA.¹²⁰ Therefore, a potential increase in vehicle trips would not result in significant impacts to the Beverly Fairfax Historic District.

¹²⁰ The NTMP is discussed in Topical Response No. 9.

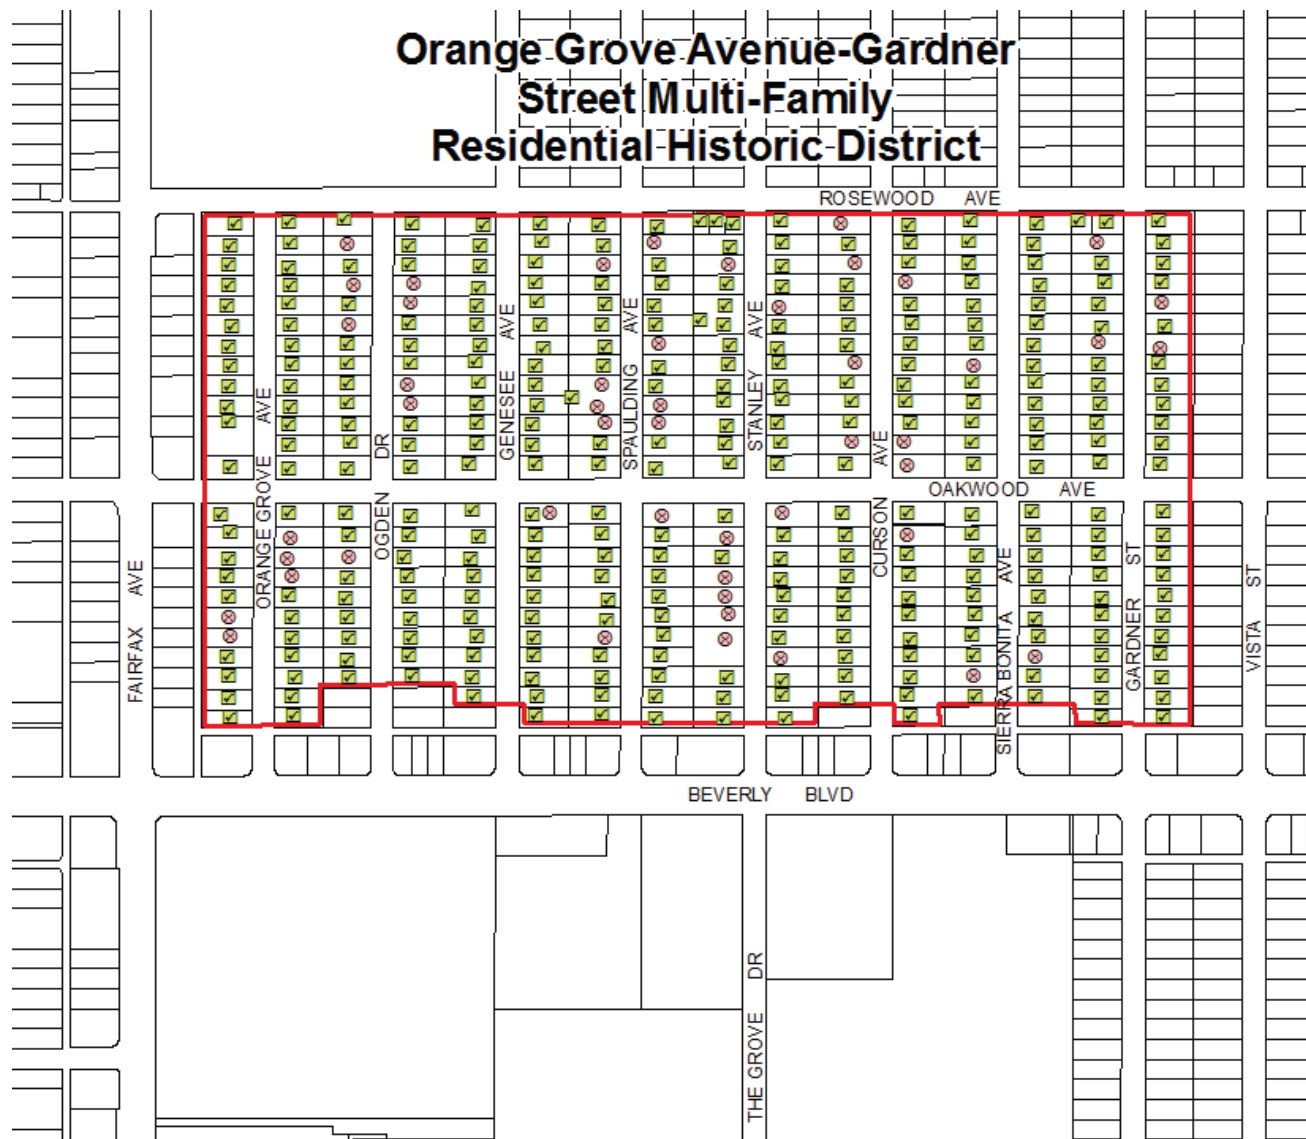

Figure II-16

Boundary of Orange Grove Avenue-Gardner Street
Multi-Family Residential Historic District

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-20

The DEIR’s land use analysis is fundamentally deficient for failing to disclose and discuss the fact that the Wilshire Community Plan is severely out of date. The land use analysis is also fundamentally defective for failing to discuss the Project’s inconsistency with Executive Directive No. 19 issued by Mayor Garcetti on March 9, 2017 to correct the deficiency of the City’s out of date community plans, and to make the City’s “planning process more efficient, effective, fairer and transparent...” The land use analysis of the DEIR must be revised and recirculated to discuss Executive Directive No. 19 and the lack of Project consistency with it.

According to the City Planning Department, an update of the Wilshire Community Plan was to be undertaken 2019–2021. According to the City Planning Department, updated Community Plans are intended to reflect the following environmental and planning objectives:

- Integrate land use, infrastructure, and transportation improvement;
- Direct growth to centers while preserving established residential neighborhoods;
- Create healthier, more livable neighborhoods and economically vital business districts that can provide more job and housing opportunities for city residents; and
- Facilitate improved design of new and renovated structures and public spaces.

Please explain how processing the Project, including but not limited to its proposal to redesignate Beverly Fairfax as a “Regional Center,” apart from an update to Wilshire Community Plan is consistent with each of these objectives?

What is the status of the update process? We note that there is no plan for an actual project that would be developed by the Developer within any time frame. Rather, there is only “Conceptual Site Plan” (which the DEIR states will not govern the development of the Project), and the Developer’s request for “vested rights” to develop the Project Site with an unknown project as many as 20 years into the future. In April 2018, the City Council found that “Amendments to Community Plans may at times need to be considered in the course of reviewing proposed developments. **However, such considerations should take place within the parameters of an identified Community Plan update process framework.**”

(emphasis added) Why is the Planning Department facilitating the Developer's proposed amendment to the General Plan when it is inconsistent with the City Council's adopted 2018 directive to the Planning Department?

The Wilshire Community Plan provides:

"In the fifth year following plan adoption (and every five years thereafter), the Director of Planning shall report to the commission on the relationship between population, employment, housing growth and plan capacities. If growth has occurred faster than projected, a revised environmental impact analysis will be prepared and appropriate changes recommended to the community plan. These plan and zoning changes shall be submitted to the Planning Commission, Mayor and City Council as specified in the Los Angeles Municipal Code."

Is the Director of Planning in compliance with this requirement of the Wilshire Community Plan? Please include all of the five-year reports required by the Wilshire Community Plan to be prepared by the Director of Planning in a revised and recirculated DEIR.

We also note that the Director of Planning's April 16, 2021 consent to initiation of the Project plan amendment stated that initiation of the amendment is "within the **absolute discretion of the Director of Planning** and, if initiated, to ensure a comprehensive review of the request and to avoid discordant planned land use, the Director may initiate additional properties ("added areas") within the immediate area for a similar General plan Amendment... " Given the severely out of date Wilshire Community Plan, the Council's 2018 directive, the lack of an actual project plan or timetable for construction, and the significant impacts of the Developer's request, please provide an explanation as to why the Director of Planning should not exercise his "absolute discretion" to place a hold on the Developer's request until an update to the Wilshire Community Plan is conducted?

The Developer is proposing that the Project Site, which is currently designated Neighborhood Commercial, Community Commercial and Limited Commercial be redesignated as a "Regional Center" in the City's General Plan. Regional Center is the most intense commercial designation provided by the General Plan. Does the Planning Department agree that Beverly Fairfax is the appropriate location for Regional Center Development?

Response to Comment No. 28-20

Refer to Topical Response No. 6, Wilshire Community Plan Update. As discussed therein, CEQA requires an evaluation of a project's consistency with existing land use plans, and that evaluation is not affected by possible changes to an existing land use plan

that may be adopted in the future. In accordance with CEQA Guidelines Section 15125, the Draft EIR relied on information that was currently available to establish baseline conditions and, as such, uses information from the existing Wilshire Community Plan. That evaluation satisfies the requirement under CEQA that an EIR “discuss any inconsistencies between the proposed project and applicable general plans, specific plans, and regional plans.”¹²¹ An “applicable” plan is a plan that has already been adopted and, thus, legally applies to a project; draft plans need not be evaluated. Further, it would be unprecedented for the City to require that an individual project be delayed until the completion of an update to a Community Plan.

The legal presumption is that a city’s general plan, including its various elements, is valid and that official duties have been performed regularly, thus placing the burden on those challenging the general plan to demonstrate that the general plan is inadequate. The burden is on the challenger to demonstrate the existence of a nexus between any plan inadequacies and the project or action being challenged. Although a court may not consider a city’s general plan or its parts suitable, such unsuitability may not be the basis for concluding that the plan is legally inadequate, unless there is a statutory requirement on point. Statutory law contains no requirement that a general plan’s land use element—which, in the context of the Project, is the Wilshire Community Plan—be updated at any given interval or in connection with any given event, or that a development plan must be put on hold for such an event to occur.

Further, the City has not adopted a mandatory timeframe under which Community Plans must be updated. Per the City of Los Angeles General Plan Framework Element, updates of the City’s Community Plans are dependent on adequate funding, and the Framework Element provides non-mandatory guidelines for future Community Plan updates.¹²² The General Plan states that, “[l]ike all general plan elements, community plans are comprehensively updated on a periodic basis through a city-initiated process. However, given the size and complexity of the City, the process of updating all of them takes time.”¹²³ The General Plan further states that “[s]ubject to availability of funding, all comprehensive updates of the citywide elements and the community plans for the purpose of implementing the Framework Element shall be initiated within five years of adoption of the Framework Element. Phasing of such updates may be made in accordance with Objective 3.3 and Policies 3.3.1 and 3.3.2 based on the monitoring of population, development, and infrastructure and service capacities as recommended through the

¹²¹ CEQA Guidelines § 15125(d).

¹²² City of Los Angeles, General Plan Framework Element, Executive Summary, re-adopted August 8, 2001.

¹²³ City of Los Angeles, General Plan Framework Element, Chapter 1, re-adopted August 8, 2001.

Annual Report on Growth and Infrastructure.”¹²⁴ While phasing of such updates may be done in accordance with the Framework Element objective and policies listed above, the Framework Element makes clear that the City does not require updates to its Community Plans within a fixed time frame.

The Wilshire Community Plan is not currently being updated; the City neither publicly notified nor initiated an update to the Wilshire Community Plan, and the timing of such an update is unknown. In any instance where a community plan has yet to be updated and adopted, a draft plan would not be applicable under CEQA. Accordingly, this comment that the Wilshire Community Plan needs an update is not relevant to the environmental analysis of the Project. In fact, consideration of an unknown future community plan update would be contrary to CEQA, which prohibits speculation and conjecture.¹²⁵

Refer to Response to Comment Nos. 5-8 and 11-29 regarding the proposed Regional Commercial designation for the Project Site.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-21

In addition to inappropriately proposing a general plan amendment and upzoning outside of the context a long-overdue update to the Wilshire Community Plan, redesignation of the Project Site as a Regional Center is inconsistent with the Framework Element of the General Plan, which is the City’s “strategy for long-term growth that sets a citywide context to guide subsequent amendments of the City’s community plans, zoning ordinances, and other pertinent programs.” The Project Site is not identified in the General Plan Framework as a location for a Regional Center. Redesignating the Project Site as a Regional Center would transform the community and set an adverse precedent for redevelopment around it.

Policy 3.1.5 of the Framework provides that amendments to community plans should not be allowed if there would be “a reduction in overall housing capacity.” In promulgating the DEIR, the lead agency has failed to address the “elephant in the room”—California’s housing and affordability crisis. The Project proposes to add approximately 5,700 new

¹²⁴ City of Los Angeles, General Plan Framework Element, Chapter 1, re-adopted August 8, 2001.

¹²⁵ CEQA Guidelines § 15187(d).

employees to the Project Site. However, the Project includes no housing and entirely eliminates the housing capacity of the Project Site in direct contravention of Policy 3.1.5 and in violation of the Housing Crisis Act of 2019. The DEIR should be revised and recirculated to analyze and disclose this conflict and the Project's direct and indirect impacts on California's housing supply and affordability crisis. The California legislature has expressly recognized that this crisis is of historic proportions and that "[t]he consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, **worsening poverty and homelessness, and undermining the state's environmental and climate objectives.**" See Government Code Section 65589.5(a)(2)(A). The DEIR should analyze the foreseeable pressure the Project will place on existing area rents and housing prices, which are already among the highest in California, and discuss how the Project will foreseeably lead to displacement affecting the most vulnerable populations in the area; specifically elderly residents and the members of minority groups.

Response to Comment No. 28-21

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation for the Project Site. Refer to Response to Comment No. 28-9 regarding housing and how the Project would not conflict with the Housing Crisis Act.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 28-22

The 3D model of the Project's proposed height zones in reference to the surrounding community illustrates the dramatic impact the Project would have on the community environment and character, and the precedent that would be set for future development in the area, which the DEIR fails to discuss or analyze.

The Project would line Fairfax Avenue with Height Zone C, permitting a wall of buildings up to 160 feet in height,⁵ which is significantly taller than the massive Beverly Center. Approximately 11,325 square feet of illuminated digital signs along Fairfax Avenue would glare down on the community, with an additional 6,100 square feet of illuminated digital signs glaring north towards Beverly Blvd. In the center of its mass, the Project would rise to 225 feet in height,⁶ dwarfing all surrounding structures, including the Beverly Fairfax National Historic District, the historic Fairfax commercial district, the neighborhood west of Fairfax, the historic Original Farmers Market, the Gilmore Adobe complex, and the Broadcast Apartments.

The DEIR turns a blind eye to the Project's obvious physical effects on the urban environment and its conflict with the City's numerous planning principles to protect historic resources and existing stable residential neighborhoods, including but not limited to the City's transitional height ordinance.

- ⁵ The height of buildings would be even taller if measured in accordance with the requirements of the Municipal Code, which should be applied to the Project.
- ⁶ The height of buildings would be even taller if measured in accordance with the requirements of the Municipal Code, which should be applied to the Project.

Response to Comment No. 28-22

Refer to Response to Comment No. 5-9 regarding how the massing diagrams presented in this comment and a number of other comments, including Comment Letter Nos. 5 and 26, are inaccurate and do not portray the Project. Refer to Response to Comment Nos. 9-16, 11-3, and 26-7 regarding height, massing, and its relation to historical resources and residential uses. Also refer to Response to Comment No. 11-3 regarding

the Beverly Center. Refer to Response to Comment No. 5-10 regarding the Preliminary Draft Specific Plan and how digital signage would not be permitted along the perimeter of the Project Site. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's consistency with applicable plans, policies, and regulations that regulate land use on the Project Site, including the LAMC, among others, as well as the compatibility of the proposed uses with surrounding land uses, and concluded that impacts would be less than significant.

Comment No. 28-23

The DEIR also ignores the precedent the Project's up-zoning and massing would set; inviting nearby property owners to propose similarly scaled development along Beverly Blvd., Fairfax Avenue, and adjacent commercial corridors. The DEIR should be revised and recirculated to analyze these foreseeable environmental impacts.

Response to Comment No. 28-23

Growth-inducing impacts are analyzed in Section VI, Other CEQA Considerations, of the Draft EIR. Refer specifically to pages VI-14 through VI-17 of the Draft EIR. As discussed therein, direct and indirect growth-inducing impacts would be less than significant.

The assertion regarding the precedent the Project would set is incorrect. Refer to Response to Comment No. 11-3 regarding the size and scale of the Project. As discussed therein, the Project's proposed FAR of 1.75:1, which is an approximately 17 percent increase in permitted floor area, is similar to or less than the FARs of several adjacent and nearby properties.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-24

In light of the significant environmental impacts the Project would have at its proposed location, and the adverse precedent and transformative impact its approval would have on the Beverly Fairfax community, the DEIR is fundamentally defective for its failure to identify alternative location(s) for development the [sic] Project The [sic] Developer's basic objective of developing an integrated studio complex has, in fact, little relationship to the Project Site, and might be satisfied at other locations providing suitable land area for development. The same is true of the Developer's objectives of promoting local and

regional economic growth by creating a wide range of entertainment jobs as well as construction jobs and keeping production jobs in Los Angeles, and contributing to Los Angeles' status as a global creative capital and provide maximum opportunity for productions to be filmed in the region. These objectives can be satisfied anywhere in the region. CEQA does not permit a lead agency to give a project's purpose an artificially narrow definition in order to avoid analysis of alternative locations.

The Developer's contentions that developing an integrated studio complex is somehow "bound up" in the Project Site is entirely self-serving and plainly calculated to avoid CEQA-required analysis and consideration of alternative sites for the Project. In this regard, we note that the Developer proposes to demolish approximately two-thirds (495,860 square feet) of the existing historic Television City complex.

Response to Comment No. 28-24

This comment misunderstands the Project's underlying purpose. It is not just to construct an integrated studio complex, but "to maintain Television City as a studio use and to modernize and enhance production facilities within the Project Site to meet both the existing unmet and anticipated future demands of the entertainment industry, keep production activities and jobs in Los Angeles, upgrade utility and technology infrastructure, and create a cohesive studio lot." Thus, the underlying purpose of the Project and its objectives are closely tied to the existing Project Site and studio use that has been there for more than 70 years. Refer to pages V-11 and V-12 of Section V, Alternatives, of the Draft EIR and Topical Response No. 16, Project Alternatives Analysis.

The claim that the Project would demolish 495,860 square feet of historical resources is incorrect. First, the entire Television City complex is not identified as a historical resource. Within the Project Site, only the Primary Studio Complex is identified as HCM No. 1167. The Project would rehabilitate, but not demolish, the Primary Studio Complex and impacts were determined to be less than significant. Refer to Section IV.B, Cultural Resources, of the Draft EIR.

Comment No. 28-25

Moreover, the Developer's claimed objective of rehabilitating and preserving the integrity of the buildings which constitute the designated Historic Cultural Monument (the "HCM") is not dependent on developing the Project. Indeed, the Developer itself has conceded that the existing sound stages of the HCM will not necessarily be renovated or utilized: "Despite their limited size and flexibility, the four existing sound stages within the Studio Building are intended to remain active production spaces and would be renovated and modernized to the extent feasible, subject to industry market demand." DEIR II-17 (emphasis added).

The City's Cultural Heritage Ordinance protects the HCM against substantial alteration or demolition in the absence of CEQA review and overriding considerations, as well as an affirmative proposal to substantially alter or demolish the HCM. It does not follow that if the Project is not approved at this location, the HCM would not be retained. Certainly, there is no substantial evidence that in the absence of the Project (that is, demolition of two-thirds of Television City and the addition of the 1.6 million square feet of new development that the DEIR concedes),⁷ the Primary Studio Complex would not be preserved.

⁷ As discussed earlier, the DEIR improperly understates the actual amount of new development.

Response to Comment No. 28-25

As stated on page II-10 in Section II, Project Description, of the Draft EIR, one of the Project objectives is to “[r]ehabilitate and preserve the integrity of the Primary Studio Complex consistent with the HCM designation and restore the currently obstructed public views of the HCM consistent with the HCM designation, while building upon Pereira & Luckman’s master plan for a flexible and expandable studio campus.” This objective is one of several objectives of the Project and its inclusion as an objective does not imply that the HCM would not be retained if the Project is not approved. Specifically, refer to Section V, Alternatives, of the Draft EIR, which evaluates a “No Project” alternative (Alternative 1). As stated on pages V-21 to V-22 of this Section, the No Project Alternative would not involve any construction activities that could affect on-site or nearby historical resources, and no new buildings or changes to the physical environment that could affect the historical context of the on-site or nearby historical resources would be introduced. Therefore, the No Project Alternative would not result in impacts to historical resources, and the Project’s less-than-significant impacts would be avoided. However, without the Project, the Primary Studio Complex would not be rehabilitated as proposed by the Project, and the currently compromised character-defining features, as well as the visibility and prominence of the Primary Studio Complex from Beverly Boulevard, would not be restored.

The comment that the Draft EIR underestimates the amount of new development is incorrect. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate.

Comment No. 28-26

Further, the rhetorical homage paid to the Pereira & Luckman master plan is entirely self-serving. The DEIR’s technical appendices concede that CBS itself never implemented any part of the master plan, which was abandoned after CBS developed the Service Building and Studio Building. See Architectural Resources Group report at page 45. Furthermore, unlike the Developer’s plan, the Pereira & Luckman master plan did not propose any buildings taller than 12 stories. DEIR at 11-7. The Pereira & Luckman master plan did not

propose a 5,300 car parking structure. The Pereira & Luckman master plan did not propose a structured “base camp.”

An objective assessment of the history of the Project Site’s development tells an altogether different story than portrayed by the DEIR; which is that CBS chose not to develop the Project Site as conceived by Pereira and Luckman. Realization of the Periera [sic] and Luckman plan was never a goal, and was never pursued, by CBS. Why should it become an important objective of the City in considering the Project?

Response to Comment No. 28-26

The comments regarding the intent and realization of the Pereira & Luckman master plan do not concern the Draft EIR’s analysis of potential impacts to historical resources under CEQA. The master plan is discussed to provide historical context and explain the reasoning behind one of the Project objectives.

As stated in the 2018 Historic Resource Assessment, which was prepared by ARG as part of the HCM designation process prior to this Project and is attached to the Historic Report (Appendix C.1 of the Draft EIR):

When CBS engaged Pereira & Luckman to come up with a ground-up concept for Television City, it embarked on an ambitious project that would not only serve its brand, but strongly influence the design of postwar television production studios. Pereira’s 1948 survey of existing film studios had convinced the new partnership that the needs of television production were so different from that of film or radio that they necessitated the creation of a new and completely flexible building program. CBS gave the firm “virtual carte blanche to design a highly-flexible, infinitely-expandable solution, without precedents either to guide them or to restrict them.”¹⁰⁷ In response, Pereira & Luckman designed a two-building complex with highly configurable interiors and expandable exteriors—the first phase of implementing a master land use plan meant to guide all future use of the site.

CBS intended the Service Building and Studio Building to be only the nucleus of a massive development to include an office high-rise, a long retail block along Beverly Boulevard, and 24 studios in six projecting wings.¹⁰⁸ Newspaper articles unfailingly referred to Television City’s 1952 buildings as the “initial unit” or “first phase” of a much larger future complex that would eventually cover the entire site at Beverly and Fairfax.

¹⁰⁷ CBS, “CBS Television City—Los Angeles, Calif.—1952,” 1982, 83.

¹⁰⁸ CBS, “TVC History for 50th Anniversary,” 2002, 2.

(2018 Historic Resource Assessment, pages 44–45 [see Appendix C.1 of the Draft EIR])

Pereira & Luckman’s drawing of the Television City master plan is included on page 45 of the 2018 Historic Resource Assessment. As discussed in the newspaper stories included in the HCM nomination (included in Appendix C.1 of the Draft EIR), when completed, Television City would “cover 25 acres and [would] include a 13-story administration building of 600,000 square feet.”¹²⁶

The comment’s assertion that the Draft EIR’s assessment of Television City’s history was not objective is incorrect, as the Draft EIR and Historic Report relied upon and confirmed the analysis and conclusions in the 2018 Historic Resource Assessment.

As discussed in Section A, Existing Evaluation and Designation of the Primary Studio Complex, of Topical Response No. 5, Historical Resources, the Project Site did not require re-evaluation as a historical resource. Under CEQA, a property designated under a local preservation ordinance is presumed to be a historical resource.¹²⁷ In addition, requirements for CEQA historical resource assessment reports established by OHR clearly state that if a property is already designated, an assessment of eligibility is not required. Instead, the report should summarize the property’s significance pursuant to the designation documentation.¹²⁸ As such, the Draft EIR and Historic Report were prepared in accordance with these requirements. Furthermore, the designation documentation for Television City was reviewed by HRG for the accuracy of the information, consistency with NPS guidance, and for physical changes that may have occurred to the property since the designation. HRG determined that the designation documentation was in conformance with best practices in historic preservation and that the property had not been altered since the designation. Thus, HRG concurred the designation made the appropriate findings.

As discussed in Response to Comment No. 28-25, one of the Project objectives is to “[r]ehabilitate and preserve the integrity of the Primary Studio Complex consistent with the HCM designation and restore the currently obstructed public views of the HCM consistent with the HCM designation, while building upon Pereira & Luckman’s master plan for a flexible and expandable studio campus.” The requirement to identify Project objectives is set forth in CEQA Guidelines Section 15124(b), which provides that an EIR shall contain “[a] statement of the objectives sought by the proposed project,” including “the underlying purpose of the project,” but does not impose any substantive limitations on those

¹²⁶ See Appendix C of the Draft EIR, pdf page 201.

¹²⁷ Public Resources Code § 5024.1 and Title 14 California Code of Regulations § 4850 & § 15064.5(a)(2).

¹²⁸ Department of City Planning, Office of Historic Resources, Requirements for Historical Resource Assessment Reports, Updated July 2017.

objectives. Thus, CEQA does not restrict an agency's discretion to identify and pursue a particular project designed to meet a particular set of objectives.

Comment No. 28-27

Given the fact that development of the Project does not depend on it being located at the Project Site, and that the DEIR has improperly constrained the Project objectives in order to avoid analysis and consideration of other sites for the Project, CEQA requires that the lead agency identify locations for the Project and include discussion and analysis of such locations in a revised and recirculated DEIR.

Response to Comment No. 28-27

Refer to Response to Comment Nos. 28-24 and 26-179.

Regarding recirculation, this comment does not provide substantial evidence to demonstrate that "significant new information" as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation of the Draft EIR is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-28

The DEIR is fundamentally deficient for failing to analyze the Gilmore Adobe complex as a sensitive residential receptor. The Adobe is a residential complex that has historically been utilized by the Gilmore family. It includes a continuing single family residence, a cottage and apartment. The cottage is approximately 40 feet from the Project, constituting the nearest single-family use to the Project. The residential wing of the Adobe is approximately 100 feet from the Project. The air quality and noise impact analyses of the DEIR must be revised to analyze potential construction and operational noise (including but limited to human annoyance impacts) and air quality impacts to the Adobe complex as a sensitive receptor single-family use. Feasible mitigation measures should be identified, including but not limited to a construction buffer zone. Without limiting the analysis that must be provided, there is no analysis of how studio-related production will impact the Gilmore Adobe. In addition, a sound barrier is not proposed between the Project and Gilmore Adobe.

Response to Comment No. 28-28

Please see Response to Comment No. 26-26 for a discussion of localized air quality and health risk impacts on nearby sensitive receptors. As stated therein, the shortest applicable (i.e., most conservative) sensitive receptor distance was used for the LST analysis and would, therefore, be representative of localized air quality impacts at the Gilmore Adobe location. While the Gilmore Adobe was not specifically identified in

Figure IV.A-4 as it is a commercial use, the closest sensitive receptor land use to the Project Site would be the residential use located immediately east of the Project Site (Broadcast Center Apartments). As shown in Table IV.A-10 and Table IV.A-11 of the Draft EIR, Project localized construction and operational emissions would remain below significance thresholds for receptors located within 25 meters (82 feet) of the Project Site. Please note that the nearest construction activities would be located approximately 125 feet from the Gilmore Adobe, and new buildings would be located a minimum of approximately 167 feet from the Gilmore Adobe. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptors. Thus, mitigation is not required.

Refer to Response to Comment No. 26-139 regarding the Gilmore Adobe and the thorough analysis of potential impacts to the Gilmore Adobe in the Draft EIR.

Comment No. 28-29

The DEIR is fundamentally deficient for failing to identify significant adverse impacts to the Gilmore Adobe complex as a historic resource as discussed in the September 13, 2022 report by Architectural Historian and Historic Preservation Planner, Kathryn McGee. CEQA Guidelines Section 15064.5(4)(b)(i) provides that a significant impact to a historic resource results from the "...alteration of the resource or **its immediate surroundings** such that the significance of an historical resource would be materially impaired." (emphasis added) In addition, Standard 9 of the Secretary of Interior's Standards provides that consistency with the Secretary's Standards requires that "the new work... will be compatible with the historic materials, features, size, scale and proportion, and massing **to protect the integrity of the property and its environment**" (emphasis added).

The DEIR inadequately addresses the issue of potential impacts to the Adobe complex by ignoring Standard 9 entirely, and limiting its analysis of impacts to the setting of the Gilmore Adobe to the following single sentence:

Integrity of setting for both resources have been substantially altered previously by construction of The Grove shopping and entertainment center in 2002, and neither The Original Farmers Market nor the Rancho La Brea Adobe retains integrity of setting.⁸

This sentence is entirely conclusory, and is unsupported by actual analysis of the environment surrounding the Adobe complex in accordance with CEQA and Standard 9 of the Secretary's Standards.

As discussed in Ms. McGee's expert report, historic aerials demonstrate that the immediate environment surrounding the Adobe complex has always retained a sense of seclusion and separateness. Indeed, the Adobe and its isolated setting are described in an historic photo description on file in the California Historical Society Collection held at USC as "shielded from public view by a fortress of foliage" and "as a bucolic island of tranquility in the heart of the city."

Despite the development of The Grove, the adobe exists as a secluded oasis ensconced in landscaping and trees. Adjacent development is primarily one and two stories in height and well-buffered from the Adobe complex (The Grove Parking Structure being the exception). Thus, the integrity of the Adobe's historic setting is largely intact and should be protected to avoid a significant adverse impact to the Adobe complex as a historic resource.

Indeed, existing CBS buildings within 150 feet north of the Adobe complex have respected the special setting of the Adobe complex, and are limited to one story in height in this area. The Project would allow buildings up to 225 feet in height within the same area setback by only 30 feet from the property line.⁹

Existing CBS buildings to east of the Adobe complex similarly respect the special setting of the Adobe, are set back over 150 feet, and are limited to one story in height. The Project would allow buildings up to 130' in height in the same area setback by only approximately 60 feet from the property line.¹⁰

The 3D model of the Project's height zones below provides a simple illustration of the Project's significant adverse impact upon the setting of the Adobe complex's setting.

Ms. McGee concludes that allowing out-of-scale construction in these areas as proposed by the Project would create a wall that overshadows the low-scale Adobe complex, especially the open spaces and north yard, a primary location for Gilmore family and community gatherings, and would entirely block out access to light and air in this area, significantly and adversely impacting the historic look and feel of the setting, and destroying spatial relationships in contravention of Standard 9 of the Secretary of Interior's Standards.

Nor, Ms. McGee concludes, would significant adverse impacts to the Adobe setting be avoided if building height is limited to the 88' "base height" proposed by the Developer (approximately 103' tall as measured in accordance with LAMC requirements) within the same areas now characterized by open space and one-story structures. Structures of this scale would similarly block out access to light and air in the Adobe complex and contravene Standard 9 of the Secretary of Interior's Standards.

In summary, the DEIR should be revised and recirculated to disclose that the new construction proposed by the Project fails to meet Standard 9 in that (i) it would destroy spatial relationships that characterize the adobe as a historic property, and (ii) that its size,

scale and proportion, and its massing fails to protect the integrity of the Project's environment (specifically the adobe complex). Accordingly, the DEIR should be revised and recirculated to acknowledge this significant adverse impact and identify potential mitigation measures.

⁸ Historic Resources Group, Historical Resources Technical Report TVC 2050 Project, May 2022:88.

⁹ The actual height of such buildings may be as much as 15' taller when measured in accordance with LAMC requirements, which should be applied to the Project.

¹⁰ We note that the actual height of such buildings may be as much as 15' taller when measured in accordance with LAMC requirement, which should be applied to the Project

Response to Comment No. 28-29

This comment misstates the threshold for analyzing impacts to historical resources under CEQA and suggests that the Rehabilitation Standards are the thresholds for significant impacts, which they are not. The analysis in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR) is correctly based upon the thresholds for significant impacts on historical resources in Appendix G of the CEQA Guidelines. As explained in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report, a project will result in a significant impact if it causes a "substantial adverse change" in the significance of a historical resource. Substantial adverse change means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired."¹²⁹ In general, a project that complies with the Rehabilitation Standards is considered to have impacts that are less than significant.¹³⁰ Furthermore, the Rehabilitation Standards are not prescriptive, but instead provide general guidance for managing changes to historic properties. Standard 9 pertains to additions, exterior alterations, and related new construction of the subject historic property—not historic properties that may be present in the vicinity. The Rehabilitation Standards are not applied to properties that are not historically associated. Thus, the comment expresses a lack of understanding of the CEQA threshold and the Rehabilitation Standards, as well as their practical application. For a significant impact to occur, the integrity of the historical resource would have to be diminished to the degree that it would no longer be able to convey its significance.¹³¹ The Draft EIR and Historic Report correctly considered the impact the Project could have on the integrity of the historical resources in the vicinity, including their integrity of *setting*, and concluded that any impacts would be less than significant (refer to Draft EIR page IV.B-55 and Historic Report pages 87 to 88).

¹²⁹ CEQA Guidelines Section 15064.5(b).

¹³⁰ CEQA Guidelines Section 15064.5(b)(3).

¹³¹ CEQA Guidelines Section 15064.5(b)(2).

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment No. 363-1 regarding the Draft EIR's analysis of potential impacts to the Gilmore Adobe (also referred to as the Rancho La Brea Adobe). As discussed therein, the Project would not physically alter any of the historical resources in the vicinity of the Project Site, including the Gilmore Adobe. This comment does not provide evidence of material alteration of the Gilmore Adobe. As explained and analyzed in the Draft EIR and Historic Report, all demolition, alteration, and new construction associated with the Project would be contained within the Project Site. Because the Project Site is located outside the parcel boundaries of the identified historical resources in the vicinity, the Project would not impact their integrity of immediate setting. Further, the broad setting of the Gilmore Adobe has been subject to continual change and alteration over time as is typical of urban environments. As such, the physical aspects of this resource that are critical to conveying its historic significance are largely contained to its respective property.

This comment mischaracterizes the setting around the Gilmore Adobe. The Gilmore Adobe was constructed in 1852, became the home of the Gilmore family in 1883, and was expanded in 1900. The area around the Gilmore Adobe continued to be developed and redeveloped until the construction of The Grove (Figures 4, 6, 7, and 8). Thus, Comment No. 363-3 only supports the conclusion in the Historic Report that the Gilmore Adobe does not retain its broad integrity of setting. As discussed in the Draft EIR, Historic Report, and Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, the broad setting of the Gilmore Adobe has been completely transformed since its original construction in the 19th century, as all the surrounding ranch land was developed and redeveloped over time. Construction of The Grove shopping and entertainment center, which opened in 2002 and includes an eight-level parking garage immediately east of the Gilmore Adobe, is only the most recent example. Today, the Gilmore Adobe is almost entirely enclosed by more recent retail and restaurant development (including back of house operations that are immediately adjacent to the Project Site) associated with The Grove. Therefore, the broader setting of the Gilmore Adobe does not contribute to its historic significance given the existing condition.

The claims that the Project would result in a significant impact to the Gilmore Adobe because it would be out of scale, overshadow, block access to light and air, etc., is not substantiated by facts or analysis and is not based on the threshold in Appendix G of the CEQA Guidelines. Refer to Response to Comment No. 5-13 for additional information. This comment does not provide any explanation as to what aspects of the immediate surroundings are instrumental in conveying the historic significance of this historical resource or how new construction located north of the Gilmore Adobe would diminish its integrity. As demonstrated in the Draft EIR, the Gilmore Adobe, including its component buildings, structures and associated outdoor spaces, would remain physically unchanged after implementation of the Project and it would continue to convey its historic significance.

Therefore, impacts to the Gilmore Adobe would be less than significant as defined by CEQA.

The massing model included in this comment is the same as the massing model included in Comment No. 5-13. Refer to Response to Comment No. 5-13 regarding the inaccuracies of this massing model. Also refer to Response to Comment No. 5-5 of this Final EIR for a diagram of Height Zone D and to Figures II-4(a) and II-4(b) of Section III, Revisions, Clarifications and Corrections to the Draft EIR, for aerial renderings depicting the Conceptual Site Plan.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-30

The DEIR is also fundamentally deficient for failing to adequately analyze potential direct impacts of construction vibration on the structure of the Gilmore Adobe as discussed in the September 13, 2022 report by Architectural Historian and Historic Preservation Planner, Kathryn McGee. The DEIR briefly addresses potential impacts from vibration in Chapter IV.I: Noise. This chapter acknowledges off-site historical resources including the adobe as “buildings extremely susceptible to vibration damage” and states that “the estimated vibration levels from the construction would be well below the 0.12-PPV building damage significance criterion at the five off-site historical resources.” This analysis is entirely conclusory.

The Gilmore Adobe was constructed in 1852 of adobe brick finished in stucco. Adobe is an extremely fragile building material, and the Gilmore Adobe is approximately 170 years old. The Gilmore Adobe’s method of construction is one of the primary reasons for its significance. There is a significant risk that significant adverse impacts to the Adobe could result from construction vibration, including but not limited to pile installation, during construction of the Project.

The DEIR references Federal Transit Administration: Transit Noise and Vibration Impacts Assessments (FTA) standards and applies 12-PPV ‘significance criterion’ to its evaluation of potential construction vibration impacts to the Adobe. This is the same criterion the DEIR applies to the wood-frame buildings nearby the Project and appears to have been selected merely as a ‘catch all’ rather than a criterion suited to an extremely fragile 170-year old adobe structure. What evidence or information substantiates the application of this criterion to a 170 year old adobe structure? Was such criterion developed in relation to

similarly-aged adobe structures? Please provide the empirical studies substantiating the application of this criterion to similarly-aged [sic] adobe structures.

The DEIR data tables included in the associated technical report provides that the 170 year old Gilmore Adobe will be 100 feet from construction equipment including: large bulldozer, caisson drilling, loaded trucks, jackhammer, and small bulldozer. The cultural resources technical report excludes mention of any potential impacts from pile installation and/or vibration on the Adobe.

The DEIR should be revised and recirculated to provide an evaluation of potential damage due to vibration impacts to the 170 year old Gilmore Adobe by a structural engineer with experience working on aged Adobe structures, disclosing potential impacts and identifying necessary mitigation measures. Significance criterion suited to an adobe structure of similar age should be utilized in any analysis. The potential for significant unavoidable impacts to the Adobe must be acknowledged. Mitigation measures must include monitoring of vibration levels at the adobe complex to ensure that damage does not occur.

Response to Comment No. 28-30

Refer to Response to Comment Nos. 26-139 and 363-2 for a discussion of the Gilmore Adobe. As discussed therein, impacts would be less than significant.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 28-31

In addition, potential impacts from the Project on the historic use and operations of the Farmers Market were not considered in the DEIR. Operation of the Farmers Market depends on support from the Shop Building which is located along the north boundary of the Farmers Market property, and which depends on open access to the service road separating Farmers Market from the Project Site. As depicted by the “Conceptual Site Plan” the Project proposes to intensely utilize this road to provide access to its 5,700 space parking garage as well as truck access to its Production Support area adjacent to the parking garage. All materials to support the Farmers Market and adjacent company-owned properties are loaded through this service road; loading activities only leave sufficient clearance for fire access. Thus, an increase in traffic would mean service vehicles may not have clearance to safely load and unload vehicles while maintaining an adequate fire lane; slow-moving service equipment (man lifts, scissor lifts, forklifts, etc.) that regularly travel down the service road would also be interrupted by an increase in traffic. This which would

disrupt the necessary Farmers Market support services in this location and therefore impede on the ability of the HCM to maintain its historic, significant use as a fully functioning, open-air market in contravention of Standard 1 of the Secretary of Interior's Standards. To mitigate this impact, secondary truck access to the service road and passenger vehicle access to service road should be eliminated.

Response to Comment No. 28-31

Regarding the potential traffic impacts to The Original Farmers Market's use of its Shop Building, the Project would not affect this operation for several reasons. First, the Project's proposed vehicular access points are located along the Southern Shared Access Drive which is located to the east of the Shop Building. The Shop Building itself is located along the western portion of the alley where The Original Farmers Market and the Project Site each have their own parallel alleyways. Thus, there is no interaction between The Original Farmers Market vehicles and the Project vehicles in the area of the Shop Building. Second, all vehicular traffic to and from those driveways and any loading operation on the Southern Shared Access Drive would flow to/from The Grove Drive, and thus would not use the alley from Fairfax Avenue (and would not pass in front of the Shop Building). Third, Project vehicle operations on the Southern Shared Access Drive would not restrict the movement of other vehicles using the Southern Shared Access Drive. Therefore, there would be no impact on The Original Farmers Market operations through the Project's use of the Southern Shared Access Drive.

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding impacts to The Original Farmers Market. Refer also to Response to Comment No. 28-29 regarding the threshold for impacts to historical resources under CEQA. This comment does not provide any evidence demonstrating that the Project would result in a substantial adverse change to The Original Farmers Market such that it would no longer be able to convey its significance. The historic use and operation of The Original Farmers Market and the use of the Southern Shared Access Drive do not relate to the threshold for significant impacts to historical resources in Appendix G of the CEQA Guidelines. As discussed in Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, historic impacts and transportation impacts are analyzed separately and have different thresholds. This comment does not provide any explanation as to how increased trips or usage would result in physical demolition, destruction, relocation, or alteration of The Original Farmers Market such that its significance would be materially impaired.

Refer to Response to Comment No. 363-6 regarding why Standard 1 is not applicable to the Project.

Further, this comment incorrectly asserts that mitigation is required. However, as discussed in Section IV.B, Cultural Resources, of the Draft EIR, potential impacts to historical resources would be less than significant, and no mitigation is required.

Comment No. 28-32

The DEIR also fails to identify and disclose conflicts that may be created by truck access and turning movements to and from the secondary driveway at the southern boundary of the Project Site and Fairfax Avenue. Feasible mitigation should be considered including restricting the hours for truck access at this location to between 9 p.m. and 7 a.m. daily.

Response to Comment No. 28-32

The driveway referred to in the comment is an existing driveway used by the Project Site for truck access. It would continue to be used for truck access with the Project and could also provide potential inbound or outbound access for shuttles to and from the Mobility Hub. Refer to Response to Comment No. 26-E.4-15 regarding truck access and maneuvers. These operations would not result in any new conflicts or warrant any restrictions on hours of operations. Because the commenter does not specify what conflict may occur, no further response can be provided and no mitigation is necessary.

Comment No. 28-33

We look forward to the lead agency's consideration to the comments and objections raised in this letter, and to the preparation of a revised and recirculated DEIR if the Director of Planning does not terminate the Developer's application—as the Director should do in accordance with the Director's expressly reserved discretion and for the numerous reasons as discussed in this letter. As required by CEQA Guidelines Section 15088, where the lead agency's position is at variance with the recommendations and objections raised in this letter "the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice."

Response to Comment No. 28-33

Refer to Response to Comment Nos. 28-2 through 28-32. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 29

Maria S. Salinas
President & CEO
Los Angeles Area Chamber of Commerce
350 S. Bixel St.
Los Angeles, CA 90017-1418

Comment No. 29-1

On behalf of the Los Angeles Area Chamber of Commerce, I write to support the Television City 2050 plan and the long-term investment in the studio and the region's media industry. The Los Angeles Area Chamber of Commerce is the oldest and largest business association in the L.A. region. The Chamber's mission is to advance opportunities and solutions for a thriving regional economy that is inclusive and globally competitive.

Maintaining a strong entertainment industry is vital to Los Angeles and its economy. The industry contributes billions in wages including production, distribution and a host of vendor-related jobs. The Television City plan which represents a \$1.25 billion investment, will create thousands of new jobs and allow the studio to grow and adapt to accommodate changing technology and industry advancements.

For seventy years, Television City has played an integral role in the entertainment industry and today it remains at the epicenter of television and movie production. Television City's plan for its approximately 25-acre campus will preserve its legacy as a working studio and enhance studio operations with technologically advanced soundstages and production office and support facilities needed to compete in a global entertainment market.

As we have read, the film and television industry in Los Angeles is currently experiencing a significant scarcity of production space. Without studio facility investments like this one in Los Angeles, the local industry's ability to attract and accommodate future production will be limited. L.A. is the home of entertainment, and we need to support the numerous crew members and small businesses here, who make production happen.

We welcome this plan's contributions to job creation and city revenue. With an expected \$2.4 billion in economic output annually upon completion, and projected improvements expected to create more than 4,200 jobs during construction and 18,700 jobs during operations, this project will ensure the success of the iconic studio while contributing significantly to our regional economy and keeping well-paying jobs in Los Angeles.

We thank you for your leadership and urge the City to support the TVC 2050 plan.

Response to Comment No. 29-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 30

Dan Seaver
Executive Director & Co-Founder
ManifestWorks
823 Seward St.
Los Angeles, CA 90038-3601

Comment No. 30-1

I want to express my strong support for TVC 2050, primarily, because it represents an unprecedented long-term investment in the future of our city's entertainment industry. Los Angeles continues to see increasing competition from other global production centers. Over the past couple decades, Los Angeles has been losing entertainment industry jobs to destinations such as Canada and Georgia.

Incentives and local tax credits have helped, but a bold new investment like this is desperately needed. This plan will not only bring jobs and support to local businesses, but it will also revitalize the local neighborhood.

ManifestWorks is an immersive workforce development organization that partners with a network of supportive professional businesses including Television City to provide job opportunities for underrepresented communities, specifically those impacted by foster care, incarceration and homelessness. This plan will create new jobs and help provide training opportunities in our industry.

TVC 2050 will modernize Television City and will ensure it can serve the growing and unmet demand for state-of-the art production facilities. Building for jobs changes lives.

Response to Comment No. 30-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 31

Donald R. Duckworth
Executive Director
Melrose Arts District
1934 Wilson Ave.
Arcadia, CA 91006

Comment No. 31-1

The Melrose Business Improvement District (MBID) enthusiastically supports TVC 2050: The Los Angeles Studio Plan.

The MBID Board of Directors, a non-profit 501.c.6 corporation dedicated to revitalizing Melrose Avenue in partnership with the City of Los Angeles and other community based organizations, met on July 22, 2022 to continue its on-going review of the TVC 2050 Studio Plan. MBID represents over 300 business and commercial property owners along Melrose Avenue between Fairfax Avenue and Highland Avenue. After full consideration of the TVC proposal, the Board voted unanimously to support the Plan and continue to participate in its implementation.

As Los Angeles continues to recover from the impacts of COVID-19 and confronts increasing competition from other global production centers, the TVC 2050 Studio Plan represents an unprecedented long-term investment in the future of our City's most beloved industry.

TVC 2050 Studio Plan will modernize Television City, establishing a dynamic studio ecosystem and ensuring it can serve the growing and unmet demand for state-of-the-art production facilities. The Plan will create thousands of entertainment industry jobs, generate more than \$2.4 billion in new, annual economic output, and reaffirm Los Angeles' status as the creative capital of the world. These jobs and their economic output will directly affect small businesses located on Melrose Avenue.

TVC 2050 Studio Plan also represents a significant investment in the Beverly/Fairfax/Melrose community. The plan improves and beautifies the public realm, creating a more vibrant, pedestrian friendly environment; provides a multi-modal mobility hub, encouraging alternative means of transportation and connections to the surrounding neighborhood; and respects its surrounding context by reducing height along studio edges. Lastly, TVC 2050 Studio Plan celebrates and preserves the Historic Cultural Monument onsite.

As the leading business organization of the Melrose neighborhood, we recognize the potential benefits the project will bring to our community and the greater LA business community. Our business and property owners have a vital stake in this project and encourage the City to approve the TVC 2050 Studio Plan.

Response to Comment No. 31-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 32

Greg Goldin
President
Miracle Mile Residential Assn.
P.O. Box 361295
Los Angeles, CA 90036-9495

Comment No. 32-1

The Miracle Mile Residential Association (MMRA) opposes the proposed above-referenced TVC 2050 Project as presently contemplated in the Draft Environmental Impact Report.

Response to Comment No. 32-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 32-2

The TVC 2050 project will negatively impact and irrevocably change the Miracle Mile neighborhood as well as surrounding neighborhoods. The DEIR does not adequately analyze or mitigate these negative impacts. If this project goes forward as proposed, the Miracle Mile will face irreversible and long-term health, traffic, and other environmental impacts.

Response to Comment No. 32-2

The issues raised by the commenter are addressed in Response to Comment Nos. 32-3 through 32-8.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 32-3

This enormous project has been quietly pushed forward without adequate public input due to more than two years of a global pandemic. In addition to opposing the project as currently proposed, the MMRA requests extended time for public comment on the voluminous DEIR.

Response to Comment No. 32-3

In addition to complying with and exceeding CEQA's noticing requirements, the Applicant has actively conducted stakeholder outreach and shared information about the Project in 2019. When the Project entitlement application was filed on March 26, 2021, TVC mailed thousands of brochures to its neighbors to announce its plan to expand and modernize the studio facility. The application filing was also covered by the Los Angeles Times, along with other local and regional publications. The Notice of Preparation (NOP) for the Project was filed on July 2, 2021. The NOP was sent to owners and occupants within a 500-foot radius of the Project Site, numerous agencies and City departments (including the Council Office and Neighborhood Council), and individuals and entities who identified themselves to the Planning Department as "interested parties." The NOP included a description of the Project and all entitlements sought, and stated that the Planning Department would be holding a Scoping Meeting on July 20, 2021 to present the Project, explain the CEQA process, and solicit comments regarding the environmental implications of the Project. The Draft EIR was published on July 14, 2022, in accordance with CEQA Guidelines Section 15087. The Notice of Completion and Availability of the Draft EIR was sent to the same extensive distribution list and explained that the CEQA-required 45-day comment period concluded on August 29, 2022. In response to community feedback and at the request of Councilman Paul Koretz's office, the Department of City Planning extended the comment period by 15 days, for a total of 60 days concluding on September 13, 2022, which exceeds CEQA requirements. Following the publication of this Final EIR, the EIR and the Project's requested approvals will be considered during public hearings before City decision-makers, including the City Hearing Officer and Deputy Advisory Agency, the City Planning Commission, the Planning and Land Use Management Committee, and the City Council with input from the City Attorney's office. Also refer to Response to Comment Nos. 78-2 and 85-3.

Comment No. 32-4

Here are some of our major concerns:

The scope of this project is too large. It would add almost 2,000,000 square feet of development (including 1.4 million square feet of offices) and 20-story towers, an enormous increase over the size of current operations. It would be twice the size and twice as tall as the Beverly Center, just one mile west.

Response to Comment No. 32-4

Refer to Response to Comment No. 11-3 regarding how the height and scale of the Project would be compatible with the surrounding community and how proposed building heights would not be twice as tall as the Beverly Center.

Comment No. 32-5

The project would place greater strain on already overburdened infrastructure and community services, importantly including fire and public safety.

Response to Comment No. 32-5

With regard to the adequacy of LAFD fire protection and LAPD police protection services and infrastructure, refer to Response to Comment Nos. 16-5, 16-10, 26-147, and 35-133. Regarding public safety, as discussed in Response to Comment No. 16-5, per Project Design Features POL-PDF-2 through POL-PDF-7, the Project would include numerous operational design features to enhance safety within and immediately surrounding the Project Site, which would reduce the demand for police services.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 32-6

Traffic and air quality would be severely impacted. The proposed twenty-year construction timeline will jam the already gridlocked nearby streets with 60,000 dump trucks, hauling millions of tons of steel, concrete, and construction materials as many as six days each week. As each phase of the project is completed, more traffic will ensue—commuters heading to work at the newly expanded facilities as well as dozens of production trucks entering and exiting the site every day. Gridlock, increased cut-through traffic, and more air pollution, will be the inevitable result. Our barely walkable streets will become even more perilous for pedestrians, and cyclists will be pushed off the road.

Response to Comment No. 32-6

The Project's transportation impacts were comprehensively analyzed in Section IV.K, Transportation, of the Draft EIR in accordance with CEQA and were determined to be less than significant during both construction and operation of the Project. Refer to Topical Response No. 8, Vehicle Miles Traveled, and Topical Response No. 10, Trip Generation.

Refer to Response to Comment No. 26-30 regarding haul truck trips. As discussed therein, there would be a maximum of 300 haul trucks and 20 delivery trucks per day during peak export activities with a conservative estimate of up to 126,972 truck trips (63,486 trucks) during the 185 day grading period. Importantly, while construction-related activities associated with the Project would result in varying levels of truck and worker trips to and from the Project Site on a daily basis, such trips would be far less than operational Project-related trips. Even under phased construction, in which portions of the Project Site

may begin operations while other portions of the Project Site are under construction, the total trips generated to and from the Project Site would be less than those forecast for the Project upon completion and, therefore, would have less of an effect on traffic operations than the completed Project as evaluated in the Transportation Assessment. Additionally, the Project would include a Construction Traffic Management Plan pursuant to Project Design Feature TR-PDF-1 (see pages IV.K-36 and IV.K-37 of the Draft EIR), which would include provisions to limit the amount of construction-related trips during peak hours to the extent feasible. Refer to Topical Response No. 14, Construction Vehicle Impacts, for additional information about the trips generated by construction.

With respect to operational trips, as discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, changes in driver delay are not considered to be transportation impacts under CEQA. As discussed on pages IV.K-72 through IV.K-78 of the Draft EIR, impacts related to VMT would be less than significant. In addition, refer to Topical Response No. 12, Safety and Congestion, regarding measures that have been included in the Project's transportation improvement program in the form of TDM strategies and traffic signal and operational improvements along the High Injury Network corridors that would advance the traffic safety goals of the City's Vision Zero Program and would include LOS benefits. Refer also to Topical Response No. 11, Transportation Demand Management.

With regard to cut-through trips, a detailed analysis of cut-through effects is provided in Section 5C (commencing on page 167) of the Transportation Assessment included as Appendix M.1 to the Draft EIR. As discussed in the introduction to and Section A, Deferred Mitigation, of Topical Response No. 9, Neighborhood Traffic Management Plan, a project's effect on automobile delay (including cut-through trips) is no longer an environmental impact under CEQA.

Refer to Topical Response No. 12, Safety and Congestion, regarding pedestrian safety.

Regarding air quality impacts, Section IV.A, Air Quality, of the Draft EIR provided an analysis of construction, operations, and concurrent construction and operations. As stated on pages IV.A-59, IV.A-66, IV.A-73, and IV.A-75 through IV.A-77 of the Draft EIR, air quality impacts would be less than significant for all criteria pollutants after the application of mitigation, except for regional construction NO_x emissions, and regional overlapping construction plus operational VOC and NO_x emissions during the long-term buildout scenario. All localized impacts would be less than significant with incorporation of mitigation measures.

Comment No. 32-7

The project includes zero affordable housing, yet will generate approximately 8,000 jobs—with nowhere for new workers to live without long, climate-impacting, commutes. This is completely contrary to state and local policy and will only increase the rent burden on those currently living nearby the proposed project.

Response to Comment No. 32-7

Television City has been an operating studio within the Project Site since 1952. As is typical of studio environments, the land uses are centered around production operations, including associated parking, loading, storage, and related basecamp activities. The Project Site does not currently contain housing, and the Project does not propose residential uses. As discussed in Section II, Project Description, of the Draft EIR, the Project's underlying purpose is to maintain Television City as a studio use and to modernize and enhance production facilities within the Project Site to meet both the existing unmet and anticipated future demands of the entertainment industry, keep production activities and jobs in Los Angeles, upgrade utility and technology infrastructure, and create a cohesive studio lot.

With respect to employment growth, as discussed in the Initial Study provided in Appendix A to the Draft EIR, the Project is estimated to generate a total of approximately 7,832 employees at buildout, for a net increase of approximately 5,702 employees over existing conditions. Based upon employment data provided in the 2020–2045 RTP/SCS, an estimated 1,947,472 employees are projected in the City of Los Angeles in 2026, the Project's earliest buildout year, with 49,586 new employees projected in the City between 2021 and 2026. The Project's net increase in employment would represent approximately 0.29 percent of the total number of employees in the City in 2026 and approximately 11.50 percent of the employment growth between 2021 and 2026.

While some new Project employees may be anticipated to relocate to the Project vicinity, many would not, nor would existing employees be expected to move as a result of redevelopment of the Project Site. Accordingly, this potential indirect increase in population would not be substantial. As the Project does not include development of residential uses, it would not directly contribute to substantial population growth in the Project area. Additionally, many of the employment opportunities generated by the Project would be filled by people already residing in the vicinity of the Project Site or who would commute to the Project Site, similar to existing conditions. Thus, the potential growth associated with Project employees who may relocate their place of residence would not be substantial. As such, the Project would not induce substantial unplanned population growth in an area, either directly or indirectly and such impacts would be less than significant.

The commenter states that the Project conflicts with state and local policies; however, no specific examples are provided. The Project's potential to conflict with state and local plans and policies is analyzed in the Draft EIR. Refer to the entirety of Section IV.H, Land Use and Planning, and Appendix I; pages IV.A-48 through IV.A-60 of Section IV.A, Air Quality; pages IV.E-52 through IV.E-73 of Section IV.E, Greenhouse Gas Emissions; and pages IV.K-45 through IV.K-72 of Section IV.K, Transportation, of the Draft EIR which present analyses of the Project's consistency with applicable policies. As discussed therein, impacts would be less than significant.

Pursuant to CEQA Guidelines Section 15131(a), a project's economic and social effects, including potential impacts on housing rent burdens, are not treated as effects on the physical environment under CEQA. Substantial evidence must be provided to demonstrate a reasonably foreseeable physical impact on the environment resulting from the economic or social change, and this comment does not include any such evidence. Therefore, no further response to this comment is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action being taken on the Project.

Comment No. 32-8

In addition to these specific concerns, the MMRA opposes the proposed amendment to the City's general plan which would designate the project a "Regional Center." This would give it the same zoning and planning designation as Century City and Downtown Los Angeles. Such a designation is not only unwarranted, but given the way in which the DEIR is written, would give the developer carte blanche to do as it pleases at any time in the future—without public input or review. It also runs contrary to the Wilshire Community Plan, which the city was obligated to update and would not permit this project nor a "regional center" designation. To grant such a designation is to do an end-run around the city's legally-mandated community plan update program and make a mockery of that process.

The DEIR is entirely inadequate. In place of a detailed plan that specifies exactly what project applicants will build, the applicants offer a "conceptual" site plan that gives them unprecedented flexibility over a 20-year period. In place of a project that conforms to prevailing regulations—or even one that asks for specific zoning changes—they want to declare the site "a regional center" that writes its own rules.

Response to Comment No. 32-8

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 regarding the proposed Regional Commercial designation. Refer to Topical Response No. 6, Wilshire Community Plan Update, and Response to Comment No. 28-20 regarding the Wilshire Community Plan. Refer to Response to Comment Nos. 5-5 and 9-12 and Topical Response No. 1,

Clearly Defined Project Description and Specific Plan, regarding the Conceptual Site Plan, the adequacy of the Project Description, and the purpose and function of a specific plan. As discussed in Topical Response No. 1, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. Refer to Response to Comment No. 32-3 regarding the noticing of the Project in accordance with CEQA and the public hearing process.

Comment No. 32-9

For the reasons stated, the Miracle Mile Residential Association asks that the city revisit the DEIR to address these concerns fully and adequately before proceeding in any way with this project.

Response to Comment No. 32-9

Refer to Response to Comment Nos. 32-2 through 32-8. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA.

Comment Letter No. 33

Dennis Wachs
Senior Lumber Trader
Neiman Reed Lumber Company
7875 Willis Ave.
Panorama City, CA 91402-5964

Comment No. 33-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of entertainment and production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 33-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 34

Barbara Gallen
President
Park La Brea Impacted Residents Group
16255 Ventura Blvd., Ste. 950
Encino, CA 91436-2313

Comment No. 34-1

I am writing on behalf of the Park La Brea Impacted Residents Group (PLBIRG). PLBIRG is a group of multifamily Park La Brea residents living 7/10 of a mile from the Proposed Project, near the intersection of Fairfax and 3rd Street.

We're aware of comments and concerns voiced by other neighborhood groups and businesses, re: the Project's proposed scope, density, massing, traffic congestion, lack of an affordable housing component, impacts related to the proposed access/egress on Grove Drive, as well as the proposed General Plan amendment which would designate the Project as a Regional Center. We support these groups and businesses' concerns, and recognize that some of the concerns fall under the entitlements portion of the City's decision-making rather than CEQA.

The amount of time provided for the public to review, digest and prepare comments to the DEIR was grossly inadequate given the length of the report, the scope of the Project, and the fact that it was published in the middle of the summer when many people were away and/or preoccupied with our children who were home from school. Our purpose here is to comment on a partial list of the Project's CEQA environmental impacts that we believe were inadequately addressed in the DEIR. Whether the Project is ultimately scaled back by 50% (or more), or built as proposed, the impacts would still be present and need to be addressed, as would many more DEIR-related issues we were unable to prepare comments for in the limited time provided.

Response to Comment No. 34-1

The issues raised by the commenter are addressed in Response to Comment Nos. 34-2 through 34-5.

With respect to the claim that the public review period was inadequate, which is incorrect, refer to Response to Comment No. 32-3. With respect to the extension request, see Response to Comment No. 16-102.

Regarding the length of the EIR, refer to Response to Comment No. 26-4.

Comment No. 34-2**EMERGENCY RESPONSE**

Appendix K of the DEIR contains the LAFD Response Letter (“Response Letter”) written by then-Fire Marshall (and current LAFD Fire Chief) Kristin Crowley. Per the Response Letter, the Project is first and foremost served by Fire Station No. 61 at 5821 W. 3rd Street, LA 90036, which is 1.2 miles from the Project and offers Task Force level services and equipment. (The next closest fire station offers less than half the resources and equipment as No. 61.)

The Response Letter states:

*“Based on these criteria [sic] (response distance from existing fire stations), fire protection would be considered **inadequate**.” [Bolding per LAFD.]*

“At present, there are no immediate plans to increase Fire Department staffing or resources in those areas which will serve the proposed project.”

The resource and staffing levels shown in the Response Letter are deemed “**inadequate**” at full strength, and we draw the City’s attention to the fact that at Fire Station No. 61 (the sole nearby station with Task Force response capability) actual levels of personnel and engines on most days are significantly less than full strength. For the past several years, multiple days per week, Fire Station No. 61 has forfeited the use of one of its engines because of insufficient staffing, per LAFD policy.

The Project at its proposed scale—or anything approaching it—would hijack already inadequate emergency response services from our neighborhoods and neighbor businesses.

Last week my teenage son discovered a suspicious, rapidly-spreading fire started in a cardboard box in our Park La Brea multifamily carport (determined to be arson by LAFD). It took 11 minutes from the 911 call for the LAFD to arrive on the scene. LAFD contained and extinguished the fire, and nobody was hurt. We later learned Station No. 61’s response time, from activation to arrival on scene was only 4½ minutes; the rest of the 11 minutes was the internal workings of the 911 system. 11 minutes is an unacceptable amount of time to wait. But the TVC 2050 Project as proposed portends much worse; a project of this size’s need for fire and emergency services will send response times skyrocketing and severely compromise public safety.

Response to Comment No. 34-2

With regard to the adequacy of LAFD fire protection services and infrastructure, refer to Response to Comment Nos. 9-35, 16-5, 16-10 and 26-147. With regard to LAFD emergency response times, refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-35. Refer to the Confirmatory Fire Public Services Technical Memorandum included in Appendix FEIR-12 of this Final EIR which confirms that the Project would result in less-than-significant impacts associated with fire protection facilities and the associated demand for new or expanded fire facilities. The information regarding the equipment and staffing levels for the fire stations included in Table IV.J.1-3 on page IV.J.1-16 of the Draft EIR was provided by Fire Marshal Kristen Crowley (refer to Appendix K of the Draft EIR). The comments regarding the equipment and staffing levels, the scale of the Project, and the non-Project-related arson incident are noted for the administrative record and have been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 34-3**CUT THROUGH TRAFFIC—IMPACTS ON NEIGHBORHOOD BELOW 3rd St. EAST OF FAIRFAX**

The DEIR fails at all to analyze or even mention cut through impacts on the residential neighborhood south of 3rd Street/east of Fairfax. This includes Park La Brea multifamily complex, other current and in-the-pipeline multifamily complexes along Ogden, as well as an elementary school. To paraphrase comedian Joan Rivers: “What are we, chopped liver?”

Potentially thousands of TVC 2050 employees, visitors, vendors and audience members daily will get off the 10 Freeway and drive north on a narrow, congested Fairfax Avenue headed to the Project’s 12 story parking structure off Grove Drive. To avoid the heavily congested 3rd and Fairfax intersection, lots of them will turn off Fairfax at Colgate, speed eastward running the stop sign and zip up to 3rd Street for a quick right turn onto 3rd St. to head east to Grove Drive and then up to TVC Parking Structure entrance. (Then do it all again in reverse going home.)

Availability of an entrance on Fairfax Avenue will not prevent or minimize the appeal of this cut through route to drivers wanting to avoid the congested, collision prone intersection and stretch of 3rd Street between Fairfax and Ogden. To be clear: congestion is not a CEQA impact, but a gross increase in cut through traffic on Colgate/Ogden is.

Not all motorists will use the Colgate/Ogden cut through and there will still be a huge increase in vehicle trips traveling north to TVC 2050 on Fairfax Avenue that need to cross 3rd St.

For drivers who continue north beyond Colgate, there is no right turn lane at Fairfax/3rd St. When they are forced to wait for throngs of pedestrians crossing crossing [sic] 3rd St. on eastbound side of intersection it can take a full signal phase for a single car to clear the intersection on a right turn. The City-approved doubling of the Town and Country project site's density on the S.E. corner will significantly increase both vehicle and pedestrian trips at that corner and the opening of the Metro at Wilshire will also significantly increase the pedestrian trips across 3rd St. When a right turning vehicle must begin their turn in the through lane, due to lack of a right turn lane, cannot make their turn, hundreds of northbound vehicles behind them are stalled.

We get that congestion itself is not a CEQA impact, but public safety is. When a new project dramatically increases the volume of vehicle trips on a roadway such that it paralyzes an intersection, the associated frustration, anger and carelessness of thousands of people wanting to get where they're going puts everyone at risk for collisions, both pedestrian v. vehicle and vehicle v. vehicle. The 3rd and Fairfax intersection is already on the high injury network and per LAPD Traffic data, there were 9 pedestrian v. vehicle collisions in barely 36 months in the vicinity of this intersection from 2019–2021.

Response to Comment No. 34-3

The non-CEQA analysis of cut-through trips included in the Transportation Assessment (Appendix M.1 of the Draft EIR) considered the residential streets south of 3rd Street, including Colgate Avenue and Ogden Drive and the Park La Brea streets. The Park La Brea internal streets did not meet the thresholds for cut-through analysis under the TAG because the Park La Brea internal streets are gated private streets, and, thus, there is no opportunity for cut-through effects as defined in the TAG. Ogden Drive and Colgate Avenue are primarily lined with institutional or retail commercial uses and would not be considered residential streets by the TAG. Refer to pages 167 through 178 of the Transportation Assessment and Topical Response No. 9, Neighborhood Traffic Management Plan.

Pedestrian safety and hazards are discussed in Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion. As discussed in detail therein, the design of each driveway would be reviewed and approved by LADOT as part of the design, regulatory permitting, and construction process, and safety issues, such as safe sight distance and pedestrian control across the signalized locations, would be confirmed in the detailed driveway design approval process. Refer to Response to

Comment No. 9-29 regarding the Project's less-than-significant impacts related to traffic hazards.

As a point of correction, the comment incorrectly identifies a 12-story parking structure off of The Grove Drive. As described on page 3 of the Transportation Assessment, the Conceptual Site Plan proposes a parking structure with eight levels above ground-level basecamp space in the southeast corner of the Project Site off The Grove Drive adjacent to the above-ground parking structure for The Grove. Nonetheless, as described on page II-30 of the Draft EIR, parking may be located anywhere within the Project Site and would be subject to height limitations designated in the Specific Plan. This comment also discusses several non-CEQA issues and issues that are not specific to the Project. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 34-4

Ridehailing Vehicle Trips and Greenhouse Gases (GHG)

The DEIR touts a mobility hub that will serve ride hailing drop off and pick up, but fails to consider, at all, the impacts on Greenhouse Gases (GHG) of the rail [sic] hailing component of vehicle trips related to the Project in addition to seriously undercounting the number of trips for an industry that does not follow a traditional "peak hour" paradigm.

Published studies from the City of San Francisco, Uber Lyft, and others, have been available for several years documenting that the explosion of ride hailing has significantly increased vehicle trips and GHG in both urban and suburban areas. LADOT and City Planning, and City Council officials continue to act as if these well documented impacts do not exist, and have rebuffed PLBIRG members' requests that our City study and consider the GHG impacts of projects that increase demand for ride hailing services.

The connection between ride hailing's growth and the increase in vehicle trips and GHG stems in part from "deadheading." Compared with a person using their own vehicle to visit TVC, the individual using ride hailing generates 2 trips for every trip generated by the person who drove their own car.

Response to Comment No. 34-4

The Draft EIR and the Transportation Assessment (included in Appendix M.1 of the Draft EIR) included ridesharing as one of many strategies included in the TDM Program for the Project. However, the Transportation Assessment did not reduce the number of trips to/from the Project beyond the base level that LADOT allows for any project located in the

Central Area Planning Commission (APC) area with similar transit accessibility. Thus, the Transportation Assessment estimate of Project vehicular trips added to the street system conservatively overestimates Project trips in the Draft EIR and in the transportation and GHG analyses presented therein; refer to Sections IV.E, Greenhouse Gas Emissions, and IV.K, Transportation, of the Draft EIR. Refer to Topical Response No. 11, Transportation Demand Management.

The Mobility Hub would provide off-street services for numerous types of travel choices, all of which will reduce the number of vehicular trips and VMT to/from the Project, even after the potential increases in vehicle trips associated with the rideshare industry. A summary of the potential net vehicular and VMT effects of the Mobility Hub may be found in Appendix FEIR-20 of this Final EIR. The overall effects of the Project TDM and the Mobility Hub activities has the potential to reduce vehicle trips to/from the Project Site by a net of approximately 3,400 trips per day and reduce overall Project VMT by over 23,500 VMT per day.

Clarification regarding VMT associated with the Mobility Hub is provided in the Mobility Hub Memo, included as Appendix FEIR-20 of this Final EIR. As discussed therein, the Mobility Hub would result in approximately 52 shuttle round trips (approximately 90 VMT per day based on an approximately 1.7-mile round trip) to the planned Metro D (Purple) Line Wilshire/Fairfax Station and would displace approximately 1,469 automobile trips (over approximately 9,800 VMT per day based on 6.7 VMT per capita as shown in Table IV.K-5 of the Draft EIR).

The comment's claim that every rideshare trip generates two trips for every trip generated by the person who drove their own car implies that every rideshare trip returns empty all the way to the original pickup location, thus doubling VMT, which is a gross overstatement of the number and length of rideshare trips. Most rideshare "deadhead" trips are very short, as the rideshare driver can pick up another rider nearby after dropping one off. This is especially true given the Project's location in an area with both high commercial and residential density providing many opportunities for a rideshare driver to quickly pick up a new fare and minimizing deadhead VMT.

Regardless, as discussed above, the VMT potentially generated by rideshare deadhead trips would be more than offset by the reduction in VMT from the other modes using the Mobility Hub. The number of rideshare trips expected to and from the Mobility Hub and the Project Site is very small compared to the overall trips estimated to be generated by the Project. Rideshare trips (including pick-ups and drop-offs by friends or family) are expected to generate approximately 596 net new daily trips to/from the Mobility Hub (refer to the Mobility Hub Memo in Appendix FEIR-20 of this Final EIR). However, the effects of the full TDM Program and the operation of the Mobility Hub have the potential to reduce vehicle trips to/from the Project Site by over 3,400 vehicle trips per day and total

VMT by over 23,500 VMT per day. Therefore, the net effect of these measures would substantially reduce VMT even accounting for a potential increase in VMT due to rideshare and pick-up/drop off activities.

The Draft EIR conservatively did not account for the reduction in criteria pollutant and GHG emissions associated with the Mobility Hub.

Comment No. 34-5

EXACERBATION OF PUBLIC HAZARD RELATED TO INADEQUATE PEDESTRIAN SAFETY INFRASTRUCTURE ON SOUTHERN PERIMETER

The DEIR indicates that Applicant proposes to improve and add to existing pedestrian infrastructure on Fairfax north of 3rd, as well as on Beverly and on Grove Drive, but fails to consider that crucial pedestrian routes to the Project include Fairfax between the Wilshire Metro station and 1st Street, and the segment of 3rd Street between Fairfax and Grove Drive. In terms of public access to TVC, 3rd St. is the Project's de facto southern perimeter.

Many, if not most, TVC-headed transit users riding the 3rd Street bus lines—which are among the most frequent service the City, so an appealing transportation option—may prefer to walk north on Fairfax or Grove Drive from 3rd St. to the TVC entrances, in lieu of waiting for a northbound Fairfax bus connection not as frequent. (Note: The DEIR cites the Fairfax 780 bus line which has been discontinued for some time.) These 3rd St. transit users will proceed to Television City by crossing 3rd at Fairfax and/or at Ogden, and/or at Grove Drive, and/or at Gilmore Lane if they have an access card to use the private “CBS” southern gate. To do that they must face intersections and a stretch of 3rd St. on the high injury network with a very high level of ped. v. vehicle collisions. In recent years (9 in 36 months).

We believe the Project-induced increases in pedestrian and vehicle trips necessitate study and implementation of Traffic Signal “Scrambles” at both the 3rd & Fairfax and 3rd & Ogden/Gilmore intersections to **provide a protected all-way pedestrian cycle that minimizes pedestrian and cyclist conflicts with vehicles**. Scrambles will also help to keep long queues of vehicles from being stalled and stressed out while a motorist in the lead position holds up an entire through lane waiting for a break in pedestrian traffic to turn right, helping to reduce the collision risks inherent in the increased vehicle and pedestrian trips.

Broken sidewalks discourage walking as a component of TVC trips originating from Metro station and other points south of 4th Street. Many TVC workers and visitors will want to walk, bike or scoot from the Wilshire Metro station up Fairfax all the way to TVC,

but they will face a stretch of Fairfax on its eastern side between 6th Street and 4th Street with extremely broken sidewalks, which could discourage them from doing so.

Response to Comment No. 34-5

Refer to Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 34-3 regarding hazards and pedestrian safety. As discussed in detail therein, the design of each driveway would be reviewed and approved by LADOT as part of the design, regulatory permitting, and construction process, and safety issues, such as safe sight distance and pedestrian control across the signalized locations, would be confirmed in the detailed driveway design approval process.

Given the lack of any significant impact, the suggestions offered by the commenter are not required by CEQA. Notwithstanding, the Project is improving the sidewalks and parkways along its north, east, and west borders to improve the walking quality and safety of any employees or visitors headed for the 3rd Street buses as described in the comment. Controlled crosswalks are available at 3rd Street traffic signals at The Grove Drive, Ogden Drive, and Fairfax Avenue to assist pedestrians accessing the buses on both sides of 3rd Street. Internal to The Original Farmers Market and The Grove, a private north/south sidewalk currently exists, which provides crosswalks across the South Alley and The Original Farmers Market Lane to create a controlled connection between the 3rd Street buses and the Project pedestrian gate on the southern property line for Project employees.

LADOT has previously investigated the feasibility of adding a scramble pedestrian system to the intersection of Fairfax Avenue and 3rd Street and found that the intersection did not meet the criteria for adding the scramble system at this location. Since the traffic volumes and the pedestrian volumes are much lower at the Ogden/Gilmore and 3rd Street intersection, it is highly unlikely that this intersection would meet the pedestrian scramble warrants either.

In terms of the condition of the sidewalk along Fairfax Avenue between 6th Street and 4th Street, this comment will be forwarded to City decision-makers for their information and consideration. The Project has committed to providing a free shuttle bus ride from the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction to the Project Site for its employees and visitors because the distance between the station and the Project is almost one mile, which is beyond the industry standard for acceptable walking distance for a daily walk trip from a transit stop.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 35-1

This firm represents Mayer Beverly Park Limited Partnership, an affiliate of Apartment Income REIT Corp. (“AIR Communities”), which owns and operates the Broadcast Center Apartments (“Broadcast Center”) located at 7660 Beverly Boulevard (the “BC Site”).

Broadcast Center has requested our assistance regarding the proposed TVC 2050 Project, as currently proposed by Television City Studios, LLC, which we understand is controlled by Hackman Capital Partners (“Hackman”), on an approximately 25-acre site located at 7716–7860 Beverly Boulevard (the “Project Site”) in the City of Los Angeles (the “City”). The Project Site and the existing television studio (the “Existing Television Studio”) located on the Project Site was previously known as “CBS Television City” or “CBS Television Studios.” Hackman apparently modified the name to “Television City” after it acquired the Project Site and Existing Television Studio in early 2019.

Response to Comment No. 35-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 35-2

The BC Site is located adjacent to the Project Site at both its western and southern boundaries. It also borders Beverly Boulevard to the north and The Grove Drive to the

east. Broadcast Center has approximately 500 residents. Affiliates of Broadcast Center also own Palazzo West and Palazzo East, which collectively house approximately 2,500 residents and are located a short distance from the Project Site to the east.

Response to Comment No. 35-2

This comment briefly discusses the location of Broadcast Center Apartments in relation to the Project Site. The comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Please note that Palazzo West apartments are located approximately 1,000 feet south of the Project Site and the Palazzo East apartments are located approximately 2,100 feet southeast of the Project Site.

Comment No. 35-3

As stated in the DEIR (as defined below), the proposed Project consists of the development of up to 1,626,180 square feet of new studio development, the retention of up to 247,820 square feet of existing studio facilities and the demolition of up to 495,860 of existing studio facilities. According to the DEIR, this would result in a maximum of 1,874,000 square feet of “soundstage, production support, production office, general office, and retail uses” on the Project Site, as well as related circulation improvements, parking and landscaping, notwithstanding that the DEIR states elsewhere that the proposed TVC 2050 Specific Plan (the “Specific Plan”) for the Project would allow a long list of other uses, including all of the permitted uses in the C2 zone.

Response to Comment No. 35-3

This comment providing a general overview of the Project is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Regarding permitted uses on the Project Site, note that the Project no longer allows all uses permitted in the C2 Zone (even though these uses are currently permitted). Refer to Topical Response No. 3, Permitted On-Site Uses. This clarification has been reflected in the Final EIR; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 35-4

The Project requires numerous discretionary approvals, but the central entitlement is the requested approval of the Specific Plan that would establish the zoning for the Project Site and largely override the applicable zoning standards and requirements in the Los Angeles Municipal Code (the “LAMC”) that would otherwise govern development of the Project Site.

Indeed, the first sentence in Section II (Project Description) of the DEIR states that “[t]he TVC 2050 Project... would establish the TVC 2050 Specific Plan.” (DEIR, p. II-1)

On July 14, 2022, the City, through its Department of City Planning (“DCP”), circulated a Draft Environmental Impact Report (the “DEIR”) for the Project, which includes hundreds of pages of text, as well as numerous technical appendices with additional environmental information regarding the Project. However, while the DEIR repeatedly references and purports to describe provisions in the proposed Specific Plan, and notwithstanding that those alleged provisions underpin much of the analysis in the DEIR, the Specific Plan apparently does not exist yet because the City did not release it to the public concurrently with its release of the DEIR itself and has still not released it as of today, September 13, 2022, the last day of the 60-day comment period for the DEIR.

Response to Comment No. 35-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 26-5 regarding the proposed Specific Plan, how all of the physical aspects of the proposed Specific Plan were disclosed and analyzed in the Draft EIR, and a draft Specific Plan was not required to be included as part of the Draft or Final EIR. Nevertheless, in response to comments on the Draft EIR, the Preliminary Draft Specific Plan has been made publicly available on the Department of City Planning’s website prior to the release of this Final EIR.

Lastly, refer to Response to Comment No. 11-3 regarding the Project’s use of a Specific Plan to regulate construction on-site consistent and compatible with the floor area, height, and other various requirements typically identified under the existing (Community Commercial, Limited Commercial, and Neighborhood Commercial) designations and the proposed future general plan land use designation of Regional Commercial.

Comment No. 35-5

Broadcast Center has significant concerns regarding the adequacy of the DEIR. As a threshold matter, the DEIR includes a nebulous and wholly unstable project description that provides no meaningful basis for environmental review. Instead of identifying critical project characteristics such as the specific location, size, massing, height, configuration and other technical features of the proposed buildings and uses, the production areas, the circulation system and parking, the environmental analysis is largely based on a “conceptual site plan” (the “DEIR Conceptual Plan”) that includes white boxes and several new onsite private streets that cover much of the Project Site, with no data or text at all. (DEIR, p. II-14 [Figure II-4]) The DEIR states that this conceptual site plan “illustrates one possible development scenario” and that actual development would **not** be governed by the conceptual site plan, but rather by the requirements of the Specific Plan, which the

public has never seen and may not exist yet. (*Id.* p. II-13, emphasis added) As the City must be aware, in *Stopthemillennium.com v. City of Los Angeles* (“*Millennium*”), 39 Cal. App. 5th 1 (2019), the Court of Appeal determined that an illustrative conceptual development scenario was neither a stable nor finite project description.

It is also apparent that virtually no subsequent review under the California Environmental Quality Act (“*CEQA*”) would be required for the actual buildings and related improvements proposed by Hackman following the adoption of the Specific Plan. In other words, the DEIR provides no meaningful information regarding the Project because the Specific Plan would allow virtually any type of development with a myriad of different uses at any location within the Project Site, but the actual development plans would be insulated from CEQA review.

Response to Comment No. 35-5

This comment is similar to those provided in Comment Letter Nos. 5, 9, and 26. Refer to Response to Comment Nos. 5-3, 5-5, 5-6, 5-15, 9-12, 9-13, and 26-11, as well as Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As explained in Response to Comment No. 5-3, 35-10, and Topical Response No. 1, a draft Specific Plan was not required to be part of the EIR and all of the physical aspects of the Preliminary Draft Specific Plan were fully disclosed and analyzed in the Draft EIR as demonstrated in Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR. In addition, as explained in Response to Comment Nos. 5-6 and 9-13 and Topical Response No. 3, Permitted On-Site Uses, consistent with the Project’s studio objectives, the permitted uses on-site will only include the five studio uses and associated ancillary uses, and these uses have all been addressed in the Draft EIR.

Refer to Response to Comment Nos. 5-5, 9-12, and 9-13 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Conceptual Site Plan and the procedures under the proposed Specific Plan. As discussed therein, all plans included in an EIR are inherently conceptual. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Refer to Response to Comment No. 9-13 and Topical Response No. 1 regarding how the Draft EIR comprehensively analyzes the environmental impacts of a defined project. As demonstrated in these responses, Section II, Project Description, of the Draft EIR is accurate, stable, and finite and fully complies with CEQA, and the Project is distinguishable from the *Millennium* case.

Comment No. 35-6

In addition, the DEIR appears to bootstrap from defined terms in the unseen Specific Plan that deviate significantly from corresponding defined terms in the LAMC in order to understate the Project's various environmental impacts. The definition of "floor area" in Section 12.03 of the LAMC includes all actively used space in a building (other than parking areas). However, according to the DEIR, the Specific Plan definition of floor area excludes all sorts of commercial activity within the proposed buildings, including "basecamp areas" and other production support and production activity areas. (DEIR, pp. II-2 [n. 1]; II-13 [Table II-2, note a]) Based on this artificially narrow and inaccurate definition of floor area, it appears that the DEIR omits two entire levels of commercial activity—an at-grade "production activity level" and a below-grade "production operations level" that would be used for production activity and provide space for basecamp activity and production staging. (*Id.*, pp. II-25–26) These two production levels, which are not even graphically illustrated on the nebulous DEIR Conceptual Plan, could cover the entire Project Site. Given that many of the environmental analyses are based on the floor area of the Project, the omission of these production levels necessarily results in a substantial understatement of environmental impacts.

Response to Comment No. 35-6

This comment is similar to those provided in Comment Letter Nos. 5, 9, and 26. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 regarding the basis for the definition of floor area, how the Draft EIR does not underestimate the size of the Project, how all of the proposed areas, uses and activities have been accounted for in the impact analyses in the EIR regardless of whether they are considered floor area, and how no active production activities would be located in the basecamp and parking areas below Project Grade. This is consistent with the Draft EIR description referenced in this comment regarding the multi-level circulation plan, which is discussed further in Response to Comment No. 35-23. Also refer to Figure II-4(e), Basecamp Areas Below Project Grade—Future Conditions, and Figure II-6(a), Lower Level Below Project Grade—Future Conditions, in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, for graphic depictions of the lower level below Project Grade.

Also refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. Please note that the Preliminary Draft Specific Plan includes the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR.

Comment No. 35-7

Broadcast Center has numerous additional concerns regarding the individual environmental analyses in the DEIR, many of which stem from the unstable and incomplete project description.

Response to Comment No. 35-7

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a discussion that demonstrates how Section II, Project Description, of the Draft EIR is accurate, stable, and finite and fully complies with CEQA.

Comment No. 35-8

The comments below reference and are supported by technical comments attached to this letter that were prepared by a variety of reputable consultants with significant expertise in their various fields. Attached as **Exhibit 1** is a technical comment letter prepared by Ramboll US Consulting ("Ramboll") with respect to the DEIR's analysis of air quality, greenhouse gas emissions, hydrology and water quality, noise, hazards and hazardous materials and land use (the "Ramboll Letter"). Attached as **Exhibit 2** is a technical comment letter prepared by Linscott, Law & Greenspan ("LLG") regarding the DEIR's transportation analysis (the "LLG Letter"). Attached as **Exhibit 3** is a technical comment letter prepared by Statistical Research, Inc. ("SRI") with respect to the DEIR's cultural resource, paleontological resource and tribal cultural resource analyses (the "SRI Letter").

Broadcast Center recognizes the importance of the entertainment industry in the City and the desire to expand production facilities. However, the development of additional studio facilities on the Project Site must be balanced with the impacts that the Project would have on existing residents and uses.

I.**SUMMARY**

Against that background, Broadcast Center has the following concerns with respect to the DEIR, each of which is discussed in detail below.

1. The DEIR's project description is inadequate.
2. The DEIR does not analyze the Project's maximum possible impacts.

3. The DEIR's reliance on an allegedly modified and artificial definition of "floor area" in the Specific Plan results in a substantial and unlawful understatement of the Project's environmental impacts.
4. The DEIR's analysis of the Project's air quality impacts is inadequate.
5. The DEIR's analysis of the Project's historical resource impacts is inadequate.
6. The DEIR's analysis of the Project's archaeological resource impacts is inadequate. inadequate. inadequate.
7. The DEIR's analysis of the Project's energy impacts is inadequate.
8. The DEIR's analysis of the Project's geology and soils impacts is
9. The DEIR's analysis of the Project's paleontological impacts is
10. The DEIR's analysis of the Project's greenhouse gas emissions impacts is inadequate.
11. The DEIR's analysis of the Project's hazards and hazardous materials impacts is inadequate.
12. The DEIR's analysis of the Project's hydrology and water quality impacts is inadequate.
13. The DEIR's analysis of the Project's land use and planning impacts is inadequate.
14. The DEIR's analysis of the Project's noise impacts is inadequate.
15. The DEIR's analysis of the Project's public services impacts is inadequate.
16. The DEIR's analysis of the Project's transportation impacts is inadequate.
17. The DEIR's analysis of the Project's tribal cultural resources impacts is inadequate.
18. The DEIR's analysis of the Project's utility and service systems impacts is inadequate.

19. The DEIR's analysis of alternatives is inadequate.

Response to Comment No. 35-8

This comment introduces technical exhibits and outlines the commenter's concerns about the Draft EIR. Refer to Response to Comment Nos. 35-10 through 35-168, below, regarding the issues raised in this comment.

Comment No. 35-9

II.

ANALYSIS

A. Overview of CEQA.

CEQA was enacted in response to the well-documented failure of state and local governmental agencies to consider fully the environmental implications of their actions. Selmi, *The Judicial Development of the California Environmental Quality Act*, 18 U.C.D. L. Rev. 197,202 (1984).¹ The California Supreme Court has repeatedly affirmed that CEQA must be interpreted liberally "to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." *Laurel Heights Improvement Assn. v. The Regents of the University of California* ("Laurel Heights"), 47 Cal. 3d 376, 390 (1988), quoting *Friends of Mammoth v. Board of Supervisors*, 8 Cal. 3d 247, 259 (1972).

Two of the central purposes of CEQA are to inform governmental decisionmakers and the public about the potential significant environmental effects of a proposed project and to identify ways that environmental damage can be avoided or significantly reduced. Guidelines §§ 15002(a) and (b).

The EIR is the heart of CEQA. Guidelines§ 15003(a). As noted by the California Supreme Court, the EIR:

is the primary means of achieving the Legislature's considered declaration that it is the policy of this state to "take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state." (§ 21001, subd. (a).)... Because the EIR must be certified or rejected by public officials, it is a document of accountability. If CEQA is scrupulously followed, the public will know the basis on which its responsible officials either approve or reject environmentally significant action, and the public, being duly informed, can respond accordingly to action with which it disagrees. The EIR process protects not only the environment but also informed self-government. *Laurel Heights*, 47 Cal. 3d at 392.²

An EIR must be “prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences.” Guidelines § 15151. “The EIR must contain facts and analysis, not just the bare conclusions of a public agency. An agency’s opinion concerning matters within its expertise is of obvious value, but the public and decision-makers, for whom the EIR is prepared, should also have before them the basis for that opinion so as to enable them to make an independent, reasoned judgment.” *Kings County Farm Bureau v. City of Hanford* (“*Kings County*”), 221 Cal. App. 3d 692, 736 (1990), quoting *Santiago County Water Dist. v. County of Orange*, 118 Cal. App. 3d 818, 831 (1981). The certification of an EIR constitutes a prejudicial abuse of discretion if the failure to include relevant information precludes informed decisionmaking and informed participation, thereby thwarting the statutory goals of the EIR process. *Kings County*, 221 Cal. App. 3d at 712.

- ¹ The Office of Planning and Research has promulgated guidelines to implement CEQA. 14 Cal. Code of Regs. §§ 15000 et seq. (the “Guidelines”).
- ² An EIR serves “to demonstrate to an apprehensive citizenry that the agency has in fact analyzed and considered the ecological implications of its action.” *No Oil, Inc. v. City of Los Angeles*, 13 Cal. 3d 68, 86 (1974). An EIR also allows the public to “determine the environmental and economic values of their elected and appointed officials, thus allowing for appropriate action on election day should a majority of the voters disagree.” *People v. County of Kern*, 39 Cal. App. 3d 830, 842 (1974). “The report... may be viewed as an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *County of Inyo v. Yorty*, 32 Cal. App. 3d 795, 810 (1973).

Response to Comment No. 35-9

This comment providing the commenter’s overview of CEQA is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 35-10

B. The DEIR’s Project Description Is Inadequate.

For the many reasons discussed below, the project description in the DEIR is inadequate and unlawful.

1. The Project Description.

As a threshold matter, the project description in Section II (Project Description) of the DEIR repeatedly references provisions in the Specific Plan, but the City did not release any such document for public review on or before the public comment period for the DEIR began on July 14, 2022, and still has not released any such document for public review. As discussed in more detail below, the project description repeatedly references provisions that purportedly will be in the Specific Plan, but often in general terms that leave the public

with little and sometimes no idea of what the Specific Plan actually would require and not require. This fundamentally impairs the public's ability to understand the nature of the Project and its environmental impacts.

Hackman filed an entitlement application for the Project with DCP on May 13, 2021 (the "Project Application"). The requested entitlements included the Specific Plan. The Project Application states that "the specific plan sets forth clear and cohesive set of principles and guidelines.... This language suggests that the Specific Plan existed on that date. If so, why was it not provided to the public concurrently with the release of the DEIR?

One of the attachments to the Project Application is a plan set with 18 sheets (the "Application Plans"). The second sheet is a "Conceptual Site Plan," but unlike the DEIR Conceptual Plan included in Section II of the DEIR, this conceptual plan includes a description of each of the illustrative buildings (e.g., stage, office, production support) and graphically illustrates the large parking structure in the southeastern corner of the Project Site. In addition, the Application Plans include floor plans for Project Grade Level, Levels 2–4, Level 5 and Level B1, as well as Site Elevations from The Grove Drive (east), Beverly Boulevard (north), Fairfax Avenue (west) and the southern alley (south).

The DEIR Conceptual Plan does not include any of those details. It consists of approximately 21 white boxes with no data or text that explains anything about any of them. Moreover, the DEIR Conceptual Plan entirely omits the potential "production levels" described in the DEIR (DEIR, pp. II-25–26), which include an at-grade "production activity level" and a below-grade "production operations level" that would be used for production activity and provide space for basecamp activities, production staging and loading. This omission is striking because, while, as discussed below, the DEIR Conceptual Plan is "illustrative," the DEIR firmly states that the Project will include the two production levels. And yet, the DEIR provides no graphic illustration or information regarding the location of these two levels, which could theoretically cover the entire Project Site.

And that graphic information apparently already exists. For example, looking beyond the four corners of the DEIR (which the reader should not be required to do), the Application Plans includes a sheet for "Floor Plan—Level B1," which appears to be the below-grade "production operations level." That sheet specifies multiple "production basecamp" and "production support" areas. That sheet, however, was omitted from the DEIR, even for "illustrative" purposes.

Response to Comment No. 35-10

Refer to Response to Comment No. 35-5. As discussed therein, and explained in Response to Comment No. 5-3 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, a draft Specific Plan was not required to be part of the EIR,

and all of the physical aspects of the proposed Specific Plan were fully disclosed and analyzed in the Draft EIR. Refer to Response to Comment Nos. 5-5, 9-12, and 9-13 and Topical Response No. 1 regarding the Conceptual Site Plan. As discussed therein, the Conceptual Site Plan that was analyzed in the Draft EIR was based on the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning's website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project's entitlement case number, *CPC-2021-4089-AD-GPA-ZC-SN-SP*. Refer to Response to Comment No. 35-6 regarding how all of the proposed areas, uses, and activities have been accounted for in the environmental analyses throughout the EIR. Also refer to Figure II-6(a) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, for a graphic that shows the lower level below Project Grade, which is consistent with the application plans.

Contrary to this comment, Section II, Project Description, of the Draft EIR is not inadequate or unlawful. Rather, the Project Description has been completed in full compliance with CEQA.

Comment No. 35-11

Furthermore, hundreds of pages after the nebulous DEIR Conceptual Plan in Figure II-4, Alternative 5 (Above-Grade Parking Alternative) in the DEIR's alternatives sheds some light on Hackman's actual development plan. Alternative 5 "include[s] the same proposed development program and layout as shown in Figure V-6 on page V-128, except that all of the Project's subterranean parking would be moved above ground." (DEIR, p. V-127) Figure V-6, however, is not limited to a bunch of white boxes, but instead includes detailed information regarding specific buildings and parking structures, including the use, height and number of stories in each building and the location of parking areas and structures. (*Id.*, p. V-128) This includes a 140-foot-tall building adjacent to the western boundary of the BC Site.³ Why was all of this information omitted from the DEIR Conceptual Plan? Why is the reader forced to sift through hundreds of pages of text (and thousands of pages of technical appendices to the DEIR, as well as the Project Application) to find details of what appears to be Hackman's very specific conceptual plan? Does Figure V-6 actually show the details of the DEIR Conceptual Plan, albeit in the alternatives analysis? In short, what is going on here?

Moreover, during the DEIR comment period, Hackman also presented far more detailed information regarding its "conceptual" project to the City, in stark contrast to the absence of meaningful information in the DEIR Conceptual Plan. At the Cultural Heritage Commission meeting on August 18, 2022, Hackman made its second "informational presentation" to the Commission (see Item 5 in the meeting agenda attached as **Exhibit 4**). Hackman and its team presented a PowerPoint (attached as **Exhibit 5**) that included a slide titled "Project Evolution—Original Proposal Pre-Application Submittal (January 2021)." The next slide is

titled “Project Evolution- Revised Proposal/Application Submittal (March 2021)” and shows a simulation of development that would occur around the Primary Studio Complex (the two original, attached historic buildings on the Project Site, as discussed further below), as viewed from Beverly Boulevard.

The PowerPoint then presents a series of six slides with simulations of all or portions of the Project as envisioned by Hackman. The first one, titled “Project Evolution—Current Proposal/Draft EIR Proposal (July 2022)” is the same view from Beverly Boulevard that shows the intended development around the Primary Studio Complex. The next slide, however, which is titled “Illustrative Concept of HCM Viewshed,” is a very detailed simulation of the **entire** Project, apparently as contemplated in the nebulous DEIR Conceptual Plan. More detailed simulations follow with regard to specific development areas.

All of this more detailed information in the Project Application, the Alternative 5 Conceptual Site Plan and the multiple simulations shown to the Cultural Heritage Commission individually and collectively reflect that, notwithstanding the lack of concrete project details in the DEIR’s project description and virtually all of the impact analyses, Hackman and its architect have a very specific project in mind. And, while the preparers of the PowerPoint simulation slides threw in the word “illustrative” in many (although not all) of their titles, Hackman’s team clearly presented this as the project it intends to build and as an “evolution” from its prior proposals.

³ The same is apparently true for Alternative 3, which reduces the Project’s density by 20%. (*Id.*, p. V-62) Like the Conceptual Site Plan for Alternative 5, the Conceptual Site Plan for Alternative 3 appears to be a more detailed version of the DEIR Conceptual Plan, but with 20% reductions in the sizes of the various buildings and parking structures. (*Id.*, p. V-62 [Figure V-4])

Response to Comment No. 35-11

Refer to Response to Comment Nos. 5-3, 5-5, 9-12, 9-13 and 9-15 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Conceptual Site Plan and proposed development program, the level of detail required in an EIR for a specific plan project, how Section II, Project Description, of the Draft EIR complies with CEQA and includes sufficient information to evaluate the environmental impacts of the Project, and the required discretionary process (which includes subsequent CEQA compliance review) for future changes that are substantially different than the Project that was analyzed in the EIR.

Refer to Topical Response No. 16, Project Alternatives Analysis, and Response to Comment Nos. 26-18, 26-180, 26-182, 35-164, 35-165 and 35-166 regarding the alternatives, including Alternatives 3 and 5. The graphics included in Section V, Alternatives, of the Draft EIR are provided so that the reader can visually understand the

physical differences between the Project and the alternatives. Contrary to the comment, these graphics do not include specific building details. Note that in addition to the Conceptual Site Plan, Section II, Project Description, of the Draft EIR also includes a height zone map with frontage areas and stepbacks, an open space and landscape plan, plans showing vehicular and pedestrian access, and a plan of the Mobility Hub. Furthermore, Sections IV.H, Land Use and Planning, and IV.K, Transportation, of the Draft EIR also include graphics depicting the public realm improvements and a site access map that incorporates the Conceptual Site Plan that notes the use of each of the buildings. Also note that the City's environmental review process is separate from any community outreach activities conducted by the Applicant. As discussed in Response to Comment No. 26-12, the Cultural Heritage Commission presentation was an informational presentation to explain the Project and the Project parameters that were adopted and disclosed in the Draft EIR to ensure that impacts to the historic Primary Studio Complex would be less than significant; the figures shown therein are consistent with the Draft EIR and Conceptual Site Plan. The Conceptual Site Plan reflects the application materials submitted by the Applicant to the City, and the Conceptual Site Plan along with the many other graphics and text within the Draft EIR convey the physical details of the Project to support the analyses required by CEQA.

Comment No. 35-12

The DEIR Conceptual Plan also includes two new private streets, one of which would be adjacent to the southerly boundary of the BC Site and the second of which would be adjacent to the western boundary of the BC Site. (DEIR, p. II-14 [Figure II-4]) However, as discussed further below, these new private streets could be located anywhere within the Project Site.

Response to Comment No. 35-12

The comment describes elements of the Conceptual Site Plan but provides no specific commentary. Please note that the Project does not include "new private streets" but rather internal circulation paths, as shown in the Conceptual Site Plan.

Comment No. 35-13

The DEIR project description explains that "[t]he specific mix of uses ultimately constructed will depend upon market demands, and the Specific Plan would allow flexibility in locating the various uses within the Project Site." As a result, the DEIR Conceptual Plan **"illustrates one possible development scenario that could be developed in conformance with the proposed Specific Plan,"** but "actual development would be governed by the requirements of the proposed Specific Plan and **not** the [DEIR Conceptual Plan], which is intended to provide an illustrative depiction of future Project Site development." (*Id.*, p. II-13, emphasis added) Therefore, the DEIR Conceptual Plan is

simply one “scenario” among unlimited scenarios that might result from the adoption of the Specific Plan.

Response to Comment No. 35-13

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-5, 9-12, and 9-13 regarding the Conceptual Site Plan, the required discretionary process (which includes subsequent CEQA compliance review) for future changes that are substantially different than the Project analyzed in the EIR, and how all of the physical aspects of the proposed Specific Plan, including the proposed land uses, are consistent with the Draft EIR.

Comment No. 35-14

According to the project description, the Specific Plan would only regulate development on the Project Site in two primary ways. First, as shown on Table II-2, the “proposed development program” (the “DEIR Conceptual Program”) could include up to 1,626,180 square feet of new development, including sound stages (295,820 square feet), production support (80,890 square feet), production office (635,400 square feet), general office (594,090 square feet) and retail uses (20,000 square feet). Note c in Table II-2 states that “an estimated 6,608 square feet of existing production office space would not be demolished but may be converted to basecamp/parking uses, while Noted states that an estimated 38,068 square feet of existing general office space would not be demolished but may be converted to basecamp/parking uses.” (*Id.*) Relatedly, precisely 772,000 cubic yards of excavated dirt would have to be hauled from the Project Site and the import of 50,000 cubic yards of fill may be required.⁴ (*Id.*, pp. II-1, II-15)

These very precise numbers reflect that Hackman has developed a specific development project for the Project Site. Nonetheless, the DEIR makes no reference to it and it is impossible to discern even if that specific development project is consistent with the illustrative DEIR Conceptual Plan. The precise numbers in Table II-2 may be generally consistent with the Application Plans, but the DEIR does not reveal that either.

In any event, the stated floor areas for the proposed new construction are not fixed either. As stated in Note b in Table II-2, “[t]he proposed new construction floor area amounts listed in this table **represent one possible development scenario** that could be developed in conformance with the proposed Specific Plan.^[5] Actual development would be governed by the requirements of the proposed Specific Plan.” (*Id.*, emphasis added) Moreover, the stated floor areas requirements can be substantially increased and/or decreased pursuant to “land use exchanges” between the various uses that would be permitted in the Specific Plan. (*Id.*, pp. II-16–17) As one example, the total permitted “production support floor

area” can be increased from 104,000 square feet to 1,626,180 square feet. (*Id.*, pp. II-16, II-13 [Table II-2])

- ⁴ Parenthetically, the DEIR does not appear to explain why 50,000 cubic yards of imported fill may be required when a much larger volume of dirt (772,000 cubic yards) has to be exported.
- ⁵ It seems apparent that the DEIR Conceptual Plan and DEIR Conceptual Program are linked, so that the floor area amounts in the DEIR Conceptual Program correspond to the white boxes shown on the DEIR Conceptual Plan. Even this is uncertain, however, because the DEIR does not appear to acknowledge it.

Response to Comment No. 35-14

Refer to Response to Comment Nos. 35-5, 35-10, and 35-11 regarding the Specific Plan and Project Description.

Refer to Response to Comment No. 26-5 regarding the development regulations under the proposed Specific Plan. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 26-6 regarding the purpose and function of a specific plan and the differences between a specific plan project and an individual building project. The massing and locations of the proposed buildings are depicted on the Conceptual Site Plan included as Figure II-4 on page II-14 of the Draft EIR and are consistent with the architectural plans on file with the City. Project plans are part of the administrative record and are available on the Department of City Planning’s website, <https://planning.lacity.org/pdiscaseinfo/>, by searching the Project’s entitlement case number, *CPC-2021-4089-AD-GPA-ZC-SN-SP*. Refer to Topical Response No. 1 regarding the Land Use Exchange Program and the maximum limitation of 450,000 square feet of production support. As discussed in Topical Response No. 1, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

With regard to the calculations of import and export, the earthwork evaluation is based on the maximum potential grading for the proposed development program. The volume of cut is mostly due to export of soil associated with the underground building levels. The volume of fill is associated with potential for the final site elevations to be higher than the existing site elevations, and the volume of fill assumed in the Draft EIR is a conservative estimate. Even in projects where the volume of cut is much larger than the volume of fill, it is typical for fill material to be accounted for in the unforeseen case the cut material is unsuitable for development. See Figure 3 of the Soil Management Plan (included in Appendix G.1 of the Draft EIR). Also refer to Appendix FEIR-8, Details of Project Buildout and Construction.

Comment No. 35-15

The DEIR Conceptual Program permits (1) the demolition of up to 495,860 square feet of existing uses and (2) the retention of up to 247,820 square feet of existing uses. (DEIR, pp. II-12–13, II-1) These maximum square footages, however, are nonsensical and misleading. The total of these two amounts is 743,680 square feet, which the EIR claims is the floor area of the existing buildings. Therefore, in this zero sum game, Hackman could not demolish fewer than 495,860 square feet of existing improvements because that would cause the retained floor area to exceed 247,820 square feet of existing improvements. Conversely, Hackman could not retain less than 247,820 square feet of existing improvements because that would cause the demolished floor area to exceed 495,860 square feet. In other words, Hackman actually proposes to demolish precisely 495,860 square feet of existing improvements and retain 247,820 square feet of existing improvements. This further indicates that, contrary to the amorphous project description in the DEIR, Hackman has a very specific project in mind that is not described in Section II of the DEIR.

Response to Comment No. 35-15

Refer to Response to Comment No. 35-14 regarding the proposed development program. Note that the numbers presented in Table II-2 that are cited in the comment reflect the Conceptual Site Plan.

Comment No. 35-16

The Specific Plan would also establish six Height Zones (A-F) that would limit the height of buildings from 58 to 225 feet above a defined “Project Grade” of 201 feet above mean sea level (“AMSL”).⁶ (*Id.*, pp. II-17-19) The DEIR emphasizes the nebulous nature of these height zones, stating that they “do not represent the actual development footprint of Project buildings.” (*Id.*, p. II-20)

We note that the portion of the Project Site adjacent to the western boundary of the BC Site is in Height Zone C, which permits a maximum height of 160 feet over 40% of that height zone area (*id.*, pp. II-18-19), with a 30-foot setback (which the DEIR confusingly describes as a “frontage” area) from the eastern boundary of the Project Site. (*Id.*, p. II-20) As a result, one or more 160-foot-high buildings could be constructed along the entire eastern boundary of the Project Site, 37 feet from the Broadcast Center building, which is approximately seven feet from the western property line of the BC Site. Moreover, the 30-foot frontage area could be occupied by the new four-lane private street shown on the DEIR Conceptual Plan⁷, which Hackman has advised Broadcast Center would include substantial truck traffic entering and exiting the Project Site.⁸ As discussed below, the environmental analyses in the DEIR do not account for this potential scenario (in particular

with respect to the Project's air quality and noise impacts), which Broadcast Center considers part of a worst-case scenario with respect to its property.

The DEIR project description also claims that the height zones and related frontage areas and stepbacks “would guide future development in a manner that concentrates building mass and height toward the center of the Project Site.” (*Id.*, p. II-20) That is wildly untrue. The height zones restrict new construction in proximity to, and on top of, the two original, existing and attached buildings on the Project Site—the Service Building and the Studio Building—which are located in the middle of the Project Site and which the DEIR collectively defines as the “Primary Studio Complex” and is a designated City Historic-Cultural Monument (“HCM”). Height Zone A, which is a “Viewshed Restoration Area” directly north of the Primary Studio Complex, limits building height to 58 feet directly north of the Primary Studio Complex. In addition, Height Zones E and F prohibit or substantially limit new construction over the Primary Studio Complex.

- ⁶ The DEIR engages in sleight-of-hand here that will surely mislead most readers. It acknowledges that the elevation of the Project Site slopes downward from northeast to southwest, from 201 feet to 185 feet AMSL (*id.*, p. 11-9), but sets the “Project Grade” at 201 feet AMSL for the entire Project Site (*id.*, p. 11-17 [n. 8]). So, for example, Height Zone C includes the southwestern portion of the Project Site and permits a maximum building height of 160 feet above the arbitrary Project Grade of 201 feet AMSL. However, since the actual elevation in the southwestern portion of the Project Site is only 185 feet AMSL (16 feet lower than the arbitrary Project Grade), the maximum building height at that location is actually 176 feet above ground level (160 + 16).
- ⁷ While the DEIR Conceptual Plan omits the width of this “illustrative” street, another graphic in Section IV.K (Transportation) of the DEIR indicates that it is 30 feet in width, the precise depth of the frontage area (*id.*, p. IV.K-43 [Figure IV.K-3]), so that, in the “illustrative” DEIR Conceptual Plan, there would be no real buffer at all between the project buildings and the BC Site, but rather a use that would generate its own substantial impacts.
- ⁸ However, the placement of this private street within the 30-foot frontage area contradicts the DEIR text, which states that “features such as sidewalks, landscaping, security kiosk, fences, walls, projections, stairs, balconies, and parking would be permitted” in the frontage areas. (*Id.*, p. IT-20) If Hackman wishes to include streets within frontage areas, why does the DEIR list omit that feature? Furthermore, if, as the DER states, frontage areas “would function as buffers and transitional space around the Project Site perimeter,” how does a four-lane private street designed to accommodate truck traffic qualify as a “buffer” for Broadcast Center?

Response to Comment No. 35-16

Refer to Response to Comment Nos. 9-16, 11-3, and 26-7 regarding the height zones, building height, and Project Grade. Also refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, a specific plan is a regulatory land use ordinance that establishes zoning regulations, such as maximum height limits. Notably, the existing zoning for the Project Site permits unlimited height. Nevertheless, the proposed Specific Plan would impose height limits across the entire Project Site. Further, the proposed height limits in each of the height zones have been consistent throughout the life of the Project; the height limits described in the Draft EIR are

the same as those included in the Project's application submittal in March 2021, the Initial Study (Appendix A of the Draft EIR; see pages 17 to 19), and the Preliminary Draft Specific Plan. Also refer to Response to Comment Nos. 11-3 and 26-19 regarding how the Project meets its objective to concentrate building mass and height towards the center of the Project Site while still preserving the integrity of the HCM.

Regarding the frontage areas, refer to Response to Comment Nos. 16-56, 26-7, and 26-8. There is currently no setback requirement along the Shared Eastern Property Line. As discussed on page II-21 in Section II, Project Description, of the Draft EIR, the Project is imposing a 30-foot frontage area requirement along the Shared Eastern Property Line. Contrary to this comment, the frontage area would not be occupied by a "new four lane private street." Rather, as shown in the Conceptual Site Plan provided in Figure II-4 and the Vehicle Access Plan provided in Figure IV.K-3 of the Draft EIR, the 30-foot frontage area along the eastern boundary of the Project Site adjacent to the Broadcast Center Apartment building includes an internal circulation path and a landscaped area. Refer to Response to Comment No. 26-26 regarding how operation of the Project, including on-site vehicles, would not result in significant air quality impacts to the Broadcast Center Apartments. In addition, refer to Response to Comment No. 26-135 regarding how operation of the Project would not result in significant noise impacts at the Broadcast Center Apartments.

Comment No. 35-17

Project Design Feature CUL-PDF-1 includes several additional restrictions on development in proximity to the Primary Studio Complex. First, new buildings cannot be located immediately north of the complex. Second, any new occupiable structure immediately east of the Service Building that exceeds the height of the Service Building must be set back southerly from the north façade of the Service Building by a minimum of 60 feet and separated from the east façade of the Service Building by a minimum of 15 feet. Third, any new occupiable structure immediately west of the Studio Building that exceeds the height of the Service Building must be set back southerly from the north façade of the Service Building by a minimum of 150 feet and separated from the west façade of the Studio Building by a minimum of 10 feet.⁹

While the DEIR Conceptual Plan vaguely reflects one of an infinite number of development options, it appears to reflect the restrictions discussed in the preceding paragraphs because it shows the most significant open-space areas in the central portion of the Project Site, with new development pushed toward and to the perimeter of the Project Site, including significant development immediately adjacent to Broadcast Center. Slide 19 in Hackman's August 18 presentation to the Cultural Heritage Commission (see **Exhibit 5**) clearly reflects that the new development has been concentrated away from the center of the Project Site and toward its boundaries, including multiple buildings adjacent to the BC

Site. The DEIR's false claim to the contrary further erodes its value as an informational document.

- ⁹ While the second and third restrictions limit in some way development in the central portion of the Project Site, they are incomprehensible as written. For example, a new building could not be set back southerly from the north façade of the Service Building by a minimum of 60 feet because the Service Building itself is located to the south of its north façade. This promotes yet further uncertainty as to what can be built where on the Project Site.

Response to Comment No. 35-17

The Conceptual Site Plan that was analyzed in the Draft EIR conforms with all the Project Parameters included in Project Design Feature CUL-PDF-1. This comment incorrectly states that a new building could not be set back southerly from the north façade of the Service Building by a minimum of 60 feet (which is a required Project Parameter for any new construction immediately east of the Service Building); refer to Figure II-10 on page II-957 associated with Response to Comment No. 26-E.2-3, above, which shows how the Conceptual Site Plan analyzed in the Draft EIR complies with the Project Parameters.

As discussed in Response to Comment Nos. 11-3, 26-19, and 35-16, the Project would meet the Project objective to concentrate building mass and height toward the center of the Project Site while also preserving the integrity of the HCM. The tallest buildings would be located in Height Zone D, which is located in the center of the Project Site south of the HCM. Further, a 30-foot frontage would be required along the Shared Eastern Property Line, and, therefore, new buildings would be substantially set back from Broadcast Center Apartments. Please note that Slide 19 in the presentation referenced in this comment includes a rendering of the Conceptual Site Plan that was analyzed in the Draft EIR.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Conceptual Site Plan and Project. The draft Specific Plan is not necessary for evaluation of the Project. Please note that the proposed Specific Plan includes the same elements that could result in a physical impact on the environment that were fully disclosed and analyzed in the Draft EIR. Refer to Appendix FEIR-2, Comparison Chart of the Draft EIR and the Preliminary Draft Specific Plan, of this Final EIR. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

Comment No. 35-18

The project description also lacks a fixed construction period. The DEIR states that “buildout under the Specific Plan could take place in one phase over a 32-month period or could occur in phases over multiple years. Accordingly, the applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043.”¹⁰ (DEIR, p. II-12; see *also* p. II-33) Therefore, the construction period could be anywhere between approximately three years and 20 years, an enormous range of time. Moreover, the DEIR presents no information regarding potential project phasing.

¹⁰ The DEIR engenders yet more uncertainty by stating in conflicting fashion elsewhere in the DEIR that “Project buildout is anticipated by 2026,” but “the Project Applicant is seeking a Development Agreement with a term of 20 years, which could extend the full buildout year to approximately 2043.” (DEIR, p. V-4, n. 3; see *also* p. IV.K-42) Is buildout anticipated by 2026 or, as the project description states, could it really occur anytime between 2026 and 2043? If project buildout is anticipated by 2026, why does Hackman need a 20-year development agreement? Moreover, to state that the requested development agreement could extend buildout to 2043 flips cause and effect. Hackman desires the vesting that comes with a development agreement so that it can develop the Project over a period of more than 20 years, not the other way around.

Response to Comment No. 35-18

Refer to Response to Comment Nos. 9-24 and 28-7 regarding the timeframe for the Project, the Development Agreement, and how a long-term buildout has been adequately addressed in the impact analyses throughout the Draft EIR.

Comment No. 35-19

In addition, the project description includes contradictory information regarding the permitted uses on the Project Site. As previously discussed, the DEIR Conceptual Program in Table II-2 includes just five uses—sound stages, production support, production office, general office and retail. Elsewhere in the project description, however, the DEIR states that the Specific Plan will allow numerous other uses, including, for example, motion picture studios¹¹, museum exhibits and theaters, child care and educational facilities, fitness facilities, mills/manufacturing, sleeping quarters, recreational facilities, restaurants and special event areas. (*Id.*, pp. II-15-16) The DEIR further provides that the Specific Plan will allow “all other permitted uses in the C2 zone unless expressly prohibited in the Specific Plan.” (*Id.*, p. II-16) Permitted uses in the C2 zone include, for example, auditoriums with a seating capacity of up to 3,000 people, billiard and pool halls, baseball or football stadiums or boxing arenas with seating capacity of up to 3,000 people, churches, circuses or amusement enterprises, medical or dental clinics and laboratories, hospitals, sanitarium or clinics, etc.

The DEIR does not explain which of these and the numerous other permitted uses in the C2 zone will be prohibited in the Specific Plan, and instead cryptically states that “[t]he specific mix of uses ultimately constructed will depend on market demands, and the Specific Plan would allow flexibility in locating the various uses within the Project Site.” (*Id.*, pp. II-13, IV.K-42) Moreover, the public cannot review the Specific Plan to find this information because it remains unavailable to the public.

For all of these reasons, the public really has no idea of what uses would actually occur on the Project Site following the adoption of the Specific Plan.

- ¹¹ The DEIR distinguishes motion picture studios from television studios. Would a motion picture studio have greater impacts than the television studio that is analyzed in the DEIR? In particular, would outdoor production activities for motion pictures generate more significant noise impacts on Broadcast Center and other nearby sensitive receptors than a television studio?

Response to Comment No. 35-19

Refer to Topical Response No. 3, Permitted On-Site Uses, and Response to Comment No. 5-6 regarding the permitted uses on-site that are proposed to support the continued operation of the Project Site as a studio. Refer also to Section III, Revisions, Clarifications, and Corrections to the Draft EIR, for clarifications to Section II, Project Description, of the Draft EIR related to the permitted uses on-site, which specifically remove references to all C2 zone uses (even though these uses are currently permitted).

With respect to the comment regarding distinguishing “motion picture studios” from “television studios,” the Draft EIR evaluated outdoor production activities associated with various types of studio uses, including motion picture, television, and broadcast studio uses that currently occur within the Project Site and would continue to be permitted in the future, with the most impactful land use category analyzed as appropriate. Refer to the Maximum Impact Scenarios included as Appendix FEIR-3 of this Final EIR. Also refer to Response to Comment No. 26-146 regarding the noise analysis conducted for outdoor production activities.

This comment incorrectly claims that the sentence in the Draft EIR regarding the mix of uses and market demands concerns other uses that would be permitted. Rather, as discussed in Response to Comment Nos. 9-13 and 26-16, the mix of uses refers to the five studio uses, and the exact size and timing of construction of such uses would be based on market demands.

Comment No. 35-20

With respect to design and architecture, the DEIR references “design standards” and “design requirements” in the Specific Plan, but it does not state them, except that new

development “would embrace the mid-century modern legacy established by Pereira & Luckman and be compatible with the architectural elements of the HCM.” (*Id.*, p. II-17) The reader, however, has no idea of the substance of those design standards and design requirements without the Specific Plan in hand to review. Similarly, the “Other Design Elements” section of the DEIR states that the Specific Plan would also include “design regulations that address screening of rooftop equipment and outdoor storage areas, fencing, parking structures and Project Site access points,” but only provides a few examples of those proposed regulations, resulting in yet more uncertainty, on top of not knowing the location, appearance, configuration and massing of any potential project building. (*Id.*, p. II-22)

Response to Comment No. 35-20

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 35-5. As discussed therein, the Draft EIR disclosed all of the elements of the Project required by CEQA. As discussed in Response to Comment No. 9-17, the design standards and more detailed design information are not necessary for the CEQA environmental analysis of the Project.

Comment No. 35-21

The project description also includes a Conceptual Open Space and Landscape Plan in Figure II-6. (*Id.*, p. II-24) The preparers of the DEIR were less careful here, so the DEIR does not expressly state that this plan “illustrates one possible open space and landscape scenario,” but the inclusion of the word “Conceptual” in the name of the plan presumably means that. Therefore, the reader has no idea where the actual open space and landscaped areas would be developed on the Project Site as part of the Project. The DEIR includes rosy, generic language that “landscaping and open space elements would be used to unify the various building types, programs and activities on the Project Site through cohesive plant palette,” and “planting zones and associated pallets would be established to define streetscape areas, gateways and major Project site Entrances, production areas, bungalows, and rooftop terraces,” but includes no information or illustration as to what any of that would look like. (*Id.*, p. II-23) In particular, the Conceptual Open Space and Landscape Plan may include a very thin band of landscaping adjacent to the western boundary of the BC Site (it is very hard to tell and does not match up with any of the “Keys” [G1–G7]), but otherwise no landscaping at all is even conceptually required along the multiple boundary lines shared by the Project Site and the BC Site.¹²

¹² As is the case for so many aspects of the Project, the Application Plans includes detailed conceptual landscaping information that is absent in the DEIR. For example, the Application Plans include an “Illustrative Tree Plan” that shows the potential location of 19 types of trees, “Illustrative Planting Zones” and a detailed “Illustrative Planning Palette.” While Hackman would not be bound by any of those “illustrative” plan sheets, why would this information be omitted from the DEIR when it already existed

and was linked to the Conceptual Open Space and Landscape Plan that appears in both Figure II-6 in the DEIR and as a plan sheet in the Application Plans?

Response to Comment No. 35-21

Both the Conceptual Site Plan provided in Figure II-4 and the Conceptual Open Space and Landscape Plan provided in Figure II-6 of the Draft EIR are consistent and based on the application materials submitted to the City by the Applicant. The Project would include implementation of open space and landscaped areas consistent with these figures. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a discussion of how the Draft EIR disclosed and analyzed all of the elements of the Project required by CEQA. Refer to Response to Comment Nos. 16-47 and 26-E.1-11 regarding how the Project is consistent with applicable plans and policies related to open space. Precise landscape plans are details that are not currently available and are not required to be included as part of an EIR for a specific plan project.

Comment No. 35-22

The DEIR project description also states that “some” of the project buildings may include rooftop terraces or decks it would serve as outdoor gathering spaces, and that this use would be permitted from 7 A.M. to 12 A.M. (*Id.*, p. II-23) However, the DEIR provides no clue as to the actual locations of these rooftop areas and they could potentially be at the top of every new building, including buildings constructed as little as 30 feet away from Broadcast Center.

Response to Comment No. 35-22

Refer to Response to Comment No. 26-135 regarding the outdoor gathering noise analysis.

Comment No. 35-23

The project description further claims that vehicular and pedestrian access “would” be provided as shown in Figures II-7 and II-8. (*Id.*, pp. II-26–28) However, the names for Figures II-7 and II-8 are “**Illustrative** Vehicular Site Access” and “**Illustrative** Pedestrian Site Access.” It therefore appears that vehicular and pedestrian access points could be located anywhere on the Project Site, so that the public has no idea how the Project’s access and internal traffic circulation would actually work, and would not have any idea until Hackman seeks building permits for specific development projects after the adoption of the Specific Plan. At that point, however, no CEQA review would be required with respect to the ministerial approval of building permits.

As previously discussed, the DEIR relatedly states that the Project “would incorporate a multi-level circulation plan” which includes two primary production levels—the at-grade production activity level and the below-grade product operations level—that “would provide access, staging, storage, and conductivity between active production and supporting uses.” (*id.*, pp. II-25–26) However, the DEIR provides no concrete information as to where these production levels, each of which could potentially cover the entire Project Site, would be located or how they would actually “connect” to the rest of the Project. Even the “illustrative” vehicular site access graphic in Figure II-7 and the DEIR Conceptual Plan in Figure II-4 entirely omits the two production levels.

Response to Comment No. 35-23

The proposed vehicular and pedestrian access points are shown in the Conceptual Site Plan (Figure II-4), as well as in Figures II-7 and II-8 in Section II, Project Description, of the Draft EIR. Refer to Response to Comment No. 16-11 regarding the Project’s multi-level circulation plan, which is discussed on pages IV.K-42 to IV.K-44 in Section IV.K, Transportation, of the Draft EIR. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. Please note that any plan, including the vehicular and pedestrian access plans shown in the Conceptual Site Plan, included in an EIR or other CEQA document is inherently conceptual, and plans would be finalized during the building permit process, which occurs after a project is approved and its EIR certified. As discussed in Topical Response No. 1, the Draft EIR fulfilled CEQA’s informational purpose by disclosing all the elements of the Project required by CEQA and providing a comprehensive analysis of the Project.

The intent of the internal access and circulation system is to allow a vehicle or pedestrian to enter the Project Site from any of the Project driveways or security gates and be able to travel to any destination or parking area within the Project Site. Figure 2B on page 13 of the Transportation Assessment (Appendix M.1 of the Draft EIR) shows the basic form of the circulation system. North-south roadways would be provided west of the Primary Studio Complex and as an extension of Genesee Avenue. Vehicles and pedestrians would be able to enter the Project Site on Beverly Boulevard, Fairfax Avenue and The Grove Drive and drive or walk to other areas of the Project Site.

The comments regarding internal circulation and access do not concern the CEQA analysis in the Draft EIR. Nevertheless, this comment will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment No. 35-24

The project description next asserts that the Project “would” include an onsite “Mobility Hub,” as depicted in Figure II-9, that would support first/last mile connections, encourage public transit and ride-sharing and support transportation demand management strategies. (*Id.*, p. II-26) However, the Mobility Hub is another hazy project component. The name for Figure II-9 is “**Conceptual** Mobility Hub,” which connotes that the Mobility Hub could be very different from what is shown on the rendering. More fundamentally, Hackman has not proposed a concrete development project with plans that include the suggested Mobility Hub, nor does the DEIR indicate that the Mobility Hub requirements would be included in the still-unseen Specific Plan. Moreover, the reader has no idea where the Mobility Hub would be located because the DEIR text does not disclose that and the DEIR Conceptual Plan does not include any specific information regarding any potential use, so that the public has no opportunity to comment on whether a particular proposed location would be appropriate. Broadcast Center believes that it would be highly inappropriate to place the Mobility Hub in close proximity to its apartment building, but it currently has no idea if Hackman would attempt to do that since the Mobility Hub could be located anywhere on the Project Site.

We note that Hackman and the City have provided clues as to where the Mobility Hub might be located. While the DEIR Conceptual Plan does not disclose the potential location of the Mobility Hub, Figure IV.K-3 (Vehicular Project Site Access) in the DEIR includes a reference to “Mobility Hub (Ground Level)” in the southwestern corner of the Project Site.¹³ (DEIR, p. IV.K-43) Even this reference, however, is quite confusing. The text right below “Mobility Hub (Ground Level)” states “(N) STAGE,” which indicates that a new sound stage would be constructed at that location, which also appears to be at “ground level.” The Floor Plan-Level BI sheet in the Application Plans may reconcile this contradictory text. It indicates that the Mobility Hub could be located below grade adjacent to production basecamp and production support areas. But this information, illustrative or otherwise, is nowhere to be found in the DEIR.

What all of this further demonstrates is that Hackman has apparently already formulated a specific development project, including the location of the Mobility Hub, and the Project Application and DEIR includes bits of information and discussion that reflect this, but the project description in the DEIR nonetheless omits basic and specific information regarding the project components and their location. Moreover, it forces the reader to engage in serious detective work to try and figure out the potential locations of those improvements, including the Mobility Hub, that Hackman may have in mind.

¹³ Figure IV.K-3 includes the same conceptual layout as the DEIR Conceptual Plan in Figure 11-4. Figure IV.K-3 provides minimal text descriptions for each of the white boxes (e.g., stage, office, north parking structure, southeast parking structure, public retail and the Mobility Hub), as well as the widths of the potential internal streets, but the DEIR Conceptual Plan inexplicably omits even that limited information.

Even the Conceptual Site Plan sheet in the Application Plans includes this basic information, although a comparison of that plan sheet and Figure IV.K-3 reflects that the illustrative conceptual plan was modified in several respects between May 2021 and the release of the DEIR in July 2022. **Why would the DEIR deprive the reader of the most basic information regarding the one illustrative scenario that forms the basis of much of the project description and the subsequent environmental analyses when that information actually exists elsewhere in the DEIR?**

Response to Comment No. 35-24

Refer to Topical Response No. 7, Mobility Hub, for a more detailed discussion of the function and location of the Mobility Hub. As discussed therein, City guidance provides flexibility regarding the proposed location and functions of the Mobility Hub. Nevertheless, the primary Mobility Hub functions and location are proposed in the southwest corner of the Project Site, near the intersection of Fairfax Avenue and 1st Street, as shown in the Conceptual Site Plan in the Draft EIR. This location provides a direct connection to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction, and this location would also be consistent with a possible northern extension of the Metro K (Crenshaw) Line along Fairfax Avenue. The Fairfax Avenue corridor has a high concentration of pedestrian destinations and direct access to the Metro D (Purple) Line Wilshire/Fairfax Station, so it would be beneficial and logical to locate the transit functions in this area. While the primary location for the Metro D (Purple) Line shuttle bus service will likely remain in the southwest portion of the Project Site, a portion of the bicycle, rideshare, and visitor drop-off functions may be distributed across the Project Site to directly link mobility uses with primary destinations.

Topical Response No. 7 also contains a commitment that the Project would not operate bus loading/unloading in an open-air setting within 75 feet of the Broadcast Center apartments. Project Design Feature TR-PDF-2 has been revised to include this commitment; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the proposed development program. Notably, the Conceptual Site Plan is based on the architectural plans on file with the City. These plans are part of the administrative record and have been publicly available on City Planning's website, as evidenced by this comment. Please note that any site plan included in an EIR or other CEQA document is inherently conceptual, and plans are finalized during the building permit process, which occurs after a Project is approved and its EIR certified. The Draft and Final EIRs for the Project provide the detail required by CEQA. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA

compliance review. Refer to the Preliminary Draft Specific Plan, which is publicly available on the Department of City Planning's website for this Project (<https://planning.lacity.org/development-services/eir>).

Comment No. 35-25

The DEIR project description then states that the Project would include approximately 5,300 parking spaces, and that the various uses would require 1–3 parking spaces per 1000 square feet of floor area. (DEIR, p. II-30; see *also* p. IV.K-44) However, the project description does not disclose the location of any of these parking spaces, nor does the DER Conceptual Plan even illustrate their potential location.¹⁴ Furthermore, while unexplained in the project description, the DEIR's transportation analysis states the calculation of the required parking spaces is not based on LAMC parking rates, but rather on three parking rates in the unseen Specific Plan—two spaces/1,000 square feet for retail uses and all other uses permitted under the Specific Plan (excluding soundstages, production office in general office uses), 2.5 spaces/1,000 square feet for sound stage uses, and three parking spaces/1000 square feet for production office and general office uses. It appears that no parking spaces are required for basecamp areas or any of the other uses on the two production levels. (*Id.*, p. IV.K-44) On their face, these parking rates contradict the range of 1–3 parking spaces/1,000 square feet stated in the project description. In any event, the DEIR fails to explain why the Specific Plan parking rates deviate from the applicable LAMC parking rates, while at the same time claiming, with no evidentiary support, that “the Project would provide sufficient on-site parking to meet the needs of employees and visitors at the Project Site.” (*Id.*, p. IV.K-46)

In addition, (1) the parking spaces may be located anywhere on the Project Site or at offsite locations at undisclosed distances from the Project Site, (2) the Specific Plan includes an unspecified process for reduced/shared parking and (3) temporary offsite parking due to displacement resulting from production filming and related activities may be provided with shuttle service to the Project Site. (*Id.*, p. II-30; see *also* p. IV.K-44)

As a result, the reader has no idea whether the proposed 5,300 parking spaces are sufficient to meet the parking demands associated with buildout of the Project, where any of the onsite or offsite parking spaces would actually be located, or how the location of the parking spaces would relate to the internal circulation system (which itself is unknown). For example, Hackman could develop a large parking structure 30 feet from the BC Site's western boundary. It could also choose to provide substantial offsite parking adjacent to nearby schools and other sensitive receptors. This is consistent with the statements in the project description that “ultimately parking may be located throughout the Project Site [and offsite], provided that the Specific Plan's requirements are met,” so that “parking may be provided in a combination of above-ground structures, subterranean structures, and/or surface spaces.” (*Id.*, pp. II-30, IV.K-44)

In addition, the project description fails to explain (1) whether the proposed 5,300 parking spaces include spaces for employees and visitors who would be part of live studio audiences for television shows and attend other events on the Project Site and, if so, how the number of required spaces was calculated, and (2) why no parking spaces whatsoever are required for the commercial activity that would occur within the two production levels. It also fails to disclose how often the “temporary” displacement of parking spaces due to production filming is anticipated to occur or to what extent it would occur.

Moreover, the project description falsely states that “the conceptual site plan [*i.e.*, the DEIR Conceptual Plan in Figure II-4] illustrates specific parking locations. (*Id.*) In fact, it does not. Hundreds of pages later in the DEIR, Figure IV.K-3 (Vehicular Project Site Access) includes the potential locations of a “Southeast Parking Structure” and a “North Parking Structure,” but, as the project description states, the parking can be located anywhere on the Project Site or offsite.

¹⁴ While the DEIR Conceptual Plan does not disclose the potential location of any parking structure, either below grade or above grade, Figure IV.K-3 (Vehicular Project Site Access) in the DEIR designates a large building in the southeastern corner of the Project Site as the “Southeast Parking Structure” and it would apparently be an above-grade parking structure. Since this building is the central building shown in Height Zone B, and Height Zone B has a maximum height of 130 feet, it appears that Hackman contemplates a 130-foot-tall parking structure that would be 60 feet from the BC Site. Broadcast Center believes that is a highly inappropriate location for this enormous parking structure, given that it could easily be constructed elsewhere on the 25-acre Project Site and avoid the potentially significant air quality and noise impacts on Broadcast Center’s residents. Those air quality and noise impacts are discussed in subsequent sections of this letter.

Response to Comment No. 35-25

Pursuant to SB 743, the adequacy of a new development’s parking supply is not a CEQA consideration. (Pub. Res. Code § 21099, subd. (b)(3) [“the adequacy of parking for a project shall not support a finding of significance pursuant to this section.”].)

The Project parking locations are disclosed in the Conceptual Site Plan set forth in the Draft EIR. Refer to Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the parking proposed for the Project and the operation of/access to the Project’s parking. As discussed therein, the parking provisions in the Preliminary Draft Specific Plan were developed based on employee and visitor (including audiences) populations to be served and the seasons of the year, times of the day and the days of the week that these populations will use the parking supply. These analyses determined the parking supply needed to allow the Project Site to provide sufficient parking on-site to meet the peak day Project demands and prevent spillover parking.

With respect to off-site parking, as discussed in Section B, Off-Site Parking, of Topical Response No. 13, Parking, the Project does not intend to implement an off-site

parking program or negotiate an agreement with the City regarding off-site parking. The Project does not need off-site parking to meet its peak parking demands and, therefore, is no longer proposing off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Comment No. 35-26

The project description also discusses the proposed “Sign District” for the Project. (*Id.*, pp. II-31–32) In the City, a sign district for a specific project site is normally established pursuant to an ordinance that establishes specific sign standards for the site that override the sign standards and requirements in the LAMC. However, the City did not make the draft sign ordinance available to the public on or before the commencement of the public comment period for the DEIR, and it remains unavailable as of today, the end of the public comment period. In addition, the project description generally states that the ordinance would allow a total of approximately 31,375 square feet of signage along the perimeter of the Project Site, but includes no illustrations or descriptions of any of the specific contemplated signs.

The project description further states that “unlimited signage could occur within the “interior” of the Project Site, which is almost the entire Project Site. (*Id.*) For example, unlimited signage at any height could be placed 30 feet from the western and southern boundaries of the BC Site. Signage would be limited within 30 feet of the BC Site, but that is likely an empty gesture given that Hackman apparently intends to construct a 30-foot-wide private street adjacent to the western boundary of the BC Site and a 60-foot-wide private street along the southern boundary of the BC Site. (*Id.*, p. IV.K-43 [Figure IV.K-3])

Response to Comment No. 35-26

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-10, 9-26, and 26-129 regarding the proposed Sign District. As discussed therein, the application for the proposed Sign District was submitted in accordance with the requirements of the LAMC, the Preliminary Draft Specific Plan ordinance was not required to be included as part of the Draft or Final EIR, the physical aspects of the proposed signs included within the Preliminary Draft Specific Plan are described in the Draft EIR, and specific sign limitations have been proposed for interior signs and signs along the Shared Eastern Property Line near the Broadcast Center Apartments. Refer to Response to Comment No. 35-16 regarding the inaccurate statements in this comment regarding “private street[s]”.

Comment No. 35-27

Finally, the project description includes three different truck routes for construction deliveries and haul trucks. (*Id.*, pp. II-34-35) However, the DEIR does not explain whether one or all of these routes would or could be used. Furthermore, these routes are described as “optional routes,” which suggests that other, undescribed truck routes may be used. (*Id.*, p. II-34)

Relatedly, footnotes 14, 15 and 16 in this discussion restate the three optional routes actually recommended by LADOT. This suggests that the optional routes that LADOT recommended are different from the routes described in the main DEIR text, but the DEIR declines to explain those differences. As a result, the reader is forced to compare the footnote description with the text description to determine those differences. (*id.*, pp. II-34-35; see *also* pp. IV.A-60-61, IV.I-35-36)

And they are indeed different in an important respect. All three options in the main DEIR text state that empty trucks would access the Project Site from Beverly Boulevard and loaded trucks would exit the Project Site from Beverly Boulevard. However, the three footnotes state that LADOT actually recommended that trucks enter and exit Beverly Boulevard **at the existing Genesee Avenue signal**. Therefore, based on LADOT’s recommendations, construction trucks would have to enter and exit the Project Site a substantial distance from Broadcast Center, while the stated options in the main text would allow trucks to enter and exit the Project Site immediately adjacent to Broadcast Center, including large trucks exiting the site that are filled with excavated dirt. Why have Hackman and the City apparently decided to disregard the LADOT recommendations and why has the DEIR been prepared in a way that makes it extremely difficult to discern this distinction?

Response to Comment No. 35-27

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Response to Comment Nos. 107-2 and 124-6 regarding the haul routes. Each of the three haul routes was adequately disclosed and evaluated in the Draft EIR and was approved by LADOT. Note that the haul routes described in Section II, Project Description, of the Draft EIR have been revised to fully match the text from LADOT; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The changes pertain only to entry/exit points to and from the Project Site and do not affect any analysis or impact conclusion in the Draft EIR.

Comment No. 35-28**2. The Project Description Is Neither Accurate, Finite Nor Stable.**

The project description in an environmental impact report (“EIR”) “must be accurate, stable and finite.” *Millennium*, 39 Cal. App. 5th 1, 16 (2019). An accurate and stable project description is the sine qua non of an informative and legally sufficient EIR. *Kings County*, 221 Cal. App. 3d at 739. The courts have long held that “[a] curtailed or distorted project description may stultify the objectives of the reporting process. Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal’s benefits against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal and weigh other alternatives in the balance.” *County of Inyo v. City of Los Angeles*, 71 Cal. App. 3d 185, 192-193 (1977). In other words, without an accurate, stable and finite project description, the entire EIR is rendered inadequate.

For the many reasons discussed at length in the preceding section, the project description in the DEIR utterly fails to satisfy these requirements. The project description is merely a potpourri of illustrative scenarios, conceptual plans and ranges of options, none of which may occur. The open-ended, inaccurate and indefinite project description fails to describe the Project at all. While the DEIR, Project Application and PowerPoint presentation to the Cultural Heritage Commission telegraph that Hackman has a specific development project in mind and at some point developed concrete plans, it has chosen to largely cloak its intentions and deprive the public of any meaningful information regarding the Project.

Based on the DEIR, the public has no idea where new project buildings, private streets, parking structures, production levels, landscaping, open space or signage would be located, what their general design and relationship to one another would be, or over what period of time they would be constructed. The DEIR Conceptual Plan includes nothing more than white boxes and the general location of private streets, but that plan merely “illustrates one possible development scenario” among an infinite range of development options. The DEIR presents a blurred view of the Project and Hackman could build something that bears no resemblance to the DEIR Conceptual Plan, the Application Plans or any graphic illustration in the DEIR.

Similarly, the project description provides no concrete information as to what uses would be located in which portions of the Project Site. Moreover, while the DEIR Conceptual Program in Figure II-2 includes three types of studio uses, along with general office and retail uses, the DEIR states that the Specific Plan would in fact allow any permitted use in the C2 zone, and the public is in the dark as to which uses Hackman will select and in which buildings on which portions of the Project Site those uses would be located.

Response to Comment No. 35-28

This comment summarizes preceding comments in this comment letter that are fully responded to. As demonstrated in the responses to the preceding comments, including Response to Comment Nos. 35-4 through 35-27, the Project Description is accurate, stable, and finite. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a more detailed discussion of how Section II, Project Description, of the Draft EIR fully complies with CEQA and is distinguishable from the project description at issue in *Millennium*. Also refer to Response to Comment No. 9-11 regarding the *Inyo* case cited in this comment.

Comment No. 35-29

The DEIR's project description incorporates or generally references development regulations that apparently will be included in the as-yet unseen Specific Plan, but those regulations, whatever they may be, provide the public and decisionmakers with little actual information regarding an actual, concrete development scenario. Rather, they will simply limit to some unknown extent the range of construction choices for Hackman or another developer. Moreover, as previously discussed, the limits imposed are often vague, ambiguous or contradictory.

In short, the project description fails to describe in concrete terms the siting, size, mass, appearance or use of any building, structure, street or landscaping proposed to be built or planted on the Project Site. Rather, it presents a single conceptual scenario that itself is virtually devoid of information. Whatever this conceptual scenario is, Hackman has no obligation to follow it, and it does not meet the requirement of a stable or finite project.

It is therefore bewildering for the DEIR to state, among many examples, that the unseen Specific Plan "would establish a clear and cohesive development framework for the entire Project Site, serving to integrate the proposed mix of permitted land use..." (DEIR, p. II-12), and that the Specific Plan results in "visual and physical integration of the proposed land uses" (*id.*, p. V-48). Undeniably, the reality is the precise opposite.

Response to Comment No. 35-29

This comment summarizes preceding comments in this comment letter that are fully responded to. Refer to Response to Comment Nos. 35-4 through 35-7, above. As demonstrated in the responses to the preceding comments, Section II, Project Description, of the Draft EIR is accurate, stable, and finite and complies with CEQA. Refer to Response to Comment Nos. 5-3 and 26-5 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, with regard to the proposed Specific Plan and Response to

Comment Nos. 5-3 and 9-13 regarding the physical aspects of the Project included in Section II, Project Description, of the Draft EIR, including the Conceptual Site Plan.

Comment No. 35-30

In addition, as discussed in more detail in Section II.C, *infra*, the DEIR states that the Specific Plan places an upper limit on the square footage of new construction on the Project Site, but this cap is based on a definition of “floor area” that significantly deviates from the LAMC definition of “floor area” and thereby excludes at least several hundred thousand square feet of enclosed spaces where production activities would occur, including the two proposed “production levels.” This results in an inaccurate project description.

Response to Comment No. 35-30

This comment is similar to Comment No. 35-6. Refer to Response to Comment No. 35-6 for a discussion of the floor area identified for the Project.

Comment No. 35-31

Furthermore, the inchoate project description makes it impossible for the public to participate meaningfully in the CEQA process. In particular, Broadcast Center cannot begin to know what Hackman may eventually choose to develop in close proximity to the Broadcast Center building and how that would impact its residents. Would Hackman decide to construct one or more 160-foot buildings with rooftop areas just a few feet from the western boundary of the BC Site, with a private street in between that is designed to accommodate truck traffic? Would Hackman elect to place significant signage on the eastern sides of those buildings, which it has an unlimited right to do? Would Hackman design the internal circulation system and vehicular access points for the Project in a manner that maximizes the traffic impacts on The Grove Drive and impairs access to, and operation of, Broadcast Center, including resident move-ins and the retail uses on the ground floor? Would Hackman construct offsite parking structures at locations that further exacerbate the Project’s traffic impacts and potentially impact Palazzo West or East? Would Hackman choose to place the Mobility Hub or a parking structure¹⁵ adjacent to the western boundary of the BC Site, which would also significantly impact Broadcast Center residents? Would Hackman allow intrusive outdoor production activities in proximity to Broadcast Center, the noise impacts of which could significantly impact residents? The DEIR does not, and as structured cannot, provide answers to any of these questions or similar questions regarding the Project’s impact on The Grove or the Farmers Market. It therefore fails as an informational document and precludes informed decisionmaking and public participation.

¹⁵ Indeed, one of the project alternatives does feature a six-level, above-grade parking structure adjacent to the BC Site. (DEIR, p. V-33 [Figure V-3])

Response to Comment No. 35-31

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a discussion of the adequacy of the Project Description provided in Section II, Project Description, of the Draft EIR. As discussed therein, the Draft EIR disclosed all of the elements of the Project required by CEQA and provides a comprehensive analysis of the Project. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. Contrary to the commenter's assertion, the Project Description includes all information required by CEQA and fulfills CEQA's purpose as an informational document that allows for meaningful public participation.

In terms of access on The Grove Drive, the Transportation Assessment in Appendix M.1 of the Draft EIR already shows the maximum potential effects of Project vehicles on that roadway and, therefore, the maximum potential effects on the Broadcast Center Apartment driveways along The Grove Drive. Please note that the Broadcast Center Apartments and its grocery store tenant adversely impact the operation of The Grove Drive by:

- a. Ignoring the red curb along the east side of The Grove Drive south of Beverly Boulevard and instead using that red curb area as a de facto loading zone for the grocery store and blocking the westbound to southbound dual left-turn lanes entering The Grove Drive and extending the traffic queue into the Beverly Boulevard/The Grove Drive intersection;
- b. Operating a valet parking system that extends the queue of vehicles accessing the parking structure into the southbound lanes of The Grove Drive and blocking the street; and
- c. Allowing grocery store employees to utilize the curb parking along the west side of The Grove Drive as all-day employee parking.

With respect to off-site parking, as discussed in Section B, Off-Site Parking, of Topical Response No. 13, Parking, the Project does not intend to implement an off-site parking program or negotiate an agreement with the City regarding off-site parking. The Project does not need off-site parking to meet its peak parking demands and, therefore, is no longer proposing such a program. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR. Thus, the Project would not have any off-site parking impacts on Palazzo East or Palazzo West.

The Conceptual Site Plan includes a 30-foot frontage area along the Shared Eastern Property Line, which includes an internal circulation path. Please note that the assertion that the Project includes a “private street” is incorrect. Rather, the Project would include internal circulation paths, as is typical for any development. As discussed in Response to Comment No. 26-141, only approximately 4 trucks per day would use the Beverly Boulevard driveway immediately to the west of Broadcast Center Apartments.

Refer to Response to Comment No. 26-7 regarding building heights to the west of Broadcast Center Apartments.

Refer to Response to Comment No. 35-24 above for a discussion of the location of the Mobility Hub. Topical Response No. 7, Mobility Hub, also presents a commitment to limit loading/unloading of buses in an open-air setting within 75 feet of the Broadcast Center without a noise barrier in place. This commitment has been included as a PDF as set forth in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

With respect to “the Project’s impact on The Grove or the Farmers Market,” the commenter has made no specific claim as to what impacts are allegedly left unaddressed, so no response can be provided.

Refer to Response to Comment No. 26-135 regarding how noise levels associated with rooftop areas would be less than significant at the Broadcast Center Apartments. Regarding outdoor production activity, in accordance with Project Design Feature NOI-PDF-5, outdoor production activities will continue to be prohibited within 200 feet of the Shared Eastern Property Line between the hours of 10 P.M. and 7 A.M. In addition, Response to Comment No. 16-102 also discusses how noise associated with outdoor production activities would be less than significant at the Broadcast Center Apartments.

With regard to signage, refer to Response to Comment No. 5-10 and page II-31 of Section II, Project Description, of the Draft EIR. As discussed therein, signage in the vicinity of the Broadcast Center Apartments would be limited.

Comment No. 35-32

Relatedly, the project description fails to include a general description of the Project’s technical, economic and environmental characteristics, as required by Section 15124(c) of the Guidelines. The DEIR does not contain a concrete site plan, cross-sections, building elevations or illustrative massing to show what buildings and structures would be built, where they would be built, what they would look like or how many there would be.

Response to Comment No. 35-32

This comment is similar to Comment No. 9-12. Refer to Response to Comment No. 9-12 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding how the Project fully complies with Section 15124(c) of the CEQA Guidelines.

Comment No. 35-33

Moreover, there is no practical impediment as to why Hackman could not have provided an accurate, stable and finite project description of what it intends to build. As previously discussed, it is apparent that Hackman has already prepared concrete development plans, but has simply chosen not to disclose them in the DEIR or base the environmental analyses on them. The DEIR suggests that the nebulous project description is required to account for future market demands (DEIR, p. 11-13), but uncertainty about market conditions is an insufficient ground for the DEIR's incoherent and ambiguous project description. See *Millennium*, 39 Cal. App. 5th at 14.

Response to Comment No. 35-33

This comment repeats comments related to the adequacy of the Project Description. Refer to Response to Comment Nos. 35-4 through 35-7 in this letter; Response to Comment Nos. 5-3, 11-12, and 26-11 above; and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding how the Project Description of the Draft EIR is accurate, stable, and finite and is distinguishable from the project description at issue in the *Millennium* case.

Comment No. 35-34

In addition, it appears that, for the most part, no additional CEQA review would be required when Hackman proposes an actual development project or projects. In this regard, the DEIR's project description states as follows:

Specific proposals for development that involve a land use exchange would require a review by the Director of... Planning. This process would entail a determination of whether the development proposal complies with the Specific Plan regulations and mitigation measures set forth in the Mitigation Monitoring Program for the Project and whether the environmental impacts resulting from the proposed development would be within the envelope of impacts identified in this Draft EIR. Throughout this Draft EIR, where appropriate, the analyses address the potential impacts resulting from a hypothetical development mix under the proposed land-use exchange program that would generate the maximum impact for that environmental

issue. Accordingly, the maximum possible impacts of the Project are evaluated herein and represent the measure against which future land use exchange proposals must be considered. (DEIR, pp. II-16-17)

Let us unpack that statement. First, it indicates that no further environmental review under CEQA would occur if a land use exchange is **not** required. It is quite possible that Hackman would not require **any** land use exchange, in which case no additional CEQA review would occur.

Moreover, if Hackman develops the Project in phases, as the DEIR repeatedly states it may do, then if a land use exchange was required at all, it would likely only be required in a later project phase. For example, the total permitted floor area of sound stages is 350,000 square feet, but Hackman has the right to increase the sound-stage floor area to 450,000 square feet. (*Id.*, p. II-16) It is reasonable to assume that Hackman would not include more than 350,000 square feet of sound stages in earlier project phases, but might decide to expand the sound stage use in later project phases, or the last project phase. Furthermore, given that four of the five uses for which land use exchanges are permitted (sound stage, production support, production office and general office) are all studio-related and do not generate significantly different environmental impacts, it is likely that the Director of Planning would determine that the land use exchange would not result in environmental impacts outside the envelope of impacts discussed in the DEIR, particularly given that DCP has already endorsed the preparation of an EIR that does not include an accurate, stable or finite project description. Finally, the statement strongly suggests that the public would have no right to participate in this process, further defeating the informational goals of CEQA. For all of these reasons, no meaningful CEQA review would occur even if a specific development proposal required a land use exchange.

This statement, and others in the DEIR, also reflect that the City and Hackman believe the use of a development envelope for the Project, in lieu of a concrete development project, is acceptable for CEQA purposes because the DEIR allegedly analyzes the Project's "maximum possible impacts" or "maximum impacts." However, numerous courts have "roundly rejected" that argument. *Millennium*, 39 Cal. App. 5th at 18." CEQA's purposes go beyond an evaluation of theoretical environmental impacts. "If an EIR fails to include relevant information and precludes informed decisionmaking and public participation, the goals of CEQA are thwarted and a prejudicial abuse of discretion has occurred." *Id.*

Furthermore, the DEIR's impact analyses do not analyze worst-case impacts, as discussed in Section II.C, *infra*, and subsequent sections of this letter. To the contrary, the inaccurate, unstable and contradictory project description wreaks havoc with the DEIR's impact analyses because it is impossible to adequately analyze a proposed project when most of its characteristics are unknown.

Response to Comment No. 35-34

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-5, 9-12, and 9-13, the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the Project. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Also refer to Response to Comment No. 9-13 and Topical Response No. 1 regarding the limited land use exchanges that would be permitted.

With regard to the comments about maximum impacts and "worst case" analyses, refer to Response to Comment Nos. 9-14 and 26-11 and Topical Response No. 1. As discussed therein, the Draft EIR's environmental analysis accounts for the maximum potential environmental impacts associated with buildout of the Project as set forth in Table II-2 of the Draft EIR. In addition, the Draft EIR also analyzes the maximum impact scenarios (i.e., the development scenarios under the limited Land Use Exchange Program that would generate the greatest environmental impact). Refer to Appendix FEIR-3 of this Final EIR, which discusses the maximum impact scenarios that were analyzed for each environmental topic in addition to the proposed development program as set forth in Table II-2 of Section II, Project Description, of the Draft EIR.

With regard to the statement about the Department of City Planning, the Los Angeles Department of City Planning is the Lead Agency for the Project and has directed the preparation of the EIR. As such, the Department of City Planning has concluded that Section II, Project Description, of the Draft EIR is indeed accurate, stable, and finite. Please note that the Project has not been approved. As discussed in Response to Comment No. 32-3, public noticing of the Project has been conducted in compliance with CEQA. This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeded the typical 45-day period required under CEQA. Following the publication of this Final EIR, the Project approvals and EIR will be considered during public hearings and meetings before City decision-makers prior to any approval, where the public will have additional opportunities to comment on the Project.

Comment No. 35-35**C. The DEIR Does Not Analyze the Project's Maximum Possible Impacts.**

Some of the ways in which the DEIR fails to analyze the Project's maximum possible impacts apply to many or most of the DEIR's impact analyses and others relates to specific impact analyses.

First, the impact analyses ignore a host of permitted uses on the Project Site. As previously discussed, the impact analyses generally consider only the uses described in the DEIR Conceptual Program in Table II-2, which are limited to sound stages, production support, production office, general office and retail.

Elsewhere in the project description, however, the DEIR states that the Specific Plan will include numerous other uses, including, for example, museum exhibits and theaters, child care and educational facilities, fitness facilities, mills/manufacturing, sleeping quarters, recreational facilities, restaurants and special event areas. (*Id.*, pp. II-15–16) Moreover, the DEIR states that the Specific Plan will allow “all other permitted uses in the C2 zone unless expressly prohibited in the Specific Plan, which include uses as varied and substantial as auditoriums and baseball or football stadiums with a seating capacity of up to 3,000 people, hospitals and churches.” (*Id.*, p. II-16) Hackman could include any of those uses as part of the Project.

The DEIR's failure to consider the environmental impacts associated with any of the permitted uses other than the five production-related uses in the DEIR Conceptual Program necessarily means that the DEIR does not analyze the Project's maximum possible impacts.

Response to Comment No. 35-35

With regard to permitted uses, refer to Response to Comment No. 5-6 and Topical Response No. 3, Permitted On-Site Uses, regarding the clarified list of studio-related uses that would be permitted on-site, which removed the C2 zone text referenced in this comment (even though these uses are currently permitted); refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. However, it should be noted that the C2 zone quoted in this comment is inaccurate; specifically, the text after the comma that refers to “auditoriums and baseball or football stadiums with a seating capacity of up to 3,000 people, hospitals and churches” was not included in the Draft EIR. As discussed therein, childcare and fitness uses would be permitted as ancillary uses. Refer to Response to Comment Nos. 5-6, 26-14, 26-121, and 28-6 regarding the uses discussed in this comment. Also refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Appendix FEIR-3 of this Final EIR for details of how all of the on-site uses have been

accounted for in the impact analyses throughout the Draft EIR. As such, contrary to this comment, the Project's maximum impacts have been fully analyzed.

Comment No. 35-36

Second, as discussed in detail in Section II.D, *infra*, the DEIR omits impact-generating floor area, in particular the two planned production levels that could include in the neighborhood of 1,000,000 square feet of active project space, by arbitrarily omitting all of that space from the Specific Plan's definition of "floor area" and then using that artificially reduced floor area in various impact analyses. As one example, as discussed in Section II.E, *infra*, the DEIR's quantified analyses of the Project's air quality impacts are based on the Specific Plan's definition of floor area and therefore omit analysis of the air quality impacts associated with the two production levels.

Response to Comment No. 35-36

This comment is similar to Comment No. 35-6. Refer to Response to Comment No. 35-6 regarding the adequacy of the Project Description and how all of the proposed areas, uses, and activities have been accounted for in the impact analyses throughout the EIR. Also refer to Response to Comment No. 26-E.1-27 with regard to potential operational air quality impacts and how all of the on-site uses have been accounted for in the analysis.

Comment No. 35-37

Third, while the DEIR and supporting technical reports and modeling data state that the DEIR Conceptual Plan in Figure II-4 "illustrates one possible development scenario" and the DEIR Conceptual Program in Table II-2 represents just "one possible development scenario that could be developed," so that they in no way govern the development of the Project Site, at the same time the project description, impact analyses and supporting technical reports in the DEIR often expressly state and/or assume that the Project **would** be developed in accordance with the vague and nonbinding DEIR Conceptual Plan and DEIR Conceptual Program and that they reflect a worst-case development scenario, notwithstanding that the Specific Plan allows an infinite number of development options.

Response to Comment No. 35-37

This comment repeats comments mentioned elsewhere in this comment letter. Refer to Response to Comment Nos. 35-5, 35-13, 35-28, and 35-34 regarding the adequacy of the Project Description. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-5, 9-12, and 9-13 regarding the Conceptual Site Plan, the regulatory process under the proposed Specific

Plan, and how Section II, Project Description, of the Draft EIR is not vague and fully complies with CEQA.

Comment No. 35-38

As just one of many, many examples, consider the transportation analyses in the DEIR. To start with, in describing the “relevant project characteristics,” the DEIR includes and references Figure IV.K-3 (Vehicular Project Site Access), which is the DEIR Conceptual Plan with additional information, including specific locations for sound stages, production support, office and retail buildings, parking structures, the width of new private streets, and vehicular access points (again, it is mystifying that the DEIR Conceptual Plan itself omits all of this additional information). (DEIR, pp. IV.K-41–44) While this graphic illustrates only one potential development scenario, the DEIR text often misleads the reader into thinking that this is the actual Project. It states that, as shown on Figure IV.K-3, “vehicular access **would** be provided via the nine vehicular access points....” It states that the Project “**would** incorporate a multi-level circulation plan” through the two production levels that “**would** provide access, state staging, storage, and conductivity between the active production and supporting uses,” notwithstanding that those production levels are not shown on Figure IV.K-3 or anywhere else in the DEIR or supporting technical reports.

The VMT (vehicle miles traveled) traffic analysis that follows is then based on the DEIR Conceptual Program in Table II-2, which appears tied to the DEIR Conceptual Plan. To calculate the Project’s VMT traffic impact, the DEIR utilizes the conceptual floor areas for the five categories of use in the DEIR Conceptual Program (sound stages, production support, production office, general office and retail) for input into the City’s VMT Calculator. This generated an average work VMT per employee of 6.7, which is less than the significance threshold of 7.6. The DEIR never explains, however, why or how this reflects the “maximum possible” VMT impact. Given the broad range of uses that would be allowed in the Specific Plan, there are untold combinations of uses that would exceed a work VMT impact of 6.7 and, for that matter, would exceed the significance threshold of 7.6.¹⁶

¹⁶ The DEIR proves this point. It looks at two scenarios involving potential land use exchanges. It discloses that, under Scenario 2, which involves an exchange of 350,000 square feet of sound-stage space for 350,000 square feet of production support space, the average work VMT per employee would increase from 6.7 to 7.6, which “would meet but not exceed” the significance threshold of 7.6. (DEIR, p. IV.K-77) However, the land use exchange allows similar exchanges that would further increase production support space and correspondingly decrease production office, general office and/or retail floor area. If such an additional exchange as part of Scenario 2 resulted in any further increase in the average work VMT per employee (which seems quite likely), the VMT impact would then exceed the significance threshold of 7.6 miles and result in a significant impact that is not acknowledged in the DEIR.

Response to Comment No. 35-38

The comment cites several particular Project features that are part of the Conceptual Site Plan, including specific locations for Project land uses and parking structures, the width of new internal circulation paths, locations of vehicular access points, and a multi-level internal circulation plan. However, none of these features directly relate to any CEQA transportation impact category, and, therefore, any change to those features with the Project upon final design would not affect the transportation impact conclusions presented in the Draft EIR. The Project design is required to be reviewed by the City for compliance with the proposed Specific Plan before construction permits are issued, as well as for compliance with general City standards where applicable.

Refer to Topical Response No. 8, Vehicle Miles Traveled, regarding the VMT analysis in Section IV.K, Transportation, of the Draft EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 11-17 and 26-154 regarding the Land Use Exchange Program and the Draft EIR's analysis of both the proposed development program and the maximum transportation impact scenarios. The comment incorrectly claims that the Draft EIR doesn't explain why the proposed development program VMT analysis represents the "maximum possible" VMT impact. In fact, the Draft EIR specifically claims that it *doesn't* represent the maximum possible VMT impact, which is why a separate analysis was conducted on page IV.K-77 of the Draft EIR of a land use program that does represent the maximum VMT impact (maximum transportation impact scenario 2). It is important to note that while this scenario, which generates higher work VMT per employee but does not result in a significant VMT impact, is technically permissible under the proposed Specific Plan and, thus, included to represent a worst-case VMT impact scenario, it does not represent a realistic development scenario because a balance of sound stages and production support uses are necessary for a functioning studio campus and in order to meet the Project objectives set forth in Section II, Project Description, of the Draft EIR.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 35-24 and 35-31 regarding the adequacy of the Project Description and the information and analysis provided in the Draft EIR.

Refer to Topical Response No. 3, Permitted On-Site Uses, for a discussion of permitted land uses and how the Project Site is assured to remain a studio use under the proposed Specific Plan.

Comment No. 35-39

The VMT analysis also fails to consider the VMT impact associated with the (1) two planned production levels where numerous employees would work substantial studio

activities would occur. (DEIR, Appendix M, pp. 122–123) and (2) substantial traffic trips associated with live studio audiences for many television shows because those uses are not included in the DEIR Conceptual Program.

Response to Comment No. 35-39

As discussed in detail in Topical Response No. 10, Trip Generation, trips associated with basecamp space (including the studio level and the below grade production levels) and studio audience visitors are inherent in the empirical trip generation rates that were used to estimate Project trips. As discussed in Topical Response No. 8, Vehicle Miles Traveled, the Project's daily trip generation estimate was a direct input to the VMT Calculator tool, and, thus, those trips were a factor in the VMT analysis.

Because the vast majority of the trips to and from the Project Site are generated by employees (studio audience trips represent a small percentage of the overall gross daily trip generation), the VMT analysis was conducted based on the Project serving as an employment destination. As discussed in detail in Topical Response No. 8, the VMT analysis followed guidelines from *Technical Advisory on Evaluating Transportation Impacts in CEQA* (California Governor's Office of Planning and Research, December 2018) and appropriately focused on home-based-work attraction trips for estimating work VMT per employee. When other trip types are a small component of overall VMT, the OPR Technical Advisory recommends that the focus of VMT reduction efforts should be on trips between home and work.

As discussed in Topical Response No. 2, Definition of Floor Area is Appropriate, the Draft EIR's analysis accounted for the potential physical environmental impacts of all proposed uses and activities, regardless of whether they are within the definition of floor area.

Comment No. 35-40

As a second example, several of the impact analyses, including construction air quality, construction noise and geology and soils analyses, assume that the grading and excavation for the Project would include 772,000 cubic yards of cut and export (as well as 50,000 square feet of imported fill), based on a maximum excavation depth of 45 feet. (See, e.g., *Id.*, pp. II-15, IV.A-59, IV.I-35, IV.D-19) These numbers are again apparently based on the DEIR Conceptual Plan and DEIR Conceptual Program. Hackman, however, is not bound by those concepts. It could decide to excavate to a depth of more than 45 feet to provide subterranean parking, or more subterranean parking, for certain buildings and/or for the stand-alone subterranean parking structure along Beverly Boulevard that is not designated as such in the DEIR Conceptual Plan, but is so designated—as the “North Parking Structure (Subterranean)” —in Figure IV.K-3. (*Id.*, p. IV.K-43) It could choose to

convert a portion of the above-grade parking structure contemplated across the street from the BC Site to below-grade parking, which would increase the amount of excavation at that location. It could decide to break up the permitted new construction into more buildings than shown on the DEIR Conceptual Plan and thereby increase the required amount of excavation and export. It could opt to build an entirely different project with different buildings at different locations with different parking requirements and different building designs that could require substantially more excavation than buildout under the DEIR Conceptual Plan. There is simply no way the preparers of the DEIR can possibly know that 772,000 cubic yards is the maximum cut and export that would occur with the development of the Project, so they therefore cannot know if the relevant impact analyses in the DEIR reflect the “maximum possible impacts.”

Many more examples of the DEIR’s failure to analyze the Project’s “maximum possible impacts” are discussed in following sections.

Response to Comment No. 35-40

Permitted development would adhere to the parameters set forth in Section II, Project Description, of the Draft EIR, as clarified in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The maximum depth of excavation would be approximately 45 feet and the maximum export would be approximately 772,000 cubic yards. Should additional depth of excavation or additional export be required, further CEQA review would also be required. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan. As discussed therein, any substantial changes from the Project would require future discretionary City review and approval and additional CEQA review.

Comment No. 35-41

D. The DEIR’s Reliance on an Allegedly Modified and Artificial Definition of “Floor Area” in the Specific Plan Results in a Substantial and Unlawful Understatement of the Project’s Environmental Impacts.

Normally, the analysis in a draft EIR prepared for a project in the City is based on the various definitions and standards applicable to the relevant project site set forth in the LAMC. Here, however, Hackman has proposed the unseen Specific Plan, which would largely override the applicable zoning provisions in the LAMC. However, the preparers of the DEIR improperly use a modified and artificial definition of “floor area” to understate substantially the Project’s environmental effects.

Specifically, the DEIR analyzes numerous environmental impacts based on the definition of “floor area” in the proposed Specific Plan. LAMC Section 12.03 broadly defines “floor area” as follows:

The area in square feet confined within the exterior walls of a Building, but not including the area of the following: exterior walls, stairways, chdfs, rooms housing Building-operating equipment or machinery, parking areas with associated driveways and ramps, space dedicated the bicycle parking, space for landing and storage of helicopters, and Basement storage areas.

“Building” is defined in LAMC Section 12.03 as “any structure having a roof supported by columns or walls, for the housing, shelter or enclosure persons, animals, chattels or property of any kind.” In other words, the normal zoning definition of “floor area” is broadly defined to include all active uses in a structure that has a roof supported by columns or walls, except for parking.

The apparent definition of “floor area” in the Specific Plan, however, is far narrower and includes a much longer list of excluded areas. According to the DEIR, the Specific Plan definition of “floor area” will exclude all of the following activities that are not excluded from the LAMC definition of “floor area”: the area between the exterior walls and “exterior face” of a building; light courts; bicycle parking (covered); covered ground-floor storage areas; recycling or waste management equipment or machinery; areas related to the Mobility Hub; outdoor eating areas (covered or uncovered), Trellis and shade structures; canopies (covered); existing marquees and walkways (covered); outdoor production areas; buildings wholly constructed to house mechanical, plumbing, electrical or other co-generation and stormwater equipment; production trailers; **basecamp areas**; temporary uses; and sets/façades. (DEIR, pp. II-2 [n. I], II-13 [Table II-2, note a], emphasis added)

Based on this narrow definition of floor area, it appears that the DEIR omits two entire levels of production activities—the at-grade “production activity level” and the below-grade “production operations level.” (*Id.*, pp. II-25–26) The DEIR, however, provides almost no information regarding these two production levels. They are not even graphically illustrated on the nebulous DEIR Conceptual Plan, notwithstanding that each level could apparently cover the entire Project Site. One paragraph in the DEIR’s 36-page project description does state, however, that both production levels “would provide space for basecamp, production staging, loading and emergency vehicle access throughout the Project Site.”¹⁷ (*Id.*, p. II-26) That brief discussion also seems to reflect that the two production levels would be at least partially enclosed, but the DEIR, as is so often the case regarding the DEIR Conceptual Plan, lacks clarity here.

If each production level covered even 50% of the Project Site¹⁸, that would mean the Specific Plan’s definition of “floor area” omits approximately **1,000,000** square feet of

commercial activity (25 acres x 43,560 square feet x 50% x 2). And, the long list of excluded areas in the Specific Plan's definition of "floor area" may well exempt other active areas within buildings that could be constructed on the Project Site.

It is apparent that there is something of a CEQA shell game going on here. The DEIR Conceptual Program in Table II-2 of the DEIR's project description provides the major clue. (DEIR, p. II-13) As shown thereon, the Project would increase the existing floor area on the Project Site by 1,626,180 square feet. This includes significant increases in floor areas for sound stages, production office and general office. Notably, however, the Project includes the demolition of almost all of the existing production support space. Specifically, 302,340 square feet of the existing 325,450 square feet of production support space would be demolished, with only 80,890 square feet of proposed new production support space, for a total of 104,000 square feet of production support space with the development of the Project.

The question, therefore, is how can Hackman hugely increase the overall square footage of the other production uses, while at the same time significantly reducing the existing production support space? The apparent answer is that Hackman plans to substitute and expand the existing production space with new production support space within the two planned production levels. The result is that, notwithstanding both the existing production space and the new production levels would be located in "buildings," somewhere in the range of 1,000,000 square feet of new production support space on those two production levels has been arbitrarily exempted from the definition of "floor area" in the Specific Plan, which artificially and significantly reduces the Project's true floor area.¹⁹

As discussed in following sections of this letter, many of the environmental analyses in the DEIR are based on the floor area of the Project. This includes multiple air quality impact analyses (DEIR, pp. IV.A-59-77), the energy impact analyses (*id.*, pp. IV.C-22-41), noise impact analyses (*id.*, pp. IV.I-48-55, Appendix M.1), the fire protection services impact analysis (*id.*, p. IV.J.1-24), the police protection services impact analysis (*id.*, p. IV.J.2-26), transportation impact analyses (*id.*, p. IV.K-74, Appendix M, pp. 122-123), and almost all of the utilities and service systems impact analyses (water supply and infrastructure, wastewater, electric power and natural gas) (*id.*, pp. IV.M.1-35-36 [Table IV.M.1-5], IV.M.1-37-38 [Table IV.M.1-6], IV.M.2-14-17 [Tables IV.M.2-2 and IV.M.2-3], IV.M.3-12-13).

¹⁷ Similarly, only one page in the 787-page Transportation Assessment for the Project mentions the two enormous production levels and the Conceptual Site Plan in the Transportation Assessment also omits them. (DEIR, Appendix M.1, pp. 4, 11 [Figure 1])

¹⁸ While the DEIR and Transportation Assessment scrupulously avoid providing graphic details regarding the two production levels (even conceptually), the Application Plans reflect that the preparers of those documents once again omitted known details regarding those two levels. In particular, the "Floor Plan-Level BI" sheet reflects that one of those two levels, more likely the below-grade production operations level, would conceptually cover approximately 50% of the Project Site.

- ¹⁹ The DEIR Conceptual Program takes this even further. Notes c and d in Table II-2 state that 44,676 square feet of existing production office and general office space would not be demolished but may be converted to basecamp use. (DEIR, p. II-13) Given that the Specific Plan excludes basecamp areas from its definition of floor area, even substantial square footage in existing buildings may therefore be excluded from the development cap of 1,874,000 square feet.

Response to Comment No. 35-41

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 for details of how the Project's definition of floor area does not understate the environmental impacts of the Project and how all areas, uses, and activities have been accounted for, including in the impact areas referenced in this comment. Note that no active production areas would be located in the parking or basecamp areas below Project Grade as discussed in Response to Comment No. 26-121. Also note that the Conceptual Site Plan depicts the Project Site from a "bird's eye" or plan view above the Project Site and is not intended to depict the subterranean levels. CEQA does not require the EIR to include a graphic depicting exact details of parking, interior circulation, and basecamp areas. Nonetheless, the below-Project Grade level is depicted in Figure II-6(a) in Section III, Revisions, Clarifications and Corrections to the Draft EIR, which is consistent with the architectural plans on file with the City. Also note that the conversion of office floor area to basecamp uses would reduce floor area and also reduce impacts as office uses generally generate more impacts than basecamp uses.

Refer to Response to Comment No. 26-16 regarding the ratio of studio land uses.

Comment No. 35-42

Moreover, the DEIR's impact analyses reflect that production support space does generate environmental impacts. As one of many examples, the VMT traffic analysis demonstrates that production support use generates traffic trips and that using the land use exchange program to decrease sound stage floor area and increase production support floor area substantially increases the Project's work VMT per employee. (DEIR, pp. IV.K-73–77)

Response to Comment No. 35-42

The comment correctly notes that increasing production support space while decreasing sound stage space increases the Project's work VMT per employee. However, it incorrectly claims this results in environmental impacts. With regard to the VMT analysis, the Draft EIR analyzed the proposed development program and two other scenarios that account for the limited Land Use Exchange Program, including "maximum transportation impact scenario 2" on page IV.K-77, which assumes eliminating sound stages and allocating all of that space to production support. While work VMT per employee would increase to 7.6 under that scenario, it would not exceed the significant impact threshold (also 7.6) and, thus, would not result in a significant impact. Moreover, as stated on page

IV.K-77 of the Draft EIR, this does not represent a likely development scenario, as a balance of sound stages and production support uses are necessary for a functioning studio campus and in order to meet the objectives set forth in Section II, Project Description, of the Draft EIR. Refer to Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 35-38 regarding the Land Use Exchange Program and the Draft EIR's comprehensive transportation analysis.

Comment No. 35-43

As a result, the omission of these production levels necessarily results in a substantial understatement of the Project's actual environmental impacts. As one prominent example, the CalEEMod inputs for DEIR's operational air quality analyses entirely omit the production levels and their floor area. This omission is unstated in the DEIR text, which forces the reader to delve into the underlying air quality modeling in Appendix B (Air Quality and Greenhouse Gas Emissions) to the DEIR, which discloses that, while the model accounts for operational pollutant emissions associated with enclosed and unenclosed parking areas (which fall outside both the Specific Plan and LAMC definitions of floor area), the model ignores the Mobility Hub, basecamp areas and other production-related activities contemplated within the two production levels. (DEIR, Appendix B, pp. 98 and 102–105 of PDF)

Response to Comment No. 35-43

Please see Response to Comment Nos. 26-E.1-27, 26-E.1-28, and 35-53 for a discussion on the conservative nature of the CalEEMod land use modeling and how the Draft EIR analyzed the potential physical environmental impacts of all proposed uses, areas, and activities, regardless of whether they are considered to be within the definition of floor area.

Comment No. 35-44

In contrast, in two other impact analyses, the preparers of the DEIR acknowledge that at least some of the floor area in the two production levels must be considered. Specifically, in estimating the Project's water demand, the DEIR factors in 194,600 square feet of basecamp area and 36,000 square feet for the Mobility Hub, a total of 230,600 square feet. (DEIR, pp. IV.M.1-35-38 [Tables IV.M.1-5 and IV.M.1-6]) The same is true with respect to the DEIR's estimate of the Project's wastewater demand. (*Id.*, pp. IV.M.2-14-17 [Tables IV.M.2-2 and IV.M.2-3]) These sizable uses should have been taken into account in all of the other relevant impact analyses, but were not.

Having said this, how was the basecamp floor area calculated? To our knowledge, there is nothing in the DEIR to substantiate this number. We surmise that the basecamp area comes from plans that have not been disclosed to the public, or perhaps from the "Floor

Plan—Level B1” sheet in the Application Plans, which shows the general locations of multiple basecamp areas. But the public really has no idea. Moreover, why do these water and wastewater demand calculations omit the floor area of the rest of the two production levels, which are apparently intended to collectively include far more than 230,600 square feet of space?

Response to Comment No. 35-44

Refer to Response to Comment No. 26-140 regarding the inclusion of basecamp uses throughout the impact analyses in the EIR. As discussed in Topical Response No. 2, Definition of Floor Area is Appropriate, the impacts associated with the Mobility Hub were fully analyzed in the EIR.

In addition, as set forth on pages II-25 to II-26 of Section II, Project Description, of the Draft EIR, the below grade levels referred to by the comment would be part of an integrated circulation and access plan with ancillary functions as follows.

The Project would incorporate a multi-level circulation plan that provides flexible and efficient access and circulation to meet the demands of a large-scale production studio. Two primary production levels would provide access, staging, storage, and connectivity between active production and supporting uses. The main level (at Project Grade), or the production activity level, would provide direct and separate access for vehicles and pedestrians to the uses on-site via a unified ground plane encircling the production facilities. The lower level, or the production operations level, would provide large areas of flexible space to house production vehicles and store equipment, with direct access to the production activity level above via vehicle ramps, pedestrian stairs and elevators, and service elevators. To facilitate efficient, safe, and effective production circulation, both the production activity and the production operations levels would provide space for basecamp, production staging, loading, and emergency vehicle access throughout the Project Site. These levels would be interconnected via a series of vehicular and pedestrian ramps, stairs, and elevators.

As discussed in Response to Comment No. 26-121, the circulation, parking and basecamp areas below Project Grade would not include active production activities. Refer to Figure II-6(a) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, of this Final EIR, which shows the existing and proposed basecamp areas. Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, regarding the proposed Specific Plan’s definition of floor area. Refer to Table II-2 on page II-13 in Section II, Project Description, of the Draft EIR for the land use and floor area breakdown of the proposed

development program (i.e., Conceptual Site Plan [Figure II-4 on page II-14 of the Draft EIR]) that was analyzed in the Draft EIR.

Comment No. 35-45

E. The DEIR's Analysis of the Project's Air Quality Impacts Is Inadequate.

For the numerous reasons discussed below, the DEIR's analysis of the Project's air quality impacts is inadequate and distorts and/or understates the Project's true air quality impacts. The comments below are supported in part by the Ramboll Letter, and the Ramboll Letter includes comments that are not summarized or referenced here.

1. The DEIR Unlawfully Failed To Include and Summarize a Health Risk Assessment.

The construction and operation of the Project is anticipated to include high levels of diesel particulate matter ("DPM") and other toxic air contaminants ("TAC"). Despite these substantial TAC emissions, the DEIR does not include a health risk assessment ("HRA") to evaluate the potential health impacts (e.g., acute, chronic and cancer risk) from construction and operation of the Project on adjacent sensitive land uses, including the BC Site. Instead, the DEIR summarily dismisses the need for an HRA by claiming that (1) the Project only has short-term construction impacts based on a 32-month construction schedule, (2) the Project includes less than 100 diesel-fueled trucks per day during operations and (3) the land uses associated with operation of the Project "are not considered land uses that generate substantial TAC emissions." (DEIR, pp. IV.A-68, IV.A-72) As discussed in more detail below, these statements are all inaccurate and unsupported by the DEIR.

Broadcast Center requests the City to update the DEIR to include an HRA that addresses the Project's short- and long-term construction impacts and operational impacts of the Project. As written, the DEIR provides limited information to the residents at Broadcast Center and other sensitive receptors in the surrounding area about how the Project could impact their health.

Response to Comment No. 35-45

Contrary to the commenter's assertion, the Draft EIR was not required to include a quantitative HRA. CEQA does not specifically require the completion of a quantitative HRA but, instead, requires that a project correctly identify and disclose the effects of pollutants, such as TACs, from project activities. Such identification and disclosure of impacts for the Project is performed qualitatively in the Draft EIR. Please see Response to Comment Nos. 1-3 and 1-4 for an explanation of why the qualitative health impact assessment included in the Draft EIR was indeed appropriate for this Project. Nonetheless, in response

to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. Refer to Response to Comment No. 26-E.1-2 regarding the HRA. As shown therein, the quantitative HRA demonstrates the Project would not result in significant health risks and confirms the findings of the Draft EIR.

See Response to Comment No. 26-E.1-21 for a discussion of sensitive receptors in proximity to the Project Site.

See Response to Comment Nos. 9-24 and 26-E.1-24 for a discussion of the buildout timeline and the long-term buildout impact assessment.

See Section E, Truck Trips, of Topical Response No. 10, Trip Generation, and Response to Comment No. 26-E.1-16 for a discussion of Project truck trip generation during operation.

Comment No. 35-46

a. Construction Impacts.

The construction of the Project will require use of heavy-duty trucks and heavy-duty off-road equipment during the entire construction period. (*Id.*, Appendix B, [Air Quality and GHG Technical Appendix], the “Air Quality Report”) Section IV.A (Air Quality) of the DEIR assumes two very different construction scenarios: (1) a 32-month construction period with a buildout year of 2026 (“2026 Buildout”); and (2) a 20-year construction timeline with concurrent operations with a final buildout year of 2043 (“Long-Term Buildout”). (DEIR, p. II-12; *see also* p. II-33) Therefore, the construction period could be anywhere between approximately three years and 20 years, an enormous range of time. The DEIR provides limited justification to support why it did not consider any construction period longer than three years and less than 20 years.

Under both of these assumed scenarios, construction would occur adjacent to, or in very close proximity to, numerous sensitive receptors, including Broadcast Center, which includes numerous dwelling units that have windows and balconies facing the Project Site, only seven feet from the Project Site. In fact, sensitive receptors (*e.g.*, residences, parks, hotels, etc.) surround the Project Site on all four sides, despite the misleading figure created for the DEIR.²⁰ (DEIR, p. IV.A-30 [Figure IV.A-4, Air Quality Sensitive Receptors Locations]) See Figure 1, Haul Truck Routes from the Ramboll Letter, which more accurately illustrates the expansive number of sensitive receptors surrounding the Project Site.

Notwithstanding the proximity and number of sensitive receptors near the Project Site, the DEIR summarily dismisses the need to prepare an HRA, based on an unrealistic and

unsupported assumption that the construction schedule would only be “short-term” in nature. The DEIR claims: “[g]iven the short-term construction schedule of approximately 32 months (2.5 years), the Project would not result in a long-term (*i.e.*, 70-year) source of TAC emissions.” (*Id.*, p. IV.A-68) However, as stated previously, the DEIR includes both a 2026 Buildout and a Long-Term Buildout. But, the Long-Term Buildout is ignored in DEIR’s analysis of TAC emissions. (*Id.*, pp. IV.A-74-77) As an attempt at justification, the DEIR claims that construction air quality impacts are evaluated based on a worst-case scenario using the “worst-case day.” However, this is only true and conservative for some air quality analyses, but not for the analysis used for an HRA. The methodology for a health risk analysis consists of four main steps: (1) hazard identification; (2) exposure assessment; (3) dose-response assessment; and (4) risk characterization.²¹ As recognized in other HRAs prepared for the City, long-term exposure to low concentrations of chemicals may eventually cause harm, meaning that a worst-case day analysis may not actually result in a worst-case analysis for purposes of health risk analyses. Therefore, a worst-case day analysis is misleading in that it sounds conservative and the “worst-case,” but in actuality it does not account for health impacts related to long-term exposure to chemicals at lower doses. So, the long-term exposure and potential health impacts to sensitive receptors from a Long-Term Buildout was not analyzed in the DEIR. As such, the DEIR fails to inform the public, especially the thousands of residents living in nearby sensitive receptors, of the true scope of health impacts caused by the Project.

²⁰ The DEIR also excludes several sensitive receptors from Figure IV.A-4 that are located closer to the Project Site than those identified in that Figure, including (1) future residential uses and sensitive receptors at 3rd & Fairfax Project, (2) residential uses at the Gilmore Adobe, 6333 W. Third Street, (3) The Fairfax Apartments, W. 1st Street and I 05 S. Fairfax Avenue, (4) SureStay Hotel by Best Western on Beverly and Genesee Avenue, 7721 Beverly Boulevard, (5) Beverly Inn, 7701 Beverly Boulevard, (6) School of Rock, 7801 Beverly Boulevard, and (7) Short Stories Hotel, 115 S. Fairfax Avenue.

²¹ “The first step, hazard identification involves determining the potential health effect which may be associated with emitted pollutants. The purpose is to identify qualitatively whether a pollutant is a potential human carcinogen or is associated with other types of adverse health effects. Depending on the chemical, these health effects may include short-term ailments or chronic diseases. The dose-response assessment is designed to characterize the relationship between the amount or dose of a chemical and its toxicological effect on the human body. Responses to toxic chemicals will vary depending on the amount and length of exposure. For example, short-term exposure to low concentrations of chemicals may produce no noticeable effect, but **continued exposure to the same levels of chemicals over a long period of time may eventually cause harm.** The purpose of the exposure assessment is to estimate the extent of exposure to each substance for which risk will be evaluated. This involves emission quantification, modeling of environmental transport, identification of chemicals of concern, identification of exposure routes, identification of exposed populations, and estimation of long-term exposure levels. Risk characterization is an integration of the health effects and public exposure information developed for emitted pollutants to provide a quantitative probability of adverse health effects.” (Final EIR, Appendix FEIR-7, Health Risk Assessment for 3rd & Fairfax Project, pp. 6–7, emphasis added)

Response to Comment No. 35-46

The commenter incorrectly states that no interim years other than 2026 (32-month buildout) and 2040 (long-term buildout) were analyzed in the Draft EIR. As clearly presented in Table IV.A-12 of the Draft EIR, interim years with overlapping construction and operation were analyzed, including 2026, 2030, 2035, 2040, and 2043. Refer to Response to Comment Nos. 9-24 and 26-E.1-24 for a discussion of the buildout timeline and the long-term buildout impact assessment.

The commenter also incorrectly asserts that Figure IV.A-4 of the Draft EIR excludes several sensitive receptors that are located closer to the Project Site than those identified in that figure. As stated on page IV.A-31 in Section IV.A, Air Quality, of the Draft EIR, only those sensitive receptors nearest to the Project Site are displayed in Figure IV.A-4. In review of the additional receptors identified in this comment, hotels would not be considered sensitive receptors based on the definition included in the SCAQMD's LST methodology. While the School of Rock does include camps and lessons, it would not be considered a school where children would spend substantial amount of time on an ongoing basis and is not considered a sensitive receptor. Figure IV.A-4 has been updated to include the 3rd and Fairfax Project and the Fairfax Apartments; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. While these additional sensitive receptors were not specifically identified in Figure IV.A-4, the closest sensitive receptor land use to the Project Site would remain to be the residential use located immediately east of the Project Site (Broadcast Center Apartments). As shown in Table IV.A-10 and Table IV.A-11 of the Draft EIR, Project localized construction and operational emissions would remain below the significance thresholds for all identified receptors. Based on the SCAQMD LST methodology properly employed in the Draft EIR, impact estimates would be greatest at those receptors closest to the Project Site and would be lower at all other receptors. Please see Response to Comment No. 26-26 for a discussion of analyzed sensitive receptors and the conservative nature of the LST methodology. This response to comment also discusses the types of land uses considered to be sensitive receptors under the applicable methodology.

Please see Response to Comment Nos. 26-E.1-2 and 26-E.1-14 for a discussion of human health risk impacts and the Draft EIR's conservative use of the 32-month buildout scenario for the analysis of Project health risk. Moreover, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the conclusions of the Draft EIR.

Comment No. 35-47

In addition, the DEIR should have included an analysis of health impacts related to a 2026 Buildout, given the proximity of numerous residential uses near the Project Site, which includes dozens of apartments with windows and balconies facing the Project Site. These residents would have direct exposure to DPM and other TAC emissions during the entire duration of construction over a large construction area of approximately 25 acres. Moreover, the Office of Environmental Health Hazards Assessment's ("OEHHA") Air Toxics Hot Spots Program Guidance Manual for Preparation of Risk Assessments ("2015 OEHHA Guidance Manual"), provides recommendations related to cancer risk evaluation of short-term projects, which further demonstrates that the DEIR should have addressed short-term construction impacts.²² In the recent past, the City has required the preparation of HRAs in connection with EIRs for residential projects that examine health impacts related to short-term construction consistent with these recommendations.

Therefore, either a 2026 Buildout or a Long-Term Buildout necessitates the preparation of an HRA. As such, the analysis in the DEIR should be updated to include an HRA that examines the Project's health impacts related to both a 2026 Buildout and a Long-Term Buildout.

²² "The local air pollution control districts sometimes use the risk assessment guidelines for the Hot Spots program in permitting decisions for short-term projects such as construction or waste site remediation." See Section 8.2.10 of the 2015 OEHHA Guidance Manual.

Response to Comment No. 35-47

Please see Response to Comment No. 26-E.1-14 for a discussion of human health risk impacts. Moreover, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the conclusions of the Draft EIR.

This comment misconstrues information in the 2015 OEHHA Guidance regarding applicability of preparing an HRA of short-term projects. In addition, this comment incorrectly claims that the Draft EIR was required to conduct a quantitative HRA based on this guidance. OEHHA adopted the Air Toxics Hot Spots Program Guidance Manual for the Preparation of Risk Assessments (2003 Guidance Manual) in October of 2003. The Guidance Manual was developed by OEHHA, in conjunction with CARB, for use in implementing the Air Toxics "Hot Spots" Program (Health and Safety Code Section 44360 et. seq.). The Air Toxics "Hot Spots" Program requires certain stationary sources to report the types and quantities of certain substances routinely released into the air. The goals of the Air Toxics "Hot Spots" Program are to collect emission data, identify facilities having

localized impacts, ascertain health risks, to notify nearby residents of significant risks, and reduce those significant risks to acceptable levels.

OEHHA adopted a new version of the *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Risk Assessments* (2015 Guidance Manual) in March of 2015.¹³² CARB acknowledges that the Guidance Manual does not include guidance for projects prepared under the auspices of CEQA and that it would be “handled by individual [Air Pollution Control] Districts.”¹³³ The intent in developing the 2015 Guidance Manual was to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of new or modified stationary sources.¹³⁴ The 2015 Guidance Manual provides recommendations related to cancer risk evaluation of short-term projects. As discussed in Section 8.2.10 of the 2015 Guidance Manual, “[t]he local air pollution control districts sometimes use the risk assessment guidelines for the Hot Spots program in permitting decisions for short-term projects such as construction or waste site remediation.” Short-term projects that would require a permitting decision by SCAQMD typically would be limited to site remediation (e.g., stationary soil vapor extractors). The extent of potentially contaminated soils and groundwater are not anticipated to require a permitting decision by SCAQMD. The 2015 Guidance Manual does not provide specific recommendations for evaluation of short-term use of mobile sources (e.g., heavy-duty diesel construction equipment). OEHHA’s recommendation to prepare a quantitative HRA for a short-term project does not apply to this Project. Please note that construction activities associated with potentially contaminated soils and groundwater were included in the above-referenced HRA (see Appendix FEIR-10 of this Final EIR).

Comment No. 35-48

To fill in these informational gaps, Ramboll performed a screening-level analysis for construction impacts for the 2026 Buildout. Using the CalEEMod-generated unmitigated emissions reported in DEIR for the 2016 Buildout, Ramboll completed a Tier 3 HRA for on-site construction equipment using the United States Environment Protection Agency (“USEPA”) AERSCREEN tool. The screening-level analysis determined that DPM from on-site construction equipment would generate a maximum incremental cancer risk of **52.9 in a million** at the property line and **65.2 in a million** at a distance of 175 meters from

¹³² Office of Environmental Health Hazard Assessment, Air Toxicology and Epidemiology, Adoption of Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments, March 6, 2015, <https://oehha.ca.gov/air/crn/notice-adoption-air-toxics-hot-spots-program-guidance-manual-preparation-health-risk-0>.

¹³³ CARB, Risk Management Guidance for Stationary Sources of Air Toxics, July 23, 2015, www.arb.ca.gov/toxics/rma/rmgssat.pdf, p. 19.

¹³⁴ CARB, Overview of the Air Toxics “Hot Spots” Information and Assessment Act, ww2.arb.ca.gov/overview-air-toxics-hot-spots-information-and-assessment-act.

the Project Site. (Ramboll Letter, Attachment A). This is well over the **10 in a million significance threshold** for a significant health risk impact. While the use of Tier 4 construction equipment, as required by Mitigation Measure AIR-MM-1, could reduce the health risk impacts below this threshold, the DEIR did not evaluate and disclose the unmitigated impact, nor demonstrate how AIR-MM-1 would mitigate that significant impact to less than significant. In addition, if corrected CalEEMod assumptions were used (see discussion below), the construction health impacts would be even greater and may not be mitigable.

Response to Comment No. 35-48

This comment is similar to Comment No. 26-E.1-14. Please see Response to Comment No. 26-E.1-14.

Comment No. 35-49

As a final point, the health risk impacts of the truck activity at the two “potential” offsite truck staging areas (shown on Figures IV.I-4 and IV.I-5 in the DEIR) that will be used during project construction are not evaluated in the DEIR. The Project is expected to generate over 102,000 hauling truck trips during construction. Many of those trucks would use these staging areas. There are numerous sensitive receptors, including residences, schools and a hospital, that are located in the vicinity of these staging areas and would be exposed to DPM and other TAC emissions from trucks. (Ramboll Letter, Figures 2 and 3) Therefore, the required HRA should assess and disclose the health impacts on sensitive receptors near the potential staging areas.

Furthermore, these trucks would enter the Project Site during construction. DPM emissions from the onsite activity of these trucks (driving and idling) should be evaluated as part of the HRA construction analysis.

b. Operational Impacts.

The Project contemplates several new mobile and stationary sources of DPM and other TAC emissions during operation that further necessitate the preparation of an HRA. Specifically, the Project apparently includes new mobile sources such as diesel-fueled delivery and production trucks, the addition of a private roads [sic] adjacent to the BC Site, and the construction of a Mobility Hub. The Project also apparently includes new stationary sources such as diesel-fueled generators for emergency power and for basecamps, spray-paint booths, and the storage and use of hazardous materials like diesel-fuel filled belly tanks and above-ground storage.²³ These sources of DPM and other TAC emissions would be located adjacent to sensitive receptors, including the many windows and balconies in Broadcast Center that abut the Project Site.

Despite the proposed uses and proximity to sensitive receptors, the DEIR dismisses the need to prepare an HRA to assess operational health impacts with incomplete, unsupported and sometimes misleading claims about the Project. (DEIR, p. IV.A-72) To start with, the DEIR recognizes that, for mobile sources, the South Coast Air Quality Management District (“SCAQMD”) recommends preparation of an HRA when a project includes “substantial individual sources” of DPM such as truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units.²⁴ (*Id.*, p. IV.A-72)

²³ The Existing Television Studio is currently designated as a small quantity generator under the Resource Conservation and Recovery Act (“RCRA”). (DEIR, p. IV.F-48) The DEIR recognizes that the Project could increase the hazardous-waste generating activities, but does not state whether Hackman’s designation would change or require reassignment. The DEIR also does not address how or whether this designation undercuts statements regarding the types of TACs anticipated on the Project Site. According to the DEIR, the only TACs anticipated as part of operations (except mobile sources) include cleaning solvents, paints, landscape pesticides, etc. (*Id.*, p. IV.A-72) The DEIR, however, does not discuss the other potential sources of TACs identified in Section IV.F (Hazards and Hazardous Materials), such as diesel storage tanks, diesel-fuel generators, spray paint booths, etc.

²⁴ See also California Air Resources Board (“CARB”), Air Quality and Land Use Handbook: A Community Health Perspective.” April 2005, Table 1-1 on p. 4.

Response to Comment No. 35-49

The first paragraph of this comment is similar to Comment No. 26-E.1-20. Please see Response to Comment No. 26-E.1-20. Please see Response to Comment No. 26-E.1-18 for a discussion of operational TAC sources, including emergency generators, portable generators, and spray paint booths. Additionally, as discussed in Response to Comment No. 26-34, the Project does not propose a fueling station, and a fueling station is not permitted under the proposed Specific Plan. As such, there would be no fueling belly-tanks on-site. Furthermore, VOC emissions and related TACs from diesel storage tanks associated with emergency generators would not represent a substantial TAC source. The combustion of diesel and not the storage of diesel contributes to cancer risk. SCAQMD provides guidance regarding the calculation of VOC emissions from storage tanks, which provides 0.0028 pound of VOC per 1,000 gallons of diesel throughput.¹³⁵ In 2019, Television City used approximately 3,464 gallons of diesel for all of the emergency generators, which would equate to less than 10 pounds per year (0.03 pound per day) of VOC emissions across the Project Site. These emissions were not required to be reported in Television City’s Annual Emission Reports. Please refer to Response to Comment No. 1-4 for a discussion of the 100 trucks per day siting criteria. Please refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, for a detailed explanation of the

¹³⁵ SCAQMD, Supplemental Instructions for Liquid Organic Storage Tanks Annual Emissions Reporting Program, revised December 2020.

trip generation assumptions, which went into the Draft EIR's daily truck estimates. Please refer to Response to Comment No. 26-E.1-21 regarding impacts to Broadcast Center Apartments.

Additionally, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. The HRA includes all anticipated sources of DPM (e.g., emergency generators and spray paint booths) and other TAC which would occur on the Project Site during construction and operations. As shown therein, health risk impacts would be less than significant, confirming the conclusions of the Draft EIR.

Refer to Response to Comment No. 26-78 regarding the hazardous waste categorization for the Project Site and how the routine use of small quantities of potentially hazardous materials will continue to be managed in similar quantities in accordance with applicable permits and regulations, such as LAFD CERS/CUPA permitting requirements, under which the Project Site currently operates.

Comment No. 35-50

The DEIR claims that daily truck trips for the Project would not exceed 100 trucks per day or more than 40 with operating transport refrigeration units. (*Id.*, p. IV.A-72) However, these claims are not supported by evidence elsewhere in the DEIR and Appendices. The CalEEMod assumptions in the Air Quality Report reflect that the Project would generate approximately 559 one-way trips or 279 round trips per day during operations, far greater than 100 trucks per day. (Air Quality Report, pp. 102 and 103; Ramboll Letter, Comment 4c). This is almost three times more than the 100 truck trips/day threshold that triggers the need for a mobile air toxics HRA.

Figures in the transportation analysis also indicate that more than 100 trucks per day is likely. We count approximately 54 large, 18-wheeler trucks shown in these figures, which only includes at-grade activity and omits, at a minimum, the below-grade production level. This further indicates that considerably more than 100 trucks would visit the Project Site each day. (DEIR, Appendix M.1 [Transportation Assessment, Figures 1, 2B, 3,]; [sic] *Id.*, p. IV.K-43 [Figure IV.K-3]) Setting aside the lack of transparency, the number of anticipated diesel-fueled trucks alone should have triggered preparation of an HRA to assess health impacts from DPM and other TAC emissions from operational mobile sources.

Response to Comment No. 35-50

This comment is similar to Comment No. 26-29. Refer to Response to Comment Nos. 26-29.

This comment misrepresents information included in the figures in the transportation analysis. Figure 2B (Project Site Vehicular Access Proposed) on page 13 of Appendix M.1, Transportation Assessment, of the Draft EIR shows truck access and routing throughout the Project Site by depicting truck movements regardless of at-grade or below-grade and not the proposed number of trucks per day.

Additionally, in response to comments on the Draft EIR, a quantitative HRA was completed and is included as Appendix FEIR-10 of this Final EIR. As shown therein, health risk impacts would be less than significant, confirming the conclusions of the Draft EIR.

Comment No. 35-51

In addition, the Project includes two new “conceptual” private streets adjacent to Broadcast Center, but fails to address their potential health impacts on Broadcast Center residents. Specifically, the DEIR Conceptual Plan includes two new private streets, one of which would be adjacent to the southerly boundary of the BC Site and the second of which would be adjacent to the western boundary of the BC Site. (DEIR, p. II-14 [Figure II-4]) The western private street would include four lanes and have a width of 30 feet (*id.*, p. IV.K-43 [Figure IV.K-3]), and Hackman has indicated that this private street would be used for truck traffic. In addition, based on the Height Zone Map in Figure II-5, Hackman could construct one or more 160-foot-tall buildings immediately adjacent to the western private street and 37 feet from the Broadcast Center building, approximately seven feet from the western boundary of the BC Site. (*Id.*, p. II-20)

Similarly, the southern private street would include six lanes and have a width of 60 feet. (*Id.*, p. IV.K-43 [Figure IV.K-3]). Hackman has indicated that the street would also support truck traffic. Based on the Height Zone Map, Hackman could construct one or more 130-foot-tall buildings immediately adjacent to the southern private street.

What this means is that the new streets would support traffic from diesel-fueled trucks adjacent to sensitive receptors and the windows and balconies of Broadcast Center residents. Despite this obviously problematic project feature, the DEIR does not address potential health impacts from siting these new private streets immediately adjacent to Broadcast Center.

Moreover, the new private streets would essentially create “canyons” between the Broadcast Center building and the new buildings at the edges of the Project Site. The TAC emissions from diesel-fueled trucks would linger in the “canyons” for longer periods, rather than more quickly dispersing. The DEIR does not address this unique and potentially harmful condition created by the Project, or the potential health impacts on nearby sensitive receptors.

As previously discussed, the Project also includes an onsite Mobility Hub (depicted in Figure II-9 of the DEIR) that would support first/last mile connections, encourage employee and visitor use of public transit through the provision of a shuttle bus service,²⁵ carpooling, vanpooling, and biking/scooter to work, and support transportation demand management strategies. (DEIR, p. II-26) However, the scope and location of the Mobility Hub is conceptual and it could be located anywhere on the Project Site since the DEIR Conceptual Plan only illustrates one potential development scenario. Broadcast Center believes that it would be highly inappropriate to place the Mobility Hub in proximity to its building. That said, if the air quality analysis in the DEIR truly reflected a worst-case scenario, as stated in the project description (*id.*, pp. II-16–17), the analysis should have assumed that the Mobility Hub would be located adjacent to the BC Site. To the contrary, however, the analysis does not address potential health impacts of siting the Mobility Hub near any sensitive land use, notwithstanding that Hackman would have full discretion to do precisely that.

²⁵ It is important to note that the project description also states that shuttle buses would use the Mobility Hub. (DEIR, pp. II-26, 30 [Figure II-9]) However, the DEIR provides almost no information about the shuttle buses. For example, it is not clear whether the shuttle buses would use diesel or gasoline, how many buses are anticipated per day, or whether the shuttle buses would enter the Project Site on either of the new private streets adjacent to Broadcast Center. How would diesel-fueled shuttle buses impact the health of adjacent residents? Were the shuttle buses factored into the DEIR's determination that an HRA is not required for the Project? Would the number of shuttle buses increase over time? Would there be any cap on the maximum number of shuttle buses per day? The DEIR should provide information to address these basic questions. The DEIR should be updated to fill in these informational gaps and address the potential health impact from diesel-fueled shuttle buses.

Response to Comment No. 35-51

See Response to Comment No. 26-E.1-21 for a discussion of why further investigation into speculative and unsubstantiated alleged “air canyon” effects is not warranted. As discussed in the response, the findings of the Draft EIR would not be meaningfully changed by the consideration of additional downwash effects, and the results of the Draft EIR and HRA, included as Appendix FEIR-10 of this Final EIR, are conservative in their assessment of potential health risks. Please see Response to Comment No. 26-E.1-23 and Topical Response No. 7, Mobility Hub, for a discussion of the vehicle trip effects of the Mobility Hub, which would be expected to reduce vehicle trips and VMT associated with Project operations.

Refer to Topical Response No. 7, Mobility Hub, for a more detailed discussion of the function and location of the Mobility Hub. Contrary to what is stated in this comment, Figure 4 (Mobility Hub Conceptual Plan) on page 15 of Appendix M.1, Transportation Assessment, of the Draft EIR provides additional details regarding the Mobility Hub. The primary Mobility Hub functions and location are proposed in the southwest corner of the Project Site, near the intersection of Fairfax Avenue and 1st Street, as shown in the Conceptual Site Plan in the Draft EIR and Transportation Assessment. Also refer to

Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan that requires, among other things, a discretionary approval and CEQA compliance review for substantial changes to the Project. While not specifically identified in the Draft EIR, the Mobility Hub would not include any diesel fueled shuttles (thereby reducing DPM and health risk impacts), and the shuttles were instead conservatively assumed to be gasoline-fueled, although four EV chargers would be provided for future electrical shuttles. Additional details regarding the number and type of shuttles and Mobility Hub are included in the quantitative HRA, included as Appendix FEIR-10 of this Final EIR and the Mobility Hub Memo included as Appendix FEIR-20 of this Final EIR. As discussed therein, the Mobility Hub would result in approximately 52 shuttle round trips (approximately 90 VMT per day based on an approximately 1.7-mile round trip) to the Metro D (Purple) Line Wilshire/Fairfax Station and would displace approximately 1,346 auto trips (over 9,000 VMT per day based on 6.7 VMT per capita as shown in Table IV.K-5 of the Draft EIR). The Draft EIR conservatively did not account for the reduction in emissions associated with the reduction in trips and VMT associated with the use of the Mobility Hub. These shuttle bus trip totals would accommodate the anticipated demand from the full buildout of the Project and, thus, are not expected to increase beyond these levels. Clarification regarding the additional EV chargers is provided in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Thus, the Draft EIR's analysis of health impacts and the HRA present conservative assessments of Project health impacts.

The comments expressing the commenter's opinions are noted for the administrative record and have been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 35-52

With respect to stationary sources, the DEIR makes the blanket claim that the land uses associated with operation of the Project "are not considered land uses that generate substantial TAC emissions." (*Id.*, p. IV.A-72) However, the DEIR glosses over the fact that the Project, like the Existing Television Studio, actually does include sources of TACs, including spray-paint booths, diesel-powered generators for emergency power and for basecamps, and broilers. Starting with the Existing Television Studio, based on publicly available data that Ramboll reviewed from SCAQMD's Facility Information Detail ("FIND") database, the Existing Television Studio currently uses numerous sources of TAC emissions, including six diesel emergency generators, four spray booths, and six boilers.²⁶ (Ramboll Letter, Comment 4e) Annual TAC emissions from these existing sources, as reported to SCAQMD in calendar year 2021, are shown in Table 1 in the Ramboll Letter. Table 1 shows that DPM emissions from existing operations (*i.e.*, diesel generators) were greater than 39 pounds per year (lbs/yr) in 2021. SCAQMD's Risk Assessment Procedures (Permit Application Package "N") establish annual Tier 1 screening emission

levels for DPM, which range from 0.0483 lbs/yr for a 25-meter (m) receptor distance to 0.404 lbs/yr for a 100m receptor distance.²⁷ According to SCAQMD's Risk Assessment Procedures, these "six screening levels are pollutant emission thresholds, which are not expected to produce a maximum incremental cancer risk ["MICR"] greater than one in one million nor a hazard index greater than one."²⁸ The current operational DPM emissions are nearly 100 times greater than the DPM screening emission level at 100m and 800 times greater than the screening emission level at 25 meters, indicating that the MICR from DPM emission due to the operation of the existing diesel generators is likely far greater than 10 in a million. (*Id.*)

The DEIR does not discuss how the TAC emissions from the Existing Television Studio would change with the Project, despite the proposed intensification of the existing uses at the Project Site. (DEIR, pp. IV.A-71-72) As such, the reader has no idea whether the Project would worsen existing TAC emissions at the Existing Television Studio, keep emissions the same or similar, or reduce existing emissions. Without identifying the proposed stationary sources of TAC emissions, the public also has little understanding of the health impacts of the Project on sensitive receptors.

As such, in addition to an operational HRA, the DEIR should also be updated to include information regarding the scope, level of emissions, and health impacts of certain TAC-emitting uses proposed during operations of the Project, including the diesel-powered generators (emergency, basecamps, trailer-mounted), spray-paint booths, storage of waste paint and cleaning fluids (*i.e.*, hazardous wastes), clarifiers for the helipad and transformer substation, and the storage and use of hazardous materials like diesel-fuel belly tanks and above-ground storage. (*Id.*, pp. IV.F-29–30, 40, 41) These are all uses identified in Section IV.F (Hazards and Hazardous Materials) of the DEIR that would result in TAC emissions, yet the DEIR does not address whether these stationary sources of TAC would expand, stay the same, or be reduced, or if the TAC emissions would result in substantial health impacts to nearby sensitive receptors.

As an example, the DEIR states throughout that generators will be used for basecamp operations. (*Id.*, pp. 11-7; IV.A-10, 64 [Table IV.A-7], and 70 [Table IV.A-10]; IV.C-17 and 27 [Table IV.C-2]; and IV.F-32 and 41) However, the air quality analysis provides limited information related to the DPM emissions and health impacts from these generators. It is difficult to understand basic facts regarding the generators let alone their potential environmental impacts. Information regarding the number of proposed generators at the Project Site,²⁹ where the generators would be located, how many generators could be used at one time, how long generators would be running, or if the basecamp and trailer-mounted generators are included in the total estimate for "emergency" generators is completely missing from the DEIR. Without knowing this information, it is impossible for the public to understand the potential health impacts from the generators that very well could be placed adjacent to Broadcast Center, exposing dozens of residents to unhealthy levels of DPM.

- ²⁹ The only information contained in the DEIR regarding the number of existing and proposed diesel-powered generators is in Section IV.C (Energy), which states that six emergency generators are currently used on the Project Site, and that the Project would increase the amount of diesel fuel used by generators by an additional 4,594 gallons per year (which, if you do the math, would increase the total to approximately nine generators). However, as a separate issue, this assumption raises the obvious question of whether it is reasonable to assume that the proposed intensification of uses and increase in square footage at the Project Site would only require three additional generators. The DEIR provides no justification for this assumption. And, the facts suggest otherwise. The project description reflects the continued use of belly tanks and aboveground storage tanks (“AST”) for diesel fuel storage at the Project Site, which implies that the generators could be used frequently, likely beyond any “emergency” use.

Response to Comment No. 35-52

The first portion of this comment is similar to Comment No. 26-E.1-18. Please see Response to Comment Nos. 1-3 and 26-E.1-18 for a discussion of existing and future Project permitted source TAC emissions, including emergency generation units, boilers, portable generators, and paint booths. In the comment footnote, the commenter suggests that the number of emergency generators proposed in the Project is speculative, which is incorrect. The generators included in the Project assessment represent the number of emergency generation units necessary to meet reasonably foreseeable needs of the facility based on the designs and operational uses specified for the Project. However, the emergency generator calculation sheet was inadvertently not provided in Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR. This worksheet is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. As shown therein, the Project would include 7 new emergency generators. Please refer to Response to Comment No. 1-4 for a detailed discussion of emissions associated with the existing and proposed emergency generators.

This comment incorrectly states that the Draft EIR includes multiple references to generators being used for basecamp operations; refer to Response to Comment No. 26-36.

Additionally, as discussed in Response to Comment No. 35-49, the Project does not propose a fueling station, and a fueling station is not permitted under the proposed Specific Plan. As such, there would be no fueling belly-tanks on-site.

As discussed in Response to Comment Nos. 26-15 and 16-87, while both the existing conditions and future Project would include a helipad, the operational usage of the helipad would not be expected to change as a result of the Project and its location would be expected to be located higher (i.e., further from receptors) than under existing conditions. Storage of operational wastes, such as paint and cleaning fluids, would be consistent with regulatory requirements for hazardous waste products and would not be expected to result in an airborne source of TAC beyond the architectural coating and consumer product emissions estimated in the Draft EIR modeling. Please refer to pdf page 106 of Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR for the calculation of architectural coating and consumer product emissions.

As discussed above in Response to Comment No. 26-E.1-18, the Project would not create new substantial sources of TACs and would result in overall reductions to existing TAC emissions at the Project Site, and the Draft EIR correctly concluded that impacts would be less than significant based on the qualitative health risk analysis. However, in response to comments on the Draft EIR, further evaluation of TAC emissions is included in a quantitative HRA, provided as Appendix FEIR-10 of this Final EIR, which confirms the conclusion in the Draft EIR. Please note that the seven new emergency generators were located for analysis purposes in close proximity to the Broadcast Center Apartments for purposes of the HRA to conservatively evaluate potential health risk impacts at this sensitive receptor.

Comment No. 35-53

2. The Nebulous Project Description Invalidates the Entire Air Quality Analysis.

Broadcast Center has significant concerns regarding how the amorphous and unstable project description impacts the assumptions used for the air quality analysis. To begin with, the air quality analysis appears to be based on the “Proposed New Construction” and “Existing to Remain” columns in Table II-2 (Proposed Development Program) of the DEIR, which is apparently tied to the DEIR Conceptual Plan. (DEIR, p. II-13) However, as previously discussed, Table II-2 makes clear that the “proposed construction floor area amounts listed in this table represent **one possible development scenario** that could be developed in conformance with the proposed Specific Plan. **Actual development would be governed by the requirements of the proposed Specific Plan.**” (*Id.*, p. II-13 [Table II-2, Note b], emphasis added) Moreover, the stated floor area requirements can be substantially increased and/or decreased pursuant to “land use exchanges” between the various uses that would be permitted in the Specific Plan. (*Id.*, pp. II-16–17) In other words, the Project remains indeterminate, and the DEIR’s air quality analyses are based on inputs from an illustrative development scenario that cannot possibly reflect the Project’s “maximum possible” air quality impacts, as the DEIR claims in the project description. (*Id.*) The DEIR provides no support for this statement with respect to the air quality analyses.

To further confuse matters, the proposed development program in Table II-2 is based on “floor area” as defined in the yet-to-be-seen Specific Plan. (*Id.*, p. II-13 [Table 11-2, Note a]) As previously noted, however, the Specific Plan would modify the LAMC definition of floor area to exclude activity areas that would generate air quality impacts. According to the DEIR, the Specific Plan definition of “floor area” eliminates at least 110,000 square feet of active production-related spaces that would be counted as floor area under the LAMC definition.³⁰ So, the assumptions inputted into CalEEMod artificially limit the air quality impacts associated with the already amorphous DEIR Conceptual Plan.

To make matters worse, it further appears that the DEIR’s air quality analyses omits at least 120,000 square feet of additional active production and other spaces that may not qualify as LAMC floor area but nonetheless would generate pollutant emissions (for a total of approximately 230,000 square feet of impact-generating areas).³¹ A meaningful analysis should include all areas and uses that would generate pollutant emissions and thereby impact air quality.

It appears that the floor area associated with some of the most intensive project uses has been eliminated in the LAMC and/or Specific Plan definitions, including the Mobility Hub, all of the basecamp areas and outdoor production areas, eating areas and production trailers.

Moreover, the minimum of approximately 230,000 square feet of unanalyzed active space may be substantially understated. As previously discussed, even if the two planned production levels each covered only 50% of the Project Site (they could potentially cover the entire Project Site), that results in an additional approximately 1,000,000 square feet of active project space. It appears, however, that no floor area associated with these production levels were inputted into CalEEMod, so their potential air quality impacts are not analyzed at all.

Therefore, the DEIR significantly understates the Project’s operational air quality impacts, which may result in undisclosed significant impacts. As one example of the potential importance of this omission, Table IV.A-7 indicates that the Project’s operational VOC emissions would be 45 pounds per day, which is just under the significance threshold of 55 pounds per day. (DEIR, p. IV.A-64) That VOC operational impact, however, could easily exceed the significance threshold, resulting in a significant impact, if the DEIR had properly analyzed all of the Project’s impact-generating areas.

³⁰ Specifically, the DEIR indicates that the Project includes 1,874,000 square feet of Specific Plan floor area, but 1,984,000 square of LAMC floor area. (*Id.*, p. II-1)

³¹ The preparers of the DEIR make it exceptionally difficult to figure this out. However, buried in footnote 1 on page II-1 of the project description is a statement that the Project’s “gross” floor area is approximately 2.103 million square feet. The difference between that gross floor area and the Specific Plan floor area is approximately 230,000 square feet (2.103–1.874). That difference matches up with the 230,600 square feet of non-Specific Plan floor area that was added to the Specific Plan floor area to evaluate the Project’s

water and wastewater impacts. That 230,600 square feet includes 194,600 square feet of “basecamp” and 36,000 square feet for the Mobility Hub. (*Id.*, pp. IV.M.2-14 [Table IV.M2-2], [sic] IV.M.2-16 [Table IV.M2-3]) [sic] Therefore, at a minimum, the air quality analyses omit a total of approximately 230,000 square feet of impact-generating uses.

Response to Comment No. 35-53

Please see Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for detailed explanation of how the Project Description is accurate, stable and finite and complies with CEQA, and how the Draft EIR comprehensively analyzed the Project’s potential air quality impacts in accordance with CEQA and based on conservative assumptions and is supported by substantial evidence. Please see Topical Response No. 3, Permitted On-Site Uses, for a detailed explanation of the land uses permitted for the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR’s air quality analysis accounts for the proposed Specific Plan’s Land Use Exchange Program. As discussed therein, the CalEEMod model was developed using representative land use types, modeled such that the most conservative representation of permitted land use emissions was assumed, and the maximum impact scenarios under the land use exchange were analyzed. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for additional discussion regarding the Land Use Exchange Program.

See Response to Comment No. 26-E.1-28 for a discussion of how the CalEEMod model appropriately accounts for the entire Project, not just those elements that might be defined as “floor area.” As discussed therein, electricity and lighting associated with basecamp operations and Mobility Hub were accounted for within the parking structure electricity use. When electricity is used in buildings, the electricity generation typically takes place off-site at power plants, the majority of which burn fossil fuels. Because power plants are existing stationary sources permitted by air districts and/or the USEPA, criteria pollutant emissions are generally associated with the power plants themselves, and not individual buildings or electricity users. Additionally, criteria pollutant emissions from power plants are subject to local, state, and federal control measures, which can be considered the maximum feasible level of mitigation for stack emissions. Therefore, electricity usage associated with the basecamp areas and the Mobility Hub would not change the air emissions conclusions presented in the Draft EIR. See Response to Comment No. 26-36 for a discussion of operational emission sources from basecamps. See Response to Comment No. 26-E.1-28 for a discussion of the operational impacts of the Mobility Hub.

As discussed in Response to Comment No. 26-36, while outdoor production activities may occur above Project Grade, no active production activities or uses would be located in the parking and basecamp areas below Project Grade. Refer to Figure II-6(a) in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

As shown in Table IV.A-7 in Section IV.A, Air Quality, of the Draft EIR, operational VOC emissions were estimated to be 45 pounds per day, approximately 82 percent of the threshold, and thus impacts would be less than significant. Furthermore, the additional electricity usage associated with basecamp areas and the Mobility Hub would not increase operational VOC emissions. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan; Topical Response No. 3, Permitted On-Site Uses; and Response to Comment Nos. 26-E.1-27 and 26-E.1-28, this conclusion reflects the operational emissions associated with basecamp areas and the Mobility Hub and reflects a conservative estimate of Project operational VOC emissions.

Comment No. 35-54

In addition, the DEIR shows the “net” operational emissions from the Project in Table IV.A-7 and Table IV.A-10, rather than the total expected emissions from the Project. (*Id.*, pp. IV.A-64 and 70) Ostensibly, the EIR preparers subtracted the total emissions from “TVC Operations—Total Permitted Land Uses” on pages 98 through 117 of the Air Quality Report with the CalEEMod results from “TVC Existing” on pages 77 through 97. However, this is not explained in the DEIR or in Table IV.A-7 or Table IV.A-10. Furthermore, the DEIR does not address how existing floor area is calculated, which makes the air quality analysis (and the Project’s impacts) impossible to understand. Specifically, the reader has no way of knowing if the floor area assumptions inputted in CalEEMod are based on the Specific Plan definition of floor area or the LAMC definition of floor area. Being able to comprehend the assumptions used in CalEEMod is critical because the analyses for both regional and localized operational emissions was offset by the proposed emissions from the Project with emissions from existing conditions.

As a final point, the DEIR makes no effort to connect the dots for readers. We had to piece together statements regarding the nebulous project description with descriptions from multiple sections and technical appendices in the DEIR to even begin to understand the inputs used in the CalEEMod and assumptions in the air quality analyses. No cogent explanation of these assumptions exists in the DEIR.

Response to Comment No. 35-54

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Project Description is accurate, stable, and finite and meets all of the requirements under CEQA.

Page IV.A-59 in Section IV.A, Air Quality, of the Draft EIR states that regional emission impacts were analyzed based on the “net increase” in criteria pollutant emissions, and page IV.A-68 indicates that the “pollutant increment” is applicable to the LST analysis.

Consistent with the requirements of CEQA, the “net increase” and “increment” represent the difference between the buildout of the Project and existing conditions.

Please see Topical Response No. 2, Definition of Floor Area is Appropriate, for a detailed description of the floor area assumed throughout the analysis. The square footage of land uses in Table II-2, Proposed Development Program, in Section II, Project Description, of the Draft EIR are based on the Specific Plan definition of floor area and are consistent with the square footage by land use included in the CalEEMod modeling provided in Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Appendix FEIR-3 of this Final EIR for a discussion of the Land Use Exchange Program. Additionally, Response to Comment No. 26-E.1-27 explains how the Draft EIR air quality analysis accounts for the proposed Specific Plan’s Land Use Exchange Program. As discussed therein, the CalEEMod model was developed using representative land use types, modeled such that the most conservative representation of permitted land use emissions was assumed. Please see Appendix B, Air Quality and Greenhouse Gas Emissions, of the Draft EIR for a detailed explanation of the analytical methods and calculations utilized throughout the Draft EIR air quality and GHG analyses.

Comment No. 35-55

3. The DEIR Air Quality Analyses Are Based on Inaccurate and Self-Serving Assumptions That Do Not Account For Worst-Case Scenarios or Otherwise Result in Inaccurate or Unsupported Analyses.

As previously discussed, the DEIR claims all of the impact analyses evaluate “maximum possible impacts.” The DEIR does so to excuse the unstable project description. As discussed earlier, in addition to the courts having “roundly rejected” this approach, the DEIR’s impact analyses do not actually analyze worst-case impacts. As discussed in more detail below, the inaccurate, unstable and contradictory project description makes it impossible to adequately analyze the Project’s air quality impacts because most of the Project’s characteristics are unknown. In addition, many aspects of the analyses are inaccurate and/or unsupported.

Response to Comment No. 35-55

Please see Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for detailed explanation of how the Draft EIR defines the Project and analyzes impacts to a level appropriate and necessary under CEQA. Please see Topical Response No. 3, Permitted On-Site Uses, for a detailed explanation of the land uses permitted for the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR air quality analysis accounts for the proposed Specific Plan’s permitted land use exchange.

Comment No. 35-56**a. Construction-Related Assumptions.****i. Construction Phasing.**

The air quality analyses are based on two very different construction timelines—a 2026 Buildout and a Long-Term Buildout. The DEIR states that a 2026 Buildout was assumed “to provide a conservative evaluation” of the Project’s air quality impacts, but provides no credible justification as to why it is conservative. (DEIR, p. IV.A-59). Moreover, given that the Specific Plan would allow an infinite number of development options, how does analyzing the air quality impacts associated with one of those unlimited options—the DEIR Conceptual Plan—result in a conservative evaluation, whether based on a 2026 Buildout, a Long-Term Buildout or a construction period in between them?

As discussed in the Ramboll Letter, the DEIR does not properly evaluate the emissions from construction under a Long-Term Buildout. (Ramboll Letter, Comment 10a) The CalEEMod runs for construction air quality emissions do not appear to reasonably estimate the construction impacts at different years, despite the fact that Table IV.A-12 and IV.A-13 in the DEIR show emission estimates for overlapping construction and operation. For example, the emissions for construction presented in Tables IV.A-12 and IV.A-13 are assumed to be 50% of the maximum daily emissions that were found in each respective CalEEMod run. However, the assumption that 50% of the maximum daily emissions reported in CalEEMod would apply to each five-year period is arbitrary and the DEIR does not provide sufficient evidence to justify this assumption. Furthermore, the DEIR needs to provide a reasonable estimate of what the level of construction activity may be over the course of the 20-year construction period to accurately characterize potential construction emissions and associated air quality and health risk impacts.

Response to Comment No. 35-56

This comment is similar to Comment No. 26-E.1-24. Please see Response to Comment No. 26-E.1-24 for a discussion of the Draft EIR’s comprehensive analysis of both the long-term buildout and the 32-month buildout scenarios. Please see Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a detailed explanation of how the Draft EIR defines the Project and analyzes impacts to a level appropriate and necessary under CEQA. The air quality analysis included in the Draft EIR is consistent with the requirements of CEQA and constitutes a reasonable estimate of the air quality impacts which would arise from construction and operation of the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR air quality analysis accounts for the proposed Specific Plan’s Land Use Exchange Program. Additionally, Table IV.A-12 of the Draft EIR presents an analysis of various potential long-term buildout conditions at multiple potential construction years including 2026, 2030, 2035, 2040, and 2043.

See Response to Comment No. 26-E.1-24 for a discussion of the conservative nature of the long-term buildout scenario analysis and the reasonability of the 50 percent of peak activity long-term buildout assumption. See Response to Comment No. 26-E.1-25 for supporting detail pertaining to the CalEEMod air quality analysis.

Comment No. 35-57

ii. Construction Staging.

The DEIR does not evaluate the potential air quality and health risk impacts of the truck activity in the potential offsite truck staging areas. (DEIR, Figures IV.I-4 and IV.I-5) As noted previously, the Project is expected to generate over 102,000 truck trips during construction. Many of these trucks would likely utilize the two offsite staging areas identified in the project description, located within the City on the north side of Venice Boulevard, west of Guthrie Avenue, and on the north side of Venice Boulevard, east of Normandie Avenue. As noted by Ramboll, the air quality analysis does not address the potential construction air quality impacts related to these offsite staging areas at all, despite the significant number of nearby sensitive receptors. (Ramboll Letter, Comment 5) As shown in Figures 2 and 3 of the Ramboll Letter, those sensitive receptors include residences, schools, and a hospital that would be exposed to criteria air pollutant and toxic air contaminant emissions including diesel particulate matter emissions from trucks that use these staging areas. The DEIR should have assessed offsite air quality impacts related to truck staging areas and must be updated to do so.

Response to Comment No. 35-57

Please see Response to Comment No. 26-E.1-17 for a discussion of haul truck staging areas, which would occur on-site.

Comment No. 35-58

iii. Localized Construction Impacts.

The methodology used to assess localized construction impacts of criteria air pollutants (NO_x , CO, PM_{10} , and $\text{PM}_{2.5}$) is flawed for several reasons and does not provide a conservative or worst-case analysis. First, the DEIR uses the mass look-up tables developed by SCAQMD for each source receptor area ("SRA") as a screening-level tool, including the Localized Significant Thresholds ("LST") mass rate look-up tables for projects with active construction areas that are less than or equal to five acres. (DEIR, p. IV.A-43) While the DEIR recognizes that this look-up value can be used for sites larger than five acres, it also states that this is a screening-level tool used only to "determine which pollutants require detailed analysis." (*Id.*) If a project "exceeds the LST look-up values, then SCAQMD recommends that project-specific air quality modeling be performed." (*Id.*)

In that case, the project-specific air quality modeling required is the AERMOD dispersion modeling, which would show how the concentration of pollutants is dispersed from the area and volume sources to nearby sensitive receptors. (*Id.*) Here, the Project exceeds the look-up values for PM₁₀, and PM_{2.5}. However, additional project-specific air quality modeling for PM₁₀, and PM_{2.5} was not completed for the Project. The air quality analysis needs to be updated to include project-specific air quality modeling using the AERMOD dispersion modeling to demonstrate the dispersion of PM₁₀, and PM_{2.5} emissions from the Project Site to sensitive receptors, and the potential impacts on sensitive receptors.

In addition, the five-acre look-up tables are far too simplistic to use for this complex Project Site, Project and construction schedule. The five-acre look-up provides a conservative analysis as a screening-level tool in certain circumstances when the actual construction area is greater than five acres because the approach assumes that all onsite emissions would occur within a five-acre area. Per the DEIR, this approach “over-predicts potential localized impacts (*i.e.*, more pollutant emissions occurring within a smaller area and within closer proximity to potential sensitive receptors).” (*Id.*) As such, if the actual area of active construction is less than five acres, using the five-acre look-up table would no longer be a conservative analysis as it would erroneously show emissions dispersed over a larger area than actually anticipated during construction. In those cases, a different look-up value should be used, such as one or two acres, to ensure the analysis remains conservative. (Ramboll Letter, Comment 6c)

Here, a simple change to the sequence of project construction could entirely throw off the modeling. For example, Hackman could choose to construct first the above-grade parking structure that is contemplated as part of the DEIR Conceptual Plan, which is proposed on an area less than five acres, then continue with construction on a piecemeal basis on other fewer-than-five-acre sections on the Project Site until the entire Project is constructed. Under this hypothetical construction schedule, the five-acre look-up would no longer be a conservative assumption, or provide an accurate assessment of localized impacts related to construction. As we understand it, nothing limits Hackman’s ability to engage in continuous construction on sections of the Project Site that are less than five acres, or mandates that construction occur only on portions of the Project Site that are larger than five acres.

Response to Comment No. 35-58

Please see Response to Comment No. 26-E.1-21 for a discussion relating to the analysis of localized air quality impacts, applicability of the LST methodology and the appropriateness of the 25-meter and 5-acre look-up criteria. Additionally, the commenter’s assertion that “the Project exceeds the look-up values for PM₁₀, and PM_{2.5}” ignores the mitigated results presented in Tables IV.A-10 and IV.A-11 in Section IV.A, Air Quality, of the Draft EIR. Project emissions would not exceed the LST look-up values for any pollutant

during operations and would not exceed the look-up values for any pollutant during construction after the application of applicable mitigation.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR, which used the AERMOD model. The HRA confirms the Draft EIR's conclusion that health risks from the Project would be below the applicable significance thresholds and impacts would be less than significant.

Comment No. 35-59

Second, the DEIR and the Air Quality Report use SCAQMD's 25 meter look-up for all sensitive receptors, even though there are receptors, including Broadcast Center, far closer than 25 meters from the Project Site. As coverage, the DEIR includes a blanket statement that, even though Broadcast Center is adjacent to the Project Site,

[i]n accordance with SCAQMD recommendations, the LST receptor distance was assumed to be 25 meters. **All other existing air quality-sensitive uses are located at greater distance from the Project Site and would experience lower air quality impacts** from potential sources of emissions at the Project Site due to atmospheric dispersion effects. (*Id.*, p. IV.A-31, emphasis added)

However, this is simply a false assumption which arbitrarily increases the distance between the BC Site and the Project Site from 0 meters to 25 meters, essentially ignores that the DEIR Conceptual plan includes two new private streets contiguous to the BC Site, and thereby diminishes and obfuscates the Project's localized air quality impacts on Broadcast Center residents, which are not directly evaluated in the DEIR at all.

Third, the DEIR does not accurately identify the closest sensitive receptors to the Project Site. Figure IV.A-4 omits several sensitive receptors that are located closer to the Project Site than some receptors identified in the Figure, including: (1) future residential uses and sensitive receptors at 3rd & Fairfax Project; (2) residential uses at the Gilmore Adobe, 6333 W. Third Street; (3) The Fairfax Apartment, W. 1st Street and 105 S. Fairfax Avenue; (4) SureStay Hotel by Best Western on Beverly and Genesee Avenue, 7721 Beverly Boulevard; (5) Beverly Inn, 7701 Beverly Boulevard; (6) School of Rock, 7801 Beverly Boulevard; and (7) Short Stories Hotel, 115 S. Fairfax Avenue. Figure IV.A-4 is also misleading in that it only identifies the "closest" sensitive receptors, but does not identify that the Project is surrounded by residential uses to the west, north, and east. Ramboll has prepared an updated figure that more accurately shows the number of sensitive receptors around the Project Site. (Ramboll Letter, Figure 1)

Response to Comment No. 35-59

Please see Response to Comment No. 26-E.1-21 for a discussion of the 25-meter LST criterion. As discussed therein, page 3-3 of the SCAQMD LST methodology provides the following specific guidance: “The closest receptor distance on the mass rate LST look-up tables is 25 meters. It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters.” This comment contradicts the SCAQMD LST methodology for receptors closer than 25 meters. Furthermore, the statement quoted from the Draft EIR, which states that all receptors further from the Project Site than the analyzed 25-meter LST receptor distance would experience lower impacts than the analyzed 25-meter LST receptor distance analysis, is correct in the context of SCAQMD LST methodology guidance given atmospheric dispersion of emissions. Further, as discussed in Response to Comment No. 26-26, as instructed by SCAQMD guidance, the LST lookup tables for a 25-meter receptor distance would be applicable to receptors located less than 25 meters from the Project Site. Please see Response to Comment Nos. 26-26 and 35-46 for a discussion of sensitive receptors.

Comment No. 35-60

Fourth, according to Tables IV.A-9, IV.A-10 and IV.A-11, the DEIR uses thresholds from SRA 2 for both NO_x and CO localized emissions.³² However, the Project Site falls within SRA 1.³³ (Ramboll Letter, Comment 6b) In addition, the analysis does not address the federal 2010 1-hour NO₂ standard.³⁴ The DEIR must evaluate the potential localized impacts relative to the federal 2010 1-hour NO₂ standard.

Response to Comment No. 35-60

This comment is similar to a portion of Comment No. 26-E.1-21. Please see Response to Comment No. 26-E.1-21.

Comment No. 35-61**iv. Dewatering Activities.**

The DEIR states that project construction would include potential dewatering, given the high water table at the Project Site. (DEIR, p. IV.G-28) The DEIR further states that

dewatering activities are anticipated during construction, which would require the installation and operation of temporary pumps and filtration in accordance with National Pollutant Discharge Elimination System (“NPDES”) requirements. (*Id.*, p. IV.G-9) However, the DEIR does not account for dewatering activities in the air quality analysis. Because the DEIR acknowledges that dewatering activities are anticipated, emissions from the dewatering equipment (e.g., pumps, trucks, etc.) must be evaluated. (Ramboll Letter, Comment 14)

Response to Comment No. 35-61

This comment is similar to Comment No. 26-E.1-30. Please see Response to Comment No. 26-E.1-30.

Comment No. 35-62

v. Potential Odors.

The Project Site is located within the City’s Methane Zone and is therefore impacted by naturally occurring hydrogen sulfide. According to Ramboll, in addition to posing health risks, hydrogen sulfide is a highly odorous gas. (Ramboll Letter, Comment 15) The DEIR should evaluate the potential impacts associated with the release hydrogen sulfide and other odorous compounds released during project construction (particularly during soil excavation) and operation (from the tar collection system in the southwestern corner of the Project Site and methane mitigation systems for buildings on the Project Site).

b. Operational-Related Assumptions.

i. Diesel-Fueled Trucks and Buses.

As previously discussed, the DEIR claims that daily truck trips for the Project would not exceed 100 trucks per day or more than 40 trucks with operating transport refrigeration units. (DEIR, p. IV.A-72) The DEIR relies on these assumptions to justify not preparing an I-IRA to assess DPM and other TAC emissions from mobile sources during operation of the Project. CalEEMod shows approximately 559 one-way trips or 279 round trips per day during project operation, far greater than 100 trucks per day. (Air Quality Report, pp. 102–103) This is an example where the DEIR uses understated data that does not reflect a worst-case scenario for an impact analysis.

In addition, the project description states that shuttle buses would use the Mobility Hub. (DEIR, pp. II-26, 30 [Figure II-9]) However, the DEIR provides almost no information about the shuttle buses. It is not clear whether the shuttle buses use diesel or gasoline, how many buses are anticipated per day, or whether the shuttle buses would enter the Project Site on either of the new private streets adjacent to Broadcast Center. The impacts of

these buses is completely unknown to the public. A worst-case scenario analysis would have provided answers to these basic questions and included a corresponding impact analysis.

ii. Localized Operational Impacts.

Like the regional construction air quality analysis, the DEIR's methodology used to assess the Project's localized operational impacts is flawed. The DEIR uses the 25 meter look-up tables to assess impacts to sensitive receptors at a 25-meter distance and beyond. However, this approach does not make sense for this Project because the Broadcast Center building, which is only seven feet from the Project Site, is much closer than 25 meters. In addition, the DEIR's analysis of localized impacts simply ignores the two new private streets that would be sited adjacent to the western and southern boundaries of the BC Site pursuant to the DEIR Conceptual Plan. These six-lane and four-lane streets would support substantial traffic adjacent to the windows and balconies of Broadcast Center residents. The proper way to proceed would have been to prepare a project-specific assessment using AERMOD to assess LST for criteria air pollutants. (Rambo!! Letter, Comment 6) The AERMOD modeling would demonstrate how pollutants, like PM_{2.5} and PM₁₀, would disperse from the area and volume sources to nearby sensitive receptors, in particular Broadcast Center, the closest residential use to the Project Site.

Response to Comment No. 35-62

Regarding potential odors, this comment is similar to Comment No. 26-E.1-31. Please see Response to Comment No. 26-E.1-31 for further discussion of this topic.

Regarding air quality operational-related assumptions, this comment is similar to Comment Nos. 26-29, 26-E.1-16, 35-50, 35-51, and 35-58. Refer to Response to Comment Nos. 26-29, 26-E.1-16, 35-50, 35-51, and 35-58 for further discussion of this topic.

Please see Response to Comment No. 26-E.1-16 for a discussion of truck trip estimates associated with Project operations. Please see Response to Comment No. 26-E.1-23 for a discussion of the vehicle trip effects of the Mobility Hub, which would be expected to reduce vehicle trips associated with Project operations.

Please see Response to Comment No. 26-26 for a discussion of the 25-meter LST criterion. Please see Response to Comment No. 26-E.1-21 for an explanation of the appropriate nature of the LST analysis for operational Project emissions, including such emissions from on-site roadways.

Comment No. 35-63**iii. Production Levels.**

As previously discussed, it appears the DEIR did not consider the air quality impacts, including regional emissions, localized emissions, TACs and other potential health impacts to nearby sensitive receptors, related to the two planned “production levels,” which apparently include multiple basecamp areas and other production-related areas. Specifically, the DEIR excluded the production levels from the CalEEMod modeling. We assume that this was done because the Specific Plan’s proposed definition of floor area specifically excludes basecamp areas, outdoor production area, production trailers, sets/facades and the like. (DEIR, p. II-1 [n. 1])

However, it is undeniable that the basecamps areas and other activities contemplated on the production levels are impact-generating uses. For example, basecamps are defined as

areas at, near, or within a filming location where critical production activities can be coordinated. These areas provide for active uses (including but not limited to loading, wardrobe, hair, make-up, craft services, etc.) and passive uses (including but not limited to parking, storage of mobile facilities, power generators, support vehicles, etc.) all related to production activities. (*Id.*, p. II-7)

A meaningful analysis of the Project’s air quality impacts would include the basecamps and other planned activities within the production levels in CalEEMod and assumed the maximum number of basecamp areas running simultaneously adjacent to the nearest sensitive receptor, which is Broadcast Center. The air quality analysis must be updated to address this significant omission.

Response to Comment No. 35-63

Please see Response to Comment Nos. 26-E.1-27, 26-E.1-28, and 35-53 for a discussion on the conservative nature of the CalEEMod land use modeling and how the Draft EIR analyzed the potential physical environmental impacts of all proposed uses, areas and activities regardless of whether they are considered to be within the definition of floor area. Response to Comment Nos. 26-28 and 26-E.1-28 provide a detailed discussion regarding potential emissions related to production, basecamp operations, and the Mobility Hub.

As further discussed in Response to Comment No. 26-E.1-28, CalEEMod does not calculate pollutant emissions (except for GHG emissions) and related TAC emissions from building electricity because power plants are existing stationary sources permitted by air

districts and/or the USEPA and pollutant emissions are generally associated with the power plants themselves, and not individual buildings or electricity users.¹³⁶ Therefore, electricity usage associated with the production areas, basecamp areas and the Mobility Hub would not change the air emissions or conclusions in the Draft EIR.

As discussed in Response to Comment No. 26-E.1-2, in response to comments on the Draft EIR, a quantitative HRA is included as Appendix FEIR-10 of this Final EIR. The HRA includes health risk impacts from both Project-related construction and operational activities. Sources analyzed in the HRA include operations in production, basecamp areas, and the Mobility Hub (e.g., vehicular and truck activity and char broilers) and in close proximity to the Broadcast Center Apartments as recommended in this comment. As discussed in Response to Comment No. 26-E.1-2, the quantitative HRA confirms the Draft EIR's conclusion that health risks from the Project would remain below applicable significance thresholds and impacts would be less than significant.

Comment No. 35-64

iv. Mobility Hub.

The DEIR Conceptual Plan does not even include an illustrative location for the Mobility Hub. As previously disclosed, a combined review of a graphic in the transportation section of the DEIR and a sheet in the Application Plans indicate that it might be located on the lower production level in the southwestern corner of the Project Site. However, given that the DEIR Conceptual Plan is just one of an unlimited number of potential development scenarios, Hackman could place the Mobility Hub anywhere, including adjacent to Broadcast Center. Of course, the DEIR did not analyze this worst-case air quality impact because the DEIR engages in the pretense that the DEIR Conceptual Plan reflects the "maximum possible impacts." An actual worst-case scenario analysis would be based on potentially locating the Mobility Hub next to the BC Site. Broadcast Center would vigorously oppose that location, but the point is that Hackman could do exactly that following the adoption of the Specific Plan with no further environmental review. Therefore, it is incumbent on the City to provide a true worst-case analysis now to apprise the public and decisionmakers of the Project's actual maximum impacts.

Response to Comment No. 35-64

This comment is similar to a portion of Comment No. 35-51. Please see Response to Comment Nos. 26-E.1-28 and 35-51 for a discussion of the Draft EIR's analysis of the

¹³⁶ California Air Pollution Control Officers Association, CalEEMod User's Guide, Appendix C, Emission Calculation Details for CalEEMod (Page C-53), April 2022.

Mobility Hub, which would be expected to reduce vehicle trips associated with Project operations.

Comment No. 35-65

v. Visitor Trips.

As discussed in more detail in Section II.Q, *infra*, the DEIR's air quality analyses do not properly account for visitor or audience trips to the Project Site during operations. (Ramboll Letter, Comment 8; LLG Letter, p. 19-21) The Project's VMT Calculator only includes "employees" trips taken within the land use "Studio, Production, and Office." The inputs from the VMT calculator are used in the CalEEMod to determine air emissions from operations of the Project. As such, if the traffic assumptions do not accurately reflect the true scope of the Project, then the air quality results from CalEEMod will be inaccurate. In this case, by omitting visitor and audience trips, the CalEEMod assumptions underrepresent the Project's VMT. As a result, the analysis underestimates the daily trip rate and operational VMT, and therefore underestimates the associated mobile source operational emissions.

Response to Comment No. 35-65

Please see Response to Comment No. 26-E.1-23 for a discussion of trip generation rates, which included trips that would be generated by visitors. As discussed therein, the total trips and related VMT accounts for the total Project development and is not limited to "employee" trips.

Comment No. 35-66

vi. Other Permitted Uses.

As previously discussed, the DEIR's project description includes contradictory information regarding the permitted uses on the Project Site. The DEIR Conceptual Program in Table II-2 includes just five uses—sound stages, production support, production office, general office and retail. Elsewhere in the project description, however, the DEIR states that the Specific Plan will include numerous other permitted uses. (*Id.*, pp. II-15–16) The DEIR further provides that the Specific Plan will allow "all other permitted uses in the C2 zone unless expressly prohibited in the Specific Plan." (*Id.*, p. II-16)

As a result, the air quality analyses in the DEIR do not adequately evaluate the extensive list of potential land uses. Most of those permitted uses are not analyzed in the CalEEMod runs, which focus solely production offices (as general office building), sound stages (as industrial park), production support (as user defined industrial), and retail (as restaurant and strip mall). Several of the related land uses proposed in the project description

(including child care and educational facilities, medical facilities, warehouses, and museum exhibits and theatres) would have different associated emissions and energy and water demands than the limited uses analyzed for air quality purposes. Therefore, the Project's air quality analysis would be inaccurate if the Project is developed for any of the other permitted use and those analyses almost certainly do not reflect the Project's "maximum possible impacts."

Response to Comment No. 35-66

Please see Topical Response No. 3, Permitted On-Site Uses, for a detailed explanation of the land uses permitted for the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR air quality analysis accounts for the proposed Specific Plan's Land Use Exchange Program. As discussed therein, the CalEEMod model was developed using representative land use types, modeled such that the most conservative representation of permitted land use emissions was assumed. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Appendix FEIR-3 of this Final EIR for a discussion of the Land Use Exchange Program and the maximum impact scenarios analyzed in the Draft EIR.

Comment No. 35-67

vii. Land Use Exchange—Maximum Air Emissions.

The DEIR claims that the "maximum air emissions" from implementing a "land use exchange" would be exchanging 100,000 square feet of production support space for 100,000 square feet of additional sound stages. (DEIR, p. IV.A-63, 64 [Table IV.A-7, note c]) This means that the DEIR Conceptual Plan (one of an infinite number of development scenarios) would include 1,400,000 square feet of production office, 450,000 square feet of sound stages, 20,000 feet of retail space, and only 4,000 square feet of production support use.

This exchange is nonsensical. How could the sound-stage floor area increase by 100,000 square feet without a requisite increase in the production support? This exchange appears to allow Hackman to shift even more production support space to basecamp areas, the floor area of which is ignored in the air quality analyses. The DEIR does not explain why this exchange is realistic or how it represents a worst-case scenario for project emissions. To the contrary, it appears to allow a further opportunity to conceal a substantial portion of the Project's pollutant emissions.

Response to Comment No. 35-67

Please see Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a detailed explanation of the Land Use Exchange Program and the

Project's regulatory framework under the proposed Specific Plan. Please see Topical Response No. 3, Permitted On-Site Uses, for a detailed explanation of the land uses permitted for the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR air quality analysis accounts for the proposed Specific Plan's Land Use Exchange Program. Refer to Appendix FEIR-3 of this Final EIR for a summary of the maximum impact scenarios analyzed in the Draft EIR.

Comment No. 35-68

c. Other CalEEMod Modeling Issues.

i. Outdated Modeling.

As discussed in the Ramboll Letter, the modelling used in the air quality analyses contains numerous errors. In addition to the errors mentioned previously, the Ramboll Letter identifies additional concerns in Comments 10 and 20. For example, the DEIR should have used the most recent iteration of the CalEEMod and Emissions Factor ("EMFAC") models, 2020.4.0 version of CalEEMod and EMFAC2021.

Response to Comment No. 35-68

Please refer to Response to Comment No. 26-E.1-25 with regard to the adequate modeling and technical documentation for the air quality and GHG analyses in the Draft EIR. As discussed therein, the documentation and CalEEMod output files provided in Appendix B of the Draft EIR properly identify Project construction and operational impacts. Please refer to Response to Comment No. 26-E.1-35 for an explanation as to the applicability of the CalEEMod 2020.4.0 version used in the Draft EIR and a discussion of CalEEMod 2022.1.1 results included for informational purposes in Appendix FEIR-9 of this Final EIR.

Comment No. 35-69

ii. Missing Output Files.

The Air Quality Report (Appendix B) does not include the complete technical documentation, so it is not clear if the peak daily emissions are accurately represented in the DEIR. The missing output files prevent the reviewer from verifying the technical analyses and results. (Ramboll Letter, Comment 10)

Specifically, page 2 of the Air Quality Report includes a table of contents for all CalEEMod Output files corresponding to the 2026 Buildout and Long-Term Buildout scenarios. However, the actual output reports provided are incomplete. First, the TVC Operations—Total Permitted Land Uses run on page 264 seems to have several pages of outputs

missing. Second, the table of contents lists two runs as “2043 Buildout” runs. However, the corresponding runs in the output files have 2045, not 2043, as the operational year. Third and most important, there are no summer output runs provided in the Air Quality Report. SCAQMD Mass Daily Air Quality Significance Thresholds³⁵ are for maximum daily emissions, which should be calculated as the maximum daily emissions across both summer and winter seasons. These missing output files must be provided so the public can fully understand the Project’s air quality impacts.

³⁵ <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>.

Response to Comment No. 35-69

Please refer to Response to Comment No. 26-E.1-25 with regard to the adequate technical documentation for the air quality and GHG analyses in the Draft EIR. The commenter incorrectly asserts that the CalEEMod output file provided in Appendix B of the Draft EIR is missing pages. As discussed in Response to Comment No. 26-E.1-25, documentation and CalEEMod output files provided in Appendix B of the Draft EIR properly identify Project construction and operational impacts. Please refer to Response to Comment No. 26-E.1-35 for an explanation as to the applicability of the CalEEMod 2020.4.0 version used in the Draft EIR and a discussion of CalEEMod 2022.1.1 results included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR).

Comment No. 35-70

F. The DEIR’s Analysis of the Project’s Historical Resources Impacts Is Inadequate.

The DEIR’s analysis of the Project’s impacts on historical resources is inadequate for the reasons set forth below.

1. The Development of the Project Would Materially Impair the Historic Significance of the Primary Studio Complex.

As previously discussed in detail, it is difficult to assess the Project’s environmental impacts because the proposed development is undefined. In any event, the development of the Project, whether or not in accordance with the DEIR Conceptual Plan, Height Zone Map and Proposed Development Program, would materially impair the historic significance of the Primary Studio Complex for several reasons. (SRI Letter, pp. 1-5)

First, as discussed in the SRI Letter, one would assume based on a review of the DEIR that almost no above-grade new construction would occur to the north of the Primary Studio Complex. (*Id.*, p. 2) However, the DEIR Conceptual Plan is just one of a limitless

number of development options, and in fact new buildings are allowed between Beverly Boulevard and the Primary Studio Complex in “Height Zone A—Viewshed Restoration Area.” (*Id.*) Notwithstanding Hackman’s negotiated agreement with the Los Angeles Conservancy to preserve in part the view of the Primary Studio Complex from Beverly Boulevard, Height [sic] Zone A does not promote “view restoration” because one or more buildings of up to 58 feet in height (*i.e.*, six-story buildings) are permitted in Height Zone A. (*Id.*)

While Project Design Feature CUL-PDF-1 states that “new buildings immediately adjacent to the Primary Studio Complex [should be located] to the east and south of the Service Building and to the west of the Studio Building,” new buildings are not necessarily prohibited because this provision seemingly precludes new construction to the north that is “immediately adjacent” to the Primary Studio Complex. In other words, the project design feature would not preclude new buildings that are five feet, or 10 feet, or 20 feet from the Primary Studio Complex. (*Id.*)

Response to Comment No. 35-70

This comment is substantially similar to Comment Nos. 26-E.2-2 and 26-E.2-3. Refer to Response to Comment Nos. 26-E.2-2 and 26-E.2-3.

Comment No. 35-71

Second, contrary to the DEIR and Historic Resources Technical Report (“Historic Report”) prepared by Historic Resources Group for the Project (DEIR, Appendix C.1), it is likely that the 1969 Mill Addition and the 1976 Support Building Addition (collectively, “Additions”) are historical resources. (SRI Letter, p. 2) The DEIR and Historic Report attempt to disqualify the Additions as historical resources by artificially limiting the period of significance to 1952 to 1963 and then concluding that the Additions are not historical resources because they were constructed in 1969 and 1976 (*i.e.*, after 1963). (*Id.*) The only justification offered for using the 1952-1963 period of significance is that the Primary Studio Complex was constructed in 1952 and then, in 1963, “CBS abandoned its vision of a single unified production facility and moved its filmed programming operations to the CBS Studio Center lot in Studio City.”³⁶ (*Id.*, pp. 2-3; DEIR, IV.B-24; Historic Report, p. 34)

However, the period of significance for the Project Site did not end in 1963. “Period of significance” refers to the dates when a property achieved the historic significance necessary to qualify for listing on the California Register of Historical Resources (CRHR) or National Register of Historic Places (NRHP). (SRI Letter, p. 3) The period of significance for the television studio on the Project Site is the duration in which the property actively contributed to the growth and popularity of commercial television, which clearly did not end in 1963. As recognized in the Historic Report, a variety of groundbreaking and innovative

television shows were shot there with live studio audiences throughout the 1960s and 1970s, including the Smothers Brothers Comedy Hour (1967–1970), All In The Family (1971–1979), Maude (1972–1978) and the Carol Burnett Show (1967–1978). (*Id.*) Accordingly, the DEIR and Historic Report “cannot credibly omit these and other television shows that became part of the nation’s shared cultural experience during these two decades.” (*Id.*)

The DEIR and Historic Report’s brief discussion of the period of significance undercuts the artificially shortened period by stating that (1) from 1952 to 1963, television use was growing rapidly and networks expanded their operations and facilities nationwide and (2) the period from 1952–1963 “captured the postwar evolution of CBS and with the construction of Television City” and “represents the maturation of commercial television.” (*Id.*) As emphasized by SRI, “none of this was less true in 1979 than it was in 1963.” (*Id.*) Indeed, even after 1963, CBS continued to grow and expand its domination of American television into the 1970s, and constructed the Additions in 1969 and 1976, demonstrating its continued demand for and expansion of television production facilities. (*Id.*) For these reasons, the period of significance of the CBS television studio ended no earlier than 1979. (*Id.*)

Moreover, sufficient time has passed to provide a scholarly perspective on the potential historical significance of the 1969 Mill Addition and the 1976 Support Building Addition. (*Id.*) As analyzed in the SRI Letter, both of the Additions were designed by master architect Gin Wong. (*Id.*) As stated in the Historic Report, Gin Wong coordinated the architectural design and construction of the Primary Studio Complex for Pereira and Luckman. (*Id.*) Because the Additions were erroneously excluded from consideration as historical resources based on the artificially limited 1952–1963 period of significance, the Additions must be reevaluated under the more appropriate period of significance of 1952–1979 to determine whether they are historical resources that alter the overall historic significance of the Primary Studio Complex. (*Id.*)

³⁶ The SRI Letter also notes a disconnect between the stated reason for ending the period of significance in 1963 and the evidence cited to support it. (SRI Letter, p. 3) As stated in the report, “[t]he stated reason is that, in 1963, CBS decided to move filmed programming to Studio City. But the subsequent discussion focuses entirely on the expansion of television programming, not on moving filming to Studio City. This disconnect arises because the reliance on a decision to abandon a unified facility is an artificial construct that has no bearing on the making of some of CBS’s most historically significant television shows throughout the 1960s and 1970s. In other words, the period of significance cannot be based on what did not happen at Television City, but what did happen there.” (*Id.*)

Response to Comment No. 35-71

This comment is substantially similar to Comment No. 26-E.2-4. Refer to Response to Comment No. 26-E.2-4.

Comment No. 35-72

Third, the DEIR and Historic Report understate or entirely omit the Project's overall impact on the integrity of the existing resources. (*Id.*) Integrity is the ability of a historical resource to convey its historic significance. (DEIR, IV.B-54) The National Park Service defines the seven aspects of integrity as location, design, setting, materials, workmanship, feeling, and association. (*Id.*)

As stated above, it is likely that the Additions qualify as historical resources and enlarge the overall historic and architectural significance of the Primary Studio Complex. (SRI Letter, p. 3) If that is the case, then the proposed demolition of the Additions would materially impair the overall historical resource with respect to all aspects of integrity and therefore result in a substantial adverse change in the significance of that overall historical resource. (*Id.*, p. 4, see Cal. Pub. Res. Code§ 21084.1)

In addition, the proposed demolition of the southern portion of the Service Building and removal of up to two bays of the Studio Building's west wall constitute substantial losses that would further compromise the integrity of the overall historical resource. (SRI Letter, p. 4)

Response to Comment No. 35-72

This comment is substantially similar to Comment No. 26-E.2-5. Refer to Response to Comment No. 26-E.2-5.

Comment No. 35-73

Moreover, as illustrated in the SRI Letter, given the broad flexibility granted by the Specific Plan, the Primary Studio Complex could be completely encircled by new construction that, contrary to the DEIR, would envelop it and result in a significant loss of integrity with respect to setting, feeling and association. (*Id.*) To the north of the Primary Studio Complex, Hackman could develop one or more new buildings up to 58 feet in height within Height Zone A. (*Id.*) To the west, east and south of the Primary Studio Complex, Height Zone D allows a base height of 88 feet, but allows a maximum of 225 feet over 40% of the Project Site. (*Id.*) The DEIR even states that the Project "would" include two new buildings to the east and west of the Primary Studio Complex with heights of 225 feet. (*Id.*) In addition, the DEIR Conceptual Plan shows new office and sound stage buildings south of the Primary Studio Complex. (*Id.*) Moreover, new construction would be permitted on top of the Primary Studio Complex within Height Zone E—a rooftop zone that would apparently allow a rooftop addition of up to 36 feet above the existing parapet of the Studio Building for a length of approximately 350 feet. (*Id.*) Height Zone F is another rooftop zone that would permit a variety of non-occupiable structures on top of the Primary Studio Complex north of Height Zone E. (*Id.*)

Even if construction proceeded in accordance with the DEIR Conceptual Plan, contrary to the DEIR's representations, the architectural features of the Primary Studio Complex would not remain visible because new construction would surround the Primary Studio Complex and result in a significant loss of integrity with respect to setting, feeling and association. (*Id.*)

As further stated in the SRI Letter, the "setting of the television studio includes the relationships of surrounding features, reflects the designer's intent, and indicates function. The new development envisioned in the [DEIR] Conceptual [] Plan would diminish integrity of setting by changing dramatically the existing physical environment and character of place by surrounding the Primary Studio Complex both horizontally and vertically with new construction." (*Id.*) For example, the proposed height limit of 58 feet in Height Zone A permits the construction of one or more intrusive structures between Beverly Boulevard and the north façade of the Primary Studio Complex, which would certainly cause major visual intrusions and interrupt the continuity of the historic setting. (*Id.*) Similarly, the development of large buildings on all other sides of the Primary Studio Complex within Height Zone D, and the substantial new additions on top of the Primary Studio Complex within Height Zones E and F, would indeed cause the same intrusion issues. (*Id.*)

Feeling is the expression of a historic sense or a conveyance of historic character. (*Id.*, p. 5) As discussed above, the new buildings allowed in Height Zones C and D would eclipse the Primary Studio Complex with heights of up to 160 feet in Height Zone C and up to 225 feet in Height Zone D. This would substantially impair the original relationship with neighboring buildings and structures and therefore, impair integrity of feeling. (*Id.*)

Association is the link between an important event or trend and resource, wherein the resource conveys that relationship. (*Id.*) As stated in the SRI Letter, integrity of association would be impaired through additions and subtractions to the Primary Studio Complex and surrounding new development by altering the essential physical features that conveyed its appearance during the period of significance. (*Id.*)

Having said all this, it is not the case, as the DEIR repeatedly suggests by using the word "would," that the Project would proceed in accordance with Conceptual Site Plan. (*Id.*) While development would apparently be subject to the restrictions in the Height Zone Map, the actual development could be even more impactful to integrity of setting, feeling and association than the Conceptual Site Plan, which is an illustrative scenario. (*Id.*) As previously discussed, while the Conceptual Site Plan includes no material above-ground buildings to the north of the Primary Studio Complex, the developer could choose to construct buildings there as tall as the Primary Studio Complex. (*Id.*)

Response to Comment No. 35-73

This comment is substantially similar to Comment Nos. 26-E.2-5 and 26-E.2-6. Refer to Response to Comment Nos. 26-E.2-5 and 26-E.2-6.

Comment No. 35-74**2. The DEIR Impermissibly Defers the Preparation of a Historic Structure Report.**

The historic resource analysis in the DEIR includes Project Design Feature CUL-PDF-2 (DEIR, p. IV.H-20), which requires the preparation of a Historic Structure Report (“HSR”) after the entitlements for the Project have been approved. This is a significant flaw. In the absence of a contemporaneous HSR comprehensive information regarding the existing onsite historical resources, the DEIR’s analysis and conclusions regarding the Project’s potential impact on those resources cannot be substantiated . [sic] (SRI Letter, p. 5) This analysis is critical to clarify what mitigation measures are necessary to minimize the Project’s adverse effects on the character-defining features of the historical resource. (*Id.*) As discussed in the SRI Letter, the HSR must be prepared now and in accordance with the National Park Service’s Preservation Brief 43: The Preparation and Use of Historic Structure Reports. (*Id.*) Again, because the DEIR Conceptual Plan is an illustrative scenario and not necessarily reflective of what might actually be constructed, the preparation of an HSR in conjunction with the DEIR is necessary to guide the development of the Project and demonstrate to the public and decisionmakers that the Project would not materially impair the Primary Studio Complex and other historical resources on the Project Site. (*Id.*)

Response to Comment No. 35-74

This comment is substantially similar to Comment No. 26-E.2-7. Refer to Response to Comment No. 26-E.2-7.

Comment No. 35-75**3. The DEIR Fails to Analyze the Project’s Potentially Significant Impact on Surrounding Historical Resources.**

The DEIR and Historic Report solely focus on preserving the visual conditions and scenic integrity of the north façade of the Primary Studio Complex, but entirely fail to consider the Project’s adverse visual effect on surrounding historic properties, including the Original Farmers Market, Gilmore Adobe, Chase Bank, Fairfax Theater, Air Raid Siren No. 25, Beverly Fairfax Historic District, and the Miracle Mile North Historic Preservation Overlay Zone. (SRI Letter, p. 5) As discussed in the SRI Letter, a comprehensive visual resource

or viewshed study is needed to evaluate existing visual conditions to, from and within the Project Site, and assess scenic integrity, visual quality, and viewer sensitivity regarding the existing landscape/streetscape characteristics. (*Id.*)

As illustrated above regarding the Project's proposed Height Zones and intrusive maximum building heights ranging from 130 to 225 feet above "Project Grade," which is already up to 15 feet above existing grade adjacent the Gilmore Adobe, it is apparent that the Project would materially impair the historic significance of the neighboring Gilmore Adobe and Original Farmers Market just south of the Project Site. (*Id.*) Indeed, according to the SRI Letter, "any interruption of the existing horizon line would have an obstructive effect on the historic properties by altering the character, setting, feeling and viewshed that make them eligible for listing in the NRHP and/or CRHR." (*Id.*, pp. 5–6) In addition, the introduction of buildings, signage, and nighttime lighting that are incompatible, out of scale and proportion and/or out of character with the Gilmore Adobe and Original Farmers Market would have a demonstrably negative aesthetic effect (*i.e.*, an effect that diminishes the character or quality of the historic property) to these neighboring historical resources. (*Id.*, p. 6)

Response to Comment No. 35-75

This comment is substantially similar to Comment No. 26-E.2-8. Refer to Response to Comment No. 26-E.2-8..

Comment No. 35-76

Furthermore, while the noise analysis in the DEIR considers building damage impacts from onsite construction (DEIR, pp. IV.I-60–62), including impacts to the Gilmore Adobe, the scope of the analysis is inadequate given the extremely sensitive nature of the adobe's unreinforced masonry building type and the proximity of the adobe to the Project Site's southern property line (approximately 130 feet) (SRI Letter, p. 6). According to the SRI Letter, a preconstruction survey of the structure should be performed by a structural engineer who specializes in adobe architecture to identify structural and seismic deficiencies that may be worsened by ground-borne vibration during construction, and a vibration management and monitoring plan should be prepared to ensure against damage caused by vibration or differential settlement caused by vibration during Project construction and operation activities. (SRI Letter, p. 6)

Response to Comment No. 35-76

Refer to Response to Comment Nos. 26-139 and 363-2 for a discussion of the Gilmore Adobe. As discussed therein, potential vibration impacts would be less than significant.

Comment No. 35-77

Finally, as discussed in the SRI Letter, the DEIR and Historic Report fail to consider the potentially significant impact that the Project's anticipated cut-through traffic would have on the Beverly Fairfax Historic District located just north of the Project Site. (*Id.*) The DEIR omits any discussion of the increased traffic expected within the historic district and how it might adversely affect the pedestrian environment and diminish the integrity of the historic district, which is comprised of narrow residential streets. (*Id.*) Accordingly, the SRI Letter states the DEIR should include a residential neighborhood protection plan or a neighborhood traffic management plan to mitigate traffic and spillover parking impacts to the historic district. (*Id.*)

Response to Comment No. 35-77

This comment is substantially similar to Comment No. 26-E.2-10. Refer to Response to Comment No. 26-E.2-10.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the Project's proposed NTMP, which would implement traffic calming measures to address potential cut-through trips. Refer also to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply and that spillover parking into adjacent neighborhoods and properties is not anticipated.

Comment No. 35-78**G. The DEIR's Analysis of the Project's Archaeological Resources Impacts Is Inadequate.**

The DEIR's analysis with respect to archaeological resources is inadequate largely due to the absence of an underlying archaeological resources report and the DEIR's omission of any substantive discussion regarding the protohistoric and historical archaeology of the Project Site. These omissions are particularly glaring given that the Project Site is located in one of the most archaeologically significant regions in the State of California.

1. The DEIR Is Unsupported By an Archaeological Resources Report.

The DEIR's impact analysis for archaeological resources (DEIR, p. IV.B-57–58) is wholly inadequate because it is not based on an archaeological resources report. (SRI Letter, p. 6) Instead, the DEIR's two-paragraph analysis relies on information in the Tribal Cultural Resources Report (the "TCR Report") prepared for the Project, which is limited to analysis of Native American archaeological resources, but includes no data or substantive analysis regarding the protohistoric and historical archaeology of the Project Site. (DEIR, p. IV.B-57–58, Appendix C.2) As stated in the SRI Letter, "[s]tandard practice, *especially in*

an area expected to contain archaeological resources, is to prepare as part of the environmental review process a cultural resources technical report that includes the identification and evaluation of the full range of cultural resources that might be expected in a project area and to use that information to assess project effects on archaeological resources.” (*Id.*, emphasis in original) Rather than prepare a report that considers the full range of archaeological resources present on the Project Site, the DEIR’s archaeological analysis relies on a report that is narrowly focused only on potential tribal cultural resources and omits discussion of expected archaeological resources from the protohistoric and historical periods, provides a cursory evaluation of potential buried resources, and fails to identify specific types of buried cultural resources that have a high likelihood of being present onsite. (*Id.*)

Per the SRI Letter and in accordance with industry standards set forth in *Archaeological Resource Management Reports (ARMR): Recommended Contents and Format*, published by the California Office of Historic Preservation in 1990, “[p]roper analysis of Project effects on archaeological resources involves: (1) preparing a historic context for understanding past human land use, as well as the physical remains these uses create, and identifying where those remains would have likely been located; (2) conducting a geoarchaeological study evaluating the possibility that these remains could be preserved despite past environmental and development disturbances; (3) identifying if archaeological remains exist within the Project area and if they are an historical resource as defined by the California Environmental Quality Act (CEQA); and (4) analyzing the effects of the proposed Project on any archaeological historical resources.” (*Id.*, p. 7)

While the DEIR utterly fails to characterize the archaeological potential of the Project Site and vicinity, from the limited information provided in the DEIR, it is apparent from the historic occupation of the Project Site and surrounding areas, including Gilmore Field, Gilmore Stadium, Gilmore Adobe, and smaller properties like the drive-in and gas station known to have been present prior to 1952, that the Project Site may contain intact subsurface deposits of archaeological significance. (DEIR, Appendix C.1, CBS Television City Historic Resources Assessment dated April 11, 2018, prepared by Architectural Resources Group (“ARG”), April 11, 2018, pp. 63–64 [citing Los Angeles Times, “L.A. Scene: The City Then and Now” 1/11/93, which notes that remains of Gilmore Field dugouts were encountered during excavation for the East Studio Building foundation in 1991])³⁷ Accordingly, an archaeological resources report must be prepared consistent with industry standards and as detailed in the SRI Letter, and the DEIR must thereafter be revised to actually and adequately analyze the Project’s potential impacts on archaeological resources. Only then can the public and decisionmakers properly assess whether the proposed Mitigation Measure CUL-MM-1 is appropriate for a site that is rich in archaeological resources.

³⁷ In 2018, when ARG prepared its Historic Resource Assessment for the Project Site, it did not include a comprehensive archaeological assessment in the scope of the report and therefore, the Project Site's potential to yield information important in prehistory or history was deemed unknown at the time. (*Id.*, p. 64)

Response to Comment No. 35-78

Refer to Response to Comments Nos. 13-7, 26-42, and 26-44 regarding the adequacy of the identification and analysis for archaeological resources, including those from all time periods such as the so-called protohistoric period, also known as the Spanish and Mexican Periods. Refer to Response to Comment Nos. 13-7 and 26-42 regarding the considerations of the adequacy of the historical context and land use history, including the uses of Gilmore Adobe and business ventures of the Gilmore family that produced Gilmore Field, Gilmore Stadium, among other commercial developments. These responses also address the means by which geoarchaeological data have been incorporated into the analysis of archaeological resources.

These responses also provide an explanation for why the available evidence presented in multiple data sources, including but not limited to the data presented in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR, contained sufficiently detailed information and substantial evidence to provide a reasonable characterization of the existing conditions and the types of resources most likely to be encountered. Specifically, the proximity of CA-LAN-3045H to the Project Site is noted on page IV.B-58 of Section IV.B, Cultural Resources, of the Draft EIR, which recognizes that there is some potential for unknown historic-period materials in the Project Site, adequately considers the type of archaeological resource most likely to be encountered, and provides a reasonable means of mitigating potentially significant impacts if such a resource is identified.

Additional explanation of how these results further support the analysis presented in Section IV.B, Cultural Resources, of the Draft EIR are described in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo also includes additional clarifications on why the resources described in the Draft EIR as most likely to occur are unlikely to be considered historical resources under CEQA. The Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Refer to Response to Comment No. 26-E.2-11 regarding the applicability of the ARMN standards.

Comment No. 35-79**2. The TCR Report Is Inadequate as an Informational Document.**

Cultural Setting. As detailed in the SRI Letter, the TCR Report is inadequate because it fails to identify the full range of human land-use history of the Project Site and vicinity with respect to archaeological resources. (SRI Letter, p. 7) SRI has identified numerous and significant flaws in the TCR Report's cultural setting section, including "a poor command of local archaeological literature." (*Id.*) The cultural setting for the prehistoric period incorrectly focuses on the San Diego and Mojave Desert regions instead of the relevant Los Angeles Basin. (*Id.*) To the extent it discusses the Los Angeles Basin, it relies on outdated information and omits recent research in downtown Los Angeles and nearby coastal communities. (*Id.*) The section also fails to reference established scholarly studies and contains omissions, incomplete and incorrect information.³⁸ (*Id.*)

In addition, the SRI Letter found that the cultural setting section fails to present historical-period use of the Project Site with respect to archaeological resources, which is critical to anticipating the kinds of potential buried cultural resources onsite. (*Id.*) Neither the DEIR nor the TCR Report analyzes (a) the Project Site and surrounding properties' long history starting in the early Mexican Rancho Period with the founding of Rancho La Brea in 1828, (b) the construction of the Rancho La Brea Adobe (also referred to as Gilmore Adobe) around 1852, (c) development of the local oil industry in the early twentieth century, (d) the development of the early sports entertainment industry, especially Gilmore Field, Gilmore Stadium, and related businesses, or the development of Television City in 1952. (*Id.*) Perhaps most astonishing is the absence of any meaningful discussion of the Rancho La Brea Adobe, located approximately 130 feet south of the Project Site's southern boundary. (*Id.*) The TCR Report does not discuss the history of the adobe and the scope of activities related to the adobe that may include portions of the Project Site. (*Id.*) It even omits any consideration of Native American labor used to construct the original adobe building and Native American domestic help or ranch hands potentially present at the adobe, which was a common occurrence in the 1850s. (*Id.*)

³⁸ For example, the TCR Report fails to mention the early burial at the nearby La Brea Tar Pits, states incorrect dates for the introduction of mortars and pestles, and misstates the burial practices of the Gabrielino tribe. (SRI Letter, p. 7)

Response to Comment No. 35-79

Refer to Response to Comments Nos. 13-7 and 26-42 regarding the adequacy of the Project Site land use history and the entire body of evidence considered in the assessment of archaeological resources, which includes but is not limited to the information presented in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR. This

information has been further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR.

Refer to Response to Comment Nos. 13-7 and 26-42 regarding land use history, methodology used to characterize the existing conditions and cultural setting at the regional and local levels, including the relevance of San Diego area references and how the Los Angeles Basin was adequately considered.

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-13 regarding the references to sources used to inform the analysis, including seminal works by scholars of archaeology, history, and anthropology, as well as studies produced in association with environmental compliance.

Refer to Response to Comment No. 26-E.2-12 regarding the discrepancies in minor details for topics that are either matters of scholarly debate or are only indirectly related to the background setting.

Refer to Response to Comment Nos. 13-7 and 26-42 regarding the subject of the historical context and how the archaeological assessment was informed by the land use history, including considerations of the Mexican Period.

Refer to Response to Comment Nos. 13-7, 26-42, and 26-E.2-12 regarding the discussion of the Gilmore Adobe and various business ventures of the Gilmore family that were pursued in advance of the Project Site being developed as Television City.

Refer to Response to Comment No. 26-E.2-12 regarding the topic of Native American labor.

The above responses explain why the available evidence from multiple data sources and presented in the Draft EIR were sufficiently detailed to provide a reasonable characterization of the existing conditions and the types of resources most likely to be encountered, and thereby provide a reasonable basis on which to develop mitigation measures capable of avoiding or reducing potentially significant impacts.

Comment No. 35-80

Background Research. The SRI Letter also found that the background research section of the TCR Report lacks basic information and is disconnected from the prior cultural setting section for the following reasons: (1) The 0.5-mile radius used for the South Central Coastal Information Center ("SCCIC") records search was wholly inadequate because it failed to consider the archaeological sensitivity of the Project Site, and that a minimum

10-mile radius was required; (2) the TCR Report failed to reference and discuss historic rancho maps, General Land Office (“GLO”) maps, Sanborn Fire Insurance maps, and other historical maps, as well as historical aerial imagery³⁹; and (3) no independent tribal outreach was conducted pursuant to the Sacred Lands Files Search.⁴⁰ (*Id.*, p. 8)

³⁹ Of the few aerial photographs reviewed, the TCR Report did not contextualize any of the structures identified in the images and even failed to identify Gilmore Stadium. (SRI Letter, p. 8)

⁴⁰ The report erroneously relied on the results of the AB 52 consultation. Although the named tribes are the same for the Sacred Lands Files Search and AB 52 consultation, three individuals named by the California Native American Heritage Commission (the “NAHC”) were not named on the AB 52 consultation list. As stated in the SRI Letter, these two forms of Native American engagement serve different purposes, and one should not be substituted for the other. (*Id.*)

Response to Comment No. 35-80

Refer to Response to Comment No. 26-42 regarding the records search radius and why 0.5 mile was sufficient for acquiring the data necessary to substantiate the assessment of archaeological and tribal cultural resources based on the presence of CA-LAN-3045H and the studies completed in association with its recording for a parcel adjacent to the Project Site.

Refer to Response to Comment No. 26-E.2-13 regarding the use of historical maps, including topographic maps, aerials, rancho, GLO, and Sanborn maps. Refer to Response to Comment Nos. 13-7 and 26-42 regarding a more comprehensive discussion of the archival sources used to assess archaeological and tribal cultural resources.

Refer to Response to Comment No. 26-E.2-14 regarding the efforts made to contact tribes identified on the contact list included in the SLF results returned by the NAHC.

Comment No. 35-81

Geoarchaeological Study. The DEIR and TCR Report are devoid of any type of geoarchaeological study analyzing the likelihood of prehistoric or historical-period archaeological resources on the Project Site. (*Id.*, p. 8) The TCR Report fails to analyze the geotechnical investigation findings in a meaningful way to discuss the potential for intact buried archaeological deposits on the Project Site. (*Id.*) As discussed in the SRI Letter, the TCR Report includes just a cursory review of soils data from the geotechnical report and fails to disclose, for example, that “the logs of several borings document dark-gray to black or dark-brown to black sediments present immediately below the fill. Dark sediments can sometimes indicate the presence of anthrosols or other soils with potential for containing cultural resources.” (*Id.*) Furthermore, while the TCR Report recognizes that a drainage crossed the west side of the Project Site prior to modern

development, it surprisingly does not discuss how this drainage may have affected Native American settlement patterns on the Project Site and the surrounding areas. (*Id.*)

In addition, the TCR Report and cultural resources section of the DEIR omit the 1991 discovery of Gilmore Field dugouts during excavation for the East Studio Building foundation. (*Id.*, p. 9) This alone demonstrates the high sensitivity of the Project Site for buried archaeological deposits. (*Id.*)

Response to Comment No. 35-81

Refer to Response to Comment Nos. 26-42 and 26-E.2-15 regarding how geoarchaeological data were already considered in the analysis of the potential for buried archaeological resources.

Refer to Response to Comment Nos. 26-42, 26-E.2-15, and 26-E.2-117 regarding the analysis of specific soils referenced in the geotechnical bore logs.

Refer to Response to Comment No. 26-E.2-15 regarding the discussion of the former stream course identified within the Project Site and the characterization of the environmental setting provided in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Refer to Response to Comment No. 26-E.2-15 regarding the subject of the Gilmore Field dugout.

Elements of the geoarchaeological data have been further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 35-82

Identifying Buried Archaeological Deposits. As discussed in the SRI Letter, in order to properly evaluate buried deposits from development and activities prior to 1952, the preparers of the DEIR should develop a thorough historic context along with in-depth archival research and a geoarchaeological study to identify the types and locations of archaeological resources likely to exist on the Project Site and in the vicinity. (*Id.*) Once identified, these locations should be further analyzed through remote sensing or mechanical excavation, particularly given the recent onsite discovery of remnants of the Gilmore Field dugouts. (*Id.*) As discussed further below, archaeological monitoring during grading, as recommended in Mitigation Measure CUL-MM-1, is appropriate “for identifying and treating **unanticipated** resources but should not be used in lieu of active searching

when there are **anticipated** buried resources to be present.” (*Id.*, emphasis added) Here, it is highly likely that archaeological resources would be encountered during project construction. Given the known archaeological sensitivity demonstrated by recent discovery of archaeological resources onsite and within the Project vicinity, further characterization of potential impacts to archaeological resources and meaningful consideration of appropriate, site-specific mitigation are required here.

Response to Comment No. 35-82

Refer to Response to Comment Nos. 13-7, 26-42, 26-44, and 26-E.2-15 regarding how geoarchaeological data were already considered in the analysis of the potential for buried archaeological resources, including activities prior to 1952 while Gilmore Field was being operated.

Refer to Response to Comment No. 26-42 regarding the reasons why methods such as remote sensing or mechanical excavation are infeasible and unnecessary to support the findings in the Draft EIR, which considers the substantial evidence already presented concerning the likelihood of archaeological resources and the proposed means of mitigating the potential for impacts. This evidence includes building materials identified in geotechnical cores presented in the Preliminary Geotechnical Engineering Investigation in Appendix E.1 of the Draft EIR and reviewed in the Tribal Cultural Resources Report in Appendix C.2 of the Draft EIR.

Refer to Response to Comment No. 26-44 regarding the intended meaning of unanticipated resources and the relationship to the assessment of potential impacts to archaeological sites and how the proposed mitigation avoids or reduces potentially significant impacts.

Further, Response to Comment No. 26-44 specifically addresses how Mitigation Measure CUL-MM-1 is adequate for addressing unanticipated archaeological resources and those likely to be encountered. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities.

Elements of the geoarchaeological data and historical land uses have been further summarized in the Supplemental Cultural Memo, included in Appendix FEIR-14 of this Final EIR. The Supplemental Cultural Memo did not identify any new or substantially more significant impacts than were disclosed in the Draft EIR.

Comment No. 35-83**3. Mitigation Measure CUL-MM-1 Improperly Defers Identification and Evaluation of Subsurface Archaeological Resources.**

Even if the DEIR had adequately characterized the archaeological potential of the Project Site and surrounding areas (which it does not), Mitigation Measure CUL-MM-1 is entirely inappropriate even based on the limited archaeological information made available to the public. To start with, CUL-MM-1 incorrectly defers identification and evaluation of subsurface archaeological resources to construction monitoring rather than proactively identifying archaeological resources during the environmental review process. (SRI Letter, pp. 6–7) Moreover, when dealing with an archaeologically sensitive site, as we have here, a mitigation measure that is limited to the inadvertent discovery of archaeological resources like the one proposed in CUL-MM-1, where a monitor is simply present to address unknown discoveries on an emergency basis, is wholly inappropriate. (*Id.*) In fact, the failure to adequately identify archaeological resources prior to the commencement of construction increases the likelihood that the Project would have a significant effect on encountered archaeological resources. (*Id.*)

The DEIR states that “[t]he Project Site has been previously disturbed and developed.... Given that the Project would include excavations to a maximum depth of approximately 45 feet below ground surface, there may be a potential to encounter **unknown** archaeological resources that could be present at the Project Site.” (DEIR, p. IV.B-58, emphasis added) The DEIR does not describe the scope of prior excavation and grading activity on the Project Site, so the location, depth and extent of intact subsurface soil is unknown. However, with the preparation of a proper and complete archaeological resources report, as described by SRI, the preparers of the DEIR could consider and recommend appropriate mitigation that does more than address inadvertent discovery, but also presents a detailed and supported mitigation plan based on the **known** archaeological resources likely to be present onsite.

Response to Comment No. 35-83

Refer to Response to Comment Nos. 13-7, 26-42, and 26-44 on the efforts made to obtain substantial evidence used to assess the potential for archaeological and tribal cultural resources within the Project Site and put forward mitigation measures capable of avoiding or reducing potentially significant impacts to less than significant levels. Further, Response to Comment No. 26-44 specifically addresses how Mitigation Measure CUL-MM-1 is adequate for addressing unanticipated archaeological resources and those likely to be encountered. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities. The Supplemental Cultural Memo,

included in Appendix FEIR-14 of this Final EIR, also provides additional discussion and expert opinion related to these responses.

Comment No. 35-84

H. The DEIR's Analysis of the Project's Energy Impacts Is Inadequate.

1. The Assumptions Used in the Underlying Modeling Are Inaccurate and Distort the Energy Analysis.

The VMT Calculator in the Transportation Assessment for the Project (see DEIR, Appendix M.1) and the CalEEMod from the Greenhouse Gas Emissions (“GHG”) worksheets in Appendix B-3 (“CalEEMod for GHG”) provide the backbone of the energy analysis. For both construction and operation, the consumption estimates for transportation⁴¹, electricity, and natural gas⁴² all start with outputs from CalEEMod for GHG or the VMT Calculator as the basis for the ultimate energy consumption estimates provided in the analysis and in Appendix D, Energy Calculations (“Energy Calculations”). (DEIR, pp. IV.C-19–20, IV.C-24, IV.C-26 [Table IV.C-1 and Table IV.C-2]) As discussed below, the analysis falls victim to the same errors seen in the air quality and transportation analyses. See also Sections II.E and II.Q, *infra*, for additional discussion regarding the flawed modeling.

To begin with, while the DEIR's project description states that the Specific Plan will include numerous uses, the VMT Calculator and CalEEMod for GHG only model a subset of uses associated with the DEIR Conceptual Plan and DEIR Conceptual Program, which is merely one illustrative scenario among endless options. The VMT Calculator and CalEEMod for GHG only includes sound stages, production support, production office, general office and retail uses, notwithstanding that the Specific Plan would allow myriad other use, many of which would presumably involve greater energy use per square foot. In other words, the scale and intensity of development ultimately approved at the Project Site may differ substantially from, and be substantially greater than, what was analyzed in Section IV.C (Energy) of the DEIR. Accordingly, the nebulous project description makes it impossible to properly evaluate the Project's actual energy demands with respect to transportation energy, electricity or natural gas.

Furthermore, the DEIR's discussion of how the permitted land use exchange among the five uses in the DEIR Conceptual Program would affect the Project's energy demand is incomprehensible. As stated in Note bin Table IV.C-2, “[t]he proposed Specific Plan would provide development flexibility by allowing for exchanges between certain categories or permitted land uses and associated floor areas in order to respond to the future needs and demands of the entertainment industry.” (*Id.*, p. IV.C-27) Note b claims that certain land use exchanges would represent the “maximum” demand for electricity, natural gas and transportation fuel, but provides no explanation to support those claims. Furthermore, Table IV.C-2 reflects that the electrical demand would be exactly the same for the DEIR

Conceptual Program or a “maximum demand scenario” with what it claims would be the most impactful land use exchange. (*Id.*) How can that be? Perhaps relatedly, Note b states that with the implementation of unspecified project design features, the DEIR Conceptual Program would generate the maximum electricity demand, but provides no support for that claim either. (*Id.*) Is this meant to explain why the electricity demand is claimed to be the same under any scenario? It is impossible to tell. Table IV.C-2 is a jumble of confusion.

- ⁴¹ To assess construction impacts related to transportation energy (gasoline and diesel fuel), the analysis starts with the outputs from the vendor trips and heavy-duty equipment inputted into CalEEMod for GHG. (*Id.*, pp. IV.C-19–20) These outputs are then calculated by either (1) multiplying fuel usage estimates per horsepower for heavy-duty equipment or (2) dividing the County-specific miles per gallon factor using CARB’s EMFAC 2021 model for vendor trips. (*Id.*) To assess operational impacts related to transportation, the analysis starts with the daily Project-related VMT from the VMT Calculator, which were then inputted in the CalEEMod for GHG to obtain the annual VMT for the Project. (*Id.*) The gasoline and diesel fuel usage were calculated using EMFAC 2021 based on an estimated vehicle fleet mix for Los Angeles County. (*Id.*)
- ⁴² Electricity and natural gas consumption estimates provided in the DEIR rely exclusively on the outputs from the CalEEMod for GHG for both construction and operations. (*Id.*)

Response to Comment No. 35-84

The Project’s energy impacts were comprehensively analyzed in Section IV.C, Energy, of the Draft EIR in accordance with CEQA based on conservative assumptions and substantial evidence, and impacts were determined to be less than significant.

Please refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for a detailed explanation of how the Project Description is accurate, stable, and finite and complies with CEQA and the regulatory process under the proposed Specific Plan. As noted therein, the scale and intensity of the Project would not exceed the parameters disclosed in the Draft EIR and further clarified in this Final EIR. Please also refer to Response to Comment Nos. 26-E.1-27, 26-E.1-28, and 35-53 for a discussion on the CalEEMod land use modeling and how the Draft EIR analyzed the potential physical environmental impacts of all proposed uses, areas and activities. As discussed extensively in Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment No. 26-35, the energy analysis accounted for the impacts of all proposed uses, areas and activities, regardless of the proposed Specific Plan definition of floor area.

Please see Topical Response No. 3, Permitted On-Site Uses, for a detailed explanation of the five studio land uses (i.e., sound stage, production support, production office, general office, and retail) permitted for the Project. Response to Comment No. 26-E.1-27 explains how the Draft EIR analysis comprehensively accounts for the Land Use Exchange Program under the proposed Specific Plan.

This comment references Sections II.E and II.Q of this comment letter. For Section II.E responses, please refer to Response to Comment Nos. 35-43 through 35-69. For Section II.Q responses, please refer to Response to Comment Nos. 35-12 through 35-150.

Supporting calculations are provided on pdf page 10 of Appendix D, Energy Calculations, of the Draft EIR which provides the demand factors used, reduction in electricity/natural gas associated with PDFs, and resulting electricity/natural gas usage. PDFs incorporated into the calculation of electricity/natural gas usage were described on page IV.C-21 in Section IV.C, Energy, of the Draft EIR. As described therein, Project Design Feature GHG-PDF-2 would require photovoltaic panels on the Project Site capable of generating a minimum of 2,000,000 kWh annually. In addition, Project Design Feature GHG-PDF-1 would result in an approximately 25-percent reduction with the installation of high-efficiency lighting (see page IV.C-26 in Section IV.C, Energy, of the Draft EIR). The “maximum demand scenario” accounted for an increase in square footage of land uses with higher demand factors (e.g., kilowatts per square foot per year). In addition, the VMT for the “maximum demand scenario” is from the LADOT VMT output included in pdf pages 758 through 782 of Appendix M, Transportation, of the Draft EIR. Table IV.C-2 (Summary of Net Annual Energy Use During Project Operation) provided in Section IV.C, Energy, of the Draft EIR provides a summary of the energy usage associated with the “maximum demand scenario.” As discussed in Footnote b of Table IV.C-2, without the implementation of PDFs, the land use mix that would generate the maximum electricity demand reflects an exchange of a combined total reduction of 446,000 square feet of production office and/or general office space for an additional 100,000 square feet of sound stages and an additional 346,000 square feet of production support uses since production support and sound stages have a higher electricity usage factor than office. However, with the implementation of the PDFs, the proposed development program would generate the maximum electricity demand.

Refer to pdf page 4 of Appendix D, Energy Calculations, in the Draft EIR. Also, refer to pdf pages 345 and 346 and pdf pages 363 and 364 of Appendix B of the Draft EIR for the electricity usage output (CalEEMod output file) for the Project and the maximum demand scenario, respectively. CalEEMod 2020.4.0 provides energy use factors for three sources (Title 24, Non-Title 24, and Lighting). Project Design Feature GHG-PDF-1 (25-percent reduction with the installation of high efficiency lighting) only applies to lighting energy usage. So, while sound stages and production support have a higher total electricity usage factor, the office lighting usage factor is lower. Thus, application of the 25-percent reduction for high efficiency lighting does not reduce the overall energy usage for office space as much as for sound stages and production support.

Under the maximum natural gas and maximum fuel demand scenario, a reduction of 100,000 square feet of production support would be exchanged for 100,000 additional square feet of sound stages since sound stages have a higher natural gas usage factor

than production support. Under each of these development scenarios, all impacts would remain less than significant. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Appendix FEIR-3 of this Final EIR regarding the Land Use Exchange Program and maximum impact scenarios.

Comment No. 35-85

In addition, the energy modeling and analysis does not even address all of the areas and uses that are contemplated as part of the DEIR Conceptual Plan and DEIR Conceptual Program. Specifically, all energy-intensive uses within the two production levels, which apparently include multiple basecamp and other production-related areas, as well as the Mobility Hub, were excluded from CalEEMod and the VMT Calculator. As such, the energy calculations and related analysis understate the Project's actual energy demands from transportation energy, electricity and natural gas, even when such analysis is arbitrarily confined to the DEIR Conceptual Plan and DEIR Conceptual Program.

The energy analysis should be redone to analyze the Project's actual worst-case energy impact.

Response to Comment No. 35-85

Please refer to Response to Comment No. 35-53 regarding electricity demand associated with the basecamp areas, Mobility Hub, and production-related areas. Refer to Response to Comment No. 26-174 regarding the natural gas usage evaluated in the Draft EIR.

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and to Response to Comment Nos. 5-7 and 26-121 for a discussion of how all of the uses, areas and activities have been accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area and how no active production activities would be located in the parking and basecamp areas below Project Grade.

Please also refer to Response to Comment No. 26-51 regarding the updates to the Project energy analyses modeling to account for building electrification related to the City's new all-electric buildings ordinance.

The Draft EIR comprehensively analyzed the energy impacts from the proposed development program (Conceptual Site Plan) as well as the maximum energy impact scenarios under the Land Use Exchange Program in Section IV.C, Energy, of the Draft EIR, and correctly determined that impacts would be less than significant. Refer to Response to Comment No. 35-84 regarding the maximum energy impact scenario analysis.

Comment No. 35-86**2. The Actual Energy Demand Required by Diesel Generators During Operations Is Not Disclosed in the DEIR.**

The DEIR provides limited information regarding the diesel generators that would be used at the Project Site, so it is impossible to know whether the full scope of the Project's energy impact is disclosed. It appears that the DEIR's energy section does not disclose the energy consumption from diesel generators required for basecamp and other production support operations on the two production levels. That is because the analysis only discusses emergency generators at the Project Site. It states that six "emergency" generators are currently used on the Project Site, and the Project would increase the amount of diesel fuel used by generators by an additional 4,594 gallons per year (or three additional generators). (DEIR, pp. IV.C-17 and IV.C-27 [Table IV.C-2]) Section IV.C (Energy) of the DEIR also states that the emergency generators would only "be used on an intermittent, short-term basis" and during periodic testing. (*Id.*, p. IV.C-29)

This assumption does not square with other facts provided in the DEIR. Specifically, the project description discloses that generators would be used during regular basecamp operations, stating that basecamp areas include "mobile facilities such as trucks, **generators**, and support vehicles related to production are temporarily staged" and "passive uses (including, but not limited to, parking, storage of mobile facilities, **power generators**, support vehicles, etc.)." (*Id.*, p. II-7, emphasis added) This reflects full-time, constant use of generators. Furthermore, Section IV.F (Hazards and Hazardous Materials) of the DEIR discloses that belly tanks and ASTs for diesel fuel would be kept onsite, which further suggests that generators would be used more frequently than on a short-term, intermittent basis. If generators will be used for regular basecamp operations, then should not the stated assumptions in the DEIR reflect that anticipated use?

Response to Comment No. 35-86

Refer to Response to Comment No. 26-36 regarding basecamp power usage. While existing production activities occasionally require the use of small portable generators when electrical hookups are not available, the Project would provide a sufficient number of electrical hookups in basecamp areas such that use of portable generators would not be necessary. Project Design Feature GHG-PDF-3 is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of additional electrical hookups at all basecamp areas. During operation of the Project, emergency generators would be included for emergency use during a power outage and regularly tested for maintenance purposes but otherwise would not be used to provide power to the Project Site. As under the existing condition, diesel storage tanks are provided for the emergency generators for purposes of supplying diesel fuel to the emergency generators during a loss of power. Therefore, there would be no diesel fuel use

regularly associated with the emergency generators. The intermittent nature of generator use proposed by the Project is consistent with the Draft EIR's analysis and conclusions.

Comment No. 35-87

3. The Energy Analysis Does Not Address a Potentially Significant Impact Related to GHG-PDF-2.

The Project Site currently has a significant number of photovoltaic panels ("PV Panels") (1,617,000 kWh annually). Project Design Feature GHG-PDF-2 mandates the installation of additional PV Panels on the Project Site, which are capable of generating a minimum of 2,000,000 kWh annually, a 383,000 kWh increase from the existing condition. However, the construction schedule and project description do not address what Hackman would do with the existing PV Panels that are currently spread across a substantial portion of the Project Site. (DEIR, p. IV.C-27 [Table IV.C-2]) Presumably, however, they would be removed, which would result in the loss of an energy-producing use that has not been accounted for in the DEIR's energy analysis.

Furthermore, the DEIR does not address the indirect or secondary environmental impact that could occur with the implementation of GHG-PDF-2, as required by Section 15126.4(a)(1)(D) of the Guidelines. For example, the removal of the existing PV Panels could add additional haul trips and vendor trips that were unaccounted for in the diesel and gasoline estimates for the energy analysis or in the DEIR's air quality analyses.

Response to Comment No. 35-87

The Draft EIR energy analysis takes into account the existing solar generation at the Project Site. As presented in Table IV.C-2 of the Draft EIR, solar generation (i.e., Project Design Feature GHG-PDF-2) would result in an approximately 383,000-kWh increase in production relative to existing conditions. Only the increase in solar production relative to the existing conditions was accounted for in the analysis of net energy demand. Energy demand associated with vehicle trips needed for the removal or installation of solar panels were assumed in the hauling and vendor delivery trips estimated for Project construction. Please refer to pdf page 8 of Appendix D, Energy Calculations, of the Draft EIR.

Comment No. 35-88

4. The Transportation Energy Demand Does Not Accurately Account for Diesel Fuel Usage from Trucks During Operations.

As stated previously, to calculate the diesel fuel estimates for Project operations, the DEIR used the daily project-related VMT from the VMT Calculator, which was then inputted into the CalEEMod for GHG to determine the estimated annual VMT for the Project. The

annual VMT was then divided by the “County-specific [miles per gallon] calculated in EMFAC2021” based on the default CalEEMod vehicle fleet mix for projects in Los Angeles County. (DEIR, p. IV.C-20) However, the DEIR provides no evidence to justify the use of the default CalEEMod fleet mix for the Project. Given the large number of diesel-fueled trucks that would arrive at and depart from the Project Site each day (estimated at 559 one-way trips or 279 round trips per day), the DEIR needs to explain why the default fleet mix is appropriate and, if it is not appropriate, to modify the default and redo the analysis. (Air Quality Report, pp. 102, 103)

Moreover, the land use assumptions in the VMT Calculator are inconsistent with the land uses in the CalEEMod for GHG sheets. Specifically, the VMT Calculator does not assume any industrial uses at the Project Site, but the CalEEMod for GHG assumed 454,000 square feet of industrial uses. (DEIR, Appendix M.1, pp. 351–361; Air Quality Report, CalEEMod for GHG, p. 341) So, it is not clear whether operational diesel-fuel truck trips were accurately included in the Energy Calculations for the Project. The energy analysis should be updated to address the inconsistency between the CalEEMod for GHG and VMT Calculator and to clarify how diesel-fueled trucks were accounted for in the energy calculations.

Response to Comment No. 35-88

Refer to Response to Comment No. 26-E.1-22 for a discussion of the Project trip generation rates. Please refer to Response to Comment No. 26-E.1-16 for a discussion of diesel truck trip estimates associated with Project operations. As discussed therein, the commenter’s estimate of operational trucks is not accurate as the Project would result in approximately 62 diesel truck trips per day. CalEEMod provides the fleet mix calculated using EMFAC based on the selected county. Specifically, EMFAC calculates the fleet mix by vehicle type based on the total trips and vehicle population data for the designated county. Thus, for Los Angeles County, CalEEMod would use the same default fleet mix for all land uses within the county regardless of land use type (i.e., CalEEMod uses the same fleet mix whether the user selects an industrial park, retail, or dwelling units). This comment does not provide substantial evidence to support changing the default CalEEMod fleet mix for the Project. Furthermore, the same number of trips and VMT analyzed in CalEEMod for GHG are consistent with the trips and VMT calculated by the VMT Calculator. Refer to Appendix M, Transportation, of the Draft EIR beginning on pdf page 242 for the VMT Calculator output files. This comment does not provide substantial evidence of inconsistency between the trips and VMT provided in CalEEMod for GHG and the VMT calculated by the VMT Calculator.

Comment No. 35-89

I. The DEIR's Analysis of the Project's Geology and Soils Impacts Is Inadequate.

The DEIR's analysis of the Project's impacts on geology and soils is inadequate for the reasons set forth below.

1. The Geotechnical Report Relies on Unstable Project Assumptions.

The DEIR's analysis of the Project's geology and soils impacts is based in large part on the Preliminary Geotechnical Engineering Investigation ("Geotechnical Investigation"), Addendum I—Response to Soils Report Review Letter ("Geotechnical Addendum I"), and Addendum II—Additional Geotechnical Comments ("Geotechnical Addendum II") (collectively the "Geotech Report"). (DEIR, p. IV.D-1, Appendix E)

The Geotech Report, in turn, bases its analysis on the DEIR Conceptual Plan (*id.*, Appendix E, p. 72 of PDF) and the following assumptions:

- "For reference purposes, an elevation of 185 feet above mean sea level (AMSL) will be utilized as the base site elevation.
- The proposed sound stages will be one-story high-bay structure, extending approximately 60 feet in height.
- The proposed production support buildings and office buildings will vary typically between 4 and 7 stories in height.
- The proposed parking structure will be approximately 9 stories in height. In addition parking may also be provided in subterranean areas.
- Multi-story buildings for production and general office may be spread across the Project site." (*Id.*, Appendix E, Geotechnical Investigation, p. 2)

It also assumes that "[m]ost of the sound stages, production support, and office buildings will be constructed at or near the base site elevation for the Project. The structures closest to Beverly Boulevard will be constructed over 2 subterranean levels. It is anticipated that the subterranean levels will extend approximately 20 to 40 feet below the existing Project [S]ite grade." (*Id.*) It further assumes that "[p]reliminarily, the office buildings, production support buildings, and parking structure will have estimated column loads between 1,500 and 2,000 kips. The sound stages will have estimated typical column loads of 500 kips. Grading will consist of excavations for removal and recompaction of existing unsuitable soils, and excavations for the proposed subterranean levels and foundation elements." (*Id.*)

The Geotech Investigation cautions, however, that “[a]ny changes in the design of the Project or location of any structure, as outlined in this report, should be reviewed by [Geotechnologies, Inc.]” and states that, “[t]he recommendations contained in [the Geotech Report] should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.” (*Id.*) In other words, the Geotech Report expressly states that it is not valid for any development scenario other than the DEIR Conceptual Plan. But Hackman is not required to develop the Project in accordance with the DEIR Conceptual Plan. As discussed throughout this letter, Hackman could develop the Project in a much different way with different buildings and uses at different locations. As just one example, the production support buildings and office buildings shown on the DEIR Conceptual Plan within Height District D can have a minimum height limit of 88 feet and maximum height of 225 feet over 40% of the height zone. (*Id.*) This would allow buildings at least three times the height with the four- to seven-story buildings assumed in the Geotech Report. As such, the analysis in the Geotech Report, and therefore the analysis in the DEIR, is invalid because they are based on an inherently unstable project description and unwarranted and improper assumptions.

Response to Comment No. 35-89

The qualifying statement in the Preliminary Geotechnical Engineering Investigation included as Appendix E.1 of the Draft EIR is found in any such report, and simply means that any changes to the design or locations of structures must be reviewed by the geotechnical engineer of record so that any adjustments or modifications to the geotechnical design parameters may be made, if necessary, to ensure that the building design are in conformance with the recommendations provided in Appendix E.1 and in compliance with applicable building code requirements. All design recommendations and parameters will be reviewed by the local jurisdiction as part of the regulatory permitting process prior to construction. Furthermore, permitted development would adhere to the parameters set forth in Section II, Project Description of the Draft EIR and in the Preliminary Draft Specific Plan. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the accurate, stable, and finite Project Description and the regulatory process under the proposed Specific Plan. As discussed therein, any substantial changes from the Project would require future discretionary City review and approval and additional CEQA review. The maximum depth of excavation would be approximately 45 feet and the maximum export would be approximately 772,000 cubic yards. Should additional depth of excavation or additional export be required, further CEQA review would also be required.

Comment No. 35-90**J. The DEIR's Analysis of the Project's Paleontological Resources Impacts Is Inadequate.**

The DEIR's paleontological resources analysis is inadequate primarily because it fails to clearly characterize the paleontological potential of the Project Site due to its cursory and sometimes contradictory analysis. As a result, the DEIR's recommended Mitigation Measure GEO-MM-1 is unsupported by substantial evidence and further consideration of appropriate mitigation is required, especially given the known extent of paleontological resources present in the project vicinity.

1. The DEIR Fails to Clearly Characterize the Paleontological Potential of the Project Site.

The DEIR's impact analysis for paleontological resources consists of one paragraph (DEIR, p. IV.D-26) and relies on a records search conducted by the Natural History Museum of Los Angeles ("LACM") Vertebrate Paleontology Department that yielded no previously encountered vertebrate fossil localities onsite and a 31-page Paleontological Resources Review Memorandum prepared by Dudek (the "Paleo Report"), less than two pages of which included any substantive analysis of paleontological resources and the remainder comprised of a brief project description and 27 pages of Dudek's qualifications. (DEIR, Appendix F)

As discussed in the SRI Letter, the DEIR fails to discuss the specific depths at which native sediments occur beneath the Project Site and the nature of the underlying geology, particularly as such information relates to paleontological potential onsite. (SRI Letter, p. 10) In addition, the DEIR refers to a variety of geologic unit terminology interchangeably to describe the sediments underlying the Project Site, when such terms have specific meanings and are not necessarily interchangeable. (*Id.*) As a result, it is impossible to understand the character of the underlying geology of the Project Site, yet alone the depths and location of each geologic unit anticipated to be encountered during Project construction. (*Id.*)

Moreover, the DEIR uses outdated 1995 definitions, rather than more current 2010 definitions, for significant fossiliferous deposits and significant paleontological resources provided by the Society of Vertebrate Paleontology ("SVP"). As discussed in the SRI Letter, it is not clear whether the Paleo Report used the SVP system for assigning paleontological resource potential, but the DEIR seemingly implies that the SVP system was used. (*Id.*) However, to add to the already confusing analysis, the DEIR states that the Project Site has a "moderate to high" paleontological sensitivity (DEIR, p. IV.D-15), which is not a listed designation within the SVP system. (SRI Letter, p. 10)

Response to Comment No. 35-90

The potential impacts to paleontological resources were comprehensively evaluated in Section IV.D, Geology and Soils, of the Draft EIR and the Paleontological Resources Review Memorandum included as Appendix F of the Draft EIR, which was prepared in accordance with CEQA and 2010 SVP standards. As discussed on pages IV.D-15 to IV.D-16 of the Draft EIR, a paleontological records search specific to the Project Site was conducted through the Natural History Museum of Los Angeles. Regarding the analysis presented in the Paleontological Resources Review Memorandum, Dudek prepared the memorandum for the Project based on the results of the confidential records search, which contains sensitive fossil locality data that are on file at the City for review by qualified individuals, as stated on page IV.D-15 of Section IV.D, Geology and Soils, of the Draft EIR.¹³⁷ The results of the paleontological records search indicated that there are no previously encountered vertebrate fossil localities located within the Project Site. However, fossil localities have been identified within 4,000 feet of the Project Site from the same sedimentary deposits that occur beneath portions of the Project Site. The Project Site is mapped as being underlain by older Quaternary alluvial deposits that are late Pleistocene in age (approximately 129,000 to 11,700 years old). These Pleistocene age alluvial deposits have a high potential to yield paleontological resources. Thus, these sedimentary deposits have the potential to yield scientifically significant vertebrate fossils.

As the paleontological records search indicated that there are no previously encountered vertebrate fossil localities located within the Project Site, the Draft EIR and Paleontological Resources Review Memorandum evaluated the known presence of paleontological resources at nearby properties. The Draft EIR identified seven nearby properties where paleontological resources were discovered. For each such property, the Draft EIR identified the distance from the property to the Project Site, the type of resources found, the depth below grade the resource was found, and the type of sedimentary deposit in which the resource was found as discussed on pages IV.D-15 to IV.D-16 of Section IV.D, Geology and Soils.¹³⁸ Those resources were generally found in older Quaternary age deposits. Similarly, Pleistocene age alluvial deposits were found to be present below the artificial fill at the Project Site (as confirmed by the Preliminary Geotechnical Engineering

¹³⁷ Records searches for paleontological resources such as sensitive fossil data are kept confidential to protect the specific locality information in order to, among other reasons, prevent poaching. However, general information about the type of geological units is not considered confidential.

¹³⁸ The discoveries discussed in Section IV.D, Geology and Soil, of the Draft EIR and the Paleontology Technical Report included nearby development projects such as The Grove at Farmers Market as well as the La Brea Tar Pits within Hancock Park. Given the fact that the La Brea Tar Pits is a National Natural Landmark, further descriptions of its importance would be redundant. It is mentioned in the same paragraph (on page 2 of the Paleontological Resources Review Memorandum) that “millions of Pleistocene fossil plant, insect, and animal specimens” have been recovered from the La Brea Tar Pits, further emphasizing its importance.

Investigation attached as Appendix E.1 of the Draft EIR). Although no previously encountered vertebrate fossil localities were identified within the Project Site as part of the records search, previously undisturbed Pleistocene age alluvial deposits would be conducive to preserving such remains. As excavation for the Project would occur up to a maximum depth of approximately 45 feet below grade, it was determined that it is possible that fossilized remains may be encountered during grading operations within the Project Site. As resources were found at some of the nearby sites at depths of 45 feet or less, the Draft EIR concluded that paleontological resources could be discovered at the Project Site during excavation. Refer to pages IV.D-15 to IV.D-16 and IV.D-26 to IV.D-27 of the Draft EIR and Appendix F (Paleontological Resources Review Memorandum) of the Draft EIR.

Regarding the depth of native sediments, the Draft EIR and Paleontological Resources Review Memorandum conservatively assumed that the Pleistocene age alluvial deposits could exist immediately below the artificial fill at the Project Site, and thus, would require monitoring for paleontological resources except during excavation of the artificial fill (refer to Appendix F, page 2, of the Draft EIR). Also, the Preliminary Geotechnical Engineering Investigation identified the Pleistocene age alluvial deposits as shallow as three feet below grade (refer to Appendix E.1, page 4, of the Draft EIR).¹³⁹

In addition, as discussed on pages IV.D-15 to IV.D-16 of Section IV.D, Geology and Soils, of the Draft EIR, the Paleontological Resources Review Memorandum uses the correct terminology when discussing the type of deposits that have a higher potential to contain paleontological resources, namely, older Quaternary age sedimentary deposits known as Pleistocene. As discussed on pages 1–2 of the Paleontological Resources Review Memorandum, “[t]he Project Site is mapped as being underlain by older, elevated Quaternary alluvial deposits that are late Pleistocene in age (approximately 129,000 to 11,700 years old; map unit Qae)” based on published geological mapping.^{140,141} Previously discovered fossils in the area have been in older Quaternary age sedimentary deposits known as Pleistocene age deposits.

With respect to the Society for Vertebrate Paleontology Standard Guidelines (SVP Guidelines), which were published in 1995 and updated in 2010, those Guidelines are

¹³⁹ The Draft EIR discusses the existing soil conditions on page IV.D-11 of Section IV.D, Geology and Soils, detailing fill deposit thickness, depth, and native deposits that lie underneath. Boring logs are provided as part of the Preliminary Geotechnical Engineering Investigation in Appendix E.1 of the Draft EIR.

¹⁴⁰ Dibblee, T.W. and H.E. Ehrenspeck. 1991. Geologic map of the Hollywood and Burbank (south 1/2) quadrangles, Los Angeles, California, Dibblee Geological Foundation, Dibblee Foundation Map DF-30, 1:24,000.

¹⁴¹ Cohen, K.M., S.C. Finney, P.L. Gibbard, and J.-X. Fan. 2023. The ICS International Chronostratigraphic Chart.” Episodes 36: 199–204. 2013.

discussed on pages IV.D-3 to IV.D-4 of Section IV.D, Geology and Soils, of the Draft EIR and in the Paleontological Resources Review Memorandum. The Paleontological Resources Review Memorandum refers to the 2010 SVP Guidelines, and the Draft EIR refers to both the 1995 and 2010 SVP Guidelines, as discussed on pages IV.D-3 through IV.D-4, footnotes 5 through 8 in Section IV.D, Geology and Soils, of the Draft EIR. Those citations to the 1995 SVP Guidelines refer to the definitions of “significant nonrenewable paleontological resources” and “significant fossiliferous deposits.” The definitions of those terms in the 1995 and 2010 SVP Guidelines are not substantively different (i.e., they were not substantively changed in the 2010 SVP Guidelines).¹⁴² The Draft EIR states that:

As defined by the SVP [1995], significant nonrenewable paleontological resources are:

Fossils and fossiliferous deposits here are restricted to vertebrate fossils and their taphonomic and associated environmental indicators. This definition excludes invertebrate or paleobotanical fossils except when present within a given vertebrate assemblage. Certain invertebrate and plant fossils may be defined as significant by a project paleontologist, local paleontologist, specialists, or special interest groups, or by lead agencies or local governments.

The Draft EIR goes on to state:

As defined by the SVP, significant fossiliferous deposits are:

A rock unit or formation which contains significant nonrenewable paleontologic resources, here defined as comprising one or more identifiable vertebrate fossils, large or small, and any associated invertebrate and plant fossils, traces, and other data that provide taphonomic, taxonomic, phylogenetic, ecologic, and stratigraphic information (ichnites and trace fossils generated by vertebrate animals, e.g., trackways, or nests and middens which provide datable material and climatic information). Paleontologic resources are considered to be older than recorded history and/or older than 5,000 years BP [before present].

The SVP (2010) states that:

¹⁴² Notably, these definitions from the 1995 SVP Guidelines have been referenced as recently as 2019 by other consultants. See page 6 of www.cityofinglewood.org/DocumentCenter/View/13919/I-Paleontological-Resources-Report.

Significant paleontological resources are fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).

This updated definition incorporates elements of both of the SVP (1995) definitions, specifically, what fossils and fossiliferous deposits are, data such deposits yield, and ages of such deposits. The definition of “significant paleontological resources” in the first sentence of the 2010 definition incorporates the elements stated in the: (i) first two sentences of the 1995 definition of “significant nonrenewable paleontological resources” and (ii) first sentence of the 1995 definition of “significant fossiliferous deposits.” Further, the last sentence of the 2010 definition of paleontological resources refers to the same time period as referenced in the last sentence of the 1995 definition of significant fossiliferous deposits.

For the sake of clarity, however, pages IV.D-3 and IV.D-4 of the Draft EIR were revised to reflect only the 2010 SVP Guidelines; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. This revision does not affect or change the analysis or conclusion in the Draft EIR related to potential impacts on paleontological resources.

Finally, regarding the use of the terminology of “moderate to high” potential or sensitivity for paleontological resources, the moderate to high potential or sensitivity is used by practitioners to indicate the need for paleontological resources mitigation during construction.¹⁴³ Low or zero (also “no”) potential or sensitivity indicate that mitigation is not needed during construction. Thus, using only the terminology of “high” sensitivity instead of the terminology of “moderate to high” sensitivity would not change the conclusion in the Draft EIR that mitigation is required (through monitoring for paleontological resources).

Comment No. 35-91

2. Mitigation Measure GEO-MM-1 Is Inadequate.

Even if the DEIR had adequately characterized the paleontological potential of the Project Site and surrounding areas (which it does not), Mitigation Measure GEO-MM-1 is

¹⁴³ County of San Diego, El Monte Sand Mining Project Draft EIR, Section 2.5, Paleontological Resources, August 2018.

inadequate even based on the limited and conflicting paleontological information in the DEIR. First, Mitigation Measure GEO-MM-1, which requires construction monitoring by a paleontologist, fails to provide all requisite qualifications under the SVP system for a project paleontologist and omits any qualifications for the paleontological monitor. (SRI Letter, p. 11) Given the “moderate to high” paleontological sensitivity of the geologic units underlying the Project Site and the Project’s proximity to “La Brea”-type asphaltic deposits, an experienced professional monitor should be required under Mitigation Measure GEO-MM-1. (*Id.*)

Second, as discussed in the SRI Letter, Mitigation Measure GEO-MM-1 lacks other critical provisions included in paleontological mitigation measures for recent projects near the Project Site and within the same geologic unit, “including requirements for fossil preparation, assignment of an approved repository, donation of significant paleontological resources to the approved repository, review of the Mitigation and Treatment Plan by curatorial staff of the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County and at the Natural History Museum La Brea Tar Pits & Museum, mandate of a Worker Environmental Awareness Program (WEAP), authority of the paleontological monitor to divert/direct ground-disturbing activities in the event of discovery, and preparation of a final report at the conclusion of monitoring.” (*Id.*) Accordingly, in addition to revising the DEIR’s analysis of the Project Site’s paleontological potential, the preparers of the DEIR must meaningfully consider mitigation to address the known paleontological resources within the Project Site, not just the unknown paleontological resources that could inadvertently be discovered there.

Response to Comment No. 35-91

Mitigation Measure GEO-MM-1, as provided on page IV.D-27 of the Draft EIR, requires the preparation of a Paleontological Resource Mitigation and Treatment Plan by a “paleontologist who meets the Society of Vertebrate Paleontology standards (including a graduate degree in paleontology or geology and/or a publication record in peer reviewed journals, with demonstrated competence in the paleontology of California or related topical or geographic areas, and at least two full years of experience as assistant to a Project paleontologist).” Definitions for a qualified professional paleontologist and qualified paleontological resource monitor are outlined in the 2010 SVP Guidelines (which is discussed in Section IV.D, Geology and Soils, of the Draft EIR and the Paleontological Resources Review Memorandum (Appendix F of the Draft EIR). This measure also provides that “[t]his Project paleontologist shall supervise a paleontological monitor who shall monitor all ground disturbance activities within Pleistocene age deposits in order to identify potential paleontological remains.” Further, as stated on page IV.D-28 of the Draft EIR, the paleontological monitoring program required by Mitigation Measure GEO-MM-1 would follow the SVP Guidelines.

Mitigation Measure GEO-MM-1 is consistent with the 2010 SVP Guidelines and professional best practices for paleontology. As stated above, the paleontological monitoring would follow the SVP Guidelines. Nevertheless, Mitigation Measure GEO-MM-1 has been clarified to expressly incorporate the qualification requirements for both a Qualified Professional Paleontologist and Qualified Paleontological Resource Monitor as defined by the 2010 SVP Guidelines. In addition, although standard for Paleontological Resource Mitigation and Treatment Plans, which will be prepared pursuant to Mitigation Measure GEO-MM-1, this mitigation measure has been further revised to expressly include: (a) a Worker Environmental Awareness Program; (b) communication protocols during construction, fossil recovery protocols, sampling protocols for microfossils, laboratory procedures, reporting requirements, and curation provisions for any collected fossil specimens; (c) the authority of the monitor to stop construction work if resources are discovered; (d) review of the Paleontological Resource Mitigation and Treatment Plan by the curatorial staff of the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County and/or the La Brea Tar Pits and Museum; and (e) the preparation of a post-monitoring report. Thus, Mitigation Measure GEO-MM-1 has been revised as set forth in Section III, Revisions, Clarifications, and Corrections to the Draft EIR:

In addition, the Paleontological Resource Mitigation and Treatment Plan, according to the mitigation measure, “shall specify ... laboratory procedures,” which would generally include preparation of paleontological resources to the point of taxonomic identification. It should also include, but not be limited to, “curation provisions” which outline the museum, for instance, that will serve as the accredited repository of discovered paleontological resources. The Paleontological Resource Mitigation and Treatment Plan shall also include the details for the Worker Environmental Awareness Program (WEAP) which is now an express requirement in the clarified version of Mitigation Measure GEO-MM-1.

Further, other elements of the Paleontological Resource Mitigation and Treatment Plan would include, but not be limited to, the applicable portions of the 2010 SVP Guidelines (section titles are from the 2010 SVP Guidelines): Adequate Monitoring, Macrofossil, Salvage, Avoidance and Site Protection, Microfossil Salvage, Samples, Preparation, Identification and Cataloging, Analysis, Storage, Reporting, and Compliance.

Finally, this mitigation measure has been clarified to include a WEAP. The WEAP is intended to provide training to construction personnel regarding paleontological resources protection requirements and protocols to be implemented on-site should a paleontological resource be discovered. The WEAP training is presented prior to the start of construction and will be repeated for those workers who were not at the initial training held for the Project Site.

Refer to Response to Comment Nos. 13-7 and 35-90 regarding the Draft EIR’s comprehensive analysis of potential impacts to paleontological resources.

Comment No. 35-92**K. The DEIR's Analysis of the Project's GHG Impacts Is Inadequate.**

The modeling used to quantify the GHG emissions suffers the same global issues as the modeling used for the DEIR's air quality and energy analyses. Specifically, the DEIR Conceptual Plan and DEIR Conceptual Program identified in the GHG analysis represent only one potential iteration of the Project. As such, the project ultimately constructed at the Project Site may differ substantially from what was input into the CalEEMod for GHG. Therefore, it is impossible to understand whether the Project's GHG emissions have been properly assessed. In addition, the CalEEMod for GHG does not include all of the uses actually contemplated in the DEIR Conceptual Plan and DEIR Conceptual Program because it omits all of the impact-generating uses within the two contemplated production levels. Moreover, the modeling only includes the sound stages, production support, production office, general office, retail uses and parking areas reflected in the DEIR Conceptual Program, notwithstanding that the Specific Plan would permit many other uses. (DEIR, Appendix B, CalEEMod for GHG, p. 341)

Ramboll identifies several other errors made in the inputs used in the CalEEMod for GHG. (Ramboll Letter, Comments 17 through 26) For example, the CalEEMod for GHG relies on defaults using the CalEEMod2020.4.0 version of the model. (*Id.*, pp. IV.E-47-48) However, an updated version of CalEEMod is available, CalEEMod 2022. The updated model could change the estimated electricity usage factors because the CalEEMod 2022 default electricity usage factors are based on 2019 consumption estimates using the California Energy Commission's ("CEC") 2018–2030 Uncalibrated Commercial Sector Forecast and 2019 Residential Appliance Saturation Survey ("RASS").⁴³ The DEIR should evaluate if electricity usage factors for each land use should incorporate the CalEEMod2020.4.0 relies on a 2009 RASS and 2002 CEC sponsored California Commercial End Use Survey for non-residential land uses.⁴⁴

While we recognize that no quantified GHG emissions thresholds apply to the Project and the DEIR therefore provides the information above for informational purposes, the preparers of the DEIR have an obligation to provide accurate and up-to-date information for a concrete, stable project. As such, the informational portion of the GHG analysis should be redone to address the Project's actual worst-case GHG impacts.

⁴³ CalEEMod2022 Appendix D, Technical Source Documentation for Emissions Calculations. Available at: https://www.caleemod.com/documents/user-guide/05_Appendix%20D.pdf. Accessed: August 2021.

⁴⁴ CalEEMod2020.4.0 Appendix E, Technical Source Documentation for Emissions Calculations. Available at: <http://www.aqmd.gov/docs/default-source/caleemod/user-guide-2021/appendix-e2020-4-0.pdf?sfvrsn=6>. Accessed: August 2021.

Response to Comment No. 35-92

The first paragraph of this comment is similar to Comment No. 35-53. Refer to Response to Comment No. 35-53.

Please see Response to Comment No. 26-E.1-35 for an explanation of why CalEEMod 2020.4.0 was the appropriate modeling software for the Draft EIR analysis and that, for informational purposes, Project emissions using CalEEMod 2022.1.1 have been prepared and are included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR). As discussed in Response to Comment No. 26-E.1-35, the results of CalEEMod 2022.1.1 in comparison to CalEEMod 2020.4.0 are similar and do not change any conclusion in the Draft EIR. However, operational GHG emissions with increased electrification of the Project to account for the City's new all-electric buildings ordinance (which was adopted after the Draft EIR was published) would increase GHG emissions in comparison to what was reported in Table IV.C-11 (Annual Project (Conceptual Land Use Program) GHG Emissions Summary (2026 Buildout Year)) of the Draft EIR. Electricity generation only takes into account carbon intensity at build out year and does not take into account decreasing carbon intensity in subsequent years required by SB 100, which accelerated the State's RPS target dates. The RPS would require utilities to supply 100 percent renewable energy by 2045. Thus, overall Project-related GHG emissions would similarly decrease over time as increased renewable energy is available.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Project Description is accurate, stable, and finite, and the Draft EIR comprehensively evaluated the potential impacts of the Project in accordance with CEQA.

Comment No. 35-93**L. The DEIR's Analysis of the Project's Hazards and Hazardous Materials Impacts Is Inadequate.****1. The DEIR Fails to Adequately Address How the Project Would Increase Existing Hazards at the Project Site.**

The DEIR describes existing hazards and hazardous materials that are part of operations of the Existing Television Studio. The DEIR also recognizes "[w]ith the proposed increase in floor area and increased production levels, it is anticipated that hazardous waste-generating activities could increase." (DEIR, p. IV.F-47) Examples of existing hazardous materials at the Project Site include: (1) six diesel generators; (2) one 1,000-gallon AST and four belly tanks of various sizes for diesel fuel (7,000, 1,000, 300, and 50 gallons); (3) two spray-paint booths; (4) hazardous material storage of water-based ink, non-PCB containing light ballasts, sewage, infectious/medical waste, paint-related wastes, and other

materials;⁴⁵ (5) natural gas fuel cell; and (6) above-ground clarifier for helipad. (DEIR, pp. IV.F-26, IV.F-28-29) Many of these materials are also identified in Figure IV.F-1, which depicts where on the Project Site the hazards and hazardous materials are located. (*Id.*, p. IV.F-26) However, the DEIR fails to explain which hazardous-waste-generating activities would increase and by how much they would increase. (*Id.*, p. IV.F-47) As such, it is impossible to know whether the Project would have any significant impacts related to increases in existing hazards or hazardous materials, or how these increases would impact nearby sensitive receptors, like Broadcast Center.

Similarly, despite the fact that Hackman is currently a “small quantity generator”⁴⁶ under RCRA, the DEIR provides no information about how the increase in production uses could change this categorization from small quantity generator to a large quantity generator, or something else entirely. (*Id.*, p. IV.F-48)

⁴⁵ The DEIR provides no information about the current location of the “hazardous waste storage area” that is currently used at the Project Site. (DEIR, p. IV.F-23) It also fails to address where the hazardous waste storage area would be located with the implementation of the Project, and whether it would be located close to nearby sensitive receptors.

⁴⁶ Per the U.S. EPA’s webpage on “Categories of Hazardous Waste Generators” under RCRA, “small quantity generators” generate more than 1 00 kilograms, but less than 1,000 kilograms of hazardous waste per month. Available at: <https://www.epa.gov/hwgenerators/categories-hazardous-waste-generators#small>. Accessed: September 2022.

Response to Comment No. 35-93

Refer to Response to Comment No. 26-78 for a discussion of current and anticipated use of hazardous materials. Please note that there are four existing spray paint booths on the Project Site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 35-94

2. The DEIR Does Not Substantiate How Mitigation Measure HAZ-MM-2 Would Reduce the Project’s Significant Impacts on the Public from Methane Gas and Hydrogen Sulfide During Construction or Operation.

Threshold (b) in Section IV.F (Hazards and Hazardous Materials) asks whether a project would “create a significant hazard to the **public** or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.” (DEIR, p. IV.F-42) The DEIR concludes that the Project would exacerbate the risk of upset and accident conditions associated with methane gas and hydrogen sulfide during construction and operation, and that these impacts would be significant without mitigation. (*Id.*, pp. IV.F-46–47, IV.F-50) The DEIR goes on to conclude that Mitigation Measure HAZ-MM-2⁴⁷ would reduce these significant impacts to a

less-than-significant level. (*Id.*, pp. IV.F-53–55) However, the measures included in Mitigation Measure HAZ-MM-2 only address worker safety during construction, not the overall public's safety during construction. And, they fail to address operations at all. Given the substantial number of sensitive receptors adjacent to and near the Project Site, HAZ-MM-2 needs to be strengthened to ensure that these significant public impacts are reduced to a less-than-significant level or the DEIR must acknowledge that the impacts are significant and unavoidable.

⁴⁷ The Ramboll Letter includes a substantial number of additional recommendations related to Mitigation Measure HAZ-MM-2 in Comment 59.

Response to Comment No. 35-94

Refer to Response to Comment Nos. 13-6 and 26-80 regarding methane impacts and Mitigation Measure HAZ-MM-2. As concluded in the Draft EIR, impacts related to methane during construction and operation would be less than significant. Thus, no changes need to be made to Mitigation Measure HAZ-MM-2. Please refer to Response to Comment No. 26-E.1-75, which discusses controls to mitigate the effects of subsurface gases on workers and the public.

Comment No. 35-95

3. The DEIR Does Not Adequately Address the Project's Potentially Significant Impact from Dewatering During Construction.

As indicated by Ramboll, the DEIR fails to adequately assess how dewatering activities at the Project Site could exacerbate existing offsite hazardous conditions. Specifically, dewatering could spread existing off-site contaminations in groundwater. (Ramboll Letter, Comment 57) The DEIR claims that the VOCs detected in groundwater at the Project Site are "likely related to an off-site upgradient release." (DEIR, p. IV.F-44) However, no obvious upgradient source is identified in the Phase I included as Appendix G to the DEIR or in the DEIR text itself. (Ramboll Letter, Comment 57) PCE was also shown at concentrations as high as 13 µg/L in groundwater in the northeast corner of the Project Site at concentrations above MCLs. (Appendix G, 2018 Phase I Environmental Site Assessment ["**2018 Phase I**"], pp. 95–96; 2017 Phase I Environmental Site Assessment, p. 703) TCE at 12 µg/L and cis-1,2-DCE (6.4 µg/L) were also identified in groundwater above MCLs at B-1 (near eastern site boundary south of adjacent apartments). (*Id.*, 2021 Site Summary Report, p. 36 [Table 9]) The 2018 Phase I also identifies various adjacent properties that were listed on the Leaking Underground Storage Tank databases and have received regulatory closure. These multiple adjacent properties were closed with methyl tertiary butyl ether and tertiary butyl alcohol remaining in groundwater. (*Id.*, 2018 Phase I, pp. 19-20) A more detailed analysis of the potential offsite source(s) is required because, if the existing contamination is the result of an offsite source, future dewatering activities may

result in additional contamination being pulled onsite and/or beneath adjacent residences and/or schools. (Ramboll Letter, Comment 57) The DEIR's hazards section does not address the effect of dewatering on these offsite properties or others within the radius-of-influence.

In addition, according to Ramboll, given the expected dewatering activities at the Project Site during construction, the DEIR and the soil management plan proposed in Mitigation Measure HAZ-MM-1 (the "Soil Management Plan") should have included specific recommendations related to dewatering during construction. (*Id.*, Comment 53) While the Soil Management Plan indicates that the general contractor shall implement any required treatment of groundwater, it is not clear if a permanent dewatering system will be required, and if so, what type of treatment will be required. (*Id.*)

Response to Comment No. 35-95

As discussed in Response to Comment No. 3-7, the Project would require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment Nos. 11-5 and 11-25 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts. As discussed therein, the temporary dewatering system would be installed and operated in accordance with the NPDES discharge permit or industrial sewer permit requirements, and the specific dewatering system will be determined during the City's building permit process. Nevertheless, in response to comments regarding the Draft EIR's dewatering analysis, an evaluation of dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction would be less than significant.

Refer to Response to Comment Nos. 26-E.1-70 and 26-E.1-73 for responses to the comments discussed in this comment.

Comment No. 35-96

4. The DEIR Does Not Address the Project's Potentially Significant Impact Related To Tar Removal During Construction.

The Project Site is located in a part of the City where tar naturally accumulates near the ground surface. (DEIR, p. IV.F-30) According to the DEIR, the Existing Television Studio has an existing subsurface tar removal system, and the accumulated tar is collected in 55-gallon drums for proper offsite disposal or recycling. (*Id.*) The DEIR assumes that excavation for the Project would be approximately 45 feet below grade. However, as noted by Ramboll, the hazards analysis does not disclose whether construction would require a

tar removal system or how tar will be managed during excavation. (Ramboll Letter, Comment 54) The Soil Management Plan also does not address tar collection or removal. (DEIR, pp. IV.F-50-53) As such, potential significant impacts to the public or construction workers from tar excavated from the Project Site are unknown.

Response to Comment No. 35-96

Refer to Response to Comment Nos. 13-4, 16-64, and 26-80 regarding naturally occurring tar, the tar collection system and the testing and disposal requirements for any impacted soil. Following extensive subsurface investigations and sampling, tar was noted only in an isolated area near the southwest boundary of the Project Site where a tar collection system is located and currently operating. It is not expected that any tar will be encountered during construction. Nevertheless, as discussed in Response to Comment No. 13-4, testing and proper disposal of any excavated soil impacted by naturally occurring oil and/or tar will follow the sampling, testing, and disposal procedures described in Section 5 of the Soil Management Plan (Appendix B of the Site Summary Report [Appendix G.1 of the Draft EIR]) pursuant to Mitigation Measure HAZ-MM-1.

Comment No. 35-97

5. The DEIR Should Have Analyzed the Project's Potential Impact Related to Existing Underground Storage Tanks That Could be Encountered During Construction.

The Soil Management Plan is meant to provide protocols “to be implemented during design, construction, and post-construction of the Project in order to protect human health and the environment during any development activities that involve soil disturbance.” (*Id.*, p. IV.F-37) However, as indicated in the Ramboll Letter, the Soil Management Plan provides limited details regarding underground storage tanks (“USTs”), even though the DEIR concludes that the “status of any former USTs at the former Anderson V L gas station is unknown.” (Ramboll Letter, Comment 58; DEIR, p. IV.F-44)

According to Ramboll, it is also not clear if both locations of the former gas station were surveyed in the geotechnical investigation. As such, Ramboll concludes that the possibility of encountering former USTs should not have been dismissed in the DEIR. (Ramboll Letter, Comment 58) Ramboll recommends that specific recommendations related to encountering USTs be added (e.g., potential permitting, sampling, and analysis requirements) to the Soil Management Plan.

Response to Comment No. 35-97

Refer to Response to Comment No. 13-6 regarding USTs and the former gas stations.

Comment No. 35-98**6. The Hazards Analysis Does Not Address the Project's Potentially Significant Impact Related To Removal of Existing PV Panels During Construction.**

The Project Site currently has a significant number of PV Panels. Project Design Feature GHG-PDF-2 mandates the installation of additional PV Panels on the Project Site that are capable of generating a minimum of 2,000,000 kWh annually, a 383,000 kWh increase from the existing condition. (*Id.*, p. IV.E-51) However, the hazards analysis does not address how Hackman would remove and dispose of the existing PV Panels. Importantly, as noted by Ramboll, PV Panels contain heavy metals and may be classified as a hazardous waste. (Ramboll Letter, Comment 55) However, Threshold (b) does not address the potentially significant impact related to how these PV Panels could cause a significant hazard to the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. (DEIR, pp. IV.F-42-43)

Response to Comment No. 35-98

Refer to Response to Comment No. 26-84 regarding solar panels.

Comment No. 35-99**M. The DEIR's Analysis of the Project's Hydrology and Water Quality Impacts Is Inadequate.****1. The DEIR's Analysis of Stormwater Runoff Is Inadequate.**

The DEIR does not adequately analyze whether the Project would result in surface water runoff that would cause impacts related to hydrology or water quality.

The DEIR presents the existing and proposed stormwater runoff flows for the 50-year storm event in Table IV.G-1. (DEIR, p. IV.G-36) The DEIR cites the Hydrology Report, included as Appendix H to the DEIR, as the source for the surface flow rate data. (*Id.*, pp. IV.G-35, 36 [Table IV.G-1]) The Hydrology Report presents the existing and proposed peak flow rates for stormwater for the 50-year frequency design storm event runoff (Q_{50}). (*Id.*, Appendix H, p. 34 [Table 2]) Table 2 provides that the existing flow rate of 53.47 cubic feet per second would remain exactly the same after Project implementation. The Hydrology Report provides the stormwater runoff estimates based on HydroCalc for the existing and proposed condition of the Project Site. (*Id.*, pp. 44-49 [Figure 4]) However, as the input parameters are exactly the same for the existing and proposed scenarios, the HydroCalc modeling is entirely without value. (Ramboll Letter, Comment 47a) Therefore, the DEIR

does not provide adequate support for the statement that “runoff flows during Project operation would remain the same at 53.47 cfs during a 50-year storm event.” (DEIR, p. IV.G-36)

The DEIR also states that “the Project Site would continue to be comprised of up to approximately 90 percent impervious surfaces following Project buildout” to support the claim that surface runoff would remain exactly the same. (DEIR, p. IV.G-35) However, there is no evidence to support the assumption that the Project would not increase the Project Site’s impervious surface area. In addition, as the DEIR includes no project design feature or recommended mitigation measure that would limit the Project Site’s impervious area, surface water runoff could increase. In fact, the Hydrology Report states that “[t]he Project is expected to **increase** or maintain the overall percentage of impervious area from the current condition of the Project Site.” (DEIR, Appendix H, p. 33, emphasis added) Therefore, the DEIR analysis of surface water runoff relies on unsubstantiated claims regarding the amount of impervious area on the Project Site that would result from Project implementation.

In addition, the DEIR provides inconsistent information regarding the volume of stormwater to be captured onsite in accordance with the City’s Low Impact Development (“LID”) requirements. The text states that “[t]he Project will need to capture and use up to 625,000 gallons of water on-site.” (DEIR, Appendix H, p. 29)

However, Figure IV.G-1 in the DEIR (Project Site Drainage), which is the same as Figure 3 in the Hydrology Report (Proposed Drainage Exhibit), provides that only 567,854 gallons would be captured. (*Id.*, p. IV.G-21, Appendix H, p. 43) In addition, the Hydrology Report does not specify whether either figure represents annual, monthly or daily capture volumes and how the volumes relate to the provided surface water runoff flow rates. (Ramboll Letter, Comment 47b) The lack of consistent information calls into question the DEIR’s claims regarding the Project’s compliance with LID standards as well as the quantity and quality of surface water runoff that would result from the Project.

Furthermore, the DEIR’s reliance on the future design and implementation of LID Best Management Practices (“BMPs”) represents an impermissible deferral of environmental review of the Project’s stormwater impacts and the formulation of feasible mitigation for any significant stormwater impact. The DEIR relies on the proposed LID BMPs to support its finding of less than significant with respect to multiple impacts. (DEIR, pp. IV.G-30, IV.G-34, IV.G-37) For example, the DEIR provides no assessment of the level of pollutants in the surface water runoff resulting from the Project. (Ramboll Letter, Comment 47e) As explained in the DEIR, “[a]nticipated and potential pollutants generated by the Project include sediment, nutrients, pesticides, metals, pathogens, and oil and grease, similar to existing conditions. The implementation of BMPs required by the City’s LID Ordinance

would target these pollutants that could potentially be carried in stormwater runoff.” (DEIR, p. IV.G-30)

However, the DEIR defers the design and analysis of the LID system, resulting in lack of clarity as to whether the Project would be able to capture any stormwater onsite at all. According to the DEIR, “the Project would include the installation of stormwater capture and use or biofiltration/bioretenction BMPs as established by the LID Manual.” (*Id.*, p. IV.G-34) As explained in the Hydrology Report, “if capture and use is later determined to not be feasible, the Project would then be required to implement high efficiency biofiltration/bioretenction systems pursuant to applicable regulatory requirements.” (*Id.*, Appendix H, p. 29) Accordingly, the DEIR does not even provide basic information as to the type of LID improvement to be implemented. Therefore, the DEIR does not support the claim that “[t]he Project’s proposed BMPs would address the stormwater runoff quality and quantity.” (*Id.*, p. 34) So, the public and decisionmakers are left with no real idea of what stormwater impacts the Project would have, how those impacts would specifically be addressed by future LID BMPs, and whether those BMPs would actually be effective.

The DEIR also states that “the City’s preferred LID improvement is on-site infiltration of stormwater, since it allows for groundwater recharge and reduces the volume of stormwater entering municipal drains.” (DEIR, p. IV.G-16) However, the Hydrology Report states that “[a]ccording to the Preliminary Geotechnical Investigation prepared for the Project Site, groundwater infiltration is not feasible for the Project Site.” (*Id.*, Appendix H, p. 29) The Hydrology Report provides no text for the footnote that appears next to this statement. (Ramboll Letter, Comment 47d) The Preliminary Geotechnical Engineering Investigation includes only a single sentence on the topic: “Due to the groundwater level, the depth of the proposed subterranean level, and the relatively cohesive nature of the surficial native soils, stormwater infiltration will not be feasible for the Project.” (DEIR, Appendix E, p. 55) This explanation does not provide substantial evidence of the infeasibility of stormwater infiltration. The Hydrology Report and DEIR should be updated to include soil sampling results to demonstrate soil conditions and inform decisionmakers and the public about the potential for infiltration of stormwater and to identify ways that any significant impact related to stormwater management and groundwater recharge can be avoided or reduced.

The DEIR also states that “the Project’s stormwater infrastructure would be designed to convey the 50-year storm to the designated discharge location.” (DEIR, p. IV.G-36, Appendix H, p. 34) However, the discharge location is not designated in the analysis. The DEIR specifies that existing “surface water runoff is conveyed into the City system via an existing 24-inch stormwater pipe that slopes west to the existing 90-inch by 144-inch stormwater pipe within Fairfax Avenue.” (DEIR, Appendix H, p. 21) However, the DEIR does not specify how stormwater would be conveyed after Project implementation, providing only that “[s]tormwater runoff from the Project Site and surrounding properties will

discharge toward City catch basins and underground storm drain pipes which convey stormwater through various underground pipe networks into the Ballona Creek.” (*Id.*) There is no indication of whether the existing 24-inch stormwater pipe that connects to the Fairfax Avenue stormwater pipe would continue to convey stormwater after redevelopment. (Ramboll Letter, Comment 47c) Thus, the DEIR does not provide sufficient analysis of the proposed stormwater infrastructure to support the conclusion that stormwater would not lead to flooding and would not exceed stormwater infrastructure capacity.

Response to Comment No. 35-99

The issues discussed in this comment are similar to those in Comment Nos. 26-E.1-59 through 26-E.1-62. Refer to Response to Comment Nos. 26-E.1-59 through 26-E.1-62.

The implementation of LID BMPs is not an impermissible deferral of environmental review of the Project’s stormwater impacts. Rather, the LID Ordinance is one part of the regulatory framework for which the Project is evaluated, and the Project will comply with the LID Ordinance. Compliance with the LID ordinance means implementation of LID BMPs, and implementation of LID BMPs means the Project would not result in discharges that would cause: (1) pollution which would alter the quality of the waters of the State (i.e., the Los Angeles River) to a degree which unreasonably affects beneficial uses of the waters; (2) contamination of the quality of the waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of diseases; or (3) a nuisance that would be injurious to health; affect an entire community or neighborhood, or any considerable number of persons; and occurs during or as a result of the treatment or disposal of wastes. Refer to Section 6.2.2 of the Hydrology and Water Quality Report included as Appendix H of the Draft EIR.

The commenter also claims that reliance on the LID BMPs pursuant to the LID Ordinance constitutes improper deferral of environmental review and the formulation of feasible mitigation. CEQA Guidelines Section 15126.4 expressly provides that the specific details of a mitigation measure may be developed after project approval “provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will be considered, analyzed, and potentially incorporated in the mitigation measure.” Further, with respect to reliance on regulatory programs for mitigation, CEQA Guidelines Section 15126.4 also provides that “Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards.” Given these provisions of CEQA Guidelines Section 15126.4, numerous courts have rejected claims of improper deferral of

mitigation measures when the mitigation measure relies on an existing regulatory program that is designed to avoid the significant environmental impact at issue. (See e.g., *Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4th 1036, 1059–1060; *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, 908909.)

Comment No. 35-100

2. The DEIR's Analysis of Dewatering Is Inadequate.

The DEIR inadequately addresses the Project's potential groundwater impacts from construction dewatering. (DEIR, pp. IV.G-29, IV.G-30–31, IV.G-33, and IV.G-43) The Hydrology Report fails to describe the approach to construction dewatering or to provide quantitative analysis related to construction dewatering, which undermines the DEIR's conclusions regarding the Project's surface water and groundwater impacts. (Ramboll Letter, Comment 48) As the Ramboll Letter explains, "[d]ewatering can cause the development of hydraulic gradients that are also necessary for drawing out water towards the Site. With the possibility of off-site contamination in groundwater, dewatering can result in mobilizing the contaminants towards the Site." (Ramboll Letter, Comment 48b) However, the DEIR limits its analysis of groundwater quality impacts from construction dewatering to the discharge of pumped groundwater and ignores potential impacts related to the subsurface migration of contaminated groundwater. (DEIR, p. IV.G-31) Thus, the DEIR fails to provide adequate analysis of the Project's impact on groundwater quality due to dewatering.

Furthermore, the DEIR's reliance on the future design and implementation of the required treatment or mitigation of water discharged from dewatering operations represents an impermissible deferral of environmental review of dewatering impacts and the formulation of feasible mitigation for any significant dewatering impacts. The DEIR states that "temporary groundwater dewatering systems would be designed and implemented in accordance with NPDES permit requirements." (DEIR, p. IV.G-43) However, the required treatment or mitigation measures that Hackman would use to meet the permit limits are not documented or discussed anywhere in the DEIR or Hydrology Report. (Ramboll Letter, Comment 48c) Therefore, the DEIR does not adequately support the DEIR's conclusion that construction of the Project would not result in discharges that would violate any surface water quality standard or waste discharge requirements or otherwise substantially degrade surface water quality.

The DEIR and Hydrology Report also omit any discussion of the Project's impact related to potential operational dewatering activities. According to the Hydrology Report, the depth-to-water measurements on the Project Site vary from 8 to 30 feet, while the project construction activities would include the excavation to a depth of approximately 15 to

45 feet below existing Project Site grade. (DEIR, Appendix H, pp. 25, 34) According to the Ramboll Letter, the shallow groundwater depth and artesian groundwater conditions indicate that operational dewatering is likely necessary. (Ramboll Letter, Comment 48) The DEIR, however, fails to analyze any potential surface water or groundwater impacts associated with operational dewatering.

Dewatering may also impact groundwater levels in the vicinity, and the DEIR fails to adequately analyze that potential impact. The Hydrology Report claimed that "... no water supply wells, spreading grounds, or injection wells are located within a one-mile radius of the Project Site...", without providing any reference. (DEIR, Appendix H, p. 38) The DEIR does not provide any substantial evidence to support its conclusion that groundwater levels would be unaffected by dewatering activities. (Ramboll Letter, Comment 48d) Therefore, the DEIR inadequately analyzes the Project's potential impact related to groundwater supplies.

In general, the DEIR does not adequately analyze dewatering activities associated with the Project. While the DEIR does not provide any quantitative analysis of dewatering, dewatering could result in the removal of approximately 120,000 cubic yards of groundwater in connection with the excavation required for the Project, as calculated in the Ramboll Letter. (Ramboll Letter, Comment 48f) That is enough water to fill approximately 37 Olympic-size swimming pools. The removal and discharge of this quantity of groundwater could result in significant impacts on groundwater and surface water hydrology and quality that the DEIR fails to adequately analyze.

Furthermore, a much greater amount of dewatering may be required if the excavation depth were to exceed 45 feet. Hackman could choose to provide more levels of subterranean parking than contemplated in the DEIR Conceptual Plan, which could increase the excavation depth on portions of the Project. The DEIR Conceptual Plan is simply an illustrative scenario and Hackman is not bound by it. Moreover, the DEIR does not include any project design feature or recommended mitigation measure that would limit the extent of excavation for the Project, so the maximum excavation depth is no more than an unsubstantiated assumption. (DEIR, p. IV.G-29) Therefore, the limited analysis of dewatering activities that may be required for the Project does not represent a worst-case scenario of the Project's potential impacts on hydrology and water quality.

Response to Comment No. 35-100

Refer to Response to Comment No. 26-E.1-65 for responses to the comments discussed in this comment. As discussed in Response to Comment No. 3-7, the Project would require temporary construction dewatering and not permanent dewatering. Refer to Response to Comment Nos. 11-5 and 11-25 regarding the Draft EIR's comprehensive analysis of potential dewatering impacts, a detailed discussion of construction dewatering

and potential cone of depression and gradients estimates. In response to comments regarding the Draft EIR's dewatering analysis, an evaluation of dewatering conditions for the temporary excavation and construction of a below-grade parking structure is provided in Appendix FEIR-13 of this Final EIR for informational purposes. This evaluation confirms the conclusion in the Draft EIR that impacts associated with dewatering activities during construction, including settlement and subsidence effects, would be less than significant. The maximum excavation depth of approximately 45 feet was determined based on the proposed development program described on pages II-12 to II-35 of Section II, Project Description, of the Draft EIR. Any additional excavation would require additional CEQA review.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan.

Refer to Response to Comment No. 26-61 regarding the amount of water that would be dewatered during Project construction, which represents only 0.05 percent of the capacity of the Hollywood Subbasin.

Refer to Response to Comment No. 26-E.3-26 for a discussion of the lack of artesian conditions at the Project Site.

Comment No. 35-101

N. The DEIR's Analysis of the Project's Land Use and Planning Impacts Is Inadequate.

The fundamental inadequacy of the DEIR's land use and planning analysis primarily stems from the unstable project description and absence of a Specific Plan for public review and consideration, issues discussed extensively in Section II.B, *infra*.

1. The Land Use Analysis Relies on the "Illustrative" DEIR Conceptual Plan.

The DEIR's land use impact analysis addresses the Project's consistency with the requirements and policies of the General Plan Framework Element, Conservation Element, Mobility Plan 2035, Wilshire Community Plan, LAMC and Citywide Design Guidelines. (DEIR, p. IV.H-39) This consistency analysis relies on an "illustrative" DEIR Conceptual Plan, which, as discussed previously, is simply one development "scenario" among unlimited scenarios that might result from the adoption of the Specific Plan, a document that the public has still had no opportunity to review.

Without a concrete, stable project description that reflects the actual Project to be constructed, the DEIR's land use consistency analysis is meaningless because one cannot

demonstrate consistency with a project that does not actually exist. Even if the DEIR Conceptual Plan is consistent with this Wilshire Community Plan policy or that Mobility Plan 2035 standard, there is no assurance whatsoever that the actual project Hackman chooses to develop would be. Moreover, in the continuing absence of a Specific Plan to review, which presumably means that it does not exist yet, at least is in substantial flux, how can the public have any confidence that the final provisions in the Specific Plan, including provisions that are not even summarized in the DEIR or stated in generic terms, will be consistent with applicable laws? There is simply no reliable information in the DEIR from which to assess whether implementation of the Specific Plan could result in a significant impact due to a conflict with an applicable plan or policy. (See Ramboll Letter, Comments 1 and 2)

In addition, the Specific Plan summary in the land use summary excludes the TVC 2050 Sign District and “Public Realm Improvements” (DEIR, pp. IV.H-30-37), which apparently will not be addressed in the Specific Plan and are discussed separately in the land use analysis. If that is the case, then when will the public have an opportunity to review the proposed Sign District Ordinance that would regulate the future development of signage on the Project Site, in order to determine whether it is consistent with applicable laws? As to Public Realm Improvements, there are no project plans that include those improvements, just a few graphic snippets in the DEIR. Is Hackman required to adhere to the standards summarized in the DEIR? Will, for example, the City condition the Project to provide a required “minimum” of 28,900 square feet of open space within the Public Realm Improvements along the Project Site boundaries, as illustrated in Figure IV.H-3 through Figure IV.H-6 in the DEIR? (*Id.*, pp. IV.H-33-36)

Response to Comment No. 35-101

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 26-5 regarding the proposed Specific Plan, the fact that a Specific Plan was not required to be included as part of the Draft or Final EIR, and how the physical aspects of the proposed Specific Plan are fully accounted for in Section II, Project Description, of the Draft EIR and in the associated impact analyses throughout the Draft EIR. Also refer to Topical Response No. 1 and Response to Comment Nos. 5-5, 9-12, and 9-13 regarding how the Conceptual Site Plan depicts the Project, including the public realm improvements, and how the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review.

As explained in detail in Topical Response No. 1, the Project Description is accurate, stable, and finite and fully complies with CEQA. The physical aspects of the Project presented in Section II, Project Description, of the Draft EIR, including the Conceptual Site Plan and other graphics, the description of the proposed Sign District (which is consistent with the Sign District), and the description of the public realm improvements were used to conduct the analysis for the potential for the Project to conflict with applicable land use plans in Section IV.H, Land Use and Planning, of the Draft EIR, which concluded that the Project would not conflict with any applicable plans and policies, and impacts would be less than significant. Section IV.H, Land Use and Planning, of the Draft EIR also includes additional details about the proposed Sign District and public realm improvements that were used in the land use analysis. In short, sufficient Project information was available to provide a thorough analysis of the Project's potential to conflict with applicable land use plans and regulations in accordance with CEQA. Also note that the public realm improvements are incorporated into the Preliminary Draft Specific Plan.

Comment No. 35-102

2. The DEIR Fails to Support its Land Use Consistency Findings With Substantial Evidence.

The land use consistency findings in the DEIR are flawed for the reasons set forth below.

a. Land Use Chapter of General Plan Framework.

The DEIR claims that the Project would support Objective 3.2 to provide for the spatial distribution of development that promotes an improved quality of life by facilitating a reduction of vehicle trips, vehicle miles traveled, and air pollution, as well as Policy 3.2.3 to provide for the development of land use patterns that emphasize pedestrian/bicycle access and use in appropriate location. (DEIR, p. IV.H-39) This conclusion solely relies on the provision of a Mobility Hub onsite that “would facilitate the use of public transit and support opportunities for walking and biking, thus promoting an improved quality of life.” (*Id.*, p. 40) This consistency finding is flawed because, as discussed in Section II.B, *infra*, this project component is conceptual. Hackman has not proposed a concrete development project with plans that include the suggested Mobility Hub, nor does the DEIR indicate that the Mobility Hub requirements would be included in the undisclosed Specific Plan.

b. Open Space and Conservation Chapter of General Plan Framework.

The consistency analysis with the Open Space and Conservation Chapter of the General Plan exclusively relies on the Public Realm Improvements depicted on DEIR pages IV.H-33 through IV.H-36, which would apparently include a “minimum” of 28,900 square feet of open space. (*Id.*, p. IV.H-40; Appendix I, pp. 9–10) This analysis does not hold up because, as previously discussed, there is no assurance that Hackman would be required

to provide the Public Realm Improvements in the manner suggested in the DEIR. Moreover, even if Hackman was bound to provide the minimum open space, it could apparently be located anywhere on the Project Site given the “illustrative” nature of the DEIR Conceptual Plan. Furthermore, widening and landscaping existing sidewalks does not add actual open space (*i.e.*, public park or recreation area) or promote conservation. (Ramboll Letter, Comment 2)

Response to Comment No. 35-102

Contrary to the assertion of the commenter, the Mobility Hub is an essential feature of the Project. The Mobility Hub is part of Project Design Feature TR-PDF-2, which is included in the Mitigation Monitoring Program for the Project (Section IV of this Final EIR). The Draft EIR’s conclusion that the Project would not conflict with Objective 3.2 and Policy 3.2.3 of the General Plan Framework is also based on the Project’s improved integration of uses and on-site circulation, as well as amenities, such as retail and commissary uses, childcare and fitness facilities, etc., as discussed on pages 3 and 4 of Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR. Also refer to Response to Comment No. 16-72 regarding the Project’s pedestrian-oriented design.

With respect to open space, the Project is not required to provide any under the LAMC because no residential uses are proposed. Refer to Response to Comment No. 16-47 regarding improvements to the street frontages and pedestrian facilities that promote safety and enhance the public realm. The public realm improvements are also a required component of the Project and would be ensured as a condition of approval for the Project. As such, as set forth in the Draft EIR, the Project would not conflict with the relevant policies of the Open Space and Conservation Chapter of the General Plan Framework Element, as discussed on pages 9 to 10 of Appendix I, Land Use Plans Consistency Analysis Tables, of the Draft EIR.

Comment No. 35-103

c. General Plan Conservation Element.

The DEIR’s land use analysis concludes that the Project would “protect and important historical resource, consistent with the goal, objectives, and policies of the Conservation Element” through compliance with the Specific Plan’s historic preservation regulations and Office of Historic Resources would review all project construction documents prior to approving building permits to ensure compliance with Rehabilitation Standards. (DEIR, p. IV.H-42-43) This finding is flawed because it relies on the improper conclusion that the Project Design Features CUL-PDF-1 and CUL-PDF-2 and Specific Plan regulations would adequately mitigate potential historical resources impacts to the Primary Studio Complex. As presented in Section II.E, *infra*, the development of the Project would materially impair the significance of the Primary Studio Complex.

Response to Comment No. 35-103

This comment that the Project would materially impair the significance of the Primary Studio Complex is incorrect. Refer to Sections B, Historic Structure Report and the Future Preservation of the Primary Studio Complex; C, Potential New Construction North of the Primary Studio Complex; and D, Analysis of Impacts to the Primary Studio Complex, of Topical Response No. 5, Historical Resources. As demonstrated in the analyses within the Draft EIR and summarized in these topical responses, the Project would indeed protect the Primary Studio Complex, an important historical resource, consistent with the goals, objectives, and policies of the Conservation Element as stated on pages IV.H-42 and IV.H-43 of the Draft EIR.

Comment No. 35-104**d. Mobility Plan 2035.**

The DEIR's land use analysis omits any discussion of the Project's consistency with the public right-of-way requirements in Mobility Plan 2035. Instead, the reader must refer to Section IV.K (Transportation) of the DEIR to find the street standard consistency analysis. (DEIR, p. IV.K-56) Based on a close review of Vesting Tentative Tract Map No. 83387 (the "VTTM") for the Project which Hackman has filed with the City, and the Mobility Plan 2035 consistency analysis in Section IV.K (Transportation) and Appendix M to the DEIR, the DEIR fails to disclose certain deviations from applicable street standards.

Pursuant to Mobility Plan 2035: Beverly Boulevard, a Modified Avenue I, would require a 35-foot half-width and 15-foot sidewalk to complete a 50-foot half-width right-of-way; Fairfax Avenue, an Avenue II, would require a 28-foot half-width roadway and 15-foot sidewalk to complete a 43-foot half-width right-of-way; and The Grove Drive, a Collector Street, would require a 20-foot half-width right-of-way and 13-foot sidewalk to complete a 33-foot half-width right-of-way. (DEIR, Appendix M, p. 705 of PDF)

According to the DEIR, Beverly Boulevard has an existing half-right-of-way width of 50 feet and meets the Mobility Plan 2035 standard of 50 feet. However, the sidewalk width toward Fairfax Avenue where the roadway widens slightly (up to three feet), the sidewalk is reduced to approximately 12 feet. Hackman does not propose to change this condition and has not sought a waiver of dedication to allow for the substandard sidewalk width. Instead, the DEIR states that in consultation with the City's Bureau of Engineering ("BOE"), the existing configuration is considered generally compliant with Mobility Plan 2035 and no dedication or widening is required. (*Id.*, Appendix M.1, p. 6) The DEIR does not reference an Interdepartmental Correspondence from BOE to the Advisory Agency finding that the proposed substandard sidewalk condition on Beverly Boulevard is consistent with Mobility Plan 2035. For these reasons, the consistency finding is not supported by substantial

evidence. Hackman must request a variable three-foot waiver of dedication to permit the reduced sidewalk shown on the filed VTTM.

On Fairfax Avenue, the existing half-right-of-way width is 50 feet and thus exceeds the Mobility Plan 2035 standard of 43 feet. Hackman is requesting a merger and re-subdivision of the seven-foot excess, which would reduce the existing sidewalk area in the public right-of-way to three feet. As a result, a combination of public and private property would be used to create a pedestrian sidewalk. Specifically, the Project would include the dedication of a 12-foot public sidewalk easement to complete an overall 15-foot sidewalk to accommodate pedestrian travel. (*Id.*, Appendix M.1, pp. 5–6) A request to provide the 12 feet as an easement in lieu of dedication is not included in the Project Application as it relates to the VTTM. Hackman was required to request this waiver of dedication in the Project Application, but did not, to permit the reduced sidewalk dedication as part of the requested VTTM.

On The Grove Drive, the existing half-width right-of-way is 30 feet, which is three feet under the Mobility Plan 2035 requirement of 33 feet. As such, the Project entitlements, as reflected in the VTTM, include a request to waive a three-foot dedication and a proposal to widen the roadway by two feet to accommodate a northbound left-turn lane to access the Project Site, and also provide a three-foot public sidewalk easement to provide a 10-foot sidewalk. The proposed condition of the roadway would exceed the 20-foot requirement at 23 feet and the sidewalk would be narrower than the 13-foot requirement at ten feet (*i.e.*, three-foot easement plus seven-foot dedication). (*Id.*, Appendix M.1, p. 6) While the proposed sidewalk width is slightly wider than the existing nine-foot wide sidewalk, a request to provide the three feet as an easement in lieu of dedication is not included in the VTTM. Hackman was required to request this waiver of dedication in the Project Application, but did not, to permit the reduced sidewalk dedication as part of the VTTM.

Response to Comment No. 35-104

Refer to Response to Comment Nos. 16-30 and 16-76 regarding sidewalk widths and the waiver of dedication request included with the Project's Vesting Tentative Tract Map application.

As noted by the commenter, Section IV.K, Transportation, of the Draft EIR includes a consistency analysis with the Mobility Plan's street standards. Specifically, page IV.K-56 provides a detailed description of the Mobility Plan's half-ROW requirements and the Project's proposed roadway dedications, mergers, improvements, and waivers of dedication adjacent to the Project Site. As described therein, the existing ROW meets or exceeds dedication requirements on Fairfax Avenue and Beverly Boulevard (though a portion of Beverly Boulevard and all of Fairfax Avenue provides a wider roadway and narrower sidewalk). The Project Conceptual Site Plan has been reviewed by LADOT and

Bureau of Engineering and found to be consistent with or exceed Mobility Plan standards for roadway width and sidewalk width on Fairfax Avenue and Beverly Boulevard. Refer to Response to Comment Nos. 16-30, 16-72, and 16-76 regarding the Project's pedestrian-oriented design, sidewalk widths, and public realm enhancements and correspondence provided by BOE dated July 14, 2021. Based on the absence of any policies in the Mobility Plan that conflict with the Project, the Project is not inconsistent with the Mobility Plan regardless of any future determination (approval or dismissal) of the proposed waiver of dedication.

Comment No. 35-105

O. The DEIR's Analysis of the Project's Noise Impacts Is Inadequate.

The DEIR's noise analysis is wholly inadequate for many reasons. Many of the flaws in the analysis flow from (1) the DEIR's failure to establish the baseline noise currently generated within the Project Site from operations, including outdoor production activities and special events, (2) the DEIR's failure to analyze all onsite noise generators and (3) the DEIR's unstable project description. As a result, the DEIR fails to evaluate the noise impacts associated with Hackman's proposed intensification of existing outdoor uses, as well as the introduction of many new outdoor uses, which would degrade the quality of life of surrounding neighbors, including Broadcast Center residents.

Response to Comment No. 35-105

Refer to Response to Comment No. 26-146 for the existing and future noise levels associated with outdoor production activities. As analyzed therein, noise impacts associated with outdoor production activities and special events would be less than significant.

Noise associated with onsite noise sources, including mechanical equipment, parking facilities, outdoor spaces (people gathering and amplified sound), loading, and trash compactors, were fully analyzed in the Draft EIR. In addition, additional noise analysis for onsite outdoor production activities (see Response to Comment No. 26-146), onsite truck movements (see Response to Comment No. 26-141), and the Mobility Hub (see Response to Comment No. 35-129) were conducted to confirm the conclusions in the Draft EIR that operational noise impacts would be less than significant. Refer to Appendix FEIR-16 of this Final EIR for the supplemental noise analysis. Based on the Draft EIR and the additional analysis, noise impacts associated with onsite noise sources at all offsite noise sensitive receptors would be less than significant. Also note that during operation of the Project, emergency generators would be included for emergency use during a power outage and regularly tested for maintenance purposes but otherwise would not be used to provide power to basecamps, which would be outfitted with electric tie-ins.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project Description.

Comment No. 35-106

1. The Discussion of Regulatory Setting Omits the Sound Amplification Restrictions in the City's Noise Ordinance.

The DEIR summarizes the City's noise regulations. (DEIR, pp. IV-I-15–16) However, the DEIR omits any discussion of the restrictions on amplified sound set forth in Section 112.01 and Article 5 of the City's Noise Ordinance. In particular, LAMC Section 112.01(b) prohibits any noise level caused by sound amplifying equipment which is audible (a) at a distance in excess of 150 feet from the property line of the noise sources or (b) within any residential zone or 500 feet thereof. LAMC Section 115.02(f) further states that sound emanating from sound amplifying equipment shall not be audible at a distance in excess of 200 feet from the sound equipment. As a result, the DEIR fails to include the proper significance thresholds for determining whether the amplified sound associated with the Project would be significant. (Ramboll Letter, Comments 27–27.a)

Response to Comment No. 35-106

This comment raises the same topics as Comment No. 26-E.1-40. Refer to Response to Comment No. 26-E.1-40 regarding the LAMC regulations that are applicable to the Project and the appropriate significance thresholds used in the Draft EIR analysis for noise.

Comment No. 35-107

2. The Noise Analysis Failed to Analyze All Sensitive Receptors in the Project Site Vicinity.

The noise analysis is based on eight sensitive noise receptors (R1–R8) and two potential offsite construction staging areas (R9 and RIO). (DEIR, p. IV.I-18, 19, Figure IV.I-3) The noise analysis, however, omits as a sensitive receptor the residence at 7659 Beverly Boulevard, also known as the Rancho La Brea Adobe or Gilmore Adobe, located south of the Project Site, and therefore fails to analyze the Project's noise impact on it.

We understand the Gilmore Adobe is a “historic residence that is actively used, and its outdoor gardens have historically functioned, and continue to function, as cultural civic and philanthropic gathering places.” (Kathryn McGee Letter to Cultural Heritage Commission dated August 17, 2022, p. 1) The residential receptor is sited approximately 130 feet from the Project Site's southern property line and would be within close proximity to construction activities for one or more new buildings up to 225 feet in height. The noise analysis must

be augmented to evaluate the Gilmore Adobe's existing noise levels, the extent to which the Project would increase those noise levels, and necessary mitigation measures. (Ramboll Letter, Comment 29)

Response to Comment No. 35-107

Refer to Response to Comment No. 26-139 for a discussion of the Gilmore Adobe. As discussed therein, impacts would be less than significant if the Gilmore Adobe were treated hypothetically as a residential use.

Comment No. 35-108

3. The Baseline Ambient Noise Levels Are Flawed.

The DEIR's analysis of existing noise levels is based on a monitoring study that consisted of collecting a 24-hour measurement at receptor location R1 (Broadcast Center), two 15-minute measurements conducted during daytime and nighttime hours at receptors R2 through R8, and one 15-minute measurement at the staging area receptors R9 and R10 during daytime hours only. (*Id.*, p. IV.I-19)

As discussed in the Ramboll Letter, the existing noise levels presented in the DEIR are inadequate and misleading because they do not reflect the current existing conditions during quieter weekday nighttime hours and quieter weekend daytime and nighttime hours. The level of monitoring conducted for receptors R2 through R10 are wholly inadequate as the methodology used in this case is inconsistent with typical community noise survey durations as specified and recommended in industry standards for assessing community noise. (ANSI S12.9-1992/Part 2 [R2018]—Quantities and Procedures for Description of Environmental Sound) Accordingly, the ambient survey must be redone to be consistent with industry standards, and the Project's noise impacts must be reanalyzed based on accurate and complete baseline ambient noise levels. (Ramboll Letter, Comment 30)

Moreover, Table IV.I-6 (Existing Ambient Noise Levels) provides the Community Noise Equivalent Level ("CNEL") at each sensitive receptor and estimates CNEL based on the short 15-minute noise measurement. Except as it relates to receptor R1 (which was measured for 24 hours), this is misleading because CNEL is a 24-hour average of sound level, so estimating CNEL based on one extremely short measurement conducted during noisier daytime or evening hours does not accurately depict existing conditions. (Ramboll Letter, Comment 32)

Moreover, the DEIR's analysis of existing noise levels is facially inadequate because it simply ignores existing noise impacts associated with existing operations on the Project Site. There is no discussion of the existing amplified sounds and other noise from outdoor

production activities, special events, helicopters, and other outdoor uses, which all contribute significantly to the current conditions. Without data regarding these baseline noise levels, the DEIR cannot properly evaluate the Project's noise impacts or the extent to which the Project would increase those noise levels. Furthermore, as raised in the Ramboll Letter, "[a]re current activities and operations compliance with all applicable noise ordinances? What is the recent history, if any, of noise complaints related to activities and operations associated with the production facility?" (Ramboll Letter, Comment 31)

Response to Comment No. 35-108

Refer to Response to Comment Nos. 26-E.1-5 and 26-E.1-43 for a discussion of existing ambient noise measurements and procedures that were appropriately utilized in the Draft EIR.

Refer to Response to Comment No. 26-E.1-45 for a discussion of the use of CNEL values.

Refer to Response to Comment Nos. 26-140 and 26-146 for the existing and future noise levels associated with outdoor production activities. As analyzed therein, noise impacts associated with outdoor production activities would be less than significant.

Refer to Response to Comment Nos. 16-87 and 26-15 for a discussion of the helipad. As discussed therein, noise levels due to helicopter operations at the helipad would be slightly lower as compared to the existing conditions, due to additional sound attenuation provided by a higher helipad location.

Comment No. 35-109

4. Mitigation Measure NOI-MM-1 Does Not Address Elevated Levels (Above-Ground Level) at Each Receptor.

Mitigation Measure NOI-MM-1 would require the installation of temporary and impermeable sound barriers, of unspecified heights, designed to a minimum noise reduction level at the ground level of receptors R1 through R8 during construction of the Project. (DEIR, p. IV.I-56) In particular, a temporary barrier would be required along the eastern property line of the Project Site and the western boundary of the BC Site to provide a minimum 16-A-weighted decibels ("dBA") noise reduction at the ground level of Broadcaster Center (R1). (*Id.*)

This proposed mitigation, however, is meaningless to Broadcast Center because there are no residential units on the ground floor of the building. Why is the mitigation limited to the ground level, given that Broadcast Center includes six stories, with windows and balconies

just seven feet from the Project Site's eastern property line? How would construction noise be mitigated at elevated levels at Broadcast Center and the other receptor locations? (Ramboll Letter, Comment 44) Is it feasible to mitigate construction noise above ground level? If so, to what extent? If not, why? Are there feasible mitigation measures that could substantially reduce the Project's construction noise impact on Broadcast Center? The DEIR answers none of these questions.

Response to Comment No. 35-109

Refer to Response to Comment No. 26-136 for a discussion of how Mitigation Measure NOI-MM-1 has been augmented in response to public comments to include a 30-foot temporary noise barrier along the Shared Eastern Property Line that would further reduce noise levels at the upper floors of the Broadcast Center Apartments.

Comment No. 35-110

5. The DEIR Fails to Demonstrate That Implementation of NOI-PDF-4 Regarding Outdoor Roof Deck Gathering Spaces Would Comply With LAMC Section 115.02(f) Regarding Amplified Sound.

While NOI-PDF-4 imposes maximum noise levels that would be implemented through the design of the speaker sound systems on outdoor roof deck gathering spaces, the Project Design Feature must be revised to strictly comply with the regulatory requirements in LAMC Section 115.02(f) regarding sound amplifying equipment for commercial purposes, as well as LAMC Section 112.01 regarding radio, musical instrument, phonograph, television receiver, or other machine or device for the production, reproduction or amplification of the human voice, music, or any other sound. (Ramboll Letter, Comment 33)

In addition, this project design feature does not account for amplified noise sources that may not utilize the built-in speaker sound system for gathering spaces. What assurance is there that other such amplification systems (e.g., vendor's amplification system) would comply with the maximum allowable noise levels?

Response to Comment No. 35-110

Refer to Response to Comment No. 26-E.1-40. As discussed therein, LAMC Article 5, Section 115.02 does not apply to the Project. Furthermore, as also discussed therein, Project Design Feature NOI-PDF-4 on page IV.I-34 in Section IV.I, Noise, of the Draft EIR establishes the noise limits for any amplified sound system for outdoor gatherings on roof decks so as to not exceed the City's noise limit (i.e., an increase of 5 dBA above the ambient noise level) at any off-site noise-sensitive receptor location. Specifically, the Project Design Feature NOI-PDF-4 specifies maximum noise levels for the amplified sound

systems for outdoor gatherings on roof decks, at a reference distance, depending on where the amplified sound system is located. For example, the maximum noise level for an amplified sound system within 40 feet of the Shared Eastern Property Line would be limited to 85 dBA at a distance of 25 feet from the amplified speaker sound system. Furthermore, the Project Design Feature NOI-PDF-4 requires a qualified noise consultant to provide documentation that the design of the system complies with the maximum noise levels. The specified maximum noise levels for the amplified sound system apply to both in-house built-in systems and temporary amplified sound systems.

Comment No. 35-111

6. The Noise Model Ignores the Two New Private Streets That Would Significantly Impact Broadcast Center.

The operational noise analysis in the DEIR entirely ignores the potential noise impacts resulting from the two new private streets—a 60-foot-wide, six-lane street along the southerly boundary of the BC Site and a 30-foot-wide, four-lane street along the western boundary of the BC Site—that are roughly shown on the DEIR Conceptual Plan (DEIR, p. II-14 [Figure II-4]) and more clearly shown and described on the Vehicular Project Site Access graphic (*id.*, p. IV.K-43 [Figure IV.K-3]). While the operational noise analysis addresses, or at least purports to address, onsite stationary noise sources and offsite mobile noise sources (*id.*, pp. IV.I-43–56), it simply ignores **onsite mobile** noise sources from the movement and use of heavy trucks and other vehicles, including vehicular noise from the traffic on the two new private streets. (Ramboll Letter, Comments 38a–38b) This is an astonishing omission, particularly given that the two new streets would immediately flank Broadcast Center and Hackman has advised that both streets would include significant truck activity. Moreover, truck use would also presumably occur during nighttime production activities, as outdoor production is permitted any time and any day of the week, including weekends.

Furthermore, these onsite vehicular noise impacts from encircling Broadcast Center with roadways could be exacerbated by the construction of new buildings and parking structures along the western and southern boundaries of the Project Site and adjacent to the new private streets. To the west of the BC Site, Height Zone C permits a maximum height of 160 feet over 40% of that height zone area. (*Id.*, pp. II-18–19) As a result, one or more 160-foot-tall buildings could be constructed along the western edge of the western new private street. Similarly, to the south of the BC Site, Height Zone B permits a maximum height of 130 feet over 40% of that height zone area (*id.*, p. 19), so that one or more 130-foot-tall buildings could be constructed along the southern edge of the southern new private street. The “canyon” effect created by the presence of those potential buildings on one side of the new private streets, with the six-story Broadcast Center on the other side of them, would intensify the traffic noise generated by the new private streets and their impact on Broadcast Center residents. (Ramboll Letter, Comment 38a)

Response to Comment No. 35-111

Contrary to this comment, there are no omissions in Section IV.I, Noise, of the Draft EIR relative to onsite access and the Project does not include new private streets. Currently, the lower level of the Broadcast Center Apartments is comprised of parking with openings that face the Project Site. In addition, balconies and residential portions of the Broadcast Center Apartments located above the parking levels are set back more than approximately 20 feet from the Shared Eastern Property Line to the south and approximately 8 feet from the Shared Eastern Property Line to the west. Furthermore, as shown in Figure II-3, Key Existing Site Features, of the Draft EIR, the areas of the Project Site located to the west and south of the Broadcast Center Apartments are already used for parking and access, as well as outdoor production activities. As shown in Figure II-4, Conceptual Site Plan, and in Figure IV.K-3, Vehicle Access Plan, of the Draft EIR, the area along the Shared Eastern Property Line would continue to be separated from the Broadcast Center Apartments by mature landscaping and fencing. As also shown in these figures, the area of the Project Site to the immediate west of the Broadcast Center Apartments would continue to be used for a two-lane access aisle and parking, and the area of the Project Site to the south of the Broadcast Center Apartments would include an approximately 34-foot landscaped open space area with five drive aisles further to the south used for Project Site entry and exit that connect with the parking and circulation areas.

As stated on page IV.I-33 in Section IV.I, Noise, of the Draft EIR, the operational noise analysis was calculated using the SoundPLAN computer noise prediction model. SoundPLAN considers the specifics of land topography and sound reflections from the ground and nearby buildings for any potential “canyon effect.” Therefore, the noise analysis accounts for buildings along the Shared Eastern Property Line and includes any potential sound reflection (“canyon effect”) to the Broadcast Center Apartments. As set forth in the Draft EIR and confirmed in Response to Comment No. 26-141, noise levels associated with on-site trucks and other vehicles on-site during operations would be less than significant.

Refer to Section E, Truck Trips, of Topical Response No. 10, Trip Generation, regarding the truck generation estimates during Project operation.

Comment No. 35-112**7. The Noise Analysis of the Relocated Helipad Is Inadequate.**

According to the DEIR, the existing helipad use would be retained in approximately the same location, but at a higher elevation. (DEIR, p. II-15) The DEIR, without detail or justification, summarily finds that the relocated helipad’s potential noise impact would be less than significant without first establishing the existing sound levels associated with the helipad flights/use at the helipad’s current location, how those noise levels would change if

the helipad was at a higher elevation, whether the frequency and/or timing of helipad arrivals and departures would change. Given that the DEIR Conceptual Plan would significantly increase studio-related production activities, it is reasonable to assume that helipad use would correspondingly and significantly increase, but the DEIR wrongly assumes no intensification of use.

Moreover, while the DEIR states that the new helipad would be in the same approximate location, Hackman could in fact relocate the helipad anywhere on the Project Site, including a location close to Broadcast Center, that would substantially increase the helipad's noise impact on sensitive receptors.

The DEIR must be revised to establish a baseline for the existing helipad use, analyze the "maximum impact" of the new helipad and assess the need for mitigation. (Ramboll Letter, Comment 39)

Response to Comment No. 35-112

Refer to Response to Comment Nos. 16-87 and 26-15 regarding the continued operation of the helipad. As discussed therein, noise from helipad operations would be reduced compared to existing conditions.

Comment No. 35-113

8. The Noise Model Ignores Impulsive Noise Sources Which Will Significantly Impact the Surrounding Area.

The DEIR's limited consideration of studio-related production activities fails to account for the highly intrusive noise emissions unique to outdoor production activities, such as impulsive noise from staged gunshots, explosives, car crashes, wind and wave machines, sirens, flares, fireworks, crashing glass, and the construction and breakdown of sets and facades, etc. These high-energy impulsive sound sources could occur at any time and any day of the week, including weekends. These noise sources clearly present a potential nuisance value to offsite receptors and must, therefore, be considered in the analysis. Why were these obvious noise sources ignored in the DEIR? The noise model and the DEIR text need to be revised to address these noise impacts. (Ramboll Letter, Comment 38)

Response to Comment No. 35-113

Refer to Response to Comment No. 26-146 regarding the noise analysis of outdoor studio production activities. With regard to outdoor production related noise, Project Design Feature NOI-PDF-5 would continue to prohibit outdoor studio productions within 200 feet of the Shared Eastern Property Line during nighttime hours. As also discussed in

Response to Comment No. 26-146, studio production activities currently occur throughout the Project Site and would continue to occur with implementation of the Project. However, the noise levels associated with outdoor studio production would be expected to be lower than the existing conditions, due to the reduction in the outdoor area used for studio production activities. In addition, as discussed in Response to Comment No. 26-145, the Project would not involve the use of pyrotechnics as part of outdoor production activities.

Comment No. 35-114

9. The Cumulative Noise Analysis For Operational Noise in the DEIR Is Inadequate.

The DEIR concludes that cumulative impacts related to operational stationary noise sources would be less than significant because “[a]ll related projects are of a residential, retail, commercial, or institutional nature, and these uses are not typically associated with excessive exterior noise levels.” (DEIR, p. IV.I-72)

That non-analysis is facially inadequate. The DEIR cannot make this determination based solely on a conclusory, qualitative analysis. A proper cumulative noise analysis would first calculate ambient noise conditions in the assumed future buildout year, which the noise analysis assumes is 2026, and then determine the impact of full project buildout on those ambient conditions. Furthermore, the fact that a related project may not **individually** have “excessive” exterior noise levels is irrelevant. The issue is whether the combined noise from the Project and a substantial number of related projects would **cumulatively** have significant impact. Moreover, the DEIR’s two-sentence discussion is limited to onsite stationary noise sources, while again ignoring the vehicular noise associated with onsite use of heavy trucks and other vehicles that would use the new private streets and are **mobile** noise sources. In addition, as a result of the limited operational noise impact analysis, the onsite stationary noise source cumulative impacts determination of less than significant is understated. (Ramboll Letter, Comment 37a)

In addition, the cumulative noise analysis for a Long-Term Buildout through 2043 is suspect because it ignores onsite stationery noise sources entirely and only discusses offsite mobile noise associated with ambient growth through 2043. (*Id.*, p. IV.I-78) The cumulative impacts analysis through 2043 should account for onsite and offsite noise sources.

Response to Comment No. 35-114

The commenter’s assertion that the cumulative impact analysis cannot be made in a qualitative manner is overly simplistic and not supported by CEQA, CEQA Guidelines, City policy, or case law. The Draft EIR’s cumulative noise impact analysis was prepared in

accordance with CEQA, the 2006 L.A. CEQA Thresholds Guide and the LAMC. This included evaluating the noise profile of seven related projects within 1,000 feet of the Project Site identified by the City as potentially contributing to future cumulative impacts. In evaluating cumulative operational noise, pages IV.I-69 and IV.I-70 in Section IV.I, Noise, of the Draft EIR identified the type of land use for each related project, the distance from the Project Site, and the potential for cumulative impacts based on both distance and presence of intervening buildings and structures that would attenuate noise from the Project and related projects at sensitive receptors.

Similarly, with regard to stationary source noise, the distance of related projects, presence of intervening buildings and structures, and the sources of onsite stationary source noise (e.g., rooftop mechanical equipment) were used to determine the potential for cumulative impacts. In the analysis of cumulative offsite mobile source noise, page IV.I-71 in Section IV.I, Noise, of the Draft EIR included a projection of future ambient noise levels from roadway traffic in the vicinity of the Project Site and used the traffic noise model to quantitatively determine the significance of related projects on future increases in ambient noise levels.

With respect to the cumulative impact analysis for the long-term buildout through 2043, the Draft EIR evaluated impacts associated with off-site traffic due to the potential ambient growth. Cumulative on-site noise was not evaluated quantitatively for the long-term buildout scenario, as the cumulative impacts would be similar to the cumulative impacts analyzed for 2026, as the ambient traffic growth does not affect the on-site noise sources. In summary, the Draft EIR's analysis was consistent with CEQA and City guidance on this topic, used both qualitative and quantitative methods to evaluate and disclose cumulative operational noise impacts, and found those impacts to be less than significant.

Comment No. 35-115

10. Additional Onsite Construction Noise Mitigation Measures Must Be Considered Before Rejecting the Alternative That Would Eliminate the Project's Significant Onsite Construction Noise and Vibration Impacts on Broadcast Center.

The DEIR considered but ultimately rejected "Alternatives that Eliminate the Project's On-Site Construction Noise and Vibration Impacts." (DEIR, p. V-13) According to the DEIR, in order to eliminate the Project's significant construction noise impact on Broadcast Center, construction activities would need to be moved approximately 700 feet westerly from the eastern property line of the Project Site. (*Id.*) The DEIR rejected this alternative as infeasible because it would mean that "new development could not occur over half of the Project Site." (*Id.*) Another rejected alternative would involve moving construction activities

100 feet west from Broadcast Center and erecting a 30-foot sound wall extending nearly 1,000 feet along the eastern property line of the Project Site. (*Id.*) The DEIR rejected this alternative from further consideration because it would be cost prohibitive and the wall would block views and sunlight for the west and south facing residential units during the construction period. (*Id.*) Next, with respect to onsite construction vibration, the DEIR considered moving construction activities at least 80 feet westerly from the eastern property line of the Project Site. (*Id.*) However, the DEIR rejected this third and final alternative from further consideration because it would “render a substantial portion of the Project Site undevelopable.” (*Id.*)

Measures to reduce construction noise and vibration impacts on Broadcast Center would not necessarily be infeasible. (Ramboll Letter, Comment 36a) As stated in the Ramboll Letter:

Given the lack of project-specific buildout details available at this time, the specifics around construction activities and phasing are unknown. As such, the rejection of the alternatives may be premature without further detailed considerations of construction noise planning focused on the specific buildout design. Versions of these alternatives with detailed consideration of an overall plan that includes practical measures such as imposing minimum allowable distance to the boundary for specific activities, phasing activities, employing reduced-noise equipment (for both small, powered hand tools as well as large combustion engine equipment), sequencing the use of noise barrier walls along the boundary, employing mobile noise control barriers or enclosures to shield activities, etc., may be feasible. Similar consideration applies to construction vibration mitigation. (*Id.*)

Response to Comment No. 35-115

The issues discussed in this comment are similar to those in Comment No. 26-E.1-49. Therefore, refer to Response to Comment No. 26-E.1-49.

Comment No. 35-116

11. The DEIR Conceptual Plan Does Not Reflect Nor Can It Be Verified Whether the DEIR Has Analyzed the “Maximum Impact” With Respect To Noise.

As discussed in Section II.B, *infra*, the DEIR analyses are largely based on the DEIR Conceptual Plan, the related development program in Figure II-2 and the “land use exchange,” which reflect a “hypothetical development mix... that would generate the maximum impact for that environmental issue.” (DEIR, pp. II.16–17) [sic] There is no

evidence whatsoever in the DEIR, however, that this “illustrative development scenario,” one of an infinite number of development options that the Specific Plan would permit, would generate the “maximum possible impacts.” (*Id.*, p. II-17) In particular here, it is impossible to determine whether the DEIR Conceptual Plan would generate the maximum possible noise impacts on nearby sensitive receptors, including Broadcast Center. Furthermore, there is no way to determine the worst-case impact scenario because Hackman would have an unlimited number of development options. As stated in the Ramboll Letter, “the buildout scenarios are not defined or detailed and therefore the selection of the ‘maximum impact’ scenario cannot be reviewed and confirmed.” (Ramboll Letter, Comment 28)

Response to Comment No. 35-116

The Draft EIR analyzed the Project described in Section II, Project Description, of the Draft EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3, 9-13, and 9-14 regarding how the Project Description fully complies with CEQA and the Draft EIR disclosed and analyzed all physical elements of the Project, how all plans in an EIR are inherently conceptual, the limited Land Use Exchange Program, and the regulatory process under the proposed Specific Plan. Refer to Response to Comment Nos. 26-135 and 26-138 regarding how the noise analysis is based on the Conceptual Site Plan and reflects conservative assumptions.

Comment No. 35-117

e. Construction Noise Impacts.

Onsite Construction Noise. The DEIR claims it conservatively analyzed onsite construction noise impacts when it assumed a 32-month construction schedule with overlapping construction stages. (DEIR, pp. IV.I-35, IV.I-30, n. 44) However, the construction period is **not** limited to 32 months. In fact, Hackman could extend construction over a 20-year period, until 2043. The DEIR’s arbitrary assumption that the construction period would be the minimum 32 months therefore fails to account for the potentially greater construction noise impacts associated with a much longer construction period, both as a direct result of the increased duration and likely changes in future ambient conditions. (Ramboll Letter, Comment 34)

If construction activities continued for the maximum 20-year period, the DEIR could no longer reasonably characterize the Project’s construction noise impacts as “temporary.” (DEIR, pp. IV.I-40, 42) The DEIR’s measurement of onsite construction noise is based on an hourly L_{eq} on a conservative worst day. That is reasonable for a normal construction period of two or three years. But for an extended construction period of up to 20 years, the analysis has to take account of the continuous exposure to construction noise over such a lengthy period.⁴⁸ The onsite construction noise impacts resulting from 20 years of more or

less continuous construction activity would obviously be quite significant. The noise from construction vehicles and equipment is extremely unpleasant and quite distinctive from other noise that contributes to ambient noise levels. Broadcast Center is adjacent to the Project Site, so construction noise would be particularly audible and disruptive over such an extended period.

If the preparers of the DEIR insist that the compressed 32-month timeframe is the most conservative assumption (when of course it is not), they must demonstrate that a 20-year time frame would not result in greater onsite construction noise impacts.

⁴⁸ This is consistent with the significance thresholds for construction noise, which reflect that the longer the construction period, the greater the construction noise impact. Specifically, a construction noise impact would be significant if "[c]onstruction activities lasting more than one day would exceed ambient exterior sound levels by 10 dBA (hourly L_{eq}) or more at a noise-sensitive use. However, the required decibel increase for a significant impact is sharply reduced when the construction period increases to more than 10 days. In that case, the significance threshold is that a construction noise impact would be significant if "[c]onstruction activities lasting more than **10 days in a three-month period** would exceed ambient exterior sound levels by **5 dBA** (hourly L_{eq}) or more at a noise-sensitive use. While there is no significance threshold for an exceptionally long construction period, as could be the case here, the existing thresholds reflect that that longer construction periods have greater construction impacts due to their overall duration.

Response to Comment No. 35-117

The commenter conflates noise nuisance with noise impacts evaluated under CEQA. Pursuant to the 2006 L.A. CEQA Thresholds Guide guidance on the evaluation of noise impacts, the significance of construction impacts are not related to duration, but rather to maximum hourly and/or maximum daily thresholds. Refer to Response to Comment No. 26-138 for the explanation of how the 32-month schedule represents a conservative approach to determining maximum impacts.

Comment No. 35-118

In addition, Table IV.I-10 in the DEIR assumes the construction area would be would be [sic] **20 feet** from the Broadcast Center building, when in actuality the construction area of any given construction stage would almost certainly occur up to the western property line of the BC Site, which is about **seven feet** from the Broadcast Center building, a significantly shorter distance. Construction equipment would operate up to the property line to construct the private street shown in the DEIR Construction Plan, as well as construction work required to construct buildings at the western edge of that new private street, as also envisioned in the DEIR Conceptual Plan.

Therefore, the estimated construction noise impacts would be greater than disclosed in the DEIR. The DEIR must be revised to analyze the actual "maximum impact" on Broadcast Center by reducing the distance between the receptor and construction area to seven feet.

Once the actual maximum impact is analyzed, the DEIR must also meaningfully evaluate all feasible mitigation measures, even if such measures would not reduce the impact below the significance threshold. As stated above regarding Mitigation Measure NOI-MM-1, that measure is largely meaningless to Broadcast Center because there are no residential units on the ground floor of the building.

Response to Comment No. 35-118

Refer to Response to Comment No. 26-140 for a discussion of the distance between the Broadcast Center Apartments and construction activities. Refer to Response to Comment No. 26-136 regarding the construction noise impacts on the Broadcast Center Apartments and Mitigation Measure NOI-MM-1, which has been revised to require a sound barrier of 30 feet in height along the Shared Eastern Property Line to further reduce noise levels at the Broadcast Center Apartments. In addition, as discussed in Response to Comment No. 35-111, the Project does not include a new private street, as incorrectly stated by the commenter.

Comment No. 35-119

Offsite Construction Noise—Staging Areas. For offsite construction noise, the DEIR assumes temporary construction-related truck staging for haul trucks along the south side of Venice Boulevard between Cadillac Avenue and Fairfax Avenue (staging area 1) and between Normandie Avenue and Catalina Street (staging area 2). (*Id.*, p. IV.I-40) It assumes up to 25 haul trucks lined up at each of the two staging areas, with idling limited to a maximum of five minutes per the State's CARB guidelines. (*Id.*) Based on these assumptions, it concludes that noise increases at receptor locations R9 (residential, motel and medical uses on the north side of Venice Boulevard, west of Guthrie Avenue) and RIO (school and recreation uses on the north side of Venice Boulevard, east of Normandie Avenue) due to truck staging would be below the 5-dBA increase above ambient significance criterion. (*Id.*)

To start with, it is unclear how the 25 haul trucks at each staging location capture the "maximum impact" because the DEIR does not explain the basis for the 50 total haul trucks. Based on the maximum 772,000 cy of export, as well as 50,000 cy of imported fill, we reasonably assume that more than 25 haul trucks would queue and idle at the staging areas each day during the construction period. This constant parade of idling haul trucks for an undetermined number of hours and days when hauling activities are ongoing would occur within feet of the sensitive receptors at much longer durations and higher intensity and frequency than assumed in the DEIR.

Response to Comment No. 35-119

Refer to Response to Comment No. 26-24. As discussed therein, off-site staging is no longer proposed, and all construction haul trucks would stage on-site; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 35-120

Offsite Construction Noise—Haul Routes. For offsite construction noise related to haul routes, the DEIR assumes construction haul trucks would travel between the Project Site and I-10 via Washington Boulevard, Fairfax Avenue, San Vicente Boulevard, Beverly Boulevard, Normandie Avenue, and Vermont Avenue to access the staging area from I-10. (*Id.*, p. IV.I-41) The estimated number of trucks for each stage of construction is based on the CalEEMod inputs in Appendix B to the DEIR, which purports to assume the minimum 32-month buildout of the DEIR Conceptual Plan. The increases in ambient sound levels due to offsite noise are underestimated because the existing ambient conditions are not based on the quietest time of day or week, as further detailed above regarding the DEIR's erroneous ambient noise monitoring methodology. As a result, the actual increases in the existing ambient noise levels resulting from haul-and construction-related truck trips are unknown and should be reanalyzed against a corrected baseline. (Ramboll Letter, Comment 35)

Offsite Construction Noise—Construction-Related Truck Trips. This analysis references Section IV.K (Transportation) of the DEIR, stating that the peak period of construction with the highest number of construction trucks would occur during the mat foundation stage.⁴⁹ (*Id.*, p. IV.I-41) This reference is incorrect. The Transportation Chapter of the DEIR does not address construction-related trips at all. The relevant information is actually buried in the CalEEMod inputs in Appendix B to the DEIR (*i.e.*, the Air Quality Report). It assumes that 500 concrete trucks would be required during the mat foundation stage, for a total of 1,000 truck trips per day for five consecutive days. This is a significant number of trips, but there is no evidence that this is the “maximum impact.” Do the 500 concrete trucks and 1,000 truck trips per day for five consecutive days accurately reflect a single concrete pour for the mat foundation for all of the buildings on the Project Site and is this a worst case? The DEIR does not explain the basis for its mat foundation assumptions, including the notion that there would only be one mat foundation. If the DEIR claims that this is the most conservative assumption, it must provide sufficient information demonstrating that is the case. Moreover, the DEIR analysis only relates to the alleged maximum impact from buildout under the DEIR Conceptual Plan, one of an unlimited number of development options. Hackman could easily choose a different development scenario that would substantially increase the Project's offsite construction noise impact, for example by constructing separate mat foundations for series of buildings and structures in close proximity to the Project Site an extending such construction over a Long-Term Buildout.

⁴⁹ The DEIR assumed a single mat foundation (concrete pour) stage for the construction of the entire Project, which appears nonsensical for buildout under the DEIR Conceptual Plan or otherwise.

Response to Comment No. 35-120

Refer to Response to Comment Nos. 26-E.1-5 and 26-E.1-43 regarding the baseline ambient noise levels.

Noise impacts associated with off-site construction were analyzed in the Draft EIR (see Table IV.I-11), which was based on the anticipated maximum number of construction truck trips per day. Refer to Appendix FEIR-8 (Details of Project Buildout and Construction Activities) of this Final EIR for a summary of construction assumptions. As discussed in the Draft EIR, construction noise impacts are evaluated based on the maximum number of truck trips per hour. As analyzed in the Draft EIR and further discussed in Appendix FEIR-8 of this Final EIR, the Project may require mat foundations for some of the proposed structures, which would require up to approximately 500 concrete deliveries (500 truck trips in and 500 truck trips out). These types of concrete pours would be limited to approximately five large pours. Therefore, the noise impacts analyzed in the Draft EIR represent the maximum noise impacts.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Project that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan.

Comment No. 35-121

f. Construction Ground-Borne Vibration and Noise Impacts.

Human Annoyance Vibration Impacts from Onsite Construction. For human annoyance vibration impacts from onsite construction, the DEIR applies the 72 VdB significance criterion to Broadcast Center, which is the threshold used for residential receptors. (*Id.*, p. IV.I-63) It concludes that ground-borne vibration levels at Broadcast Center would exceed the threshold if the heavy construction equipment would operate less than 80 feet from the receptor.

Table IV.I-21 in the DEIR assumes the construction equipment would be **20 feet** from the Broadcast Center building, when in actuality equipment would almost certainly operate up to the western property line of the BC Site, which is about **seven feet** from the Broadcast Center building, a significantly shorter distance. Construction equipment would operate up to the property line to construct the private street shown in the DEIR Construction Plan, as well as construction work required to construct buildings at the western edge of that new private street, as also envisioned in the DEIR Conceptual Plan.

Therefore the estimated construction vibration impacts with respect to human annoyance would be greater than disclosed in the DEIR. Moreover, the DEIR concludes that mitigation measures considered to reduce vibration impacts from onsite construction with respect to human annoyance such as a wave barrier, were infeasible, so that vibration impacts from onsite construction with respect to human annoyance would be significant and unavoidable. (*Id.*, pp. IV.I-66–67) As a result, not only were the vibration impacts on Broadcast Center understated, but apparently the DEIR claims there are no feasible mitigation measures that could at least reduce disturbance to the residents. The DEIR must be revised to analyze the “maximum impact” on Broadcast Center by reducing the distance between the receptor and construction equipment to seven feet.

Response to Comment No. 35-121

Refer to Response to Comment No. 26-140 for a comprehensive explanation of the construction noise analysis that was conducted at the Broadcast Center Apartments, including the distance between the Broadcast Center Apartments and construction activities. Similar to noise, vibration impacts were analyzed with the same distance to represent worst-case condition. As noted in Table IV.I-21 on page IV.I-64 of the Draft EIR, vibration impacts associated with human annoyance impacts would be potentially significant at the Broadcast Center Apartments. As discussed in Response to Comment No. 26-E.1-49, a wave barrier was deemed infeasible; therefore, these impacts would be significant and unavoidable.

As discussed in Response to Comment No. 35-111, the Project does not include a new private street, as incorrectly stated by the commenter.

Comment No. 35-122

Once the actual maximum impact is analyzed, the DEIR must also meaningfully evaluate all feasible mitigation measures, even if such measures would not reduce the impact below the significance threshold. (Ramboll Letter, Comment 44a [“The effectiveness and reasonableness of a temporary construction noise barrier to reduce construction noise impacts at the apartment building should be determined based on the specific construction to occur along that boundary”]; see *also id.*, Comment 36a [“While measures to reduce construction noise impacts on the apartment building along the east boundary would be challenging, they would not necessarily be infeasible... detailed consideration an overall plan that includes practical measures such as imposing minimum allowable distance to the boundary for specific activities, phasing activities, employing reduced-noise equipment (for both small, powered hand tools as well as large combustion engine equipment), sequencing the use of noise barrier walls along the boundary, employing mobile noise control barriers or enclosures to shield activities, etc., may be feasible.”])

Response to Comment No. 35-122

Refer to Response to Comment Nos. 26-136 and 26-137 for the discussion of additional measures that would reduce the construction noise impacts.

Comment No. 35-123

In addition, if construction activities continued for the maximum 20-year period, the significant and unavoidable construction vibration impact on Broadcast Center would no longer be “temporary.” The vibration impact resulting from 20 years of more or less continuous activity would be extremely unpleasant and disruptive to Broadcast Center residents. How would Hackman manage the community impacts? Which, again, could persist for up to 240 months. Consistent with the Ram boll Letter, has Hackman considered implementing a construction noise management plan to facilitate communication with neighboring stakeholders to address construction-related noise complaints? (Ram boll Letter, Comment 36) If the preparers of the DEIR insist that the compressed 32-month timeframe is the most conservative assumption, they must demonstrate that a 20-year time frame would not result in a greater construction vibration impact on Broadcast Center.

Response to Comment No. 35-123

Refer to Response to Comment No. 26-138 regarding the construction noise analysis, the 32-month construction schedule, and long-term buildout scenario. With respect to the commenter’s suggestion of a noise management plan, refer to Response to Comment No. 26-137 for revisions to Project Design Feature NOI-PDF-1, which include establishment of a telephone hot-line for use by the public to report any adverse noise complaints associated with the construction of the Project. Also note that with regard to vibration, as discussed on page V-13 in Section V, Alternatives, of the Draft EIR, the vibration impacts related to construction would be reduced to a less than significant level when heavy construction equipment is located more than 80 feet from the sensitive receptor. As such, the vibration impacts would indeed be short-term and only related to the timeframe when construction immediately adjacent to the sensitive receptor occurs.

Comment No. 35-124

Building Damage and Human Annoyance Vibration Impact From Offsite Construction. For building damage and human annoyance vibration impacts from offsite construction, the DEIR analyzes the impacts to existing buildings along the Project’s anticipated haul routes from construction delivery and haul trucks and found the impact would be significant and unavoidable. (*Id.*, p. IV.I-65) The DEIR, however, attempts to minimize the importance of this impact by a statement that it would be “temporary and intermittent.” (*Id.*) This again reflects that the noise analyses assume the minimum 32-month construction, when in fact

construction could continue for 20 years, to 2043. The DEIR fails to address what this protracted exposure to vibration impacts could mean for the offsite receptors along the anticipated haul routes, or even acknowledge that these impacts could be far more than “temporary.”

Response to Comment No. 35-124

The duration of off-site construction activities (e.g., haul trucks on local roads) does not affect the significance of vibration impacts on building damage and human annoyance. As summarized in Table IV.I-1 of the Draft EIR, the criteria for evaluating the impact of groundborne vibration on buildings is based on peak particle velocity, which is defined as “the maximum instantaneous peak of the vibration signal in inches per second” (page IV.I-9). The Draft EIR also relies on FTA’s guidance on how human annoyance impacts are to be analyzed (page IV.I-31). FTA recommends that impacts be judged based on the decibel notation (VdB) variable, which expresses the amplitude of vibration of vibration and its effects on the human body. This factor is not a function of duration, but of the peak strength of vibration.

As such, any exceedance of thresholds for building damage and human annoyance would be considered significant regardless of the duration or frequency of exceedances. However, as provided in the Draft EIR (page IV.I-65), vibration impacts associated with building damage along the haul routes would be less than significant. Put another way, a longer period of impacts associated with a 20-year buildout would not change the finding that impacts would be considered significant.

Comment No. 35-125

g. Operational Noise Impacts.

The DEIR uses the SoundPLAN (version 8.2) computer noise prediction model to calculate the Project’s noise impact with respect to onsite stationary noise sources. (*Id.*, IV.I-32) With this software, the user selects the project-specific data inputs and SoundPlan produces the automated noise modeling prediction algorithm and results for the project.⁵⁰

Mechanical Equipment. For mechanical equipment, the DEIR assumes that project-related outdoor mechanical equipment would be designed so as not to increase the existing ambient noise levels by 5 dBA and the Project would comply with LAMC Section 112.02, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise levels on the premises of other occupied properties by more than 5 dBA. (*Id.*, p. IV-I.43) [sic]

The DEIR, however, does not provide the equipment location, type, size, operation, etc. that is necessary to verify whether the “maximum possible impact” was analyzed. For example, with respect to Broadcast Center, what did the preparers of the DEIR input in the SoundPlan for proximity to the building and how many and what size equipment would be installed on the adjacent rooftop(s)? Would screening effectively reduce noise impacts to comply with LAMC Section 112.02 under a worst-case scenario analysis? There is simply not enough information in the DEIR to make this determination. (Ramboll Letter, Comment 37) In fact, the SoundPlan noise modelling information, specifically the mechanical equipment sound level data, assumes a simple point source with a sound power level of 90 dBA for all mechanical equipment (heating, ventilating, air-conditioning, etc.). Therefore, offsite project sound levels and the associated impacts are underestimated. (Ramboll Letter, Comment 45)

Moreover, as discussed above, the potential noise level increase due to the proposed mechanical equipment would be underestimated because the noise monitoring was conducted between the hours of 10:00 P.M. and 1:00 A.M. on a weekday (Monday into Tuesday), which is not the quietest time of the day when people are the most sensitive to noise. As such, the ambient noise levels must be reanalyzed in accordance with industry standards, so operational (and construction) noise levels can be appropriately measured against the correct baseline. (Ramboll Letter, Comment 40)

⁵⁰ See SoundPlan noise 8.2. Available at: <https://soundplan-uk.com/soundplan-noise-8-0/> Accessed: August 2022. See also SoundPLANnoise Contents of the Individual Modules, June 2020. Available at: <https://soundplan-uk.com/wp-content/uploads/2020/08/SoundPLAN-Module-Description-SP-EU-June-2020.pdf>. Accessed: August 2022.

Response to Comment No. 35-125

Refer to Response to Comment Nos. 26-135 and 26-E.1-57 for a discussion of how rooftop mechanical equipment was analyzed in the Draft EIR. In addition, the noise model for the rooftop mechanical equipment is based on typical HVAC equipment sound levels, as the detailed design of the individual building mechanical design is not available at this stage of the Project (detailed individual building plans are prepared during the regulatory building permit phase after a project is approved). Stationary noise sources, including mechanical equipment, are typically calculated based on a point source, representing each piece of mechanical equipment (e.g., an air-handling unit or an exhaust fan). Furthermore, as stated on page IV.I-43 of the Draft EIR, the Project mechanical equipment would be required to comply with LAMC Section 112.02, so as not to exceed the ambient noise level by more than 5 dBA.

Refer to Response to Comment No. 26-E.1-5 above regarding how the existing ambient noise levels have been properly identified in accordance with applicable LAMC requirements.

Comment No. 35-126

Outdoor Studio Production Activities. With regard to outdoor studio production activities, which could include, without limitation, the construction and breakdown of sets, outdoor filming and the use of portable generators, the DEIR assumes that outdoor production activities would continue to be prohibited within 200 feet of the BC Site and could occur any time and any day of the week, including weekends. (*Id.*, pp. IV.I-44–45) It also assumes that, because the overall amount of outdoor area used for studio production activities during project operation would be reduced as compared to existing conditions due to the development of new building and parking facilities, the operational noise level associated with outdoor production activities would be less than the existing condition. (*Id.*, p. IV.I-45)

These assumptions are extremely unpersuasive, for many reasons. First, the conclusory statement that the outdoor areas would be reduced as compared to the existing outdoor areas, and noise levels from outdoor production would therefore be somewhat lower, is unsupported, demonstrably untrue and contradicts numerous statements in the DEIR. To begin with, the square footages of the existing and proposed outdoor areas are not clearly identified in the DEIR, so it is impossible to verify the DEIR's assumption. In any event, even with the limited information in the DEIR, it appears the stated assumption is false. The Project would apparently include two production levels, one at-grade and the second below-grade, both of which could cover the entire Project Site. The DEIR does not disclose any details regarding the potential production levels (even in the DEIR Conceptual Plan), but they would presumably include unenclosed areas from which noise would emanate.

Furthermore, the DEIR's conclusory assumption ignores that even if the amount of available outdoor area is reduced, the **frequency** of outdoor production activities would certainly increase because the development of the Project would significantly increase the overall studio production activity at the Project Site, including outdoor production activity. If the available outdoor areas are used more frequently for outdoor production activities, noise from those activities could be substantially more impactful on Broadcast Center and other sensitive receptors than existing outdoor activities. The reader has no idea, however, because the DEIR substitutes an unsupported assumption in lieu of facts and analysis.

Moreover, the DEIR states that Hackman has the flexibility to expand the potential outdoor areas available for production activities by converting surface parking areas to production space and "temporarily" relocating the parking to offsite locations. (DEIR, p. II-30) Therefore, the amount of outdoor production space could be greater than assumed in the DEIR.

Response to Comment No. 35-126

As discussed in Response to Comment No. 26-140, when compared with existing conditions, outdoor production areas would be reduced with the Project due to the introduction of new buildings. As such, noise impacts associated with outdoor studio production activities would be less than significant. Also refer to Response to Comment No. 26-146 for a quantitative analysis that confirms this conclusion. In addition, Project Design Feature NOI-PDF-5 would continue to prohibit outdoor studio production activities within 200 feet of the Shared Eastern Property Line during nighttime hours. With regard to the comment about frequency of use of outdoor production facilities, note that CEQA noise impacts are not based on frequency. Furthermore, the confirmatory quantitative noise analysis discussed in Response to Comment No. 26-146 assumed full operation of the outdoor production areas. Also note that off-site parking is no longer proposed as part of the Project.

As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed all of the elements of the Project required by CEQA and provided a comprehensive analysis of the Project in accordance with CEQA.

Comment No. 35-127

Equally important, the DEIR's assumption is apparently based on the DEIR Conceptual Plan. Again, however, that is only one illustrative development scenario and, with respect to noise from outdoor production activities, clearly does not reflect anything close to a worst-case scenario with "maximum possible impacts." There is nothing to stop Hackman from increasing the amount of outdoor production spaces. There is nothing to prevent Hackman from developing outdoor production space adjacent to Broadcast Center and/or Farmers Market. There is nothing to impede Hackman from developing uses, whether production-related or not, that have unenclosed space and would generate considerably more onsite operational noise than the implementation of the illustrative DEIR Conceptual Plan.

In addition, while Project Design Feature NOI-PDF-5 limits studio-related production activities to no closer than 200 feet from the BC Site during nighttime hours, there is no evidence or analysis in the DEIR which demonstrates that this buffer area would be effective. The DEIR does not define "outdoor studio production activities" in NOI-PDF-5, so it is not clear what activities would or would not be allowed within the 200-foot buffer. (Ramboll Letter, Comment 42) In any event, a 200-foot buffer area would be wholly inadequate to mitigate the Project's operational noise impact from outdoor production activities. In particular, impulsive noises associated with outdoor filming can be highly intrusive to residents and other sensitive uses at distances that far exceed 200 feet.

Furthermore, Project Design Feature NOI-PDF-5 is not a project design feature; rather, it is a mitigation measure to try and mitigate the Project's noise impact from outdoor production activities on Broadcast Center residents. However, actual analysis is required in the DEIR to determine the extent to which this mitigation measure would be effective. (Ramboll Letter, Comment 42)

The DEIR ignores that its purpose is to analyze the environmental impacts of the Project on the existing environment. The Specific Plan would permit and expand outdoor studio production activities for decades to come with limited restrictions. The DEIR must actually analyze those impacts and identify all required and feasible mitigation measures to diminish those impacts. The DEIR's reliance on a conclusory and inaccurate statements is wholly inadequate under CEQA.

Response to Comment No. 35-127

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the Project that was analyzed in the Draft EIR and the regulatory process under the proposed Specific Plan. Refer to Topical Response No. 3, Permitted On-Site Uses, regarding the five studio uses that would be permitted under the Specific Plan. Outdoor production activities are described on pages IV.I-44 to IV.I-45 in Section IV.I, Noise, of the Draft EIR. In addition, refer to Response to Comment No. 26-146 for typical noise sources associated with outdoor studio production activities.

Refer to Response to Comment No. 26-135 for the response to the assumption used in the noise analysis including the PDFs. Refer to Response to Comment No. 9-34 regarding the difference between PDFs and mitigation measures. Refer to Response to Comment No. 26-146 regarding the noise analysis associated with outdoor studio production.

Also note that Project Design Feature NOI-PDF-5 represents the continuance of an existing restriction to prohibit outdoor studio production activities within 200 feet of the Shared Eastern Property Line during nighttime hours. As explained on pages IV.I-44 to IV.I-45 of the Draft EIR, outdoor production activities include the construction and breakdown of sets, outdoor filming, etc. As provided in Response to Comment No. 26-145, the Project would not involve the use of pyrotechnics outdoors.

Comment No. 35-128

Outdoor Roof Deck Gathering Spaces. The DEIR assumes that up to 1,200 people could gather at a given roof deck location, with a total of 5,000 people throughout the Project Site at any given time during the hours of operation within the potential outdoor gathering areas. (*Id.*) The DEIR states this is a conservative assumption based on the

DEIR Conceptual Plan. (DEIR, p. IV.I-45, n. 53) The hours of operation are assumed to be 7:00 A.M. to 12:00 A.M. (*Id.*, p. IV.I-45) The DEIR claims that the outdoor roof deck gathering areas would be designed per NOI-PDF-4 to maintain noise levels to specified levels at each property boundary, which would ensure that any amplified sound system would not exceed the significance criterion at any offsite noise-sensitive receptor location. (*Id.*, pp. IV.I-45–46)

However, actual development would not be governed by the illustrative DEIR Conceptual Plan. As is the case for impact analyses throughout the DEIR, the DEIR includes no evidence or explanation that the DEIR Conceptual Plan would generate the “maximum possible impact” with respect to outdoor roof deck gathering spaces. Furthermore, the DEIR does not provide the necessary detail from the SoundPlan in Appendix J to the DEIR to verify whether the “maximum impact” was analyzed. (Ramboll Letter, Comment 46) It is possible Hackman could decide to place multiple rooftop gathering spaces 30 feet from the BC Site, with clear line of sight to Broadcast Center, rather than spreading them across the Project Site, as the DEIR apparently assumes. (*Id.*, p. IV.I-45, n. 53)

Moreover, the DEIR’s recommended amplified-sound mitigation is inadequate, as previously discussed. Project Design Feature NOI-PDF-4 must be revised to strictly comply with the regulatory requirements in LAMC Sections 115.02(f) and 112.01(b). In addition, how does this project design feature and the noise analysis account for the combined or composite noise level resulting from people talking and amplified sound occurring together on outdoor roof deck gathering spaces?

Response to Comment No. 35-128

Refer to Response to Comment No. 26-135 for a detailed discussion of the less-than-significant impacts associated with outdoor roof deck gathering spaces, including the conservative assumptions regarding the maximum number of occupants at the outdoor roof deck areas. Refer to Response to Comment No. 26-E.1-40 regarding the applicable LAMC noise regulations related to amplified sound systems that are incorporated into Project Design Feature NOI-PDF-4.

With respect to the comment regarding the composite noise level from people talking and amplified sound, Table IV.I-13 in Section IV.I, Noise, of the Draft EIR provides the estimated composite noise levels from the outdoor uses, including amplified sound. As shown therein, noise levels from these noise sources would be below the significance criteria and noise impacts would be less than significant.

This comment incorrectly refers to the PDF as mitigation. Refer to Response to Comment No. 9-34 regarding the difference between PDFs and mitigation measures. The

Draft EIR concluded that noise impacts would be less than significant during operation, and no mitigation is required.

Comment No. 35-129

Parking Facilities. The DEIR's operational noise analysis assumes that, consistent with the DEIR Conceptual Plan, the Project would include approximately 5,300 vehicular parking spaces, which would be located within an underground parking level, an above-ground parking structure (located at the southeastern portion of the Project Site) and/or surface parking throughout the Project Site. (*Id.*, p. IV.I-46) It further assumes that the underground parking "levels" (which contradicts its statement in the preceding sentence that there would be a single underground parking level) would be fully enclosed on all sides and therefore noise would be shielded from offsite sensitive receptors. (*Id.*) The estimated noise levels from at-grade and above-grade parking levels are collectively estimated in Table IV.I-14, with no distinction between noise levels caused by the two types of parking.

Again, the DEIR does not provide the necessary detail in Appendix J to the DEIR to verify whether the "maximum impact" was analyzed. The distance to sensitive receptors, the type of parking (at-grade versus above-grade), and the size of the parking operation assumed are not disclosed in the DEIR. As such, the DEIR fails to demonstrate that it has in fact studied a worst-case scenario for parking noise.

More specifically, assuming that the DEIR Conceptual Plan actually reflects the maximum possible impact regarding operational noise associated with onsite vehicular parking, Appendix J to the DEIR lacks sufficient information to show how the analysis was done. The distance to sensitive receptors, the type of parking (at-grade versus above-grade), and the size of the parking operation assumed are not disclosed in the DEIR. As such, the DEIR fails to demonstrate that it has in fact studied a worst-case scenario.

Furthermore, the noise analysis looks in isolation at the parking noise impact instead of collectively analyzing the combined onsite mobile noise impacts from at- and above-grade parking and the traffic on the two new private streets. This is a significant omission, particularly because the DEIR Conceptual Plan reflects an above-grade parking structure and both new private streets sited adjacent to or in close proximity to Broadcast Center.

In any event, the DEIR Conceptual Plan does not reflect the maximum possible impact as there is nothing to prevent Hackman from developing a second above-grade parking structure (in lieu of the illustrative subterranean parking structure reflected in the DEIR Conceptual Plan) adjacent to the new western private street, 30 feet from Broadcast Center. In that case, there would be two new private streets and two new above-grade parking structures flanking both the western and southern boundaries of the BC Site. This would clearly generate considerably more onsite operational noise than the implementation

of the illustrative DEIR Conceptual Plan. Similarly, there is nothing to prohibit Hackman from placing the Mobility Hub or an outdoor production activity area adjacent to the new western private street with a similar result.

Response to Comment No. 35-129

Refer to Response to Comment No. 26-135 regarding the detailed analysis of noise associated with proposed on-site parking.

As described on page IV.K-44 in Section IV.K, Transportation, of the Draft EIR and discussed in Topical Response No. 7, Mobility Hub, the Mobility Hub would provide access for passenger pick-up/drop-off zones, including shuttle buses. The Mobility Hub would be located at the southwest corner of the Project Site with access from Fairfax Avenue. The Mobility Hub would be shielded along the north and east by new structures and an approximately 12-foot-high wall along the southern property line. Noise levels associated with the Mobility Hub would include vehicles and shuttle buses for drop off and pick up. Based on the Project transportation analysis and shown in Appendix FEIR-16 of this Final EIR, there would be up to approximately 52 shuttle buses (104 shuttle bus trips per day), approximately 149 rideshare vehicles (298 rideshare trips (e.g., Uber/Lyft), and approximately 149 pick-up/drop-off private vehicles (298 private vehicle trips per day). Table II-30 on page II-1402 provides the estimated noise levels associated with the Project's Mobility Hub. As shown in Table II-30, noise from the Project's Mobility Hub would be well below the existing daytime and nighttime ambient noise levels (minimum 25 dBA below) and would not increase the existing daytime and nighttime ambient noise levels. As such, noise impacts associated with the Mobility Hub would be less than significant. Furthermore, noise impacts associated with the Mobility Hub would be consistent with the Draft EIR's analysis, and the Mobility Hub does not have any unique noise characteristic different than circulation areas and parking noise analysis. Nevertheless, a confirmatory noise analysis of the Mobility Hub was conducted in response to this comment, which confirms the Draft EIR's conclusion that noise impacts, including noise from the Mobility Hub, during Project operation would be less than significant. With regard to the Mobility Hub being constructed in a different location, as discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 26-135, future changes that are substantially different than the Conceptual Site Plan or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review.

Also refer to Response to Comment No. 26-143 regarding composite noise levels.

**Table II-30
Mobility Hub Operation Noise Levels**

Off-Site Receptor Location	Estimated Noise Levels due to Mobility Hub, dBA (L _{eq})		Existing Daytime Ambient Noise Levels, dBA (L _{eq})		Ambient + Project Noise Levels, dBA (L _{eq})		Noise Increase due to Project, dBA (L _{eq})	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	1.7	0.0	61.1	53.3	61.1	53.3	0.0	0.0
R2	0.0	0.0	62.8	60.7	62.8	60.7	0.0	0.0

R4	0.0	0.0	67.7	65.8	67.7	65.8	0.0	0.0
R5	10.6	5.5	58.9	57.8	58.9	57.8	0.0	0.0
R6	9.0	3.9	60.4	54.2	60.4	54.2	0.0	0.0
R7	23.5	18.4	56.6	53.1	56.6	53.1	0.0	0.0
R8	41.9	36.9	66.9	65.0	66.9	65.0	0.0	0.0
R9 (Gilmore Adobe) ^a	13.5	8.4	56.0	52.1	56.0	52.1	0.0	0.0

^a The Gilmore Adobe (also referred to as the Rancho La Brea Adobe) is a commercial use, and the Draft EIR correctly analyzed the Gilmore Adobe as a commercial use. This is verified by the 2018 book, *A Family Vision – Spanning Three Centuries – The History of the A.F. Gilmore Company*, written by the A.F. Gilmore Company and the certified Addendum to the Final Environmental Impact Report for The Grove at Farmers Market Project. A commercial use is not a sensitive receptor for purposes of the noise analysis under CEQA. Nonetheless, even if the Gilmore Adobe were treated hypothetically as a residential use, potential noise impacts associated with the Mobility Hub at the Gilmore Adobe would be less than significant.

Source: AES, 2023

Comment No. 35-130

Loading Dock and Trash Collection. For loading dock and trash collection areas, the DEIR assumes that they would be located throughout the Project Site in support of the production activities. (DEIR, pp. IV.I-46–47) The Project also includes various outdoor truck loading areas to serve the basecamp areas and sound stages that would be located at the basecamp areas or adjacent to the sound stages. (*Id.*, p. IV.I-47) The estimated noise levels were calculated with the assumption that up to 60 truck loadings and two trash compactors would operate concurrently to represent a conservative noise analysis. (*Id.*) The DEIR further assumes that noise levels associated with loading activities would be consistent with the existing loading operations because the loading activities would be located at similar distances from the offsite receptors. (*Id.*)

The DEIR yet again fails to provide the necessary detail in Appendix J to the DEIR to verify whether the “maximum possible impact” was analyzed. Do 60 trucks loading and two trash compactors operating concurrently reflect the most conservative assumption? What is the basis for these operational inputs? Because we do not know the distances assumed from

the sensitive receptors, we do not know whether it is the most conservative analysis with respect to Broadcast Center or another offsite receptor. Moreover, the DEIR cannot assume that the loading areas would be sited at similar distances from offsite receptors because the DEIR Conceptual Plan “illustrates one possible development scenario” and the actual development would be governed by the Specific Plan. Hackman could decide, for example, to place more loading areas in close proximity to Broadcast Center.

Response to Comment No. 35-130

Refer to Response to Comment No. 26-135 for a detailed discussion of the loading dock analysis included in the Draft EIR and Response to Comment No. 26-E.1-58 for detailed discussion of the noise calculation worksheets, including assumptions for the loading docks and trash compactors. As discussed in the Draft EIR (page IV.I-47), the noise analysis assumed that up to 60 truck loadings and two trash compactors would operate concurrently to represent a conservative noise analysis. As also discussed in the Draft EIR (page IV.I-46), trash compactors would be located inside the subterranean parking facilities or within another structurally-enclosed area, which would be shielded from the off-site noise sensitive receptors. Based on the Project truck trips forecasts, there would be approximately 83 trucks per day during operation of the Project.¹⁴⁴ In addition, truck trips would be dispersed throughout the day and would not be expected to concentrate in any particular hour. Therefore, the assumed 60 truck loadings simultaneously is a conservative assumption, as there would only be approximately 83 trucks on-site per day. Refer to Response to Comment Nos. 26-135 and 26-138 regarding how the noise analysis is based on the Conceptual Site Plan and reflects conservative assumptions. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the regulatory process under the proposed Specific Plan.

Comment No. 35-131

Offsite Mobile Noise. The DEIR analyzes 18 roadway segments in the project vicinity (DEIR, p. IV.I-48), assuming a net increase of 787 and 855 trips during the morning and afternoon peak hours, and that automobiles, as opposed to medium or heavy trucks, would comprise the majority (97%) of the trips (*id.*, Appendix J, pp. 210–213). The DEIR claims the calculated CNEL levels are conservative because the noise levels experienced along the roadways do not account for the presence of any physical sound barriers or intervening structures. (*Id.*, p. IV.I-48)

¹⁴⁴ Gibson Transportation Consulting, Inc., Truck Trips Forecasts for the TVC 2050 Project, Los Angeles, California, Memo dated March 8, 2023.

The DEIR does not expand on its assumptions around vehicle type, so the reader cannot verify whether the distribution assumption regarding 97% auto, 2% medium truck, and 1% heavy truck for average daily trips reflects the “maximum possible impact” from offsite mobile noise. In addition, the truck assumptions applied in the noise analysis are inconsistent with the assumptions used in the air quality analysis of the DEIR. The CalEEMod assumptions in the Air Quality Report show approximately 559 one day trips or 279 round trips per day during operations, far greater than 3% of 787 or 855 trips. (Air Quality Report, pp. 102 and 103 of PDF). Moreover, under the DEIR Conceptual Plan, Broadcast Center would be surrounded on all four sides by public and private streets, so residents would be acutely affected by mobile noise impacts, but, as previously discussed, the DEIR simply ignores the noise impact associated with the two new private streets.

Response to Comment No. 35-131

The percentage of trucks for the off-site transportation noise analysis is provided in Table IV.I-7 of the Draft EIR. The analysis assumed that truck trips would represent 3 percent of total vehicle trips accessing the Project Site, which is a conservative assumption, as the actual trucks would be less than 3 percent. Please refer to Response to Comment No. 26-141 for detailed information associated with the Project truck percentages. As provided on page IV.I-49 in Section IV.I, Noise, of the Draft EIR, the Project would result in a maximum noise increase of 1.0 dBA (CNEL) in vehicle-related noise along The Grove Drive. The estimated maximum noise levels increase along Beverly Boulevard and Fairfax Avenue would be 0.3 dBA (CNEL) and 0.2 dBA (CNEL), respectively. As concluded on page IV.I-54 in Section IV.I, Noise, of the Draft EIR, noise impacts associated with off-site vehicles would be less than significant. As discussed in Response to Comment No. 35-111, the Project does not include any new private streets. Please refer to Response to Comment No. 26-141 for additional noise analysis associated with on-site vehicles.

Regarding the truck trips cited in the commenter’s Air Quality Report, please refer to Response to Comment No. 26.E.1-16. As explained therein, the CalEEMod model is designed for calculation of regional emissions and not for the purpose the commenter is trying to use it for (developing a localized fleet mix). It is fundamentally flawed to apply a regional fleet mix designed for all land uses within the region to represent a single project.

Comment No. 35-132**P. The DEIR's Analysis of the Project's Public Services Impacts Is Inadequate.****1. The DEIR's Analysis of Fire Protection Impacts Is Inadequate.**

The DEIR did not adequately analyze the Project's potential to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered fire protection facilities.

According to threshold (a) from Appendix G to the Guidelines, the DEIR must analyze whether the Project would result in physical impacts associated with the need for new fire protection facilities in order to "maintain acceptable service ratios, response times or other performance objectives for fire protection services." As the DEIR acknowledges, "[b]ased on the LAMC criteria regarding response distance, the Project Site would be located outside of the required 1.0-mile response distance from a fire station with an engine company." (DEIR, p. IV.J.1-23) And, as calculated in the DEIR, "the Project would result in an estimated net increase of 5,702 employees on-site." (*Id.*, p. IV.J.2-15) Therefore, the DEIR admits that the Project would result in a sizeable population of workers whose place of employment would be located well outside of the fire protection facility response distance required by the LAMC.

Indeed, according to the Los Angeles Fire Department Response Letter (the "Fire Letter"), included as Appendix K to the DEIR, "[b]ased on these criteria (response distance from existing fire stations), fire protection would be considered **Inadequate**." (DEIR, Appendix K, p. 3, emphasis in original) This directly contradicts the DEIR's determination that the Project's "impacts with regard to LAFD facilities and equipment would be less than significant." (*Id.*, p. IV.J-25)

The Fire Letter went on to provide a list of standards, only some of which are connected to enforceable regulatory requirements. The Fire Letter then stated that "[t]he inclusion of the above listed recommendations, along with any additional recommendations made during later reviews of the proposed project will reduce the impacts to an acceptable level." (*Id.*, p. 6) However, the DEIR does not include any project design feature or mitigation measure to address the Fire Letter's "recommendations." Nevertheless, the DEIR concludes that "compliance with LAFD procedures and Fire Code requirements would minimize the potential for incidents requiring an emergency response by LAFD and, therefore, reduce the need for a new fire station or the expansion, consolidation, or relocation of an existing fire station." (*Id.*, p. IV.J.1-25) While compliance with regulatory requirements may reduce the potential for incidents, it does not address the recommendations in the Fire Letter that LAFD indicated are necessary to mitigate a significant impact on fire protection services. Moreover, the DEIR makes no attempt to explain how adherence to these

recommendations would excuse compliance with the regulatory requirement to have a fire station with an engine company within a 1.0 mile response distance.

Nor does the DEIR directly dispute that the Project may result in the need for new or enhanced fire protection facilities. Instead, the DEIR merely states that “if new facilities were needed in the future, associated construction would be required to undergo separate environmental review per CEQA, and physical environmental impacts would be addressed, as necessary.” (*Id.*) This disregards the CEQA obligation to analyze the potential environmental impacts of a new facility at the time that the need is created by a project.

The cumulative impacts analysis regarding the need for new fire protection facilities is also inadequate. As plainly stated in the Fire Letter, “[t]he development of this proposed project, along with other approved and planned projects in the immediate area, may [cumulatively] result in the need for the following: 1. Increased staffing for existing facilities. (I.E., Paramedic Rescue Ambulance and EMT Rescue Ambulance resources.) 2. Additional fire protection facilities. 3. Relocation of present fire protection facilities.” (*Id.*, Appendix K, p. 6) Nonetheless, the DEIR makes no attempt to analyze the potential environmental impacts associated with the cumulative need provide increased staffing and additional facilities, and relocate existing facilities.

After explicitly acknowledging, and without addressing, LAFD’s declared resource needs for additional staffing and facilities, the DEIR generically states that “over time, LAFD will continue to monitor population growth and land development throughout the City and identify additional resource needs, including staffing, equipment, trucks and engines, ambulances, other special apparatuses, and possibly station expansions or new station construction, which may become necessary to achieve the required level of service.” (*Id.*, p. IV.J-29) Because LAFD has already identified these cumulative resource needs, the DEIR should have studied the potential cumulative impacts resulting from new fire protection facilities.

Instead of studying the potential environmental impacts associated with needed fire protection facilities, the DEIR again defers the analysis. In order to justify the impermissible deferral of analysis, the DEIR claims that

if a new fire station, or the expansion, consolidation, or relocation of an existing station was determined to be warranted by LAFD, such facilities: (1) would occur where allowed under the designated land use; (2) would be located on parcels that are infill opportunities on lots that are between 0.5 and 1.0 acre in size; and (3) could qualify for a categorical exemption under CEQA Guidelines Section 15301 or 15332 or a Mitigated Negative Declaration and would not be expected to result in significant impacts. (*Id.*, p. IV.J.1-30)

However, the DEIR omits any discussion as to why the required facility would necessarily be located on a site with any particular land use designation or of any particular lot size. Furthermore, as the analysis does not address any of the categorical exemption requirements or any of the exceptions thereto, or evaluate any potential impact areas in particular, the statement that no significant environmental impacts would occur is conclusory and unsubstantiated. These claims again disregard the CEQA requirement to analyze the potential environmental impacts of such needed new facilities at the time that the need is cumulatively created by the Project and related projects.

Response to Comment No. 35-132

With regard to the adequacy of LAFD fire protection services and infrastructure, refer to Response to Comment Nos. 16-5, 16-10, and 26-147. With regard to emergency response times, refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-35. With regard to population growth, cumulative impacts related to fire protection and the assertion regarding deferred analysis and mitigation, refer to Response to Comment No. 26-153.

Additionally, the fire protection features listed in LAFD's inter-departmental correspondence regarding the Project (see Appendix K of the Draft EIR) were not included as PDFs in the Draft EIR because they are a form of regulatory compliance. As discussed on pages IV.J.1-24 and IV.J.1-25 of Section IV.J.1, Public Services—Fire Protection, of the Draft EIR, the Project would implement all applicable Los Angeles Building Code and Fire Code requirements regarding structural design, building materials, site access, fire flow, storage, and management of hazardous materials, alarm and communications systems, etc., including the requirements set forth in the written correspondence from LAFD included in Appendix K of the Draft EIR. Compliance with applicable Building Code and Fire Code requirements for specific building designs would be confirmed as part of LAFD's fire/life safety plan review and fire/life safety inspection per LAMC Section 57.118 prior to the issuance of a building permit. As discussed on page IV.J.125 of the Draft EIR, compliance with applicable regulatory requirements, including LAFD's fire/life safety plan review and fire/life safety inspection, would ensure that adequate fire prevention features that reduce the demand on LAFD facilities and equipment are provided. As such, compliance with LAFD procedures and Fire Code requirements would minimize the potential for incidents requiring an emergency response by LAFD and, therefore, reduce the need for a new fire station or the expansion, consolidation, or relocation of an existing fire station. Refer also to the Confirmatory Fire Public Services Technical Memorandum included in Appendix FEIR-12 of this Final EIR which confirms impacts related to fire protection would be less than significant. In addition, in accordance with the fire protection-related goals, objectives, and policies set forth in the Framework Element, Safety Element, and Wilshire Community Plan, as listed in Subsection 2.a, Regulatory Framework, of Section IV.J.1, Public Services—Fire Protection, of the Draft EIR, the City and LAFD would continue to monitor

the overall demand for existing and projected fire facilities and coordinate the development of new fire facilities to be phased with growth.¹⁴⁵ Contrary to the commenter's assertion, this does not constitute deferred analysis. Furthermore, if new facilities were needed in the future, associated construction would be required to undergo separate environmental review per CEQA, and physical environmental impacts would be addressed, as necessary. Given these procedures and policy directives, Project impacts with regard to LAFD facilities and equipment would be less than significant.

Comment No. 35-133

2. The DEIR's Analysis of Police Protection Impacts Is Inadequate.

The DEIR does not adequately analyze the Project's potential to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered police protection facilities.

The DEIR ignores the potential impact of the Project's construction employees on the need for police protection services, stating that "the Project would not generate a permanent population on the Project Site that would substantially increase the police service population of the Wilshire Community Police Station." (DEIR, pp. IV.J.2–13) As discussed in Section II.O, *infra*, if construction activities continued for the maximum 20-year period, the DEIR could no longer reasonably characterize the Project's construction impacts as "temporary." Indeed, the demand for police protection services could persist for up to 240 months, yet the DEIR summarily dismisses this worst-case scenario assuming the construction activities would be "temporary."

Response to Comment No. 35-133

Potential impacts related to police protection during construction are thoroughly discussed on pages IV.J.2-13 to IV.J.2-14 and IV.J.2-18 to IV.J.2-19 of Section IV.J.2, Public Services—Police Protection, of the Draft EIR. As discussed therein, construction of the Project would not generate a permanent population on the Project Site that would substantially increase the police service population of the Wilshire Community Police Station. In addition, the Project Site would continue to be enclosed with fencing, walls, or other barriers to prevent unauthorized access, as under existing conditions. Furthermore, access to the Project Site would continue to be controlled by staffed guard houses. Therefore, Project construction would not contribute to an increased demand for police protection services. Per Project Design Feature POL-PDF-1, additional security measures

¹⁴⁵ Refer to Framework Element Objectives 9.16 and 9.18, Safety Element Policy 2.1.6, and Fire Protection Objective 9-1 of the Wilshire Community Plan.

such as appropriate lighting, locked entry, and security patrols would be implemented during construction. With continued implementation of these security measures, the potential demand for police protection services at the Project Site during construction would be reduced. Furthermore, LAPD's needs for police protection services are primarily based on a permanent residential population, which would not occur as part of construction or operation of the Project. Thus, the Draft EIR accurately concludes that Project construction activities would not generate a demand for additional police protection services that would necessitate the provision of new or physically altered governmental facilities. Therefore, impacts on police protection services during Project construction would be less than significant.

Refer also to Response to Comment No. 9-24 regarding buildout of the Project. As discussed therein, the Draft EIR conservatively assumes a 32-month construction duration that includes overlapping activities and construction phases and more intense activities on a daily basis. In addition, the Draft EIR analyzed a long-term buildout scenario. The 32-month timeframe is preferred by the Applicant and the Applicant intends to complete construction of the Project within this timeframe subject to market conditions.

Comment No. 35-134

With regard to operational impacts, the DEIR acknowledges that the 5,702 net new Project Site employees as estimated by the DEIR “may result in an increased demand for police services.” (*Id.*, p. IV.J.2-15) However, instead of attempting to analyze the potential environmental impacts associated with the provision of those required services, the DEIR concludes that “proposed Project design features, as well as the Project’s contribution to the General Fund, would help offset the Project-related increase in demand for police services.” (*Id.*, p. IV.J.2-16) The DEIR’s conclusion disregards the CEQA requirement to study the adverse physical impacts associated with the provision of required police services, rather than the extent to which the demand for services would be “offset.”

Furthermore, the DEIR acknowledges that “Project-related traffic could have the potential to increase emergency vehicle response times to the Project Site and surrounding properties due to travel time delays caused by congestion.” (*Id.*, p. V.J.2-16) [sic] As further discussed in Section II.Q, *infra*, analysis of the Project’s emergency access impacts was improperly scoped out of the DEIR, the Transportation Assessment prepared for the Project demonstrated that the substantially increased vehicle queues caused by the Project would exceed available storage space in turn pockets at surrounding intersections and block the Project’s new six-lane private street that would intersect with The Grove Drive, as well as the existing southern parking entrance/exit for the Broadcast Center building. (*Id.*, pp. 164–165, LLG Letter, pp. 17, 21–24) Notwithstanding these vehicles queues, the DEIR found that emergency response time impacts would be less than significant simply because “pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to

avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic.” (DEIR, p. V.J.2-17) [sic] However, emergency vehicles may not be able to avoid this congestion, such as the vehicles that the Transportation Assessment indicates would be queued on both the northbound and southbound directions on The Grove Drive, with nowhere to go to make room for emergency vehicles. Therefore, the DEIR did not provide substantial evidence that the Project’s impact on emergency response times would be less than significant.

Response to Comment No. 35-134

The assertion that the Draft EIR fails to analyze Project impacts on the provision of police services is incorrect. Project impacts with respect to police protection are fully analyzed in Section IV.J.2, Public Services—Police Protection, of the Draft EIR. As stated clearly therein and affirmed by LAPD, “the Project would not require any special police protection requirements and would not result in the need for new or altered police facilities.”¹⁴⁶ With regard to the adequacy of LAPD police protection services and infrastructure during operation, refer also to Response to Comment No. 16-5.

In regard to LAPD emergency response times, refer to pages IV.J.2-7 to IV.J.2-8 of the Draft EIR. As discussed therein, the Project Site is located within the Wilshire Division, which is served by the Wilshire Community Police Station. As shown in Figure IV.J.2-1 on page IV.J.2-8 of the Draft EIR, the Wilshire Community Police Station is located at 4861 West Venice Boulevard, approximately 3.7 miles southeast of the Project Site, with a response time of approximately 14 minutes to the Project Site. The Wilshire Community Police Station serves a population of approximately 250,000 residents and is staffed by approximately 256 sworn officers and 10 civilian support staff. The average response times for the station’s emergency—high priority, medium-high priority, and non-emergency calls from January 23, 2022, to February 19, 2022, were 4.7, 17.1, and 37.7 minutes, respectively. Citywide, the average response times for emergency—high priority, medium-high priority, and non-emergency calls during the same timeframe were 4.8, 16.0, and 34.1 minutes, respectively. As indicated by LAPD, the response times for the Wilshire Division are considered adequate.

Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding the Transportation Assessment’s non-CEQA analysis of potential queuing at Project driveways, and Section B, Level of Service, of Topical

¹⁴⁶ Written correspondence from Alfonso Velasco, Public Engagement Section and Crime Prevention Through Environmental Design Section, Los Angeles Police Department, March 3, 2022. See Appendix L of the Draft EIR.

Response No. 12, Safety and Congestion, regarding the Transportation Assessment's non-CEQA analysis of vehicular congestion.

The comment that emergency access was improperly scoped out of the Draft EIR is incorrect. As discussed on pages 74 to 75 of the Initial Study, which is included in Appendix A of the Draft EIR, impacts regarding emergency access would be less than significant, and no mitigation measures are required. As stated in the Initial Study, according to the City's General Plan Safety Element, the nearest disaster routes in the Project area are Beverly Boulevard, adjacent to the Project Site's northern property line, and La Cienega Avenue, approximately 1.0 mile to the west. While it is expected that the majority of Project construction activities would be confined on-site, limited off-site construction activities may occur in adjacent street rights-of-way during certain periods of the day, which could potentially require temporary lane closures. However, if lane closures are necessary, the remaining travel lanes would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access. With regard to operation, the Project does not propose the closure of any local public streets, and primary access to the Project Site would continue to be provided from the adjacent roadways. In addition, the Project would comply with LAFD access requirements, including required fire lane widths, proximity of fire access roads to buildings, turning radii, secondary access, etc., and plot plans would be submitted to LAFD for approval. Therefore, the Project would not result in inadequate emergency access to the Project Site or surrounding uses.

Comment No. 35-135

3. The DEIR's Analysis of Parks and Recreation Impacts Is Inadequate.

The DEIR also fundamentally errs by failing to study the Project's potential impacts associated with substantially increased use of local parks, including Pan Pacific Park, which is located directly across The Grove Drive from the Project Site.

Instead, the DEIR states that this environmental topic was scoped out in the Initial Study, which determined that the Project would not (a) result in the need for new or physically altered park facilities or (b) substantially increase the use of existing neighborhood and regional parks or other recreational facilities. (DEIR, pp. VI-30–31, Appendix A, pp. 70, 71–72)

However, the analysis in the Initial Study and repeated in Section VI (Other CEQA Considerations) of the DEIR falls far short of establishing that impacts related to parks or recreational facilities would be "clearly insignificant and unlikely to occur." Guidelines § 15143. For instance, the DEIR states that "[w]hile it is possible that some of the employees may utilize local parks and recreational facilities, such use would be anticipated to be

limited due to work obligations and the amount of time it would take for employees to access off-site local parks.” (*Id.*, p. VI-30) The DEIR also states that “only a fraction of new Project employees would be expected to create new demand for local parks and recreational facilities.” (*Id.*, p. VI-31) Given that the Project conceptually includes crosswalks connecting the Project Site to Pan Pacific Park, located directly across The Grove Drive from the Project Site, the DEIR should have considered the extent to which employee use of this park (which could occur before, after or conterminous with work obligations) could affect the physical condition and adequacy of service provided. As the Project proposes to introduce 5,702 net new employees to the Project Site, by the DEIR’s estimate, even “some of” or “a fraction of” these employees could create a significant impact, which should have been evaluated in the DEIR rather than being improperly scoped out.

Response to Comment No. 35-135

Potential impacts with regard to parks and recreation were thoroughly discussed in the Initial Study (included in Appendix A of the Draft EIR). As discussed on page 71 therein, the new employment opportunities generated by the Project may be filled, at least in part, by employees presently residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, only a fraction of new Project employees would be expected to create new demand for local parks and recreational facilities, and such use is anticipated to be limited due to work obligations and the travel time necessary to access off-site parks and recreational facilities. In addition, Project employees are often more likely to use parks and facilities near their homes during non-work hours. The Project would also include a number of on-site outdoor areas including courtyards and rooftop decks for employees.

A minimum of approximately 28,900 square feet of open space would also be provided along the Project Site boundaries. Also note that the Department of Parks and Recreation typically bases its demand for parks and recreational facilities on the demand generated by residential populations, and residential uses are not proposed as part of the Project. Therefore, as concluded in the Initial Study, impacts related to parks and recreational facilities would be less than significant.

Comment No. 35-136

Q. The DEIR’s Analysis of the Project’s Transportation Impacts Is Inadequate.

1. The DEIR’s Analysis of Trip Generation and Vehicle Miles Traveled Conceals a Significant Impact By Excluding Project Components.

As introduced above, while the DEIR’s project description states that the Specific Plan will permit a broad range of uses, the Transportation Assessment (the “TA”) for the Project,

which is attached as Appendix M.1 to the DEIR and provides the foundation for the transportation analysis in the DEIR, only addresses and models a subset of uses associated with the DEIR Conceptual Plan and related DEIR Conceptual Program, which reflects one of an unlimited number of development options. The TA is based on particular floor areas for sound stages, production support, production office, general office, and retail. As noted in the TA,

[t]he conceptual Project Site plan shown in Figure 1 [*i.e.*, an enhanced DEIR Conceptual Plan that matches Figure IV.K-3 in the DEIR] is an illustrative design based on the Specific Plan guidelines for the purpose of the analysis in this Study. The eventual Project design may differ from Figure 1, but would continue to comply with the Specific Plan with regard to allowed land use types, densities, access, and other features. (DEIR, Appendix M.1, p. 2)

In other words, for all of the reasons discussed in Sections II.B and II.C, above, the scale and intensity of development ultimately approved for the Project Site may differ substantially from, and be greater than, what was analyzed in the TA and the transportation section of the DEIR. That is in part because, as stated in the DEIR, Hackman could choose to develop the Project Site with other uses permitted in the Specific Plan, including any permitted uses in the C2 zone. (DEIR, pp. II-15–16)

Response to Comment No. 35-136

Refer to Topical Response No. 3, Permitted On-Site Uses, for a discussion of the land uses allowed under the Specific Plan. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed throughout the Draft EIR, the Project is a studio project, and the proposed Specific Plan will permit five land uses—sound stage, production support, production office, and general office—as well as ancillary supporting sitewide uses related to the five land uses and operation of the studio. Further, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. Importantly, the overall development density for the Project Site is limited to 1,874,000 square feet of floor area. The proposed Specific Plan does not permit additional development density. Please note that, as discussed in Topical Response No. 2, Definition of Floor Area Is Appropriate, the Draft EIR analyzed the potential physical environmental impacts of all proposed uses and activities, regardless of whether they are considered to be within the definition of floor area. Further, the Draft EIR analyzed not only the potential transportation impacts of the proposed development program but also potential VMT impacts under two maximum transportation impact scenarios (see page IV.K-75 of the

Draft EIR), and, therefore, the Draft EIR analyzed the maximum potential trip generation and VMT associated with the Project. Refer to Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 35-38 regarding the Land Use Exchange Program and the Draft EIR's comprehensive transportation analysis. Under all scenarios, transportation impacts were found to be less than significant.

Comment No. 35-137

Moreover, the TA, and therefore the DEIR, fails to account for all of the uses that are apparently part of the DEIR Conceptual Plan. In particular, the TA and DEIR transportation analysis do not analyze trip generation associated with the two planned production levels, which include basecamp areas, other production-related space and the Mobility Hub. (*Id.*, p. IV.K-74) With regard to the basecamp areas, according to the project description, the active uses in basecamp areas include, but are not limited to, loading, wardrobe, hair, make-up, craft service, etc.)" (*Id.*, p. II-7) According to Section IV.M (Water Supply and Infrastructure) of the DEIR, "[b]asecamp areas are dedicated to media production uses...." (*Id.*, p. IV.M.1-35)

As previously discussed, while the DEIR's project description, the DEIR Conceptual Plan and DEIR Conceptual Program all omit the floor area for the two production levels, the DEIR's water and wastewater analyses factor in 194,600 square feet of basecamp area, although this is far less than full amount of space within the production levels, which could easily be one million square feet.

However, the TA and DEIR ignore the active uses for the two production levels in calculating the Project's trip generation and vehicle miles travelled (VMT). (*Id.*, pp. IV.K-74–76 [Tables IV.K-4 and IV.K-5], Appendix M.1, pp. 122–123 [Tables 12 and 13]) Therefore, according to the transportation analysis, precisely zero vehicle trips would be generated by the production levels, including the numerous employees and vendors that would work in the basecamp areas.

Let us conservatively assume for the sake of argument that the only active use within the production levels would be the 196,000 square feet of basecamp area referenced in the DEIR's water and wastewater analyses. Even then, that floor area must be added to the 104,000 square feet of production support uses referenced in the TA and DEIR transportation analysis results, which results in a total of 300,000 square feet of actual production support space (based on the TA's daily vehicle trip rate for production support uses of 4.14 per 1,000 square feet). (Appendix M.1, p. 122 [Table 12]). Therefore, the omission of basecamp areas from the trip generation represents an additional 812 daily vehicle trips using the TA's own figures that the DEIR fails to disclose.

As the DEIR acknowledges, dedicating additional square footage to production support uses results in a higher VMT per employee. To illustrate this, the DEIR analyzes a scenario, permitted under the proposed land use exchange program, in which 350,000 square feet of sound stage space is exchanged for additional production support space. According to the DEIR, this permitted buildout scenario “would result in higher work VMT per employee than the proposed development program” and increase the average VMT per employee from 6.7 to 7.6. (DEIR, p. IV.K-77, Appendix M.3 [Supplemental VMT Memorandum], p. 4)

However, this so-called “maximum impact” scenario disregards the 196,000 square feet or more of basecamp area dedicated to production support, as expressly stated in the DEIR. If the basecamp areas were properly included, it is apparent that average VMT per employee would exceed the significance threshold of 7.6. And, the exceedance would be greater if the TA and transportation analysis considered the other production-related uses within the production levels. It is not a stretch to surmise that the Specific Plan specifically excludes “basecamp areas,” even when within a building, as well as “outdoor production areas” (*id.*, p. II-13 [Table II-2, note a]), to provide a basis to understate the Project’s transportation and other impacts. Regardless, however, of how “floor area” is defined in the undisclosed Specific Plan, or the LAMC for that matter, the TA and DEIR transportation analyses fail to disclose a significant VMT traffic impact that would result if the vehicle trips associated with the basecamp areas and other production-related activities within the two production levels had properly been considered.

Response to Comment No. 35-137

Basecamp space is fully accounted for in the Transportation Assessment (Appendix M.1 of the Draft EIR) and the Draft EIR. As discussed in Topical Response No. 10, Trip Generation, basecamp space is an ancillary support space necessary at all studio production campuses. It provides temporary staging for support services, such as loading, wardrobe, hair and makeup, and craft services, as well as parking and storage. These uses do not generate external vehicle trips of their own. The sound stages and production support space generate trips, and the basecamp space acts in a manner similar to a parking structure supporting an office building.

Notwithstanding that basecamp space is not the same as production support space, a supplemental VMT analysis was conducted, specifically in response to this comment, of a scenario in which basecamp space were assumed to generate trips and VMT just like production support space. Therefore, this scenario assumes a total of 300,000 square feet of production support space rather than the 104,000 square feet assumed in the Conceptual Site Plan. The results of this analysis are shown in Table II-31 and Table II-32 on pages II-1416 and II-1417. As shown in Table II-31, this hypothetical scenario would have approximately 8,144 non-retail employees (compared with approximately 7,752 under

**Table II-31
Custom Land Inputs Use for VMT Analysis**

Land Use	Size	Daily Vehicle Trip Rates	Daily Vehicle Trips ^a	Employee Rate ^b	Employees
Conceptual Plan Scenario with 196,000 sf of Additional Production Support Space					
Stages	350,000 sf	5.91	2,069	0.00556	1,944
Production Support	300,000 sf	4.14	1,242	0.002	600
Production Office	700,000 sf	9.34	6,538	0.004	2,800
General Office	700,000 sf	10.06	7,006	0.004	2,800
Total Studio-Related Uses	2,050,000 sf		16,855		8,144
Maximum Transportation Impact Scenario 2 plus 196,000 sf of Additional Production Support Space					
Stages	0 sf	5.91	0	0.00556	0
Production Support	650,000 sf	4.14	2,691	0.002	1,300
Production Office	700,000 sf	9.34	6,538	0.004	2,800
General Office	700,000 sf	10.06	7,006	0.004	2,800
Total Studio-Related Uses	2,050,000 sf		16,235		6,900
^a Daily trip estimates exclude the 15-percent transit/walk-in credit because transit usage assumptions are built into the VMT Calculator. ^b Employee rates were identified in the Initial Study. Source: Gibson Transportation Consulting, Inc., 2023.					

the proposed development program) and would generate approximately 16,855 raw trips (before processing through the VMT Calculator). These two factors served as inputs to the custom land use feature of the VMT Calculator. Table II-32 on page II-1417 shows that this scenario would generate a total of approximately 14,072 daily trips (after processing by the VMT Calculator) and 6.7 work VMT per employee, which is the same as the proposed development program. Therefore, the Project would similarly not result in significant VMT impacts if basecamp space were considered to be production support space. Note that the work VMT per employee remained constant even though the total number of trips increased. This is because the work VMT per employee is based on the mode split and the geographic distribution of the employment work force, and the hypothetical basecamp analysis assumed the same geographic distribution of employees and the same mode split as the proposed development program. The increase in the number of trips did not change the average work VMT per employee because the average work VMT per employee is based on the location of the project in relation to the residential distribution serving the site and the mode split choices available to those employees. Please note that this hypothetical scenario is not realistic and overstates impacts given that basecamp activity is generated from and dependent upon sound stage uses, which have already accounted for basecamp activity from a traffic perspective.

**Table II-32
VMT Analysis Summary**

Description	Conceptual Plan Scenario with 196,000 sf Additional Production Support Space	Maximum Transportation Impact Scenario 2 Plus 196,000 sf Additional Production Support Space
Land Use		
Stage, Production, and Office Uses	2,050,000 sf	2,050,000 sf
Public-Serving Commercial Uses	20,000 sf	20,000 sf
Gross Total Project VMT Analysis^a		
Residential Population	N/A	N/A
Employee Population	8,224	6,980
Project Area Planning Commission	Central	Central
Travel Behavior Zone (TBZ)	Compact Infill	Compact Infill
Maximum Allowable VMT Reduction	40%	40%
Gross Total Daily Vehicle Trips	14,072	13,599
Gross Total Daily VMT	100,312	9,690
Total Household VMT	—	—
Household VMT per Capita	—	—
Impact Threshold	6.0	6.0
Significant Impact	No	No
Total Work VMT	54,802	52,802
Work VMT per Employee	6.7	7.6
Impact Threshold	7.6	7.6
Significant Impact	No	No
<i>sf = square feet</i> ^a Results based on the City of Los Angeles VMT Calculator Version 1.3 (July 2020). Detailed outputs provided in Appendix FEIR-21 of this Final EIR. Source: Gibson Transportation Consulting, Inc., 2023.		

Contrary to the commenter's claim, the Draft EIR does not "acknowledge" that additional production support square footage results in a higher VMT per employee. Rather, the maximum transportation impact scenario 2 noted in the comment found that the *exchange* of sound stage space for additional production support space under the proposed Land Use Exchange Program resulted in higher VMT per employee. This difference was actually the result of the loss of sound stage space, which has a lower overall VMT per employee, rather than the increase of production support space. Production support space, if considered in isolation (which is a faulty assumption, since it by definition supports sound stages), generates VMT per employee at rates similar to general office and production office and similar to the proposed development program as a

whole. Nevertheless, even under this scenario, the Project would not result in a significant VMT impact.

The comment goes on to suggest that applying the additional basecamp space to the production support space in maximum transportation impact scenario 2 (resulting in 650,000 square feet of production support space) would result in a significant VMT impact. Maximum transportation impact scenario 2 was provided in Appendix M.3 of the Draft EIR. In response to this comment, an additional supplemental analysis was conducted of a hypothetical scenario that adds 196,000 square feet of production support space to maximum transportation impact scenario 2. The results of this analysis are also provided in Table II-31 and Table II-32 on pages II-1416 and II-1417. As shown in Table II-31, this hypothetical scenario would have approximately 6,900 non-retail employees and would generate approximately 16,235 raw trips (before processing through the VMT Calculator). These two factors served as inputs to the custom land use feature of the VMT Calculator. Table II-32 shows that this scenario would generate a total of approximately 13,599 daily trips (after processing by the VMT Calculator) and 7.6 work VMT per employee, which is the same VMT per employee as maximum transportation impact scenario 2. Therefore, this hypothetical scenario in which basecamp space were considered production support space would similarly not result in significant VMT impacts.

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, regarding the definition of floor area and the Draft EIR's analysis of production activities. Notably, CEQA requires an analysis of all physical environmental impacts, regardless of how something is defined or classified in a land use regulation (e.g., noise impacts from an above-ground parking structure must be analyzed under CEQA even though a parking structure is not considered floor area under the LAMC). As such, even though basecamp and outdoor production activities are not counted as floor area, these activities were fully accounted for in the EIR's environmental analysis. Refer also to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Comment No. 35-138

The VMT analysis in the TA and the DEIR also ignore the contemplated Mobility Hub. The Mobility Hub, with an estimated construction cost of \$50 million, would include a "shuttle service between the Project Site and the Metro D Line Wilshire/Fairfax Station." (DEIR, Appendix M.1, p. 186) It would also include "space to accommodate support uses, storage, maintenance, staging facilities, bicycle share or similar first-mile/last-mile programs, and other amenities" and a "transportation information center" (*id.*, pp. 5, 116), as well as support shuttle services to connect to unspecified "existing and future transit stations (e.g. Metro B Line or Crenshaw North Extension)." (*Id.*, p. 117) Similar to the basecamp areas, the DEIR's water and wastewater analyses factor in at least 36,000 square feet of basecamp area. (DEIR, pp. IV.M.1-35–38 [Tables IV.M.1-5 and IV.M.1-6])

However, the TA and the DEIR's transportation analysis also ignore the Mobility Hub in the trip generation forecasts and the VMT analysis. Specifically, they do not even attempt to disclose how VMT would be impacted by the various shuttle services that the Project may provide, including the Mobility Hub shuttles discussed above. In addition, the DEIR provides that "[w]hile the conceptual site plan... illustrates specific parking locations, ultimately, parking may be located anywhere within the Project Site or off-site.... [O]ff-site parking due to any displacement resulting from production filming and related activities may be provided, with shuttle service to the Project Site as needed." (DEIR, p. IV.K-44) The DEIR does not address the VMT impact associated with these unspecified parking shuttles, nor the production filming and related activities that may displace onsite parking. This disregard for planned activities in connection with the DEIR Conceptual Plan permeates the DEIR's transportation analysis, severely curtailing its usefulness as an information-disclosure document and consistently understanding project-related transportation impacts.

As another example, the TA concludes that 128 rideshare trips per hour to the Project Site could occur. (*Id.*, Appendix M.1, p. 149) However, the effect of ridesharing is not accounted for in the project trip generation forecast. Rideshare usage doubles the number of trips into and out of a project site as each person trip end generates two vehicle trip ends (*i.e.*, a trip with the employee/patron/guest and an additional trip by the driver of the vehicle without the employee/patron/guest). (*Id.*, pp. IV.M.1-35–38 [Tables IV.M.1-5 and IV.M.1-6])

Response to Comment No. 35-138

The comment suggests that the Mobility Hub would generate trips and VMT that were not analyzed in the Draft EIR. This is a misunderstanding of the Mobility Hub and its functions. Refer to Topical Response No. 7, Mobility Hub, for information about the functions that would be provided by the Mobility Hub. These functions, which are geared toward providing first-mile/last-mile services for those using alternative travel modes to and from the Project Site, serve to reduce automobile travel and its resulting VMT to and from the Project Site. The OPR Technical Advisory specifically states, "Transit and other active transportation projects generally reduce VMT and therefore are presumed to cause a less-than-significant impact on transportation. This presumption may apply to all passenger rail projects, bus and rapid transit projects, and bicycle and pedestrian infrastructure projects." The Mobility Hub directly supports the Project's TDM plan to reduce automobile trips. Therefore, it would not result in a VMT impact.

It should be noted that the Draft EIR conservatively excluded the trip-reducing effects of the Mobility Hub's uses in the transportation and VMT analyses in the Draft EIR, as stated on page IV.K-74 of the Draft EIR. Had those effects been included in the analysis, the VMT results would have been lower as shown in a supplemental analysis provided in Appendix E of the Transportation Assessment (Appendix M.1 of the Draft EIR).

A summary of the net vehicular and VMT effects of the Mobility Hub may be found in Appendix FEIR-20 of this Final EIR to support the emissions analysis discussed in the Appendix. The overall effects of the Mobility Hub activities would reduce vehicle trips to/from the Project Site by a net of approximately 3,400 trips per day and reduce overall Project VMT by over approximately 23,500 VMT per day. Thus, while some additional trips would be generated to/from the Mobility Hub, the overall effect of the services provided by the Mobility Hub would result in a reduction of both vehicle trips and Project VMT.

As discussed in Section B, Off-Site Parking, of Topical Response No. 13, Parking, the Project does not intend to implement an off-site parking program or negotiate an agreement with the City regarding off-site parking. The Project does not need off-site parking to meet its peak parking demands and, therefore, is no longer proposing such a program. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

Regarding rideshare trips, the estimate of up to approximately 128 peak hour rideshare trips in the Transportation Assessment was a conservative example to demonstrate that the Project's proposed rideshare spaces would be sufficient to accommodate even a conservative rideshare volume. It is not expected that rideshare demand would regularly approach 10 percent of trips. Nonetheless, while a rideshare trip can generate two trip ends as noted in the comment, the Draft EIR conservatively excluded the effects of all the TDM measures as discussed above, which collectively would substantially reduce trips. Comparing the approximately 13,454 daily trips estimated to be generated by the Conceptual Site Plan without the TDM plan from Table IV.K-5 of the Draft EIR to the approximately 11,346 daily trips estimated to be generated with inclusion of all the TDM measures (from Appendix E of the Transportation Assessment), the TDM measures reduce trips by approximately 16 percent, which is well over the hypothetical 10-percent rideshare assumptions noted in the comment. Therefore, the Transportation Assessment and Draft EIR analysis remains conservative.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, which discusses how the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

Comment No. 35-139

In addition, the transportation analysis ignores vehicle trips and VMT generated by construction workers, construction equipment and truck haul trips. (DEIR p. IV.K-80) There is no reasoned basis provided by the DEIR for not complying with law by analyzing

foreseeable construction traffic using standard, accepted methodology. *Berkeley Keep Jets Over the Bay Com. v. Ed. of Port Comrs.*, 91 Cal. App. 4th 1344, 1370 (2001).

Response to Comment No. 35-139

CEQA does not require a VMT analysis of construction traffic; CEQA Guidelines Section 15064.3(b) notes, “for many projects, a qualitative analysis of construction traffic may be appropriate.” The City does not require an analysis—quantitative or qualitative—of VMT impacts during construction based on the TAG. Refer to Topical Response No. 14, Construction Vehicle Impacts, for a detailed discussion of why construction VMT analysis is not required and that Project construction generates substantially fewer trips than Project operation. As discussed in Section IV.K, Transportation, of the Draft EIR, transportation impacts were comprehensively analyzed and determined to be less than significant during construction of the Project.

Comment No. 35-140

Nor does the DEIR study traffic associated with proposed special events. (DEIR, p. II-15) The DEIR does not even mention the need for a special event traffic management plan. The project description also states that the project buildings may include rooftop terraces or decks that would serve as outdoor gathering spaces from 7 A.M. to 12 A.M. (*Id.*, p. II-23) However, the TA and DEIR also fail to evaluate the transportation impacts related to this use, including the vehicle miles traveled with regard to rooftop special events.

As further discussed in the LLG Letter, the TA and DEIR also ignores the operational transportation impacts associated with live-audience studio programs. (LLG Letter, pp. 14, 19–21)

For all of these reasons, the DEIR fails as an information disclosure document. See, e.g., *Napa Citizens for Honest Gov’t v Napa County Ed. of Supervisors*, 91 Cal. App. 4th 342,356 (2001) (an EIR must be prepared with a sufficient degree of analysis to provide decisionmakers with the information needed to make an intelligent judgment concerning a project’s environmental impacts.); *Laurel Heights*, 47 Cal. 3d at 392 (an EIR should, when looked at as a whole, provide a reasonable, good faith disclosure and analysis of the project’s environmental impacts).

Response to Comment No. 35-140

Refer to Section C, Special Events, of Topical Response No. 10, Trip Generation, for a transportation-related discussion of special events. As described therein, the studio regularly hosts small production-related events during the normal course of studio productions, as well as a small number of larger production-related events, which are

typically held on nights and weekends. Larger special events, which currently occur at Television City several times per year, would continue to require special event permits from the City consistent with existing conditions. The proposed Specific Plan would not provide any additional authority related to conducting special events in any way. In other words, the Project does not propose a change from existing conditions in this regard.

Studio audience trips are also discussed in detail in Section A, Visitor Trips, of Topical Response No. 10, Trip Generation. As concluded therein, these trips represent a small percentage of total daily campus trip generation and an even lower percentage of the net Project increase in daily trips.

These events do not affect the VMT analysis because that analysis focuses on home-to-work employee trips as recommended by the OPR Technical Advisory and because these trip types generate the vast majority of VMT in a development, such as the Project, as discussed in Topical Response No. 8, Vehicle Miles Traveled. The small number of non-employee trips generated by events relative to the typical daily trip generation does not affect the VMT per employee calculations or conclusions. Therefore, the transportation impact analysis presented in the Draft EIR is sufficient and valid under CEQA.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, which discusses how the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

Comment No. 35-141

2. The DEIR's Analysis of the Project's VMT Traffic Impact Is Otherwise Significantly Flawed and Inadequate.

The discussion in the preceding section demonstrates that, even if the methodology used in the VMT analysis in the TA and DEIR was appropriate, the Project would have a significant VMT traffic impact that is not disclosed. However, the VMT methodology is itself flawed, which results in an even graver understatement of the Project's VMT traffic impact.

First of all, the TA and DEIR transportation analysis rely on the City's VMT Calculator tool despite the express statement in the City's VMT Calculator User Guide that the VMT Calculator cannot be used for specific plans or entertainment uses. As stated in the DEIR,

LADOT developed City of Los Angeles VMT Calculator Version 1.3 (July 2020) (VMT Calculator) to estimate project-specific daily household VMT per capita and daily work VMT per employee for developments within City limits.

The methodology for determining VMT based on the VMT Calculator is consistent with CEQA Guidelines Section 15064.3 and the TAG. (DEIR, p. IV.K-6)

However, according the City's VMT Calculator User Guide, "[a]lthough the tool may be useful for other purposes," it is not designed to do the following: "[e]valuate VMT impacts of regional-serving retail projects, entertainment projects, or event centers" or "land use plans (e.g., general plans, community plans, and specific plans)." (VMT Calculator User Guide, Version 1.3, May 2020, Section 1.1, pp. 2–3) The City's Transportation Assessment Guidelines (the "TAG") further state that a "project-specific customized approach will be required to estimate VMT impacts" for "regionally-serving entertainment projects." (TAG, p. 2-9)

As discussed in the LLG Letter, the TA and DEIR should have employed the methodology prescribed by the TAG for proposed land use plans such as the Specific Plan. (TAG, July 2020, pp. 2-9–10, LLG Letter, pp. 9–10) The TAG requires land use plans to "be evaluated using modified versions of the City's Travel Demand Forecasting (TDF) model to determine if the proposed VMT per service population in the future with project scenario will exceed the two-part thresholds described in Section 2.2.3." (*Id.*) As described in Section 2.2.3, a land use plan will have an impact if (1) "[t]he anticipated land use growth under the proposed plan would result in an average total VMT per service population in the horizon year that exceeds 15% below the regional average total VMT per service population for the baseline year from the most recent SCAG RTP/SCS" or (2) "[t]he land use growth anticipated under the plan would result in an average total VMT per service population in the plan horizon year that exceeds the average total VMT per service population in the plan area for the baseline year from the most recent locally validated travel demand forecasting model." (*Id.*, p. 2-7) Service population is defined as "all of the people living and working within the plan or project area." (*Id.*) The plan area "will be defined by the area directly affected by the proposed plan, which is generally... a specific plan area for specific plans...." (*Id.*)

This methodology prescribed by the TAG is more appropriate as it allows for modelling "the reallocation of the population and/or employment growth based on the land supply changes associated with the proposed plan.... Total VMT per service population would be calculated for all scenarios generated by land use within the project area, which is generally the plan area." (*Id.*, p. 2-10) As the TAG explains, for land use plans, "the City's TDF model will need to be refined to create a sub-area TDF model with the adequate level of detail within the respective community plan area for improved sensitivity in measuring the effect of land use development and transportation network changes. The assessment should cover the full area in which the plan may substantially affect travel patterns." (*Id.*) The VMT Calculator is not designed to be able to and is not capable of adequately addressing VMT impacts associated with land use plans, such as the Specific Plan.

The transportation analysis in the TA and DEIR doubles down on this error by relying on custom VMT Calculator inputs, which are inconsistent with one another and collectively incoherent. The TA and DEIR estimate that the Project would include 7,752 non-retail project site employees for the total of 1,854,000 square feet of studio-related land uses that were input into the VMT calculator. (DEIR, p. IV.K-73) To support this estimate, the TA and DEIR reference Table 3 of the Initial Study. (DEIR, p. IV.K-73, Appendix M.3 [Table 2, note e], LLG Letter, pp. [sic] 13) Table 3 of the Initial Study, in turn, bases its employee generation rate on the City's VMT Calculator but uses a completely different approach than the VMT Calculator inputs relied on by the TA and the DEIR. To arrive at the employee estimate, Table 3 "[a]ssumes general retail rate for production support; general office rate for production office and general office." (DEIR, Appendix A, p. 68 [Table 3, note a]) The employee estimate based on these VMT Calculator land use inputs is then fed back into the VMT Calculator in combination with different and inconsistent, custom land use inputs. (LLG Letter, p. 14) The inconsistency here is that the Initial Study's VMT Calculator model run input the production support space using the built-in general retail rate and production office space using the built-in general office rate, while the TA's VMT Calculator model run input these uses as a combined custom studio land use.

The VMT calculator inputs used in the VMT analysis also selectively rely on "empirical studies of trip generation at other studios in Los Angeles." (DEIR, p. IV.K-35) According to the TA, "[d]aily trip generation rates for stages, production support, and production office uses are based on empirical data from other studios in Los Angeles...." (TA, p. 81 [Table 6, note c]) However, the TA and DEIR provide no substantiation that the empirical data, which were collected for film studios at different locations in the City and involving little-to-no audience soundstage capacity, actually applies here. But what is most bewildering is that the VMT analysis was not based on employee data for the **Existing Television Studio**, which is directly applicable in calculating the average VMT for employees. Nor do the preparers of the TA and DEIR provide any explanation for their failure to use this far more relevant employee travel data.

Furthermore, while, according to the DEIR, "the trips generated by production office during the standard commuter peak hours are fewer than those generated by a typical office building," an assumption which results in reduced trip generation forecasts, studio-related employees are paradoxically "expected to have daily travel characteristics similar to general office employees," which results in reduced vehicle miles travelled calculations. (DEIR, pp. IV.K-35, IV.K-73, Appendix M.1, p. 115)

Based on the improper use of the City's VMT Calculator and in reliance on flawed custom inputs into the VMT Calculator, the TA and DEIR conclude that the Project's average work VMT per employee is 6.7 miles per day (3.35 miles one-way). In other words, they conclude that the average commute by employees would, on average, be a 3.35-mile

radius of the Project Site. For the reasons discussed below, this significantly understates the Project's VMT impact.

Response to Comment No. 35-141

Refer to Section A, Appropriateness of Using VMT Calculator, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-31, 9-32, 20-3, and 26-E.4-9 regarding the appropriateness of using the City of Los Angeles' VMT Calculator to analyze VMT for the Project and the assumptions that were used in the VMT analysis. Topical Response No. 8 includes an explanation of why a development project implemented under a specific plan can and should be analyzed using the VMT Calculator and describes why the Project is not large enough to change demographics in a meaningful way such that the data underlying the VMT Calculator would become invalid. As substantiated therein, the approach to, and assumptions for, using the City's VMT Calculator tool to analyze the Project's VMT impacts were appropriate, as acknowledged by LADOT in its Assessment Letter that is presented in Appendix M.2 of the Draft EIR.

The use of empirical studies of trip generation at other studios in Los Angeles as input into the VMT calculations completed for the Transportation Assessment (included in Appendix M.1 of the Draft EIR) served to validate the assumptions applied in the transportation analysis (see Section IV.K, Transportation, of the Draft EIR), based on similar types of studios uses. Refer to Topical Response No. 10, Trip Generation, which provides a discussion on the validity of the empirical data used to estimate trip generation for sound stage, production support and production office uses at the Project Site, as well as a comparison of actual driveway counts of existing trips at the Project Site to estimates using the empirical data. It should be noted that the employee assumptions in the VMT calculations for the Transportation Assessment and Draft EIR are the same as what was estimated in Table 3 of the Initial Study included in Appendix A of the Draft EIR (i.e., approximately 7,752 non-retail employees and approximately 80 retail employees for a total of approximately 7,832). Refer to Response to Comment No. 26-E.4-11 for further response to the incorrect claim that there was a discrepancy in the estimation of Project Site employees and the inputs into the VMT Calculator.

It should also be noted that the work VMT per employee analysis presented in the Transportation Assessment and Draft EIR is presented in terms of one-way trips; specifically, as stated on page IV.K-30 of the Draft EIR, "*These thresholds—and the VMT analysis to which the thresholds apply—are based on specific types of **one-way trips**....*" (emphasis added). As such, the commenter's assertion that the Transportation Assessment and Draft EIR conclude that the Project's average work VMT per employee per day is 3.35 miles one-way is incorrect. For a more detailed discussion and illustration of this calculation, see Section C, Assumptions in the VMT Analysis, Employee Trip Length, of Topical Response No. 8, Vehicle Miles Traveled.

Section IV.K, Transportation, of the Draft EIR comprehensively evaluated the potential VMT impacts of the Project using conservative assumptions and correctly concluded that impacts would be less than significant.

Comment No. 35-142

Existing commute distances based on census data indicate that the average VMT per employee is actually much greater than 6.7 miles per day. According to easily available online census data, more than 50% of the employees at the Existing Television Studio travel more than 10 miles each way for their commute, more than 25% commute at least **25 miles** one way, and more than one in eight travel more than 50 miles one way. (See **Exhibit 6**) This reflects that the average VMT for employees is far more than 6.7 miles roundtrip per day and far in excess of the significance threshold of 7.6 roundtrip miles per day. The TA and DEIR should have utilized residential zip code data of current employees at the Existing Television Studio in lieu of the generic commuter VMT value produced by the City's VMT Calculator. This significant discrepancy reflects the improper use of the VMT Calculator and helps explain why the VMT Calculator User Guide and the TAG state that the VMT Calculator cannot be used for this type of project.

Furthermore, as discussed in the LLG Letter, GPS data provided by StreetLightData demonstrates an average one-way trip length for all vehicles traveling to the Project Site of 17.1 miles. (LLG Letter, p. 11) LLG also obtained cell phone tracking data showing that, of individuals who made at least 75 annual trips to the Project Site in 2018 and 2019 and assumed to be employees, over 65% traveled greater than seven miles one-way. (LLG Letter, pp. 11–12) These data further demonstrate why the use of the VMT Calculator Project was improper.

There are several additional methodological errors that further expose the inadequacy of the transportation analysis. As explained in the DEIR, “estimates for each land use were reduced by 15 percent to account for staff and visitors traveling to the Project Site via public transit rather than automobile due to the Project numerous bus/transit options.” (p. IV.K-35) However, according to the latest update of the TAG, only

[d]evelopments within a 1/4-mile walking distance of a transit station, or of a stop serving a Metro Next Gen Tier 1 service line, may qualify for up to a 15% trip generation adjustment. The actual adjustment provided will be determined by an analysis of the transit service frequency and density at the specified transit station or a stop serving a Metro Next Gen Tier 1 service line. (TAG, August 2022, p. 3-11)

The DEIR does not identify any transit station or Metro Next Gen Tier 1 service line within a quarter-mile of the Project Site and no such station or line exists. (DEIR, p. IV.K-19) Given

that the DEIR only identifies local and limited bus routes in the study area, the 15% transit usage reduction is improper.

Response to Comment No. 35-142

Refer to Response to Comment Nos. 9-30 and 35-141 above and Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project's VMT analysis, including as related to employment trip length and the provision of empirical data in support of the subject analysis. As substantiated therein, the approach to and assumptions for using the City's VMT Calculator tool to analyze the Project's VMT impacts were appropriate, as acknowledged by LADOT in the Assessment Letter included as Appendix M.2 of the Draft EIR.

Regarding the non-CEQA analysis and trip reduction associated with staff and visitors traveling to the Project Site via public transit, Table 4A on page 58 of the Transportation Assessment (provided as Appendix M.1 of the Draft EIR) notes that there are numerous bus transit options on Fairfax Avenue and Beverly Boulevard. Metro Rapid 780 on Fairfax Avenue has been discontinued, but, according to Metro,¹⁴⁷ Route 180/217 on Fairfax Avenue is a Next Gen Tier 1 service line and provides a stop adjacent to the Project Site at Fairfax Avenue and Beverly Boulevard. Regardless, LADOT's approval of the 15-percent transit credit applied to the Project's peak hour trip generation estimates was stated in a Memorandum of Understanding (Appendix A to the Transportation Assessment), which was signed in June 2021, and LADOT's Assessment Letter reviewing the Transportation Assessment (Appendix M.2 of the Draft EIR) was issued in November 2021, nearly a year prior to the TAG update in August 2022, which changed the qualification language for a 15-percent transit credit. Notwithstanding, as noted above, the Project is adjacent to a Next Gen Tier 1 transit stop and, thus, continues to qualify for the 15 percent transit credit-. For all of the above reasons, the peak hour trip generation estimates—which were only used in the non-CEQA analysis in the Transportation Assessment—are valid and appropriate. Refer to Section A, TDM Effects on Trip Generation, of Topical Response No. 11, Transportation Demand Management, for a detailed discussion of the 15-percent trip generation adjustment.

Comment No. 35-143

Another significant flaw in the DEIR's transportation analysis is that it, as well as the underlying TA, fail to analyze the Project's transportation impacts under a Long-Term Buildout to 2043. Instead, they only evaluate a 2026 Buildout. The TA and DEIR must be

¹⁴⁷ City of Los Angeles Department of City Planning, Metro NextGen: Rapid Bus Definitions, March 25, 2021.

augmented to evaluate the traffic impacts associated with a Long-Term Buildout that could be more impactful than a 2026 Buildout.

For these reasons alone, the DEIR is woefully inadequate in its disclosure of the Project's VMT-related transportation impacts.

Response to Comment No. 35-143

The comment misunderstands the nature of the CEQA VMT analysis. The VMT analysis is based on the SCAG long-range travel demand forecast model, which projects traffic levels 20 years into the future. The CEQA transportation impact criteria measure the VMT of a project under long-range future conditions as calculated by the LADOT VMT Calculator (which is based on the SCAG long-range model). Additionally, the TAG notes on page 2-11 (consistent with the recommendations in the OPR Technical Advisory) that a project can be considered not to contribute to a cumulatively significant VMT impact (i.e., a long-range impact considering all other long-term development) if it is found not to have a VMT per employee impact in the VMT Calculator. Refer to pages IV.K-80 to IV.K-81 in Section IV.K, Transportation, of the Draft EIR for an analysis of potential impacts under a long-term buildout scenario. As stated therein, the Project's impact analyses per the CEQA Guidelines Appendix G transportation thresholds and the TAG are not dependent upon the Project buildout date, and, therefore, the results and conclusions presented in Section IV.K of the Draft EIR are applicable to a long-term completion date. As such, a later buildout date would not affect the Draft EIR's transportation analysis and less-than-significant impact conclusions.

The non-CEQA transportation operational analysis is an analysis requested by LADOT, and it focuses on the likely operational impacts of Project vehicles on nearby travel corridors and intersections. LADOT does not require an operational analysis for 20-year time horizons because the nature of travel demand forecasts that far into the future are speculative at best, and because the conservative practice of assuming a 1-percent annual ambient growth, as well as development of all known related projects in a year 2026 analysis, overestimates traffic growth. In fact, the traffic growth projected in the Study Area, when both related project traffic and an ambient 1-percent background traffic rate are combined, results in a 2026 Future Base condition that is 12.8 percent higher than the 2019 Existing Conditions base traffic levels. This overall 12.8-percent traffic growth is higher than the SCAG model projections for 2040 Future Base conditions. Contrary to the comment's conclusion, the Draft EIR and its Transportation Assessment included in Appendix M.1 of the Draft EIR investigated the Project's VMT impacts for the long-term horizon through the use of the LADOT VMT Calculator. A 20-year analysis of the potential non-CEQA transportation operational impacts of a Project is not required by LADOT.

Comment No. 35-144**3. The DEIR Fails to Provide Substantial Evidence That the Project Would Not Obstruct Adopted Programs, Policies, Plans and Ordinances Adopted To Protect the Environment.**

The DEIR's evaluation of the Project's consistency with plans is vague, conclusory and outright wrong in several significant respects. The DEIR fails to acknowledge clear and substantial conflicts with plans and fails to disclosed significant impacts to the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

To begin with, the Project studied in the DEIR is flawed in its reliance on vehicle travel and failure to accommodate pedestrians and other roadway users, in conflict with established City, Regional, and State policies. See, e.g., Assembly Bill (AB) 1358, the Complete Streets Act (Government Code Sections 65040.2 and 65302), AB 32, the Global Warming Solutions Act of 2006, Senate Bill (SB) 375 of 2009, SCAG's RTP/SCS Goal 2: "Improve mobility, accessibility, reliability, and travel safety for people and goods," and additional City policies referenced below. The failure to adequately address pedestrian safety is particularly notable given the widely-reported increase in pedestrian fatalities in the City, from already high levels, despite the first objective in Mobility Plan 2035 to "decrease transportation related fatality rate to zero by 2035." (Mobility Plan 2035, p. 79) It bears emphasis that the Project Site is surrounded by stretches of Fairfax Avenue and Beverly Boulevard that are already among 6% of the City's streets that result in 65% of deaths and severe injuries to pedestrians. (Vision Zero Los Angeles, *Los Angeles Vision Zero Technical Analysis: Final Report 2015*, Los Angeles Department of Transportation, 2015) Nevertheless, the Project, as currently embodied by the DEIR Conceptual Plan, includes a new multi-level network of "internal roadways" complete with "vehicular ramp" interchanges, new and questionable intersections where existing public streets meet new private streets, and 5,300 parking spaces (enough to fill approximately 20 football fields), which collectively appear to substantially increase risks to pedestrian safety. (DEIR, pp. IV.K-42-44)

The DEIR also neglects pedestrian safety issues associated with passenger and production vehicles, various shuttles, and delivery trucks arriving and departing, driving up and down ramps, crossing sidewalks and internal walkways, and operating alongside outdoor production activities throughout the Project Site.

The Project also conflicts with (1) Policy 1.1 in Mobility Plan 2035, to "[d]esign, plan, and operate streets to prioritize the safety of the most vulnerable roadway user," (2) Wilshire Community Plan Policy 11-2, to "[p]romote pedestrian mobility, safety, amenities, and access between employment centers, residential areas, recreational areas, schools, and transit centers," and (3) Citywide Design Guideline 1, to "[p]romote a safe, comfortable, and

accessible pedestrian experience for all.” As detailed in the LLG Letter, the construction of the two new private streets adjacent to the western and southern boundaries of the BC Site would result in a significant impact on pedestrian safety. (LLG Letter, pp. 3–5)

The new private streets and reconfiguration of The Grove Drive, designated as part of the Neighborhood Enhanced Network, would also conflict with Mobility Plan 2035 Policy 2.4. The Grove Drive should be designed in accordance with the Complete Streets Design Guide and implement traffic calming features, “including curb bulbouts, mini traffic circles, neckdowns, raised crosswalks, and diagonal diverters.” (Complete Streets Design Guide, p. 17.) Instead, it is clear that the conditions proposed for the Grove Drive, when considering the existing use of curbside space for residential and supermarket loading operations, the proposed hazardous design features detailed in the LLG Letter, and the inordinate vehicle queue lengths exacerbated by the Project, are anything but enhanced for the neighborhood.⁵¹ (LLG Letter, pp. 5, 7, 15-19, 21–24)

As a further risk to pedestrian safety, and as discussed in the LLG Letter, the DEIR Conceptual Plan includes substandard sidewalk widths along both The Grove Drive and the Beverly Boulevard project frontages. (DEIR, p. IV.K-56, LLG Letter, p. 7) According to the TAG, “[i]f the project dedications and improvements asking to be waived are necessary to meet the City’s mobility needs, the project may be found to conflict with a plan that is adopted to protect the environment.” (TAG, July 2020, Attachment D [Plan, Policy, and Program Consistency Worksheet], p. 2) The DEIR does not, and cannot, explain why the requested waiver of dedication for the sidewalk widths required by Mobility Plan 2035, an element of the City’s General Plan, does not conflict with that width requirement. (DEIR, p. IV.K-56)

Policy 15-1.1 of the Wilshire Community Plan is to “[m]inimize the number of ingress and egress points to and from all Boulevards II and Avenues in the Wilshire Community Plan Area.” The DEIR Conceptual Plan includes two new driveways at Beverly Boulevard and one at Fairfax Avenue, which streets are both designated as Avenues in Mobility Plan 2035. This substantially increases vehicle/pedestrian conflict points and represents another undisclosed conflict with the Wilshire Community Plan. According to the DEIR, “[a]lthough the Project would result in more ingress and egress points than existing conditions, the Project driveways would be designed to minimize vehicle conflicts with other vehicles, pedestrians, and bicyclists and provide safer pedestrian crossings through pedestrian signal phasing and continental crosswalks.” (DEIR, p. IV.K-63) However, the DEIR fails to explain why these driveways are necessary, how they would be designed to “minimize vehicle conflicts” and why this does not represent a conflict with Policy 15-1.1.

In addition, the proposed new driveways on Beverly Boulevard and Fairfax Avenue would conflict with the installation of bicycle lanes on those roads due to the need for openings in the bicycle lane striping, barrier, or curb to permit vehicle ingress and egress and resulting

potential for vehicle/bicycle conflicts (Complete Streets Design Guide, pp. 120, 127–128 and TAG, p. 2-18), in conflict with Policy 2.6 in Mobility Plan 2035. In general, bicyclist safety is inadequately addressed in the DEIR’s plan consistency analysis. (LLG Letter, p. 4) For example, with respect to Wilshire Community Plan Policy 11-1.2, to “[p]rovide Bikeways along Boulevards II and Avenues in the Wilshire Community Plan Area,” the DEIR offers only an unsubstantiated statement that “[t]he Project would not preclude future improvements to existing and future bicycle infrastructure and would, thus, support the initiatives to construct bikeways along Boulevards II and Avenues in the Community Plan area.” (*Id.*, p. IV.K-59) However, the DEIR does not provide any evidence to demonstrate that the various project driveways would not geometrically interfere with bikeway installation.

Policy 1.8 in Mobility Plan 2035 provides that “[t]ruck movement should be limited to the arterial street network as much as possible since these streets have the lanes and wider turning radii to accommodate these heavy large vehicles.” The Project contravenes this policy by inviting truck traffic onto The Grove Drive, designated as a neighborhood enhanced network collector street, and on multiple grade levels throughout the Project Site’s internal roadway network. (*Id.*, p. IV.K-42) However, the DEIR ignores this policy. (LLG Letter, p. 5) As discussed below, the DEIR must, at a minimum, be augmented to provide a truck maneuvering analysis for the proposed new driveways and private street network.

⁵¹ The TA and DEIR should be updated to incorporate and comply with the August 2022 update to the TAG. Regarding The Grove Drive’s Neighborhood Enhanced Network designation, the updated TAG (at page 3-19) requires that “LADOT Division of Transportation Planning and Policy (TPP) shall be consulted to identify solutions that would promote safe and comfortable access by walking and biking, while also reducing the incentive for cut-through traffic.” The analysis should be updated to reflect the results of a “a pedestrian, bicycle, and transit facilities assessment,” which must include “collecting baseline pedestrian and bicycle counts” for The Grove Drive near the intersection with Beverly Boulevard, in accordance with Caltrans’ 2019 Interim Count Methodology Guidance for the Active Transportation Program. This is especially necessary given the identified existing pedestrian safety concerns with this road segment identified in the LLG Letter, which would be exacerbated by the Project.

Response to Comment No. 35-144

The commenter’s claims regarding the consistency analysis in Section IV.K, Transportation, of the Draft EIR and the Transportation Assessment (included in Appendix M.1 of the Draft EIR) are incorrect. The consistency analysis was conducted in accordance with CEQA and was reviewed and approved by the Department of City Planning and LADOT.

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. The Draft EIR and the Transportation Assessment analyzed the potential

transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would not cause significant transportation impacts.

Pages IV.K-45 through IV.K-72 in Section IV.K, Transportation, of the Draft EIR and Chapter 4 of the Transportation Assessment include CEQA analyses for consistency with existing plans, policies, ordinances, and programs, and concluded that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Thus, impacts would be less than significant. Refer to Response to Comment No. 9-29 regarding the analysis of hazards due to a geometric design feature or incompatible use and the conclusion that impacts would be less than significant.

Refer to Response to Comment No. 26-E.4-3 regarding the Project's consistency with Mobility Plan Policy 1.1.

Refer to Response to Comment No. 26-E.4-5 regarding the Project's consistency with Wilshire Community Plan Policy 11-2.

Refer to Response to Comment No. 28-18 regarding the Project's consistency with the Citywide Design Guideline 1. As discussed on pages IV.H-45 to IV.H-46 in Section IV.H, Land Use and Planning, of the Draft EIR, the Project would provide dedicated pedestrian entries to the Project Site along the Project Site perimeter along Beverly Boulevard, Fairfax Avenue, The Grove Drive, and the southern property line. All of the access points would be controlled with gates and/or staffed guard houses. A gate marking the central pedestrian entrance to the studio would be located along Beverly Boulevard. In addition to the Mobility Hub location, ride-share pick-up/drop-off zones could be located at Beverly Boulevard, Fairfax Avenue and/or at the Southern Shared Access Drive. Internal circulation routes, including drives, sidewalks, and pathways, would be introduced throughout the Project Site to facilitate efficient access to all buildings and parking areas from the numerous Project driveways. Additionally, the Mobility Hub located on-site would support first/last mile connections. The Mobility Hub would provide an off-street space for Television City employees and visitors to access passenger pick-up/drop-off zones and would include space to accommodate support uses, storage, and amenities. Such amenities may include interactive kiosks, which would provide real time transit data and manage access to shared vehicles; charging docks; and self-repair bike stations. Furthermore, the Project would include several improvements that prioritize the pedestrian experience, including landscaping, sidewalk and crosswalk improvements and bus stop improvements around the Project Site. Therefore, the Project would not conflict with this objective of the Citywide Design Guidelines.

With respect to pedestrian safety, refer to Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, regarding the number and location of the proposed driveways at the Project Site and pedestrian safety at those driveways. As discussed therein, the number of driveways chosen is appropriate for the amount of development proposed, and all driveways would be designed in accordance with LADOT design standards to ensure pedestrian safety. The queuing analyses also show that the security check points at each driveway would be set far enough into the Project Site that inbound queues would not extend back into the adjacent public streets nor would they block the sidewalks at the driveways nor any bike lanes on the adjacent streets. Also refer to Response to Comment Nos. 16-72 and 26-E.4-3 regarding the Project's pedestrian-oriented design and pedestrian safety.

Section IV.K, Transportation, of the Draft EIR and the Transportation Assessment also acknowledged the fact that the major streets adjacent to the Project Site are on the City's High Injury Network and that the Project worked with LADOT to develop transportation improvements that support the Vision Zero goals of the City. LADOT identified several Vision Zero improvements to be included in the Project's Transportation Improvement Program (see Topical Response No. 15, Transportation Improvement Program).

The design and operation of The Grove Drive are discussed in Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion. As discussed therein, adequate queueing capacity is provided, and driveways would be designed in accordance with LADOT design standards to ensure pedestrian safety.

The Project's consistency with Mobility Plan Policy 2.4 is analyzed on pages IV.K-48 to IV.K-49 of the Draft EIR. As concluded therein, the Project would not conflict with this policy to provide a slow speed network of locally-serving streets. Please note that the comment that the Project would provide "new private streets" is incorrect. In regard to the commenter's reference regarding their existing use of curbside space for residential and supermarket loading operations, as discussed in Response to Comment No. 26-E.4-14, the Broadcast Center Apartment's lack of enforcement of the red curb along the west side of The Grove Drive south of Beverly Boulevard and illegal loading operations cause periodic backups on Beverly Boulevard and contribute to the signal not clearing in time to process the northbound cars traveling from The Grove Drive.

Based on the absence of any policies in the Mobility Plan that conflict with the Project, the Project is not inconsistent with the Mobility Plan regardless of any future determination (approval or dismissal) of the proposed waiver of dedication. Refer to Response to Comment No. 16-76 regarding the sidewalk widths around the Project Site and the Project's consistency with the intent of the Mobility Plan. Refer to Response to

Comment No. 26-E.4-6 regarding the Project's consistency with Wilshire Community Plan Policy 15-1.1.

The bicycle lanes along Fairfax Avenue and Beverly Boulevard are called for in the Mobility Plan, but LADOT acknowledges that they are likely more than five years away from implementation. They would both require the elimination of curbside parking in front of small businesses and/or the loss of a travel lane along very congested streets. Because of the difficulty of the bike lane implementation, it was important that the Project access design did not add any impediments to their implementation. Therefore, the curb lanes and the parking lanes adjacent to the Project Site on those streets would not be disturbed in any way. Refer to page IV.K-59 of the Draft EIR regarding the Project's consistency with Wilshire Community Plan Policy 11-1.2. As stated therein, the Project would not preclude future improvements to existing and future bicycle infrastructure and would, thus, support the initiatives to construct bikeways along Boulevards II and Avenues in the Wilshire Community Plan area. Additionally, the Project would include an on-site Mobility Hub that would provide space for bike-share facilities, bicycle rentals, and other similar services that may be available in the future.

Refer to Response to Comment No. 26-165 regarding Mobility Plan Policy 1.8, which is not applicable to the Project.

Refer to Response to Comment No. 26-E.4-15 for a discussion of truck access along The Grove Drive. As discussed therein, the Project is designed so that all vehicles, including trucks, would head in and out of all designated access points, limiting their effect on surrounding streets, including The Grove Drive. Due to the adequate size of the Project driveways and turning radii, the addition of Project trucks would not result in a safety hazard.

The footnote referenced in the comment suggests that bicycle and pedestrian data should have been collected in the vicinity of the Broadcast Center Apartments and that LADOT Division of Transportation Planning and Policy (TPP) should have been contacted to develop solutions to encourage bicycle and pedestrian access. The traffic counts at all study intersections did indeed include pedestrian and bicycle counts, including the Beverly Boulevard/The Grove Drive/Spaulding Avenue intersection immediately adjacent to the Broadcast Center Apartments. The Transportation Improvement Program for the Project also includes an NTMP that will involve the LADOT TPP with the neighbors in the development of improvements and strategies to reduce cut-through trips and improve pedestrian and bicycle access for the area.

Comment No. 35-145**4. The DEIR Fails to Disclose Significant Site Plan Deficiencies That Would Result In Substantially Increased Hazards Due To Geometric Design Features.**

The DEIR also fundamentally errs by failing to study the Project's potential impacts associated with substantially increased hazards due to geometric design features in accordance with threshold (c) from Appendix G to the Guidelines.

Instead, the DEIR states that this environmental topic was scoped out in the Initial Study, which determined that the Project would not substantially increase hazards due to a geometric design feature or incompatible uses and the impact would therefore be less than significant. (DEIR, pp. IV.K-78, VI-31–33) However, the analysis in the Initial Study was cursory and factually inconsistent with the Project analyzed in the DEIR. For instance, while the Initial Study states that the Project includes “six new vehicular entry points and eight new pedestrian gates” (p. 73), the DEIR states that the Project includes “nine vehicular access points” (p. IV.K-42) and only four new pedestrian access points (p. II-28). Given that the Initial Study failed to properly identify the Project's access points, it is no surprise that it does not specifically analyze how the proposed “multi-level circulation plan” would operate, or how the numerous grade changes and vehicular ramps to accommodate production vehicles and delivery trucks on two levels would be designed to avoid conflicts. The Initial Study does not provide any evidence that the Project would not create hazards due to geometric design features. Accordingly, the Initial Study falls far short of establishing that hazards due to a geometric design feature would be “clearly insignificant and unlikely to occur.” (See Guidelines § 15143)

As the DEIR acknowledges,

[t]he TAG includes a methodology for analyzing impacts with respect to hazardous geometric design features. For vehicle, bicycle, and pedestrian safety impacts, project access points, internal circulation, and parking access from an operational and safety perspective (for example, turning radii, driveway queuing, line of sight for turns into and out of project driveways) are reviewed. Where project driveways would cross pedestrian facilities or bicycle facilities (e.g., bike lanes or bike paths), operational and safety issues related to the potential for vehicle/pedestrian and vehicle/bicycle conflicts and the severity of the consequences that could result are considered. In areas with moderate to high levels of pedestrian or bicycle activity, the collection of pedestrian or bicycle count data may be required. (DEIR, pp. IV.K-33–34)

And, as stated in the TAG:

Impacts regarding the potential increase of hazards due to a geometric design feature generally relate to the design of access points to and from the project site, and may include safety, operational, or capacity impacts. Impacts can be related to vehicle/vehicle, vehicle/bicycle, or vehicle/pedestrian conflicts as well as to operational delays caused by vehicles slowing and/or queuing to access a project site. These conflicts may be created by the driveway configuration or through the placement of project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections. Evaluation of access impacts require details relative to project land use, size, design, location of access points, etc. These impacts are typically evaluated for permanent conditions after project completion but can also be evaluated for temporary conditions during project construction. (TAG, p. 2-19)

The DEIR fails to address the Project's compliance with any of these requirements, but in addition to stating, as discussed above, that this issue was disposed of in the Initial Study, it also "nonetheless" references analysis buried in Section 4C of the TA. (DEIR, p. IV.K-78) However, that section of the TA also fails to comply with the above-described requirements. Specifically, the TA's analysis of driveway design features ignores turning radii, truck maneuvering and line of sight for all of the new project driveways and private streets. (*Id.*, Appendix M.1, pp. 124–128) This is especially concerning as the Project includes two new driveways connecting to internal private streets that result in the complete encirclement of Broadcast Center by public and private streets. (LLG Letter, pp. 15, 17, 19) Furthermore, the DEIR and supporting TA both neglect to analyze the use of The Grove Drive curbside space that Broadcast Center residents currently use for move-ins and the Erewhon supermarket currently uses for unloading purposes. This represents additional potential for vehicle/vehicle and vehicle/pedestrian conflicts and associated safety hazards.

Response to Comment No. 35-145

The vehicular and pedestrian access points under existing conditions and the proposed Conceptual Site Plan are discussed in Section II, Project Description, of the Draft EIR. Regarding vehicular access, there are three existing active driveways¹⁴⁸ to the Project Site (including one on Beverly Boulevard and two on Fairfax Avenue) and six additional vehicular access points would be provided (refer to pages II-8 and II-26 of the Draft EIR), which is consistent with what is stated on page 73 of the Initial Study, included in Appendix A of the Draft EIR. Regarding pedestrian access, a total of eight pedestrian

¹⁴⁸ As stated on page II-8 of the Draft EIR, two of the existing driveways along Beverly Boulevard are existing curb cuts that are not currently used for access.

access points would be provided (refer to Figure II-8 on page II-28 of the Draft EIR; the Initial Study incorrectly stated that eight “new” pedestrian access points would be provided). Refer to Response to Comment No. 26-E.4-3 and Topical Response No. 12, Safety and Congestion, regarding pedestrian and vehicular access and safety.

As analyzed and concluded in the Initial Study, the Project would have a less-than-significant impact related to increased hazards due to a design feature or incompatible use, and no further analysis of this topic was required in the Draft EIR. Nonetheless, the Transportation Assessment provides a detailed discussion of Threshold T-3 in Section 4C, beginning on page 124. Refer to Response to Comment No. 9-29 regarding the CEQA impact analysis of traffic hazards. LADOT reviewed the location of the pedestrian and vehicular gates and the likely locations of the inbound/outbound gate control points, as well as the internal circulation system. LADOT carefully reviews the location of potential driveways in relation to other intersections on the public street system, the adequacy of the inbound storage prior to gate control points, and the ability of the proposed locations to meet the City’s driveway design standards. LADOT found all these elements to be acceptable in both the Initial Study and the Draft EIR Conceptual Site Plan. These features would be further reviewed during the City’s building permit process when final designs for individual buildings are submitted for construction permitting. However, any changes that could arise compared with the conceptual plans would not result in changes to the CEQA conclusions regarding geometric hazards because any changes to the design features and driveway locations would still be subject to LADOT and BOE review and approval.

Regarding truck maneuvering and access, refer to Response to Comment Nos. 26-E.4-15 and 35-148.

Regarding curbside space on The Grove Drive, the commenter does not specify the portion of the curbside along the Broadcast Center Apartment frontage. The Broadcast Center Apartment has approximately 480 feet of frontage along The Grove Drive which includes approximately 180 feet of loading and/or parking curb zone, with the remainder being either red-curb zone or ingress/egress for off-street parking for the Broadcast Center Apartments and the Erewhon supermarket. The current use of the curb on The Grove Drive for loading/parking by Broadcast Center Apartment residents and for loading at the Erewhon supermarket frequently occurs illegally in a red-curb zone. Therefore, general use of the curbside, specifically adjacent to crosswalks along Beverly Boulevard and The Grove Drive, occurs illegally. As such, both CEQA and non-CEQA analysis related to vehicular and pedestrian conflicts, as described by the commenter, would rely on the assumption of illegal and inappropriate use of the curbside. Increased enforcement of the red-curb zone could ameliorate this situation and would be enforced by LAPD and LADOT, not by Television City.

Comment No. 35-146

In addition, neither the DEIR nor TA make any attempt to evaluate whether the construction of the Project would create traffic safety hazards, an analysis that the TAG suggests should be done. The Project's anticipated construction traffic should have been analyzed with respect to potential safety hazards given the scale of the Project and potential for significant hazards associated with haul routes that Hackman could choose to place immediately adjacent to Broadcast Center.

We do not know how many bicyclists and pedestrians could be affected by these hazardous conditions as, instead of conducting pedestrian counts, the TA states that "[p]eak period traffic counts collected at the adjacent study intersections and driveway locations were reviewed for pedestrian and bicycle activity along the Project frontages." (DEIR, Appendix M.1, p. 126) Instead, specific pedestrian and bicycle counts should have been collected in accordance with Caltrans' 2019 Interim Count Methodology Guidance for Active Transportation Program.

Response to Comment No. 35-146

Please note that this comment appears to misunderstand the CEQA threshold related to hazards due to a geometric design feature or incompatible uses. Refer to Response to Comment No. 9-29, which discusses the Project's less-than-significant impacts related to hazards.

The Draft EIR comprehensively analyzed the Project's potential transportation impacts in accordance with CEQA and City policy in Section IV.K, Transportation, and concluded that impacts would be less than significant during construction of the Project. In addition, the Transportation Assessment (Appendix M.1 of the Draft EIR) included a full non-CEQA analysis of construction traffic in accordance with the TAG. As discussed therein, the Project would include a CTMP as Project Design Feature TR-PDF-1. The Project would not result in significant traffic safety hazards, as construction haul truck staging, deliveries, etc., would occur within the boundaries of the Project Site. Any activity on the Project Site periphery would include pedestrian and bicycle protection and detours as necessary. The Project would comply with all construction safety requirements and would not introduce unusual features that could result in an unusual safety hazard. The haul routes use arterial streets and have been reviewed and approved by the City. By following standard rules and implementing the CTMP, the Project would not result in safety hazards. Refer to pages IV.K-36 to IV.K-37 and IV.K-80 in Section IV.K, Transportation, of the Draft EIR; pages 179–184 of the Transportation Assessment; and Topical Response No. 14, Construction Vehicle Impacts.

The comment also claims that pedestrian and bicycle counts were not collected. However, the counts included in Appendix B of the Transportation Assessment include bicycle and pedestrian counts in 15-minute increments throughout the peak periods at each of the analyzed intersections. As shown on page IV.K-36 of the Draft EIR, specific features of the CTMP addressing pedestrian and bicycle safety include:

- Temporary pedestrian, bicycle, and vehicular traffic controls (e.g., flag people trained in pedestrian and bicycle safety at the Project Site's driveways) during all construction activities adjacent to Fairfax Avenue, Beverly Boulevard, and The Grove Drive, to ensure traffic safety on the public right-of-way.
- Implementing safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers.

Comment No. 35-147

Another important issue to address in determining whether a project would substantially increase hazards due to a geometric design feature is the queuing that would result at the closest intersections to the Project Site as a result of the Project. However, neither the DEIR nor the Initial Study even mentions this subject.

Moreover, not even the TA's limited discussion in Section 4C of the Project's potential to substantially increase hazards due to a geometric design feature or incompatible use includes any queuing analysis. The only mention of queuing in Section 4C is a conclusory statement that "[a]ll parking control systems (*i.e.*, security booths, gate arms) would be placed on-site and would provide adequate reservoir area to avoid potential queue spillover onto adjacent roadways," and indicates that study of this issue would be deferred to the subsequent final design of the new project driveway by LADOT. (DEIR, Appendix M.1, p. 125)

However, after dodging queuing issues in the hazards discussion and suggesting a queuing analysis had not been prepared yet, a later section of the TA includes a brief queuing analysis. (*Id.*, pp. 145-146, 164-165) The TA states, based on Table 19 therein, that "the Project would contribute at least 50 feet to queues exceeding turn pockets at eight locations under Future with Project Conditions (Year 2026)." (*Id.* p. 145) This deceptively understates what is shown on Table 19. Table 19 reflects the queue length would increase by 55–190 feet during the A.M. peak hour or P.M. peak hour with respect to **16** turning movements. (*Id.*, pp. 164-165)

We note in particular that there is an existing queue length of 930 feet for northbound traffic approaching Beverly Boulevard on The Grove Drive. According to the TA, the Project would increase that queue length by 90 feet, for a total queue length of 1,020 feet. (*Id.*, pp. 145–146, 164–165). It is apparent, however, that the TA significantly understates the

increase in queue length due to the multiple ways in which the TA undercounts project trip generation, as previously discussed. Moreover, as discussed in the LLG Letter, even if the TA accurately states the increase in queue length, the resulting queue would block access to (1) the Project's new six-lane private street that would intersect with The Grove Drive project driveway and (2) the existing southern parking entrance/exit for the Broadcast Center building. The Broadcast Center parking entrance/exit would also be blocked by southbound The Grove Drive traffic approaching the intersection where The Grove Drive and the Project's new six-lane private street would meet based on the vehicle queuing data provided in Appendix G to the Transportation Assessment. (LLG Letter, p. 17)

These queues would result in hazards, including, but not limited to, vehicles being trapped within the intersection, pedestrians not being able to use crosswalks, motorists attempting to squeeze through vehicle queues to enter or exit driveways, and motorists failing to observe or yield to oncoming traffic or pedestrians using sidewalks and crosswalks. There is no explanation provided for why the TA, not to mention the DEIR, fail to analyze these potential hazards associated with geometric design features.

As discussed in the LLG Letter, the queueing analysis in the TA is further inadequate because it fails to account for vehicle trips associated with audience member attendance at productions in the numerous sound stages contemplated in the DEIR Conceptual Plan and DEIR Conceptual Program. As LLG demonstrates, when those trips are factored in, the design queue length for arriving vehicles at the proposed The Grove Drive security gate would be 572 feet, whereas the security gates are only proposed to be set back 100 feet from The Grove Drive. This means that vehicles would queue onto The Grove Drive, well beyond the intersection with the proposed Project driveway and six-lane private street, which would further impact vehicle traffic flow and safety. (LLG Letter, pp. 19–21)

As shown on Table 19 in the TA, there are numerous other intersections where project-related traffic would cause vehicle queues to exceed available storage space in turn pockets, which would result in additional roadway hazards that are not disclosed in the DEIR. As one example, at the Fairfax Avenue/Melrose Avenue intersection, the 170-foot turn pocket is sufficient under the future without project condition, but the Project would cause the P.M. peak hour queue length to increase from 140 feet to **240** feet, which would significantly exceed the 170-foot storage capacity. (*Id.*, p. 164) In addition, the Project would substantially increase the queue length at other intersections that already exceed the turn pocket lengths. For example, at the Fairfax Avenue/Beverly Boulevard intersection, the A.M. peak hour queue length of 373 feet for a westbound left-turn already exceeds the turn pocket length of 140 feet, but the Project would significantly increase that queue length by at least **157** feet, for a total queue length of 530 feet. (*Id.*) Neither the TA, the DEIR nor the Initial Study has nothing to say about this, however.

In addition, the proposed travel lane geometry for the new six-lane private street, where it meets The Grove Drive, represents an additional geometric design hazard that is entirely neglected in the TA and DEIR. The conceptual striping plan for the intersection, buried in Appendix H to the TA (non-numbered, but page 665 of overall 787-page TA), shows that southbound traffic on The Grove Drive would be directed into oncoming northbound traffic, as further described in the LLG Letter. (LLG Letter, p. 18–19) In other words, the proposed new left-turn lane on northbound The Grove Drive at the intersection with the new private street lines up directly with the oncoming southbound through lane. To avoid a collision, southbound through traffic would need to transition approximately 10 feet across the intersection. Vehicles traveling southbound on The Grove Drive would have to swerve laterally 10 feet through the intersection to avoid head-on collisions with northbound vehicles turning left onto the new private street. The conceptual striping plan also interferes with an existing passenger loading area adjacent to the Holocaust Museum and Pan Pacific Park. As proposed, the drop-off lane would no longer be able to safely function because tour bus operators attempting to exit the drop-off lane would be in the middle of the intersection and not know at any time which movement (e.g., The Grove Drive traffic or Project driveway traffic) has a green light. (LLG Letter, p. 19)

Response to Comment No. 35-147

Please note that this comment appears to misunderstand the CEQA threshold related to hazards due to a geometric design feature or incompatible uses. Refer to Response to Comment No. 9-29, which discusses the Project's less-than-significant impacts related to hazards.

The second paragraph of the comment suggests that the issue of queue lengths behind the inbound control gates was not investigated and that the matter would be improperly deferred to a later date. This statement is not correct. Figure 25 on page 158 of the Transportation Assessment (included in Appendix M.1 of the Draft EIR) shows the inbound and outbound peak hour volumes at each Project driveway. These volumes were used to conduct the non-CEQA queuing analysis that established the distances from the public streets for the location of the inbound gates. Refer to Sections A, Queuing at Project Driveways, and E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion, for a detailed discussion of the non-CEQA queueing analysis at the Project gates and the location of the control gates at each major intersection and pedestrian safety. Also refer to Response to Comment No. 26-E.4-3 regarding pedestrian safety. The comment regarding deferred analysis is incorrect, as queuing was analyzed in the Transportation Assessment in accordance with the TAG, and queuing and driver delay are not CEQA impacts.

The non-CEQA effects of the Project on both driveway and intersection queuing were fully disclosed and evaluated in the Transportation Assessment. As discussed on

pages 145 to 146 of the Transportation Assessment, the Project is projected to result in a queuing effect at eight study intersections, and Table 19 on pages 164 to 165 of the Transportation Assessment shows the Project's effect on 16 individual turn movements at the eight study intersections in one peak hour. Contrary to the commenter's claim, these Project effects are fully disclosed in the Transportation Assessment.

The comment also discusses potential queuing at the intersection of Beverly Boulevard and The Grove Drive, which again is fully disclosed in Table 19 of the Transportation Assessment as described above. The additional queues along The Grove Drive caused by Project vehicles do not represent a safety or operational effect because The Grove Drive Project entrance would be signalized, and if the northbound queue from Beverly Boulevard reaches the Project driveway, the traffic signal will regulate vehicles leaving the Project Site until capacity on The Grove Drive is available to accommodate the additional Project vehicles.

The comment incorrectly claims that audience trips were not included in the Project trip generation, and, therefore, the trips in the Transportation Assessment are undercounted, and the potential Project impacts are understated. Refer to Response to Comment No. 35-39, above, as well as Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for a thorough discussion of visitor/audience trips.

The comment regarding the purported inadequacy of the inbound storage length at The Grove Drive Project driveway is based on the incorrect assumption that the trip generation of the Project is underestimated because it does not include audience trips. As discussed in Topical Response No. 10, Trip Generation, the Project trip generation does indeed account for visitor and audience trips and therefore the queuing analysis for the Project driveways as presented in Topical Response No. 12, Safety and Congestion, represents the correct estimation of queues and storage requirements at the Project driveways.

Refer to Section A, Queuing at Project Driveways, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-14 regarding queuing along The Grove Drive. Also refer to Figure II-14 on page II-1153 for a more refined version of the proposed striping along The Grove Drive and a clearer presentation of the lane assignments and lane flow on the street. This figure shows the restriping of The Grove Drive that accommodates the northbound left-turn pocket at the Project entrance that does not require the severe lane shifting for southbound through traffic as described in the comment. The Project entrance off The Grove Drive will not be a "six-lane private street" as described in the comment. Rather, a four- to five-lane driveway will intersect with The Grove Drive at a new traffic signal. The bus bay for the Holocaust Museum would be incorporated into the intersection and traffic signal design that allows buses leaving the loading bay to see the signal indications and pull safely into traffic. The final design of the

driveway and intersection would be subject to detailed review by City staff as part of the building permit process to ensure safety and compliance with design standards.

Comment No. 35-148

The LLG Letter also demonstrates that the DEIR's failure to provide truck maneuvering analyses, as required by the TAG, is a critical failure given that standard trucks would not be able to safely maneuver through the intersection of the new six-lane private street with The Grove Drive. (LLG Letter, p. 17-18) Another of the Project's new private streets, the one that would border the western boundary of the BC Site, also represents a hazard with respect to truck turning movements, especially given sight line impacts resulting from the existing multi-story residential structure. For example, trucks turning into this proposed private street from Beverly Boulevard out of this proposed private street onto Beverly Boulevard may be impeded from seeing or yielding to oncoming vehicle and pedestrian traffic due to the lack of visibility resulting from the adjacent, opaque structure. Truck maneuvering analyses should be prepared for the Project addressing all driveways and proposed onsite streets to be used for truck transportation.

Response to Comment No. 35-148

The graphics referred to in this comment are inaccurate portrayals of truck operations, as it shows trucks turning right from the right-most lane at a sharp angle when, in reality, large trucks swing wide to the left to make right turns at corners. While this maneuver is temporarily inconvenient for other vehicles on the road, it is the appropriate and safe way for large trucks to turn into and out of commercial driveways. These movements are expected, as codified in State and City guidelines. The *California Commercial Driver Handbook* (California Department of Motor Vehicles, 2019-2021) states in Section 2.7.6, Space for Turns, that drivers of large vehicles may encroach into other vehicle lanes. The *City of Los Angeles Supplemental Street Design Guide* (Los Angeles Bureau of Engineering & LADOT, May 2020) states on page 25, "The intersection corner [radius] should be designed so that the most common vehicle can negotiate a turn without encroachment into an adjacent or oncoming motor vehicle lane." (Emphasis in original text.) It further states on page 26, "Large trucks are assumed to be able to use adjacent lanes on the departing and receiving street at all intersections."

These movements are made out of necessity by experienced drivers with extremely limited frequency compared to passenger vehicle movements, and they are not considered to be an unusual safety hazard by LADOT. The infrequent inconvenience of maneuvers by large trucks is far outweighed by the pedestrian safety benefits and physical space efficiency of designing commercial driveways at a normal scale. Figure II-11 on page II-1148 associated with Response to Comment No. 26-E.4-15 provides an accurate

depiction of how large trucks can access the Project Site via the driveway at The Grove Drive.

Refer to Response to Comment No. 26-E.4-15 regarding truck maneuvering and access. It is important to note that large trucks already use The Grove Drive. The Grove shopping and entertainment center has a loading dock located on The Grove Drive south of the Project Site, which requires large delivery trucks to back in from the street. When those trucks arrive and depart, they block all southbound travel lanes and, in some cases, all northbound travel lanes at the same time. Traffic counts with vehicle classifications were conducted at the loading dock and found that trucks (not associated with the studio) currently use it during business hours. Accordingly, truck maneuvering, which is the issue specifically raised in the comment, already occurs under existing conditions.

The Project, on the other hand, is designed so that all vehicles including trucks would head in and out of all designated access points, limiting their effect on surrounding streets, including The Grove Drive.

In addition, there are three proposed driveways on Beverly Boulevard, all three of which exist today (though two are not in use). The driveway at Genesee Avenue would continue to be signalized and provide full access (i.e., left- and right-turns in and out). The other two driveways, including the one adjacent to the Broadcast Center Apartments, would remain unsignalized and be restricted to right-turns in and out only. Therefore, should the driveway adjacent to the Broadcast Center Apartments be used for truck access, those movements would only be right turns, and the driver would have sufficient visibility to see oncoming traffic from the west. As discussed in Response to Comment No. 9-29, geometric design hazards associated with Project access were analyzed in the Initial Study and found to be less than significant.

Comment No. 35-149

The DEIR and supporting TA also fail to analyze hazards associated with the substantial, multi-level internal roadway network contemplated as part of the Project, which includes potential conflicts between vehicles and pedestrians at multiple proposed intersections. In fact, as previously discussed, the DEIR and TA disclose little about this multi-level network and do not appear to include a single graphic that illustrates this multi-level internal roadway network. Moreover, even if the DEIR or TA had included meaningful information regarding the contemplated multi-level network, it would only be illustrative and Hackman would have the discretion to place the onsite roadway network anywhere it chose. For example, the DEIR states that “[w]hile some of the circulation routes are depicted in the conceptual site plan, some would be partially subterranean and/or internal to the new buildings, thus providing internal connectivity between production spaces and supporting uses.” (DEIR, p. II-26) The safety hazards presented by the Project could potentially be

more significant than (barely) presented in the DEIR Conceptual Plan that is the foundation of the DEIR's analysis.

Therefore, the identified internal circulation is not a worst-case scenario as there is no limit on where Hackman could locate onsite streets, driveways and parking areas. Once the Specific Plan is adopted, Hackman could change the internal roadway network, or even the arrangement of proposed buildings, structures and uses on the Project Site, without further environmental review. If it did so, that would result in greater or lesser use of particular project driveways and private streets, calling into further question the validity of the limited and inadequate intersection LOS and queueing analysis that were conducted for the Project, but not disclosed in the DEIR text.

Response to Comment No. 35-149

Project access, circulation, and parking are discussed in detail on pages II-25 to II-30 in Section II, Project Description, of the Draft EIR. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review. The Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

The Project driveways would not result in hazards due to a geometric design feature; refer to Response to Comment No. 9-29. All driveways would be designed in accordance with applicable regulatory standards and subject to review and approval by LADOT. The use of individual driveways would be influenced by the direction from which traffic approaches the Project Site which, in most cases, would be influenced by the residential location of the Project employees. As described earlier, the location and distribution of parking would be spread out throughout the Project Site, and the internal circulation system has been designed to provide access to all the on-site parking regardless of the point of entry into the Project Site. Thus, the distribution of Project trips in and out of the Project Site driveways is not likely to be meaningfully different than that summarized in the Draft EIR and the Transportation Assessment included as Appendix M.1 of the Draft EIR. Further, all ramping associated with the multi-level internal circulation system would be internal to the Project Site and would be designed so as to prevent any queuing or congestion impacts that would affect the adjacent public street system.

Refer to Topical Response No. 12, Safety and Congestion, regarding the non-CEQA queuing and LOS analysis in the Transportation Assessment.

Comment No. 35-150**5. The Project's Emergency Access Impact Should Not Have Been Scoped Out of the DEIR.**

The DEIR further and significantly errs by failing to study the Project's potential impacts associated with inadequate emergency access in accordance with threshold (d) from Appendix G to the Guidelines. Instead, the DEIR states that this environmental topic was scoped out in the Initial Study, which determined that the Project would not result in inadequate emergency access and the impact would therefore be less than significant. (DEIR, pp. IV.K-80, VI-31–33)

However, the analysis in the Initial Study was cursory and failed to address key issues associated with the Project's potential impacts on emergency access. For instance, the Initial Study acknowledges that Beverly Boulevard, adjacent to the Project Site, is a designated disaster route. (DEIR, Appendix A, p. 74) The Initial Study states that Project construction may result in lane closures on this route. (*Id.*) However, the only explanation for why this impact would be clearly insignificant is a brief statement that "the remaining travel lanes would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access." (*Id.* pp. 74–75) The Initial Study does not include any analysis demonstrating that remaining travel lanes would provide sufficient disaster route capacity during required lane closures. In addition, as construction traffic is not modelled anywhere in the Initial Study, DEIR or TA, there is no evidence provided that construction traffic would not impede emergency access.

With regard to emergency access impacts from Project operation, the Initial Study states only that "primary access to the Project Site would continue to be provided from the adjacent roadways" and "the Project would comply with LAFD access requirements." (*Id.*, p. 75) Again, however, the Initial Study fails to address key issues, such as potential emergency access impacts related to vehicle queues on surrounding roadways or how emergency vehicles would navigate the proposed internal roadway network. (LLG Letter, pp. 24–25) In particular, the Initial Study does not explain why thousands of feet of additional vehicle queues on surrounding roadways, on top of significant existing queue lengths, which would substantially impede traffic flow, including at the new primary entrance to the Project Site off The Grove Drive and a primary entrance to the Broadcast Center, would not create meaningful emergency access constraints.

Also, as there is no special event management plan called for, how will special event traffic impact emergency access? What if there is an emergency at a live audience taping requiring rapid police deployment, but all the surrounding roads are jammed? The Initial Study has nothing to say on this topic.

Accordingly, the Initial Study falls far short of establishing that inadequate emergency access would be “clearly insignificant and unlikely to occur” and this impact therefore should have been evaluated in the DEIR. (See Guidelines§ 15143)

While the Project’s impact on emergency access was scoped out in the Initial Study, the DEIR adds one new point. It references Project Design Feature TR-PDF-1 (DEIR, p. IV.K-80), which requires, in the future, “[a] detailed Construction Traffic Management Plan, including street closure information, a detour plan, haul routes, and a staging plan, [which] will be prepared and submitted to the City for review and approval prior to commencing construction.” (*Id.* p. IV.K-36) In other words, notwithstanding that the Project is very large and complex development that could be constructed over a 20-year period and would involve major alterations to the onsite and offsite circulation systems, the DEIR defers all review of the Project’s construction traffic impacts, including how construction would impact emergency access and pedestrian and vehicular safety.

The DEIR’s reliance on a future construction traffic management plan represents an impermissible deferral of environmental review of the Project’s construction traffic impacts, including its potential impact on emergency access, as well as deferral to formulate feasible mitigation for any significant construction traffic impact. Furthermore, it seems apparent that the reason the preparers of the DEIR have been forced to unlawfully defer review of the Project’s construction traffic impacts is that Hackman may develop a project that is much different from what is contemplated in the DEIR Conceptual Plan. While Project Design Feature TR-PDF-1 includes a list of the type of generic provisions that could be included in the construction traffic plan “as appropriate,” it acknowledges that the contents of the plan “will be based on the nature and timing of the specific construction activities.” (*Id.*) So, the public and decisionmakers are left with no real idea of what would be developed on the Project Site, what construction traffic impacts the Project would actually have, how those impacts would specifically be addressed in the future construction traffic management plan, and whether that plan would actually be effective. Once again, the lack of a stable project description has made it impossible to meaningfully evaluate the Project’s impacts.

Response to Comment No. 35-150

Refer to pages 75 and 76 of the Initial Study included as Appendix A of the Draft EIR, as well as page IV.K-80 of Section IV.K, Transportation, of the Draft EIR. As discussed therein, impacts would be less than significant without mitigation. Thus, analysis of emergency access was not deferred.

Refer also to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, for a discussion of the Project’s effects on emergency access. As discussed therein, and as detailed in pages 3-4 of the Transportation Assessment included

in Appendix M.1 of the Draft EIR, the Conceptual Site Plan includes both access and internal circulation considerations that would enhance emergency access to the Project Site. New and redesigned Project driveways would provide increased emergency access to the Project Site with new signalized driveways provided along both Fairfax Avenue and The Grove Drive and an enhanced signalized driveway along Beverly Boulevard. Thus, emergency access to the Project Site via Beverly Boulevard, 3rd Street, and Fairfax Avenue would be maintained and improved. As also discussed in Section D of Topical Response No. 12, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations serving the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times. Also refer to Topical Response No. 10, Trip Generation, regarding how special events would not be regulated by the Project's Specific Plan and would continue to be regulated on a case-by-case basis by City departments consistent with existing conditions.

The comment incorrectly implies that the Project would cause thousands of feet of additional vehicle queues. Refer to Topical Response No. 12, Safety and Congestion, regarding queuing.

Refer to Topical Response No. 14, Construction Vehicle Impacts, for detailed information on construction traffic and the CTMP. Project construction activities would primarily occur within the Project Site boundaries. Construction lane closures are temporary in nature and would be subject to the requirements of the CTMP (Project Design Feature TR-PDF-1; see pages IV.K-36 to IV.K-37 in Section IV.K of the Draft EIR). The CTMP would be reviewed and approved by the City prior to commencing construction, and would include at a minimum all of the measures identified in Project Design Feature TR-PDF-1. These types of measures are common to CTMPs for development projects citywide and do not reflect a failure to disclose potential construction traffic impacts. As discussed in Response to Comment No. 35-146, the Transportation Assessment includes a complete analysis of construction traffic as part of its non-CEQA analysis. Refer to Section 5D, pages 179 through 184 of the Transportation Assessment. The conclusion of the analysis is that there are less-than-significant impacts resulting from construction activities, and, therefore, there is no deferral of mitigation.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Project Description is accurate, stable and finite, and the Draft EIR fulfilled CEQA's informational purpose by disclosing all of the elements of the Project required by CEQA and providing a comprehensive analysis of the proposed development program.

Comment No. 35-151**R. The DEIR's Analysis of the Project's Tribal Cultural Resources Impact Is Inadequate.**

The DEIR's tribal cultural resources analysis is inadequate because proper consultation with Native American tribes did not occur and the DEIR relies on the flawed TCR Report.

1. The Tribal Consultation Conducted for the Project Is Inadequate.

The tribal consultation conducted for the Project is inadequate for three reasons. First, the City notified the tribes on the City's AB 52 Consultation Contact List, but this does not satisfy the best practices promulgated by the State of California and NAHC for AB 52 consultation. (SRI Letter, p. 9) In this case, consultation consisted of sending a notification letter to those tribes listed on the City's AB 52 Consultation Contact List in July 2021—the height of the COVID-19 pandemic when tribal representatives were likely working remotely and therefore may not have received the notices. (*Id.*) While the AB 52 notices were sent through U.S. Postal Service Certified Mail as shown in the "Delivery Confirmations" provided in the TCR Report, the DEIR provides no evidence that the notices were successfully delivered by the mail carrier and received by the intended recipient, as a signature from the recipient would have been required at the time of delivery to complete the electronic verification.⁵² The U.S. Postal Service website provides electronic verification that an article was delivered or that a delivery attempt was made. (*Id.*)

Based on an online search using the USPS tracking numbers shown in the TCR Report, **at least five of the 10 contacts** did not receive the notices, including San Fernando Band of Mission Indians (Ms. Donna Yocum, Chairperson), Torres Martinez Desert Cahuilla Indians (Mr. Thomas Torte, Chairperson), Fernandeno Tataviam Band of Mission Indians (Mr. Rudy Ortega, Tribal President), Gabrieleno Band of Mission Indians—Kitz Nation (Mr. Andrew Salas, Chairperson), and Soboba Band of Luiseno Indians (Mr. Isaiah Vivanco, Chairperson). (See **Exhibit 7** attached hereto) We note that while the USPS Tracking shows the notices to the Torres Martinez Desert Cahuilla Indians and San Fernando Band of Mission Indians as "delivered" to the respective P.O. Box addresses, the tracking does not confirm that the "Individual Picked Up at Postal Facility" as is the case for the other P.O. Box addresses for the tribal contacts, such as the Gabrielino Tongva Indians of California P.O. Box shown in **Exhibit 8**. Thus, we reasonably assume that Mr. Torte and Ms. Yocum have yet to retrieve the AB 52 notice from their P.O. Boxes.

As discussed in the SRI Letter, the 2005 State of California Tribal Consultation Guidelines Supplement to General Plan Guidelines state that written correspondence requesting consultation with a tribe may not be sufficient and that telephone calls or more direct forms of contact may be required. (SRI Letter, p. 10) Even the NAHC's Tribal Consultation Under AB52: Requirements and Best Practices recommends that lead agencies consult

with tribes in advance of AB 52 consultation and to send more than one consultation notice. (*Id.*) In fact, standard practice, according to SRI, is to follow up with email notification after notice letters are mailed, and then telephone calls with each tribal entity if the letters and emails go unanswered, which was the case here. (*Id.*) The DEIR does not provide any indication that this standard practice was followed. (*Id.*)

⁵² See United States Postal Service, Frequently Asked Questions, “What is Certified Mail?” Available at: <https://faq.usps.com/s/article/What-is-Certified-Mail>. Accessed: September 2022.

Response to Comment No. 35-151

Refer to Response to Comment No. 26-E.2-54 regarding the consideration of constraints posed by the pandemic.

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the tribal outreach efforts completed for the Project, including notification to tribal contacts from the NAHC’s list returned with the SLF, the means by which tribal consultation requirements were fulfilled pursuant to PRC Section 21080.3.1, as amended by AB 52.

Comment No. 35-152

Second, because the Project is being implemented through a Specific Plan and General Plan Amendment, tribal consultation following the requirements of SB 18 is also required under State law. (*Id.*) The SB 18 consultation is not the same as AB 52 consultation or the NAHC Sacred Lands Files Search process. (*Id.*) SB 18 is subject to its own schedule and timeline for tribes to respond to the notification.⁵³ (*Id.*) Under SB 18, the City would send the Specific Plan proposal information to the NAHC and request contact information for tribes with traditional lands or places located in the geographic area affected by proposed changes. Cal. Gov’t Code § 65352.3(a)(1). The City is required to consult with federally recognized California Native American tribes, or non-federally recognized California Native American tribes, that are within the local government’s jurisdiction, are on the contact list maintained by the NAE-IC, and would be affected by the proposed Specific Plan. (*Id.* § 65352.3) Once the City contacts the tribes about the opportunity to consult, the tribes have 90 days to request consultation. (*Id.* § 65352.3(a)(2)) As such, in addition to correcting its noticing error under AB 52 discussed above, the City must also comply with its separate SB 18 obligations and correct the DEIR with any new information obtained during its SB 18 consultation.

Third, as discussed in the SRI Letter, although the NAHC Sacred Lands Files search did not disclose any tribal cultural resources within the Project Site, follow-up outreach with affiliated tribes is necessary because NAHC states that negative results do not negate the possibility of those type of resources being present and recommends contacting tribes and individuals affiliated with the area. (SRI Letter, p. 8) In this case, no tribal outreach was

conducted, as recommended by NAHC. (*Id.*) Instead, the TCR Report relied on the results of the AB 52 consultation, which as demonstrated above was itself flawed. In addition, the AB 52 Consultation Contact List is separate from the Sacred Lands Files list. (*Id.*) Here, although the named tribes are the same for both lists, three individuals named by the NAHC in the Sacred Lands Files search are not named on the AB 52 Consultation Contact List and were not contacted. (*Id.*)

⁵³ See Governor's Office of Planning and Research published guidance summarizing the differences in tribal consultation process and timeline for SB 18 and AB 52. Available at: https://opr.ca.gov/cega/docs/20220?23-Tribal_Consultation_Checklist.pdf. Accessed: September 2022.

Response to Comment No. 35-152

Refer to Response to Comment Nos. 26-E.2-14 and 26-E.2-17 regarding the tribal outreach efforts completed for the Project, including outreach to tribal contacts from the NAHC's list returned with the SLF, the means by which tribal consultation requirements were fulfilled pursuant to PRC Section 21080.3.1 (as amended by AB 52), and why the requirements of SB 18 do not apply.

Comment No. 35-153

2. The TCR Report is Inadequate as an Informational Document.

As previously discussed in the archaeological resources discussion, the cultural setting section in the TCR Report is inadequate for numerous reasons. "The discussion of the prehistoric period: (1) focuses on the wrong region, (2) contains outdated information, (3) ignores recent research, (4) fails to cite many well-known scholarly studies and reports, and (5) contains omissions and incomplete and wrong information." (SRI Letter, p. 10) Moreover, as previously discussed above, the TCR Report omits critical Project-specific history related to Native American use of the Project Site and surrounding areas during the historical period, including the Gilmore Adobe, which is located approximately 130 feet from the southern boundary of the Project Site. (*Id.*)

Response to Comment No. 35-153

The comments regarding the inadequacy of the Tribal Cultural Resources Report (Appendix C.2 of the Draft EIR) are incorrect and not supported by evidence. Refer to Response to Comment Nos. 13-7 and 26-42 regarding the issue of the regional historical context, the adequacy of the background research, identification, and analysis for archaeological and tribal cultural resources, including the discussion of the Gilmore Adobe.

Refer to Resource to Comment No. 26-E.2-12 regarding the issue of Native American labor, alternative source materials omitted from the Tribal Cultural Resources

Report, and discrepancies that may exist concerning minor details for topics that are either matters of scholarly debate or are only indirectly related to the background setting.

Comment No. 35-154

S. The DEIR's Analysis of the Project's Utility and Service Systems Impacts Is Inadequate.

1. The DEIR's Analysis of Water Supply and Infrastructure Impacts Is Inadequate.

The DEIR did not adequately analyze significant environmental effects associated with the Project's potential to result in the relocation or construction of new or expanded water supply infrastructure.

For example, the DEIR did not address potential environmental impacts associated with the installation of water distribution lines and related earthwork activities. (DEIR, pp. IV.M.1-31–32) Even though the DEIR acknowledges that trenching would involve “off-site work associated with connections to the public main lines,” the DEIR does not even attempt to calculate the distances to nearby sensitive receptors from which construction equipment would be operating. (*Id.*, p. IV.M.1-32) Construction activities associated with water distribution lines could cause potentially significant noise and air quality impacts that the DEIR did not evaluate.

Response to Comment No. 35-154

As discussed in Response to Comment No. 26-175, the Draft EIR fully and adequately analyzed water infrastructure on pages IV.M.1-31 to IV.M.1-34 of the Draft EIR. As stated therein, the Project would not require or result in the relocation or construction of new off-site water facilities or expansion of existing facilities that could cause a significant environmental effect. Note that the commenter only cites a portion of the discussion of water infrastructure. The full text on pages IV.M.1-31 and IV.M.1-32 of the Draft EIR that includes the citation from the commenter states (emphasis added):

*Construction impacts associated with the installation of water distribution lines would primarily involve trenching in order to place the water distribution lines below ground and would be limited to on-site water distribution and **minor** off-site work associated with connections to the public main lines. Prior to ground disturbance, Project contractors would coordinate with LADWP to identify the locations and depth of all lines. Furthermore, LADWP would be notified in advance of any proposed ground disturbance activities to avoid water lines and disruption of water service. **LADWP would review and approve all appropriate connection requirements, pipe depths, and***

connection location(s). *The limited off-site construction activities could also temporarily affect access in adjacent rights-of-way. However, as discussed Section IV.K, Transportation, of this Draft EIR, a Construction Traffic Management Plan (Project Design Feature TR-PDF-1) would be implemented to ensure that adequate and safe access remains available within and near the Project Site during construction activities. **Appropriate construction traffic control measures (e.g., detour signage, delineators, etc.) would also be implemented, as necessary, to ensure that emergency access to the Project Site and traffic flow are maintained on adjacent rights-of-way.***

Any trenching or grading for the new on-site water and wastewater lines and other utilities would occur as part of Project grading and foundation activities. Equipment and labor for these activities have been fully accounted for in the impact analysis in the Draft EIR, including the air quality and noise analyses. Refer to Appendix FEIR-8 of this Final EIR for the detailed labor and equipment assumptions used in the air quality and noise analyses. In addition, as stated above and in the Draft EIR, any minor off-site work associated with utility connections would be completed in accordance with agency oversight, and the Project's Construction Traffic Management Plan (Project Design Feature TR-PDF-1) would ensure that adequate and safe access remains available within and near the Project Site during construction activities.

As noted above, the precise locations of the water and sewer line and other utility connections would be determined by the utility provider during the regulatory building permit process. Based on the existing main water and sewer lines, the future offsite connections for the Project would be located along Fairfax Avenue and/or Beverly Boulevard adjacent to the Project Site. These future offsite connections for the Project would be located a minimum of 75 feet from offsite sensitive receptors. Construction associated with the offsite utility connection would involve limited pieces of equipment (i.e., a concrete saw, a backhoe, and a dump truck) and would occur for a very short duration (i.e., a few days). Based on the calculations provided in Appendix FEIR-16 of this Final EIR, noise levels associated with the connections would be approximately 71.7 dBA (L_{eq}) at the nearest sensitive receptors along Fairfax Avenue (at receptor R8) and Beverly Boulevard (at receptor R3), which would be below the 5-dBA significance threshold (at receptors R3 and R8). Therefore, noise impacts associated with the off-site utility connections would be less than significant.

Comment No. 35-155

With respect to the Project's estimated water demand, the DEIR claims that "5,000 square feet of the retail uses are assumed to consist of restaurant uses with 334 seats for a conservative estimate." (*Id.*, pp. IV.M.1-35–36 [Table IV.M.1-5, noted]) However, this

claim is inconsistent with, and undermined by, the approach taken in Section IV.K (Transportation) of the DEIR, in which “for the purposes of providing a conservative analysis, the approximately 20,000 square feet of retail uses were input into the VMT Calculator as a high-turnover restaurant land use.” (*Id.*, p. IV.K-73) It is clear that the Project’s water supply and infrastructure analysis did not in fact take a conservative approach in analyzing only 5,000 square feet of restaurant uses. According to the water demand rate provided in the DEIR, an additional 15,000 square feet of restaurant uses (and 15,000 fewer square feet of retail uses) would result in an additional 29,685 gallons per day of water demand, representing an approximately 11% increase in the overall net Project water demand.

In its estimate of water demand, the DEIR includes 194,600 square feet of basecamp area, stating that “[b]asecamp areas are dedicated to media production uses, parking, loading, and storage, where mobile facilities related to production are temporarily staged.” (*Id.*, pp. IV.M.1-35–36 [Table IV.M.1-5, note e]) The estimate also includes 36,000 square feet of Mobility Hub area. (*Id.*, p. IV.M.1-35) It is not clear where these figures comes from, as the DEIR does not otherwise provide square footages for basecamp areas or the Mobility Hub. Moreover, the DEIR fails to explain why 194,600 square feet of basecamp area and 36,000 square feet of Mobility Hub area are included in the water demand estimate, but the rest of the considerable floor area in the two planned production levels is ignored. The DEIR should have studied water demand associated with all Project components.

Response to Comment No. 35-155

As specified in the WSA, Table II-2 of Section II, Project Description, of the Draft EIR and in the water and wastewater analyses in the Draft EIR, the Project includes 20,000 square feet of retail uses, of which up to 5,000 square feet could be comprised of restaurant uses. Refer to Response to Comment No. 35-44 regarding how all of the basecamp and Mobility Hub areas located below Project Grade have been fully evaluated in the EIR.

As such, restaurant uses have not been underestimated in the WSA. As stated in the previous paragraph, up to 5,000 square feet of the Project’s total retail floor area of 20,000 square feet was assumed to include ancillary restaurant/commissary uses. As stated on page IV.K-35 in Section IV.K, Transportation, of the Draft EIR, the Transportation Assessment and VMT Calculator assumed all 20,000 square feet to be high-turnover restaurant to present a conservative analysis because this land use generates more trips than a standard retail land use. Therefore, this VMT analysis is overly conservative, as the proposed development program would be limited to 5,000 square feet of restaurant uses as discussed above, which is reflected in the WSA. Additionally, the proposed Specific Plan would include a regulatory framework for implementation of the Project and a discretionary process that includes additional CEQA compliance review for future Project changes that

would potentially exceed the environmental impacts analyzed in the EIR. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan.

Comment No. 35-156

2. The DEIR's Analysis of Wastewater Impacts Is Inadequate.

The DEIR did not adequately analyze significant environmental effects associated with the Project's potential to result in the relocation or construction of new or expanded wastewater infrastructure.

For example, the DEIR did not analyze potential environmental impacts associated with the installation of sewer line connections and related earthwork activities. (DEIR, p. IV.M.2-12) Even though the DEIR acknowledges that trenching would involve "off-site work that may affect services from the existing sewer lines in the vicinity of the Project Site," the DEIR did not even attempt to calculate the distances to nearby sensitive receptors from which construction equipment would be operating. (*Id.*) Construction activities associated with sewer line connections would cause potentially significant noise and air quality impacts that the DEIR did not evaluate.

Response to Comment No. 35-156

Contrary to the commenter's statement, the Draft EIR fully and adequately analyzed wastewater infrastructure on pages IV.M.2-11 to IV.M.2-18 of the Draft EIR. As stated therein, the Project would not require or result in the relocation or construction of new off-site wastewater conveyance or treatment facilities or expansion of existing facilities that could cause a significant environmental effect. With regard to construction-related impacts associated with wastewater, the full context of the text quoted from the commenter on page IV.M.2-12 of the Draft EIR is as follows.

The Project would include the construction of new sewer line connections to connect the proposed buildings to the main sewer infrastructure system in the streets surrounding the Project Site. The new sewer connections would collect wastewater from the Project Site and connect to the existing public sewer laterals. Construction impacts associated with these new sewer line connections would primarily be confined to trenching for the placement of pipe and connection into the existing main sewer lines. Any off-site work that may affect services from the existing sewer lines in the vicinity of the Project Site would be coordinated with the City of Los Angeles Bureau of Engineering (BOE). BOE would establish the appropriate connection requirements, pipe depths, and connection location(s). In addition, as set forth in Project Design Feature TR-PDF-1 included in Section IV.K, Transportation, of this Draft EIR,

a Construction Traffic Management Plan would be implemented to reduce any temporary pedestrian and traffic impacts that might result from trenching and installation of new sewer line connections. The Construction Traffic Management Plan would ensure safe pedestrian access and vehicle travel in general, and emergency vehicle access in particular, throughout the construction period. All infrastructure installation impacts would be of a relatively short-term duration and would cease to occur once the installation is complete. As such, construction activities would not have any adverse impact on wastewater conveyance or treatment infrastructure.

Any trenching or grading for the new on-site lines would occur as part of Project grading and foundation activities. Equipment and labor for these activities has been fully accounted for in the impact analysis in the Draft EIR, including the air quality and noise analyses included in Sections IV.A, Air Quality, and IV.I, Noise, of the Draft EIR. Refer to Appendix FEIR-8 of this Final EIR for a detailed discussion of the equipment and labor assumptions used in the Draft EIR. In addition, as stated in the Draft EIR text included above, any off-site work associated with the connections would be completed in accordance with BOE requirements and the Project's Construction Traffic Management Plan (Project Design Feature TR-PDF-1).

As discussed in Response to Comment No. 35-154, above, construction associated with an offsite utility connection would be completed with agency oversight and would involve limited pieces of equipment (i.e., a concrete saw, a backhoe, and a dump truck) and would occur for a very short duration (i.e., a few days). Based on the calculations provided in Appendix FEIR-16 of this Final EIR, noise levels associated with the connections would be approximately 71.7 dBA (L_{eq}) at the nearest sensitive receptors along Fairfax Avenue (at receptor R8) and Beverly Boulevard (at receptor R3), which would be below the 5-dBA significance threshold (at receptors R3 and R8). Therefore, noise impacts associated with the offsite utility connections would be less than significant.

Comment No. 35-157

With respect to the Project's estimated wastewater generation, the DEIR claims that "5,000 square feet of the retail uses are assumed to consist of restaurant uses with 334 seats for a conservative estimate." (DEIR, pp. IV.M.2-14–15 [Table IV.M.2-2, note e]) However, this claim is inconsistent with, and undermined by, the approach taken in Section IV.K (Transportation) of the DEIR, in which "for the purposes of providing a conservative analysis, the approximately 20,000 square feet of retail uses were input into the VMT Calculator as a high-turnover restaurant land use." (*Id.*, p. IV.K-73) It is clear that the Project's wastewater analysis did not in fact take a conservative approach in analyzing only 5,000 square feet of restaurant uses. According to the wastewater generation rate provided in the DEIR, an additional 15,000 square feet of restaurant uses (and

15,000 fewer square feet of retail uses) would result in an additional 29,685 gallons per day of water demand, representing an approximately 14% increase in the net additional Project wastewater generation.

In its estimate of wastewater generation, the DEIR includes 194,600 square feet of basecamp area, stating that “[b]asecamp areas are dedicated to media production uses, parking, loading, and storage, where mobile facilities related to production are temporarily staged.” (*Id.*, pp. IV.M.2-14–15 [Table IV.M.2-2, note f]) The estimate also includes 36,000 square feet of Mobility Hub area. (*Id.*, p. IV.M.2-14) It is not clear where these figures comes from, as the DEIR does not otherwise provide square footages for basecamp areas or the Mobility Hub. Moreover, the analysis provides to explain why 194,600 square feet of basecamp area and 36,000 square feet of Mobility Hub area are included in the wastewater generation estimate, but the rest of the considerable floor area in the two planned production levels is ignored. The DEIR should have studied wastewater generation associated with all Project components.

Response to Comment No. 35-157

Refer to Response to Comment No. 35-155 regarding the maximum of up to 5,000 square feet of restaurant uses that would be developed as part of the Project and how the EIR evaluates the Project under the worst-case-scenario to provide the most conservative analysis.

Comment No. 35-158

3. The DEIR’s Analysis of Electric Power, Natural Gas and Telecommunications Infrastructure Impacts Is Inadequate.

The DEIR did not adequately analyze significant environmental effects associated with the Project’s potential to result in the relocation or construction of new or expanded electric power, natural gas, or telecommunications facilities.

For example, the DEIR did not analyze potential environmental impacts associated with the installation of electrical and natural gas distribution lines and the expansion of the onsite communications system and related earthwork activities. (DEIR, p. IV.M.3-9-11) Even though the DEIR acknowledges that “off-site construction activities would be required to connect the existing off-site electricity lines to the proposed on-site electrical infrastructure,” the DEIR does not even attempt to calculate the distances to nearby sensitive receptors from which construction equipment would be operating. (*Id.*) Construction activities associated with electrical and natural gas distribution lines and the expansion of the onsite communications system could cause potentially significant noise and air quality impacts that the DEIR did not evaluate.

In addition, the electricity and natural gas demand calculations relied on by the DEIR do not account for basecamp areas and Mobility Hub use, not to mention the balance of the two production levels, even though those areas would clearly require electricity and natural gas. (DEIR, Appendix O, p. 66 [Exhibit 7]) The DEIR does not provide any explanation for why these Project components are omitted in the calculations of electricity and natural gas demand.

Response to Comment No. 35-158

The Draft EIR comprehensively analyzed the Project's impacts related to energy infrastructure in Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, and concluded that impacts would be less than significant. As discussed on page IV.M.3-10 of the Draft EIR, regarding electrical distribution lines, the Applicant would be required to coordinate any electrical infrastructure removals or relocations with LADWP and comply with site-specific requirements as part of the connection permit process. This would ensure that potential service disruptions and impacts to existing electricity infrastructure associated with Project construction activities would be minimized. This same process would apply to telecommunications infrastructure. As such, Project construction activities would not adversely affect the existing electrical infrastructure serving the surrounding uses. Further, construction impacts associated with the Project's electrical infrastructure upgrades would primarily be confined to trenching to connect infrastructure required for the Project Site to the adjacent existing infrastructure. As noted in LADWP's will-serve letter, the existing infrastructure is sufficient to meet all Project demands and no major infrastructure upgrade is necessary. The proposed Project connections would comply with all applicable LADWP and City requirements and be subject to all applicable PDFs and mitigation measures.

The updated energy usage estimated using CalEEMod 2022.1.1, which accounts for the City's Ordinance No. 187714 (effective January 2023), is presented in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR) and shows, based on application of Ordinance No. 187714, that energy usage would be higher than the energy usage estimated for the Project in the Draft EIR. Thus, the City requested LADWP to provide an updated will-serve letter demonstrating that the Project's estimated electricity demand (including EV chargers and electrical hook-ups) could be met by the existing electrical infrastructure in the Project area. The updated LADWP will-serve letter is provided in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Public Comments (see Appendix FEIR-9 of this Final EIR) and confirms (a) that LADWP's infrastructure, including distribution grid, is sufficient to address the Project's electricity demands, and (b) the Project's less-than-significant electricity impact conclusion in the Draft EIR.

The environmental effects associated with on-site construction activities, including the installation of electricity, natural gas and telecommunication improvements, are accounted for in the impact analyses throughout the Draft EIR, as appropriate. Specifically, the number of construction workers and types of equipment for these improvements are accounted for in the building foundation and building construction activities evaluated throughout the Draft EIR. Refer to Appendix FEIR-8 of this Final EIR for an overview of the construction assumptions for the Project, including the construction equipment mix and number of workers. As such, air quality and noise impacts associated with these on-site improvements have been accounted for.

While off-site construction activities would be required to connect the existing off-site electricity lines to the proposed on-site electrical infrastructure, any such activities would be minimal, temporary, and would occur within developed areas. Air quality, GHG, and energy impacts associated with operation of the Project construction equipment were analyzed in the Draft EIR. As shown in Table IV.A-10 of the Draft EIR, Project localized construction emissions would remain below significance thresholds for receptors located within 25 meters of the Project Site. It should be noted that a 25-meter receptor distance is the closest receptor distance on the SCAQMD LST lookup tables and may be used to analyze receptors located closer than 25 meters in accordance with LST methodology. As discussed in Section IV.M.1, Utilities and Service Systems—Water Supply and Infrastructure, Section IV.M.2, Utilities and Service Systems—Wastewater, and Section IV.M.3, Utilities and Service Systems—Electric Power, Natural Gas, and Telecommunications Infrastructure, of the Draft EIR, while a limited amount of temporary construction may occur just off-site for the installation of utility tie-ins, the disturbed areas, hauling quantities, and necessary equipment were accounted for in the Project modeling, and any off-site emissions would be less than those of on-site construction activities. Since on-site construction was analyzed using the most conservative (25-meter) receptor distance, there is no more conservative (i.e., closer) receptor distance when following the LST methodology for the analysis of impacts on sensitive receptors, and the on-site analysis is representative, if not conservative due to the greater intensity of on-site activities.

Refer to Response to Comment No. 26-50 for a discussion of operational energy demands of the basecamps and Mobility Hub and the updates to the Project modeling to account for the City's new all-electric buildings ordinance.

With regard to noise impacts associated with on-site construction activities, refer to pages IV.I-35 through IV.I-59 of Section IV.I, Noise, of the Draft EIR. With regard to noise associated with utilities connections, refer to Response to Comment No. 35-154.

Comment No. 35-159**T. The DEIR's Analysis of Alternatives Is Inadequate.**

Pursuant to CEQA, a draft EIR must include a discussion of a reasonable range of alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project and evaluate the comparative merits of the alternatives. Guidelines § 15126.6. This requirement compels the lead agency to (1) identify a range of feasible alternatives, including alternative sites, that could attain the project objectives, (2) identify alternatives that would avoid or substantially lessen the significant environmental impacts of the project and (3) discuss the comparative environmental effects of the alternatives and the project. The discussion of the alternatives' environmental impacts must include adequate factual information, including quantitative data. *Kings County*, 221 Cal. App. 3d at 733–734. In essence, the alternatives analysis must be sufficient to allow informed public participation and informed decisionmaking. Guidelines§ 15126.6(a); *Laurel Heights*, 47 Cal. 3d at 404.

The analysis of alternatives in the DEIR fails to comply with these and other fundamental CEQA requirements and is legally inadequate for the reasons discussed below.

Response to Comment No. 35-159

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the range of alternatives selected. As stated therein, there are no requirements governing the nature or scope of the “reasonable range” of alternatives to be discussed, other than the “rule of reason” (CEQA Guidelines Section 15126.6(a) & (f)). The range of alternatives that were analyzed was appropriately based on the significant impacts identified in the Draft EIR and public comments. Refer to Response to Comment Nos. 35-160 through 35-167 for a more detailed discussion of the adequacy of the Project's alternatives analysis.

Comment No. 35-160**1. The No Project Alternative Is Inadequate.**

The lead agency is required to analyze the impacts of the no project alternative by projecting “what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.” Guidelines§ 15126.6(e)(2). In addition, “the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.” Guidelines§ 15126.6(e)(3)(B).

The DEIR states that it includes one no project alternative, which is designated “Alternative 1: No Project/No Build Alternative.” Under this no project/no build alternative,

no new permanent development would occur within the Project Site, and the existing environment ... would be maintained. Thus, the physical conditions of the Project Site would generally remain as they are today. Specifically, the existing buildings and surface parking areas would remain on the Project Site, and no new construction ... would occur. (DEIR, p. V-19)

To justify the selection of this no project alternative, the DEIR quotes a phrase in Section 15126.6(e)(3)(B) of the Guidelines, which states that “in certain instances, the no project alternative means ‘no build’ wherein the existing environmental setting is maintained.”

However, this is not the central principle that governs the selection of a no project alternative. Rather, as previously stated, the overarching standard is “what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.” Guidelines§ 15126.6(e)(2).

The DEIR fails to explain why this is a “certain instance” in which the no project alternative should be maintenance of the status quo. To the contrary, it appears self-evident that Hackman would not simply continue to operate the Existing Television Studio with no further development given that a large portion of the Project Site is undeveloped and/or underutilized.

What seems far more likely than maintaining the existing physical condition of the Existing Television Studio for the foreseeable future is that Hackman would seek to expand the Existing Television Studio in accordance with the existing zoning and General Plan land use designations. According to the DEIR’s discussion of Alternative 2 (Development in Accordance with Existing Zoning Alternative), those existing designations permit up to approximately 1.6 million square feet of studio-related development, including broadcasting studios, offices, and retail uses. (DEIR, p. V-32) While Hackman certainly might propose less than the maximum-permitted density if the current Project does not go forward, it is difficult to imagine that Hackman would not seek entitlements for additional development, given its significant investment.

Therefore, the inclusion of this “no build”/no project alternative violates CEQA because it cannot be reasonably expected that the Site would remain in its present condition if the Project was disapproved. Rather, based on the current land use and zoning designations and the demand for additional studio facilities in the City, it can be reasonably expected that some development would occur on the Project Site if the Project does not go forward.

There is no evidence in the DEIR to support the proposition that no development of any kind would occur on the Site if the Project was not approved.

Response to Comment No. 35-160

As stated on page V-2 in Section V, Alternatives, of the Draft EIR, CEQA Guidelines Section 15126.6(e) requires the analysis of a “no project” alternative. CEQA Guidelines Section 15126.6(e)(1) states that “[t]he specific alternative of ‘no project’ shall also be evaluated along with its impact. The purpose of describing and analyzing a ‘no project’ alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project.” Per CEQA Guidelines Section 15126.6(e)(3)(B), the “no project” alternative must “compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved.” The No Project/No Build Alternative included in Section V, Alternatives, of the Draft EIR meets the requirements of CEQA Guidelines Section 15126.6(e)(3)(B) and correctly evaluated a scenario where the existing environmental setting is maintained.

Thus, Alternative 1 in the Draft EIR satisfies CEQA’s requirements concerning the evaluation of a no project alternative. Notably, CEQA Guideline Section 15126.6(e)(3)(B) expressly contemplates that the no project alternative for a development project “means ‘no build’ wherein the existing environmental setting is maintained” and “compares the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved.”

The commenter claims that the no project/no build alternative is not legally adequate because it does not analyze an alternative based on a hypothetical request by the applicant for entitlements for a different project that exceeds the current zoning. However, that claim runs contrary to the language in CEQA Guidelines Section 15126.6(e)(3) that limits the no project alternative to “the property remaining in its existing state[.]” Further, any analysis of an alternative based on an undefined entitlement request would constitute speculation, which is not permitted under CEQA. (Refer, for example, to CEQA Guidelines Section 15384, which excludes speculation from the definition of “substantial evidence.”) In addition, the analysis sought by the commenter, namely the evaluation of a development project at the Project Site and its potential environmental impacts, is provided in Alternative 2. Accordingly, the EIR provides public and the decisionmakers with a range of alternatives to compare against the the proposed Project and its impacts.

Comment No. 35-161**2. The DEIR Does Not Include a Reasonable Range of Alternatives That Would Avoid or Substantially Lessen the Project's Significant Environmental Impacts and Feasibly Attain Most of the Project Objectives.**

As previously discussed, a draft EIR must (a) describe a range of reasonable alternatives to the project or to the location of the project that would feasibly attain most of the basic project objectives and avoid or substantially lessen any of the significant effects of the project. Guidelines § 15126.6(a).

Other than the no project alternative (which is not an evaluative alternative), the DEIR includes four project alternatives. Alternative 2 (Development in Accordance with Existing Zoning Alternative) contemplates a total of 1,600,666 square feet of studio-related development based on the Project Site's existing General Plan land use and zoning designation, including approximately 856,986 square feet of new general office space and the retention of 743,680 square feet of existing development. (DEIR, p. V-32) Alternative 3 (Reduced Density Alternative) involves a 20% reduction in the Project's proposed development program. (*Id.* p. V-62) Alternative 4 (Mixed-Use Alternative) assumes approximately 3,700,000 square feet of development, including 3,680 new residential units in three towers and a total of 924,370 square of studio and commercial uses. (*Id.* p. V-91) Alternative 5 (Above-Grade Parking Alternative" changes the Project's subterranean parking to above-ground parking. (*Id.* p. V-127)

For the reasons discussed below, the DEIR fails to include a reasonable range of alternatives that avoid or substantially lessen the Project's significant environmental impacts and feasibly attain most of the project objectives.

Response to Comment No. 35-161

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the reasonable range of alternatives considered for the Project. Refer to Response to Comment Nos. 35-160 and 35-162 through 35-167 for a more detailed discussion of the adequacy of the Project's alternatives analysis.

Comment No. 35-162**a. Alternative 2 (Development in Accordance with Existing Zoning).**

The General Plan Buildout Alternative assumes that the Project Site would be developed "in accordance with the existing zoning and land use regulations for the Project Site...." (*Id.* p. V-32) This alternative is neither meaningful nor reasonable. First, it is not an evaluative alternative. Rather, it is another no project alternative because it attempts to

forecast what would be reasonably expected to occur if the City does not approve the Project. Therefore, it should not be considered in determining whether the EIR includes a reasonable range of alternatives.

Moreover, the formulation of Alternative 2 is unreasonable. It assumes that the new construction would consist of a 15-story office building along the entire length of Fairfax Avenue and a six-story parking structure adjacent to Broadcast Center. This alternative appears arbitrary because it does not include any new sound stages or production support or production office space, notwithstanding that, according to the DEIR, the existing zoning designations allow those uses. In addition, the DEIR fails to explain why a new six-story parking structure is required on the other end of the Project Site or why it would need to be located adjacent to Broadcast Center.

The selection of these mystifying uses appears designed to maximize the number of project objectives that Alternative 2 does not satisfy in whole or in part. Specifically, according to the DEIR, Alternative 2 would only fully meet one of the 12 project objectives. (*Id.*, p. V-60) It therefore would not attain most of the project objectives and is improper for this additional reason.

Finally, Alternative 2 does not avoid or substantially lessen any of the Project's six significant air quality, construction noise and construction vibration impacts identified in the DEIR. (DEIR, pp. V-16–17)

Response to Comment No. 35-162

Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of the range of alternatives chosen.

With respect to the commenter's objections to the program analyzed in Alternative 2, no evidence is provided that the scenario analyzed in Section V of the Draft EIR is improper under CEQA. Alternative 2 was designed to present a reasonable range of alternatives, while still being a viable alternative that is designed to meet the underlying purpose of the Project to maintain Television City as a production use and to modernize and enhance production facilities. The types of uses and locations for development within the Project Site are reasonable given the constraints on development this scenario would represent, and the commenter has provided no evidence to the contrary. Modern studios require a higher programmatic percentage of office space, significantly more than was traditionally provided, to support the evolution of overall production ecosystem, including additional space for uses ranging from marketing, to accounting, to human resources. Currently at the Project Site, there is a lack of such additional office space within the existing studio facilities. Accordingly, Alternative 2 contemplates the development of such additional office space to better support the existing studio and production requirements.

Development of such additional office buildings would leave no physical space at the Project site for the development of additional stages and other production facilities given the spatial requirements of these uses and development standards of the existing zoning and other City land use regulations. This alternative is also responsive to public comments requesting that taller structures be located along Fairfax Avenue, furthest away from the Broadcast Center Apartments. This comment is therefore noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Regarding significant and unavoidable impacts, as stated on page V-58 of Section V, Alternatives, of the Draft EIR, while these impacts would remain significant and unavoidable, the duration of such impacts would be reduced due to the overall reduction in building footprint and associated construction activities. Furthermore, as discussed on page V-13 of Section V, Alternatives, of the Draft EIR and in Topical Response No. 16, Project Alternatives Analysis, an analysis was performed to determine whether the Project's significant impacts related to on-site construction noise and on-site vibration could be substantially reduced or avoided through an alternative development program, and no feasible alternative was identified.

Comment No. 35-163

b. Alternative 4 (Mixed-Use).

As with Alternative 2, Alternative 4 does not avoid or substantially lessen any of the Project's six significant air quality, construction noise and construction vibration impacts identified in the DEIR. (DEIR, pp. V-16–17) To the contrary, according to the DEIR, Alternative 4 would substantially increase many of the Project's impacts, and would reduce almost none of them, because the new development, based on an overall FAR of 3.45:1, would result in more than 3,000,000 square feet of new construction and almost 3,700,000 square feet of total space, which dramatically exceeds the Project's 1,626,180 square feet of new development and 1,874,000 square feet of total development.

The DEIR could easily have included a mixed-use alternative with residential and studio-related uses with less floor area and required excavation, which would reduce most or all of the Project's impacts and at least one of the Project's significant impacts. Instead, the preparers of the DEIR chose to include Alternative 4, which defeats the central purpose of an alternatives analysis to "focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly." Guidelines § 15126.6(b).

Relatedly, Alternative 4 only meets two of the 12 project objectives. (*Id.*, p. V-124) It therefore would not attain most of project objective and is improper for this additional reason.

Response to Comment No. 35-163

Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of the range of alternatives chosen, and Response to Comment No. 26-181 for a discussion of Alternative 4.

Comment No. 35-164

c. Alternative 5 (Above-Grade Parking).

Alternative 5 only considers a modification of one small component of the overall conceptual Project—eliminating subterranean parking and replacing it with above-grade parking structures. (DEIR, p. V-127) This alternative is improper because it violates the requirement that an EIR must discuss a reasonable range of alternatives to the entire Project, not just one part of it. Guidelines§ 15126.6(b).

Furthermore, Alternative 5 is illusory. It is predicated on the assumption that the Project would include subterranean parking. However, the Project is **not** required to include **any** subterranean parking. As stated in the DEIR's project description,

[w]hile the [DEIR Conceptual Plan] illustrates specific parking locations [as previously discussed, it actually does not], ultimately parking may be located throughout the Project Site, provided that the Specific Plan's requirements are met. Accordingly, **parking may be provided in a combination of the above-ground structures, subterranean structures, and/or surface spaces** (DEIR, p. II-30; see *also* p. IV.K-44, emphasis added)

This provides no basis for a meaningful comparative analysis of Alternative 5 with the proposed Project. (See Section II.C.3, *infra*, for a more detailed discussion regarding the illusory nature of the entire alternatives analysis.)

Response to Comment No. 35-164

Regarding the proposed development program and Conceptual Site Plan and the conceptual nature of the plans in an EIR, refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-5 and 26-12. The Draft EIR properly defines the Project to allow for an adequate comparison between the Project and alternative development scenarios.

This comment misconstrues CEQA Guidelines Section 15126.6(b). The relevant portion of that provision states “the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening *any* [emphasis added] significant effects on the project.” Nothing in the provision suggests an alternative must change the entire project, rather than a part of it.

The Draft EIR analyzes excavation up to a depth of approximately 45 feet to accommodate subterranean parking, resulting in approximately 772,000 cubic yards of soil excavation. Alternative 5, by contrast, is designed specifically to include aboveground parking to reduce impacts associated with grading and excavation. The aboveground parking analyzed in Alternative 5, beginning on page V-127 of Section V, Alternatives, of the Draft EIR, would require approximately 78 percent less import/export of soils (i.e., approximately 154,000 cubic yards). Accordingly, Alternative 5 would reduce the Project-level and cumulative significant and unavoidable construction related regional air quality NO_x impacts to a less-than-significant level with mitigation by eliminating subterranean parking and reducing excavation and the export of soil. Its inclusion is therefore justified under CEQA. Under CEQA, an alternative which is superior only in some respects to the proposed development project can satisfy the requirement of analysis of a reasonable range of alternatives. Refer to Topical Response No. 16, Project Alternatives Analysis.

Comment No. 35-165

d. Summary.

Based on the preceding discussion, Alternatives 2, 4 and 5 are inadequate alternatives and cannot be considered in determining whether the alternatives analysis includes a “range of reasonable alternatives.” As a result, the DEIR includes only one potentially reasonable alternative—Alternative 3 (Reduced Density). This does not constitute a range of reasonable alternatives.

Moreover, even Alternative 3 is suspect because it is limited to a 20% reduction in the Project’s proposed development program. In our experience, in City EIRs, the percentage reduction for reduced-density alternatives typically ranges from 25–35% in order to provide the public and decisionmakers [sic] with the comparative environmental benefits associated with a substantial density reduction. Why did Alternative 3 not include a more substantial density reduction?

Response to Comment No. 35-165

Refer to Response to Comment Nos. 35-162, 35-163, and 35-164 regarding Alternatives 2, 4, and 5, respectively.

With respect to Alternative 3, as discussed in Appendix FEIR-4, Economic Considerations Memorandum, at a 20 percent reduction of the Project's development program, this alternative would already be less effective than the Project at meeting its underlying purpose and objectives. A further reduction in density would meet the Project objectives to an even lesser extent. The City has no established thresholds on this matter, and the 20 percent reduction is a reasonable threshold. Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the discretion a lead agency has in defining project alternatives.

Comment No. 35-166

3. The Comparative Analyses Between the Alternatives and the Proposed Project Are Illusory and Unlawful.

Perhaps the most striking aspect of the four evaluative alternatives is that, in stark contrast to the nebulous Project, they are "stable" and "finite." The "Conceptual Site Plan" for each of those alternatives includes the locations of the alternative buildings and parking structures, the type of use for each building, the number of stories in, and height of, each building and parking structure, the precise number of parking spaces in each building, and parking structure and land use summaries. (DEIR, pp. V-33 [Figure V-3]), V-63 [Figure V-4]), V-92 [Figure V-5]) and V-128 [Figure V-6])

As a result, the comparative analyses of these alternatives with the proposed Project are meaningless. You cannot meaningfully compare concrete and finite alternatives with an amorphous project that permits an infinite number of development options. The project impact analyses are largely based on the DEIR Conceptual Plan. However, as the DEIR repeatedly notes, that conceptual plan "illustrates one potential development scenario." Given that Hackman could choose an entirely different development scenario, with entirely different uses, with entirely different floor areas, at entirely different locations, with entirely different circulation schemes, at entirely different distances from Broadcast Center and other sensitive receptors, comparing the impacts of the alternatives with the impacts associated with buildout under the DEIR Conceptual Plan is a hollow and pointless exercise. This does not "foster informed decisionmaking [sic] and public participation," as mandated by Section 15126.6(a) of the Guidelines. Rather, it precludes it.

For example, although never directly stated in the DEIR, it appears that a portion of the 5,300 parking spaces contemplated in the DEIR Conceptual Plan would be constructed in subterranean structures, while other parking spaces would be located in above-ground parking structures or in surface parking lots. On this basis, the DEIR analyzed the Project's construction air quality and noise impacts. The DEIR later comparatively analyzes those impacts with the corresponding construction air quality noise impacts associated with the four alternatives. However, as previously noted, the DEIR, "parking may be provided in a

combination of the above-ground structures, subterranean structures, and/or surface spaces....” (Id., p. II-30; see also p. IV.K-44) What if Hackman eventually decides to include all of the Project’s parking spaces in subterranean structures? That would significantly alter the comparative analyses of construction noise and air quality impacts.

The comparative analyses as they relate to Broadcast Center further demonstrate their valuelessness. All of the alternatives include new construction in close proximity to the BC Site, including six-level and nine-level parking structures close to the western and southern boundaries of the BC Site (Alternative 2), general office, sound stage and production support buildings close to the western boundary of the BC Site and a nine level parking structure close to the southern boundary of the BC Site (Alternative 3), a six level general office building near the western boundary of the BC Site and a four story parking structure close to the southern boundary of the BC Site (Alternative 4), and a 10-story office building and sound stages near the western boundary of the BC Site and a 12-level parking structure close to the southern boundary of the BC Site (Alternative 5). In addition, each alternative, except for Alternative 2, appears to include the same new private streets contiguous to the BC Site that are vaguely shown on the DEIR Conceptual Plan.

Once again, there is no basis for comparative analysis because, unlike the alternatives, Hackman would have the flexibility to construct any building or parking structure, with any use, at any distance from the BC Site and at heights that exceed those apparently contemplated in the DEIR Conceptual Plan. Nothing would stop Hackman from constructing 160-foot-tall buildings and/or parking structures all along the western boundary of the BC Site. The construction and operational air quality and noise impacts resulting from such construction would be significantly different from, and greater than, the stated impacts in the DEIR’s construction and noise analyses, and would result in very different comparative analyses.

These differences would also be affected by whether Hackman chose to build a new 30 foot-wide private street contiguous to the western boundary of the BC Site and a new 60 foot-wide private street contiguous to the southern boundary of the BC Site. The Conceptual Site Plans for Alternatives 3, 4 and 5 include the same new private streets, and therefore the same comparative impacts (to the extent that the DEIR actually analyzed the impacts of those two new private streets on Broadcast Center, which it apparently did not). Hackman, however, would not be required to construct these new private streets adjacent to the BC Site. If it chose to construct new private street elsewhere, that could significantly affect the comparative air quality and noise analyses as they relate to Broadcast Center (and, for that matter, The Grove and Farmers Market).

For these reasons, the comparative environmental analyses in Section V (Alternatives) of the DEIR have no value and are fundamentally inadequate.

Response to Comment No. 35-166

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-5, 9-12, 26-12, and 35-4 through 35-27 regarding the adequacy of the Project Description, how the Project Description complies with CEQA and is accurate, stable and finite, and the regulatory framework under the proposed Specific Plan. The Project does not permit “an infinite number of development options” as claimed by the commenter. The Draft EIR analyzes the maximum development allowed under the proposed land use exchange program in order to provide the public and decision-makers with the worst-case scenario. As such, comparison of the alternatives to the Project analyzed throughout the Draft EIR is entirely appropriate. Refer to Topical Response No. 13, Parking, and Response to Comment No. 9-20 regarding parking.

As provided in Response to Comment No. 26-135, the noise analysis was performed based on the conservative assumption that the future buildings would be located along the perimeter of the Project Site, accounting for the required frontage areas. In addition, the Project noise analysis includes an aboveground parking structure (located at the southeastern portion of the Project Site), and/or surface parking throughout the Project Site. As indicated in Response to Comment No. 26-135, noise impacts would remain less than significant if the parking structure were to be located along the eastern perimeter of the Project Site, where a 30-foot frontage area would separate the structure from the Shared Eastern Property Line.

As noted above in Response to Comment No. 35-12, the commenter’s claim that the Project would include “new private streets” is incorrect; rather, the Conceptual Site Plan includes internal circulation paths. Refer to Response to Comment Nos. 16-11 and 35-31 regarding the Project’s multi-level circulation plan, which is discussed on pages IV.K-42 to IV.K-44 in Section IV.K, Transportation, of the Draft EIR. Refer to Response to Comment No. 26-141 regarding the noise analysis for the on-site vehicle movements, including the on-site driveways west and south of the Broadcast Center Apartments. As discussed therein, noise impacts associated with the on-site vehicles would be less than significant.

With regard to air quality, as discussed in Response to Comment No. 26-E.1-2, the air quality analysis in Section IV.A, Air Quality, of the Draft EIR fully accounts for construction activities and impacts to sensitive receptors. Maximum daily air quality impacts occurred during the grading phase and reflected the amount of import/export (i.e., number of haul truck trips). Thus, air quality impacts analyzed in Section V, Alternatives, of the Draft EIR were also evaluated based on the amount of import/export. Thus, alternatives resulting in more import/export would result in an overall increase in air quality impacts, and alternatives resulting in less import/export would result in a decrease in overall air quality impacts. Also refer to Response to Comment Nos. 26-26 and 26-28

regarding how the air quality analysis in the Draft EIR fully accounts for on-site circulation of vehicles during operation.

Comment No. 35-167

4. The DEIR Fails To Include an Alternative That Actually Concentrates Development Away From Existing, Offsite Sensitive Uses and Reconfigures the Conceptual Onsite Circulation System.

Broadcast Center, as well as the owners of The Grove and Farmers Market, have asked Hackman to consider moving the most intense new development on the Project Site away from their existing buildings and to modify the conceptual project design, including the locations of the new private streets and parking structures, to reduce the Project's impact on Broadcast Center, The Grove and Farmers Market. For example, Broadcast Center has repeatedly requested that Hackman (a) shift the Project's primary development footprint to Fairfax Avenue, where it would have minimal or no impact on residents and neighbors and would reduce the Project's impact on the Primary Studio Complex, and (b) not construct new private streets at the western and southern boundaries of the BC Site, which would completely encircle Broadcast Center with streets and constant truck and other vehicular traffic.

The alternatives in the DEIR are largely unresponsive to these requests. The text descriptions of the alternatives generally ignore the onsite circulation systems for them. It appears from the Conceptual Site Plans for the alternatives that Alternatives 3 (Reduced Density) and 5 (Above-Grade Parking), which include studio-related buildings and uses, feature the same onsite private streets and circulation system as the DEIR Conceptual Plan for the Project. Alternatives 2 (Development in Accordance with Existing Zoning) and 4 (Mixed-Use) do place the most intensive development along Fairfax Avenue and do not include new private streets along the western and southern boundaries of the BC Site, but those uses are not studio-related uses, and instead new general office (Alternative 2) and residential (Alternative 4) development that apparently does not require new private streets contiguous to the BC Site. Therefore, there is no alternative that considers a substantial expansion of studio facilities where that development is centered on Fairfax Avenue and does not include new private streets adjacent to the BC Site. Nor does Section V.3 in the alternative section explain why such an alternative is infeasible.

We surmise that the reason the DEIR omits such an obvious alternative that is responsive to the requests by surrounding property owners, and would reduce the Project's environmental impacts, is that Hackman must believe, for whatever reason, that it requires the building layout and onsite circulation system in the DEIR Conceptual Plan, or something close to it, to accommodate the significant expansion of the existing studio facilities. The apparent rigidity of Hackman's position is likely tied to the two contemplated

“production levels” that could cover the entire Project Site as part of a “multi-level circulation plan” (DEIR, p. II-25). However, since neither the DEIR

Conceptual Plan nor any of the Conceptual Site Plans for the alternatives illustrate the location of these production levels or how they would connect to the new “conceptual” onsite private streets and parking structures, there is no way to understand how the Project’s onsite circulation and parking would actually work and what alternative or alternatives to that circulation system and building layout are appropriate alternatives for discussion and analysis in the DEIR.

Broadcast Center therefore requests, and believes CEQA and the Guidelines require, that the alternatives analysis in the DEIR be expanded to add an alternative that shifts the primary development footprint for the expanded studio facilities to Fairfax Avenue and modifies the onsite circulation and parking system to reduce substantially the Project’s impacts on Broadcast Center, The Grove Drive and Farmers Market. This alternative would be consistent with the basic purpose of the Project.

Response to Comment No. 35-167

The consideration, selection, range and analysis of alternatives in the Draft EIR was conducted in compliance with CEQA. Refer to Topical Response No. 16, Project Alternatives Analysis, for a discussion of alternatives suggested during public comment. As discussed therein, while an EIR must describe a range of reasonable alternatives that avoid or reduce a project’s significant impacts, it “need not consider every conceivable alternative to a project.” (CEQA Guidelines Section 15126.6(a).) Per CEQA Guidelines Section 15126.6(f), “alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project.” Because the Project will not have any significant impacts during operation including impacts associated with access or parking, consideration of the alternatives suggested in this comment is not required under CEQA. Further, CEQA establishes no categorical legal imperative as to the scope of the alternatives to be analyzed in the EIR. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

As noted above in Response to Comment No. 35-12, the commenter’s claim that the Project would include “new private streets” is incorrect; rather, the Conceptual Site Plan includes internal circulation paths. Refer to Response to Comment Nos. 16-11 and 35-31 regarding the Project’s multi-level circulation plan, which is discussed on pages IV.K-42 to IV.K-44 in Section IV.K, Transportation, of the Draft EIR.

An alternative with development centered on Fairfax Avenue is not required under CEQA because no significant impacts associated with the placement of buildings were

identified. Similarly, there are no impacts associated with onsite circulation (refer to pages IV.K-45 through IV.K-79 of Section IV.K, Transportation, of the Draft EIR). As such, an alternative addressing these issues was not required under CEQA.

With respect to the Project's on-site circulation and access to parking and internal uses, refer to Figure IV.K-3 (Vehicular Project Site Access) of Section IV.K, Transportation, of the Draft EIR. Refer to the discussion of Alternative 5, which eliminates the below-grade parking and circulation levels, in Response to Comment No. 26-182.

Comment No. 35-168

5. The Project Objectives Are Flawed and Their Application To the Alternatives Analysis Is Therefore Improper.

Many of the 12 project objectives in the DEIR, which are applied in the alternatives analysis in an effort to demonstrate that the various alternatives are infeasible, are improper for the reasons set forth below.

The first project objective states:

Create a fully integrated and cohesive Master plan site regulated by a Specific Plan that retains the Project Site's land use as a studio facility and provides an expanded, flexible, and operationally seamless production ecosystem that can respond to evolving market demands, support content creation, and maximize studio production capabilities. (DEIR, p. II-10)

This objective is improper because it is essentially a description of the Project, rather than a project objective. As we sometimes say in land use circles, it is too "on the button." The same is true for the fifth project objective, which states:

Optimize the currently underused Project Site to address past ad hoc building additions meet the existing unmet and anticipated future demands of the entertainment industry by providing new technologically advanced sound stages combined with an adequate and complementary mix of state-of-the-art production support facilities and production offices. (*Id.*, p. II-11)

The sixth project objective is improper because the DEIR Conceptual Plan and proposed Height Zones are flatly inconsistent with it. It states:

Complements the neighboring community through design elements that would be compatible with the surrounding uses, **concentrate building mass and height toward the center of the Project Site**, and provide an enhanced

public realm to promote walkability, foster connectivity and safety, and better integrate on- and off-site uses. (*Id.* p. II-11, emphasis added)

As previously discussed, the DEIR Conceptual Plan and the proposed Height Zones do **not** concentrate building mass and height toward the center of the Project Site. To the precise contrary, they push development to the perimeter of the Project Site, with numerous buildings in very close proximity to the western and southern boundary lines of the BC Site. Moreover, it is impossible to determine from a review of the DEIR whether the DEIR Conceptual Plan, or any other formulation of the Project subject to the proposed development program in Figure II-2 and the Height Zones in Figure II-5, would “foster connectivity and safety, and better integrate on-and off-site uses.” Not only is this phrase indecipherable, the public would not know whether that is true or not until after the adoption of the Specific Plan, when Hackman seeks building permits to construct new improvements on the Project Site in accordance with approved construction plans. Furthermore, contrary to this objective, the adjacent owners believe that the Project, as illustrated in the DEIR Conceptual Plan, would significantly conflict with, rather than “better integrate” with, surrounding uses and the existing public streets. For these reasons, this project objective is inadequate.

The seventh project objective is also suspect. It states:

Provide adequate, safe, and efficient ingress/egress, circulation, staging, and parking that satisfies the unique demands of a large-scale production studio with direct, enhanced access to the uses on-site and sufficient truck and trailer circulation areas, in compliance with modern fire and life safety requirements. (*Id.*)

The reader cannot determine, however, whether the Project, as embodied by the DEIR Conceptual Plan and other conceptual graphics in the DEIR’s project description, is consistent with this objective. According to the DEIR, the central component of the “multi-level circulation plan” are the two “production levels.” (*Id.*, p. II-25) However, as previously discussed, neither the DEIR Conceptual Plan nor any other graphic in the DEIR or underlying reports discloses the location of the production levels and how they would connect to the onsite circulation system and parking areas. Moreover, since the DEIR Conceptual Plan, as well as the Illustrative Vehicular Site Access graphic in Figure II-7, are “illustrative,” there is no way to know whether the ultimate access points and onsite circulation system would meet this project objective. As a result, there is no basis for determining whether the Project itself complies with this objective.

The eighth project objective states: “Create multiple production basecamps to allow for the flexible and efficient staging of vehicles needed for film and television productions.” (*Id.*, p. II-11) Once again, it is impossible to determine whether the Project, as reflected in the

DEIR Conceptual Plan, would meet this objective because neither that conceptual plan nor, to our knowledge, any other graphic in the DEIR discloses the location of any potential basecamp areas. And, even if such information existed, it would only be illustrative and Hackman would not actually be required to include any basecamp areas as part of the Project.

The 10th project objective states:

Create a model for environmental sustainability in modern production studio operations by implementing best management practices regarding water, energy, and resource conservation by achieving LEEP [sic] Gold certification or equivalent green building standards.” (*Id.*)

This is not a project objective. Rather, it reflects existing regulatory requirements.⁵⁴

The 11th project objective states:

Enhance the identity of the Project Site as an iconic entertainment and media center by providing architecturally distinct development and the creative signage program that reflects and complements the production uses on-site. (*Id.*)

Once again, there is no way to determine whether the Project itself meets this objective. As previously discussed, the DEIR does not disclose any of the Project’s architectural elements and includes nothing more than generic reference to nonexistent “design standards,” “design requirements” and “design regulations.” (*Id.*, pp. II-22, II-24) As also previously discussed, the DEIR provides no illustrations of any of the “creative signage” that Hackman may choose to install as part of the Project, nor does the DEIR reference any specific guidelines that would govern such signage, other than signage on, or in close proximity to, the Primary Studio Complex.

The 12th final project objective states:

Permit a reasonable, risk-adjusted return on investment commensurate with the Project Applicant’s fiduciary responsibilities and allow for sustained economic viability and growth in involving entertainment market, while generating tax and property revenues to the City. (*Id.*, pp. II-11–12)

This project objective is inappropriate because the DEIR includes no evidence, and makes no reference to any other document which includes evidence, that the Project “[p]ermits a reasonable-risk-adjusted return on investment commensurate with [Hackman’s] fiduciary’s responsibilities,” or explains what the required risk-adjusted return is or what Hackman’s

fiduciary responsibilities are. Moreover, since Hackman has an infinite number of development options, there is no way to determine its economic return on the Project.

In addition, almost all of the project objectives relate directly to expanding the existing studio facilities. However, the Specific Plan would allow a multitude of non-studio uses that Hackman could choose to develop on the Project Site. Therefore, it is even more uncertain that the Project would be consistent with most of the project objectives.

For all of these reasons, the project objectives do not provide a lawful basis for determining that any of the project alternatives are infeasible because the Project itself is inconsistent with them or there is no way to determine whether the Project itself is consistent with them due to the nebulous project description. If one cannot determine whether the Project satisfies numerous project objectives, then how can the DEIR determine, as it improperly attempts to do, whether the alternatives would fully meet, partially meet or not meet those objectives as “effectively” or as “well” as the Project? You first have to know whether and the extent to which the Project actually meets them.

Finally, with respect to the 12th project objective to permit a “reasonable, risk-adjusted return on investment,” the DEIR concludes that Alternatives 2, 3, 4 and 5 would all “partially meet” that objective or “would not meet the objective as well as the Project.” However, the DEIR provides no comparative economic evidence to support these conclusions, and such evidence is legally required. See, e.g., *Citizens of Goleta Valley v. Board of Supervisors*, 197 Cal. App. 3d 1167 (1988).

⁵⁴ We also note that the DEIR includes conflicting language regarding this project objective. The quoted language above is from the DEIR’s project description. However, the text of this project objective throughout the alternatives analysis omits the phrase “by achieving LEEP Gold certification or equivalent green building standards.” (*Id.*, pp. V-3, V-31, V-61, V-90, V-124) Therefore, it is unclear whether this phrase is part of the project objective.

Response to Comment No. 35-168

This comment makes a number of incorrect claims about the Project’s objectives. Note that the comment does not cite the precise text for the Project objectives that are included in Section II, Project Description of the Draft EIR. In particular, the text of objective 12 on page II-12 of the Draft EIR states “an evolving entertainment market” not “involving entertainment market.” First, the requirement to identify project objectives is set forth in CEQA Guidelines Section 15124(b), which provides that an EIR shall contain “[a] statement of the objectives sought by the proposed project,” including “the underlying purpose of the project,” but does not impose any substantive limitations on those objectives. Thus, “CEQA does not restrict an agency’s discretion to identify and pursue a

particular project designed to meet a particular set of objectives.”¹⁴⁹ Accordingly, the lead agency and Applicant have broad discretion regarding the selection of objectives. Specific criticisms of the Project objectives are addressed below.

Regarding the first and fifth Project objectives, the Project would expand and modernize operations at an existing studio, so it is reasonable that its objectives would be closely focused on studio uses. The commenter provides no evidence of any kind to support their assertion that these objectives are improper, offering only their opinion. As such, no further response is necessary.

Refer to Response to Comment Nos. 11-3 and 26-19 regarding how the Project meets its objective to concentrate building mass and height toward the center of the Project Site while still preserving the integrity of the HCM. Refer to Response to Comment No. 172-3 regarding the objective to complement and integrate the Project with surrounding uses.

With respect to the seventh and eighth Project objectives, refer to Response to Comment No. 35-5 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, regarding the adequacy of the Project as described in the Draft EIR, the conceptual nature of all plans in an EIR, and the Conceptual Site Plan that was analyzed in the Draft EIR, which is based on the plans that were submitted as part of the Project's entitlement application. Refer to Response to Comment Nos. 16-11 and 35-31 regarding the Project's multi-level circulation plan, which is discussed on pages IV.K-42 to IV.K-44 in Section IV.K, Transportation, of the Draft EIR. Refer to Figures II-3(b), II-4(d) and II-4(e) in Section III, Revisions, Clarifications and Corrections, of this Final EIR, which show the existing and proposed basecamp areas.

Regarding the tenth Project objective related to sustainability, the commenter is incorrect. LEED Gold certification or equivalent standards exceed those measures required by code.

With respect to the 11th objective, as discussed in Response to Comment Nos. 5-10 and 9-17 and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the Draft EIR disclosed and analyzed all of the physical elements of the Project, including the proposed Sign District and design standards, required by CEQA.

Refer to Topical Response No. 4, Appropriateness of Economic Objective, for a discussion of the economic Project objective. Also refer to Response to Comment No. 5-6

¹⁴⁹ *California Oak Foundation v. Regents of University of California* (2010) 188 Cal.App.4th 227, 276–277.

and Topical Response No. 3, Permitted On-Site Uses, regarding the specific studio-related uses that would be permitted within the Project Site.

Comment No. 35-169

III.

CONCLUSION

For the reasons set forth above, we respectfully request on behalf of Broadcast Center that the City take no further action with respect to the proposed Project until such time as Hackman identifies a concrete development project for the Project Site that respects the Broadcast Center building and other surrounding uses, and the City thereafter prepares and circulates for public comment a revised DEIR for the Project that fully complies with CEQA.

Response to Comment No. 35-169

Refer to Response to Comment Nos. 35-10 through 35-168 regarding the issues raised in this comment. As demonstrated therein, the Draft EIR has been completed in full compliance with CEQA and recirculation is not required. Refer to Response to Comment No. 9-4 regarding recirculation.

Comment Letter No. 36

Rick Vazquez
President/Business Representative
Sprinkler Fitters Local 709
12140 Rivera Rd.
Whittier, CA 90606-2602

Comment No. 36-1

On behalf of Local 709 of the Sprinkler Fitters local union, we would like to express our strong support of the TVC 2050: The Los Angeles Studio Plan.

This plan to modernize the 70-year-old Television City will bring more than 4,200 construction jobs to Los Angeles at a time when the city is continuing to recover from the impacts of COVID-19 and confronts increasing competition from other global production centers.

The modernization of Television City will ensure the future of the studio, create thousands of jobs, generate more than \$2.4 billion in new, annual economic output, and maintain Los Angeles status as the entertainment capital of the world.

TVC 2050 represents a massive investment in one of the city's biggest industries and it will produce new, well-paying construction jobs. Television [sic] City has agreed to employ union construction [sic] workers for the project which means new job opportunities [sic] for the skilled and trained men and women of the Building Trades.

We're pleased to support this important project that will bring more jobs and revenue to Los Angeles.

Response to Comment No. 36-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Los Angeles, CA 90046-6703

Comment No. 37-1

Streetlights, a nonprofit Job Training, Job Placement and Career Advancement organization dedicated to helping redress the inequity of gender and racial hiring practices behind-the-camera, strongly endorses the TVC 2050 plan, a major investment in the studio property and in Los Angeles' entertainment industry.

The entertainment industry is one of Los Angeles' key industries and an economic driver for the entire region, providing quality jobs and significant tax revenue to the local economy. The studio's long-term plan to enhance its operations and create new jobs will help promote economic vitality and build new creative careers in the industry.

Television City has played an important role in supporting job training experiences for underrepresented communities by giving young people from diverse backgrounds exposure to the inner workings of a studio and set environment. This plan will allow Television City to expand its facilities and address the current demand for more production space while providing job opportunities that can help promote diversity and inclusion in entertainment.

Television City has shown itself to be a truly concerned and committed part of the Beverly/Fairfax District, the greater Los Angeles community and the entertainment industry. Please support the TVC 2050 plan.

Response to Comment No. 37-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 38

William Steiner
Business Manager
UA Local 398
8590 Utica Ave., Ste. 200
Rancho Cucamonga, CA 91730-4872

Comment No. 38-1

I'm writing on behalf of UA Local 398 to express our support for the TVC 2050 project.

This plan to modernize the 70-year-old Television City will bring more than 4,200 construction jobs to Los Angeles at a time when the city is continuing to recover from the impacts of COVID-19 and confronts increasing competition from other global production centers.

The modernization of Television City will ensure the future of the studio, create thousands of jobs, generate more than \$2.4 billion in new, annual economic output, and maintain Los Angeles' status as the entertainment capital of the world.

TVC 2050 represents a massive investment in one of the city's biggest industries and it will produce new, well-paying construction jobs. Television [sic] City has agreed to employ union construction [sic] workers for the project which means new job opportunities [sic] for the skilled and trained men and women of the Building Trades.

We're pleased to support this important project that will bring more jobs and revenue to Los Angeles.

Response to Comment No. 38-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 39

Tema Staig
Executive Director
Women In Media
tema@womennmedia.com

Comment No. 39-1

Keeping production in Los Angeles is critical to the sustainability of our entertainment industry. Television City's modernization effort will expand production capacity and offer the flexibility needed to keep up with ever-changing industry demands.

Sustainability in the TVC 2050 project extends beyond providing modern facilities and a flexible environment. It means incorporating sustainability measures into all aspects of the project.

To that end, the project has been designed to achieve LEED Gold or equivalent green building standards. Industry-leading sustainability features will include:

- Solar infrastructure designed to generate a minimum of 2M kilowatt-hours annually
- Water conservation best practices
- Energy efficient measures
- EV charging stations located throughout the property

TVC 2050 will promote long-term operations and sustainability to help reaffirm Los Angeles' status as the creative capital of the world.

Response to Comment No. 39-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 40

Artin A.
350 N. Detroit St.
Los Angeles, CA 90036-2531

Comment No. 40-1

I am a 27 year resident and I care deeply about economic justice, and I do not think the developers of this project have done enough to address this issue. It seems like a lot of rich guys came up with this without really considering how it would impact residents, particularly lower-income communities of color.

Response to Comment No. 40-1

Pursuant to CEQA Guidelines Section 15131(a), “economic or social effects of a project shall not be treated as significant effects on the environment.” Substantial evidence must be provided to demonstrate a reasonably foreseeable physical impact on the environment from the economic or social change. The commenter has provided no such evidence. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 40-2

Why isn't there affordable housing with this project? We have a massive housing shortage in Los Angeles. The idea that you can just dump a project of this size on our community without housing seems ridiculous. How many new residents are projected to move into the Beverly Fairfax area and into the surrounding communities to be closer to their jobs? Is that info in the EIR? Where will those new residents live?

There are tons of renters near CBS Television City. Will their rents go up? How much? Why not include workforce housing in the draft EIR? Imagine how much lower the impact of this project would be on the local community if they had less office space and more housing.

And for that matter, what will the impact be on our local family-run businesses? Will their landlords raise their rents and run them out in favor of high-end stores?

Response to Comment No. 40-2

Refer to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site, the underlying purpose of the Project, and the provision of housing.

Residential and commercial rent and potential impacts on local businesses in and of themselves are not CEQA issues. Refer to Response to Comment No. 40-1 above regarding the consideration of economic and social effects under CEQA.

Comment Letter No. 41

Leslie Aaronson
319 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 41-1

Several questions came about since the release of the EIR for the proposed project at Beverly and Fairfax. I have several concerns regarding the impact of the community.

Response to Comment No. 41-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 41-2 through 41-4.

Comment No. 41-2

Firstly, why would the City care more about the success of the developer than the health and welfare of its residents? If the City is concerned about whether the developer's investment achieves its anticipated return, what is this expected return? The EIR rejects alternatives because the developer does not make as much money. What is the financial information underlying this objective? Why would an alternative that could possibly be a better fit with less direct and negative impacts on the neighborhood be dismissed, in favor of one that looks out for the developer instead? How can that be justified?

Response to Comment No. 41-2

This comment raises non-CEQA issues. Refer to Topical Response No. 4, Appropriateness of Economic Objective, with regard to the appropriateness of the economic objective for the Project included in the Draft EIR.

Refer to Topical Response No. 16, Project Alternatives Analysis, regarding the alternatives analysis provided in the Draft EIR. As discussed therein, the Draft EIR concluded that Alternative 5 is the Environmentally Superior Alternative. However, while Alternative 5 would reduce some of the impacts when compared to the Project, it would not meet a number of the Project's objectives to the same extent as the Project and would also result in substantially increased building massing on-site due to several multi-level parking podiums needed to accommodate above-ground parking.

Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 41-3

The project is just down the road from the La Brea Tar Pits. It seems obvious that digging down 45 feet across a 25-acre site will uncover many interesting finds such as artifacts. Has the plan considered this? Does the project have a plan for dealing with this? A detailed plan should be provided for the public to comment on.

Response to Comment No. 41-3

Refer to Response to Comment No. 13-7 regarding the analysis of archaeological resources and the means by which archaeological discoveries are evaluated and treated through implementation of Mitigation Measure CUL-MM-1. Mitigation Measure CUL-MM-1 has been refined to further define performance criteria and enhance the ability of the Qualified Archaeologist and archaeological monitor(s) to identify, evaluate, and appropriately treat any archaeological resources identified during ground disturbing activities. The Project also includes Mitigation Measure GEO-MM-1, as revised in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, which pertains to the inadvertent discovery of paleontological resources. Together, these include consideration of the La Brea Tar Pits and the circumstances under which collection and curation of archaeological and/or paleontological materials could provide an adequate means of treating discoveries if preservation in place is not feasible.

Comment No. 41-4

Given the importance of the Holocaust Museum to LA, has the project considered that this is an important cultural and historic landmark for the City? Why would you build a 130-foot-tall parking structure with 5,000 cars across the street where thousands of children come every year? How will the school buses be able to drop children off to visit the Holocaust Museum when you are adding thousands of cars to Grove Drive? What is the safety impact to the children?

Response to Comment No. 41-4

The eligibility of the Holocaust Museum as a potential historical resource was considered during the initial investigation for the Draft EIR. It was concluded, however, that it does not yet qualify for evaluation as a potential historical resource for the following reasons:

- 1) The Holocaust Museum is largely a commemorative property that does not meet the special criteria for commemorative properties as delineated by “Criteria Consideration F: Commemorative Properties,” in *National Register Bulletin 15, How to Apply the National Register Criteria for Evaluation*, published by the NPS; and
- 2) The Holocaust Museum was opened in 2010 and has not been in existence long enough to develop the necessary historic perspective to evaluate its historic significance.

It is important to understand that concluding that the current Holocaust Museum building is not currently eligible for historic designation in no way diminishes its importance as an institution, the importance of its collections, or its commemorative and educational missions. It simply points out that the Holocaust Museum building does not currently meet the definition of a *historical resource* as defined by CEQA, because it is not yet eligible for listing in the California Register.

NPS has created a special criterion for commemorative properties, Criteria Consideration F, as a guide to evaluating their potential historic significance. According to Criteria Consideration F, “a commemorative property generally must be over fifty years old and must possess significance based on its own value, not on the value of the event or person being memorialized.” In other words, a property dedicated to the commemoration of a particular event would need to possess historic significance outside of the value of the person or event memorialized in order to be considered historically significant and therefore eligible for listing as a historical resource. While the enormous historic importance of the Holocaust in world history is indisputable, a museum dedicated to the memory of the Holocaust would need to develop its own separate significance.

Although the Holocaust Museum as an institution was founded in 1961, the current building in Pan Pacific Park was not opened until October of 2010. At less than 13 years old, the current museum building has not been in existence long enough to develop the necessary historic perspective to evaluate its historic significance. According to guidance provided by NPS for applying National Register criteria, “50 years is a general estimate of the time needed to develop historical perspective and to evaluate significance.” Criteria for listing in the California Register does not include a specific age requirement but does state that “sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource.”

Regardless of the historic significance of the current Holocaust Museum building, the Project does not propose its demolition, destruction, relocation, or alteration. All demolition and new construction proposed by the Project would be located on the Project Site, which is separated from the Holocaust Museum by The Grove Drive and adjacent sidewalks. Therefore, the Holocaust Museum would continue to be experienced and

understood by the public as it has been since its completion in 2010, after implementation of the proposed Project.

With respect to parking, the total parking supply on the Project Site would be a maximum of 5,300 parking spaces spread out across the entire Project Site, which would be served by three traffic signals and multiple driveways.

The Holocaust Museum drop off takes place on the east side of the roadway in a bus bay offset from the northbound through lanes. The school children are dropped off on a sidewalk adjacent to the Holocaust Museum and would not have to cross The Grove Drive. The amount of vehicles added to The Grove Drive itself would not negatively affect the bus bay pick-up and drop off procedures. For pedestrians approaching the Holocaust Museum from the west side sidewalk, a protected marked crosswalk would be incorporated into the traffic signal controlling the entrance to the Project.

The design of the Project gate along The Grove Drive and the signalized intersection controlling that gate will incorporate elements to address pedestrian safety, such as pedestrian push buttons, count down pedestrian walk/don't walk heads, continental crosswalk markings, and control heads for pedestrians on the west sidewalk.

Comment No. 41-5

These issues need to be addressed in order for the community to feel at peace with this project. I am sure you are able to understand my concerns and the way in which I care for the community.

Response to Comment No. 41-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 41-2 through 41-4.

Comment Letter No. 42

Seth Aaronson
319 S. Orange Dr.
Los Angeles, CA 90036-3008

Comment No. 42-1

As a concerned community member, I have important questions I'd like more information about. The Beverly Fairfax Historic District is home to many families as well as many businesses. As a community member, I want to preserve my neighborhood's safety and limit any crime in the area. Since learning more about the project and reading the draft for the Environmental Impact Review, I have become more concerned about the future of our district.

Response to Comment No. 42-1

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR. As analyzed therein, impacts related to police protection services would be less than significant.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 42-2

Many of the restaurants and shops along Fairfax Avenue will not be able to compete with large chains of restaurants bound to open. How many restaurants will move into the area? What kinds of restaurants? How many shops do the developers plan on bringing into the historic district? This will completely change the cultural standards of our neighborhoods. We must set examples for future generations that we support small businesses. I will not sit idly by and allow this to happen to my neighbors.

The price of commercial rent is also likely to increase if the project is improved. Will there be any rental subsidies for homeowners and business owners? How am I supposed to support a project that will increase my rent and send local business owners bankrupt? This project needs to include specific information and a plan in place to protect our community. I've seen developers move into neighborhoods throughout the country. Small business owners cannot lower their prices to compete with greedy corporations. The developers want to take away these people's livelihoods. If you care about our community, protect us and create a plan that will actually benefit us.

Where will the developers recruit construction workers from? With the project's expected completion date in over twenty years, it is inevitable that there are going to be a lot of workers in our neighborhoods, shops, restaurants and public transit.

Response to Comment No. 42-2

The Project is the continuation of the existing studio use. Refer to Section II, Project Description, of the Draft EIR, and Topical Response No. 1, Clearly Defined Project Description and Specific Plan, for information about the Project.

The Project Site is not located within the boundaries of the Beverly Fairfax Historic District. Refer to page IV.B-31 of Section IV.B, Cultural Resources, of the Draft EIR.

The potential for unplanned growth is analyzed in the Draft EIR. Refer to pages VI-14 through VI-17 of Section VI, Other CEQA Considerations, of the Draft EIR. As discussed therein, direct and indirect growth-inducing impacts would be less than significant.

Refer to Response to Comment No. 9-24 regarding the Project's buildout timeline.

The remainder of this comment discusses a number of non-CEQA issues such as potential impacts to the local economy and rents and the recruitment of construction workers. Nevertheless, the comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 42-3

Thank you for your consideration. I look forward to reviewing the updates to the proposal.

Response to Comment No. 42-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 43

Andrew Abbott
919 N. Genesee Ave.
West Hollywood, CA 90046-7350

Comment No. 43-1

This letter is in reference to the television city [sic] 2050 project. I have a couple of questions about the cultural resource section of the environmental impact report.

Response to Comment No. 43-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 43-2

In the report, they stated that “a historic district is defined as a geographic area of land containing a significant concentration of buildings, [...] united by historic events, architecture, aesthetic, character, and/or physical development”. [sic] It also states that a district’s significance and historic integrity can be determined by its boundaries and other factors that include “visual barriers that mark a change in the historic character of the area or that break the continuity of the district,” and “visual changes in the character of the area due to different architectural styles.”

The report said that the architectural continuity of an area is something that the Planning Commission views as integral to the surrounding area and is a critical contributor to Historic Preservation Overlay Zones in Los Angeles. The Beverly Fairfax district has been renowned for architecture not only in Los Angeles but especially in the Mid-City West area. This area is known for showcasing architectural styles from Mission Revival, Period Revival, Spanish Colonial Revival, Victorian, Beaux-Art, Chateausque, to Modernist style homes, and structures. How does this proposed project adhere to the architectural continuity of the area that has already been preestablished?

This is an important fact considering that the Beverly Fairfax district has been designated an official historic district by the city of Los Angeles. What studies have been done on the architectural continuity to ensure that the character of the neighborhood stays intact during and after the construction of this proposed project? What do those studies find about whether the historic integrity and architectural continuity will be retained?

Many people move here to live in a place like Beverly Fairfax, to be a part of the community that incorporates so many different types of architecture, design, and arts. The architectural continuity is taken very seriously for a historic district known for unique and historic houses, beautiful and historic streets, museums, art galleries, more neighborhood-defining characteristics. What architectural body with the city will review and approve the proposed project? Would the project be able to move forward if the architectural continuity and integrity were not met?

Response to Comment No. 43-2

Setting is an important aspect of integrity of historic districts, as it is typically a key factor in conveying cohesiveness and unifying contributors. It is particularly important that the setting remains intact within the boundary of a district, but not necessarily outside the boundary. As explained in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), the Beverly Fairfax Historic District is located north of Beverly Boulevard, over 200 feet from the Project Site. The historic character of the Beverly Fairfax Historic District is contained within its boundaries, with the southernmost boundary (which is closest to the Project Site) defined as the alley parallel to and north of Beverly Boulevard. The significant components are the contributing buildings as well as their site design features. As such, and as explained on page 40 of the Historic Report, the Project would have no potential to directly or indirectly impact the Beverly Fairfax Historic District due to the distance between the Beverly Fairfax Historic District and the Project Site. The Project would not affect the number of buildings in the district or the ratio of contributing to noncontributing buildings. The spatial relationships and circulation patterns in the district would also be unaffected by the Project. Additionally, the broad setting is not a physical feature that conveys the significance of the Beverly Fairfax Historic District. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and to Response to Comment No. 363-7 regarding impacts to the Beverly Fairfax Historic District.

The comments regarding architectural continuity do not relate to the Draft EIR's analysis of the Project's environmental impact. These comments are noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 44

Sam Aberman
351 1/2 N. Stanley Ave.
Los Angeles, CA 90036-2335

Comment No. 44-1

As a resident of the Fairfax area, I need answers about the proposed TVC plan. It is absolutely unacceptable that existing street metered parking spaces will be replaced by commercial landing [sic] zones. This is appalling considering these spots are extremely limited as is. So many residents have been battling for more parking for years. I often find myself circling the block 30 times just to find a space. Imagining these existing spots being here no longer makes no sense. What is the city going to do to ensure employees, residents and even visitors can park in this area? What will replace those street parking spots? Those spots are used for people going to all kind of places in the neighborhood, not visiting the CBS building.

What metered spots on what specific streets will be affected? Why has this information not been provided yet and when can we expect it to? Are there going to be additional metered parking spots added to compensate for the loss of the others? Where will these be located? I do not understand why the EIR fails to mitigate these problems. Is there any way these commercial loading zones could be somewhere that the metered parking is not? Has the city analyzed how this will impact the community?

As an LA resident I totally understand what comes with living in the city. Congestion, traffic, and parking struggles are a daily obstacle. I don't understand why the city would allow more chaos with open arms. Can you explain how this project will not bring traffic the likes of which we haven't even experienced before? The car ratio compared to the parking ratio in the area cannot even come close to equal. How do you plan to deal with all this congestion and all the people that have no place to park? I am highly concerned for my community's well-being as they will be forced to spend hours of their lives dedicated to getting to a destination and will most likely regularly be late for work and anything else for that matter.

The problem won't be resolved when construction is completed. It's likely to even get worse when Television City employees are commuting and events are being held. Why does the EIR say there will be no significant impacts after construction is complete? What happens when an additional 8,000 people are expected to park in the community? Where will their parking go and what exactly does offsite parking mean? Does that mean that garages and lots will be in my neighborhood?

Response to Comment No. 44-1

First, with respect to the amount of proposed Project parking, refer to Response to Comment No. 9-28. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed in Topical Response No. 13, the Project no longer proposes off-site parking, and the Project would not permit cars to be parked anywhere outside of the Project Site. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR.

With respect to metered parking, the Project does not propose to remove any such parking.

Also pursuant to SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay is not a CEQA impact, and mitigation is not required. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment (Appendix M.1 of the Draft EIR). The Draft EIR and the Transportation Assessment analyzed the potential transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would have less-than-significant transportation impacts. In addition, the Project would institute an extensive transportation demand management program to encourage and support non-auto trips to/from the Project. The shuttle bus connection between the Project's Mobility Hub and the Metro D (Purple) Line is expected to remove almost 1,500 trips per day from the area streets. Carpool and programs to support transit will also be part of the Project's efforts to reduce automobile travel to/from the Project Site.

Comment No. 44-2

The community deserves a detailed analysis that we can come together and review. I will not stand for further disorder in my neighborhood and hope the city will not allow these issues to go unsolved...

Response to Comment No. 44-2

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 44-1.

Comment Letter No. 45

Alon Abishoor
905 N. Genesse [sic] Ave., #A
Los Angeles, CA 90046-7319

Comment No. 45-1

Building of the development could go on until 2043. If that is the case, why is the developer not considering multiple energy sources? I don't understand why the developer is planning to use natural gas. Shouldn't we strive to have new buildings that are fully electric in order to combat climate change? Why wouldn't the project be required to fulfill climate action objectives?

Are there other things the developer is going to do to offset the environmental damage that will occur as a result of usage of natural gas? For example, why not use electric vehicles during the duration of the project? What about electric trucks? I feel that if the project is going to use natural gas, the developer should be required to offset the negative contributions.

Another fear I have related to this is how the neighborhood will lag behind in the fight against climate change. What similar developments are happening around the country? What type of energy are they using? Will our area be less sustainable as a result of this project?

Response to Comment No. 45-1

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

After the NOP was published and Draft EIR for the Project was publicly circulated, the City of Los Angeles passed Ordinance No. 187714 which requires, with a few exceptions, all new buildings to be all-electric. The City's all-electric buildings ordinance applies to any development where an application for a building permit is submitted after April 1, 2023. The Project would comply with the all-electric buildings ordinance. Therefore, there would be no new natural gas demand associated with the Project, with limited exceptions permitted by the all-electric buildings ordinance. Furthermore, Project Design Feature GHG-PDF-3 is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, to require the installation of electrical hookups at all basecamp areas during operations. Electrical demand associated with these power tie-ins are presented in the updated CalEEMod 2022.1.1 analysis included in the Confirmatory Air Quality, GHG, and Energy Analysis in Response to Comments (see Appendix FEIR-9 of this Final EIR). In addition, Table IV.C-2 (Summary of Net Annual Energy Use During

Project Operation) in Section IV.C, Energy, of the Draft EIR shows that the Project's solar generation (i.e., Project Design Feature GHG-PDF-2) would result in an approximately 383,000-kWh increase in production relative to existing conditions. Additionally, a PDF (i.e., Project Design Feature GHG-PDF-4) is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, requiring all on-site operational equipment (e.g., forklifts, aerial lifts, carts, street sweepers, and landscaping equipment) to be powered by electricity. Refer to Response to Comment Nos. 26-39 and 26-E.1-38 regarding ZE and NZE trucks. The Draft EIR concluded that the Project would have less than significant impacts during both construction and operation, so offsets or other mitigation are not required under CEQA.

This comment also discusses other topics that are not specific to the Project, and no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 45-2

Similarly, the usage of natural gas requires high levels of maintenance and surveillance in order to ensure safety. What procedures and standards will be put in place to ensure the safety of Fairfax residents living near the project site? How will the safety of workers be ensured who are going to be even closer to the natural gas?

Response to Comment No. 45-2

Refer to Response to Comment No. 45-1 regarding the Project's use of natural gas. The Project would be required to implement appropriate protocols and management of subsurface gases per Mitigation Measure HAZ-MM-1. Additionally, as discussed on page IV.F-55 in Section IV.F, Hazards and Hazardous Materials, of the Draft EIR, Mitigation Measure HAZ-MM-2 (included on pages IV.F-53 to IV.F-54 of the Draft EIR) requires the installation of controls during Project construction to mitigate the effects of subsurface gases on workers and the public.

Comment No. 45-3

I am confident that most of the Fairfax community wants to have an active role in addressing global warming. As it stands, this development seems like we would be doing exactly the opposite!

Response to Comment No. 45-3

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-

makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 45-1 and 45-2.

Comment Letter No. 46

Aliza Abraham
539 N. Formosa Ave.
Los Angeles, CA 90036-1944

Comment No. 46-1

I would like to voice my concerns as a 20 year resident. I have a lot of questions about the CBS studios expansion.

Response to Comment No. 46-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comment Nos. 46-2 through 46-4, below, for responses to specific issues raised by the commenter.

Comment No. 46-2

As the city is aware, crime has been a huge issue in LA and in our neighborhood. There were just 2 home invasion robberies this past week.

Response to Comment No. 46-2

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 46-3

I saw in the EIR that there will be a mobility hub, what is mobility hub and what is provided and available? Will this hub be used by the general public? If so, it seems like that could attract transient people and crime. Will there be police there? What hours will police be on site at the mobility hub? What hours would this mobility hub be used? I am worried this will bring more crime into our neighborhood.

Response to Comment No. 46-3

The Mobility Hub functions that would be provided as part of the Project are discussed in Section II, Project Description, and Section IV.K, Transportation, of the Draft

EIR. As discussed in the Draft EIR, the Mobility Hub functions would be located on-site to support first/last mile connections; encourage employee and visitor use of public transit through the provision of a shuttle service, carpooling, vanpooling, and biking/scooter to work; and to support other modes of travel and TDM strategies that are likely to evolve over time. These features would be promoted and incentivized through programs administered by an on-site TDM coordinator and one or more transportation information kiosks, including within the Mobility Hub itself. The Mobility Hub would be open during the primary hours of operation for the Project. Additional information on the proposed Mobility Hub is provided in Topical Response No. 7, Mobility Hub, and Response to Comment No. 16-80.

The Mobility Hub is intended to serve the Project employees, visitors, and audience members. The Mobility Hub will not be open to the general public.

With respect to on-site security, as discussed in Section IV.J.2, Public Services—Police Protection, of the Draft EIR (page IV.J.2-12), the Project would include a 24/7 security plan to ensure the safety of its employees and visitors pursuant to Project Design Feature POL-PDF-2. The Mobility Hub would not attract transients or bring crime into the neighborhood.

Comment No. 46-4

This project will also bring thousands of people into our neighborhood each day. The EIR says that there will be audiences allowed to come for filming. What are the security risks this brings? Will this impact crime? Will there be police coverage for our neighborhood if people are parking on our streets to go to the studio?

Response to Comment No. 46-4

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR, and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security. With regard to audiences, as discussed in Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, audience members would represent a small fraction of the on-site population, with a weekday daytime average of approximately 427 audience members. Audience members would park on-site, would enter the Project Site through a security gate and would be monitored by on-site security staff. As such, audience members would not create security risks or impact crime.

Comment Letter No. 47

John Abram
346 N. La Jolla Ave.
Los Angeles, CA 90048-2231

Comment No. 47-1

As a concerned citizen, who has lived in the neighborhood since 1970. The EIR provides details on several aspects of what should take place. However, I still question the impact this development will have on the environment and community.

Response to Comment No. 47-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Response to Comment Nos. 47-2 through 47-7 for responses to specific issues raised by the commenter.

Comment No. 47-2

The EIR says more than 5,000 parking spaces are needed but then says that the parking spaces may be offsite. Where are all the people going to park?

Response to Comment No. 47-2

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR. Refer to Section A, Parking Supply, in Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply.

Comment No. 47-3

I am concerned about the traffic and congestion that will be caused by this amount of people and cars. Will there be any sort of traffic control?

Response to Comment No. 47-3

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, congestion and driver delay are not CEQA impacts, and mitigation is not required. Refer to Section B, Level of Service, of Topical Response No.

12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Refer also to Topical Response No. 9, Neighborhood Traffic Management Plan; Topical Response No. 11, Transportation Demand Management; and Topical Response No. 15, Transportation Improvement Program.

Comment No. 47-4

If the parking is offsite, what are the air quality impacts, noise impacts, safety issues from people speeding in the community, pedestrian impacts, and other impacts of off-site parking??

Response to Comment No. 47-4

Refer to Section B, Off-Site Parking, of Topical Response No. 13, Parking, and Response to Comment No. 47-2. As discussed therein, no off-site parking is proposed.

Comment No. 47-5

The mobility hub is going to be a magnet for crime. Are there any plans set in place in the event the crime rate increases? The City needs to describe how it is going to keep people safe.

Response to Comment No. 47-5

With regard to the security of the Mobility Hub, refer to Topical Response No. 7, Mobility Hub. Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR, and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security.

Comment No. 47-6

Why does the City think people are going to ride the bus and the subway? I work in this area, and virtually everybody drives in their cars alone. Is there any actual evidence that people at this project are going to ride transit? Senior citizens and disabled people use public transportation and I am concerned about their safety and well-being when using public transportation during the time of this project. Will there be any extra steps taken to make Senior citizens and the disabled feel more secure?

Response to Comment No. 47-6

As described in Section IV.K, Transportation, of the Draft EIR, there are several plans, regulations, and programs in support of increasing the availability and use of public transit throughout Los Angeles, including in the area of the Project Site. As described in subsection 2b. Existing Conditions of Section IV.K, Transportation, there are numerous bus lines serving the Project area. The proposed Project includes features specifically designed to encourage and support the use of public transit by employees and visitors of the Project, as well as enhance transportation mobility around the immediate Project Site. Such features are delineated in Project Design Feature TR-PDF-2, beginning on page IV.K-37 of the Draft EIR, and Project Design Feature TR-PDF-3 on page IV.K-40 of the Draft EIR. A key element of those features is the provision of an on-site Mobility Hub, which is proposed as part of the Project to serve Project employees, visitors and audience members, as described on pages II-26 through II-30 of the Draft EIR, to support first/last mile connections; encourage employee and visitor use of public transit through the provision of a shuttle service, carpooling, vanpooling, and biking/scooter to work; and to support other TDM strategies. One of the key functions of the Mobility Hub would be to connect the Project Site to the Metro D (Purple) Line Wilshire/Fairfax Station currently under construction, located 0.7 miles from the Site. The design and operation of the Mobility Hub would have security provisions and would include provisions to accommodate any disabled Project employees, visitors, and audience members. Refer to Section B, Transit and TDM Effectiveness, of Topical Response No. 11, Transportation Demand Management, for a discussion of the potential effectiveness of transit and TDM.

Senior citizens, disabled persons, and any other riders requiring additional operator support on the Metro system should not be inconvenienced by Project operations. The comment regarding the safety and well-being of riders when using public transit does not relate to CEQA issues and is not specific to the Project. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 47-7

The traffic section very confusing. Why do members of the public need to wade through an 83-page traffic section? Is the EIR really saying that an average employee only commutes 6.7 miles per day (which means that the average distance from the project site is 3.35 miles)? Why is that buried on page 75 of the traffic section? What is the support for this? Do the people who wrote this live in LA, because it is completely unrealistic. I work in this area, and I know lots of people who commute from places like Santa Clarita, the San Fernando Valley and Orange County. Has the City asked people at the existing study [sic] where they travel from?

Response to Comment No. 47-7

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10 regarding the assumptions used in the Project's VMT analysis, including as related to employee trip lengths. Note that while the Regulatory Framework subsections of the Draft EIR are standardized, the total length of any Draft EIR section, and location therein of any Project environmental analysis, reflects the appropriate and necessary amount of information and detail to adequately disclose the Project's potential impacts.

Comment No. 47-8

As a concerned citizen, the best interest of the community is at hand. In all ways I seek to ensure the well-being of the community is upheld. I understand the work that goes behind this project and desire the best for the environment.

Response to Comment No. 47-8

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 47-2 through 47-7.

Comment Letter No. 48

Dan Agil

Comment No. 48-1

If you ask anyone what their image of Los Angeles is, the answer would be traffic gridlock, human congestion, air pollution and fights over parking spots. This project would make all of those conditions worse FOR THE NEXT 20 YEARS!

Response to Comment No. 48-1

Refer to Response to Comment No. 9-24 regarding the buildout timeline. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, regarding the non-CEQA LOS analysis in the Transportation Assessment, and Section A, Parking Supply, of Topical Response No. 13, Parking, regarding the proposed on-site parking supply. Construction workers would park on-site during construction.

Refer to Section IV.A, Air Quality, of the Draft EIR for a comprehensive analysis of the Project's potential air quality impacts. As discussed on page IV.A-71 in Section IV.A, Air Quality, of the Draft EIR, off-site vehicle trips associated with the Project would not approach screening levels in which localized CO levels might exceed the 1-hour CO ambient concentration standards or result in health effects.

Comment No. 48-2

And beyond this, this massive new project will result in even further development in the general area. The Draft EIR needs to analyze the likely intensification of further development in the surrounding area as a result of this major change to the community plan.

Response to Comment No. 48-2

Refer to Response to Comment No. 13-10 regarding the Project's size. Growth inducing impacts are analyzed in Section VI, Other CEQA Considerations, of the Draft EIR; refer specifically to pages VI-14 through VI-17. As discussed therein, direct and indirect growth-inducing impacts would be less than significant.

Comment Letter No. 49

Norberto Aguilar
317 N. Ogden Dr.
Los Angeles, CA 90036-2130

Comment No. 49-1

This project is scheduled to be built over 20 years, which is twice as long as I have lived here.

Response to Comment No. 49-1

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 49-2

According to the plans, tens of thousands of trucks will have to come up Fairfax to get to the project site. The Draft EIR should analyze the air quality, noise and other issues impacting all the sensitive uses along Fairfax.

Response to Comment No. 49-2

Contrary to this comment, tens of thousands of trucks would not travel along Fairfax Avenue as a result of construction or operation of the Project on a given day. Refer to Section IV.I, Noise, of the Draft EIR regarding the analysis of noise impacts associated with off-site trucks during construction and operation of the Project. As noted in Table IV.I-11, construction traffic noise levels during a peak traffic hour on Fairfax Avenue would be significant during hauling activities. During mat pour activities that would occur for less than five days, construction traffic noise impacts would be significant along Fairfax Avenue, La Brea Avenue and San Vicente Boulevard. As shown in Table IV.I-17, during operation, the Project's traffic noise impacts, which includes trucks, would be less than significant.

Regarding localized air quality impacts, the air quality analysis provided in Section IV.A, Air Quality, of the Draft EIR correctly identified and analyzed impacts to sensitive receptors consistent with the SCAQMD LST methodology. The LST methodology is designed to evaluate localized impacts to sensitive receptors as the result of on-site construction or operational activity. In the case of the Project, on-site construction activity included both off-road equipment (e.g., bulldozer, grader, and excavator) and on-road trucks (e.g., hauling of construction debris and soil and deliveries). Tables IV.A-10 and IV.A-11 on pages IV.A-70 and IV.A-74, respectively, in Section IV.A, Air Quality, of the Draft EIR show that localized construction and operational emissions would remain below

the significance thresholds for receptors located within 25 meters of the Project Site after the application of mitigation. While construction-related trucks would use Fairfax Avenue, this would represent a small fraction of the total emission evaluated in the air quality analysis. As discussed above, the total on-site emissions would result in a less-than-significant localized air quality impact at the closest sensitive receptor (i.e., the Broadcast Center Apartments) and for all sensitive receptors along Fairfax Avenue. Therefore, no additional analysis of trucks along Fairfax Avenue is warranted.

Comment No. 49-3

And besides the construction trucks, what about the constant traffic from the warehouses, theaters, educational facilities and conference facilities/convention center in our neighborhood? The “Mobility Hub” will bring in tons of buses, shuttles and ride-shares. This project will dominate our community and affect our daily lives for decades to come.

Response to Comment No. 49-3

This comment provides a general statement about the condition of traffic in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Refer to Topical Response No. 14, Construction Vehicle Impacts.

Refer to Topical Response No. 7, Mobility Hub, and Response to Comment Nos. 26-160, 35-24, and 35-138 for a discussion of the Mobility Hub, which is a part of the Project's TDM Program and would help reduce single-occupant vehicle trips.

Refer to Topical Response No. 3, Permitted On-Site Uses. As discussed therein, uses allowed within the Project Site must be consistent with the five permitted land uses (i.e., sound stage, production support, production office, general office, and retail) and the ancillary sitewide uses that support the studio and the five permitted land uses. These uses are fully accounted for in the impact analyses in the EIR. The uses listed by the commenter are neither proposed nor allowed.

Comment Letter No. 50

Yvette Alexander
125 S. Highland Ave.
Los Angeles, CA 90036-3028

Comment No. 50-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 50-1

This comment indicating support for the Project is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 51

Walter Altamirano

The second paragraph of this comment is identical to Comment No. 47-7. Refer to Response to Comment No. 47-7, above.

Comment Letter No. 53

Nathan Alyesh
172 N. Formosa Ave.
Los Angeles, CA 90036-2818

Comment No. 53-1

I am a resident of metropolitan Los Angeles who cares about our environment. I am very concerned about the impacts of the proposed TVC studio expansion on our community's public health, as well as its larger effects on climate change.

Response to Comment No. 53-1

The Project's greenhouse gas impacts are fully analyzed in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR, and specific issues raised by the commenter are addressed in Response to Comment Nos. 53-2 and 53-3.

Comment No. 53-2

There does not appear to be a clear assessment of the environmental impacts of the construction, as well as the regular effects of the trucks and cars coming and going once the project is finished. Where are the numerous assessments so that the public can understand the range of adverse impacts coming from the project? Just how much carbon will be emitted from all the exhaust created by all the construction vehicles that will be used? And post construction, what will be the likely long-term carbon footprint created by all the additional traffic and vehicles coming and going from around the site? Is anything being done by the developer to mitigate the public health hazards that could arise from all the excess emissions created by this project? Why would the city accept any project with such a large carbon footprint and adverse air quality and climate impacts? Under what basis could the city approve a project like that? Does the city have to determine that some perceived benefits outweigh all of those impacts? When would the city make that determination? Does the public not get a say in the city choosing a project over air quality, public health, and climate impacts?

Response to Comment No. 53-2

The purpose of the Draft EIR is to disclose the potential environmental impacts, including air quality and GHG impacts, associated with the Project.

Refer to pages IV.A-59 through IV.A-73 of Section IV.A, Air Quality, of the Draft EIR and to Appendix B of the Draft EIR regarding the analysis of air quality impacts during

construction and operation of the Project, including the emissions from trucks and cars. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptors.

As stated on page IV.E-76 of the Draft EIR, a total of 14,303 MTCO₂e were estimated for construction activities over the construction buildout. Refer to pages IV.E-80 through IV.A-81 of Section IV.E, Greenhouse Gas Emissions, of the Draft EIR and to Appendix B of the Draft EIR regarding the analysis of GHG emissions during operations of mobile sources. As discussed therein, mobile emissions during Project operations would result in approximately 4,795 MTCO₂e per year. These emissions include an approximately 4,388 MTCO₂e per year reduction due to the incorporation of USEPA MXD VMT reduction features applicable to the Project and the TDM Program (Project Design Feature TR-PDF-2). Other PDFs and mitigation measures, such as Project Design Feature AIR-PDF-1 and Mitigation Measures AIR-MM-1, AIR-MM-2, AIR-MM-3, and AIR-MM-4, would reduce Project GHG emissions. As stated on page IV.E-85 of the Draft EIR, Project-level impacts related to GHG emissions were determined to be less than significant without mitigation. As stated on pages IV.A-59, IV.A-66, IV.A-73, and IV.A-75 through IV.A-77 of the Draft EIR, air quality impacts would be less than significant for all criteria pollutants after the application of mitigation, except for regional construction NO_x emissions, and regional overlapping construction plus operational VOC and NO_x emissions during the long-term buildout scenario. Refer to Section VI, Other CEQA Considerations, of the Draft EIR for a discussion of the reasons why the Project is being proposed, notwithstanding its significant unavoidable impacts.

In accordance with Section 15093(a) of the CEQA Guidelines, CEQA requires the City to “balance, as applicable, the economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered ‘acceptable.’” If the City decides to certify the EIR, it will be required to adopt a written Statement of Overriding Considerations identifying the specific reasons that support its decision. A Statement of Overriding Considerations is typically adopted at the same time that an EIR is certified. With regard to the commenter’s question about the role of the public, the Draft EIR comment response period is an opportunity for public involvement in the decision-making process for the Project under CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during several public hearings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project during these hearings.

Comment No. 53-3

Our planet is sick right now. Our county is in even more jeopardy from all the smog and carbon emissions clustered in the area that make it almost impossible to breath daily. Please respond to these questions that are being raised and ensure the public that their health and the health of our community and the climate is not being threatened by this expansion.

I appreciate your time.

Response to Comment No. 53-3

Section IV.A, Air Quality, of the Draft EIR evaluates the impacts of the Project on air quality, as well as health effects from TACs. Also refer to Response to Comment No. 26-E.1-2 regarding health effects. Impacts of the proposed Project on the climate are addressed in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR. As concluded in that analysis, Project-related impacts related to GHG emissions were determined to be less than significant. Refer to Response to Comment No. 53-2 for responses to the specific questions raised by the commenter.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 54

Lisa Anderson
507 N. Harper Ave.
Los Angeles, CA 90048-2222

Comment No. 54-1

I'm writing to express my concern about the planned TV City expansion and how it will affect the neighboring residents of the development. I think that there are still many questions about traffic impacts that have not been addressed in the plan or in the draft EIR. I noticed issues both with which roads the project plans to use and a lack of inclusion of certain features for traffic alleviation.

Response to Comment No. 54-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 54-2 through 54-4.

Comment No. 54-2

For one, it seems most of the traffic will be directed towards Grove Drive, since that is where parking will be located. How much of the traffic for this project will be traveling on Grove Drive. That street seems too small for thousands of new car traffic to get to the property. How will the street have the capacity to handle the traffic? Where is this analysis shown for Grove Drive, ie [sic] how many cars are anticipated? And for the other streets that will have to handle the increased number of cars?

What about the streets in proximity to the Holocaust Museum and Pan Pacific Park, including Grove Drive?—What is the specific plan for how increased traffic will be not only managed, but kept to a minimum because the entire perimeter of the project area is already greatly congested with traffic?

Response to Comment No. 54-2

The comment that most of the traffic would be directed towards The Grove Drive is inaccurate. The parking supply for the Project would be spread out across the Project Site, and all parking areas would be accessible from any of the three signalized entrances to the Project Site.

Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 26-171 and 26-E.4-17 regarding access to and use of The Grove Drive. The Grove Drive was selected as one of three signalized access driveways for the Project because The Grove Drive has more available capacity than either Fairfax Avenue or Beverly Boulevard. Refer to Response to Comment No. 26-169 for a discussion of the capacity available on The Grove Drive.

The assignment of Project trips to all the streets in the area is shown in Figure 21 on page 77 of the Transportation Assessment (included in Appendix M.1 of the Draft EIR). Figure 22 on page 80 of the Transportation Assessment shows the volumes in and out of each of the Project driveways, showing that approximately 32 percent of the Project trips would use The Grove Drive and The Grove Drive entrance to the Project Site.

The effects of Project trips entering and exiting the Project from The Grove Drive is included in the non-CEQA operational analysis which is summarized in Table 18 on page 162 of the Transportation Assessment. The results show that the three signalized intersections providing access to the Project Site will all operate at LOS B after full buildout of the Project.

Refer to Response to Comment No. 41-4 for a discussion of pedestrian safety to the Holocaust Museum and Pan Pacific Park.

Comment No. 54-3

Couldn't this project also cause problems for people who would like to use these community amenities, like with their access and parking? Any analysis of the impacts of this development is incomplete without a traffic analysis on Grove Drive. Of course all that traffic will spill out onto neighboring roads, how could it not? How much neighborhood spill over is expected and how will it affect residents, and what is being proposed to deal with that?

Response to Comment No. 54-3

A detailed non-CEQA analysis of trips on The Grove Drive is included in the Transportation Assessment (included in Appendix M.1 of the Draft EIR) and is summarized on Table 18 on page 162 of the document. As described in Response to Comment No. 54-2, The Grove Drive has sufficient capacity to accommodate the Project as described in Response to Comment No. 26-169.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the non-CEQA analysis of cut-through trips. As discussed therein, the adequacy

of a project's parking supply and cut-through effects are not environmental impacts under CEQA.

Comment No. 54-4

I am also concerned with how close the development will be to many of the apartments in the area. Truck traffic from construction and hauling soundstage equipment will be driving along residential streets, and some of these stages are being planned for right next to apartments. What kind of noise and air pollution will be affecting the apartment residents and other residents? All expected risk of health problems for residents should be made clear—what does the data indicate?

Response to Comment No. 54-4

Refer to Topical Response No. 14, Construction Vehicle Impacts, and Section E, Truck Trips, of Topical Response No. 10, Trip Generation, regarding truck trips during construction and operation.

Refer to Section IV.I, Noise, of the Draft EIR regarding the analysis of noise impacts associated with offsite trucks during construction and operation of the Project. As shown in Table IV.I-11 of the Draft EIR, construction traffic noise levels during a peak traffic hour on Fairfax Avenue would be significant during hauling activities. During mat pour activities that would occur for less than five days, construction traffic noise impacts would be significant along Fairfax Avenue, La Brea Avenue and San Vicente Boulevard. As shown in Table IV.I-17 of the Draft EIR, during operation, the Project's transportation noise impacts, which includes trucks, would be less than significant.

Section 3.d in Section IV.A, Air Quality, of the Draft EIR analyzed localized operational air quality impacts resulting from Project emissions consistent with SCAQMD LST guidelines. As shown in Table IV.A-10 of the Draft EIR, Project localized operational emissions would not exceed SCAQMD significance thresholds at the closest sensitive receptors to the Project Site (i.e., Broadcast Center Apartments), resulting in a less-than-significant impact. Refer to Response to Comment No. 11-26 regarding potential health impacts from Project-related emissions. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptors.

Comment No. 54-5

Please make sure that any deal is one that benefits the people already living near TV City property.

Thank you for your consideration.

Response to Comment No. 54-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 55

Alex Arana
327 N. Stanley Ave.
Los Angeles, CA 90036-2313

Comment No. 55-1

As an LA city resident who often rides my bike and takes my dog for walks, I am extremely concerned about how the Television City project is going to affect my safety and livelihood. Because this area is already so crowded and chaotic, I greatly appreciate the sidewalks and crosswalks. The fact that they may be taken away due to the project's construction is alarming. How are people going to walk places when there are no sidewalks/crosswalks? Considering parking is likely to be a problem as well, how are people supposed to get anywhere at all?

I can imagine that the immense surplus of people will often lead to extreme congestion and driver frustration. This is likely to result in reckless driving, making LA an even less safe place for pedestrians. How is my community supposed to enjoy our city if we are being discouraged to walk or ride bikes in it? In terms of travel, this is not supporting the environment at all. Does this mean people will be expected to drive [sic] places that are within walking or biking distance? How is this going to work when we sit in 20-minute traffic to travel one mile? Not to mention, the streets will also be effected [sic] by this project, so how exactly are we to get from point A to point B?

Yes, the EIR references pedestrian improvements that "may" be included, but at the same time, states the plan "is not finalized." How are we expected to be okay with this lack of information? My community deserves to know how this project is going to affect bike lanes, sidewalks, crosswalks, parking and the streets. We deserve to know what exact areas are going to be impacted by the project and what plans are put in place to make sure LA is still a livable city?

When is the public going to be told what the actual pedestrian improvements are going to be and when will they be done? What about an analysis of the effectiveness of any proposed improvements? The plan includes bicycle improvements that "may" be done but are not final.

When will the community and public know whether and when those improvements are going to be made?

Response to Comment No. 55-1

The Project would enhance safety within and surrounding the Project Site. Refer to Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 16-72 and 26-E.4-3 regarding the Project's pedestrian-oriented design and pedestrian safety.

The pedestrian sidewalks would be maintained around the entire perimeter of the Project Site at all times. If construction requires the temporary closure of a section of public sidewalk, a temporary alternate sidewalk would be provided. Refer to Response to Comment No. 16-76 regarding the proposed sidewalk and public realm improvements.

Likewise, no crosswalks would be eliminated either during or after construction. The Project intends to enhance the pedestrian facilities through sidewalk widening and landscaped parkways along both Beverly Boulevard and Fairfax Avenue adjacent to the Project Site.

Construction workers would be prohibited from parking off-site as part of the CTMP to be prepared for the Project pursuant to Project Design Feature TR-PDF-1. During operation, as discussed in Topical Response No. 13, Parking, the proposed on-site parking supply would be sufficient to accommodate the peak parking demands of the Project and would prevent spillover parking.

The Project would not implement any improvements that will interfere with the City's long-range bicycle lanes for the area. No sidewalks or bike lanes would be closed or reduced as part of this Project.

As discussed on page IV.K-1 of Section IV.K, Transportation, of the Draft EIR, with the passage of SB 743, the analysis of transportation impacts shifted from driver delay (i.e., LOS) to VMT. Therefore, congestion and driver delay are not CEQA impacts, and mitigation is not required. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The pedestrian improvements are described in the Draft EIR and depicted in the Conceptual Site Plan. As discussed in Topical Response No. 1, Clearly Defined Project Description and Specific Plan, the proposed Specific Plan would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as CEQA compliance review.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 56

Karen Aspen
511 N. Poinsettia Pl.
Los Angeles, CA 90036-1928

Comment No. 56-1

Regarding the proposal to develop the Television City studios, I have a number of questions about the air quality impacts.

Response to Comment No. 56-1

Refer to Section IV.A, Air Quality, of the Draft EIR for an analysis of air quality impacts and Response to Comment Nos. 56-2 and 56-3, below, for specific issues raised by the commenter.

Comment No. 56-2

The environmental report states that emissions during construction will be significant and unavoidable, and that mitigation will not change that result. It also states that the project will result in a cumulative net increase in pollutants. What will be that cumulative net increase in pollutants? Which pollutants? What are the potential health impacts of those emissions? And how much more is the risk because they will be cumulative?

Will mitigation measures be implemented even if they won't change the significant and unavoidable impacts to less than significant levels, or in that case, are you saying mitigation isn't even done?

One thing not being made clear to the community is that if the construction does go beyond three years and up to the 20 years, as it is likely to, then the project would also result in a cumulative net increase in VOC and NO_x emissions from concurrent construction and operations. What will be the extent or level of these cumulative impacts? Where is the information that shows what those cumulative impacts will be for each year of possible construction and then ultimately? How does that get studied when operations will continue for years?

Response to Comment No. 56-2

As stated on pages IV.A-59, IV.A-66, IV.A-73, and IV.A-75 through IV.A-77 of the Draft EIR, air quality impacts would be less than significant for all criteria pollutants after the application of mitigation, except for regional construction NO_x emissions, and regional

overlapping construction plus operational VOC and NO_x emissions during the long-term buildout scenario. As discussed on page IV.A-77 of the Draft EIR, consistent with SCAQMD guidance, individual projects that exceed SCAQMD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the Air Basin is non-attainment. As discussed on page IV.A-77 through page IV.A-79 of the Draft EIR, the Project would result in a cumulatively significant impact for regional construction NO_x emissions, and regional overlapping construction plus operational VOC and NO_x emissions during the long-term buildout scenario. Refer to Response to Comment No. 11-26 regarding potential health impacts from Project-related emissions. As stated on pages IV.A-69 and IV.A-72 in Section IV.A, Air Quality, of the Draft EIR and further confirmed by the quantitative HRA, included as Appendix FEIR-10 of this Final EIR, human health impacts from Project construction, operation, and overlapping construction and operation would be less than significant at sensitive receptors. Please note that mitigation measures would be implemented even if the measures do not reduce impacts to less-than-significant levels (see pages IV.A-65 to IV.A-66 of the Draft EIR).

Refer to Response to Comment Nos. 9-24 and 26-E.1-24 for a discussion of the buildout timeline and the long-term buildout impact analysis.

Comment No. 56-3

None of this cumulative impact is being made known clearly to the community. The city should be making sure that the community knows about the impacts to air quality that will come with the project.

Response to Comment No. 56-3

Cumulative impacts are analyzed throughout the Draft EIR, including in Section IV.A, Air Quality. Refer to pages IV.A-77 through IV.A-80 in Section IV.A, Air Quality, of the Draft EIR for an analysis of cumulative air quality impacts.

Comment Letter No. 57

Laura Assael
318 S. Mansfield Ave.
Los Angeles, CA 90036-3057

Comment No. 57-1

Before you make decisions about allowing the Television City expansion project, I want to make my concerns known. I am a resident whose voice should be heard.

Response to Comment No. 57-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 57-2

The Television City expansion Draft EIR is confusing and unclear. When is the city going to hold public hearings so that the community can really understand what the project will do? Why is there no specific plan required, a plan that provides details rather than general descriptions? How are we supposed to understand impacts of a development that lacks specifics about what is going to be built and the effects? What does getting a Specific Plan mean and why can it lack specifics? Seems contradictory. Please explain exactly how the current codes or zoning for this building and for the property would be changed from what is in place now for this proposed project?

Response to Comment No. 57-2

Refer to Response to Comment No. 32-3 regarding the noticing of the Project in compliance with CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval. The public will have additional opportunities to comment on the Project at upcoming hearings and meetings, the dates of which will be published in accordance with the City's noticing requirements.

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to how the Project Description fully complies with CEQA and provides sufficient details to fully evaluate the environmental impacts of the Project and why neither CEQA nor City policy requires a draft Specific Plan to be included in the EIR. Also refer to Appendix FEIR-2, Comparison Chart of the Draft

EIR and the Preliminary Draft Specific Plan, of the Final EIR. That comparison confirms that the same physical elements were discussed and analyzed in the Draft EIR. As further discussed in Topical Response No. 1, the Project would establish a Specific Plan, which would include a regulatory framework for implementation of the Project, including, among other things, mandatory review processes by the City for implementation of the proposed Project. Future changes that are substantially different than the Project or are beyond the scope of impacts evaluated in the EIR would require additional discretionary City review and approval, as well as potential CEQA compliance review. Topical Response No. 1 also includes a discussion of the level of detail required for a specific plan project EIR.

As discussed on page II-36 in Section II, Project Description, of the Draft EIR, the Project includes a General Plan Amendment to designate the Project Site as Regional Commercial and a Vesting Zone Change for the Project Site to the TVC 2050 Specific Plan Zone. Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's consistency with applicable plans, policies, and regulations that regulate land use on the Project Site, including, but not limited to, the LAMC, Wilshire Community Plan, and the City's General Plan Framework Element, as well as the compatibility of the proposed uses with surrounding land uses, and concluded that impacts would be less than significant.

Comment No. 57-3

Another concern about this project is that it will lead to more development. If Television City's expansion happens, then the general plan for the community will change, won't it? Will this change open the door to more development? What kinds of development would then be allowed? How does the EIR address how this development will lead to even more? Does that mean that future projects wouldn't have to be approved? It is not acceptable that the Television City project would be an umbrella project for other projects and development, but is that what would happen?

Response to Comment No. 57-3

Refer to Response to Comment No. 57-2 regarding the Project Description. Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. The proposed General Plan Amendment to Regional Commercial applies only to the Project Site and would not allow for additional development on other sites within the City.

Comment No. 57-4

Parking for the tremendous increase of workers at a new, larger facility will be a problem [sic] The EIR says there are more than 5,000 spaces to be added at the site with more

located offsite. That number of parking spaces doesn't even match the expected number of new employees, so what about those that can't park on site? What does offsite mean? And where is offsite? Will more parking spaces be created in other parts of the neighborhood? If so, how will that impact the area surrounding the project?

Response to Comment No. 57-4

The Project no longer proposes off-site parking. Accordingly, as discussed in Section III, Revisions, Clarifications, and Corrections to the Draft EIR, the off-site parking agreement language was deleted from the Draft EIR. Refer to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply.

Comment No. 57-5

I believe Television City should not increase in size because of the potential for even more development and quality of life impacts for the community.

Response to Comment No. 57-5

Refer to Response to Comment Nos. 57-2 through 57-4 for responses to the specific issues raised by the commenter.

Please note that quality of life is not an environmental impact under CEQA. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 58

John Atwater
600 Montgomery St.
San Francisco, CA 94111-2702

Comment No. 58-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 58-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 59

Randy Auerbach
8350 W. Fourth St.
Los Angeles, CA 90048-4203

Comment No. 59-1

Speaking as a long-time resident of this community—more than 25 years—what bothers me most about this project is the incredible traffic that this project is going to bring.

Response to Comment No. 59-1

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

The commenter's specific concerns about traffic are addressed in Response to Comment No. 59-2.

Comment No. 59-2

I looked at the Vehicle Miles Travelled analysis and am not convinced by the unrealistic assumptions. For example, the analysis claims that the average travel distance to a regional movie production facility with 1.5 million square feet of offices is only 3.5 miles. But this makes no sense: many of the studios are in Burbank (Warner Bros, Disney). And Universal City and CBS Radford are in the Valley.

So how can it be that the average trip distance for workers at the studio—many of who live in the San Fernando Valley—will only have an average trip of 3.5 miles?

With all those new daily commuters, 14 stages with performances all year long, construction trucks, and everything else envisioned in the Draft IER [sic] will result in a traffic gridlock.

Response to Comment No. 59-2

Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment Nos. 9-30, 9-32, 26-156, and 26-E.4-10, regarding the assumptions used in the Project's VMT analysis, including as

related to employee trip lengths. Also refer to Section A, Appropriateness of Using VMT Calculator, of Topical Response No. 8, Vehicle Miles Traveled, and Response to Comment No. 26-E.4-9. As discussed therein, the Project is a continuation and expansion of an existing studio, not an “entertainment center,” and would not attract regional visitor-based trips.

The Draft EIR makes no claim that the average travel distance to a regional movie production facility is only 3.5 miles. In the event that the commenter mistakenly assumed the 6.7 miles result of the work VMT per employee analysis to be a round-trip and approximated the one-way trip distance to be 3.5 miles, the assumption and approximation are incorrect. Refer to Section C, Assumptions in the VMT Analysis, of Topical Response No. 8, Vehicle Miles Traveled, regarding the assumptions used in the Project’s VMT analysis, including as related to employee trip lengths. That topical response includes additional details and an example regarding how work VMT per employee is calculated in the VMT analysis. It should also be noted that the work VMT per employee analysis presented in the Draft EIR is presented in terms of one-way trips; specifically, as stated on page IV.K-30 in Section IV.K, Transportation, of the Draft EIR, “These thresholds—and the VMT analysis to which the thresholds apply—are based on specific types of one-way trips (emphasis added)....” As shown in Table IV.K-5 of the Draft EIR, the work VMT per employee is 6.7 miles, which represents a one-way trip.

There is no recommendation in city or state guidance on VMT analysis to use empirical trip lengths when a model-based solution that combines trip thresholds and Project analysis is available. Critically, it is necessary in conducting VMT analysis that both the thresholds of significance and the Project-level VMT estimates are developed using the same data source in order to ensure an apples-to-apples comparison. Therefore, the VMT analysis presented in the Draft EIR is appropriate and accurate.

Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, for information about audience shows and audience visitor trips. Refer also to Topical Response No. 12, Safety and Congestion, and Topical Response No. 14, Construction Vehicle Impacts.

Comment Letter No. 60

Vanessa Ault

Los Angeles, CA 90036-1743

Comment No. 60-1

I read about a settlement agreement between the LA Conservancy and the project's developer. Details of the agreement have not been made public, but they should be because this project will profoundly affect the community.

Did the EIR consider the constraints from this settlement agreement? Is the developer paying the Conservancy? How do the limitations of the settlement agreement impact the project objectives? How will development be clustered in the middle of the site if the Conservancy agreement requires set backs from existing buildings? We need to know what is happening at the site.

Response to Comment No. 60-1

Refer to Response to Comment No. 26-19 regarding the agreement with the Los Angeles Conservancy.

Comment No. 60-2

There is not enough transparency or clarity with this project!

Response to Comment No. 60-2

The Draft EIR has been prepared in accordance with CEQA and noticing has been provided in compliance with state law. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 32-3.

Comment Letter No. 61

Comment Letter No. 62

Edward Azizi
6530 Drexel Ave.
Los Angeles, CA 90048-4708

Comment No. 62-1

I am writing to express concern over the Television City Project.

Response to Comment No. 62-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 62-2 through 62-5.

Comment No. 62-2

We are staring down the barrel of an enormous construction overhaul that could take up to 20 years to complete.

Response to Comment No. 62-2

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 62-3

While you would expect a proposal of this magnitude to be presented with some amount of clarity and detail, we currently have no idea what exactly they are going to build on that site, and we therefore cannot evaluate the impact that this development could have on our community. We simply do not know enough.

Response to Comment No. 62-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and the proposed Specific Plan. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Comment No. 62-4

Here is what we do know. The EIR says that **any use** in the C2 zones will be permitted. I hoped that would help clarify the site plan, but unfortunately that provision has only muddied the waters further. Permitting any use in a C2 zone leaves the door open for over **100 property uses**, ranging from car washes, to hospitals, to a circus. Each of these uses would have a unique and potentially damaging impact on the lives of residents in the area, and yet no clarity or analysis relating to each of these potential property uses has been provided.

Response to Comment No. 62-4

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 5-3 with regard to the Project Description and proposed Specific Plan; Topical Response No. 3, Permitted On-Site Uses; and Response to Comment No. 5-6 with regard to the land uses that would be permitted in the proposed Specific Plan, which were fully disclosed and analyzed in the EIR. As discussed therein, based on input received in response to the Draft EIR, the permitted uses were clarified to reflect the studio-related objective of the Project; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR. The proposed Specific Plan would only allow five land uses (i.e., sound stage, production support, production office, general office, and retail) as well as related ancillary and supportive uses, all of which were fully disclosed and analyzed in the EIR.

Comment No. 62-5

We also know that some of this confusion could have been avoided had the community, not just certain parties, been consulted in a meaningful way. Unfortunately, no one has made a good faith effort to inform or educate the actual residents, businesses, or other organizations in the affected neighborhoods about this development. That tells me that the neither the developer nor the governing bodies responsible for reviewing this development are interested in working with members of this community and responding to our concerns.

Response to Comment No. 62-5

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

Comment No. 62-6

I urge you to make a better effort to provide clarity and listen to the members of this community. Please do not move forward until these very basic steps have been taken.

Response to Comment No. 62-6

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 62-2 through 62-5.

Comment Letter No. 64

Chanan Back
539 N. Poinsettia Pl.
Los Angeles, CA 90036-1928

Comment No. 64-1

The EIR of the Television City project is reminding me too closely of the Millennium project that took place a couple years ago in Hollywood. Why would the city agree to a project with such poor planning and lack of visions? If there is already so much controversy, questions, and concerns arising from the public, how is the project expecting to gain the support of the actual residents and business that will be most impacted? The potential problems that my neighbors are presenting to the city are not getting answered and haven't even slightly begun to be addressed by the EIR.

Similar to the Millennium project, the Television City project lacks concern for potential environmental effects and disturbance to local neighborhoods.

Response to Comment No. 64-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 64-2 and 64-8. Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment No. 9-13 for a discussion of how this Project differs from the *Millennium* project.

Comment No. 64-2

The project fails to take into account the already extremely overcrowded area and the traffic, health and safety concerns that come with this. How is the city able to disregard the already congested community and those concerns?

Response to Comment No. 64-2

Under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. A project's CEQA transportation-related analysis and resulting impacts are assessed via VMT methodology. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA

LOS analysis. Health impacts associated with vehicle trips are addressed as part of the Air Quality analysis included in Section IV.A, Air Quality, of the Draft EIR.

Comment No. 64-3

Where is the evidence that the development plan is accurate, stable, and finite, as required?

Response to Comment No. 64-3

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-13. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Comment No. 64-4

There is simply not enough information being disclosed for this project to meet the requirements. Where is the case being made that the massive size of what is being proposed fits at all in our neighborhood?

Response to Comment No. 64-4

The Draft EIR was completed in accordance with the requirements of CEQA. Under CEQA, EIRs are informational documents intended to inform the public and decision-makers about the potential environmental impacts of a project and are not intended to make the case for or against any proposed development.

Comment No. 64-5

The planning committee is too quick to saying yes to projects, though in the long run they are making things worse in terms of economic growth, LA's livability and congestive issues.

Response to Comment No. 64-5

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. Thus, no further response is required. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 64-6

I understand that this project could take 20 years of construction. Where is the phasing plan? My community has absolutely no idea what to expect and it's unfair that we are unprepared in what is taking place in our proximity.

Response to Comment No. 64-6

Refer to Response to Comment No. 9-24 regarding the buildout timeline.

Comment No. 64-7

Besides this, can you explain the project design features in full and all of the real impacts that are to come? Are the project design features attempting to cover up the implications that will likely rise from the projects? When will you release mitigation measures? The residents need to review and assess safety measures.

Response to Comment No. 64-7

PDFs are not intended to mitigate impacts, but are commitments made by the Applicant above regulatory requirements. These measures are included in Section IV, Mitigation Monitoring Program, of this Final EIR and will be enforced as conditions of approval for the Project.

The mitigation measures included in the Project are discussed in Section I, Executive Summary, of the Draft EIR; each respective section of the Draft EIR; and Section IV, Mitigation Monitoring Program, of this Final EIR.

For a discussion of PDFs versus mitigation measures, refer to Response to Comment No. 9-34. Additionally, pursuant to Section 15097 of the CEQA Guidelines, Section IV, Mitigation Monitoring Program, of this Final EIR includes all mitigation measures and PDFs discussed in the Draft and Final EIR.

Comment No. 64-8

There is no real definition of the project and this has failed the city in the past. How is a project of this size, scale and volume ever going to serve LA if there is no realistic vision? Please explain why you put out an EIR that went against what the court said in that case the City cannot do.

Response to Comment No. 64-8

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan, and Response to Comment Nos. 5-3 and 9-13. As discussed therein, the Project Description in the Draft EIR is accurate, stable, and finite and contains all necessary data to evaluate and determine the potential environmental impacts of the Project.

Comment Letter No. 65

Pamela Bajarski
946 N. Genesee Ave.
West Hollywood, CA 90046-7320

Comment No. 65-1

I have lived in the area for nine years.

Response to Comment No. 65-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 65-2

I do not understand where the 5,000 plus new parking spots are going to go considering there is very limited space already. Because the site is near the farmers market, I fear audience and employee parking is going to disrupt the market's business. How will parking garages and 20-story buildings displace customers? The additional congestion in this area will be a major inconvenience and will turn people away from their once beloved community centerpiece.

Response to Comment No. 65-2

The parking supply provided on the Project Site would be sufficient to accommodate the full parking demand of the Project with no spillover parking into the neighborhoods. Refer to Sections A, Parking Supply, and C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking. There is no evidence offered by the commenter that the Project parking and buildings will displace customers at The Original Farmers Market.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

The remainder of this comment discusses several non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this

Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 65-3

The location of the farmers market is very important and it's extremely disrespectful to the city that we could possibly lose access if the Television City project takes over. People love this market in LA. The appeal of the farmers market will dwindle when 8,000 new people are brought to the area for the entertainment studio. There is a very likely possibility that the market will be lost. The loss of the farmers market would be devastating to the community and California's farmers. What does this mean for local

food economies and how is this helping maximize farmers 'profits? What will happen to all of the vendors when the city takes away their retail opportunity? The market is a major attraction. What is the analysis as to how many people may decide to no longer go there due to the project?

Is there absolutely no concern for highlighting local culture and community gathering places? Where are families going to get access to healthy, affordable foods? In terms of the environment, what does this mean sustainability wise? This does not correlate with California's efforts to fight climate change if we cannot minimize the amount of waste and pollution that comes from producing our food.

This is a historic district and the farmer's market has been here since 1880. It has served not only locals, but also tourists and has allowed them to experience a unique touch of LA. It's undoubtably one of the most beloved landmarks in the city. This farmers market has helped shape LA in so many ways. Are we expected to just accept the loss of prosperity, connectivity, and small business? My community demands that the draft EIR addresses the potential deterioration of the farmers market.

Response to Comment No. 65-3

There is no substantial evidence to support the assertion that the Project would result in a loss of access to or otherwise impact The Original Farmers Market. As discussed in Response to Comment No. 65-2, the Project would not result in the demand for off-site parking and, thus, would not affect parking for The Original Farmers Market. Physical access to The Original Farmers Market would also not be changed as a result of implementation of the Project. In addition, the Draft EIR fully analyzed potential historical resources impacts to The Original Farmers Market in Section IV.B, Cultural Resources, of the Draft EIR and Historic Report (Appendix C.1 of the Draft EIR), and concluded that impacts would be less than significant. Also refer to Section E, Impacts to Historical

Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, regarding the Draft EIR's analysis of impacts to The Original Farmers Market.

This comment discusses a number of topics that are not related to the Draft EIR's analysis of the potential environmental impacts of the Project. Nevertheless, this comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration prior to any action on the Project.

Comment Letter No. 66

Josh Barbash
104 S. Fuller Ave.
Los Angeles, CA 90036

Comment No. 66-1

I would like to express my dismay at the amount of time provided to review such a lengthy and technical document. I appreciate the comment period was extended two weeks, but given the volume of material and the fact that people work and have families, this was not sufficient time to review the Draft EIR in depth. In any case, I have grave concerns about the Draft EIR and the TVC 2050 project.

Response to Comment No. 66-1

Refer to Response to Comment No. 32-3 regarding the public comment period.

Comment No. 66-2

My understanding is that the Wilshire Plan Community Plan Update was to commence this year. Why didn't the project wait until the update of the plan was proposed? If the development agreement proposed for the project is approved for a 20-year period, it seems to make sense to wait and make the project consistent with the updated Community Plan.

Response to Comment No. 66-2

Refer to Topical Response No. 6, Wilshire Community Plan Update, and Response to Comment No. 28-20 with regard to the Wilshire Community Plan update. As discussed therein, CEQA requires an evaluation of a project's consistency with existing land use plans, and that evaluation is not affected by possible changes to an existing land use plan that may be adopted in the future. In accordance with CEQA, Section IV.H, Land Use and Planning, of the Draft EIR analyzed the Project's consistency with applicable plans, policies, and regulations that regulate land use on the Project Site, including, but not limited to, the Wilshire Community Plan, the City's General Plan Framework Element, and the LAMC, and concluded that impacts would be less than significant.

Comment No. 66-3

It seems unfair to stage haul trucks adjacent to Loyola High School and Kaiser Medical Center. The vibration of these huge trucks may impact medical devices that are sensitive to movement. Was this analyzed in the Draft EIR. Will the truck noise impact the classroom instruction? How and why was this location selected?

Response to Comment No. 66-3

The two off-site staging areas are no longer proposed to be used as part of the Project's construction activities. Instead, all haul truck staging would occur on-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR, and refer to Response to Comment No. 26-24 for a discussion of on-site construction haul truck staging.

Comment No. 66-4

Will the trucks be idling near any open playing fields at the school which may impact the air quality students would be subjected to? Staging hundreds of trucks adjacent to these sensitive uses is something that should have been fully analyzed in the Draft EIR. Where are these analyses located in the Draft EIR?

Response to Comment No. 66-4

Refer to Response to Comment No. 26-24 regarding haul truck staging areas. As discussed therein, all haul truck staging would occur on-site per LADOT's approval letter dated June 30, 2022 (see the LADOT Haul Route Approval Letter included in Appendix M.5 of the Draft EIR). The two off-site staging locations described and evaluated in the Draft EIR are no longer proposed. Accordingly, there would be no off-site idling. As such, an HRA is not warranted for sensitive receptors near the two removed off-site staging areas. The removal of the staging locations is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 66-5

I am sure there will be special events at the project site but did not see any specific information about that in the Draft EIR. How many special events will be proposed per year? Is there a limit as to the number of attendees for special events? Where will these attendees park? What time will these events be scheduled e.g., in the evenings, on weekends, etc.? Will a calendar of events be posted on the project's website to inform the adjacent neighbors of potential noise and light impacts? How can this information be disseminated to the neighbors and the public? Where is this information provided in the Draft EIR? Were the impacts of these events to the surrounding residential neighbors analyzed?

Response to Comment No. 66-5

Refer to Topical Response No. 3, Permitted On-Site Uses, with regard to the permitted on-site land uses, including special events. Special events would not be

regulated by the proposed Specific Plan, do not regularly occur on-site, and would be subject to existing City permitting regulations.

Refer also to Section C, Special Events, of Topical Response No. 10, Trip Generation, for further discussion of special events on the Project Site.

Comment No. 66-6

Thank you for the opportunity to comment on the TVC 2050 Draft EIR. It is my hope that my comments and concerns will be addressed

Response to Comment No. 66-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 66-1 through 66-5.

Comment Letter No. 67

Raymond Bardeau

Comment No. 67-1

We're already experiencing unmitigated growth and nonstop traffic congestion. I'm concerned that moving on this new Television City Project application is too much, too fast.

Response to Comment No. 67-1

This introductory comment has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 67-2.

Comment No. 67-2

We need more time to understand the long-term community and environmental impacts. A decision of this magnitude should be made with extreme caution and not rushed.

Our community should have time to review the information and provide appropriate feedback. The project will be so impactful to our neighborhood that residents and businesses should be given the opportunity to really understand what is being proposed. Why is there no public hearing scheduled to go along with the recent environmental report that came out? I'm respectfully asking you to delay approval and hold public hearings now, not later when the process is farther along.

Response to Comment No. 67-2

Refer to Response to Comment No. 28-13 regarding public outreach and Response to Comment No. 32-3 regarding noticing.

This Final EIR includes responses to all comments received during the Draft EIR review period of 60 days, which exceeds the typical 45-day required under CEQA. Following the publication of this Final EIR, the Project and EIR will be considered during public hearings and meetings before City decision-makers prior to any decision being made on the Project. The public will have additional opportunities to comment on the Project at upcoming hearings, the dates of which will be published in accordance with the City's noticing requirements.

Comment Letter No. 68

David Barlag
448 S. Orange Dr.
Los Angeles, CA 90036-3510

Comment No. 68-1

I'm heartbroken this morning as I read about the new development happening in my backyard.

Response to Comment No. 68-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 68-2 through 68-6.

Comment No. 68-2

What is this new Television Studio Project? I'm struggling to find any exact details about it. The information I was able to find is full of red flags.

Response to Comment No. 68-2

The Project would establish the TVC 2050 Specific Plan to allow for the continuation of the existing studio use and the modernization and expansion of media production facilities within the approximately 25-acre Television City studio (Project Site). The proposed Specific Plan would permit a total of up to a maximum of 1,874,000 square feet of sound stage, production support, production office, general office, and retail uses within the Project Site upon buildout, as well as associated circulation improvements, parking, landscaping, and open space. The Draft EIR for the Project was circulated for public review on July 14, 2022, until September 13, 2022, and is available on the City's website at <https://planning.lacity.org/development-services/eir/tvc-2050-project-0>. This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 68-3

It's obvious that this development, despite its details, will exacerbate already current problems throughout our community. Yes, LA is congested everywhere, but why submit our neighbors to a plan that will exaggerate it and make it even worse? What sense does that make? The kind of development that is being considered is massive for our already

highly congested area. How does this development mesh with what you are supposed to be doing to manage traffic congestion in our city? Doesn't the city have a congestion management plan it is supposed to follow? Surely you all know about the consequences that follow—decrease in air quality, increase in noise, etc.

Response to Comment No. 68-3

This comment provides a general statement about the condition of traffic in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Refer to Response to Comment No. 5-8 regarding the compatibility of the Project with the surrounding community.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

Comment No. 68-4

As leaders, please inform us neighbors, where we can expect these employees and customers to park? Will this be in my backyard? In the parking be in my neighborhood? [sic] Have you all experienced rush hour in LA as it is now? Please help me understand how the city leaders have our interest in mind at all when it comes to parking and this project.

Response to Comment No. 68-4

Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to meet the peak parking demands of the Project, which also explains that off-site parking is no longer proposed. This clarification is included in Section III, Revisions, Clarifications, and Corrections to the Draft EIR. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Comment No. 68-5

As a mom in this neighborhood, how is the construction portion of this project going to affect my children? We're constantly seeing things in the news about products, foods, ways of travel, etc. that are scientifically proven to be bad for our health. Please explain

the negative impacts of all the trucks, chemicals, and run off and other construction related effects that are expected with this project. None of that is good for our kids!

What are you going to do to ensure their health and safety during all of the construction? And when the development is finally done, what about the health and safety while so many people and cars will be going to that location? Please provide information about the risks that were identified during both those times and impacts of what is going to be done. It's not enough to say that the develop is going to keep impacts as low as possible. There shouldn't be any impacts—that's just making the community live with the impacts.

Response to Comment No. 68-5

An analysis of construction traffic impacts was included in the Transportation Assessment included as Appendix M.1 of the Draft EIR. Refer to Section 5D, pages 179 through 184 of the Transportation Assessment. Refer also to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of the impacts of construction trucks and construction worker vehicles on the traffic conditions along the roadways serving the Project Site, as well as safety during construction. As discussed therein, Project trip generation during construction would be less than the Project when fully operational, and, thus, would have a lesser effect on traffic than the Project as analyzed in the Transportation Assessment and Draft EIR.

Potential health and safety impacts related to construction are thoroughly addressed in the Draft EIR. With regard to health and safety related to localized air quality emissions, refer to Response to Comment No. 16-12 regarding how the Project is not expected to worsen air quality in the region as potential operational localized air quality impacts would be less than SCAQMD's significance criteria for all pollutants.

Comment No. 68-6

Enough is enough. Be the leaders we need in this world. Help us stop this project, not only for the current neighborhood, but for the future of our kids, city, and home [sic]

Response to Comment No. 68-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 68-2 through 68-5.

Comment Letter No. 69

Barbara Bartnof
barbarabartnof@gmail.com

Comment No. 69-1

Stop the expansion of CBS [sic]

Response to Comment No. 69-1

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 70

Laura Basmajian
lbasmajian@tvcityla.com

Comment No. 70-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 70-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 71

David Bass
434 N. Detroit St.
Los Angeles, CA 90036-2529

Comment No. 71-1

I have questions about the TVC application and how you will handle future calculations and revisions.

Response to Comment No. 71-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 71-2.

Comment No. 71-2

How will you handle changes to their building plans in the future? Will any proposed changes be assessed for changes to impacts? How will the public be made aware and provided an opportunity to review the changes and their impacts?

Will you provide the community with updates as specifics about changes to the development, about new and changed impacts is determined? What will the timeline look like for receiving updates?

We really need in-depth information before this process is allowed to continue.

Thank you for your time.

Response to Comment No. 71-2

Refer to Topical Response No. 1, Clearly Defined Project Description and Specific Plan. As discussed therein, the Draft EIR analyzed the proposed development program described in Section II, Project Description, of the Draft EIR (refer to pages II-12 through II-35 of the Draft EIR and specifically Table II-2, Proposed Development Program, on page II-13). Future Project changes that are substantially different than the proposed Project or are beyond the scope of impacts evaluated in the EIR would require additional City review and approval, as well as potential CEQA compliance review.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 72

Regina Bass
434 N. Detroit St.
Los Angeles, CA 90036-2529

Comment No. 72-1

I have questions about the TVC application and how you will handle future calculations and revisions.

Response to Comment No. 72-1

This comment is identical to Comment No. 71-1, but is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 72-2

1. Why aren't basecamp and below ground development part of what is considered in the planned square footage? Is that part of the current building considered floor area now? How did they calculate proposed and existing uses and square feet? Are they treating those calculations differently because they aren't all the same uses?

Response to Comment No. 72-2

Refer to Topical Response No. 2, Definition of Floor Area is Appropriate, and Response to Comment Nos. 5-7 and 26-121 with regard to the definition of floor area under the proposed Specific Plan; how all of the proposed uses, areas, and activities have been fully accounted for in the impact analyses in the EIR regardless of whether they meet the definition of floor area; and how no active production activities would be located in the parking and basecamp areas below Project Grade.

Comment No. 72-3

3. [sic] Did the EIR consider the construction and operation impacts from areas that the EIR says are not floor area? I can't tell. And if those areas were not evaluated for impacts, then the EIR minimizes the project's impacts. If they did, where is the information about those impacts? If not, then the analysis isn't completed and needs to be redone and recirculated.

Response to Comment No. 72-3

Refer to Response to Comment No. 72-2 regarding floor area.

With regard to recirculation, this comment does not provide substantial evidence to demonstrate that “significant new information” as defined by CEQA Guidelines Section 15088.5 has been presented or added to the Draft EIR. Thus, recirculation is not required. Also refer to Response to Comment No. 9-4 regarding recirculation.

Comment No. 72-4

We really need in-depth info before this process is allowed to continue.

Thank you for your time.

Response to Comment No. 72-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 72-2 and 72-3.

Comment Letter No. 73

Abbe Bauer
306 S. Citrus Ave.
Los Angeles, CA 90036-3036

Comment No. 73-1

I am deeply concerned for the future of the Beverly Fairfax Historic District if the TVC project proceeds as planned in the EIR. My concerns about this project primarily focus on overdevelopment issues that have not been fully outlined by the developer. As someone who has lived in the community for many years, it makes me uneasy to think about all of the changes that are proposed for our community. I have listed specific questions that I believe the community needs answers to.

Response to Comment No. 73-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 73-2 through 73-5.

Comment No. 73-2

Construction. I am worried about the ambiguity within the EIR. What is the first building stage of the project and when will this be completed? How will project updates be given to residents living in Beverly Fairfax? Furthermore, I am interested in the logistics of the construction. Will construction take place seven days a week? Will construction be closed on any major national holidays? I am concerned about the noise level of construction as it may disrupt the learning of our school children. How close is the proposed building to Fairfax High School?

Response to Comment No. 73-2

Refer to Appendix FEIR-8, Details of Buildout and Construction, of this Final EIR and Response to Comment No. 9-24 regarding the Project timeframe. See also Topical Response No. 14, Construction Vehicle Impacts.

Noise impacts, including related to construction noise, associated with the Project are discussed in Section IV.I, Noise, of the Draft EIR. As discussed on page IV.I-35 of the Draft EIR, in accordance with LAMC requirements, construction activities generally would be permitted to occur Monday through Friday from 7:00 A.M. to 9:00 P.M. and between

8:00 A.M. and 6:00 P.M. on Saturday or national holidays, or outside of these hours if a temporary noise variance is approved by the Los Angeles Board of Police Commissioners. Nighttime construction would be limited to that necessary for mat pour activities and would occur for a maximum of up to five days. Project Design Features NOI-PDF-1 and NOI-PDF-2, which address construction-related noise, are described on page IV.I-34 of the Draft EIR.

As discussed on pages I-23 and I-24 in Section I, Executive Summary, of the Draft EIR, as part of Project Design Feature TR-PDF-1, a detailed CTMP, including street closure information, a detour plan, haul routes, and a staging plan, will be prepared and submitted to the City for review and approval prior to commencing construction. The CTMP will formalize how Project construction will be carried out and identify specific actions, including appropriate signage, that will reduce effects on the surrounding community. In accordance with Project Design Feature TR-PDF-1, the Applicant will designate a construction relations officer to serve as a liaison with the surrounding community and respond to any construction-related inquiries.

Fairfax High School is located approximately 0.25 miles north of the Project Site.

Comment No. 73-3

Inclusivity initiatives. As of July 31st, 2022, Los Angeles had an unemployment rate of 5.2%. Do the developers plan to prioritize Los Angeles tax paying residents as they search for workers? What do these plans entail?

Response to Comment No. 73-3

This comment does not raise an environmental issue specific to CEQA or the Draft EIR and the environmental impacts addressed therein. The comment is nevertheless noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 73-4

I am also concerned that these building plans will exclude low income families from the community. Will any of the housing being built be reserved for low income families? If not, why not?

Response to Comment No. 73-4

The Project does not include the development of housing. Refer to Section II, Project Description, of the Draft EIR for a detailed description of the Project and its underlying purpose.

Refer also to Response to Comment No. 32-7 regarding existing and proposed uses at the Project Site and the underlying purpose of the Project.

Comment No. 73-5

Densification. Our community is already quite populated, and learning about the increase concerns me about overpopulating our area. It seems like nothing is stopping these developers from overdeveloping and overpopulating our neighborhood. It's already such a congested area. Why is the city considering allowing a project that would require so many more people to commute to the site, workers to getting to the site during years of construction?

Response to Comment No. 73-5

This comment provides a general statement about the population density in the area and is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

With respect to congestion, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis.

As discussed in the Draft EIR, construction is anticipated to take place over 32 months. Refer to Topical Response No. 14, Construction Vehicle Impacts.

With regard to population, as discussed in Section XIV of the Initial Study included as Appendix A to the Draft EIR, the Project is a studio use and, thus, would not directly increase the residential population in the Project vicinity. While some new Project employees may be anticipated to relocate to the Project vicinity, many would not; similarly, existing employees would not be expected to move as a result of redevelopment of the Project Site. Accordingly, this potential indirect increase in population would not be substantial.

The City is required to review all applications submitted, including the Project. The Draft EIR was prepared as an informational document to inform the public and decision-makers about the potential environmental impacts of the Project.

Comment No. 73-6

I am already looking forward to hearing from the developers about their plans. Please keep me informed on all project updates, specifically to the EIR

Response to Comment No. 73-6

The commenter has been added to the mailing list for the Project and will receive all future public notices regarding the Project prepared by the City. In addition, the City will continue to properly maintain the administrative record for the Project.

Comment Letter No. 74

Christopher Becker
1720 N. Fuller Ave., Apt. 544
Los Angeles, CA 90046-3078

Comment No. 74-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.

Response to Comment No. 74-1

This comment is identical to Comment No. 50-1. Refer to Response to Comment No. 50-1, above.

Comment Letter No. 75

Catherine Bergmann
556 N. Croft Ave., Apt. 8
West Hollywood, CA 90048-2542

Comment No. 75-1

I am so dismayed that this project seems to be moving forward since the community is almost uniformly and strongly opposed—

Response to Comment No. 75-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 75-2 through 75-3.

Comment No. 75-2

it seems totally unbelievable that the City would be willing to green-light this massive project that will take 20 years to build, use up so much of our groundwater resources, pollute our air, allow for near-constant noise, fill our streets with cars and construction trucks, and grab every parking spot.

Response to Comment No. 75-2

Refer to Response to Comment No. 9-24 regarding the construction timeline and Response to Comment No. 26-138 for a discussion of the construction timeline as it relates to noise.

This comment provides a general statement about groundwater, air quality, noise, traffic, and parking but does not raise any specific issues. Each of these topics were fully analyzed in the Draft EIR with the exception of parking, which is not an environmental impact under CEQA. The Project's proposed parking is discussed in Section II, Project Description, and Section IV.K, Transportation, of the Draft EIR; refer also to Topical Response No. 13, Parking, regarding the sufficiency of the proposed onsite parking to meet the peak demands of the Project, which would prevent spillover parking. In the Draft EIR, refer to Section IV.G, Hydrology and Water Quality, for a discussion of groundwater resources; Section IV.A, Air Quality, for a discussion of air quality; Section IV.I, Noise, for a discussion of noise; and Section IV.K, Transportation, for a discussion of traffic. This comment is, nevertheless, noted for the administrative record and has been incorporated

into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Also, note that the Project has not been approved by the City. The Project has not received any recommendation by the Department of City Planning, the City Planning Commission, or the City Council. Under CEQA, an EIR is an informational document intended to inform the public and decision-makers about the potential environmental impacts of a project and is not intended to make the case for or against any proposed development.

Comment No. 75-3

As someone who has lived here for 21 years—what about our quality of life and the walkability of our neighborhood? Will kids be able to walk to school and religious people feel safe to walk to services? Has the Draft EIR really thought about the impact on our lives

Response to Comment No. 75-3

Refer to Section IV.J.2, Public Services—Police Protection, of the Draft EIR and Response to Comment Nos. 16-5 and 35-133 regarding the adequacy of LAPD police protection services to serve the Project Site and an overview of the security plan and associated security measures that would be implemented by the Project to ensure safety and security. With regard to pedestrian safety, refer to Section E, Pedestrian Safety at Project Driveways, of Topical Response No. 12, Safety and Congestion.

The remainder of this comment discusses a number of non-CEQA issues. Nevertheless, this comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment Letter No. 76

Sara Berthialilue
537 N. Orlando Ave., Apt. 4
Los Angeles, CA 90048-2530

Comment No. 76-1

As a resident of Fairfax, I am very concerned with how this project will impact surrounding areas that I have grown to love over my time here.

Response to Comment No. 76-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 76-2 through 76-5.

Comment No. 76-2

Just north of the project site, there is a historic district. As a result of the projects, hundreds, if not thousands, of cars and trucks will be traveling through the neighborhood. What will happen to the historic district? Is parking going to overflow into the historic district? What specific measures are you taking to ensure that the historic district is not going to be impacted by this project? Residents of this community value the district, and we want to ensure that it does not change too much as a result of the project.

Response to Comment No. 76-2

Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 26-E.2-10 and 43-2 regarding how the Project would not result in any significant impacts to the Beverly Fairfax Historic District.

Refer to Topical Response No. 9, Neighborhood Traffic Management Plan, regarding the Project's proposed NTMP. As discussed therein, the Applicant would work closely with LADOT and the residents in the two neighborhoods during the development of the NTMP to identify potential adverse local street effects (e.g., cut-through trips, speeding, stop sign violations) and evaluate the measures available to minimize these issues. The requirement to prepare an NTMP for the two neighborhoods identified in the Draft EIR, in cooperation with the potentially affected neighbors, will be incorporated as a condition of approval for the Project.

Refer also to Topical Response No. 13, Parking, regarding a discussion of the adequacy of the proposed on-site parking supply and that spillover parking into adjacent neighborhoods and properties is not anticipated. As discussed therein, existing spillover appears to be caused by an existing grocery store with inadequate parking and the Project Site will have sufficient parking supply on-site to accommodate its full demand and therefore its employees and visitors will not be searching for off-site parking. Currently, no spillover parking occurs from existing operations at the Project Site based on the observations of traffic engineers and this is expected to continue given the proposed parking supply in the future.

Comment No. 76-3

Additionally, in the draft EIR, it says that there are going to be “fueling stations and vehicle repair.” Is this going to be a fully fleshed out gas station and mechanic shop? Where exactly are they going to be located? What are the environmental risks associated with building a fueling station near properties? How are you going to ensure there are no fuel leaks that impact the health of nearby citizens? What fire safety protocols are you taking to ensure that this station is completely safe?

Response to Comment No. 76-3

The Project would not include a fueling station or vehicle repair facilities. The allowed uses have been clarified in Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

Comment No. 76-4

Lastly, we have taken strides as a community to become more environmentally conscious. The plan states that you will use natural gas. Yet, building is supposed to go on until 2043. We want to be electric-run to help combat climate change. This massive project is regressive in terms of fighting global warming. How are you going to build and develop in a sustainable way, and how will you make sure that Fairfax isn’t contributing to the larger issue of global warming?

Response to Comment No. 76-4

The Project’s potential impacts related to climate change are fully analyzed in Section IV.E, Greenhouse Gas Emissions, of the Draft EIR. Impacts were determined to be less than significant. Refer also to Response to Comment No. 26-51 regarding the analysis of natural gas usage, GHG emissions, and the City’s new all-electric buildings ordinance.

Refer to Response to Comment No. 9-24 regarding the Project's construction timeline.

Comment No. 76-5

And lastly, [sic] Fairfax is a peaceful community. Yet, operations from this project are going to be noisy. What steps are you going to take to ensure that noise levels do not increase? Are you going to soundproof areas? When operations occur outside, how are you going to make sure that noise doesn't bother us? Are you going to have non-operational hours to ensure we aren't disrupted during non-work hours?

Response to Comment No. 76-5

Noise impacts during operation of the Project were analyzed based on the thresholds in Appendix G of the CEQA Guidelines and were determined to be less than significant. Refer to pages IV.I-43 through IV.I-56 of Section IV.I, Noise, of the Draft EIR. The Project would include a number of PDFs that would reduce noise during operations. Refer to page IV.I-34 of the Draft EIR.

Refer to Response to Comment No. 26-146 regarding noise associated with outdoor production activities during both daytime hours (7:00 A.M. to 10:00 P.M.) and nighttime hours (10:00 P.M. to 7:00 A.M.).

Comment No. 76-6

Please answer the questions above to give us more confidence that this project won't completely ruin our community.

Response to Comment No. 76-6

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 76-2 through 76-5.

Comment Letter No. 77

Alex Bidar
935 N. Genesee Ave., Apt. 2
West Hollywood, CA 90046-7348

Comment No. 77-1

I am very upset with how the proposed TVC project is proposed to run. There will be traffic and public parking issues as well as the increase in emissions that it will create.

Response to Comment No. 77-1

Regarding traffic, under SB 743, the transportation impact analysis shifted from vehicular delay (i.e., LOS) to VMT. Thus, congestion and driver delay are not CEQA impacts. Refer to Section B, Level of Service, of Topical Response No. 12, Safety and Congestion, and Response to Comment Nos. 9-29 and 16-36 regarding the non-CEQA LOS analysis in the Transportation Assessment.

Regarding parking, under SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Refer to Topical Response No. 13, Parking, regarding the adequacy of the on-site parking supply to accommodate the peak parking demands of the Project and prevent spillover parking. As discussed therein, off-site parking is not needed to meet the Project's parking demand, and the Project does not propose off-site parking.

Regarding emissions, refer to Section IV.A, Air Quality, of the Draft EIR.

Comment No. 77-2

Building of the development could go on until 2043. If that is the case, why is the developer not considering multiple energy sources? I don't understand why the developer is planning to use natural gas. Shouldn't we strive to have new buildings that are fully electric in order to combat climate change? Why wouldn't the project be required to fulfill climate action objectives?

Are there other things the developer is going to do to offset the environmental damage that will occur as a result of usage of natural gas? For example, why not use electric vehicles during the duration of the project? What about electric trucks? I feel that if the project is going to use natural gas, the developer should be required to offset the negative contributions.

Another fear I have related to this is how the neighborhood will lag behind in the fight against climate change. What similar developments are happening around the country? What type of energy are they using? Will our area be less sustainable as a result of this project?

Response to Comment No. 77-2

This comment is identical to Comment No. 45-1. Refer to Response to Comment No. 45-1, above.

Comment No. 77-3

Similarly, the usage of natural gas requires high levels of maintenance and surveillance in order to ensure safety. What procedures and standards will be put in place to ensure the safety of Fairfax residents living near the project site? How will the safety of workers be ensured who are going to be even closer to the natural gas?

Response to Comment No. 77-3

This comment is identical to Comment No. 45-2. Refer to Response to Comment No. 45-2, above.

Comment No. 77-4

The developer has both the opportunity and responsibility to change the way in which he operates in order to make our world a more sustainable one. At the moment, it seems like he is making no effort to do so. Please explain in great detail all of the environmentally friendly aspects of this project. Similarly, please provide a new energy plan so that natural gas is not being used up until 2043.

Response to Comment No. 77-4

One of the Project's objectives is to "[c]reate a model for environmental sustainability in modern production studio operations by implementing best management practices regarding water, energy, and resource conservation by achieving LEED Gold certification or equivalent green building standards" (page II-11 of the Draft EIR). As discussed on page II-33 in Section II, Project Description, of the Draft EIR, the Project would support environmental sustainability by incorporating sustainable building features and construction protocols required by the Los Angeles Green Building Code (LAMC Chapter IX, Article 9), the California Green Building Standards Code (California Code of Regulations, Title 24, Part 11; referred to as the CALGreen Code), and the California Building Energy Efficiency Standards (California Code of Regulations, Title 24, Part 6; California Energy Code), and pursuing U.S. Green Building Council's LEED Gold certification or equivalent green

building standards. The Project represents an infill development located in close proximity to existing and proposed transit lines and would utilize existing infrastructure to service the proposed uses. The Project also involves the re-use of certain existing buildings and facilities. Both in compliance with and, in some cases, in exceedance of regulatory requirements, a number of specific sustainable design components would be incorporated into the Project, including, but not limited to: Energy Star appliances; solar panels; plumbing fixtures and fittings that comply with the performance requirements specified in the Los Angeles Green Building Code; weather-based irrigation systems; water-efficient plantings with drought-tolerant species; shade trees in public areas; green walls in some outdoor areas; vegetated roofs or cool roof systems to help reduce energy use; short- and long-term bicycle parking; EV charging infrastructure; a TDM Program; the proposed Mobility Hub; use of daylighting where feasible; energy-efficient lighting; and permeable paving where appropriate. Such measures would address energy conservation, water conservation, and waste reduction and are further discussed throughout the Draft EIR.

In addition, the Project would be among the first studios built in the City in accordance with the City's new all-electric buildings ordinance. Refer to Response to Comment No. 45-1, which details the additional sustainability features included in the Project and new natural gas usage associated with the Project.

The Draft EIR comprehensively analyzed the Project's potential energy impacts in accordance with CEQA and concluded that impacts would be less than significant. Thus, a new energy plan as requested by this commenter is not warranted.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 77-5

I am confident that most of the Fairfax community wants to have an active role in addressing global warming. As it stands, this development seems like we would be doing exactly the opposite

Response to Comment No. 77-5

This comment is identical to Comment No. 45-3. Refer to Response to Comment No. 45-3, above.

Comment Letter No. 78

Asher Biron
420 N. Formosa Ave.
Los Angeles, CA 90036

Comment No. 78-1

I'll be frank, I don't understand the traffic analysis provided with the draft EIR for the TVC 2050 project. The traffic plan provided as part of the draft EIR doesn't give any indication how traffic will be re-routed. It also doesn't take into account special events when traffic counts are heaviest or trash collection days. How will first responders navigate the neighborhood when its gridlocked?

Will the developers provide additional detail to back up their claims?

Response to Comment No. 78-1

Section IV.K, Transportation, of the Draft EIR and the Transportation Assessment (Appendix M.1 of the Draft EIR) analyzed the potential transportation impacts of the Project in accordance with CEQA and, based on the criteria in Appendix G of the CEQA Guidelines, concluded that the Project would have less-than-significant transportation impacts.

There is no traffic re-routing planned as part of the Project. Future base traffic conditions were projected, and Project trips were added on top of that future base to determine the maximum impacts of the Project on the transportation system.

Trips to/from the Project Site were assigned to the street system on typical weekdays. Refer to Topical Response No. 10, Trip Generation, regarding how special events (not related to the studio) would not be regulated by the Project's Specific Plan and would continue to be regulated on a case-by-case basis by City departments consistent with existing conditions.

Refer to Section D, Emergency Access, of Topical Response No. 12, Safety and Congestion, for a discussion of emergency access and vehicle response times. As discussed therein, the Project would not increase the number of LOS E or F intersections along the key corridors serving either of the two closest fire stations serving the Project Site. Furthermore, pursuant to CVC Section 21806, the drivers of emergency vehicles are generally able to avoid traffic in the event of an emergency by using sirens to clear a path of travel or by driving in the lanes of opposing traffic. As such, emergency access to the Project Site and surrounding uses would be maintained at all times.

Comment No. 78-2

The plans for parking during construction don't seem credible to me. Tens of thousands of construction vehicles will be entering the site off of Fairfax. Do we have any idea where these trucks will be staging and idling? What kind of impact will the truck traffic have on noise and air quality? Have the developers communicated at all with any of the schools, residences, and nursing homes along Fairfax regarding the possible disruption to their lives? What have they been told about impacts that will affect them?

Response to Comment No. 78-2

Refer to Topical Response No. 14, Construction Vehicle Impacts, for a discussion of construction worker automobile travel, as well as the construction truck activity levels and parking plans. Refer to Response to Comment No. 35-150 regarding the CTMP. All haul trucks would be staged on the Project Site, and, thus, offsite truck staging would not be required; refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

The estimate that “[t]ens of thousands of construction vehicles will be entering the site off of Fairfax” overstates the construction vehicle impact. The busiest construction day would occur during the excavation/foundation phase and during the concrete pour for the building foundations. Page 181 of the Transportation Assessment (Appendix M.1 of the Draft EIR) describes the truck and car activity on the busiest construction days when 300 haul truck plus 20 delivery trucks would enter the Project Site. On those days, approximately 245 construction workers would enter the Project Site.¹⁵⁰ The most likely traffic patterns for the construction vehicles would be to enter the Project Site via Fairfax Avenue or Beverly Boulevard and then exit the Project Site on the other street.

Construction worker parking will also be provided onsite. The Project Site is large enough that construction workers in the early phases of construction can park on the surface parking lots on one portion of the Project Site while the excavation is taking place on the other portions of the Project Site.

Air quality and noise analyses during both construction and operation of the Project have been completed in accordance with CEQA and are included in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR, respectively. As discussed in Section IV.A, the Project would result in significant and unavoidable regional construction emissions, as well as concurrent construction and operational emissions. All other air

¹⁵⁰ Note that page 181 of Transportation Assessment provided in Appendix M.1 of the Draft EIR has been revised to reflect 245 construction workers on-site instead of 295 construction workers on-site. Refer to Section III, Revisions, Clarifications, and Corrections to the Draft EIR.

quality impacts would be less than significant or less than significant with mitigation. As discussed in Section IV.I, Noise, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. All other noise impacts would be less than significant.

Noticing for the Project has been conducted in accordance with CEQA, as discussed in Response to Comment No. 32-3. The Project's Initial Study was circulated for public review from July 2, 2021, to August 2, 2021, and the Draft EIR was circulated for public review from July 14, 2022, to September 13, 2022. Notices were sent to all owners and occupants within a 500-foot radius, as well as all interested parties and designated recipients on the City's standard mailing list. The Applicant also engaged in an extensive outreach program, including Project mailers to over 50,000 households and over 100 community meetings in addition to canvassing residents and businesses to inform the public of the Project.

Comment No. 78-3

According to the draft EIR, almost 8,000 employees will be on site once the production facilities become operational. Up to 5,000 people per day will access the site as television audience members. Yet the draft EIR calls for 5,300 parking spaces on site. Where will everyone else park? How did they arrive at these numbers. Will people accessing the TVC site be allowed to park in adjacent neighborhoods? Will audiences be accessing the facilities during the evening hours? We haven't been provided answers to these questions.

Response to Comment No. 78-3

Pursuant to SB 743, the adequacy of a new development's parking supply is not a CEQA consideration. Nevertheless, Topical Response No. 13, Parking, has been prepared for informational purposes. Refer to Topical Response No. 13 for a discussion of how the on-site parking supply was developed and how audience and visitor parking demand was taken into account. As discussed therein, the Project's parking ratios were developed from empirical parking demand data collected over many years at the Project Site and other studios in Southern California, including NBC Universal, Paramount Pictures, The Culver Studios, Sony Pictures, and several smaller studios. Parking rates have been separated into the components of a studio campus (sound stage, production support, production office, general office, etc.) based on the empirical parking study data collected.

In terms of overall parking demand, it should be noted that not every employee and visitor to the Project Site will arrive by automobile and certainly not alone in their cars. Thus, the Project does not need one space for every person arriving at the Project. Employees and visitors will carpool to the Project Site and a percentage of the arrivals

would be by transit, bike and walk, again reducing the need for on-site parking. The proposed 5,300 parking spaces would be sufficient to accommodate the peak parking demand of the Project.

In reference to the question regarding evening audience shows, the Project Site accommodates evening audience shows today and that practice is expected to continue in the future. Audiences for nighttime tapings arrive at the Project Site during the late afternoon or early evening, and evening tapings are generally completed by 10 P.M. The comment regarding the number of audience members is incorrect. Refer to Section B, Visitor Trips, of Topical Response No. 10, Trip Generation, regarding audience trips and the timing of existing audience shows.

Section C, Parking Spillover into the Adjacent Neighborhoods and Properties, of Topical Response No. 13, Parking, addresses the concern about spillover parking into the neighborhoods. As discussed therein, existing spillover appears to be caused by an existing grocery store with inadequate parking and The Grove shopping center that charges for parking. The Project Site will have sufficient parking supply on-site to accommodate its full demand, and, therefore, its employees and visitors will not be searching for off-site parking. Currently, no spillover parking occurs from existing operations at the Project Site based on the observations of traffic engineers, and this is expected to continue given the proposed on-site parking supply in the future.

Comment No. 78-4

I hope you'll demand answers from the developers to my questions. I also hope you'll demand the developers do a better job of communicating with neighborhood residents and business owners. The more I learn about TVC 2050, the more concerned I become. Please don't let this project move forward until our questions are answered.

Response to Comment No. 78-4

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 78-1 through 78-3.

Comment Letter No. 79

Chani Biron
320 N. Formosa Ave.
Los Angeles, CA 90036-2527

Comment No. 79-1

I have serious issues with the proposed Television City rebuild and the recent EIR associated with it. As a 20 year resident. I can see so many ways that this could go wrong for an important part of the city. In addition to being a heavily residential area, where the local residents' safety and quality of life should be the prime concern, the area is the home to several important cultural points.

Response to Comment No. 79-1

This introductory comment is noted for the administrative record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 79-2 through 79-4.

Comment No. 79-2

These include the Holocaust Museum. What is going to be the impact on the venue of the expected increase in traffic and removal of some parking along nearby streets? Will it be more difficult for visitors to get to the museum because of backed-up cars, detours and lane closures?

Has there been any consideration about how all of the construction activities will impact the Holocaust Museum? Of particular concern is how traffic and parking issues will impact the ease with which people, particularly groups of students, visit the Holocaust Museum. Not only is this an important cultural center in our community but the education it provides is needed now more than ever. Are there plans to study all of the different impacts the project will have on the museum? What mitigation systems are being considered to make sure this important museum is not hurt by the project?

Response to Comment No. 79-2

Refer to Response to Comment No. 41-4 for a discussion of the potential effects on the Holocaust Museum. As discussed therein, the Holocaust Museum drop off takes place on the east side of the roadway in a bus bay offset from the northbound through lanes. The school children are dropped off on a sidewalk adjacent to the Holocaust Museum and

would not have to cross The Grove Drive. For pedestrians approaching the Holocaust Museum from the west side sidewalk, a protected marked crosswalk would be incorporated into the traffic signal controlling the entrance to the Project.

The Holocaust Museum and Pan Pacific Park were included as sensitive receptors in Section IV.A, Air Quality, and Section IV.I, Noise, of the Draft EIR. As discussed in Section IV.A, Air Quality, of the Draft EIR, the Project would not result in significant localized air quality impacts. As discussed in Section IV.I, Noise, of the Draft EIR, the Project would result in significant and unavoidable on- and off-site noise and vibration impacts during construction. However, noise impacts at the Holocaust Museum would be less than significant with implementation of Mitigation Measure NOI-MM-1 that requires installation of noise barriers during construction; vibration impacts at the Holocaust Museum would be less than significant.

Comment No. 79-3

There are going to be so many trucks coming into the area during construction. What steps is the city taking to fully analyze what that number of trucks will do to our air quality—not only from truck emissions during driving but also additional emissions from when they are idling? Because they will be idling since there is so much gridlock on our streets now.

That many trucks will also increase noise and pollution in our neighborhood. What studies are being done to make sure this doesn't damage our community in these ways? What systems will the city put into place to make sure the noise, emissions, dirt and debris from the trucks does not make our neighborhood unlivable? Over what period of time will the impacts be monitored and systems to mitigate be implemented?

Response to Comment No. 79-3

Refer to Topical Response No. 14, Construction Vehicle Impacts, regarding construction truck trips. Tables IV.A-6 and IV.A-8 in Section IV.A, Air Quality, of the Draft EIR present, respectively, the unmitigated and mitigated regional criteria air pollutant emissions associated with construction activity, including construction truck trips and any associated vehicle idling. See Table IV.I-11 in Section IV.I, Noise, of the Draft EIR for a summary of off-site noise levels associated with construction truck activity. As discussed in the EIR, various PDFs and mitigation measures, such as Project Design Feature AIR-PDF-1, Mitigation Measures AIR-MM-1 through AIR-MM-4, Project Design Features NOI-PDF-1 through NOI-PDF-5, and Mitigation Measure NOI-MM-1 would reduce air quality and noise impacts of Project construction on the adjacent neighborhoods. Discussions as to why the Project is being proposed notwithstanding significant and unavoidable impacts are presented in Section VI, Other CEQA Considerations, of the Draft EIR. Pursuant to CEQA, a Mitigation Monitoring Program will be implemented, including reporting and/or monitoring

and enforcement procedures, to support the implementation of the Project's PDFs and mitigation measures detailed in the EIR. Refer to Section IV, Mitigation Monitoring Program, of this Final EIR.

Refer to Response to Comment No. 26-34 regarding the Draft EIR's analysis of emissions associated with wind-blown dirt and dust. Refer to Response to Comment No. 26-26 for a detailed discussion of the SCAQMD LST methodology and how it is used to evaluate localized impacts to sensitive receptors (residents).

As discussed on page IV.A-17 in Section IV.A, Air Quality, of the Draft EIR, SCAQMD Rule 403—Fugitive Dust would require the use of BACT for dust control, which includes mandatory control actions and dust control contingency measures to control fugitive dust.

Comment No. 79-4

North of Television City is an important historic district of Los Angeles! The Beverly Fairfax Historic District needs to be protected as it is so important to the culture of the city. Have the many impacts of both construction and the expansion itself been studied to see how it will impact the homes and businesses within that district? What exactly is going to be done to protect our important cultural centers and this historic district? There is no way a huge project located right in close proximity to the museum and to the historic district won't be impactful and in so many ways.

Response to Comment No. 79-4

The Draft EIR includes a comprehensive analysis of potential impacts from construction and operation of the Project. The assertion that the Project will result in impacts to the Beverly Fairfax Historic District is the opinion of the commenter and is not supported by facts or evidence. Potential impacts to historical resources located in the vicinity of the Project Site, including the Beverly Fairfax Historic District, were considered and analyzed in the Draft EIR. Refer to Section E, Impacts to Historical Resources in the Vicinity of the Project Site, of Topical Response No. 5, Historical Resources, and Response to Comment Nos. 26-E.2-10, 28-19, and 363-7. Refer to Response to Comment 79-2 above regarding the Holocaust Museum.

Comment No. 79-5

It is so easy to see this project and think "more jobs" and "more money" but it is important to take a step back and think about the history of Los Angeles, our culture, and important educational centers such as the Holocaust Museum.

Response to Comment No. 79-5

This comment, which concludes the letter, is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment Nos. 79-2 through 79-4.

Comment Letter No. 80

Paul Bisbano
637 N. Detroit St.
Los Angeles, CA 90036-1947

Comment No. 80-1

As a residents of 30 years my wife Audrey and I live near where Television City's expansion is being considered for this mammoth development, we have many concerns about what that project would mean for our community.

Response to Comment No. 80-1

This introductory comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project. Specific issues raised by the commenter are addressed in Response to Comment No. 80-2.

Comment No. 80-2

What does it mean that the site could be a Regional Center? A regional center that would do what? Are there other areas in the city that are also regional centers? Would the regional center be the same boundaries as the Television City site or expand beyond just that development?

Does that mean that other projects would fall under the category of the area being a regional center, not just the one for Television City? Would other projects then not have to go through a thorough review? Would they just get approved or be allowed because they are part of some regional center area?

How does regional center then fit into the city's General Plan? What about the Wilshire Community plan?

It seems that it could lead to uncontrolled growth of our wonderful community. Is that what could happen? How much growth or density would be allowed? Would there be a limit as to how much development could happen?

If a regional center wouldn't be only the Television Center property, it doesn't seem right or fair that an expansion of that designation, which would be hugely impactful on our neighborhoods and community, would be imposed upon us, especially not with a full understanding by community members, businesses and residents of what it would mean.

By what right could the developer do that? On what basis could the city approve that? Is there anything that the residents and businesses can do about it?

Where is an any analysis and findings that our family oriented, small business community needs or wants to be any kind of a regional center?

Response to Comment No. 80-2

Refer to Response to Comment Nos. 5-8, 11-29, and 16-4 with regard to the proposed Regional Commercial designation. As discussed therein, the Regional Commercial land use designation is an existing land use designation within the City's General Plan, and the Project proposes a General Plan Amendment that would apply to the Project Site only and would not allow for development of projects on other sites. Refer to Response to Comment No. 11-3 regarding the size of the Project. The total amount of floor area requested could be granted regardless of whether the land use designation is modified to "Regional Commercial" or utilizes the existing Community Commercial, Limited Commercial, or Neighborhood Commercial designations. See also Topical Response No. 6, Wilshire Community Plan Update, and Response to Comment No. 11-29 with regard to the Wilshire Community Plan update.

Following the publication of this Final EIR, the Project approvals and EIR will be considered during several public hearings and meetings before City decision-makers prior to any approval, and the public will have additional opportunities to comment on the Project at such hearings and meetings.

This comment is noted for the administrative record and has been incorporated into this Final EIR for review and consideration by the decision-makers prior to any action on the Project.

Comment No. 80-3

I strongly urge you to oppose this development

Comment No. 81-1

I strongly support TVC 2050: The Los Angeles Studio Plan. TVC 2050 is a significant investment in our City's most identifiable industry, creating thousands of good-paying jobs and ensuring that Los Angeles remains the entertainment capital of the world.

TVC 2050 will enhance and modernize the studio's production operations, allowing the facility to meet the constantly changing demands of the entertainment industry and promoting long-term operational sustainability. TVC 2050 includes the development of much-needed sound stages and new production facilities, keeping production and production jobs in Los Angeles.

TVC 2050 is a thoughtfully designed plan that preserves the existing studio use and rehabilitates the studio's Historic Cultural Monument. TVC 2050 encourages multi-modal transportation options through an on-site Mobility Hub, beautifies the public realm, and improves pedestrian safety and connectivity to the surrounding neighborhood. Importantly, the City's Draft Environmental Impact Report identifies no significant impacts from studio operations.

Please move TVC 2050 forward for approval. It will provide long-term benefits to the Beverly/Fairfax District, the City, and the region. The plan creates thousands of production jobs, prioritizes sustainability, and promotes diversity, equity, and inclusion through its Changing Lenses initiative, ensuring this iconic studio and the important industry and Angelenos it supports will continue to thrive.
