1. Introduction

Project Overview

O'Brien Drive Portfolio, LLC (Project Sponsor), is proposing to construct an approximately 131,825-gross-square-foot (gsf) building for research-and-development (R&D) uses as well as accessory office uses associated with life sciences, along with a 500-square-foot (sf) chemical storage area, roof terrace, and ground-floor commercial space, as part of the 1125 O'Brien Drive Project (Proposed Project). The Project site, in the existing Menlo Park Labs campus, includes three single-story buildings (located at 1105, 1125, and 1165 O'Brien Drive), totaling approximately 38,911 gsf. The Project Sponsor would demolish the existing buildings and merge the underlying parcels, as well as an adjacent drainage ditch parcel, into one lot, tentatively addressed as 1125 O'Brien Drive; this combined parcel is referred to as Parcel 1 or the Development Lot. In addition, the Project site includes a 1.68-acre parcel adjacent to Parcel 1, which is currently developed with an approximately 20,955 gsf, single-story building at 1 Casey Court, referred to as Parcel 2 or the Accessory Parking Lot. The existing building would be demolished as part of the Proposed Project.

The Proposed Project would add a five-story R&D/office building on Parcel 1. Approximately 249 surface parking stalls would be provided as part of the Proposed Project, with 89 stalls located in a surface parking lot west of the proposed building and an additional 160 parking stalls located on Parcel 2. The Proposed Project represents 71,959 net new gsf of R&D space and 89 net new parking spaces. The roof of the proposed building would have an approximately 6,600 sf roof deck with landscaped areas and seating for use by employees of the Menlo Park Labs campus. The Project site would continue to be accessible from two driveways on O'Brien Drive as well as one on Casey Court. The primary entrance/exit for employees would be at the southwest corner of the Project site. In addition, a secondary driveway would be provided in the northeast portion of the Project site, and a curb cut out would be included at the front of the proposed building on O'Brien Drive. The Project site would also be accessible to bicyclists and pedestrians from planned bicycle lanes and sidewalks along O'Brien Drive. In addition, bicycle and pedestrian connections and linkages are proposed as part of a separate project along the entire length of O'Brien Drive from Willow Road to University Avenue.

The Project site is within the City of Menlo Park (City) General Plan and M-2 Area Zoning Update (ConnectMenlo) study area and, therefore, within the scope of the programmatic ConnectMenlo environmental impact report (EIR). As discussed in more detail below, in accordance with the requirements outlined in Section 15168 of the California Environmental Quality Act (CEQA) Guidelines, this Initial Study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and discuss whether the Proposed Project is within the parameters of the ConnectMenlo EIR.

Purpose of This Initial Study

This Initial Study has been prepared by the Proposed Project's lead agency, the City, in conformance with the provisions of CEQA and 14 California Code of Regulations, Chapter 3 (CEQA Guidelines). The lead agency is the public agency with principal responsibility for carrying out or approving a project. Environmental checklists, as included in this Initial Study, are to be completed for all projects that are

subject to environmental review under CEQA. The information, analysis, and conclusions contained in the environmental checklist form the basis for deciding whether an EIR, a negative declaration, or a mitigated negative declaration should be prepared. Where only certain topic areas warrant analysis in an EIR, the document is referred to as a Focused EIR.

ConnectMenlo EIR

The Project site is within the ConnectMenlo study area. ConnectMenlo, which updated the City's General Plan Land Use and Circulation Elements and rezoned land in the M-2 Area, now referred to as the Bayfront Area, was approved on November 29, 2016. It serves as the City's comprehensive and long-range guide to land use and infrastructure development. ConnectMenlo's Land Use Element identifies an allowable increase in net new development potential of up to 2.3 million gsf for non-residential uses, up to 4,500 residential units, and up to 400 hotel rooms in the Bayfront Area.

Because the City's General Plan is a long-range planning document, the ConnectMenlo EIR was prepared as a Program EIR, pursuant to CEQA Guidelines Section 15168. Once a Program EIR has been certified, subsequent activities within the program must be evaluated to determine whether additional CEQA review is needed. However, if the Program EIR addresses a program's effects in adequate detail, subsequent activities could be found to be within the Program EIR's scope, and additional environmental review may not be required, unless one of the thresholds for subsequent environmental review is met (CEQA Guidelines Section 15168[c]). When a Program EIR is relied on for subsequent activities, the lead agency must incorporate feasible mitigation measures into subsequent activities as well as the alternatives developed in the Program EIR (CEQA Guidelines Section 15168[c][3]). If a subsequent activity would have effects that are not within the scope of a Program EIR, the lead agency must prepare a new Initial Study, leading to a negative declaration, a mitigated negative declaration, or an EIR (CEQA Guidelines Section 15168[c][1]). Because the Proposed Project's location and development parameters are consistent with ConnectMenlo, the ConnectMenlo Program EIR serves as the environmental analysis for some of the effects of the Proposed Project (i.e., is incorporated by reference pursuant to Sections 15150, 15130, and 15183), whereas those areas identified in this Initial Study as subject to significant effects will receive additional environmental review.

Section 15168(d) of the CEQA Guidelines provides for simplifying the preparation of environmental documents by incorporating by reference analyses and discussions. Where an EIR has been prepared or certified for a program or plan, the environmental review for a later activity consistent with the program or plan should be limited to effects that were not analyzed as significant in the prior EIR or that are susceptible to substantial reduction or avoidance (CEQA Guidelines Section 15152[d]). By tiering from the ConnectMenlo EIR, the environmental analysis for the Proposed Project relies on the ConnectMenlo EIR for the following:

- A discussion of general background and setting information for environmental topic areas,
- Overall growth-related issues,
- Issues that were evaluated in detail in the ConnectMenlo EIR for which there is no significant new information or change in circumstances that would require further analysis,
- Assessment of cumulative impacts, and
- Incorporating mitigation measures adopted by the ConnectMenlo EIR.

This Initial Study has been prepared to evaluate the potential environmental impacts of the Proposed Project and determine what level of additional environmental review is appropriate. In accordance with the requirements outlined in Section 15168 of the CEQA Guidelines, this Initial Study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and discuss whether the Proposed Project is within the parameters of the ConnectMenlo EIR. Consistent with the 2017 settlement agreement (discussed below) and the findings in this Initial Study, an EIR will be prepared for impacts that need further discussion and/or mitigation beyond that provided in the ConnectMenlo EIR. This is discussed in more detail in Chapter 3, *Environmental Checklist*.

2017 Settlement Agreement

On December 29, 2016, the City of East Palo Alto filed suit to challenge certification of the ConnectMenlo EIR. The City of East Palo Alto alleged that the City of Menlo Park did not comply with CEQA because the EIR underestimated the amount of new employment and failed to adequately analyze the traffic impacts that would result from the development under ConnectMenlo. To resolve litigation, the City of Menlo Park and the City of East Palo Alto entered into a settlement agreement. The key terms of the settlement agreement are as follows:

- *Reciprocal Environmental Review for Future Development Projects*. Menlo Park will prepare an EIR for any project located in an Office (O), Life Science (LS), or Residential Mixed-Use (R-MU) district that (i) exceeds 250,000 net new square feet and requires a use permit, (ii) that proposes bonus-level development, (iii) that proposes a master plan project, or (iv) that may have a significant environmental impact. Menlo Park may, with the exception of housing and traffic, which were the focus of East Palo Alto's challenge, simplify the environmental review for future development projects by incorporating analysis and discussions from the ConnectMenlo EIR, pursuant to CEQA Guidelines Section 15168(d). East Palo Alto will prepare an Initial Study for future development projects located within its city limits to determine the appropriate level of environmental review and will conduct that review, which can be simplified by incorporating by reference analysis and discussions from its general plan update, referred to as Vista 2035.
- *Reciprocal Traffic Studies and Fair-Share Mitigation Fees*. Menlo Park and East Palo Alto will work together to ensure that future development projects' potentially significant traffic impacts on the other jurisdiction will be analyzed and mitigated. Accordingly, a development project in one jurisdiction that has a significant impact on an intersection in the other jurisdiction will be required to pay a fair-share mitigation impact fee to the affected jurisdiction.[1]
- *Reciprocal Study of Multiplier Effect*. When preparation of an EIR is required, as described above, Menlo Park or East Palo Alto, as applicable, will conduct a Housing Needs Assessment, which, to the extent possible, will include an analysis of the multiplier effect on indirect and induced employment by the specific development project and its relationship to the regional housing market and displacement.[2]

[1] Although intersection level-of-service (LOS) impacts are no longer considered environmental impacts under CEQA, a Transportation Impact Assessment (TIA) will be conducted for the Proposed Project. The EIR will use vehicle miles traveled (VMT) as the threshold of significance. An intersection LOS analysis will be provided for informational purposes in the TIA, which will be an appendix to the EIR.

[2] Nothing in the settlement agreement was intended to suggest that the analysis of the multiplier effect for indirect and induced employment is required by CEQA because CEQA studies only environmental impacts, not social or economic impacts. A Housing Needs Assessment is currently being prepared for the Proposed Project, separate from the CEQA process.

Pursuant to the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case, certain topics have been identified as needing further environmental review. Although noted in this Initial Study, these topics will be analyzed in the EIR.

Project Information

1. **Project Title:**

   1125 O'Brien Drive Project

2. **Lead Agency Name and Address:**

   City of Menlo Park
   Community Development Department
   701 Laurel Street
   Menlo Park, CA 94025

3. **Contact Person and Phone Number:**

   David Hogan, Contract Planner – (650) 330-6702

4. **Project Location:**

   1105, 1135, and 1165 O'Brien Drive and 1 Casey Court, Menlo Park, CA 94025

5. **Project Sponsor's Name and Address:**

   O'Brien Drive Portfolio, LLC
   c/o Tarlton Properties
   1530 O'Brien Drive
   Menlo Park, CA 94025

6. **General Plan Designation:**

   Life Science-Bonus (LS-B)

7. **Description of Project:**

   Please refer to Chapter 2, *Project Description*.

8. **Surrounding Land Uses and Setting:**

   The Project site, located north of US 101 on the Menlo Park Labs campus, comprises a variety of life science and biotech companies. The Project site is bounded by the Hetch Hetchy right-of-way, which is owned by the San Francisco Public Utilities Commission, to the north; O'Brien Drive to the east and south; and a warehouse to the west adjacent to Kelly Court. In addition, Dura-Foam Roofing and a small private school are slightly north of the Project site. Farther north, beyond the campus, are the inactive Dumbarton Rail Corridor and State Route 84. Neighborhoods in East Palo Alto are east and south of the Project site. A Menlo Park neighborhood, Belle Haven, is west of the Project site, across Willow Road.

9. **Other Public Agencies Whose Approval May Be Required (e.g., permits, financing approval, participation agreement), Potential Responsible Agencies, and Trustee Agencies:**

   - Bay Area Air Quality Management District
   - California Department of Transportation
   - California Regional Water Quality Control Board, San Francisco Bay Region/San Mateo Countywide Water Pollution Prevention Program
   - City/County Association of Governments
   - San Mateo County Transportation Authority
   - Menlo Park Fire Protection District
   - San Mateo County Environmental Health Division
   - West Bay Sanitary District
   - Native American Heritage Commission
   - San Francisco Public Utilities Commission

10. **Have California Native American tribes that are traditionally and culturally affiliated with the Project area requested consultation, pursuant to Public Resources Code Section 21080.3.1? If so, has consultation begun?**

    The Native American Heritage Commission (NAHC) was contacted and asked to provide a list of local California Native American tribes with cultural affiliation to the Proposed Project's geographic location in order to determine whether tribal cultural resources are present at the Project site. The NAHC responded on September 20, 2019, stating that a search of the Sacred Lands File identified sensitive areas in the vicinity of the Project site. In addition, the NAHC provided a list of seven Native American contacts.

    On April 20, 2021, letters with details regarding the Proposed Project and a location map were sent by email to all seven individuals mentioned above. The letters explicitly stated that they represented formal notification of a proposed project, as required under CEQA—specifically, Public Resources Code Section 21080.3.1 and Chapter 532 of the Statutes of 2014 (Assembly Bill 52). To date, no responses have been received.

    Please refer to Section V, *Cultural Resources*, and Section XVIII, *Tribal Cultural Resources*, for more details.

[page intentionally left blank]

2. Project Description

O'Brien Drive Portfolio, LLC (Project Sponsor), is proposing to construct an approximately 131,825-gross-square-foot (gsf) building for research-and-development (R&D) uses as well as surface parking on two parcels as part of the 1125 O'Brien Drive Project (Proposed Project). The proposed building would be located on a site consisting of three separate legal lots (1105, 1135, and 1165 O'Brien Drive), plus an adjacent lot with a drainage ditch, that would be merged into one lot (Parcel 1 or the Development Lot). In addition, surface parking for the building would be provided on the adjacent lot at 1 Casey Court (Parcel 2 or Accessory Parking Lot). Parcel 1, which is 2.44 acres and part of the Menlo Park Labs campus, is currently developed with three single-story buildings totaling approximately 38,911 gsf. Parcel 2 is 1.68 acres and currently developed with an approximately 20,955 gsf, single-story building that would be demolished as part of the Proposed Project. In total, the Project site is 4.12 acres. The Proposed Project represents net new 71,959 sf of R&D space and 89 net new parking spaces.

The Proposed Sponsor would demolish the existing buildings and construct a new 131,825 gsf, five-story building that would include R&D uses; office uses associated with the primary R&D uses; a 500-square-foot (sf) chemical storage area, also associated with the primary R&D uses; and ground-floor commercial space. The roof of the building would have a 4,400 sf paved deck with seating areas and 2,200 sf of landscaping, for a total area of approximately 6,600 sf. The exterior of the Development Lot would feature an entry plaza, a shuttle stop, bioretention areas, and two driveways from O'Brien Drive. The Proposed Project would provide a total of 249 parking stalls, with approximately 89 stalls in a surface accessory parking lot west of the building and an additional 160 parking stalls on Parcel 2.

Project Location and Setting

Project Location

The Project site is north of US 101 in the city of Menlo Park (as shown in Figure 2-1). The site is bounded by the Hetch Hetchy right of way, which is owned by the San Francisco Public Utilities Commission, to the north; O'Brien Drive to the east and south; and a warehouse to the west adjacent to Kelly Court. In addition, Dura-Foam Roofing and Wund3rSCHOOL/Open Mind School, a small private school, are north and east of the Project site on O'Brien Drive. Farther to the north, beyond the campus, are the inactive Dumbarton Rail Corridor, State Route (SR) 84, tidal mudflats and marshes along San Francisco Bay (Bay), the Don Edwards San Francisco Bay National Wildlife Refuge (Refuge), and Ravenswood Slough. Farther to the east (across University Avenue) and south (beyond O'Brien Drive) are the neighborhoods of East Palo Alto. Included in these neighborhoods, the closest of which is 300 feet from the Project site, are mainly single-family residences, along with multi-family residential buildings, neighborhood-serving retail, Cesar Chavez Elementary School, the 4 Corners Civic Hub (including the East Palo Alto Library, city hall, and post office), Costaño School and San Francisco 49ers Academy, and Jack Farrell Park.

The Belle Haven neighborhood of Menlo Park is west of Willow Road, approximately 0.25 mile from the Project site. The Belle Haven neighborhood features a mix of uses, including churches, Menlo Park Fire Station No. 77, single-family residences, multi-family residential buildings, and institutional buildings. A neighborhood-serving retail center is located at the corner of Hamilton Avenue and

Willow Road. The Belle Haven neighborhood's institutional and park uses include Beechwood School, Belle Haven Elementary School, the Belle Haven Pool, Belle Haven Youth Center, Onetta Harris Community Center, Menlo Park Senior Center, the Boys and Girls Club, Hamilton Park, Karl E. Clark Park, the Belle Haven Community Garden, and Kelly Park. The Onetta Harris Community Center and Menlo Park Senior Center are proposed to be redeveloped into a new multi-generational facility that will incorporate the current Onetta Harris Community Center, Menlo Park Senior Center, Belle Haven Youth Center (child care), Belle Haven Pool, and a branch library.

Regional highways that provide access to the Project site include US 101, approximately 0.5 mile to the south, and SR 84, which is across the Dumbarton Rail Corridor and to the north. The Menlo Park Caltrain station is approximately 2.3 miles southwest of the Project site; the Palo Alto Caltrain station is approximately 2.4 miles south of the Project site, providing weekday service from San Francisco to Gilroy and weekend service from San Francisco to San José. Existing bus routes serve Newbridge Street and Bay Road south of the Project site and Willow Road west of the Project site.

Project Site Setting

The Menlo Park Labs campus is home to a variety of life science and biotech companies. The entire Menlo Park Labs campus, with approximately 1.7 million gsf of space within its buildings, includes landscaping, surface parking lots, onsite food services, and recreational facilities for tenants.[3] Transportation is provided for tenants throughout the campus by Menlo Park Rides, which offers bike-share, shuttle, and car-share services as well as electric-vehicle (EV) charging stations. Shuttle services are provided to/from San Francisco, the Union City Bay Area Rapid Transit (BART) station, the Millbrae BART/Caltrain station, and the Palo Alto Caltrain station.[4]

The Development Lot (Parcel 1) includes the existing buildings at 1105, 1135, and 1165 O'Brien Drive (Table 2-1). The three single-story buildings, with a maximum height of 20 feet, are located on two properties (assessor's parcel number [APN] 055-433-320 and APN 055-433-330). An adjacent property to the west (APN 055-433-350) with an approximately 20-foot-wide drainage ditch that runs from storm drains in East Palo Alto is also part of the Development Lot. In total, the Development Lot has a lot area of 2.44 acres (106,355 sf). Two of the existing office/R&D buildings total approximately 26,911 gsf; the third existing office/warehouse building totals approximately 12,000 gsf, resulting in a total existing floor area ratio (FAR) of approximately 37 percent across the three buildings. The buildings are surrounded by surface parking lots with 98 uncovered stalls. Minimal decorative landscaping is included at the front entries to the buildings and along the O'Brien Drive frontage. In addition, the Proposed Project includes development of a second parcel (Accessory Parking Lot or Parcel 2) located at 1 Casey Court (APN 055-433-180). This parcel would be used for surface parking. In total, the Accessory Parking Lot has an area of approximately 1.68 acres (73,000 sf). The existing office/warehouse building on the parcel totals approximately 20,955 gsf and has a FAR of approximately 29 percent and a height of approximately 19.2 feet. The Accessory Parking Lot currently has onsite surface parking with 44 uncovered stalls. Minimal landscaping exists on the property.

Table 2-1. Existing Buildings at the Project Site

Project Site	Use	Date Constructed	Building Area
Development Lot/Parcel 1			
1105 O'Brien Drive	Office/Warehouse	**1962**	12,000 gsf
1135 O'Brien Drive	Office/R&D	**1963**	16,835 gsf
1165 O'Brien Drive	Office/R&D	**1960–1965**	10,076 gsf
Accessory Parking Lot/Parcel 2			
1 Casey Court	Office/Warehouse	**1974-1981**	20,955 gsf

Source: Tarlton Properties and DES Architects + Engineers, 2020.

The existing Project site has approximately 91 employees at Parcel 1[5] and approximately 52 employees at Parcel 2,[6] a total of 143 employees.

Zoning

The Project site was historically zoned General Industrial (M-2), which permitted office and general industrial uses, such as warehousing, manufacturing, printing, and assembling. In 2016, the Project site's zoning was changed to Life Science, Bonus (LS-B) as part of the City of Menlo Park (City) General Plan and M-2 Area Zoning Update (referred to as ConnectMenlo). The updated zoning created three new zoning districts (Office [O], Residential-Mixed Use [R-MU], and Life Sciences [LS]) and established standards for new projects, including Transportation Demand Management (TDM) requirements and restrictions regarding height, density, land use, sustainability, circulation, and open space. The base-level zoning standards allow a FAR of up to 55 percent for life science uses and a height of up to 35 feet. However, the updated zoning establishes bonus-level standards, with a FAR of up to 125 percent for life science uses and an additional FAR of 10 percent for commercial uses, and a maximum height of up to 110 feet, in exchange for the provision of community amenities, which are selected from the list of potential options identified through community outreach and adopted by resolution of the Menlo Park City Council.

Project Objectives

This Initial Study addresses the physical impacts of the Proposed Project, as required by the California Environmental Quality Act (CEQA). The Project Sponsor and City have identified the following objectives, which are relevant to the physical impacts considered in this document:

- To build a new cutting-edge life science building that will cater to the Bay Area and Stanford entrepreneurial community, as well as life sciences companies both regionally and nationally.
- To develop an environmentally sustainable, high-quality aesthetic facility with the flexibility to accommodate a single life science tenant or meet the needs of multiple tenants.

[5] Based on the Project Sponsor's estimate of one employee per 400 gsf for the 26,911 gsf of R&D space at 1135 O'Brien Drive and 1165 O'Brien Drive plus one employee per 400 gsf for the 1,750 gsf of R&D space and one employee per 500 gsf for the 10,250 gsf of warehouse space at 1105 O'Brien Drive.

[6] Based on the Project Sponsor's estimate of one employee per 500 gsf for the 20,955 gsf of warehouse space and 2019 California Building Code data for occupant loads.

- To create a project that grows a broad socioeconomic base of jobs as well as a business-to-business tax base for the City of Menlo Park.
- To develop space that will accommodate life science employees and jobs in the new Life Sciences district.
- To provide community amenities for surrounding neighborhoods consistent with ConnectMenlo goals and policies.
- To achieve Leadership in Energy and Environmental Design (LEED) Gold certification or equivalent.

Project Characteristics

Land Use and Zoning

The Project Sponsor would construct an approximately 131,825 gsf building on the 2.44-acre Development Lot under the new zoning and density bonus standards. The building would include R&D space for a speculative tenant and a café. Figure 2-2 depicts the proposed site plan. As mentioned above, the Project site was rezoned LS-B in 2016 through the ConnectMenlo process. At the base level, the average height and maximum height are 35 feet; the maximum FAR is 55 percent. At the bonus level, the zoning ordinance allows a FAR of up to 125 percent (plus 10 percent for commercial use) and a maximum height of 110 feet in exchange for community benefits. The Proposed Project would have a combined FAR of 125 percent; the maximum height of the proposed building would be approximately 87 feet. The average building height would be 59.9 feet. Therefore, the Proposed Project would require the Project Sponsor to provide community benefits in exchange for bonus-level development. Table 2-2, below, compares the allowed development under LS zoning for both the base level and bonus level as well as development proposed under the Proposed Project.

Proposed Development

The Proposed Project would involve demolition of four buildings and construction of a 131,825 gsf R&D building, which would be designed with the flexibility to accommodate a single R&D/life science tenant or meet the needs of multiple tenants. The building would be oriented in an east–west direction, with the southern frontage along O'Brien Drive being the front façade. The entry lobby, with a 2,659 gsf "grab and go" café, would be on the ground floor, at the center of the south elevation. In addition, a 500 sf chemical storage area would be provided north of the R&D building, in the truck dock/loading area. The main lobby and the first floor would be more than 2 feet above the base flood elevation, as required by the LS zoning district. No basement would be constructed.

To the west of the R&D building would be 89 surface parking stalls, along with access to an additional 160 surface parking stalls on the adjacent Accessory Parking Lot. Access to parking would be provided from O'Brien Drive via a driveway in the southwest corner of the Project site and from Casey Court in the eastern portion of the parcel. Up to 249 surface stalls would be provided as a part of the Proposed Project. A sidewalk would connect the two parking lots.

Table 2-2. Allowed and Proposed Development at the Project Site

	LS Zoning Requirements (Base Level)	LS Zoning Requirements (Bonus Level)	Proposed Development
Site Area	25,000 sf (minimum [min.]) 100 feet x 100 feet (min)	25,000 sf (minimum [min.]) 100 feet x 100 feet (min)	106,358 sf (Lot 1) 73,180 sf (Lot 2) 179,538 (Total)
Floor Area Ratio	55% (+10% commercial)	125% (+10% commercial)	124% (131,825 sf)[a]
Maximum Height[b]	35 feet (+10 feet, flood zone)	110 feet (+10 feet, flood zone)	100.75 feet[c]
Average Height[b,d]	35 feet (+10 feet, flood zone)	67.5 feet (+10 feet, flood zone)	60.58 feet
Open Space[e]	35,908 sf min (20% of total)	35,908 sf min (20% of total)	39,306 sf (21.8% of total)
Public Open Space[f]	17,954 sf min (10% of total)	17,954 sf min (10% of total)	19,399 sf (10.8% of total)

Source: Tarlton Properties and DES Architects + Engineers, 2021.

Notes:

a. Although the building site includes Parcels 1 and 2, the FAR calculated here for the development uses Parcel 1. No structures would be located on Parcel 2. However, Parcel 2 would include 11,500 sf of open space and 4,780 sf of public open space; these numbers are included in the open space totals for the Proposed Project.

b. Properties within the flood zone or subject to flooding and sea-level rise are allowed a 10-foot increase in average height and maximum height.

c. Does not include parapet or mechanical equipment.

d. Height is defined as average height of all buildings on one site where a maximum height cannot be exceeded.

e. Open space calculations are based on the square footage of the Project site and not on the new building area.

f. Public open space area is also included in open space totals.

The R&D building would have a footprint of approximately 26,056 sf, or approximately 24.5 percent of the Development Lot. Table 2-3 and Figures 2-3 and 2-4 summarize the usable building area.

Table 2-3. Proposed Useable Building Areas

	R&D Building
R&D	124,821 gsf
Café	2,659 gsf
Chemical Storage (exterior)	500 gsf

Site Access, Circulation, and Parking

Access and Circulation. The Project site would be accessible from two driveways on O'Brien Drive as well as a driveway on Casey Court. In addition, a curb cut would be included at the front of the proposed building on O'Brien Drive, allowing drivers in vehicles, including shuttles, to drop off and pick up passengers. The primary entrance/exit for employees would be at the west side of the new building, in the area where vehicles would access the parking lot. Additional parking would be accessible from the driveway on Casey Court. A secondary driveway would be provided in the northeast portion of the Development Lot, mainly for service vehicle access. A truck loading dock would be on the northwest side of the building but screened from the street by vegetation. It is anticipated that a maximum of three truck deliveries would be made per weekday. Service vehicles would travel north through the Project site, turn east at the service driveway, then exit at the driveway in the northeast corner of the Project site.

The Project site would also be accessible to bicyclists and pedestrians via existing sidewalks and planned bicycle lanes along O'Brien Drive. No additional bicycle or pedestrian connections or linkages are proposed as part of the Proposed Project.

Emergency Access. Emergency access to the Project site would be provided at the parking lot entrance in the southwest portion of the Project site. Emergency vehicles would travel north through the Project site, turn east at the parking lot, then exit at the service driveway in the northeast corner of the Project site. In addition, emergency vehicles would have access to the curb cut at the front of the proposed building; a staging area would occur on the south side of the building along O'Brien Drive. Two existing fire hydrants, which would remain under the Proposed Project, are located along O'Brien Drive. One additional fire hydrant would be located on O'Brien Drive at the entrance to the driveway in the northeast portion of the Project site. A fire department connection is proposed on O'Brien Drive in front of the main entrance to the building.

Parking. As stated above, the Project site currently includes surface parking with 142 uncovered stalls, all of which would be removed as part of the Proposed Project. Parking would be provided onsite in the form of surface parking. The parking would be available to new tenants of the proposed building. In total, 249 new parking spaces would be provided at the Project site, including seven Americans with Disabilities Act– (ADA-) compliant spaces on Parcel 1 adjacent to the building. Table 2-4 summarizes the proposed parking at the Project site.

TDM Program

A TDM program would be implemented as part of the Proposed Project, consistent with the requirements of Menlo Park Municipal C-de Section 16.44.090. The TDM program would be designed to provide alternatives to single-occupancy automobile travel to and from the Project site. The following is a list of the potential elements of the TDM program:

- Participation in a local transportation management association
- Preferential carpool parking spaces
- Preferential vanpool parking spaces
- Designated parking spaces for car-share vehicles
- Pay-for-parking program
- Bike-share program
- Subsidized transit tickets for employees
- Subsidy for carpool, vanpool, shuttle, or bus services
- Compressed workweek program
- Alternate-hours workweek program
- Telecommuting
- Passenger loading zones for carpools and vanpools
- Safe, well-lit, and accessible routes to nearby transit services or shuttle stops
- Car-share membership for employees
- Guaranteed ride-home program
- Bike lockers/racks
- Showers/changing rooms
- Shuttle service
- Vanpool program
- Commute-assistance center
- Parking cash-out program

Landscaping

Landscaping would be provided along O'Brien Drive and Casey Court. The landscaping would be designed to complement the existing campus buildings in the area. Approximately 19,399 sf of the street frontage (54 percent of the required open space) would be landscaped. In total, approximately 39,306 sf of open space would be provided throughout the Project site, representing 21.8 percent of the total area. The private open space proposed as part of the Proposed Project would include a 6,600 sf roof deck with landscaped areas and seating. The public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation. Furnishings at the public space adjacent to the proposed café may include trash receptacles as well as benches and other outdoor furniture.

There are currently 40 trees on the Project site, all of which would be removed during construction of the Proposed Project. Of these, 13 are heritage trees. The Project Sponsor would be required to plant 13 trees with a value equal to the appraised value of the removed heritage trees, subject to approval by the City Arborist regarding the locations, sizes, and the number of replacement trees.[7] In total, the Project site would have 114 trees.

Approximately 92.7 percent (166,296 sf) of the existing Project site is covered with impervious surfaces, consisting of buildings, parking lots, and driveway aisles. Approximately 7.3 percent (13,077 sf) of the existing Project site is covered with landscaping and other pervious surfaces. Implementation of the Proposed Project would reduce the total impervious surface to approximately 152,089 sf, or 84.8 percent of the Project site. The pervious surface would increase from 13,077 sf to 27,284 sf, or 15.2 percent of the Project site, for a net increase in pervious area of 14,207 sf. Hardscape would comprise concrete paving, decomposed granite paving, and concrete pavers. The landscaped area would include one flow-through planter, a bioretention area, a landscape planter, and five self-treating pervious areas around the proposed building and surface parking lots. The bioretention area would treat runoff from the proposed impervious areas. Flow-through planters, landscape planters, and self-treating pervious areas would treat rain that falls directly in those areas, retaining and infiltrating rainfall up to the design rainfall depth. Table 2-5 summarizes the existing and proposed impervious and pervious areas at the Project site. The landscape plans for Parcels 1 and 2 are shown in Figures 2-5 and 2-6.

Table 2-5. Impervious/Pervious Area Summary

	Parcel 1	Parcel 2	Total
Existing			
Pervious Area	7,915 sf	5,162 sf	13,077 sf (7.3%)
Impervious Area	98,440 sf[a]	67,856 sf	166,296 sf (92.7%)
Total	106,355 sf	73,018 sf	179,373 sf
Proposed			
Pervious Area	17,754 sf	9,530 sf	27,284 sf (15.2%)
Impervious Area	88,601 sf[a]	63,488 sf	152,089 sf (84.8%)
Total	106,355 sf	73,018 sf	179,373 sf

Source: Tarlton Properties and DES Architects + Engineers, 2021.
Note:

a. The impervious surfaces on Parcel 1 includes the existing 10,495 sf drainage ditch. The drainage ditch would not be altered as a result of the Proposed Project.

Building Features and Employment

The proposed five-story, steel-frame building would be designed to house R&D/life science tenants and a ground-floor cafe. The curved south façade of the R&D structure would be composed of full-height, performance-tinted, bird-friendly insulated glazing in an aluminum-frame curtain wall. The balance of the building would be clad in glass-fiber reinforced-concrete panels, formed metal panels, and aluminum-frame windows with tinted insulated glazing. Roof-mounted mechanical equipment would be concealed behind a formed metal screen. The southern portion of the roof would have a paved deck with

[this page left blank intentionally]

seating areas and landscaping. A two-story entry lobby would be at the center of the south elevation of the R&D facility. In addition, a café would be on the main level, adjacent to the lobby. Lighting would be provided at the Project site by roadway/driveway lights, area lights, bollards, and in-ground lights. All of the Project site's lighting would be LED fixtures.

The proposed building would be designed to account for flooding and/or sea-level rise due to the proximity of the Bay. The Federal Emergency Management Agency's base flood elevation at the Project site is 12.8 feet above mean sea level. The first floor of the building would be at an elevation of 14.8 feet above mean sea level, which would be approximately 2 feet above the base flood elevation, consistent with the requirements of ConnectMenlo.

The Proposed Project would seek a rating of LEED Gold, or equivalent, for Building Design and Construction, consistent with the City's Zoning Ordinance and a requirement for bonus-level development. Strategies for compliance with LEED standards include onsite amenities that can be shared with all campus buildings, shuttle service to Caltrain, carpooling, onsite car-share and bike-share programs, a stormwater management plan, and an onsite recycling program. In addition, 100 percent of the electricity currently used by the campus is purchased through Peninsula Clean Energy (PCE); the Proposed Project would continue this practice, as described in more detail in the section that follows.

Figure 2-7 shows the building sections, and Figure 2-8 depicts the streetscape elevations.

It is estimated that approximately 143 employees currently occupy the buildings at the Project site.[8] In general, biotech and R&D uses require fewer employees than office buildings of the same size. Although administrative areas within biotech and R&D companies generally have an employee density similar to that of a corporate office, research and laboratory spaces have lower employee densities because the same employees often use both spaces (i.e., researchers carry out research in laboratory space and also have an office). Therefore, R&D companies have lower employee densities overall than equivalent office spaces. Anticipated ratios range from 30 to 45 percent office and 55 to 70 percent R&D areas. Upon full buildout, it is estimated that approximately 328 employees would occupy the proposed building,[9] a net increase of approximately 185.

Utilities

Onsite utilities would be served by energy (gas and electric), domestic water, wastewater, and storm drain facilities. All onsite utilities would be designed in accordance with applicable codes and current engineering practices.

Energy. The Proposed Project would meet 100 percent of its energy demand (gas and electric), consistent with the requirements of Menlo Park Municipal Code Section 16.44.130, which includes any combination of the following measures: onsite energy generation, purchase of 100 percent renewable electricity through PCE or Pacific Gas and Electric Company (PG&E) in an amount equal to the annual energy demand of the Proposed Project, purchase and installation of local renewable energy generation within the city of Menlo Park in an amount equal to the annual energy demand of the Proposed Project, or purchase of certified renewable energy credits and/or certified renewable energy offsets annually in an amount equal to the annual energy demand of the Proposed Project.

[8] Current employee estimate provided by the Project Sponsor, based on a conservative generation rate of one employee per 400 gsf for existing R&D space and one employee per 500 gsf for existing warehouse space.

[9] Employee estimate provided by the Project Sponsor, based on a conservative generation rate of one employee per 400 gsf.

If needed, PG&E would provide gas and electrical power for proposed facilities. Existing gas and electric lines in the vicinity would continue to serve the Project site but may be upgraded, if necessary. City reach codes restrict the use of non-electric fuel sources for energy in new buildings but includes an exception for non-residential buildings containing a laboratory space; such areas may contain a non-electric space conditioning system, provided that an all-electric system would not be cost effective or feasible, as verified by a third party.[10] The Project Sponsor would request an exception (Ordinance No. 1057) for gas space heating/conditioning because of the building's scientific laboratory uses. The exception for space conditioning would be subject to review and approval by the City prior to building permit issuance. The Proposed Project would be required to install a solar photovoltaic system. The Project design includes a solar photovoltaic system.

Domestic Water. Onsite water lines would connect to Menlo Park Municipal Water District facilities. An existing 10-inch water main runs along the O'Brien Drive frontage between the curb and property line. The City's 2018 Water System Master Plan identified a deficiency regarding the volume of water provided by the existing water main and found that a 12-inch main would be required to serve the O'Brien Drive life sciences service area. As a result of the City's 2018 Water System Master Plan, the City is in the process of developing a plan with property owners/project sponsors in the vicinity of the Project site for upsizing the existing water main. The water main would be upsized prior to occupancy of any new buildings within the life sciences service area. The Project Sponsor's participation would be ensured through Project conditions of approval. In addition, multiple service connections to the existing buildings would be removed. Separate connections would be provided for fire service and for domestic water. The Proposed Project would include water-conserving plant material and irrigation systems, in compliance with the Water-Efficient Landscape Ordinance.

Wastewater. The sanitary sewer system in this area of the city is owned and operated by the West Bay Sanitary District (WBSD). An existing 18-inch sanitary sewer runs under O'Brien Drive. A proposed 6-inch sanitary sewer line on the north side of the proposed building would connect to this 18-inch sanitary sewer. A typical WBSD control manhole with a flow meter in it for recording flows would also be installed, providing an access point for sampling wastewater just before the connection point. Wastewater from the Project site would ultimately be discharged to the Silicon Valley Clean Water pump station in Redwood City.

Storm Drainage. Stormwater runoff from the Project site currently flows to three different outlets. A very small portion of it drains into the open drainage ditch along the west property line. Some of the Project site drains to an existing valley gutter that extends into the adjacent site to the north, then ultimately outlets to O'Brien Drive. The remainder of the Project site drains into onsite catch basins and area drains that connect to a bubble-up structure within O'Brien Drive. The bubble-up structure and the valley gutter would be removed. Runoff from the Project site would be collected and treated onsite before being released into a proposed 18-inch storm drain that would extend approximately 115 feet south of Casey Court to the Project site's storm drain outlet pipe. Stormwater treatment measures, in compliance with state and County of San Mateo requirements, would be implemented on the Project site. Because the post-construction impervious area would be less than the pre-construction impervious area, no stormwater detention would need to be provided on the Project site.

[10] In 2019, the City of Menlo Park adopted local amendments to the State Building Code that require electricity to be the only fuel source for new buildings (not natural gas). This ordinance (Menlo Park Municipal Code Section 12.16) applies only to newly constructed buildings (i.e., from the ground up) and does not include additions or remodels.

Reclaimed Water. There is currently no reclaimed water service to the Project site. At some point in the future, reclaimed water service may be installed within O'Brien Drive. The proposed building would be plumbed to allow for a future connection and reserve space for a future backflow preventer device.

Project Construction

The proposed construction methods are considered conceptual and subject to review and approval by the City. For the purposes of this environmental document, the analysis considers the construction plan described below.

Construction Schedule and Phasing

The Proposed Project would consist of six phases over approximately 16 months, which may overlap, as shown below.

- Phase 1: Demolition – 25 days
- Phase 2: Rough Grade/Underground/Foundation/Slab-on-Grade – 85 days
- Phase 3: R&D Building Structure – 90 days
- Phase 4: Building Skin – 85 days
- Phase 5: Building Warm Shell – 70 days
- Phase 6: Sitework – 140 days

Standard construction work hours would be 7:00 a.m. to 3:30 p.m. Monday through Friday. It is anticipated that construction of the Proposed Project would not involve pile driving or nighttime construction.

Construction Spoils and Debris

The Proposed Project would require soil excavation and the removal of trees. The Proposed Project's excavation depths would vary from 3 to 9 feet below the finished floor for the foundations, pile caps, and elevator pits. The proposed excavation would produce approximately 4,000 cubic yards (cy) of excavated material. All of the excavated material would be exported offsite; none would be used as backfill material or grading material in landscaped areas within the Project site. In addition, approximately 11,000 cy of material would be generated during demolition on the Project site; approximately 4,000 cy would be generated during construction. Furthermore, foundation piles are anticipated to be drilled to a depth of 85 to 90 feet.

During construction activities, the Project Sponsor would implement a waste diversion and recycling program to meet LEED and City of Menlo Park waste diversion requirements. One portion of this plan would be to recycle existing site asphalt and concrete and reuse it onsite where possible and where allowed by the appropriate design agents and consultants. During construction, multiple debris boxes would be used onsite for sorting and separating to achieve the highest diversion rate possible. Site spoils and excavation materials would be hauled offsite to the nearest processing facility. The subcontracted company that would be used for recycling and separating waste materials would provide the appropriate documentation to meet the aforementioned requirements.

As such, construction of the Proposed Project would require disposal of exported materials at a permitted landfill. All soil and debris, including contaminated soil, would be off-hauled to the Dumbarton Landfill or a similar appropriate facility. The haul trucks would access the site by heading east on CA 84. The number of truck trips required to dispose of demolition material and excavated soil would range from 175 to 200 during the demolition phase and excavation phase, respectively. The number of truck trips required to dispose of excavated material would be approximately 30 per day, with 9 cubic yards per truck.[11]

Construction Equipment and Staging

Typical equipment would be used during construction of the Proposed Project, including dump trucks, end-dump trailers, cranes, forklifts, scissor lifts, lifting equipment, excavators, trenchers, graders, compactors, backhoes, support vehicles, drill rig, and concrete ready-mix delivery trucks. Potential construction laydown and staging areas would be located west of the building in the area of the proposed parking lot on Parcel 1.

Construction Employment

The size of the construction workforce would vary during the different phases of construction. The maximum number of construction workers required for construction would be 60 during the warm shell and the sitework phases (Phases 5 and 6). Parking for construction workers would be provided onsite, not on public streets.

Project Approvals

The following City discretionary approvals would be required prior to development:

- **Use Permit.** The Project Sponsor would need a use permit, per Menlo Park Municipal Code Chapter 16.82, for the bonus-level development.
- **Architectural Control**, per Menlo Park Municipal Code Chapter 16.68, the Project Sponsor would be required to obtain an architectural control review and approval of the specific building design from the Planning Commission.
- **Lot Merger and/or Lot Line Adjustment**, per Menlo Park Municipal Code Chapter 15.30, the Project Sponsor would apply to merge three parcels (APNs 055-433-320, 055-433-330, and 055-433-350) into a single legal parcel.
- **Heritage Tree Removal Permit**. A tree removal permit would be required for each heritage tree proposed for removal, per Menlo Park Municipal Code Section 13.24.040.
- **Below-Market-Rate Housing Agreement**. A below-market-rate housing agreement would be required, per Menlo Park Municipal Code Section 16.96.030, for the payment of in-lieu fees associated with the City's Below-Market-Rate Housing Program.

[11] Certain discarded materials may be able to use 40-cubic-yard dumpster trucks, which would reduce the number of overall truck trips; however, this document conservatively estimates the number of trips per day using 9-cubic-yard trucks.

- **Environmental Review**. This would include release of the Initial Study and certification of the environmental impact report (EIR), with approval of a mitigation monitoring and reporting program (MMRP) for the Proposed Project and statement of overriding considerations to the extent the EIR discloses any potentially significant impacts that cannot be mitigated to less-than-significant levels. In addition, the Proposed Project would be required to comply with the MMRP for ConnectMenlo as part of the Proposed Project.

As part of the Proposed Project review process conducted by the City, a fiscal impact analysis will be prepared. In addition, an appraisal will identify the required value of the community amenity.

Reviews/Approvals by Responsible Agencies

Reviews and approvals by other agencies that may be needed for the Proposed Project to proceed are also identified. Some of these agencies will need to approve certain parts of the Proposed Project prior to full implementation, but their approval is not required for EIR certification.

- **Bay Area Air Quality Management District** – Permits for onsite generators, boilers, and other utility equipment.
- **California Department of Transportation** – Review of traffic circulation effects and consultation on potential traffic improvements that may affect state highway facilities, ramps, and intersections.
- **California Regional Water Quality Control Board/San Mateo Countywide Water Pollution Prevention Program** – Approval of National Pollutant Discharge Elimination System permit for stormwater discharges.
- **City/County Association of Governments** – Review of potential effects on Routes of Regional Significance and the proposed TDM program.
- **San Mateo County Transportation Authority** – Review of potential effects on public transit.
- **Menlo Park Fire Protection District** – Approval of proposed fire prevention systems, onsite generators, and emergency vehicle access.
- **San Mateo County Environmental Health Division** – Review of food service functions and onsite generators.
- **San Francisco Public Utilities Commission** – Review of any potential work within the Hetch Hetchy right-of-way.
- **West Bay Sanitary District** – Approval of wastewater hookups.
- **Native American Heritage Commission** – Consultation and review of cultural resources in the area.

[page intentionally left blank]

3. Environmental Checklist

Environmental Factors Potentially Affected

The environmental factors checked below could be affected by the 1125 O'Brien Drive Project (Proposed Project), involving at least one impact that is a "potentially significant impact," as indicated by the checklists on the following pages. In addition, the following topics will require further review in an environmental impact report (EIR): air quality, biological resources, cultural/tribal resources, greenhouse gas emissions, noise, population and housing, and transportation.

☐ Aesthetics	☐ Agricultural and Forestry	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology/Soils	☒ Greenhouse Gas Emissions	☒ Hazards and Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☒ Noise	☒ Population/Housing*	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☒ Mandatory Findings	☐ Wildfire**

* Impacts related to population/housing are not expected to result in potentially significant impacts but are checked here to indicate that further analysis in the environmental impact report (EIR) is required.

** An analysis of wildfire is required only if the Project site is in or near State Responsibility Areas or lands that have been classified as Very High Fire Hazard Severity Zones. Because the Project site is urbanized and not in one of these areas, an analysis of this topic is not included in this document.

Determination

On the basis of this initial evaluation:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that, although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Proposed Project have been made by or agreed to by the Project Sponsor. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☒ I find that the Proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document, pursuant to applicable legal standards, and 2) has been addressed by mitigation measures, based on the earlier analysis, as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that, although the Proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, pursuant to applicable standards, and (b) have been avoided or mitigated, pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Proposed Project, nothing further is required.

Organization of This Chapter

Each California Environmental Quality Act (CEQA) topic or environmental issue in this chapter is given its own section, with each containing the subsections listed below.

- **Setting** – The Setting describes existing baseline conditions, including environmental context and background. For the topics to be analyzed in the EIR, a Setting section is not provided in this document.
- **General Plan Goals and Policies** – The City of Menlo Park (City) General Plan contains general goals, policies, and programs that require local planning and development decisions to consider impacts on each environmental issue. The applicable goals and policies are listed in each section, with the exception of the topics to be analyzed in the EIR.
- **Environmental Checklist and Discussion** – The impact discussion identifies standards of significance and evaluates how the Proposed Project would affect baseline conditions. Each checklist item includes a summary of the analysis in the City of Menlo Park General Plan and M-2 Area Zoning Update (ConnectMenlo) EIR, discusses the specific impacts induced by the Proposed Project, and concludes with a comparison of the Proposed Project to the findings in the ConnectMenlo EIR. However, if a checklist item is determined to result in no impact, then a Project-specific discussion is not needed and, therefore, not included.

Evaluation of Environmental Impacts

This section identifies the environmental impacts of the Proposed Project by answering questions from Appendix G of the CEQA Guidelines, the Environmental Checklist form. The analysis in this document considers all phases of the Proposed Project's planning, construction, implementation, and operation. Pursuant to Section 15063(d) of the CEQA Guidelines, this document identifies the environmental setting and discusses the environmental effects of the Proposed Project. For each impact identified, a level of significance is determined using the following classifications:

- **Potentially Significant Impact** is appropriate if there is substantial evidence that an effect is significant or the established threshold has been exceeded. If there are one or more "potentially significant impact" entries when the determination is made, then an EIR may be required. These topics will require further analysis in the EIR.
- **Less-than-significant Impact with Mitigation** is included when the impacts would be potentially significant but implementation of Project-specific mitigation measures and/or mitigation measures from the ConnectMenlo EIR would reduce the impacts to a level of less than significant. Project-level mitigation measures are provided immediately following the discussion. ConnectMenlo EIR mitigation measures are reproduced at the end of each subsection.
- **Less-than-Significant Impact** applies when the Proposed Project would affect, or be affected by, the environment, but based on sources cited in the report, the impact would not have an adverse effect and would not exceed the established thresholds.
- **No Impact** denotes situations in which there is no adverse effect on the environment. Referenced sources show that the impact does not apply to the Proposed Project. For these impacts, the analysis in the ConnectMenlo EIR is summarized and conclusions are made, but a Project-specific discussion is not provided.

I. Aesthetics	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the Project:					
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☐	☒
c) Conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒	☐
d) Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	☐	☒	☐

Setting

Regional Visual Context

Menlo Park is a 19-square-mile municipality situated approximately 30 miles south of San Francisco and 20 miles north of San José on the San Francisco Peninsula (Peninsula). Menlo Park is one of more than a dozen cities on the flatter portions of the western margin of San Francisco Bay (Bay), east of the San Andreas Fault Zone. It is surrounded by the municipalities of Redwood City to the northwest, Atherton to the west, Palo Alto and Stanford University to the southeast, and East Palo Alto to the east. The Bay is north of Menlo Park.

Urban development within the region is largely concentrated between the Bay and the Interstate 280 (I-280) corridor. In general, the Peninsula is developed with low-density uses within distinct neighborhoods that include commercial, retail, and residential buildings. Larger-scale development, such as office parks and industrial buildings, tends to be located between the Bay and US 101. Some high-rise office, apartment, and hospital buildings are located between US 101 and I-280; however, these buildings are concentrated mainly along the US 101 and El Camino Real corridors.

The Bay and its natural features are key visual components in the eastern and northern portions of Menlo Park. The Santa Cruz Mountains, which run the length of the Peninsula and form a barrier between the Pacific Ocean and the Bay, are visible from the majority of Menlo Park as well as adjacent cities, especially north and east of US 101. The visible portion of the mountain range is Skyline Ridge, which rises more than 2,400 feet. The ridge is approximately 15 miles south of the Project site.

Project Vicinity Visual Context

The Project site is in an area known as the Bayfront Area.[12] The Bayfront Area has been historically defined by light industrial/office use; however, under recent planning updates, multi-family housing is currently permitted in some parts of the Bayfront Area but not in the LS zoning district. The road network in the

[12] According to the City General Plan and ConnectMenlo EIR.

Bayfront Area includes US 101, divided arterial roads (e.g., Willow Road, Bayfront Expressway, Marsh Road), and local streets, which vary in width (many are without sidewalks). The local streets are laid out in an ad-hoc pattern to serve groups of parcels. Building placement and landscaping vary, but buildings are usually surrounded by parking or other paved areas on all sides; siting and landscaping do not fit a consistent pattern. Almost all buildings have flat roofs, many are rectangular in form, and most have metal or cementitious exterior wall materials. In general, buildings in the Bayfront Area range from one to three stories in height. The contrast between the differing land uses and the natural setting of the Bay to the north provides limited unity and inconsistent visual patterns.

The Bayfront Area is relatively flat, with limited long-range views, due, in part, to the prevalence of buildings that block views of the surroundings. In addition, mature trees and vegetation provide visual separation and screening between existing buildings and along streets. Visual resources to the north, such as the Bay, the hilly open space at Bedwell Bayfront Park (Bayfront Park), the salt marshes, Don Edwards San Francisco Bay National Wildlife Refuge (Refuge), and Dumbarton Bridge, are generally not visible from the majority of vantage points in the vicinity of the Proposed Project; these resources are visible only from areas immediately adjacent to Bayfront Expressway. No scenic resources, such as rock outcroppings, cliffs, or knolls, are present in the Proposed Project's vicinity, although mature trees are present throughout the area.

The ConnectMenlo EIR described the Bayfront Area as seven distinct subareas for the purpose of describing the general characteristics and development patterns that currently exist throughout the area. The Project site is within the O'Brien Drive subarea. As explained in the ConnectMenlo EIR, the parcels and buildings fronting O'Brien Drive are relatively small compared with the rest of the commercial lots in the Bayfront Area, making it a unique subarea. Winding block patterns define O'Brien Drive and connect to Willow Road and University Avenue. Generally, this area consists of one-story tilt-up buildings, typified by utilitarian architecture and minimal windows/openings. The buildings are smaller than similar types of development in the Bayfront Area. Small parking areas are located in the front setback and the limited side and rear setbacks. Mature trees are consistently planted adjacent to O'Brien Drive. Newer buildings show more articulation and include mirrored or colored windows/openings on the ground and upper floors. Buildings in this area range from two to three stories in height.

The Project site is also part of the Menlo Park Labs campus, which comprises a variety of life science and biotech companies. The entire campus provides approximately 1.4 million gross square feet (gsf) of space within its buildings and includes landscaping, surface parking lots, onsite food services, and recreational facilities for tenants.[13]

Project Site Visual Context

The Project site includes existing buildings at 1105, 1135, and 1165 O'Brien Drive. The three single-story buildings, with a maximum height of 20 feet, are located on two parcels (assessor's parcel number [APN] 055-433-320 and APN 055-433-330); an adjacent third parcel (APN 055-433-350) has a drainage ditch along the western edge. Together these properties are collectively referred to as the Development Lot or Parcel 1. The tilt-up concrete buildings are utilitarian-style structures and lack architectural distinction, typical of mid-20th century suburban industrial office park development. The first floor of each building, the façade of which is clad in Roman brick veneer, is slightly recessed. This area contains

[13] Tarlton Properties. 2021. *Menlo Park Labs – About*. Available: https://www.menloparklabs.com/about/. Accessed: February 4.

the main entrance. Building entrances consist of a fully glazed aluminum-frame door surrounded by an aluminum-framed window assembly. Rectangular metal-braced columns support the top portions of the façades. The braces are in the structural bays flanking the main entrance. The façades above the building entrances are clad in smooth, minimally decorated stucco and devoid of fenestration.

The buildings at Parcel 1 are surrounded by surface parking lots with 98 uncovered stalls. Minimal decorative landscaping is included at the front entrances to the buildings or along the O'Brien Drive frontage. There are currently 40 trees on the Project site, 13 of which are heritage trees. The approximately 20-foot-wide, concrete-lined drainage ditch, also located on Parcel 1, that runs from storm drains in East Palo Alto contains no vegetation; the bottom of the drainage ditch is lined with debris.

In addition, the Project site includes a second parcel, referred to as the Accessory Parking Lot or Parcel 2, at 1 Casey Court. Parcel 2 includes an existing office/warehouse building and 44 uncovered surface parking stalls. There is minimal landscaping onsite. Similar to the existing buildings on Parcel 1, the building at 1 Casey Court lacks architectural distinction and is typical of a mid-20th-century industrial office park. The building is constructed of sheet metal paneling; the façades of the building do not include fenestration. A large metal overhang with loading bays extends to the side of the existing building.

Scenic Corridors/Vistas and Onsite Visibility

Scenic Corridors/Vistas. These areas are viewed as a single entity that encompasses the total field of vision from a specific point, or series of points, along a linear transportation route. Public view corridors are areas where short-range, medium-range, and long-range views are available from publicly accessible viewpoints, such as city streets. The Bayfront Area is on the flatter portions of the western margin of the Bay, east of the San Andreas Fault Zone; this limits scenic vistas within the city and the area. Because of the flat nature of the study area, the majority of the city, particularly the Bayfront Area, is afforded views of the Santa Cruz Mountains. Scenic resources also include the Bay itself and its natural features, including the salt ponds and Bayfront Park, as viewed from the eastern and northern portions of the city. Per the ConnectMenlo EIR, the city has no designated scenic corridors or scenic vistas; however, the section of I-280 within the ConnectMenlo study area is a designated State Scenic Highway per the California Scenic Highways Program.[14] In addition, the ConnectMenlo EIR considers views to the Santa Cruz Mountains, the Bay, and the foothills and San Francisquito Creek within the city as scenic vistas.

Views from the Project Site. Because of the relatively flat topography of the Project site and vicinity, as well as the prevalence of buildings and vegetation, views from at-grade locations are largely restricted. Views at the Project site consist mainly of onsite surface parking lots and buildings, perimeter landscaping, and immediately adjacent buildings and power lines. Views of the salt ponds, marshes, the Refuge, the Bay, and the Santa Cruz Mountains are obstructed from pedestrian-level viewpoints. The Project site is visible from O'Brien Drive, Casey Court, the western segment of Kavanaugh Drive, and portions of Kelly Court.

[14] California Department of Transportation. 2021. *California Scenic Highway Mapping System, San Mateo County.* Available: https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways. Accessed: February 4, 2021.

Light and Glare

Light pollution refers to all forms of unwanted light in the night sky, including glare, light trespass or spill on adjacent sensitive receptors, sky glow, and over-lighting. Views of the night sky are an important part of the natural environment. Excessive light and glare can be visually disruptive to humans and nocturnal animal species. Although there is considerable development in Menlo Park, commercial development is concentrated in the downtown area and at intersections along major arterials; industrial uses are concentrated in the Bayfront Area (including the Project site). Light pollution in most of the city is minimal and restricted primarily to areas with lighting along major streets and freeways or areas with nighttime illumination within commercial and industrial buildings.

Light sources at the Project site include the fixtures on the buildings and positioned around the paved parking areas. Although there are four buildings at the Project site, the surrounding area is not brightly illuminated at night because of the limited number of windows and entrances. In addition, cobra-style street lighting is provided along O'Brien Drive and Casey Court. Although the buildings have glass doors and windows, the area of reflective surface is minimal because of the architectural style. Furthermore, vegetation blocks the reflective surfaces in many exterior areas.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element and the Open Space/Conservation Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on aesthetics. The following City General Plan goals and policies would serve to reduce impacts on the visual quality and character in the Bayfront Area: Goal LU-1, Policy LU-1.1; Goal LU-4, Policy LU-4.3 and Policy LU-4.5; Goal LU-6, Policy LU-6.2 and Policy LU-6.8; and Goal OSC-1, Policy OSC-1.11, Policy OSC-1.13, and Policy OSC-1.15.

Environmental Checklist and Discussion

a. Have a substantial adverse effect on a scenic vista? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-1 (pages 4.1-8 to 4.1-14) and determined to be less than significant because no publicly accessible views of scenic resources would be blocked or obstructed by increasing height limits in the Bayfront Area. Similar views would continue to be visible between buildings and over lower-intensity areas. No mitigation measures were required.

Conclusion

The physical conditions, as they relate to scenic vistas, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because of the relatively flat topography of the Project site and vicinity, as well as the prevalence of existing buildings and vegetation, views from locations at grade are largely restricted. Although the Proposed Project would result in additional height, bulk, and massing from the proposed building, this area is not considered a scenic vista. The Project site is not viewed from scenic vistas, resulting in ***no impact***. No further study is required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-2 (pages 4.1-14 to 4.1-15). The ConnectMenlo EIR determined that impacts would be less than significant because none of the potential new development would be within the I-280 viewshed. No mitigation measures were required.

Conclusion

The physical conditions, as they relate to scenic resources adjacent to a scenic highway, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site is not adjacent to, or visible from, a state scenic highway. Therefore, ***no impact*** would occur, and no further study is required.

c. Conflict with applicable zoning and other regulations governing scenic quality? (Less than Significant)

Analysis in the ConnectMenlo EIR

The following City General Plan goals and policies would serve to reduce impacts on visual quality and character in the Bayfront Area: Goal LU-1, Policy LU-1.1, Goal LU-4, Policy LU-4.3, Policy LU-4.5, Goal LU-6, Policy LU-6.2, Policy LU-6.8, Goal OSC-1, Policy OSC-1.11, Policy OSC-1.13, and Policy OSC-1.15. These policies encourage orderly development and land use patterns, promote high-quality architectural design, and protect and enhance the scenic qualities of Menlo Park.

Consistency with applicable zoning and other regulations was analyzed in the ConnectMenlo EIR as Impact LU-2 (pages 4.9-14 to 4.9-23) and determined to be less than significant with mitigation incorporated (as discussed in more detail in Section XI, Land Use and Planning). In addition, this checklist item related to aesthetics was analyzed in the ConnectMenlo EIR as Impact AES-3 (pages 4.1-15 to 4.1-16). The ConnectMenlo EIR concluded that the impacts would be less than significant. Although more intense development with taller and larger buildings could occur in the Bayfront Area, future development would not result in a substantial change to the existing visual character of the Bayfront Area or its surroundings. No mitigation measures were required.

Project-Specific Discussion

For purposes of this analysis, a conflict with applicable zoning and other regulations governing scenic quality would occur if the Proposed Project were to introduce a new visible element that would be inconsistent with the overall scenic quality, scale, and character of surrounding development. The development would also need to be consistent with City General Plan policies, the City Zoning Ordinance, and the Menlo Park Municipal Code. The analysis considers the degree of contrast between proposed features and the existing features that represent the area's aesthetic image, in addition to the degree to which the Proposed Project would contribute to the area's aesthetic value.

Construction

As described above, the Project site is not considered visually sensitive because of its urbanized surroundings with industrial, office, and warehouse buildings. Construction of the Proposed Project would include demolition, excavation, and construction activities on the Project site. These construction activities, which would occur over an approximately 16-month period, would temporarily degrade the visual character of the Project site and the surrounding area. Construction materials and equipment would be staged entirely onsite at the proposed surface parking lot on Parcel 1, in the drive aisles adjacent to the garage and behind the proposed building, and in landscaped areas. Construction fencing and existing landscaping would provide visual screening. Although construction would be visible from public view corridors along O'Brien Drive and Casey Court, visual degradation associated with construction would be short term and temporary and would not conflict with applicable zoning and other regulations governing scenic quality.

Operation

The proposed five-story, steel-frame building would be located on Parcel 1 and designed to house research-and-development (R&D)/life science tenants. In addition, a total of 249 parking stalls would be provided throughout the Project site, including 89 stalls at Parcel 1 and 160 stalls at Parcel 2. The curved south façade of the R&D structure would be composed of full-height, performance-tinted bird-friendly insulated glazing in an aluminum-frame curtain wall. The balance of the building would be clad in glass-fiber reinforced-concrete panels, formed metal panels, and aluminum-frame windows with tinted insulated glazing. Roof-mounted mechanical equipment would be concealed behind a formed metal screen. The southern portion of the roof would have a paved deck with seating areas and landscaping. A two-story entry lobby would be at the center of the south elevation of the R&D facility. In addition, a café would be on the main level, adjacent to the lobby.

Proposed landscaping would be provided along O'Brien Drive and Casey Court. The landscaping would be designed to complement the existing campus buildings along O'Brien Drive. Approximately 19,399 square feet (sf) of the street frontage (54 percent of the required open space) would be landscaped. The public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation. Furnishings at the public space adjacent to the proposed café may include trash receptacles, benches, and other outdoor furniture. Hardscape would comprise concrete paving, decomposed granite paving, and concrete pavers. The landscaped area could include five areas with flow-through planters, bioretention areas, self-retaining areas, and self-treating areas around the proposed building. In total, approximately 39,306 sf of open space would be provided throughout the Project site, representing 21.8 percent of the total area. In addition, 114 new trees would be planted at the Project site.

As discussed above, the area surrounding the Project site is an urbanized area with office parks, warehouses, and expansive surface parking lots. It is not a visually significant area. Because of flat topography and distance, the Project site is not visible from public open spaces in the vicinity. As described, the Proposed Project would result in additional building height, bulk, and massing at the Project site. However, given the existing industrial and office uses in the vicinity, the Proposed Project would be compatible with the existing visual character and quality of its surroundings.

The Proposed Project would construct a new structure (R&D building with surface parking) that would represent a continuation of the existing pattern of industrial and office development and reflect a similar design and landscape. The proposed building could be visible from the residential neighborhood in East Palo Alto, along Alberni Street, to the south. However, because of flat

topography, existing structures, and dense vegetation, the building would be predominantly screened from view. Views of the proposed building would be channelized and limited to only the upper levels, behind existing structures and trees. Therefore, implementation of the Proposed Project would not substantially change the visual character of the Project site or significantly alter the quality of the surrounding areas.

Conclusion

The physical conditions, as they relate to visual character, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would be subject to the City's architectural control process, in accordance with Section 16.68.020 of the City Zoning Ordinance, and required to comply with applicable design standards, as outlined in the City Zoning Ordinance. In addition, City General Plan goals and policies, as listed above, would serve to minimize potential adverse impacts on aesthetic resources. The Proposed Project would not conflict with applicable zoning and other regulations governing scenic quality, resulting in ***less-than-significant*** impacts. No further study is required.

d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area? (Less than Significant)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-4 (pages 4.1-16 to 4.1-17). Impacts would be less than significant because new development would be required to comply with general best management practices and City General Plan policies. No mitigation measures were required.

Project-Specific Discussion

Building, parking lot, and security lighting is currently present throughout the Project site, although to a lesser extent than proposed. Proposed development at the Project site would result in increased nighttime lighting from vehicles, interior circulation areas, the surface parking, the new R&D building, and security features. Lighting would continue to be provided throughout the Project site by roadway/driveway lights, area lights, bollards, and in-ground lights. The proposed lighting at the Project site would be visible from O'Brien Drive, Casey Court, and the western segment of Kavanaugh Drive, resulting in a potential nuisance or distraction for motorists. Lighting on the upper levels and the rooftop deck of the proposed building could be visible to some residences in East Palo Alto, along Alberni Street, to the south. However, some of the building lights would be screened by onsite vegetation. In addition, because of the urbanized nature of the surrounding area, a significant amount of ambient nighttime lighting currently exists, thereby affecting views of the nighttime sky. The lighting performance standards set by the U.S. Green Building Council under the Leadership in Energy and Environmental Design (LEED) program pertain to lighting specifications, shielding techniques, automatic lighting controls, and light pollution. Lighting on the upper levels and at the rooftop deck would comply with these requirements through down-lighting, automatic shutoffs, and shielding. Although building surfaces could be reflective, glare would be minimized through the Proposed Project's design.

Conclusion

The physical conditions, as they relate to light and glare, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Compared with existing conditions at the Project site, the Proposed Project would result in increased light and glare, which would adversely affect daytime and nighttime views. However, the Proposed Project would be subject to the City's architectural control process, in accordance with Section 16.68.020 of the City Zoning Ordinance, and required to comply with applicable design standards, as outlined in the City Zoning Ordinance. This review would ensure that the proposed design, construction materials, and lighting would be consistent with area practices and proposed lighting would be directed downward so as not to spill over on adjacent properties, resulting in ***less-than-significant*** impacts. No further study is required.

II. Agricultural and Forestry Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
In determining whether impacts on agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland.					
Would the project:					
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?	☐	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☐	☒
d) Result in the loss of forestland or conversion of forestland to non-forest use?	☐	☐	☐	☐	☒
e) Involve other changes in the existing environment that, because of their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forestland to non-forest use?	☐	☐	☐	☐	☒

Setting

The Project site does not contain Farmland, nor is it adjacent to any Farmland. The Project site is considered Urban and Built-Up Land (i.e., land that is occupied by structures with a building density of at least one unit to 1.5 acres).[15] In addition, the Project site is not currently protected under the Williamson Act or zoned for agricultural uses.[16] The Project site is zoned Life Science, Bonus (LS-B), which does not allow for agricultural uses.

There are currently 40 trees on the Project site. However, these are not considered to be forestry resources, per the definitions of Public Resources Code (PRC) Section 12220(g); timberland, as defined by PRC Section 4526; or timberland zoned Timberland Production, per Government Code Section 51104(g). According to the Open Space/Conservation Element of the City General Plan, Menlo Park includes several natural community types, including oak woodlands. However, per the Existing Vegetation map in the City General Plan, the Project site is in an Urban area.[17]

Environmental Checklist and Discussion

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-1); it was determined that it would result in no impact. No mitigation measures were recommended.

Conclusion

According to the 2018 Farmland Mapping and Monitoring Program from the California Department of Conservation, the Project site is in an area that is designated as Urban and Built-Up Land,[18] which is not considered Farmland. The physical conditions, as they relate to Farmland, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. ***No impact*** would occur, and no further study is needed.

b. Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-1); it was determined that it would also result in no impact. No mitigation measures were recommended.

Conclusion

The Project site is not zoned for agricultural use or under a Williamson Act contract. The Proposed Project involves the construction of a building for R&D uses within an area that is already developed with four single-story R&D buildings, minimal landscaping, and surface parking lots. Construction of the Proposed Project would not result in the conversion of Farmland to a nonagricultural use. The physical conditions, as they relate to agricultural resources, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. As such, the Proposed Project would have ***no impact*** on agricultural resources. No further study is needed.

c.–e. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)); result in the loss of forestland or conversion of forestland to non-forest use; or involve other changes in the existing environment that, because of their location or nature, could result in the conversion of Farmland to nonagricultural use or conversion of forestland to nonforest use? (No Impact)

Analysis in the ConnectMenlo EIR

These checklist items were analyzed in the ConnectMenlo EIR (page 6-1); it was determined that ConnectMenlo would also result in no impact on forestlands. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to the conversion of Farmland or forestland, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site is not used to grow trees for commercial lumber or other forest products; therefore, the Project site is not considered timberland. Per PRC Section 12220(g), forestland is defined as land that can support a 10 percent native tree cover of any species. As such, the Project site is not considered forestland. The Project site is also not used for timberland production and would not convert farmland or forestland. As such, the Proposed Project would not conflict with existing zoning for forestland or timberland. ***No impact*** would occur, and no further study is needed.

III. Air Quality	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
When available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:					
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is a nonattainment area for an applicable federal or state ambient air quality standard?	☒	☐	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒	☐

Setting

As discussed in more detail, below, this topic will be analyzed further in the EIR for the Proposed Project. Therefore, the setting is not discussed in this document but will be provided instead in the EIR.

General Plan Goals and Policies

General plan goals and policies related to air quality will be outlined and discussed in the EIR.

Environmental Checklist and Discussion

a. Conflict with or obstruct implementation of the applicable air quality plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-1 (pages 4.2-21 through 4.2-35) and determined to result in less-than-significant impacts. ConnectMenlo was expected to reduce vehicle miles traveled (VMT) per service population citywide, even though, overall, the plan would result in an exceedance of Association of Bay Area Governments (ABAG) projections. It was further determined that the policies identified in ConnectMenlo would not hinder implementation of the Clean Air Plan, which is the relevant Air Quality Management Plan for the Proposed Project. Impacts were found to be less than significant, and no mitigation measures were recommended.

Project-Specific Discussion

As discussed in Section XIV, *Population and Housing*, and further analyzed in the EIR, the small number of employees and residents in Menlo Park generated by the Proposed Project would be within the growth projections anticipated through implementation of ConnectMenlo. The Proposed Project would be required to adhere to relevant ConnectMenlo policies, develop a Transportation Demand Management (TDM) program to reduce the number of trips, comply with the City's Green Building requirements and achieve the prescribed level of LEED certification, comply with zoning that requires electric vehicle chargers, comply with onsite renewable and clean energy requirements, and adhere to a Zero-Waste Management Plan. The Proposed Project would also be required to comply with goals, policies, and programs to minimize adverse impacts on air quality, including those in the Open Space/Conservation, Noise and Safety, and Circulation Elements. Overall, compliance with the goals, policies, and programs discussed above would ensure that the Proposed Project would not hinder implementation of the Clean Air Plan.

Conclusion

The physical conditions, as they relate to consistency with the Clean Air Plan, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. In addition, the Proposed Project would not hinder implementation of the Clean Air Plan for the reasons discussed above. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would result in a ***less-than-significant*** impact, and no further study is needed.

b. Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is a nonattainment area for an applicable federal or state ambient air quality standard? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-2 (pages 4.2-35 through 4.2-42) and determined to result in significant and unavoidable impacts for both construction and operational emissions, even with implementation of mitigation measures. Despite the conclusion of significant and unavoidable, as discussed below, ConnectMenlo Mitigation Measures AQ-2a, AQ-2b1, and AQ-2b2 require additional analysis.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, the ConnectMenlo EIR requires that additional technical analysis be performed. This analysis could identify impacts that were not previously disclosed. Specifically, the EIR will demonstrate compliance with the following ConnectMenlo Mitigation Measures: AQ-2a (preparation of a technical assessment evaluating potential operational impacts), AQ-2b1 (compliance with the air district's basic control measures for reducing construction-related emissions), and AQ-2b2 (preparation of a technical assessment evaluating construction-related impacts). Therefore, this topic requires ***further environmental review*** in the EIR.

c. Expose sensitive receptors to substantial pollutant concentrations? (Topic to Be Analyzed in EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-3 (pages 4.2-43 through 4.2-50) and determined to result in less-than-significant impacts with implementation of mitigation measures. ConnectMenlo Mitigation Measure AQ-3a requires additional analysis.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, the ConnectMenlo EIR requires that additional technical analysis be performed. This analysis could identify impacts that were not previously disclosed. Specifically, the EIR will demonstrate compliance with Mitigation Measure AQ-3a, which requires preparation of a health risk assessment for a project within 1,000 feet of a sensitive land use. Sensitive land uses in the area include Mid-Peninsula High School to the northwest, Wund3rSCHOOL/Open Mind School to the northeast, Cesar Chavez Elementary School to the southeast, and residences in East Palo Alto to the south. Therefore, this topic requires ***further environmental review*** in the EIR.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-4 (pages 4.2-51 through 4.2-52) and determined to result in less-than-significant impacts. No mitigation measures were recommended. As discussed in the ConnectMenlo EIR, the Land Use Element would require planning and development decisions to consider the creation of objectionable odors.

Project-Specific Discussion

Potential odor sources that could affect sensitive receptors would include uses and activities such as composting, greenwaste and recycling operations, treatment plants, food processing plants, and painting/coating operations. Responses to odors are subjective and vary by individual and the type of land use. R&D uses are not included in Table 4.2-9 of the ConnectMenlo EIR, which lists the uses that could be required to undergo environmental review to ensure that sensitive land uses are not exposed to objectionable odors. The Proposed Project would not be a source of odors and would not result in other emissions, such as those leading to odors, that would adversely affect a substantial number of people.

Conclusion

The physical conditions, as they relate to creating objectionable odors, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. In addition, the Proposed Project would not result in land uses that would create objectionable odors because the Project site would be infill development in an existing office park setting. The Proposed Project would result in ***less-than-significant impact***, and no further study is needed.

IV. Biological Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☒	☐	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands, including, but not limited to, marshes, vernal pools, and coastal wetlands, through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒	☐
f) Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☐	☒

Setting

Methods

ICF reviewed the following sources to identify existing biological resources near the Project site:

- *Biological Resources* section of the ConnectMenlo EIR
- *1125 O'Brien Drive Biological Resources Assessment* prepared by WRA, Inc. (WRA)[19]

The biological resources assessment (BRA) for the Project site was prepared by WRA; the BRA is attached to this Initial Study as Appendix A. The report was informed by a reconnaissance-level survey of the Project site by WRA biologists on August 1, 2019, and October 6, 2020. Unless otherwise noted, the information in this section is from the BRA prepared by WRA.

Topography and Soils

The Project site is relatively flat, with elevations ranging from approximately 10 to 13 feet above mean sea level. The Natural Resources Conservation Service has mapped soils on the site as Urban Land. This soil type is associated with areas where more than 85 percent of the surface is covered by asphalt, concrete, buildings, and other structures. Soils at the Project site include small areas of Urban Land-Orthents, cut and fill, and Orthents-reclaimed. The soil types at the Project site are not native or hydric, resulting in a high runoff rate.

Land Cover

The entire Project site has been modified for human use and does not support any natural plant communities. The 4.12-acre site is composed of three land cover types, developed (3.65 acres), landscaped (0.24 acre), and non-jurisdictional man-made types, including a partially concrete-lined drainage ditch (0.22 acre). Developed areas consist of four buildings and associated parking and walkways. These areas lack vegetation and are composed entirely of impervious surfaces. Landscaped areas consist of planting strips along O'Brien Drive and raised areas in the southeastern portion of the Project site that support ornamental trees and low-laying shrubs. The ornamental trees and shrubs include raywood ash (*Fraxinus* angustifolia), purple leaf plum (*Prunus cerasifera*), Japanese privet (*Ligustrum japonicum*), giant yucca (*Yucca gigantea*), and coast redwood (*Sequoia sempervirens*). One remnant large coast live oak (*Quercus agrifolia*) is present on the northern edge of the Project site, within landscaped land cover. All landscaped land cover within the Project site appears to be maintained and frequently watered from an irrigation system.

The concrete-lined drainage ditch is a 525-foot segment (approximately 0.22 acre) of a 550-foot-long, 20-foot-wide stormwater ditch that runs along the western edge of the Project site. The drainage ditch conveys urban stormwater flows from residential and commercial areas south of the Project site to an enclosed culvert between several large commercial buildings, terminating in an area south of the berm along the nearby elevated train tracks. Accumulated sediment in the bottom of the ditch supports moderately hydrophytic vegetation such as curly dock (*Rumex crispus*), tall flatsedge (*Cyperus eragrostis*), Italian rye grass (*Festuca perennis*), and bristly ox-tongue (*Helminthotheca echioides*), which is mixed with upland vegetation such as prickly lettuce (*Lactuca serriola*), sweet fennel (*Foeniculum*

[19] WRA, Inc. 2021. *1125 O'Brien Drive Development Project Biological Resources Assessment*. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. July.

vulgare), and slender oat (*Avena barbata*). Two Chinese pistache (*Pistacia chinensis*) are also located on the east side of the ditch, near the northern boundary of the Project site. The drainage ditch receives periodic hydrologic inputs during the rainy season but is most likely dry for the remainder of the year between rain events. The drainage ditch was dry during the site visit in October 2020. It does not pond or hold water for significant durations between rain events, nor does it contain suitable habitat for sensitive wildlife species.

State or Federally Protected Wetlands

The Project site is built on uplands that were developed in the late 1960s for commercial use. The concrete-lined drainage ditch was also constructed at that time; it was never a natural stream or historic wetland. In addition, the Project site and stormwater conveyance system downstream of the ditch do not fall within the footprint of a historical stream, marsh, or wetland boundary. Stormwater entering the ditch from the south originates from East Palo Alto's paved streets. Because the ditch is man-made, does not exhibit wetland characteristics (i.e., hydrophytic vegetation, hydric soils, hydrology), and is not connected to wetlands or non-wetland waters of the United States, it is not considered a wetland or non-wetland water of the United States under the federal Clean Water Act. It also does not meet the State Water Resources Control Board's State Wetland Definition[20] because it is artificial, less than 1 acre in size, subject to ongoing operation and maintenance, situated in a dense commercial setting, and not identified in a water quality control plan. No other state or federally protected wetlands or non-wetland waters of the United States were observed during the October 2020 reconnaissance survey.

Special-Status Species

Plants

A review of the resources and databases listed in the BRA indicates that 25 special-status plant species have been documented in the vicinity of the Project site. The locations of 14 special-status plant species in the California Natural Diversity Database (CNDDB) within 5 miles of the Project site are provided in Appendix A of the BRA (Figure 4). Appendix B of the BRA[21] summarizes the potential for each special-status plant species to occur in the vicinity of the Project site. No special-status plant species were observed during the site visit in October 2020, and none has the potential to occur at the Project site.

Wildlife

For the purposes of this Initial Study, *special-status species* are those with one or more of the following characteristics:

- Species that are listed, proposed for listing, or candidates for possible future listing as threatened or endangered under the federal Endangered Species Act of 1973, as amended.
- Species that are listed or proposed for listing as threatened or endangered under the California Endangered Species Act of 1984, as amended.
- Species that are designated by the California Department of Fish and Wildlife (CDFW) as Species of Special Concern.

[20] State Water Resources Control Board. 2019. *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*. April 2. Available: https://www.waterboards.ca.gov/water_issues/programs/cwa401/docs/procedures_conformed.pdf. Accessed: November 15, 2019.

[21] WRA, Inc. 2021. *1125 O'Brien Drive Development Project Biological Resources Assessment*. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. July.

- Species that are designated as Fully Protected under Sections 3511 (birds), 4700 (mammals), and 5050 (reptiles and amphibians) of the California Fish and Game Code.
- Species that meet the definitions of rare or endangered under CEQA (Section 15380).

The Project site provides habitat (i.e., the resources and conditions present in an area that result in occupancy by a given organism)[22] for common wildlife species that have successfully adapted to high disturbance levels, ornamental vegetation, and abundant food sources (e.g., food waste in trash cans, seeds and flowers produced by ornamental plants), which are characteristic of urban landscapes. Based on a review of the resources and databases listed in the BRA, 40 special-status wildlife species have been documented in the vicinity of the Project site. The locations of 28 special-status wildlife species in the CNDDB within 5 miles of the Project site are provided in Appendix A of the BRA (Figure 5). Appendix B of the BRA[23] summarizes the potential for each species to occur in the area. Of the 40 special-status species examined, none is considered to have high potential for occurrence in the Project area, and only one (white-tailed kite) has moderate potential to occur. The remaining 39 species are considered unlikely to occur in the Project area or have no potential to occur.

With the exception of white-tailed kite (*Elanus leucurus*), a California Fully Protected species, and other tree-nesting raptors (identified as special-status species by the ConnectMenlo EIR), no special-status animal species are expected to occur on the Project site because the site lacks habitat, is outside their known range, and/or is isolated from the nearest known population by urban development. Although some of these species, such as western snowy plover (*Charadrius alexandrinus nivosus*), California Ridgway's rail (*Rallus obsoletus obsoletus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), and salt marsh wandering shrew (*Sorex vagrans halicoetes*), are known to occur in the tidal marsh or salt pond habitat of the Refuge, approximately 1.5 mile to the north and east, these habitats are isolated from the Project site by urban development. Tree-nesting raptors that may nest in the ornamental trees near the site include red-shouldered hawk and Cooper's hawk.

Sensitive Natural Communities

Sensitive natural communities have limited distribution statewide or within a county or region. The CDFW's Vegetation Classification and Mapping Program works to classify and map the vegetation of California and evaluate the rarity of natural communities, which the CDFW considers synonymous with "vegetation types," using NatureServe's heritage methodology, the same system used to assign global and state rarity ranks to plant and animal species in the CNDDB. The resulting CDFW Sensitive Natural Communities List,[24] which is updated annually, identifies the vegetation types that biologists and environmental planners should consider when evaluating project impacts under CEQA.

No sensitive natural communities are present on or adjacent to the Project site. As mentioned above, the entire site has been developed, and all traces of natural communities were removed when the area was filled for urban development in the early 20th century.

[23] WRA, Inc. 2021. *1125 O'Brien Drive Development Project Biological Resources Assessment*. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. July.

[24] California Department of Fish and Wildlife. 2019. *California Sensitive Natural Communities*. November 8. Available: https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=153609&inline. Accessed: November 15, 2019.

Wildlife Corridors

For the purposes of this Initial Study, a wildlife corridor is defined as "any space, usually linear in shape, that improves the ability of organisms to move among patches of wildlife habitat that join two or more larger areas of wildlife habitat."[25] Corridors can be viewed over broad spatial scales, from those connecting continents (e.g., the Isthmus of Panama) to structures across canals. Most wildlife corridors analyzed within the context of land use planning, including those in this Initial Study, are moderate in scale and used to facilitate regional wildlife movement among habitat patches and through human-dominated landscapes.

The Project site is not within or adjacent to any wildlife corridors. As described in the ConnectMenlo EIR, most urbanized portions of Menlo Park preclude the dispersal and movement by terrestrial wildlife, with the exception of unchannelized creeks (e.g., San Francisquito Creek), unobstructed ridgelines, and the shoreline of San Francisco Bay. None of these features occur on or adjacent to the Project site.

General Plan Goals and Policies

The City General Plan—specifically, the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element—contains goals, policies, and programs that require local planning and development decisions to consider impacts on biological resources. The following City General Plan goals, policies, and programs would minimize potential adverse impacts on biological resources: Goal LU-4, Policy LU-4.5; Goal LU-6, Policy LU-6.8, Policy LU-6.11, and Program LU-6.D; and Goal OSC-1, Policy OSC-1.1, Policy OSC-1.3, Policy OSC-1.4, Policy OSC-1.5, Policy OSC-1.11, Policy OSC-1.12, Policy OSC-1.13, and Policy OSC-1.15.

Environmental Checklist and Discussion

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-1 (pages 4.3-19 to 4.3-23). It was determined that it would result in a potentially significant impact on sensitive habitats from future projects. The ConnectMenlo EIR found that City General Plan goals, policies, and programs, as well as bird-safe design regulations for the Bayfront Area, would minimize impacts. In addition, implementation of ConnectMenlo Mitigation Measure BIO-1 would reduce the impact to less than significant by requiring a project applicant to prepare and submit a project-specific BRA if a project occurs on or adjacent to a parcel containing natural habitat, such as mature or native trees. Mitigation Measure BIO-1 would require any mitigation measures identified in a project-specific BRA to be incorporated as components of a project and subsequent building permit, subject to review and approval by the Community Development Department and appropriate regulatory and resource agencies. For the Proposed Project, WRA prepared a BRA in accordance with Mitigation Measure BIO-1, as discussed in more detail below.

[25] Hilty, J. A., W. Z. Lidicker Jr., and A. M. Merenlender. 2006. *Corridor Ecology: The Science and Practice of Linking Landscapes for Biodiversity Conservation*. Washington, DC: Island Press.

Conclusion

Because the Project site contains mature, albeit nonnative, trees that could support active nests of common birds that are protected under the MBTA, a BRA was prepared in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR, as included in Appendix A of this document and summarized here. Project-specific mitigation measures are included in the BRA to reduce impacts on nesting birds. Therefore, because Project-specific mitigation measures are required, ***further environmental review*** will be provided in the EIR.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-2 (pages 4.3-24 and 4.3-25). It was found that, without the preparation of project-specific assessments for future projects on or near sensitive habitats, impacts on sensitive natural communities would be potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 (i.e., completion of a BRA) would reduce the impact to less than significant by requiring a project-specific assessment of biological resources.

Conclusion

A BRA was prepared for the Proposed Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR (Appendix A). There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site does not contain any riparian habitat or sensitive natural communities. Therefore, the Proposed Project would have ***no impact*** on these resources, and no further study is needed.

c. Have a substantial adverse effect on state or federally protected wetlands, including, but not limited to, marshes, vernal pools, and coastal wetlands, through direct removal, filling, hydrological interruption, or other means? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-3 (pages 4.3-25 and 4.3-26). The ConnectMenlo EIR found that direct and indirect impacts on wetland habitat could occur if adequate controls are not implemented. Without the preparation of project-specific assessments for future projects on or near wetlands, impacts could be potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 (i.e., completion of a BRA) would reduce the impact to less than significant by requiring a project-specific assessment of biological resources.

Project-Specific Discussion

No state or federally protected wetlands or non-wetland waters of the United States occur on or immediately adjacent to the Project site. The drainage ditch is a non-jurisdictional, man-made feature; the ditch was constructed in an upland area to drain stormwater. It lacks perennial and intermittent flows and does not meet state or federal wetland definitions. Therefore, the Proposed Project would

result in no direct impacts on jurisdictional wetlands. Although no direct impacts would occur, development of the Project site has the potential to cause indirect impacts on nearby wetlands or water quality within those wetlands, based on the site's runoff patterns. Indirect impacts on wetlands and jurisdictional other waters include an increase in the potential for sedimentation due to construction grading and ground disturbance, an increase in the potential for erosion due to increased runoff volumes generated by impervious surfaces, and an increase in the potential for water quality degradation due to increased levels of non-point-source pollutants.

Even if wetlands are not in the immediate vicinity, water quality degradation may occur. However, as discussed in Section X, *Hydrology and Water Quality*, compliance with state requirements under the National Pollutant Discharge Elimination System (NPDES) Construction General Permit and the Regional Water Quality Control Board– (RWQCB-) required stormwater pollution prevention plan (SWPPP) to control the discharge of stormwater pollutants during construction, as well as post-construction measures and design features required by the Municipal Regional Permit, would reduce the Proposed Project's potential impact on water quality.

Conclusion

A BRA was prepared for the Proposed Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR (Appendix A). There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site does not contain any state or federally protected wetlands or non-wetland waters of the United States that are subject to U.S. Army Corps of Engineers jurisdiction under Section 404 of the Clean Water Act, and no such features are present adjacent to the site. However, indirect impacts on nearby wetlands or non-wetland waters could occur from site runoff. Compliance with the above-mentioned state stormwater controls would reduce potential impacts to a ***less-than-significant*** level. Therefore, no further study is needed.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-4 (page 4.3-26). The ConnectMenlo EIR found that a project-specific assessment would be necessary to determine whether any important wildlife movement corridors are present on undeveloped lands where development is proposed. Without preparation of project-specific assessments for future projects on or near sensitive habitats, impacts in the ConnectMenlo EIR study area would be considered potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 would reduce the impact to less than significant by requiring a project-specific assessment of biological resources.

Conclusion

As explained above, a BRA was prepared in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR. The BRA (Appendix A) recommends a mitigation measure to reduce impacts on active bird nests, which are considered native wildlife nursery sites under this analysis. The Proposed Project will be required to comply with this mitigation measure. This topic requires ***further environmental review*** in the EIR.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-5 (page 4.3-27). It was determined that it would result in a less-than-significant impact. The ConnectMenlo EIR found that, with adherence to City General Plan goals, policies, and programs as well as the City Municipal Code, the impact would be less than significant.

Project-Specific Discussion

Heritage Tree Ordinance

The Proposed Project is subject to the City's Heritage Tree Ordinance, codified in Chapter 13.24 of the City Municipal Code.[26] As required by the ordinance, tree surveys shall be conducted by an International Society of Arboriculture–certified arborist, and a tree report and map shall be prepared to show the locations of all pertinent trees prior to initiation of construction activities. Any work performed within an area 10 times the diameter of the tree (i.e., the tree protection zone) shall require submittal of a tree protection plan prepared by a certified arborist for review and approval by the Community Development Director or his/her designee prior to issuance of any permit for grading or construction. Removal of heritage trees requires an appropriate permit from the director of the City Public Works Department or his/her designee and payment of a fee. The Project site contains 40 trees, 13 of which meet the City's definition of a heritage tree; some of these trees are proposed for removal. With adherence to Chapter 13.24 of the City Municipal Code, impacts on heritage trees would be less than significant.

Bird-Safe Design

The Proposed Project would also be subject to Chapter 16.44.130 (6) of the City Municipal Code, which requires bird-friendly designs for new buildings. The Proposed Project would include the construction of a new building with a maximum height of 88.5 feet; glazing (i.e., glass) would be a primary design component. In general, buildings with extensive amounts of clear or especially reflective glass on the exterior and/or directly adjacent areas of heavy vegetation can experience a relatively high number of bird collisions. It is presumed that birds in flight see through glass façades to apparently desirable areas on the other side and/or interpret reflections from the surrounding environment (e.g., sky, vegetation) to be actual habitat or otherwise attractive space. This results in building features (e.g., transparent corners, glass guardrails, contiguous areas of untreated glass) presenting a potential risk related to avian collision mortality. Vegetated pathways leading toward façades can also encourage birds to fly toward buildings, resulting in collisions, primarily on the lower stories (i.e., 60 feet and lower). Bird species spend most of their time at this elevation while engaged in foraging, breeding, and other behaviors. Lastly, lighting associated with development can disorient or attract migrating birds, creating an increased collision risk if high-use avian habitats are nearby.

Despite the Project site's location (i.e., in the general vicinity of the San Francisco Bay and associated avian habitat), the general land uses surrounding the study area can be classified as dense light industrial or residential uses. Natural habitats are extremely limited in the surrounding area; what natural cover does exist is composed mainly of landscaped areas.

[26] City of Menlo Park Municipal Code, Section 13.024.10.

Although birds may use landscaped areas for nesting, they typically do not do so in large numbers. In addition, the relatively high level of baseline disturbance surrounding the Project site contributes to a reduced level of bird nesting in the immediate vicinity. Therefore, although occasional collisions involving urban-adapted passerine species may occur, they would most likely be very few in number because of the limited amount of avian habitat directly adjacent to the Project site. Several avian species are known to use habitats at the nearby Refuge, both to nest and to congregate during migration. However, because the Project site is surrounded on all sides by dense urban development and does not constitute a wildlife movement corridor, it is highly unlikely that the proposed building would be a significant obstruction to bird movement or a mortality risk.

The proposed building would extend to a height of 88.5 feet. Therefore, it would include an elevation zone with a high risk for avian collisions (i.e., within 60 feet of the ground). However, the Proposed Project would incorporate design aspects that would reduce the likelihood of avian collisions, as described below. This includes complying with the items outlined in City Municipal Code Chapter 16.44.130 (6), as follows:

- No more than 10 percent of a façade's surface area shall have non-bird-friendly glazing (bird-friendly glazing includes, but is not limited to, opaque glass, clear glass with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass).
- Occupancy sensors or other switch control devices shall be installed on non-emergency lights and programmed to shut off during non-work hours and between 10:00 p.m. and sunrise.
- Placement of buildings shall avoid the potential funneling of flight paths toward a building façade.
- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed.
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs.
- Use of rodenticides shall not be allowed.

All glazing used in the building design is indicated in the Project plans as "bird-friendly," particularly in areas where glazing makes up more than 10 percent of the building's elevation. Other areas of glass that would not be treated with anti-reflective coatings would be textured or fritted to create "visual noise." Guardrails on stairways and patios would use wire mesh rather than glass so as not to present a collision risk. All elevations of the building would incorporate variations in surface color, texture, and "relief," which would help birds see the building. Lighting associated with the building would comply with the City Municipal Code and therefore limit any potential disorientation or attraction from nearby high-use avian habitat. Overall, building design elements have been incorporated that comply with City Municipal Code Chapter 16.44.130 (6) and provide protection against avian collisions, resulting in ***less-than-significant*** impacts.

Conclusion

The physical conditions, as they relate to local policies or ordinances for protecting biological resources, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific

effects as a result of the Proposed Project. The Proposed Project would remove up to 13 heritage trees; however, it would meet the City's bird-friendly design standards and the requirements of City ordinances for protecting heritage trees. Therefore, this impact would be considered ***less than significant***, and no further study is needed.

f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-6 (pages 4.3-27 to 4.3-28). It was determined that it would result in a potentially significant impact because of potential conflicts with the Stanford Habitat Conservation Plan (HCP). Implementation of ConnectMenlo Mitigation Measure BIO-6, which requires implementation of Mitigation Measure BIO-1, would reduce impacts to less than significant.

Conclusion

The Project site is not within a geographic area covered by an adopted HCP or natural community conservation plan. The closest such plan is the Stanford HCP for an area in the Matadero/Deer Creek and San Francisquito Creek watersheds, approximately 6 miles to the south. A BRA was prepared for the Proposed Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because the Project site is not covered by an HCP, the Proposed Project would have ***no impact*** on the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state HCP. No further study is needed.

V. Cultural Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Cause a substantial adverse change in the significance of a historical resource, pursuant to Section 15064.5?	☐	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource, pursuant to Section 15064.5?	☒	☐	☐	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐	☐

Setting

Historical Resources

The Project site encompasses four parcels, which are associated with the following addresses: 1105 O'Brien Drive, 1135–1165 O'Brien Drive, the adjacent drainage ditch, and 1 Casey Court. The property at 1105 O'Brien Drive (APN 055-433-300) includes an office building with a rectangular plan that was constructed in 1962. County assessor's parcel data indicate that the second building on the Project site, 1135–1165 O'Brien Drive (APN 055-433-330), was constructed in 1971. However, historic aerial photographs indicate the building was actually constructed sometime between 1960 and 1965. The date of the building at 1 Casey Court (APN 055-433-180) is not known, although historic topographic maps indicate the building was constructed after 1974. Because the building at 1 Casey Court is not yet of an age at which it would be eligible for listing in the National Register of Historic Places (NRHP)/California Register of Historical Resources (CRHR), it does not qualify as a historical resource under CEQA.

The Project site lies adjacent to four additional parcels, 1075 O'Brien Drive (APN 055-433-250), which has a construction date of 1960; 1175–1185 O'Brien Drive (APN 055-433-310), which has a construction date of 1962; 1215 O'Brien Drive (APN 055-433-190), which historic aerial photographs indicate was constructed between 1965 and 1968; and 20 Kelly Court, which was constructed in 1962 and substantially enlarged when an addition was built in 2014 (Nationwide Environmental Title Research 1960, 1965, 1968, 1974; ParcelQuest 2021).[27]

[27] Nationwide Environmental Title Research, LLC. 1960, 1968. *Aerial Photographs of Menlo Park, California.* Available: https://www.historicaerials.com. Accessed: February 8, 2021; Nationwide Environmental Title Research, LLC. 1974. Topographic Map of Menlo Park, California. Available: https://www.historicaerials.com. Accessed: February 8, 2021; University of California, Santa Barbara Library. 2021. *ParcelQuest, Detail Reports for 1075 O'Brien Drive, 1105 O'Brien Drive, and 1175–1185 O'Brien Drive, California*. Available: http://www.parcelquest.com. Accessed: February 8, 2021.

The 1125 O'Brien Project site and its immediate vicinity, near San Francisco Bay in present-day Menlo Park, remained largely undeveloped until 1955, when local real estate developer Clarence Kavanaugh announced plans for a 40-acre industrial park east of Willow Drive. By 1965, the park contained more than 20 buildings, including two within the current boundaries of the Project site at 1105 O'Brien Drive and 1115–1165 O'Brien Drive. The Kavanaugh Industrial Park was further developed in the 1980s and 1990s; by 1993, it featured more than 35 buildings.[28]

None of the buildings within or adjacent to the Project site appear to have been evaluated previously in a built-environment survey or identified as eligible for listing in any historic register. However, the Project site contains two buildings that are more than 50 years old, the age that built-environment resources typically must reach before potentially qualifying for listing in the or CRHR. The Project site is also adjacent to four additional built-environment resources of historic age.

To determine whether the six historic-aged buildings qualify as historical resources under CEQA, ICF recorded each property during intensive-level historical resources surveys between September 2019 and January 2021. ICF documented each building on a Department of Park and Recreation (DPR) 523A (Primary Record) and 523B (Building, Structure, Object) form set. The DPR form sets, which document the evaluation of NRHP and CRHR eligibility for the buildings, are included in Appendix B of this Initial Study. The evaluations concluded that none of the six historic-aged buildings meets the eligibility criteria for NRHP or CRHR listing. As a result, the buildings at 1105 O'Brien Drive, 1135–1165 O'Brien Drive, 1075 O'Brien Drive, 1175–1185 O'Brien Drive, 1215 O'Brien Drive, and 20 Kelly Court do not qualify as historical resources under CEQA. A summary of the evaluations of these buildings under NRHP/CRHR Criteria A/1 through D/4 is provided below.

- *Criteria A/1*: All six buildings are unremarkable in the context of mid-20th-century suburban industrial office park development, and no identified tenants contributed significantly to the economic growth of Menlo Park or the San Francisco Peninsula at large.
- *Criteria B/2*: No individuals who were closely associated with any of the buildings appear to have made significant contributions to local, state, or national history.
- *Criteria C/3*: The six buildings under investigation are utilitarian-style industrial and office buildings that lack architectural distinction and association with known significant architects.
- *Criteria D/4*: None of the evaluated buildings is likely to yield important historical information not otherwise captured in the historic record.

Archaeological and Native American Resources

Archival Research

A records search was completed at the Northwest Information Center (NWIC) of the California Historical Resources Information System for the 1350 Adams Court project in 2018. This search remains valid and covers the current Project site and a 0.25-mile area surrounding the site. No previously recorded archaeological resources were identified within the Project site. However, one previously recorded archaeological resource was identified within 0.25 mile of the Project site, as detailed below.

[28] *San Mateo Times*. 1955. Industrial Park Planned for East Palo Alto. January 7; University of California, Santa Barbara Library. 1965. *FrameFinder.* Flight CAS_65_130, Frame 2-169. Available: https://mil.library.ucsb.edu/ap_indexes/FrameFinder. Accessed: February 5, 2021; University of California, Santa Barbara Library. 1993. *FrameFinder*. Flight NAPP_2C, Frame 6358-143. Available: https://mil.library.ucsb.edu/ap_indexes/FrameFinder. Accessed: February 5, 2021.

- **P-41-000160 (CA-SMA-160)** – This resource is recorded as a rich Bay marsh habitation site (Hiller Mound) with many burials, features, and artifacts, including fire-cracked rock, chert, groundstone, shell, and pestles. This resource covers an area of approximately 5 acres (Cartier 1978).

No cultural resources studies have been conducted at the Project site. However, six studies have been conducted within 0.25 mile of the Project site, five evaluations and/or testing projects that focused on specific cultural resource sites and one archaeological reconnaissance project.

As stated above, the Project site has not been subject to previous study. Although no previously recorded archaeological resources have been identified within the Project site, the presence of P-41-000160 (CA-SMA-160) indicates that the area may have potential sensitivity for subsurface archaeological deposits. Therefore, it is possible that as-yet undocumented archaeological resources could be encountered during Project-related ground disturbance.

Assembly Bill 52 Consultation

The Native American Heritage Commission (NAHC) was requested on September 20, 2019, to perform a search of its Sacred Lands File for information regarding tribal cultural resources in the area and provide a list of Native American representatives who may have relevant information regarding such resources. The NAHC responded on October 4, 2019, stating that the search of the Sacred Lands File did not identify any sensitive areas within the Project area. The NAHC provided a list of six contacts for the following five Native American tribes:

- Muwekma Ohlone Indian Tribe of the San Francisco Bay Area
- The Ohlone Indian Tribe
- Indian Canyon Mutsun Band of Costanoan
- Amah Mutsun Tribal Band of Mission San Juan Bautista
- Costanoan Rumsen Carmel Tribe

On October 7 and 8, 2019, letters with Project details and a location map were sent to the contacts at all five tribes listed above. On October 31, 2019, each recipient received a follow-up phone call.

- The contacts provided for the Muwekma Ohlone Indian Tribe of the San Francisco Bay Area and The Ohlone Indian Tribe were not reached. Detailed phone messages were left, along with a request for a return phone call.
- The contacts provided for the Muwekma Ohlone Indian Tribe of the San Francisco Bay Area and the Costanoan Rumsen Carmel Tribe were not reached. Phone messages could not be left.
- When contacted, the tribal contacts for the Amah Mutsun Tribal Band of Mission San Juan Bautista and the Indian Canyon Mutsun Band of Costanoan had feedback regarding the Proposed Project. The Amah Mutsun Tribal Band of Mission San Juan Bautista contact requested information regarding the exact amount of ground disturbance proposed by the Project; she received an emailed response the same day. The Indian Canyon Mutsun Band of Costanoan contact requested that individuals involved with excavation for the Proposed Project receive sensitivity training. She mentioned that monitors from the Amah Mutsun Tribal Band of Mission San Juan Bautista were available. She also requested to be updated on the progress of the Proposed Project. No additional responses have been received to date.

Because of changes in the Proposed Project, update letters were sent to the five tribes listed above on April 20, 2021. This letters provided the Project description from the initial notification letter, details about boundary changes at the Project site, and a figure depicting the new Project site. No responses have been received to date.

General Plan Goals and Policies

The City of Menlo Park (City) General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains goals, policies, and programs that require local planning and development decisions to consider impacts on cultural resources. The following City General Plan goals, policies, and programs would minimize impacts on cultural resources: Goal LU-7, Policy LU-7.8, and Goal OSC-3, Policy OSC-3.1, Policy OSC-3.2, Policy OSC-3.3, Policy OSC-3.4, Policy OSC-3.5, and Policy OSC-3.6.

Environmental Checklist and Discussion

a. Cause a substantial adverse change in the significance of a historical resource, pursuant to Section 15064.5? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-1 (pages 4.4-12 to 4.9-15). It was determined that it would have a significant impact on historical resources if it would lead to demolition or alteration with the potential to change the fabric or setting of historic architectural resources. Mitigation Measure CULT-1 (page 4.4-15) would require an individual project proposed on a site, or adjacent to a site, with a building that is more than 50 years old to prepare a site-specific evaluation. However, the ConnectMenlo EIR did not identify any historical resources within the vicinity of the Project site.

Project-Specific Discussion

The Project site contains two buildings at 1105 O'Brien Drive and 1135–1165 O'Brien Drive that are more than 50 years old, the age at which they could qualify as eligible for listing in the NRHP and CRHR. The Project site is also adjacent to four additional buildings of historic age. However, as documented on the DPR 523A and 523B forms included in Appendix B of this document and summarized previously, none of the historic-aged buildings under investigation is eligible for listing in the NRHP and CRHR or otherwise qualified as a CEQA historical resource. The Project site also includes a building at 1 Casey Court, which would be demolished under the Proposed Project; the building has not yet reached the age at which it could qualify as a CEQA historical resource. Therefore, implementation of the Proposed Project would not demolish a significant built-environment historical resource, nor would it result in alterations to the significant physical features or setting of a historical resource.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Redevelopment of the Project site would not alter the significance of a historical resource, as defined in Section 15064.5 of the CEQA Guidelines. Therefore, the Proposed Project would have ***no impact*** on historical resources.

b. Cause a substantial adverse change in the significance of an archaeological resource, pursuant to Section 15064.5? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-2 (pages 4.4-16 to 4.9-18). It was determined that the impact would be less than significant with implementation of Mitigation Measures CULT-2a and CULT-2b. Mitigation Measure CULT-2a would be applied if archaeological resources are found during construction. In addition, per Mitigation Measure CULT-2b, Native America tribes would need to be consulted.

Conclusion

The physical conditions, as they relate to archeological resources, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. Although no substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR, the Amah Mutsun Tribal Band of Mission San Juan Bautista and the Indian Canyon Mutsun Band of Costanoan expressed concern, believing that the area may contain archaeological resources, and requested additional mitigation measures, including preconstruction archaeological resources sensitivity training and archaeological and tribal construction monitoring. Therefore, impacts on archaeological resources require ***further environmental review*** in the EIR.

c. Disturb any human remains, including those interred outside of formal cemeteries? (Less than Significant with Mitigation Incorporated)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact CULT-4 (page 4.4-20). It was determined that the impact would be less than significant with implementation of Mitigation Measure CULT-4. This mitigation measure would provide guidance if human remains are encountered during ground disturbance.

Project-Specific Discussion

Although no archaeological or Native American resources were identified within the Project area during the literature review at the NWIC or consultation with California Native American tribes, the Project site has potential sensitivity for as-yet undocumented archaeological resources. Therefore, the potential exists for previously undiscovered human remains to be encountered during Project demolition or construction, and buried deposits may be eligible for listing in the CRHR. This impact would be ***potentially significant***.

Mitigation Measure. The Proposed Project would implement ConnectMenlo EIR Mitigation Measure CULT-4 if human remains are encountered at the Project site. All work in the immediate vicinity of the discovery would cease, and necessary steps to ensure the integrity of the immediate area would be taken.

Conclusion

The physical conditions, as they relate to human remains, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that

shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. No additional measures beyond those in the ConnectMenlo EIR are required. The Proposed Project would incorporate ConnectMenlo EIR Mitigation Measure CULT-4, which provides guidance for the treatment of human remains if encountered during ground disturbance. Therefore, the Proposed Project's impact on human remains would be ***less than significant with mitigation***. No further study is needed.

ConnectMenlo EIR Mitigation Measures

Mitigation Measure CULT-4. Procedures for conduct following the discovery of human remains have been mandated by Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98, and California Code of Regulations Section 15064.5(e) (CEQA). According to the provisions in CEQA, if human remains are encountered at a site, all work in the immediate vicinity of the discovery shall cease and necessary steps to ensure the integrity of the immediate area shall be taken. The San Mateo County Coroner shall be notified immediately. The coroner shall then determine whether the remains are Native American. If the coroner determines the remains are Native American, the coroner shall notify the NAHC within 24 hours, which, in turn, will notify the person the NAHC identifies as the Most Likely Descendant (MLD). Further actions shall be determined, in part, according to the desires of the MLD. The MLD has 48 hours to make recommendations regarding the disposition of the remains following notification from the NAHC of the discovery. If the MLD does not make recommendations within 48 hours, the owner shall, with appropriate dignity, reinter the remains in an area of the property secure from further disturbance. Alternatively, if the owner does not accept the MLD's recommendations, the owner or the descendent may request mediation by the NAHC.

VI. Energy	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒	☐

Setting

Energy resources include electricity as well as natural gas and other fuels. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. Energy production and energy use both result in the depletion of nonrenewable resources, such as oil, natural gas, and coal, and the emission of pollutants.

With a relatively mild Mediterranean climate and strict energy-efficiency requirements, California has lower energy consumption rates than other parts of the county. According to the U.S. Energy Information Administration, California's per capita energy consumption ranked 48th in the nation as of 2018.[29] California has among the lowest annual electrical consumption rates per person of any state; its industrial uses consume 5.6 percent of the energy consumed nationwide.[30] According to the U.S. Energy Information Administration, natural gas consumption in California totaled approximately 2,154.03 billion cubic feet in 2019. Commercial uses consumed approximately 12 percent of this total, followed by residential uses (22 percent), and industrial uses (36 percent), among others.[31] According to the California Energy Commission, total electric generation for California in 2019 (the most recent year for which data are available) was approximately 277,704 gigawatt hours. California's non-carbon-dioxide-emitting electric generation categories, including nuclear, hydroelectric, and renewable generation, accounted for more than 57 percent of total in-state generation in 2019. California's in-state electric generation was approximately 200,475 gigawatt hours.[32]

Accessed: March 22, 2021.

Electricity

Grid electricity and natural gas service in Menlo Park are provided by Pacific Gas and Electric Company (PG&E). PG&E is a publicly traded utility company that, under contract with the California Public Utilities Commission, generates, purchases, and distributes energy. PG&E's service territory covers 70,000 square miles, roughly extending north to south from Eureka to Bakersfield and east to west from the Sierra Nevada to the Pacific Ocean. PG&E's electricity distribution system consists of 106,681 circuit miles of electric distribution lines and 18,466 circuit miles of interconnected transmission lines.[33]

PG&E electricity is generated from a combination of sources, such as coal-fired power plants, nuclear power plants, and hydroelectric dams, as well as newer sources of energy such as wind turbines and photovoltaic plants, or "solar farms." "The grid," or bulk electric grid, is a network of high-voltage transmission lines that link power plants to the PG&E system. The distribution system, comprising lower-voltage secondary lines, is at the street and neighborhood level. It consists of overhead or underground distribution lines, transformers, and individual service "drops" that connect to individual customers. The existing electrical system in the Project area consists of overhead and underground facilities.

In addition to its base plan, PG&E has two options, known as Solar Choice options, that give customers the option of purchasing power from solar resources. The first Solar Choice option provides up to 50 percent of a customer's energy from solar resources; the other option provides up to 100 percent of a customer's energy from solar resources.[34] In addition, on January 26, 2016, the Menlo Park City Council approved a motion to join Peninsula Clean Energy (PCE) to receive additional renewable power.[35] PCE's power comes from a mix of various sources, including solar, wind, geothermal, biomass and biowaste, and hydroelectric generation resources. PCE delivers power to its customers from existing PG&E utility infrastructure. PCE allows customers to choose between two different electricity options, ECOplus, with 50 percent of a customer's electricity from renewable resources, and ECO100, with 100 percent from renewable resources.[36]

In 2019, San Mateo County consumed a total of 4,325 million kilowatts of electricity. In the county, electricity was consumed primarily by the non-residential sector (64 percent), followed by the residential sector (36 percent).[37] Currently, 100 percent of the electricity currently used by the campus, including the Project site, is purchased through PCE; the Proposed Project would continue this practice.

[34] Pacific Gas and Electric Company. 2021. *Which Renewable Option Is Best for You?* Available: https://www.pge.com/en_US/small-medium-business/energy-alternatives/private-solar/solar-choice-rates/solar-choice-plans-for-businesses.page. Accessed: March 19, 2021.

[35] On January 26, 2016, the Menlo Park City Council approved a motion to join Peninsula Clean Energy to receive additional renewable power. Peninsula Clean Energy is part of a Community Choice Energy program, a locally controlled community organization that enables local residents and businesses to have a choice as to where their energy comes from. Community Choice Energy programs allow local governments to pool the electricity demands of their communities, purchase power with higher renewable content, and reinvest in local infrastructure.

Natural Gas

PG&E's natural gas (i.e., methane) delivery system includes 42,000 miles of natural gas distribution pipelines and 6,700 miles of transmission pipelines. PG&E's gas transmission system serves approximately 15 million energy customers in California. The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols continuously taking place along the pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada. Transmission pipelines send natural gas from the fields and storage facilities; these large pipes are under high pressure. The smaller distribution pipelines deliver gas to individual businesses or residences.[38]

The PG&E gas transmission pipeline nearest the Project site runs primarily along US 101. North of Willow Road, it continues south and southeast under residential streets in Menlo Park and East Palo Alto. In addition, a gas line runs under Sevier Avenue in the Belle Haven neighborhood, approximately 0.4 mile west of the Project site.[39] Distribution gas pipelines are located throughout the Bayfront Area.

In San Mateo County, a total of 214 million therms of natural gas were consumed in 2019 (the most recent year for which data are available). In 2019, natural gas in San Mateo County was consumed primarily by the residential sector (55 percent), followed by the non-residential sector (45 percent).[40]

General Plan Goals and Policies

The City General Plan—specifically, the Land Use Element, Open Space/Conservation Element, and Circulation Element—contains goals, policies, and programs that require sustainable development and energy efficiency. The following City General Plan goals, policies, and programs would minimize potential adverse risks specifically associated with the wasteful, inefficient, or unnecessary consumption of energy resources: Goal LU-4, Policy LU-4.5; Goal LU-6; Goal LU-7, Policy LU-7.1, Policy LU-7.9, Program LU-7.A, Program LU-7.C, Program LU-7.D, and Program LU-7.E; Goal OSC-4, Policy OSC-4.1, Policy OSC-4.2, Policy OSC-4.3, Policy OSC-4.4, and Policy OSC-4.5; Goal CIRC-1, Policy CIRC-2.11; Goal CIRC-5, Policy CIRC-5.1; and Goal CIRC-6, Policy CIRC-6.1 and Policy CIRC-6.3.

Environmental Checklist and Discussion

a. Result in a potentially significant environmental impact due to the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact UTIL-13 (pages 4.14-76 to 4.14-81). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended. In addition, energy conservation was evaluated in Section 4.15.5 of the

[38] Pacific Gas & Electric. 2021. *Learn About the PG&E Natural Gas System*. Available: www.pge.com/en_US/safety/how-the-system-works/natural-gas-system-overview/natural-gas-system-overview.page. Accessed: May 4, 2021.

[39] Pacific Gas and Electric Company. 2021. *Explore Our Natural Gas Transmission Pipeline Map*. Available: www.pge.com/en_US/safety/how-the-system-works/natural-gas-system-overview/gas-transmission-pipeline/gas-transmission-pipelines.page? Accessed: May 4, 2021.

[40] California Energy Commission. n.d. *Gas Consumption By County—San Mateo County*. Available: http://ecdms.energy.ca.gov/gasbycounty.aspx. Accessed: March 22, 2021.

ConnectMenlo EIR, consistent with CEQA Guidelines Appendix F. The ConnectMenlo EIR did not quantify energy demand associated with buildout of ConnectMenlo; however, a brief discussion of energy use and conservation, including the City's Climate Action Plan, was included.

Project-Specific Discussion

The Project site would continue to be served by PG&E and PCE. The Proposed Project would result in a long-term increase in energy demand associated with the operation of lighting and space heating/cooling units in the proposed building as well as vehicle travel. In addition, construction activities associated with the Proposed Project would require the use of energy (e.g., electricity and fuel) for various purposes, such as excavation, grading, demolition, and construction vehicle travel as well as the operation of construction equipment and tools.

Construction. The anticipated construction schedule assumes that the Proposed Project would be built over 16 months. During construction, the Proposed Project would require demolition, grading, and site preparation work, along with various other building activities. Energy would be required for the manufacture and transport of construction materials as well as preparation of the Project site for demolition and grading activities and the construction of Project features. Petroleum fuels (e.g., diesel and gasoline) would be the primary sources of energy for these activities. In order to increase energy efficiency on the site during construction, the Proposed Project would restrict equipment idling times to 5 minutes or less and require construction workers to shut off idle equipment, as required by ConnectMenlo EIR Mitigation Measure AQ-2b1. Therefore, construction activities are not anticipated to result in an inefficient use of energy. Gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the Proposed Project.

The installation of new or expanded gas lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. These construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts. In addition, although construction related to new or relocated gas and electric lines could result in short-term environmental effects (e.g., noise, dust, traffic, temporary service interruptions), the work would comply with City and PG&E regulations as well as standard conditions for new construction related to infrastructure improvements. In addition, any such work would be subject to compliance with applicable regulations and standard conditions of approval for the Proposed Project, including City permits/review (e.g., grading permits, private development review, encroachment permits).

Construction vehicles would consume fuel. However, the U.S. Environmental Protection Agency (EPA) adopted the Heavy-Duty National Program to establish fuel efficiency and greenhouse gas emissions standards in the heavy-duty highway vehicle sector, which includes combination tractors (semi-trucks), heavy-duty pickup trucks and vans, and vocational vehicles, including buses and refuse or utility trucks. These standards include targets for the number of gallons of fuel consumed per mile beginning in model years 2014–2018. Although construction activities would require a commitment of energy sources, the efficiency standards would further the goal of conserving energy in the context of Project development.[41]

[41] U.S. Environmental Protection Agency. n.d. *Regulations for Greenhouse Gas Emissions from Commercial Trucks and Buses.* Available: www.epa.gov/regulations-emissions-vehicles-and-engines/regulations-greenhouse-gas-emissions-commercial-trucks. Accessed: May 4, 2021.

Energy usage on the Project site during construction would be temporary in nature and relatively small in comparison to the state's available energy sources. Therefore, the Proposed Project would not result in the inefficient, wasteful, or unnecessary consumption of energy resources during construction.

Operation. The Proposed Project would consume energy resources in the form of electricity; natural gas, if exceptions to the City's reach codes are approved; and fuel during operation. Energy demand from operation of the Proposed Project would include the electricity and natural gas consumption associated with the proposed building and the proposed surface parking lots (e.g., for lighting). In addition, vehicles traveling to and from the site would require gasoline or diesel fuel. Compared with existing conditions, energy use at the Project site would increase because of the net increase in building square footage (approximately 71,959 sf). However, energy use per square foot would decrease in comparison with existing because of the energy-efficient design of the proposed building and the sustainability features, which are described in more detail in the paragraphs that follow.

Consistent with the requirements of City Municipal Code Section 16.44.130, the Proposed Project would meet 100 percent of its energy demand (natural gas and electric) through any combination of the following measures: onsite energy generation, purchase of 100 percent renewable electricity through Peninsula Clean Energy or Pacific Gas and Electric Company in an amount equal to the annual energy demand of the Proposed Project, purchase of local renewable energy generated within the city of Menlo Park in an amount equal to the annual energy demand of the Proposed Project, purchase of certified renewable energy credits and/or certified renewable energy offsets annually in an amount equal to the annual energy demand of the Proposed Project.

As needed, PG&E would also provide gas and electrical power for the proposed facilities. Existing electricity and gas lines in the vicinity would serve the Project site; these may be upgraded, if necessary. If exceptions to the City's reach codes are approved, the amount of annual natural gas usage would be required to be offset, per the City Zoning Ordinance.[42] The Proposed Project would be exempt from the requirement for electric space heating because the building would include scientific laboratory uses.[43] Per Chapter 12.16 of the City Municipal Code, non-residential buildings containing scientific laboratory uses may install a non-electric space conditioning system. Under this exception, the Project Sponsor would need to provide third-party verification that all-electric space heating would not be cost effective or feasible. In addition, the Project Sponsor would be required to offset annual natural gas usage through any combination of purchase and installation of local renewable energy generation within Menlo Park or purchase of renewable energy credits or offsets. The exception for space conditioning would be subject to review and approval by the City prior to building permit issuance. It is anticipated that the Proposed Project would consume approximately 219,000 therms of natural gas per year.

The Proposed Project would comply with all applicable City and state "green" building measures, including Title 24, which is commonly referred to as "CALGreen" (California Code of Regulations, Part 11). As stated previously, in addition to the California Building Code, the Proposed

[42] In 2019, the City of Menlo Park adopted local amendments to the California Building Code that required electricity to be the only fuel source for new buildings (not natural gas). This ordinance (City Municipal Code Section 12.16) applies only to newly constructed buildings (i.e., from the ground up) and does not include additions or remodeling.

[43] Per Chapter 12.16 of the City Municipal Code, to use natural gas for space heating, the Project Sponsor would be required to provide third-party verification for review by the City that all-electric space heating would not be cost effective or feasible.

Project would be required to comply with the City's adopted local amendments to the California Energy Code (reach codes). In the LS-B zoning district, projects are required to meet green and sustainable building regulations. The Proposed Project would seek LEED Gold certification or equivalent for Building Design and Construction, consistent with the City's Zoning Ordinance; this is a requirement for new buildings greater than 100,000 gsf in size. Strategies for compliance with LEED standards include onsite amenities that can be shared with all campus buildings, shuttle service to Caltrain, carpooling, onsite car-share and bike-share programs, a stormwater management plan, onsite renewable energy generation, and an onsite recycling program. Details regarding how the proposed building would meet the green and sustainable building requirements would be provided as Project plans and materials are developed further.

The proposed design for the building would include a curved south façade, composed of full-height, performance-tinted, bird-friendly insulated glazing in an aluminum-frame curtain wall. The balance of the building would be clad in glass-fiber reinforced-concrete panels, formed metal panels, and aluminum-frame windows with tinted insulated glazing to reduce energy loss. The Proposed Project would also include water-conserving plant material and irrigation systems, in compliance with the Water-Efficient Landscape Ordinance. All of these designs would reduce Project-related energy consumption.

As an infill development, the Proposed Project furthers the objectives of energy conservation related to transportation by focusing activities in areas with existing infrastructure and services. The TDM program for the Proposed Project would be designed to provide alternatives to single-occupancy automobile travel to and from the Project site. The TDM program would include a bicycle storage area, showers/changing rooms, subsidized transit tickets, a commute assistance center, a shuttle stop, and a car-/bike-share program.

The Proposed Project would be within the 70,000-square-mile PG&E service territory for electricity and natural gas generation, transmission, and distribution. In addition, PCE would provide renewable power to the Project site. Because of the Project's size and location within an urban setting, buildout of the Proposed Project would not significantly increase energy demands within the service territory and would not require new energy supply facilities. In addition, energy projections from providers within the state anticipate growth from development such as the Proposed Project. If an exception for a non-electric space conditioning system is granted by the City, the Project Sponsor would be required to offset annual natural gas usage by purchasing local renewable energy generated within Menlo Park or renewable energy credits or offsets. Although the Proposed Project could result in an increase in energy consumption compared with existing conditions, it would not result in the inefficient, wasteful, or unnecessary consumption of energy resources during operation because of the incorporation of energy-efficient design features and the use of alternative modes of transportation.

Conclusion

The physical conditions, as they relate to the wasteful, inefficient, or unnecessary consumption of energy resources, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Accordingly, the Proposed Project would result in ***less-than-significant*** impacts with respect to the wasteful, inefficient, or unnecessary consumption of energy resources. No further study is needed.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact UTIL-13 (pages 4.14-76 to 4.14-81). It was determined that it would result in a less-than-significant impact. In addition, energy conservation was evaluated in Section 4.15.5 of the ConnectMenlo EIR, consistent with CEQA Guidelines Appendix F. The ConnectMenlo EIR did not quantify energy demand associated with buildout of ConnectMenlo; however, a brief discussion of energy use and conservation, including the City's Climate Action Plan, was included. No mitigation measures were recommended.

Project-Specific Discussion

As previously stated, the Proposed Project would be required to comply with CALGreen, which includes provisions related to insulation and designs that minimize energy consumption. In addition, as described in the ConnectMenlo EIR, new development, as envisioned through ConnectMenlo buildout, would be constructed using modern, energy-efficient building materials and construction practices, in accordance with CALGreen, the California Public Utility Commission's Long-Term Energy Efficiency Strategic Plan, and Chapter 12.18 of the City Municipal Code, which contains the Green Building Ordinance. Furthermore, the ConnectMenlo EIR found that new buildings would also use new, modern appliances and equipment, in accordance with the 2006 Appliance Efficiency Regulations.

Implementation of ConnectMenlo inherently furthers energy conservation objectives by focusing activities in areas with existing infrastructure and services. In addition, the Land Use, Circulation, and Open Space/Conservation Elements of ConnectMenlo include goals, policies, and programs that require local planning and development decisions to consider impacts on energy resources. As a part of ConnectMenlo, all new buildings within the Bayfront Area are required to comply with specific green building requirements for LEED certification, provide outlets for electric-vehicle charging, provide onsite renewable energy generation, and enroll in EPA's Energy Star Building Portfolio Manager.

Future development under ConnectMenlo, as part of the City's project approval process, would be required to comply with existing regulations such as City General Plan policies and City Zoning Ordinance regulations, which have been enacted to promote energy conservation and efficiency through sustainable building practices and reduced automobile dependency. Furthermore, through continued implementation of the City's Climate Action Plan, compliance with CALGreen, and compliance with other applicable state and local energy efficiency measures, significant energy conservation and savings would be realized by future development under ConnectMenlo.

Consistent with ConnectMenlo requirements, the Proposed Project would comply with specific green building requirements for LEED certification, comply with City Zoning Ordinance requirements regarding renewable energy generation/purchases and credits/offsets for exceptions granted by the City for the use of natural gas, provide outlets for electric-vehicle charging, use modern appliances and equipment, and comply with current CALGreen standards, which would help to reduce energy consumption. The Proposed Project would also comply with the City's local amendments to the California Energy Code (reach codes), which would further reduce energy consumption beyond CALGreen requirements. The Proposed Project would also be consistent with ConnectMenlo energy conservation policies and City Zoning Ordinance requirements, as noted

above, and would help further the goals of the City's Climate Action Plan.[44] The Proposed Project would also implement TDM measures, which would help reduce transportation energy usage, consistent with ConnectMenlo and City Zoning Ordinance requirements.

Because California's energy conservation planning actions are conducted at a regional level, and because the Proposed Project's total impact on regional energy supplies would be minor, the Proposed Project would not conflict with energy conservation plans. The Proposed Project would be consistent with applicable plans related to renewable energy and energy efficiency.

Conclusion

The physical conditions, as they relate to conflicts with a state or local plan for renewable energy and energy efficiency, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would result in ***less-than-significant*** impacts related to conflicts with a state or local plan for renewable energy and energy efficiency; mitigation measures would not be required for construction or operation of the Proposed Project. No further study is needed.

[44] On April 20, 2021, the Menlo Park City Council adopted an amended 2030 Climate Action Plan, which included an updated zero-carbon goal, to be achieved as a community by 2030. To the extent that the City Council enacts ordinances, programs, or requirements that are applicable to private development, the Proposed Project would comply with the requirements, as applicable. Compliance with the requirements would be ensured through conditions of approval.

VII. Geology and Soils	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

Setting

Regional Geology

The Project site is on the western margin of San Francisco Bay, in the Santa Clara Valley, a broad, sediment-filled basin bounded on the west by the Santa Cruz Mountains and on the northeast by the Diablo Range.[45] The Project site is underlain by Holocene-age fine-grained alluvium (Qaf). Fine-grained alluvium is generally described as unconsolidated, poorly sorted plastic organic clay and silty clay in poorly drained interfluvial basins, usually at the margins of tidal marshlands. Locally, this material contains thin, well-sorted interbedded sand and fine gravel with modern vertebrate and invertebrate fossils. The unit interfingers with Bay Mud (Qm) and medium-grained alluvium (Qam) geologic units. These Holocene geologic units are underlain by Pleistocene deposits.[46]

Regional Seismicity

Faults

The San Francisco Bay Area is one of the most active seismic regions in the United States.[47] Within the Bay Area, three faults belong to the San Andreas fault system, the San Andreas, Hayward, and Calaveras faults. Trending in a northwest direction, the faults generate about 12 earthquakes each century and are large enough to cause major structural damage. However, no known fault crosses the Project site.[48,49]

Ground Shaking

Because the Project site is in a seismically active area, strong to very strong ground shaking can be expected to occur at the site over the life of the Proposed Project.[50,51,52] Seismologic and geologic experts conclude that there is a 72 percent probability for at least one large earthquake of magnitude 6.7 or greater in the San Francisco Bay Area before 2044.[53]

Table 3.7-1 lists the regional faults, their distance and direction from the Project site, and each fault's probability of producing one or more earthquakes of magnitude 6.7 or greater before 2044. Because a large earthquake could occur on the San Andreas fault, similar to the 7.8-magnitude earthquake that occurred in 1906, it is anticipated that ground shaking would be violent and approximately equal to a Modified Mercalli Intensity of IX.[54] Such ground shaking could cause considerable damage in buildings, with well-designed structures thrown out of plumb and poorly built structures sustaining considerable damage.[55]

Table 3.7-1. Regional Faults in the Project Area and Seismicity

	Distance from Project Site (miles)	Direction from Project Site	Mean Characteristic Moment Magnitude
Monte Vista-Shannon	5.7	Northeast	6.50
San Andreas	7.3	Southwest	8.05
Hayward	11.7	Northeast	7.00

Site Geology, Topography, and Groundwater

The Project site is relatively level, with an elevation of approximately 12 feet above mean sea level.[56] The subsurface investigation of borings and cone penetrometer tests encountered predominantly fine-grained alluvium, consisting of clays and silts, interbedded with discontinuous layers of coarse-grained alluvium, consisting of sand, silty sand, clayey sand, and sand with lean clay[57] to the maximum depth explored. The fine-grained alluvium encountered was predominantly medium stiff to hard, and the coarse-grained alluvium was predominantly medium dense to very dense. The interbedded coarse-grained layers have a variable distribution across the Project site, occurring at discontinuous intervals.

Groundwater was encountered during soil boring at approximately 7 to 10 feet below the ground surface.[58] Depths to groundwater can vary seasonally because of landscaping across a particular geography. The long-term groundwater table is likely 5 to 10 feet below the ground surface.

Landslides and Erosion

Because the Project site's topography is flat,[59] there is little likelihood of landslides. Furthermore, according to the California Seismic Hazard Zonation Program, the Project site is not in an area that is susceptible to landslides.[60] Soils at the Project site are categorized as Urban Land[61] and not rated for erosion susceptibility.

Liquefaction and Seismically Induced Ground Failure

Liquefaction is a process in which loose sand and silt behave like a liquid when shaken by an earthquake. The soil can lose its ability to support structures. According to the California Seismic Hazard Zonation Program, the Project site is in an area that is potentially susceptible to earthquake-induced liquefaction.[62] In addition, according to the U.S. Geological Survey, the site is in an area with moderate to very high susceptibility to liquefaction.[63] However, site-specific investigation suggests that the Project site does not have liquefaction potential because the soils are generally clayey.[64]

Lateral spreading is liquefaction-related ground failure that involves horizontal (or lateral) movement of relatively flat or gently sloping soil deposits toward a free or open face, such as an excavation site, channel, or body of water. Typically, lateral spreading is associated with liquefaction involving one or more subsurface layers near the bottom of an exposed slope. Because failures tend to propagate as block failures, it is difficult to determine where the first tension crack will form. The Project site does not include a streambank or other open face, nor is there any historical documentation of lateral spreading at the Project site. Furthermore, site-specific investigation suggests that the risk of liquefaction is low. Therefore, the risk of lateral spreading at the Project site is low.

Settlement, Subsidence, and Expansive Soil

Loose to medium-dense unsaturated sandy soils can settle during strong seismic shaking. Liquefaction intensifies this trend. Because the alluvial soils encountered above the groundwater table in the site-specific geotechnical subsurface investigation had a significant degree of cohesion, seismic densification of this material is unlikely to be substantial at the Project site.[65]

65 Ibid.

Expansive soils undergo volume changes associated with changes in moisture content. When wet, expansive soils tend to swell, then shrink when dried. According to the geotechnical report prepared for the Proposed Project, near-surface soils at the Project site are highly expansive.[66]

Paleontological Resources

Paleontological resources, or fossils, are any evidence of past life, including the remains, traces, or imprints of once-living organisms that are now preserved in rocks and sediments. These provide information about the history of life on Earth and date back billions of years. According to the Society of Vertebrate Paleontology,[67] significant paleontological resources include identifiable vertebrate fossils, large or small, as well as uncommon invertebrate, plant, and trace fossils. Fossils are nonrenewable paleontological resources that are afforded protection by federal, state, and local environmental laws and regulations. The potential of a particular area to produce a valuable paleontological resource depends on the geologic age and origin of the underlying rocks.

The natural geology of the Project area comprises Holocene- (from less than 10,000 years ago) and Pleistocene-age alluvium.[68,69.70] These geologic deposits underlie artificial fill or disturbed soil in the developed areas of Menlo Park. A summary of each geologic unit is provided below.

- **Artificial Fill (Qf)** – Artificial fill is poorly consolidated to well-consolidated gravel, sand, silt, and rock fragments. It is used in a variety of applications.[71] As a mixture of sand, silt, and gravel, it is often used to prepare areas for urban development or fill in or replace low-lying areas and wetlands. Artificial fill is sourced from natural geologic deposits, then excavated, reworked, and transported to another location. Any fossils recovered from artificial fill would not constitute significant fossil records that could contribute to scientific or natural history because stratigraphic information would be lost through handling.[72] Artificial fill would, therefore, not contain significant paleontological resources. It has no potential with respect to containing paleontological resources.

- **Bay Mud (Qm)** – Holocene Bay Mud is very poorly consolidated to well-consolidated organic clay and silt, with lenses of sand and shells and layers of peat.[73] It is deposited in brackish to saline water along the margin of San Francisco Bay, interfingering with fine- and medium-grained alluvium. Bay Mud is soft and plastic when wet and firm when dry.
- **Holocene Fine-Grained Alluvium (Qaf)** – Holocene fine-grained alluvium is an unconsolidated, poorly sorted plastic organic clay or silty clay that is found in basins, usually at the margins of tidal marshlands.[74] It interfingers with Bay Mud (Qm), medium-grained alluvium (Qam), and coarse-grained alluvium (Qac). Site-specific investigation identified predominantly fine-grained alluvium, consisting of clays and silts, interbedded with discontinuous layers of coarse-grained alluvium. The interbedded coarse-grained layers indicate a significant degree of spatial variability across the site, as evidenced by occurrences of coarse-grained material at discontinuous depth intervals across the site. Holocene fine-grained alluvium is generally less than 15 feet thick and underlain by older deposits; in the Project area, it is underlain by Holocene and Pleistocene alluvial and basin deposits, undivided. Holocene-age deposits (from less than 10,000 years ago) are considered too young to have fossilized remains of organisms (fossilization processes take place over thousands or even millions of years). These alluvial deposits contain vertebrate and invertebrate fossils of extant modern taxa,[75] which are generally not considered significant paleontological resources. Holocene fine-grained alluvium has low potential with respect to containing paleontological resources.
- **Holocene Medium-Grained Alluvium (Qam)** – Holocene medium-grained alluvium is an unconsolidated to moderately consolidated, moderately sorted fine sand, silt, and clayey silt deposited at the edge of coarse-grained alluvial fans. It interfingers with coarse- and fine-grained alluvium. It is generally less than 20 feet thick and underlain by older deposits. As with Holocene fine-grained alluvium (Qaf), it is underlain by Holocene and Pleistocene alluvial and basin deposits, undivided.
- **Holocene Coarse-Grained Alluvium (Qac)** – Holocene coarse-grained alluvium is an unconsolidated to consolidated, moderately sorted fine sand and silt that forms stream levees and alluvial fans along former and present major drainage channels. It interfingers with medium-grained alluvium. It is up to 50 feet thick near the heads of fans and underlain by older deposits. As with Holocene fine-grained alluvium (Qaf), it is underlain by Holocene and Pleistocene alluvial and basin deposits, undivided.
- **Holocene and Pleistocene Alluvial and Basin Deposits, Undivided (Qu)** – Holocene and Pleistocene alluvial and basin deposits, undivided, are generally not present at the ground surface;[76] rather, they underlie Holocene deposits at the ground surface. Because of their age, there is some potential for them to contain paleontological resources. The University of

California Museum of Paleontology has records of fossil discoveries in inland San Mateo County from Pleistocene deposits of unspecified geologic formation.[77] These include species of moose, horse, camel, mammoth, and bison. Holocene and Pleistocene alluvial and basin deposits, undivided, have high potential with respect to containing paleontological resources.

General Plan Goals and Policies

The City General Plan (specifically the Land Use, Open Space/Conservation, Noise, and Safety Elements) contains goals, policies, and programs that require local planning and development decisions to consider impacts related to strong seismic ground shaking, seismically related ground failure (including liquefaction), and landslides. The following City General Plan goals, policies, and programs would minimize potential adverse risks associated with strong seismic ground shaking, seismically related ground failure, liquefaction, and landslides: Goal LU-7, Policy LU-7.7; Goal S-1, Policy S-1.1, Policy S-1.3, Policy S-1.5, Policy S-1.6, Policy S-1.7, Policy S-1.13, and Policy S-1.14; Program S-1.D, and Program S-1.H. In addition, the Open Space/Conservation, Noise, and Safety Elements contain goals, policies, and programs that would require local planning and development decisions to consider impacts related to paleontological resources. The following City General Plan goals and policies would minimize potential adverse impacts on paleontological resources: Goal OSC-3, Policy OSC-3.3 and Policy OSC-3.4.

Environmental Checklist and Discussion

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, no known fault crosses the Project site. The closest known fault is the Monte Vista-Shannon fault, approximately 5.7 miles southwest of the Project site. Therefore, the risk of surface fault rupture is low. Regardless, the Project site is in a seismically active area. Although unlikely, future faulting may occur in areas where active faults were not previously known to exist. However, the risk of surface fault rupture from unknown faults is considered to be low.

The Proposed Project would comply with the requirements of the current California Building Standards Code to withstand forces associated with the maximum credible earthquake. The California Building Standards Code sets standards regarding excavation, grading, construction

[77] University of California Museum of Paleontology. 2019. *Advanced Specimen Search: San Mateo County*. Available: https://ucmpdb.berkeley.edu/advanced.html. Accessed: December 4, 2019.

earthwork, fill embankments, foundation investigations, liquefaction potential, and soil strength loss. Furthermore, ConnectMenlo policies and programs would apply to the Proposed Project. Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil issues to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and enforcement of construction standards. The Proposed Project would comply with California Building Standards Code requirements and implement the recommendations provided in the site-specific geotechnical report.

Conclusion

The physical conditions, as they relate to the exposure of people to an earthquake fault rupture, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. No further study is needed.

(ii) Strong seismic ground shaking? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above under *Regional Seismicity*, the Project site is in a seismically active area and surrounded by numerous faults. A list of faults of regional significance is provided in Table 3.7-1. Seismically induced ground shaking at the Project site would depend on a number of factors, as follows:

- Size of the earthquake (magnitude),
- Distance from the Project site to the fault rupture source,
- Directivity (i.e., focusing of earthquake energy along a fault in the direction of a rupture), and
- Subsurface conditions.

Given the Project site's proximity to the Monte Vista-Shannon fault (approximately 5.7 miles), the San Andreas fault (approximately 7.3 miles), and other faults that would be capable of producing a large earthquake, the potential exists for a large earthquake to induce strong to very strong ground shaking at the site during the life of the Proposed Project, as discussed above under *Ground Shaking*.

The Proposed Project would be designed and constructed to meet standards set forth by the California Building Standards Code. These standards are intended to reduce major structural damage and the loss of life in the event of an earthquake. The seismic performance goals generally expect some property damage to be incurred in a moderate to large earthquake, but the damage would generally be reparable and not life threatening. Furthermore, the City General Plan Safety Element Policy S-1.13 requires site-specific geologic or geotechnical studies

for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil issues to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and enforcement of construction standards. Adherence to these recommendations would address and mitigate geologic hazards in accordance with the specifications of California Geological Survey *Special Publication 117*, Guidelines for Evaluating and Mitigating Seismic Hazards, and the requirements of the Seismic Hazards Mapping Act.

Conclusion

The physical conditions, as they relate to the exposure of people to strong seismic ground shaking, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. No further study needed.

(iii) Seismically related ground failure, including liquefaction? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, the Project site has low susceptibility with respect to seismically induced liquefaction. Subsurface sediments are predominantly clayey. Therefore, the probability of seismically induced ground shaking leading to liquefaction is only slight. Accordingly, seismically induced settlement as a result of liquefaction is unlikely to occur. Because the soils above the groundwater table have a significant degree of cohesion, seismic densification is also unlikely to constitute a hazard.[78]

The Proposed Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, City General Plan Safety Element Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil issues to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and enforcement of construction standards.

Conclusion

The physical conditions, as they relate to the exposure of people to seismically related ground failure, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in

[78] Murray Engineers, Inc. 2021. *Geotechnical Investigation: Commercial Development, 1125 O'Brien Drive, Menlo Park, California*. January. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. San Rafael, CA.

circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because the Proposed Project would comply with City of Menlo Park requirements as well as the California Building Standards Code and implement recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No mitigation is required, and no further study is needed.

(iv) Landslides? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to the exposure of people to landslides, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. No substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. As discussed above, the Project site is nearly level and not within a zone with any potential for landslides. Project construction would not cause landslides or exacerbate existing susceptibility to landslides, resulting in ***no impact***. No further study is needed.

b. Result in substantial soil erosion or the loss of topsoil? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-2 (page 4.5-11). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

Construction. Soils at the Project site are categorized as Urban Land, meaning that they are not native topsoil. Removing them for construction would not result in a loss of topsoil. Furthermore, soils at the Project site are not rated for erosion. Construction of the Proposed Project would include demolition, excavation, and grading, which could result in accelerated erosion during construction. Excavation would generate approximately 4,000 cubic yards of excavated material. The removal of currently onsite concrete and asphalt would expose previously sheltered soils to the elements as well as construction activities, which could accelerate erosion rates. However, as described in Section X, *Hydrology and Water Quality*, all construction activities would comply with the NPDES Construction General Permit, which contains standards to ensure that water quality would not be degraded. As part of this permit, standard erosion control measures and best management practices (BMPs) would be identified in the SWPPP and implemented during construction to reduce sedimentation in waterways and any loss of topsoil. The SWPPP and BMPs would minimize erosion and runoff during construction. These BMPs could include, but would not be limited to, using drainage swales or lined ditches to control stormwater flow and protecting storm drain inlets (with gravel bags or catch basin inserts).

Operation. The Proposed Project would increase the pervious area at the Project site by 14,207 sf. To manage potential erosion, the Proposed Project would comply with the NPDES General Construction Permit, San Francisco Bay Municipal Separate Storm Sewer System Permit Provision C.3, and San Mateo Countywide Water Pollution Prevention Program C.3 Stormwater Technical Guidance. In addition, the Proposed Project would implement the SWPPP, stormwater bioretention areas, and other erosion measures.

Conclusion

The physical conditions, as they relate to soil erosion or loss of topsoil, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would result in ***less-than-significant*** impacts related to soil erosion and the loss of topsoil; mitigation measures would not be required for construction or operation of the Proposed Project. No further study is needed.

c. Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project and potentially result in an onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-3 (pages 4.5-12 to 4.5-13). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As stated above, groundwater at the Project site is relatively shallow, encountered at a depth of approximately 7 to 10 feet below the ground surface. Therefore, excavation deeper than 7 to 10 feet would be likely to encounter groundwater and require dewatering to avoid substantial water inflow at the excavation site during construction. However, it is anticipated that excavation would not exceed a depth of 2 feet below the ground surface. Therefore, the likelihood of encountering groundwater is relatively minor. However, because groundwater levels can vary, depending on season, weather, and nearby landscaping practices, it is possible that groundwater could be encountered at levels higher than the maximum depth of excavation. If this should occur, dewatering would be required. Dewatering could result in settlement beneath adjacent structures, including buildings, sidewalks, streets, and utilities. In addition, during Project operation, groundwater could exert hydrostatic pressure on subsurface parking or basement levels; permanent dewatering could be required to relieve this pressure. Section X, *Hydrology and Water Quality*, discusses water quality requirements associated with dewatering.

There is no historical documentation of lateral spreading at the Project site. The Proposed Project would be constructed on a previously developed site that does not include a streambank or open face. Furthermore, the risk of liquefaction at the Project site is low. Therefore, the risk of lateral

spreading is low. Static settlement as a result of consolidation is anticipated to be up to approximately 5 inches, and differential settlement across the 25-foot span of a typical mat foundation is anticipated to be approximately 2.5 inches.[79]

To reduce impacts related to groundwater and consolidation settlement, the Proposed Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, City General Plan Safety Element Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil issues to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and enforcement of construction standards.

Conclusion

The physical conditions, as they relate to unstable geologic units or soil, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because the Proposed Project would comply with City of Menlo Park requirements as well as the California Building Standards Code and implement the recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No further study is needed.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994),[80] creating substantial direct or indirect risks to life or property? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-4 (page 4.5-13). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As stated above, highly expansive soil occurs at the Project site. Structures and flatwork supported on expansive soil could experience seasonal heave and settlement as the soil expands and contracts through wetting and drying cycles. If structures are not properly designed, cyclic expansion and contraction can affect structural stability. To reduce impacts related to expansive soils, the Proposed Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, City General Plan Safety Element Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil issues to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and enforcement of construction standards.

[79] Murray Engineers, Inc. 2021. *Geotechnical Investigation: Commercial Development, 1125 O'Brien Drive, Menlo Park, California.* January. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. San Rafael, CA.

[80] Note that the CEQA Guidelines specifically reference this version of the Uniform Building Code.

Conclusion

The physical conditions, as they relate to expansive soils, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because the Proposed Project would comply with City of Menlo Park grading requirements as well as California Building Standards Code requirements and implement recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No further study is needed.

e. Have soils that would be incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems in areas where sewers are not available for the disposal of wastewater? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-5 (pages 4.5-13 to 4.5-14). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to septic tanks, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not require the use of septic tanks or alternative wastewater disposal systems. Wastewater would be discharged into the existing public sanitary sewer system in the study area, which is serviced by the West Bay Sanitary District and Silicon Valley Clean Water. The West Bay Sanitary District provides and maintains the sanitary sewer system in Menlo Park; wastewater is conveyed to an advanced two-stage biological treatment facility operated by Silicon Valley Clean Water prior to discharge to San Francisco Bay. Therefore, the Project would result in ***no impacts*** related to septic tanks. No further study is needed.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (Less than Significant with Mitigation)

Analysis in the ConnectMenlo EIR

This topic was discussed in the ConnectMenlo EIR as Impact CULT-3 (pages 4.4-18 to 4.4-20). It was determined that the impact would be less than significant with implementation of Mitigation Measure CULT-3. This mitigation measure would temporarily halt ground-disturbing activities if unique paleontological resources are discovered.

Project-Specific Discussion

Although pile drilling would extend to a depth of 85 feet, Project excavation would not extend through the Holocene fine-grained alluvium deposit and into the Holocene and Pleistocene alluvial and basin deposits, undivided. The Holocene and Pleistocene alluvial and basin deposits, undivided,

as discussed above, are sensitive with respect to paleontological resources, but Holocene fine-grained alluvium is not. It is therefore unlikely that ground-disturbing activities associated with Project construction would encounter significant paleontological resources. However, should excavation extend beyond 15 feet below the ground surface, excavation could disturb deposits that are sensitive for paleontological resources. Therefore, the potential exists for paleontological resources to be disturbed, damaged, or lost.

City General Plan Open Space/Conservation Element Policy OSC-3.3 requires developments to protect archaeological or paleontological resources, either onsite or through appropriate documentation, as a condition of removal. In addition, if paleontological resources are uncovered during grading or excavation, Policy OSC-3.4 requires construction to stop until appropriate mitigation is implemented. Furthermore, the Proposed Project would incorporate ConnectMenlo EIR Mitigation Measure CULT-3 as a conditions of approval to the use permit for the Proposed Project. In the event that fossils or fossil-bearing deposits are discovered during ground-disturbing activities anywhere in Menlo Park, excavations within a 50-foot radius of the find shall be temporarily halted or diverted. Ground disturbance shall cease until a City-approved qualified paleontologist determines whether the resource requires further study.

Conclusion

The physical conditions, as they relate to paleontological resources, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would incorporate ConnectMenlo Mitigation Measure CULT-3, which would require any ground disturbance to be halted or diverted if fossils or fossil-bearing deposits are discovered during ground-disturbing activities. Therefore, the Proposed Project's impact on paleontological resources would be ***less than significant with mitigation***. No further study is needed.

ConnectMenlo EIR Mitigation Measure

Mitigation Measure CULT-3. In the event that fossils or fossil-bearing deposits are discovered during ground-disturbing activities anywhere in the city, excavations within a 50-foot radius of the find shall be temporarily halted or diverted. Ground disturbance work shall cease until a City-approved qualified paleontologist determines whether the resource requires further study. The paleontologist shall document the discovery as needed (in accordance with 1995 Society of Vertebrate Paleontology standards), evaluate the potential resource, and assess the significance of the find under the criteria set forth in California Environmental Quality Act Guidelines Section 15064.5. The paleontologist shall notify the appropriate agencies to determine the procedures to follow before resuming construction activities at the location of the find. If avoidance is not feasible, the paleontologist shall prepare an excavation plan to mitigate the effect of construction activities on the discovery. The excavation plan shall be submitted to the City of Menlo Park for review and approval prior to implementation, and all construction activity shall adhere to the recommendations in the excavation plan.

VIII. Greenhouse Gas Emissions	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	☐
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	☐

Setting

As discussed in more detail below, this topic will be analyzed further in the EIR for the Proposed Project. Therefore, the setting is not discussed in this document but will be provided instead in the EIR.

General Plan Goals and Policies

General plan goals and policies related to greenhouse gases will be outlined and discussed in the EIR.

Environmental Checklist and Discussion

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (pages 4.6.28 through 4.6-35) and determined to result in significant and unavoidable impacts, despite the implementation of mitigation measures.

Conclusion

Construction activities associated with the Proposed Project would produce combustion emissions from various sources. In addition, operation of the Proposed Project would produce mobile-source GHG emissions from vehicle trips and onsite maintenance as well as indirect emissions from sources associated with energy consumption. Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, there are aspects of the Proposed Project that were not evaluated in the ConnectMenlo EIR. Specifically, the trips generated by the Proposed Project may not be consistent with, and could be greater than, what was evaluated in the ConnectMenlo EIR. Therefore, impacts could result that were not previously disclosed. This topic requires ***further environmental review*** in the EIR.

b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (pages 4.6-36 through 4.6-45) and determined to result in significant and unavoidable impacts, despite the implementation of mitigation measures.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, there are aspects of the Proposed Project that were not evaluated in the ConnectMenlo EIR. Specifically, the trips generated by the Proposed Project may not be consistent with, and could be greater than, what was evaluated in the ConnectMenlo EIR. In addition, the Proposed Project could be inconsistent with the City's 2030 Climate Action Plan, which was amended and adopted in 2021, subsequent to adoption of the ConnectMenlo EIR. The Climate Action Plan includes goals for reaching carbon neutrality by 2030. The City's reach code requires all new construction to be all electric (subject to specified exceptions). Per the zoning ordinance, the Proposed Project could apply for an exemption under the local building code to allow some use of natural gas; the exemption would require energy usage to be offset through credits. Compliance with the requirements would be ensured through conditions of approval. Regardless, the Proposed Project could result in conflicts with applicable plans, policies or regulations (including the Climate Action Plan) that were not previously disclosed in the ConnectMenlo EIR. Therefore, this topic requires ***further environmental review*** in the EIR.

IX. Hazards and Hazardous Materials	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Create a significant hazard for the public or environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒	☐
b) Create a significant hazard for the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒	☐
c) Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	☐	☐	☒	☐
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard for the public or the environment?	☐	☐	☒	☐	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☐	☒

Setting

Hazardous Materials

A hazardous material is any substance that, because of its quantity, concentration, or physical or chemical properties, may pose a hazard to human health and the environment. Under California Code of Regulations (CCR) Title 22, the term "hazardous substance" refers to both hazardous materials and hazardous wastes. Both of these are classified according to four properties, (1) toxicity, (2) ignitability, (3) corrosiveness, and (4) reactivity (CCR Title 22, Chapter 11, Article 3). A hazardous material is defined in CCR Title 22 as:

> [a] substance, or combination of substances, that, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may either (1) cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or (2) pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of or otherwise managed (CCR Title 22 Section 66260.10).

Exposure to hazardous materials in various forms can result in death, serious injury, long-lasting health effects, or damage to buildings, homes, and other property. Hazards to human health and the environment can occur during the production, storage, transport, use, or disposal of hazardous materials.

The Project site consists of two parcels, the Development Lot and the Accessory Parking Lot. Conditions related to hazardous materials at these two parcels are described below.

Parcel 1: The Development Lot

Two Phase I Environmental Site Assessments were performed for the Proposed Project by Stellar Environmental Solutions.[81,82] According to the assessments, the Project site consists of three parcels, 1105 O'Brien Drive (APN 055-433-320), 1135/1165 O'Brien Drive (APN 055-433-330), and a drainage ditch (APN 055-433-350), collectively referred to as Parcel 1 or the Development Lot. The parcels at 1105 O'Brien Drive and 1135/1165 O'Brien Drive were undeveloped or in agricultural use until warehouse buildings were constructed between 1962 and 1965.[83] The buildings have remained unchanged. The parcel containing the drainage ditch was undeveloped or in agricultural use until the late 1950s, the time when the drainage ditch was constructed.[84] By 1998, the ditch was placed below ground south of O'Brien Drive; it has remained unchanged since.

Current conditions indicate that two pole-mounted PG&E transformers are at the Development Lot.[85] During site inspection, no leakage or other indication of damage was noted on the transformers themselves or on the ground below them. Although older electrical transformers can contain cooling oil with polychlorinated biphenyls, it is the current policy of PG&E not to use polychlorinated biphenyls in

83 Stellar Environmental Solutions, Inc. 2019. *Phase I Environmental Site Assessment, 1105, 1135, and 1165 O'Brien Drive, Menlo Park, California*. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. October.

84 Stellar Environmental Solutions, Inc. 2019. *Phase I Environmental Site Assessment, APN 055-433-350, O'Brien Drive, Menlo Park, California*. Prepared for Tarlton Properties, Inc., Menlo Park, CA. October.

85 Stellar Environmental Solutions, Inc. 2019. *Phase I Environmental Site Assessment, 1105, 1135, and 1165 O'Brien Drive, Menlo Park, California*. Prepared for O'Brien Drive Portfolio, LLC, Menlo Park, CA. October.

any of its transformers. In addition, several heating, ventilation, and air-conditioning (HVAC) units are mounted on the roof of the warehouse at 1105 O'Brien. At the time of the site inspection, they were not observed to be leaking refrigerant or other liquids.

No fluorescent light fixtures were reported in the buildings at the Development Lot, and no review for asbestos-containing materials was conducted. However, based on the date of construction for the buildings at the site (i.e., 1962 and 1965), it is possible that asbestos-containing materials are present at the property. Surveys indicate that radon levels are most likely below the U.S. Environmental Protection Agency action level.[86] No review for lead-based paint was conducted; however, given the date of construction for the buildings, lead-based paint could be present on the Project site.

No concerns were identified regarding the disposal of solid waste. Although the warehouse at 1135 O'Brien Drive houses equipment that has been labeled as a "biohazard," no improper storage practices or signs of mishandling were noted. No evidence of underground storage tanks (USTs) was observed during the inspection. However, a historical UST was removed in 1994. Although no obvious odors were noticed and no staining was observed during the investigation, a hole in the historical UST was observed near a seam.

A review of regulatory agency databases revealed no recognized environmental conditions,[87] two historical recognized environmental conditions,[88] and no controlled recognized environmental conditions[89] at the Project site.[90,91]

- One of the historical recognized environmental conditions is identified as a leaking UST that once contained diesel at 1105 O'Brien Drive (removed and mitigated in 1994). After removal of the leaking UST, five soil samples were tested. All five samples were classified as "non-detect" for total petroleum hydrocarbons as gasoline/benzene, toluene, ethylbenzene, and xylene and close to detection limits or "non-detect" for kerosene and total petroleum hydrocarbons as diesel. Subsequent groundwater sampling beneath the former tank location indicated no impact on groundwater from the leaking UST.
- The other historical recognized environmental condition is related to soil under the former oil-stained asphalt and concrete surfaces at 1135 O'Brien Drive. Soil under the stained surfaces was excavated in July 1994 to a depth of 12 to 18 inches to ensure that all contamination had been removed. The 11 confirmation samples from the bottom and sidewalls of the excavation did not show significant levels of hydrocarbons remaining.

87 A *recognized environmental condition* indicates the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products.

88 A *historic recognized environmental condition* is a past release of hazardous substances or petroleum products that occurred in connection with a property that has been addressed to the satisfaction of the applicable regulatory authority, or meets the unrestricted use criteria established by the regulatory authority, without subjecting the property to any required controls.

89 A *controlled recognized environmental condition* is the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property that has been released to the environment; appears to have been released to the environment because of indicative conditions; or may pose a material threat of future release to the environment but has been addressed to the satisfaction of the applicable regulatory authority, with the substance allowed to remain in place subject to implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls).

Parcel 2: The Accessory Parking Lot

In addition to the Development Lot, the Project site also includes a 1.68-acre adjacent property, referred to as Parcel 2 or the Accessory Parking Lot. The Accessory Parking Lot is currently developed with an approximately 20,955-square-foot, single-story building at 1 Casey Court. The building, which was constructed between 1974 and 1981,[92] would be demolished as part of the Proposed Project.

A Phase I Environmental Site Assessment was performed for the Accessory Parking Lot by Farallon Consulting.[93] According to the assessment, the Accessory Parking Lot contains one parcel (APN 055-433-180) that totals approximately 73,000 square feet. Western Allied Mechanical, an HVAC company, is located on a portion of the parcel. Other areas include a paved parking lot, a covered storage area, and landscaping. The site appears to have been used for agricultural purposes from at least the 1930s until the current building was constructed (i.e., between 1974 and 1981).

Current conditions indicate that pad-mounted transformers are located throughout the Accessory Parking Lot. The transformers appear in good condition. Given the date of construction, the transformers are not expected to contain polychlorinated biphenyls. No evidence of staining was observed on or around the transformers. Hazardous materials in the form of janitorial cleaning supplies; cylinders with gas; propane, used to fuel a forklift; a drum of coolant; and water-based adhesive are on the parcel and used for onsite operations.[94] During the site inspection, the materials were observed to be properly labeled and stored in designated areas. No staining or evidence of a release was observed in or around the containers. Current conditions at the time of inspection indicated that hazardous substances, if present, most likely would not pose a risk to human health and or/the environment.

No fluorescent light fixtures were reported in the building at the Accessory Parking Lot, and no inspection for asbestos-containing materials was conducted. However, given the date of construction for the building at the site (i.e., between 1974 and 1981), it is possible that asbestos-containing materials are present at the property. No inspection for lead-based paint was conducted; however, given the date of construction for the building at the site, the likelihood of lead-based paint being present at the site is low.

No concerns were identified regarding the disposal of solid waste. Although the building at 1 Casey Court houses hazardous materials, as discussed above, no improper storage practices or other signs of mishandling were noted. No evidence of current USTs was observed during the site inspection. However, a historical leaking UST was reported in 1999. The leaking UST was removed, and San Mateo County Health granted case closure, based on constituents of concern being detected at concentrations that were less than regulatory levels of concern.

---

92 Farallon Consulting. 2020. *Phase I Environmental Site Assessment, 1 Casey Court, Menlo Park, California*. Prepared for Tarlton Properties, Inc., Menlo Park, CA. August 13.

93 Ibid.

94 Ibid.

A review of regulatory agency databases revealed no recognized environmental conditions.[95] The formerly leaking UST on the site was listed as a historical recognized environmental condition of concern.[96] No controlled recognized environmental conditions[97] were found at the Accessory Parking Lot site.[98]

According to the Phase I Environmental Site Assessment:

- The historical recognized environmental condition is identified as a leaking UST on the site that once contained diesel; the case was granted regulatory closure. (The leaking UST was reported and removed in 1999.) After removal, soil samples were collected at the excavation site to a depth of 9.5 feet below the ground surface. No constituents of concern were detected at concentrations that exceeded regulatory levels of concern, with the exception of methyl tert-butyl ether, which was detected in one soil sample. In July 2000, an additional soil boring was advanced at the location where the methyl tert-butyl ether had been detected, along with two more soil samples and one groundwater sample. No constituents of concern were detected at concentrations that exceeded regulatory levels of concern; unrestricted land use was granted, based on the environmental impact from the formerly leaking UST being considered a low risk. The San Mateo County Health Groundwater Protection Program granted case closure in 2001.

Other Potential Contamination Concerns

Several properties within a 0.5-mile search radius are recorded in environmental databases as having violations related to hazardous materials or documented environmental contamination. However, given their location and/or current contamination conditions, none of these sites has the potential to adversely affect the Project site.[99][100]

Table 3.9-1 shows upgradient properties, including the address, distance from Project site, direction from Project site, and the database(s) reporting the hazardous material violations and releases.

Proximity to Schools

The Project site is within 0.25 mile of three schools, Wund3rSCHOOL/Open Mind School (0.09 mile), Cesar Chavez Elementary School (0.18 mile), and Mid-Peninsula High School (0.23 mile).

---

95 A *recognized environmental condition* indicates the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products.

96 A *historic recognized environmental condition* is a past release of hazardous substances or petroleum products that occurred in connection with a property that has been addressed to the satisfaction of the applicable regulatory authority, or meets the unrestricted use criteria established by the regulatory authority, without subjecting the property to any required controls.

97 A *controlled recognized environmental condition* is the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property that has been released to the environment; appears to have been released to the environment because of indicative conditions; or may pose a material threat of future release to the environment but has been addressed to the satisfaction of the applicable regulatory authority, with the substance allowed to remain in place subject to implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls).

Proximity to Airports

The closest airport to the Project site, Palo Alto Airport, a general aviation field that is owned and operated by the City of Palo Alto, is approximately 1.8 miles from the Project site.[101]

Wildland Fires

According to the California Department of Forestry and Fire Protection's Fire and Resource Assessment Program, the Proposed Project is within a Non-Very High Fire Hazard Severity Zone of the Local Responsibility Area.[102] Therefore, the risk of wildfire at the Project site is very low.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Safety Element, and Circulation Element) contains goals, policies, and programs that require local planning and development decisions to consider impacts related hazardous materials. The following City General Plan goals, policies, and programs would minimize potential adverse risks associated with the routine transport, use, or disposal of hazardous materials: Goal LU-4, Policy LU-4.5; Goal LU-7, Policy LU-7.7; Goal S-1, Policy S-1.1, Policy S-1.3, Policy S-1.5, Policy S-1.5, Policy S-1.16, Policy S-1.18, Policy S-1.29, Policy S-1.30; Program S-1.J; and Policy CIRC-2.14.

Environmental Checklist and Discussion

a. Create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-1 (pages 4.7-18 to 4.7-21). It was determined that it would result in a less-than-significant impact because future development, as part of the City's project approval process, would be required to comply with existing regulations, including City General Plan policies, that have been enacted to minimize impacts related to hazardous materials. No mitigation measures were recommended.

Project-Specific Discussion

Construction. The Proposed Project involves building demolition and the construction of an approximately 131,825 gsf building for R&D/life science uses. Approximately 89 surface parking stalls would be available on the Development Lot, as would an additional 160 surface parking stalls on the adjacent Accessory Parking Lot. The Proposed Project would remove dirt and trees, as well as construction materials, from demolished buildings. Construction of the R&D/life science building, as well as parking spaces on the Development Lot and in the Accessory Parking Lot, would involve the routine transport, use, and disposal of hazardous materials, such as fuel, solvents, paints, oils, grease, and caulking. Project construction would comply with applicable regulations and would not

[101] City of Palo Alto. 2019. *Palo Alto Airport.* Available: https://www.cityofpaloalto.org/gov/depts/pwd/palo_alto_airport/default.asp. Accessed: December 5, 2019.

[102] California Department of Forestry and Fire Protection. 2008. *San Mateo County: Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE.* Available: https://osfm.fire.ca.gov/media/6800/fhszl_map41.pdf. Accessed: December 5, 2019.

involve the use of substances listed in 40 Code of Federal Regulations (CFR) 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. Although small amounts of solvents, paints, oils, grease, and caulking would be transported, used, and disposed of during Project construction, these materials are commonly used in construction projects and not considered acutely hazardous. Therefore, they would not represent the transport, use, or disposal of acutely hazardous materials.

No known hazardous materials are present on the Project site; therefore, the transport of spoils is not expected to result in the transport of hazardous materials. An UST was removed from the north side of the Development Lot (Parcel 1) in 1994.[103] Although a hole was seen in the tank when it was removed, soil sampling revealed no contamination (or it was below detection limits). In addition, at the Accessory Parking Lot (Parcel 2), a leaking UST was reported in 1999.[104] In 2001, San Mateo County granted case closure because the constituents of concern were at concentrations that were less than regulatory levels of concern.

No inspection for asbestos-containing materials has been conducted at the Project site. However, given the date of construction for the building (i.e., between 1974 and 1981), it is possible that asbestos-containing materials are present at the property. In addition, no inspection for lead-based paint was conducted; however, given the date of construction for the building, lead-based paint could be present at the site. Therefore, the transport of spoils could result in the transport of hazardous materials. It is possible that undocumented contamination could be discovered, particularly during excavation for foundations, footings, and underground utilities.

City General Plan Policy S-1.18 requires developers to conduct an investigation of soils that could be affected by hazardous materials in areas that were used historically for commercial or industrial uses and identify and implement mitigation measures to avoid adverse effects on new residents or new uses. Under City General Plan Policy S-1.18, standard health requirements would apply to the Proposed Project. Surveys for lead-based paint or asbestos-containing materials would be performed (pursuant to anticipated Proposed Project conditions), and if development requires any export of soil from the site, offsite soil profiling would be conducted to identify the level of residual pesticides from historic agricultural uses as well as petroleum hydrocarbons and metals associated with commercial/industrial uses. Furthermore, consistent with City requirements, excavated soil from any excavation work in the immediate vicinity of the former leaking UST would be sampled and analyzed for petroleum hydrocarbons and UST-related metals. In addition, construction activities that disturb 1 acre or more must obtain coverage under the state's Construction General Permit, applicants for which are required to prepare the SWPPP and implement and maintain BMPs to avoid adverse construction-related effects, including hazardous materials releases, on the surrounding environment. Furthermore, hazardous materials would be transported under California Department of Transportation (Caltrans) regulations. Because compliance with existing regulations would be mandatory, the Proposed Project is not expected to create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials.

Operation. It is anticipated that the Proposed Project would use, store, generate, and dispose of hazardous materials as a result of the life science uses. In addition, the Proposed Project would use hazardous materials that are typical in the context of office uses (e.g., cleaning products, building

[103] Stellar Environmental Solutions, Inc. 2019. *Phase I Environmental Site Assessment, 1105, 1135, and 1165 O'Brien Drive, Menlo Park, California*. Prepared for: O'Brien Drive Portfolio, LLC, Menlo Park, California. October 4.

[104] Farallon Consulting. 2020. *Phase I Environmental Site Assessment, 1 Casey Court, Menlo Park, California.* Prepared for: Tarlton Properties, Inc., Menlo Park, California. August 13.

maintenance products, fertilizers and pesticides for landscaping). However, none of these products is expected to be generated or stored in large quantities. Any transport of these materials would be subject to Caltrans regulations. Furthermore, San Mateo County Health, Environmental Health Services Division, regulates hazardous materials under its Certified Unified Program Agency and related Unified Programs, which are enforced by the Menlo Park Fire Protection District.

Conclusion

The physical conditions, as they relate to the transport, use, or disposal of hazardous materials, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because compliance with existing regulations would be mandatory, the Proposed Project is not expected to create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials. The impact during construction and operation would be ***less than significant,*** and no further study is needed.

b. Create a significant hazard for the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-2 (pages 4.7-21 to 4.7-23). It was determined that it would result in a less-than-significant impact because future development, as part of the City's project approval process, would be required to comply with existing regulations, including City General Plan policies that have been enacted to minimize impacts related to accidental spills of hazardous materials. No mitigation measures were recommended.

Project-Specific Discussion

Construction. As mentioned above, hazardous materials used during construction of the Proposed Project would include fuel, solvents, paints, oils, grease, etc. Project construction would not include the use of substances listed in 40 CFR 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. It is possible that these substances could be released during construction. However, compliance with federal, state, and local regulations, in combination with temporary construction BMPs, as part of Construction General Permit requirements, would ensure that all hazardous materials would be used, stored, and disposed of properly, which would minimize potential impacts related to a hazardous materials release during construction of the Proposed Project. No releases are anticipated from excavation because no current contamination has been identified at the Project site.

Operation. It is anticipated that the Proposed Project would use, store, generate, and dispose of hazardous materials as a result of the proposed life science uses. In addition, the Proposed Project would use hazardous materials that are typical in the context of office uses (e.g., cleaning products, building maintenance products, fertilizers and pesticides for landscaping). However, none of these products is expected to be generated or stored in large quantities. Any transport of these materials would be subject to Caltrans regulations. Furthermore, the San Mateo County Health, Environmental Health Services Division, regulates hazardous materials under its Certified Unified Program Agency and related Unified Programs, which are enforced by the Menlo Park Fire Protection District.

Conclusion

The physical conditions, as they relate to the transport, use, or disposal of hazardous materials, have not changed substantially in the ConnectMenlo EIR study area since the preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not result in an accidental release of hazardous materials during construction or operation. Therefore, the impact would be ***less than significant,*** and no further study is needed.

c. Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-3 (pages 4.7-23 to 4.7-24). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As described above, the Project site is within 0.25 mile of three schools, Wund3rSCHOOL/Open Mind School (0.09 mile), Cesar Chavez Elementary School (0.18 mile), and Mid-Peninsula High School (0.23 mile).

Construction. The Proposed Project would involve the use of hazardous materials that are typical in the context of construction projects; however, the Proposed Project would comply with federal, state, and local regulations. In addition, any potential construction-related hazardous material releases would be releases of commonly used materials, such as fuels, solvents, and paints, and would not include substances listed in 40 CFR 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. Any such spills would be localized and immediately contained and cleaned up in accordance with the requirements of the Project-specific SWPPP. No releases are anticipated from excavation because no current contamination has been identified at the Project site. Consistent with standard health requirements**,** excavated soil from any excavation work in the immediate vicinity of the former leaking UST would be sampled and analyzed for petroleum hydrocarbons and UST-related metals.

Operation. As discussed above, it is anticipated that the Proposed Project would generate hazardous materials as a result of bioscience-related R&D activities. However, their use, storage, and disposal would be regulated by the San Mateo County Health, Environmental Health Services Division, and the Menlo Park Fire Protection District. Compliance with federal, state, and local regulations would ensure that all hazardous materials would be used, stored, and disposed of properly, which would minimize potential impacts related to a hazardous materials release during Project operation.

Conclusion

The physical conditions, as they relate to hazards near schools, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo

EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would comply with all federal, state, and local regulations. The impact on schools due to hazardous substances would be ***less than significant***. No further study is needed.

d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard for the public or the environment? (Less than Significant with Mitigation)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-4 (pages 4.7-24 to 4.7-26). It was determined that future development could occur on sites with known hazardous materials and, as a result, create a significant hazard for the public or the environment, a potentially significant impact. The ConnectMenlo EIR found that implementation of Mitigation Measures HAZ-4a and HAZ-4b, together with compliance with applicable laws and regulations regarding cleanup and reuse of a listed hazardous material site, would ensure that impacts related to development on sites with known hazardous materials would be less than significant. ConnectMenlo Mitigation Measure HAZ-4b has been implemented for the Proposed Project, as summarized below.

Project-Specific Discussion

The Proposed Project is not located on a site that is included in the list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. However, as discussed above, a UST was removed from the north side of the Development Lot in 1994.[105] In addition, a historical recognized environmental condition, identified as a leaking UST that once contained diesel, existed at the Accessory Parking Lot site.[106] The cases were closed, and no constituents of concern were detected at concentrations that exceeded regulatory levels of concern. Furthermore, vapor encroachment[107] screening (VES) was conducted for the Project site and the vicinity.[108] This VES, consistent with ConnectMenlo Mitigation Measure HAZ-4b, was conducted to determine whether a vapor encroachment condition (VEC) exists at the Project site. The VES determined that no VEC exists at the Project site because (1) the three Phase I ESAs completed for the Project site identified no recognized environmental conditions, (2) historical use data collected during completion of the three Phase I ESAs identified no use of volatile organic compounds at the Project site, (3) an assessment at nearby properties found no volatile organic compounds in soil or groundwater, and (4) there are no State Water Board GeoTracker open volatile organic compound sites within 0.5 mile of the Project site with groundwater contamination. Although no VEC exists at the Project site, the potential remains for excavation to encounter contaminated soil. Consistent with standard health requirements**,** excavated soil from future excavation work in the immediate vicinity of the former leaking UST would be sampled and analyzed for petroleum hydrocarbons and UST-related metals. If detected at levels that could affect human health or the environment, the impact would be potentially significant.

[107] *Vapor encroachment* is defined by ASTM International as the presence or likely presence of contaminant-of-concern vapors…caused by the release of vapors from contaminated soil and/or groundwater, either on or near the subject property.

[108] Farallon Consulting. 2021. *Vapor Encroachment Screening for 1125 O'Brien Drive, Menlo Park, California.* (Farallon PN: 2333-009.) Prepared for Tarlton Properties, Inc., Menlo Park, California. June 10.

Mitigation Measures. If petroleum hydrocarbons and/or UST-related metals are detected at levels that could affect human health or the environment, implementation of Mitigation Measures HAZ-4a, identified in the ConnectMenlo EIR, would reduce the impact to less than significant. If applicable, Mitigation Measure HAZ-4a would require the Project applicant to develop a Project-specific Environmental Site Management Plan (ESMP) in conjunction with the Regional Water Quality Control Board or Department of Toxic Substances Control, as appropriate, for the Accessory Parking Lot site. If the Regional Water Quality Control Board or Department of Toxic Substances Control determines that, based on the Phase I ESA and soil sampling, no further action is required, then HAZ-4a would not be implemented because no potential impact would be present. This ESMP would include measures for identifying, testing, and managing soil and groundwater suspected of or known to contain hazardous materials. This would protect construction workers, the general public, the environment, and future site occupants from potential subsurface hazardous materials associated with the leaking UST and address issues pertaining to the possibility of encountering unknown contamination or hazards in the subsurface.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As explained above, the Project site is not on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. However, in order to reduce the potentially significant impacts associated with potential contamination of soils in the area of the former underground leaking UST site, the Project would incorporate Mitigation Measures HAZ-4a from the ConnectMenlo EIR. Therefore, the impact with respect to development on sites with known hazardous materials would be ***less than significant with mitigation***. No further study is needed.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-5 (page 4.7-27). It was determined that it would result in no impact because the study area would not be subject to airport safety hazards. Furthermore, implementation of ConnectMenlo would not have an adverse effect on aviation safety or flight patterns. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above under *Proximity to Airports*, the Project site is within 1.8 miles of Palo Alto Airport. However, the Project site lies outside aircraft noise contours and airport safety zones.[109]

[109] Windus, W.B. 2008. *Comprehensive Land Use Plan, Santa Clara County: Palo Alto Airport*. Amended: November 16, 2016. Available: https://www.sccgov.org/sites/dpd/DocsForms/Documents/ALUC_PAO_CLUP.pdf. Accessed: December 5, 2019.

Conclusion

The physical conditions, as they relate to hazards associated with an airport, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site lies outside aircraft noise contours and airport safety zones. Accordingly, the Proposed Project would not be subject to restrictions related to airport safety hazards. There would be ***no impact***, and no further study is needed.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-7 (pages 4.7-27 to 4.7-29). It was determined that it would result in a less-than-significant impact. The ConnectMenlo EIR found that future development, as part of the City's project approval process, would be required to comply with existing regulations. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project would demolish existing buildings and construct new structures. Emergency access to the Project site would be provided at the parking lot entrance in the southwest portion of the site. Emergency vehicles would travel north through the Project site, turn east at the parking lot, then exit at the service driveway in the northeast corner of the site. In addition, emergency vehicles would have access to the curb cut at the front of the proposed building; a staging area would occur on the south side of the building along O'Brien Drive. The Proposed Project would comply with Safety Element Policy S-1.29, which requires high-occupancy structures to provide adequate access and clearance for fire equipment, fire suppression personnel, and evacuation.

Conclusion

The physical conditions, as they relate to impacts on emergency response and emergency evacuation, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not conflict with an adopted emergency response or evacuation plan, resulting in a ***less-than-significant*** impact. No further study is needed.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-8 (pages 4.7-29 to 4.7-30). It was determined that it would result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to wildfire hazards, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site and surrounding vicinity are generally developed; areas that are not developed are generally marshland. As discussed above, the Project site is within a Non-Very High Fire Hazard Severity Zone of the Local Responsibility Area.[110] Accordingly, implementation of the Proposed Project would not result, either directly or indirectly, in the exposure of people or structures to significant loss, injury, or death involving wildland fires. There would be ***no impact***, and no further study is needed.

ConnectMenlo EIR Mitigation Measures

Mitigation Measure HAZ-4a. Construction at any site in the city with known contamination shall be conducted under a project-specific prepared in consultation with the Regional Water Quality Control Board or the Department of Toxic Substances Control, as appropriate. The purpose of an ESMP is to protect construction workers, the general public, the environment, and future site occupants from subsurface hazardous materials that were previously identified at the site and address issues related to possible encounters with unknown contamination or hazards in the subsurface. The ESMP shall summarize the soil and groundwater analytical data collected during past investigations; identify management options for excavated soil and groundwater if contaminated media are encountered during deep excavations; and identify the monitoring, irrigation, or other wells that require proper abandonment procedures, in compliance with local, state, and federal laws, policies, and regulations.

The ESMP shall include measures for identifying, testing, and managing soil and groundwater suspected of or known to contain hazardous materials. The ESMP shall 1) provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during excavation and dewatering, respectively; 2) describe required health and safety provisions for workers who may be exposed to hazardous materials, in accordance with state and federal worker safety regulations; and 3) designate the personnel who will be responsible for implementation of the ESMP.

[110] California Department of Forestry and Fire. 2008. *San Mateo County FHSZ Map: Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE.* Available: https://osfm.fire.ca.gov/media/6800/fhszl_map41.pdf. Accessed: December 5, 2019.

X. Hydrology and Water Quality	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality?	☐	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:					
(i) Result in substantial erosion or siltation onsite or offsite;	☐	☐	☐	☒	☐
(ii) Substantially increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite;	☐	☐	☐	☒	☐

iv) Impede or redirect floodflows?	☐	☐	☐	☒	☐
d) In a flood hazard, tsunami, or seiche zone, risk release of pollutants due to project inundation?	☐	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒	☐

Setting

Surface Hydrology

The Project site is within the alluvial fan of the lower San Francisquito Creek watershed. The headwaters of the watershed are in the Santa Cruz Mountains, above Menlo Park; these waters eventually flow into southwest San Francisco Bay. The tidal mudflats and marshes in the Bay, the Refuge, Ravenswood Slough, and the salt ponds, some of which are within the Refuge, are across Bayfront Expressway and to the north. The Project site is approximately 1 mile inland from the Refuge and Lower San Francisco Bay. Water typically flows from southwest to northeast through natural creeks and streams as well as channelized waterways. Major surface waters in the Project vicinity include Atherton Channel, also known as Atherton Creek, to the west; Westpoint and Flood Slough to the north; Ravenswood Slough to the northeast; San Francisquito Creek to the southeast; and Lower San Francisco Bay to the north.

Atherton Channel is an alternating earthen-lined/concrete-lined channel that carries flows from the upper reaches of Atherton Creek to Westpoint Slough. Westpoint Slough is less than 2 miles northwest of the Project site and one of several sloughs that run through the salt ponds and salt marshes north of Bayfront Expressway. The slough drains into Lower San Francisco Bay. Ravenswood Slough, a wetland feature that flows into the Bay, is approximately 1 mile north of the Project site. Levees are located throughout the salt ponds. San Francisquito Creek, approximately 1 mile south of the Project site, is a natural channel that flows into the Bay and serves as a boundary between San Mateo and Santa Clara Counties.

The Project site covers approximately 4.12 acres (179,373 sf), including a concrete-lined drainage ditch to the west. The site includes three one-story buildings (Parcel 1), a warehouse and covered storage facility (Parcel 2), parking areas, driveway aisles, and landscape features. In addition, approximately 10,495 sf of the site includes an approximately 20-foot-wide drainage culvert that runs from storm drains in East Palo Alto. Approximately 92.7 percent (166,296 sf) of the Project site is covered with impervious surfaces; approximately 7.3 percent (13,077 sf) of the site is covered with landscaping and other pervious surfaces.

The Project site is near the end of a drainage shed that is tributary to San Francisco Bay. The onsite storm drain system is a combination of a valley gutter on the north end of the Project site and area drains that connect to a 10-inch pipe on the south end. The valley gutter allows for overland releases to O'Brien Drive on the east side of the Project site. The 10-inch pipe has an unknown connection to the offsite drainage system. It is assumed that the entire onsite system eventually connects to the offsite underground system northeast of the site.[111] Runoff from the roof at 1 Casey Court is discharged directly to both the landscaped and hardscape surfaces. The site relies completely on overland flows to discharge stormwater to the Casey Court gutter system. A small portion of stormwater drains into O'Brien Ditch, west of the site.[112]

Currently, the Project site is served by multiple storm drains that discharge runoff to the City storm drain system north of the site and an unknown location. A valley gutter on the north end of the site collects overland stormwater and conveys it eastward. The valley gutter that originates on the Project site discharges to an offsite gutter pan near the northeast corner of the site. Runoff from the Project site, as well as the surrounding area, ultimately drains to a 48-inch storm drain west of 1315 O'Brien Drive. Drainage is collected from the parking lot and drive aisles surrounding the existing building. Runoff from the roof is discharged directly to hardscape surfaces, area drains, and landscaped surfaces. Offsite drainage around the

[111] BKF. 2021. *1125 O'Brien Drive Hydrology Report.* February 5.
[112] BKF. 2021. *1 Case Court Preliminary Hydrology Report.* February 19.

site is limited to overland flows along O'Brien Drive and the gutters on Casey Court. The Casey Court gutter system conveys stormwater eastward to the nearest public storm drain catch basins at the intersection of Casey Court and O'Brien Drive. Stormwater is conveyed to a drain inlet north of the site, then continues to a 48-inch storm drain line west of 1315 O'Brien Drive and northeast of the Project site. O'Brien Ditch also flows to the 48-inch storm drain line. There are no stormwater management facilities onsite that provide treatment or detention; the existing storm conveyance system offers no detention onsite.[113,114]

Water Quality

Water quality in a typical surface water body is influenced by processes and activities that take place within the watershed. The quality of the stormwater runoff from the Project site and surrounding development is typical of urban watersheds, areas where water quality is affected primarily by discharges from both point and nonpoint sources, including winter storms, overland flows, exposed soils, roofs, parking lots, and streets. Water quality in the Project vicinity is affected directly by stormwater runoff from adjacent streets and properties, which deliver fertilizers; pesticides; automobile/traffic-related pollutants (e.g., oil, grease, metals); sediment, with associated attached pollutants from soil erosion; trash; and other pollutants.

Constituents or pollutants in stormwater runoff vary with surrounding land uses, the amount of impervious surface area, and topography as well as the intensity and frequency of rainfall or irrigation. The Project site is in a developed area of Menlo Park. The majority of the ground surface is covered by pavement (e.g., roads and parking lots) or structures (e.g., office and commercial buildings). Street surfaces are the primary sources of pollutants in stormwater runoff in urban areas.

Common sources of stormwater pollution in urban areas include construction sites; parking lots; large landscaped areas, with associated fertilizers and pesticides; and household and industrial sites. Grading and earthmoving activities associated with new construction can accelerate soil erosion. Grease, oil, hydrocarbons, and metals deposited by vehicles and heavy equipment can accumulate on streets and paved parking lots and be carried into storm drains by runoff. Table 3.10-1 shows 303(d)-listed impairments, or total maximum daily loads (TMDLs), as presented in the 2014/2016 California Integrated Report, for the Lower San Francisco Bay region and the completed action plans for restoring clean water.[115]

Groundwater

The Project site is within the San Mateo subbasin of the larger Santa Clara Valley groundwater basin (i.e., Department of Water Resources Basin Number 2-9.03). A relatively shallow aquifer overlies the confined and semi-confined aquifers near the margins of the Bay; most wells draw from deeper deposits. The direction of groundwater flow is generally to the east and north.

Recharge of the subbasin occurs through infiltration in streambeds as well as the infiltration of precipitation on the valley floor. Groundwater recharge increases from the hilly western portions of Menlo Park to the flatter eastern portions and decreases with increasing depth. Limited groundwater pumping in the basin has resulted in relatively stable groundwater levels over the past 40 years. The

TCDD = tetrachlorodibenxodioxin; EPA = U.S. Environmental Protection Agency;
TMDL = total maximum daily load; Est. = estimated

San Mateo subbasin is currently full; however, historical data indicate that the basin responds rapidly to increased pumping.[116] Groundwater depths at the Project site were observed at approximately 7 to 10 feet below the grade. Regional groundwater in the area of the site is most likely on the order of 5 to 10 feet below the existing grade, with fluctuations caused by variations in rainfall, landscaping, and other factors.[117]

In general, groundwater quality in the Santa Clara Valley groundwater basin is good. Throughout most of the basin, groundwater quality is suitable for most urban and agricultural uses, with the exception of a few local impairments. The primary constituents of concern are total dissolved solids, nitrates, boron, and organic compounds. Water from public supply wells meets state and federal drinking water standards without treatment. Although a designated beneficial use identified for the Santa Clara Valley groundwater basin is the municipal and domestic water supply, groundwater beneath the Project site itself is not considered to be a source of drinking water because of elevated salinity levels.

No evidence of current USTs, which could affect groundwater, was observed during the site inspections. However, an UST was removed from the north side of the Development Lot in 1994.[118] In addition, a historical recognized environmental condition, identified as a leaking UST that once contained diesel, was identified at the Accessory Parking Lot site in 1999.[119] The cases were both closed, and no constituents of concern were detected at concentrations that exceeded regulatory levels of concern. In addition, several properties within a 0.5-mile search radius are recorded in environmental databases as having violations related to hazardous materials or documented environmental contamination. A VES[120] was

[116] Stanford Water in the West. 2017. *San Mateo Plain Groundwater Subbasin: A Local Case Study.* April 26.

[119] Farallon Consulting. 2020. *Phase I Environmental Site Assessment, 1 Casey Court, Menlo Park, California.* Prepared for: Tarlton Properties, Inc., Menlo Park, California. August 13.

[120] *Vapor encroachment* is defined by ASTM International as the presence or likely presence of contaminant-of-concern vapors…caused by the release of vapors from contaminated soil and/or groundwater, either on or near the subject property.

conducted for the Project site and vicinity.[121] The VES, consistent with ConnectMenlo Mitigation Measure HAZ-4b, was conducted to determine whether a VEC exists at the Project site. The VES determined that no VEC exists at the Project site, given the location and/or current contamination conditions.

Flooding

The Project site is in the Federal Emergency Management Agency 100-year floodplain (i.e., Zone AE). The base flood elevation ranges from 13 feet at the southern border to 12 feet at the northern border.

Sea-Level Rise

Projected sea-level rise, an effect of climate change, is expected to increase the number of areas that experience coastal flooding along the Bay in the future. Coastal and low-lying areas, such as the Project site, are particularly vulnerable to future sea-level rise. More specifically, sea-level rise is a concern for the future, particularly in combination with storm events and coastal flooding. A scenario with 100-year high tides, taking into account sea-level rise over a 50- or 100-year horizon, would dramatically increase the risk of flooding in the Project vicinity.

The updated State of California Sea-Level Rise Guidance provides a science-based methodology for state and local governments to use in analyzing and assessing the risks associated with sea-level rise. They can also incorporate sea-level rise into their planning, permitting, and investment decisions. Projections regarding the extent of sea-level rise go from the low-risk range up to the extreme "high-emissions" scenario. Based on the 2018 State of California Sea-Level Rise Guidance, the Project site is above the sea levels associated with the projected mid- and late-century low-risk scenario (1.1 feet of sea-level rise by 2050 and 3.4 feet by 2100, respectively) as well as the mid-century extreme scenario (2.7 feet by 2050) but not the sea levels associated with the end-of-century extreme scenario (10.2 feet by 2100).[122]

General Plan Goals and Policies

The City General Plan—specifically, the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element—contains goals, policies, and programs that require local planning and development decisions to consider impacts on hydrology and water quality. The following City General Plan goals, policies, and programs would minimize potential adverse impacts related to water quality, groundwater resources, flooding, levee/dam breaks, sea-level rise, seiche, tsunami, and mudflows: Goal LU-4, Policy LU-4.5; Goal LU-6, Policy LU-6.11; Goal LU-7, Policy LU-7.7, Program LU-7.H; Goal OSC-5, Policy OSC-5.1; and Goal S-1, Policy S-1.5, Policy S-1.10, Program S-1.10, and Program S-1.D, Policy S-23, Policy S-1.26, Policy S-1.27, and Policy S-1.28.

[121] Farallon Consulting. 2021. *Vapor Encroachment Screening for 1125 O'Brien Drive, Menlo Park, California*. (Farallon PN: 2333-009.) Prepared for Tarlton Properties, Inc., Menlo Park, California. June 10.

[122] California Natural Resource Agency. 2018. *State of California Sea-Level Rise Guidance 2018 Update*. Available: https://opc.ca.gov/webmaster/ftp/pdf/agenda_items/20180314/Item3_Exhibit-A_OPC_SLR_Guidance-rd3.pdf. Accessed: March 10, 2021.

Environmental Checklist and Discussion

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-1 (pages 4.8-27 to 4.8-29). It was determined that it would have a less-than-significant impact on water quality because of compliance with existing federal, state, and local regulations, including City General Plan goals, policies, and design standards. No mitigation measures were recommended. In addition, this topic was also analyzed in the ConnectMenlo EIR as Impact HYDRO-6 (page 4.8-35). It was determined that it would have a less-than-significant impact on water quality through compliance with existing federal, state, and local regulations as well as City General Plan policies to minimize impacts related to water supply. No mitigation measures were recommended.

Project-Specific Discussion

Construction. Project construction would have the potential to temporarily increase sediment loads in Lower San Francisco Bay and affect surface water quality. Other pollutants, such as nutrients, trace metals, and hydrocarbons, can attach to sediment and be transported to downstream locations; they can also degrade water quality. However, the Proposed Project would be required to comply with existing federal, state, and local regulations, including City General Plan goals, policies, and design standards.

A Project SWPPP would be developed and implemented in compliance with the Construction General Permit, local stormwater ordinances, and other related requirements. Construction BMPs for the Proposed Project would control or prevent the discharge of pollutants, including paint, concrete, waste from pavement cutting, petroleum products, chemicals, wastewater, sediments, and non-stormwater discharges, to storm drains and watercourses. In addition, construction materials and wastes would be stored, handled, and disposed of properly to prevent contact with stormwater. Earthmoving and clearing activities would be performed during dry weather only to minimize any mobilization of sediment. Temporary erosion controls would be implemented to stabilize disturbed areas until permanent erosion controls are established.

Excavation depths would vary from 3 to 9 feet below the finished floor for the foundations, pile caps, and elevator pits. Because soft, saturated soil could be encountered, construction dewatering could be required during soil excavation. Coverage under the Construction General Permit typically includes dewatering activities as authorized non-stormwater discharges, provided that dischargers prove that the quality of the water is adequate and not likely to affect beneficial uses. The existing drainage ditch on the western portion of the Project site would remain undisturbed.

Construction activities could result in short-term surface and groundwater quality impacts, such as sediment loads that exceed water quality objectives or chemical spills that flow into storm drains or groundwater aquifers, if proper minimization measures are not implemented. However, a Project SWPPP would be developed and implemented in compliance with the Construction General Permit, local stormwater ordinances, and other related requirements.

Operation. The Proposed Project would construct a five-story building with adjacent surface parking lots and modify the surrounding landscaped area. Paved areas would cover approximately 152,085 sf, or approximately 84.8 percent, of the Project site. Hardscape at the Project site would

include concrete paving, decomposed granite paving, and concrete pavers. With the proposed improvements, approximately 14,207 sf of new pervious surface area would be added. Newly created or replaced pervious areas would cover approximately 27,284 sf, or approximately 15.2 percent, of the Project site. Table 3.10-2 summarizes the impervious and pervious areas at Parcel 1, Parcel 2, and on the Project site as a whole under both existing conditions and Project conditions.

Table 3.10-2. Impervious/Pervious Area Summary

	Parcel 1	Parcel 2	Total
Existing			
Pervious Area	7,915 sf	5,162 sf	13,077 sf (7.3%)
Impervious Area	98,440 sf[a]	67,856 sf	166,296 sf (92.7%)
Total	106,355 sf	73,018 sf	179,373 sf
Proposed			
Pervious Area	17,754 sf	9,530 sf	27,284 sf (15.2%)
Impervious Area	88,601 sf[a]	63,488 sf	152,089 sf (84.8%)
Total	106,355 sf	73,018 sf	179,373 sf

Source: Tarlton Properties and DES Architects + Engineers, 2021.

Notes:

a. The impervious surfaces on Parcel 1 include the existing 10,495 sf drainage ditch. The drainage ditch would not be altered as a result of the Proposed Project.

Operation of the new facilities could increase the levels of pollutants (e.g., trash, oil, grease, pesticides) and introduce pollutants into storm drains. Because the Proposed Project would create and replace more than 10,000 sf of impervious surface, the Proposed Project would be regulated by Provision C.3 of the Municipal Regional Permit. To meet San Mateo Countywide Water Pollution Prevention Program C.3 stormwater requirements, the Proposed Project would be required to treat runoff from all impervious areas.

The modified landscape area would include a bioretention area and flow-through planter to treat runoff from the roof and the newly created and replaced impervious areas. In addition, a landscape planter and five self-treating pervious areas would be installed at various locations throughout the Project site.[123] Approximately 11,827 sf of the public open space along the street frontage would also be landscaped with berms, trees, bioretention areas, and California-native vegetation. The landscaped area would include one flow-through planter, a bioretention area, a landscape planter, and five self-treating pervious areas around the proposed building and surface parking lots. The bioretention area would treat runoff from the proposed impervious areas. It would be lined to filter raw runoff through the soil media in the treatment area. Bioretention areas would trap particulate pollutants (i.e., suspended solids and trace metals) and prevent the egress of potentially contaminated runoff into nearby storm drains or other receiving waters. Flow-through planters, landscape planters, and self-treating pervious areas would treat rain that falls directly in those areas, retaining and infiltrating rainfall up to the design rainfall depth.

[123] BKF. 2021. *1125 O'Brien Drive Hydrology Report.* February 5.

The existing 10-inch pipes and area drains would be replaced with a new system that would be installed throughout the Project site. The proposed system would convey runoff from paved areas and structures to the bioretention area. After passing through the basin, stormwater would exit the site through a 15-inch storm drain to the offsite improvements.

The new development would have a larger pervious area compared with existing conditions, resulting in a net decrease in the volume of runoff leaving the site. The Project Sponsor would be required to develop and implement a stormwater management plan, with the goal of reducing the discharge of pollutants to the maximum extent practicable.

Routine maintenance activities would be implemented at the bioretention areas to prevent sediment buildup and clogging, which reduce efficiency with respect to pollutant removal and can lead to bioretention area failure. Maintenance tasks would include inspecting the bioretention areas to ensure proper drainage between storms and removing obstructions, debris, and trash. Furthermore, the Project Sponsor would be required to enter into a stormwater operations and maintenance agreement with the City for maintenance of the stormwater treatment facilities. In addition, the Proposed Project would implement BMPs, both during and after construction, to minimize or prevent pollutant discharges and runoff. The Proposed Project would comply with the General Construction Permit; San Francisco Bay Municipal Separate Storm Sewer System Permit, Provision C.3; and San Mateo Countywide Water Pollution Prevention Program C.3 Stormwater Technical Guidance and implement a SWPPP and other erosion and pollution control measures.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Project implementation, including construction and associated changes in development intensities as a result of the Proposed Project, would not result in adverse effects on water quality. Therefore, the Proposed Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality. Impacts would be ***less than significant***.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-2 (pages 4.8-30 to 4.8-32). It was determined that it would have a less-than-significant impact on groundwater supply and/or recharge through compliance with existing federal, state, and local regulations, including City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

Implementation of the Proposed Project would reduce the amount of impervious surfaces. As a result, pervious surface area would increase to 27,284 sf (15.2 percent of the Project site). The modified landscaped areas would include a bioretention area on the northeast corner of the site and a flow-through planter on the eastern edge (at Casey Court). Landscaping would be provided along O'Brien Drive, in an area where approximately 19,399 sf of the street frontage would be landscaped.

Public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation. The bioretention area and flow-through planter would allow runoff to infiltrate the soil media in the treatment area. Minimal paving would be used for the surface parking lot to improve drainage. Multiple pervious parking row endcaps would be installed at various locations throughout the surface parking lot. These landscape features would facilitate groundwater recharge and increase recharge capabilities within the Project site. Therefore, the Proposed Project would not interfere with groundwater recharge.

Although dewatering may be necessary during Project construction, the groundwater beneath the Project site is not used for municipal water supply purposes. Should dewatering occur, it would be conducted on a one-time or temporary basis during the construction phase and would not result in a loss of water that would deplete groundwater supplies. In addition, the water supply for construction activities (e.g., dust control, concrete mixing, material washing) would come from nearby hydrants and existing surface supplies for the site and/or be trucked to the site.

Because the Proposed Project would add 14,207 sf of new pervious area and reduce the total volume of runoff conveyed to the storm drain system, the Proposed Project would not need to implement a retention or detention device. The Proposed Project would not substantially deplete groundwater supplies because it would not increase groundwater demand. New and existing landscape features and bioretention facilities would collect stormwater and slowly release it at a controlled rate, allowing for increased groundwater infiltration. Trees and native grasses would stabilize native soils, and new landscaped areas would slow the flow of water, allowing it to percolate into the ground and underlying aquifers and, therefore, provide benefits related to groundwater recharge. The Proposed Project would not impede sustainable groundwater management of the basin.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Impacts related to decreasing groundwater supplies or interfering with groundwater recharge, with the Proposed Project impeding sustainable groundwater management of the basin, would be ***less than significant***. No further study is needed.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:

(i) Result in substantial erosion or siltation onsite or offsite? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-3 (pages 4.8-32 and 4.8-33). It was determined that it would have a less-than-significant impact on erosion and siltation because of regulatory requirements (e.g., BMPs, erosion control plans, the SWPPP) as well as compliance with the City Municipal Code and City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

Project construction activities would temporarily alter existing drainage patterns and could result in temporary onsite erosion and siltation. However, the Proposed Project would implement the SWPPP to minimize the potential for erosion and sedimentation in nearby storm drains. Preparation and implementation of the SWPPP would reduce the potential for substantial erosion or siltation onsite or offsite or a substantial increase in the rate or volume of runoff. The Proposed Project would be in compliance with existing NPDES permits and the City Municipal Code for construction and stormwater management (Chapter 7.42).

Proposed Project improvements would include a five-story building and adjacent surface parking stalls, along with modifications to the surrounding landscaped area. The Proposed Project would be drained by a new storm drain system that would be installed throughout the Project site, replacing the existing onsite storm drain system. Runoff would be collected from paved areas and structures and conveyed to the bioretention area and flow-through planter. To meet C.3 requirements, a bioretention area and flow-through planter would be created to capture and treat runoff from all 152,089 sf of replaced impervious surface areas. Any overflow from the bioretention area or flow-through planter would be directed to downstream overflow structures in each basin. After passing through the bioretention area or flow-through planter, stormwater would leave the Project site through an 15-inch pipe and continue to the offsite improvements, consisting of a new gutter catch basin near the northeast corner of the Project site and an 15-inch pipe that would drain north and connect to the existing catch basin and system just north of Kavanaugh Drive. As a result, the proposed improvements would not alter offsite drainage patterns.

New stormwater conveyance and management facilities would be designed per City drainage guidelines. Because the impervious area would decrease compared to existing conditions, the Proposed Project would not be required to incorporate hydromodification measures. In addition, construction of the Proposed Project would not involve work within surface waters and, therefore, would not alter the course of a stream or river. Such features do not exist onsite.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would be consistent with the City General Plan and comply with the City Municipal Code. The Proposed Project would not alter the existing drainage pattern of the site in a manner that would result in substantial erosion or siltation. Impacts would be ***less than significant.*** No further study is needed.

(ii) Substantially increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-4 (pages 4.8-33 and 4.8-34). It was determined that it would have a less-than-significant impact on onsite or offsite flooding through compliance with City stormwater measures from the City Municipal Code, compliance with the C.3 provisions of the Municipal Regional Permit, and adherence to City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

The Project site would be drained by a new storm drain system. The proposed system would collect runoff from the paved areas and structures and convey it to the bioretention area and flow-through planter. The bioretention area would be located north of the driveway on the northeast corner of the Project site. If stormwater levels exceed the height of the overflow structure (i.e., approximately 10.10 feet), they would be directed into the basin's downstream overflow structure.[124] The bioretention area's overflow structure would be equipped with a low-flow pump to remove residual water from the system. The flow-through planter would be located on the eastern edge of the surface parking area (at Casey Court). Stormwater, which would be conveyed to the flow-through planter, would ultimately drain to a pump structure equipped with a low-flow pump that would transfer the stormwater to the western flowline of Casey Court through a curb drain outlet.[125] With implementation of the Proposed Project, all stormwater that currently flows into the drainage ditch would be directed into planters.

After passing through the bioretention area, stormwater would leave the Project site through a 15-inch pipe and continue to the offsite improvements, consisting of a new gutter catch basin near the northeast corner of the Project area and a 15-inch pipe that would drain to the north and connect to the existing catch basin and system. An additional drain inlet would be added offsite to accept flows from the bioretention area and pump. The existing valley gutter within the Project site would be removed; this would not affect drainage at the adjacent property. In addition, the Proposed Project would increase the amount of pervious area compared with existing conditions, thereby reducing the amount of impervious surface area. The increase in pervious area would result in a net decrease in the volume of runoff and floodwater leaving the Project site.

The Project site is within the 100-year floodplain. The base flood elevation for the Project site is between 12 and 13 feet. However, the building design accounts for flooding and/or sea-level rise. To meet the hazard mitigation and sea-level rise resiliency requirements of the LS zoning district, the building would be required to be 24 inches above the base flood elevation. The Proposed Project would raise the site elevation to a finished floor elevation of 14.8 feet, thereby raising it 24 inches above the base flood elevation.[126] The proposed finished grades for the surface parking lot would be between 13.25 feet at the high point and 10.75 feet at the outlet flowline. If stormwater levels in the surface parking area should exceed an elevation of 10.75 feet, stormwater would be directed into the flow-through planter's downstream overflow structure.[127] Offsite improvements would include the addition of a drain inlet and 15-inch pipe that would connect to the existing system. As a result, the proposed improvements would not alter assumed offsite drainage patterns.

Because only minor onsite grade changes would be required, the anticipated improvements would not alter offsite drainage patterns so as to increase the rate or volume of surface runoff in a manner that would result in flooding onsite or offsite. In addition, the City of Menlo Park, which has adopted more stringent requirements than the C.3 provisions, specifies that post-development stormwater volumes must not exceed the pre-development volumes associated

[124] Ibid.
[125] BKF. 2021. *1 Casey Court Preliminary Hydrology Report.* February 19.
[126] BKF. 2021. *1125 O'Brien Drive Hydrology Report.* February 5.
[127] BKF. 2021. *1 Casey Court Preliminary Hydrology Report.* February 19.

with a project and increase the amount of net new impervious surface area, regardless of whether a project is regulated or not. An increase in stormwater flows in the existing or planned storm drain system would not occur, and flooding during storm events would not be worsened.

Each new development or redevelopment project within Menlo Park would be required, as part of the CEQA process or entitlement process, if exempt from CEQA, to demonstrate that stormwater runoff from the site would not result in an exceedance of the capacity of the existing or future storm drain system, meaning that other developments in the area could not negatively affect storm system capacity. In addition, implementation of low-impact development design guidelines, as well as an engineering review of drainage calculations and development plans by the Menlo Park Public Works Department, would further ensure that no significant increases in peak flow rates or runoff volumes would occur. The grading and drainage plans for the Proposed Project would be reviewed by the City to ensure that onsite drainage and low-impact development features would be adequate with respect to preventing onsite or offsite flooding.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not alter the existing drainage pattern of the site in a manner that would result in a substantial increase in runoff that would result in flooding. The Proposed Project would comply with the City Municipal Code and City General Plan. Impacts would be ***less than significant.*** No further study is needed.

(iii) Create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-5 (page 4.8-34). It was determined that it would have a less-than-significant impact on stormwater drainage systems because future development would be required to provide onsite infiltration for stormwater runoff, consistent with the City General Plan and City Municipal Code. No mitigation measures were recommended.

Project-Specific Discussion

Existing development in Menlo Park occurs on parcels in the Bayfront Area that have already been covered with impervious surfaces. The City has stringent stormwater requirements that exceed the C.3 provisions of the Municipal Regional Permit. For example, post-development stormwater volumes must not exceed the pre-development volumes associated with a project and increase the amount of net new impervious surface, regardless of whether a project is regulated or not. In addition, the Project design would include stormwater treatment facilities to treat runoff from impervious surface areas.

The Proposed Project would reduce the impervious surface area on the site and result in a net decrease in the volume of runoff and associated pollutants leaving the site. The existing discharge rate from the entire Project site to the offsite system due to a 10-year storm is

approximately 8.52 cubic feet per second. The increased amount of pervious area around the Project site would decrease the discharge rate to 8.02 cubic feet per second. In addition, the Proposed Project would include a bioretention area and flow-through planter to capture and treat runoff. Runoff from the paved areas would be conveyed to self-treating pervious areas, the bioretention area, landscape planter, and flow-through planter prior to exiting the Project site and flowing to the offsite improvements. Minimal paving would be used for the surface parking lot to improve drainage. Therefore, because the proposed discharge would be less than the existing discharge, no additional impacts on the existing system are expected.[128,129]

Implementation of the bioretention areas would meet C.3 requirements as well as City requirements. These areas would capture and treat runoff from all newly created and replaced impervious areas. However, a long-term operations and maintenance agreement and plan would be required for the Proposed Project.

The bioretention areas, which would be vegetated, would allow runoff to be distributed evenly across the site. They would be designed to treat runoff by filtering raw runoff through the soil media in the treatment area. Furthermore, the Proposed Project would have a larger pervious area, which would result in a net decrease in the volume of runoff and associated pollutants leaving the site. Landscaped and open space areas, which would be landscaped with berms, trees, and native vegetation, would filter pollutants through a substrate of sandy loam. Plant materials associated with landscaping would treat stormwater runoff through biological uptake and therefore reduce pollutant discharges.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not create or contribute runoff water that would exceed the capacity of stormwater drainage systems or provide additional sources of polluted runoff. The impact would be ***less than significant,*** and no further study is needed.

(iv) Impede or redirect floodflows? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-8 (page 4.8-38). It was determined that it would have a less-than-significant impact with respect to flood hazards through compliance with federal and City Municipal Code requirements as well as adherence to City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

As discussed, the Project site is within a 100-year flood hazard area, Flood Zone AE. Because the City participates in the National Flood Insurance Program, it must ensure that the Proposed Project meets federal standards for flood protection. Chapter 12.42 of the City Municipal Code contains

[128] BKF. 2021. *1125 O'Brien Drive Hydrology Report.* February 5.
[129] BKF. 2021. *1 Casey Court Preliminary Hydrology Report.* February 19.

methods and provisions for preventing flood damage. As described above, the Proposed Project would raise the site elevation to a finished floor elevation of 14.8 feet, thereby raising it 24 inches above the base flood elevation. The Proposed Project would also include offsite improvements (e.g., an additional drain inlet and 15-inch pipe that would connect to the existing system).

Only minor onsite grade changes in disturbed soil areas would be required. However, the Proposed Project may redirect floodwaters. Landscaped areas would increase onsite infiltration and minimize the potential for overland floodflows. In addition, other stormwater treatment facilities incorporated as part of the Proposed Project, such as bioretention areas, would also help minimize the potential for overland floodflows. The Proposed Project would not impede floodflows or exacerbate the frequency or severity of flooding.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would comply with the City Municipal Code, City General Plan, Federal Emergency Management Agency, and Engineering Division requirements, including preparation of a floodwater flow analysis. The Proposed Project would not exacerbate flooding or cause flooding to occur in areas that would not be subject to flooding without the Proposed Project. The Proposed Project would not impede or redirect floodflows offsite within a 100-year flood hazard area. Therefore, impacts would be ***less than significant,*** and no further study is needed.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? (Less than Significant)

Analysis in the ConnectMenlo EIR

The topic of inundation by tsunami or seiche was analyzed in the ConnectMenlo EIR as Impact HYDRO-10 (pages 4.8-43 and 4.8-44). It was determined that impacts on future developments related to flooding from tsunamis and seiches would be less than significant through compliance with existing regulations, including City General Plan policies. No mitigation measures were recommended.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Project site is not subject to flooding from tsunami or seiche. According to the California Tsunami Inundation Map for Emergency Planning (Redwood Point Quadrangle/Palo Alto Quadrangle), the Project site is not within a tsunami inundation area.[130] However, the salt ponds adjacent to the Bay and portions of Westpoint, Flood, and Ravenswood Sloughs, approximately 1 mile north of the Project site, are within designated tsunami inundation areas.

[130] California Emergency Management Agency, University of Southern California, California Geological Survey. 2009. *Tsunamic Inundation Map for Emergency Planning*. State of California, County of San Mateo. Redwood Point Quadrangle/Palo Alto Quadrangle. June 15.

Seiche occurs in an enclosed or partially enclosed body of water, such as a lake or reservoir. There are no large bodies of fresh water, such as reservoirs or lakes, in the Project vicinity. In addition, the Bay is a large and open body of water with no immediate risk of seiche. Large waves generated in the Pacific Ocean undergo considerable refraction and diffraction upon passing through the Golden Gate, resulting in greatly reduced heights when they reach the Project site. Therefore, there is no risk of seiche affecting the Project site, and no further analysis is required.

In the event of a flood hazard, to reduce the risk of a pollutant release, the Proposed Project would comply with the requirements of local water quality programs and associated municipal stormwater-related NPDES permits (e.g., municipal separate storm sewer system permit, Municipal Regional Permit) as well as City General Plan policies to manage flood risk and water quality. Compliance with these requirements would minimize risks related to a release of pollutants due to Project inundation in a flood hazard, tsunami, or seiche zone. The Proposed Project would not release pollutants as a result of inundation by flood, tsunami, or seiche. Therefore, impacts would be ***less than significant***.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR (Section 4.8, *Hydrology*). It was determined that it would have a less-than-significant impact with respect to conflicting with or obstructing implementation of a water quality control plan. The ConnectMenlo EIR did not analyze whether the Proposed Project would conflict with or obstruct implementation of a sustainable groundwater management plan because this is a new/revised topic for consideration. However, the ConnectMenlo EIR did conclude that development under the City General Plan would result in less-than-significant impacts with respect to depleting groundwater supplies or substantially interfering with groundwater recharge such that the local groundwater table would be lowered.

Project-Specific Discussion

Project implementation would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The Proposed Project would result in an increase in pervious area, which would increase capacity for groundwater recharge and decrease the volume of pollutants leaving the Project site because of new and existing bioretention areas. These bioretention areas would be lined to filter raw runoff through the soil media in the treatment area. Bioretention areas would trap particulate pollutants (i.e., suspended solids and trace metals) and prevent the egress of potentially contaminated water runoff into nearby storm drains or other receiving waters.

The Project Sponsor would comply with the appropriate water quality objectives for the region. Commonly practiced BMPs would be implemented to control construction site runoff and reduce discharges of pollutants (i.e., stormwater and other nonpoint-source runoff) to storm drain systems. As part of compliance with permit requirements during ground-disturbing or construction activities, implementation of water quality control measures and BMPs would ensure that water quality standards would be achieved, including water quality objectives that protect designated beneficial uses of surface water and groundwater, as defined in the San Francisco Bay Basin (Region 2) Water Quality Control Plan (Basin Plan). The NPDES Construction General Permit also requires stormwater discharges not to contain pollutants that cause or contribute to an exceedance of any applicable water

quality objectives or water quality standards, including designated beneficial uses. In addition, City General Plan policies protect groundwater recharge areas and groundwater resources, as required by a sustainable groundwater management plan. The City is not required to prepare a groundwater sustainability plan, and a groundwater sustainability agency has not yet been established for the groundwater basin in San Mateo County that underlies the Project area.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR with respect to violating water quality standards or depleting groundwater supplies; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would comply with the Construction General Permit, City General Plan, and the objectives pertaining to surface water and groundwater quality, as defined by the Basin Plan. It would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, impacts would be ***less than significant,*** and no further study is needed.

XI. Land Use and Planning	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Physically divide an established community?	☐	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒	☐

Setting

Existing Land Uses

Project Site Vicinity

The Project site is in Menlo Park, which encompasses an area of about 19 square miles, including nearly 12 square miles of San Francisco Bay (Bay) and wetlands. The approximately 7-square-mile urbanized portion of Menlo Park is virtually built out. The Project site is north of US 101 in Menlo Park (as shown in Chapter 2, *Project Description,* Figure 2-1). Specifically, the site is bound by the Hetch Hetchy right-of-way, which is owned by the San Francisco Public Utilities Commission, to the north; O'Brien Drive to the east and south; and a warehouse to the west adjacent to Kelly Court. In addition, Dura-Foam Roofing and Wund3rSCHOOL/Open Mind School, a small private school, are slightly north and east of the Project site on O'Brien drive. Farther to the north, beyond the Menlo Park Labs campus, are the Dumbarton Rail Corridor (inactive), State Route (SR) 84, tidal mudflats and marshes along the Bay, the Don Edwards San Francisco Bay National Wildlife Refuge (Refuge), and Ravenswood Slough. Farther to the east (across University Avenue) and south (across O'Brien Drive) are the neighborhoods of East Palo Alto. Included in these neighborhoods, some of which are as close as 300 feet from the Project site, are mainly single-family residences, along with multi-family residential buildings, neighborhood-serving retail, Cesar Chavez Elementary School, the 4 Corners Civic Hub (including the East Palo Alto Library, city hall, and post office), Costaño School and San Francisco 49ers Academy, and Jack Farrell Park.

The Belle Haven neighborhood of Menlo Park is west of Willow Road, approximately 0.25 mile from the Project site. The Belle Haven neighborhood features a mix of uses, including churches, Menlo Park Fire Station No. 77, single-family residences, multi-family residential buildings, and institutional buildings. A neighborhood-serving retail center is at the corner of Hamilton Avenue and Willow Road. The Belle Haven neighborhood's institutional and park uses include Beechwood School, Belle Haven Elementary School, the Belle Haven Pool, Belle Haven Youth Center, Onetta Harris Community Center, Menlo Park Senior Center, the Boys and Girls Club, Hamilton Park, Karl E. Clark Park, the Belle Haven Community Garden, and Kelly Park.

Project Site

The Project site includes buildings at 1105, 1135, and 1165 O'Brien Drive. The three single-story buildings, with a maximum height of 20 feet, are located on two parcels (assessor's parcel number [APN] 055-433-320 and APN 055-433-330). An adjacent property to the west with an approximately 20-foot-wide drainage ditch that runs from storm drains in East Palo Alto is also part of the Project site. Collectively, these properties are referred to as Parcel 1 or the Development Lot. In addition, the Project site includes an adjacent lot with an existing building at 1 Casey Court (APN 055-433-190). This parcel is referred to as Parcel 2 or the Accessory Parking Lot. In total, the Project site has a lot area of 4.12 acres.

On Parcel 1, the two existing office/R&D buildings total approximately 26,911 gsf; the existing office/warehouse is approximately 12,000 gsf. The buildings have a total FAR of 37 percent. These buildings are surrounded by surface parking lots with 98 uncovered stalls. On Parcel 2, the existing office/warehouse building is approximately 20,995 gsf and has a FAR of approximately 29 percent. The building has onsite surface parking with 44 uncovered stalls.

Existing Land Use Designations and Zoning

The Project site was historically zoned General Industrial (M-2), which permitted office and general industrial uses, such as warehousing, manufacturing, printing, and assembling. In 2017, the Project site's zoning was changed to Life Science, Bonus (LS-B) as part of ConnectMenlo. The updated zoning established standards for new projects, including TDM program requirements and restrictions regarding height, density, land use, sustainability, circulation, and open space. At the base level, the maximum height and average height are 35 feet, while the maximum FAR is 55 percent. Under the new zoning standards, bonus density is permitted (up to a FAR of 125 percent for life science uses and an additional FAR of 10 percent for commercial uses, with an increased height of up to 110 feet) in exchange for providing community amenities selected from a list of potential options identified through community outreach and adopted by resolution of the Menlo Park City Council or by paying an in-lieu fee.

General Plan Goals and Policies

The City's General Plan is a legal document and required by state law. It serves as the City's direction for development and land use. All development in Menlo Park must conform to the land use designations outlined in the City General Plan. Goals, policies, and programs contained in the Land Use Element of the City General Plan provide guidance on how land use designations should be developed to contribute to the overall character of Menlo Park. The following City General Plan goals and policies would serve to promote cohesive neighborhoods and ensure consistency with applicable plans: Goal LU-1, Policy LU-1.1; Goal LU-4, Policy LU-4.5; Goal LU-6, Policy LU-6.7 and Policy LU-6.11; Goal CIRC-1, Policy CIRC-1.8; Goal CIRC-2, Policy CIRC-2.7, Policy CIRC-2.11, and Policy CIRC-2.14; Program CIRC-2.G and Program CIRC-2.H; Goal OSC-5, Policy OCS-5.1; and Goal S-1, Policy S-1.26 and Policy S-1.27.

Environmental Checklist and Discussion

a. Physically divide an established community? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact LU-1 (pages 4.9-11 to 4.9-13) and determined to be less than significant because potential improvements would not include new major roadways or other physical features through parcels or communities that would create new barriers in the study area, which includes the Project site. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, established communities in the Proposed Project's vicinity include the Belle Haven neighborhood to the west and the neighborhoods of East Palo Alto to the east and south. The Project site is within the existing Menlo Park Labs campus; the Proposed Project would add a building to a site that is already developed with R&D/office uses. In addition, the Project site is south of the Dumbarton Rail Corridor, in an area that is characterized by light-industrial, R&D, and office uses. Although the proposed development would result in the demolition of four buildings and construction of a new building, development would be in an area with identical uses and physically separated from nearby neighborhoods by Willow Road, University Avenue, and O'Brien Drive. Therefore, implementation of the Proposed Project would not exacerbate existing barriers or create a new physical barrier that would divide the community.

Conclusion

The physical conditions, as they relate to the division of an established community, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. In addition, because the proposed building would be compatible with existing onsite buildings and would not add, change, or exacerbate barriers, the Proposed Project would not divide existing nearby communities, resulting in ***less-than-significant*** impacts. No further study is needed.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact LU-2 (pages 4.9-14 to 4.9-23) and determined to be less than significant with mitigation incorporated. Mitigation Measure LU-2 from the ConnectMenlo EIR requires that future development demonstrate consistency with the applicable goals, policies, and programs in the City General Plan and the supporting zoning standards. The analysis below demonstrates consistency with the City General Plan through implementation of Mitigation Measure LU-2.

Project-Specific Discussion

Consistency with ConnectMenlo

Adoption of ConnectMenlo resulted in updated zoning, land use designations, goals, and policies for Menlo Park. ConnectMenlo established an approach to land use that was based on an overall objective that focused on supporting the character and quality of life enjoyed in the residential and commercial neighborhoods as well as embracing opportunities for creating new live/work/play environments. ConnectMenlo was designed to encourage commercial uses that would serve existing neighborhoods, retain and attract businesses citywide, and make Menlo Park a leader in sustainable development through conservation of resources and alternative energy use.

ConnectMenlo includes nine guiding principles, listed below in bold, for maintaining and enhancing the quality of life in Menlo Park. The Proposed Project would help to support these guiding principles.

- **Citywide Equity.** To develop at the bonus level, the Proposed Project would have to provide community amenities. The Proposed Project would promote citywide equity by providing community amenities selected from a list of potential options identified through community outreach and adopted by the Menlo Park City Council or by paying an in-lieu fee. These community amenities would be implemented by the Project Sponsor as part of the Proposed Project.[131]
- **Healthy Community.** The Proposed Project would recognize and promote a healthy community by implementing a TDM program that provides alternatives to single-occupancy automobile travel to and from the Project site. The Proposed Project would encourage access to public transit and bicycling as alternatives to vehicular use, which would help to reduce air pollutants. Proposed landscaping around the perimeter of the Project site would add to the appearance of the property, which the City considers important for a healthy community. The private open space proposed as part of the Proposed Project would be within the useable roof deck, and the public open space would be along the street frontage, which would promote a healthy community. The Proposed Project's sustainability features are discussed further below.
- **Competitive and Innovative Business Destination**. The Proposed Project would replace 59,866 sf of office/warehouse/R&D uses on the site with an approximately 131,825 sf building that would be designed to attract biotech, R&D, and/or other employers to Menlo Park; contribute to the City's tax and job base; and provide flexible space for employers to expand. This would contribute to Menlo Park's competitive and innovative business environment.
- **Corporate Contribution.** The Proposed Project would contribute to Menlo Park by providing community amenities, as discussed above. However, the community amenities are currently unknown and therefore, not analyzed in this document. Nonetheless, the Proposed Project would provide community amenities through the community amenities process of the LS-B zoning district to benefit the Belle Haven community and East Palo Alto neighborhoods.

[131] If a list of proposed community amenities is provided by the Project Sponsor, the EIR will analyze any potential environmental impacts.

- **Youth Support and Education Excellence**. The Proposed Project would be designed to attract biotech, R&D, and/or other employers to Menlo Park. This would increase the number of jobs in Menlo Park and could provide opportunities for youth employment and education through opportunities such as internships.
- **Great Transportation Options.** The Proposed Project would include a TDM program that would encourage access to public transit, carpooling, and bicycling as alternatives to single-occupancy automobile travel. The TDM program would require the Proposed Project to provide safe and convenient transportation options to and from the Project site. To implement this, the TDM program would include such features as bicycle storage, showers/changing rooms, subsidized transit passes, a commute assistance center, and a shuttle. Shuttle service to Caltrain, carpooling, and onsite car-share and bike-share programs would also be encouraged to provide alternatives to single-occupancy automobile travel.
- **Complete Neighborhoods and Commercial Corridors.** The Project site is not in an existing residential neighborhood or along a vibrant commercial corridor. Therefore, the Proposed Project would not affect the existing residential character of Menlo Park. The Proposed Project would construct a new R&D/office building and parking lot on an existing office/R&D site and create a more complete facility by fully utilizing the land.
- **Accessible Open Space and Recreation.** The Proposed Project would provide 19,399 sf of publicly accessible open space and 6,600 sf of private open space. The private open space would be within a useable roof deck with open areas, landscaping, and seating areas for employees, among other amenities. The public open space would be along the street frontage and landscaped with berms, trees, bioretention areas, and California-native vegetation. Furnishings in the public space may include trash receptacles, benches, and other outdoor furniture. Therefore, the Proposed Project would provide convenient access to new public open space areas.
- **Sustainable Environmental Planning.** In the LS-B zoning district, projects are required to meet green and sustainable building regulations. The proposed office building would be required to meet 100 percent of its energy demand through a combination of onsite energy generation, the purchase of 100 percent renewable electricity, and/or the purchase of certified renewable energy credits. In addition, the Proposed Project would be designed to meet the LEED Gold rating equivalent for Building Design and Construction. The Proposed Project would meet the City's requirements for electric-vehicle charging spaces. The Proposed Project would also incorporate a bird-friendly design through its placement of the building and use of insulated glazing in an aluminum-frame curtain wall. Other green building requirements would be met through efficient water use, the placement of new structures 24 inches above the Federal Emergency Management Agency base flood elevation to account for sea-level rise, and an onsite recycling program. As such, the Proposed Project would promote green building practices and help the City continue to be a leader in sustainable environmental planning.

To the above guiding principles, ConnectMenlo includes goals and policies related to land use that guide physical development in Menlo Park. The following goals and policies are applicable to the Proposed Project:

- **Goal LU-1**: Promote the orderly development of Menlo Park and its surrounding area.
    - **Policy LU-1.1: Land Use Patterns**. Cooperate with the appropriate agencies to help ensure a coordinated land use pattern in Menlo Park and the surrounding area.

- **Goal LU-4**: Promote and encourage existing and new business to be successful and attract entrepreneurship and emerging technologies for providing goods, services, amenities, local job opportunities, and tax revenue for the community while avoiding or minimizing potential environmental and traffic impacts.
    - **Policy LU-4.1: Priority Commercial Development.** Encourage emerging technology and entrepreneurship and prioritize commercial development that provides fiscal benefits to Menlo Park, local job opportunities, and/or goods or services needed by the community.
    - **Policy LU-4.3: Mixed-Use and Nonresidential Development.** Limit parking, traffic, and other impacts of mixed-use and nonresidential development on adjacent uses and promote high-quality architectural design and effective transportation options.
    - **Policy LU-4.4: Community Amenities.** Require mixed-use and nonresidential development of a certain minimum scale to support and contribute to programs that benefit the community and Menlo Park, including education, transit, transportation infra-structure, sustainability, neighborhood-serving amenities, child care, housing, job training, and meaningful employment for Menlo Park youth and adults.
    - **Policy LU-4.5: Business Uses and Environmental Impacts.** Allow modifications to business operations and structures that promote revenue-generating uses for which potential environmental impacts can be mitigated.
    - **Policy LU-6.2: Open Space in New Development.** Require new nonresidential, mixed-use, and multiple dwelling development of a certain minimum scale to provide ample open space in the form of plazas, greens, community gardens, and parks whose frequent use is encouraged through thoughtful placement and design.
    - **Policy LU-6.9: Bicycle and Pedestrian Facilities.** Provide well-designed bicycle and pedestrian facilities for safe and convenient multi-modal activity through the use of access easements along linear parks or paseos.
    - **Policy LU-6.11: Baylands Preservation**. Allow development near the Bay only in already-developed areas.
- **Goal LU-7**: Promote the implementation and maintenance of sustainable development, facilities, and services to meet the needs of Menlo Park's residents, businesses, workers, and visitors.
- **Goal CIRC-1**: Provide and maintain a safe, efficient, attractive, user-friendly circulation system that promotes a healthy, safe, and active community and quality of life throughout Menlo Park.
    - **Policy CIRC-1.8: Pedestrian Safety**. Maintain and create a connected network of safe sidewalks and walkways within the public right-of-way, ensuring that appropriate facilities, traffic control, and street lighting are provided for pedestrian safety and convenience, including for sensitive populations.
- **Goal CIRC-2**: Increase accessibility for and use of streets by, bicyclists, pedestrians, and transit riders.
    - **Policy CIRC-2.7: Walking and Biking.** Provide for the safe, efficient, and equitable use of streets by bicyclists and pedestrians through appropriate roadway design and maintenance, effective traffic law enforcement, and implementation of the City's Transportation Master Plan (following completion; until such time, the Comprehensive Bicycle Development Plan, Sidewalk Master Plan, and the El Camino Real/Downtown Specific Plan represent the City's proposed bicycling and walking networks).

- **Policy CIRC-2.11: Design of New Development**. Require new development to incorporate a design that prioritizes safe bicycle and pedestrian travel and accommodates senior citizens, people with mobility challenges, and children.
- **Policy CIRC-2.14: Impacts of New Development**. Require new development to mitigate its impacts on the safety (e.g., collision rates) and efficiency (e.g., vehicle miles traveled per service population or other efficiency metric) of the circulation system. New development should minimize cut-through and high-speed vehicle traffic on residential streets; minimize the number of vehicle trips; provide appropriate bicycle, pedestrian, transit connections, amenities, and improvements in proportion with the scale of proposed projects; and facilitate appropriate or adequate response times and access for emergency vehicles.

- **Goal OSC-5**: Ensure healthy air and water quality.
  - **Policy OSC-5.1: Air and Water Quality Standards**. Continue to apply standards and policies established by the Bay Area Air Quality Management District, San Mateo Countywide Water Pollution Prevention Program, and City of Menlo Park Climate Action Plan through the California Environmental Quality Act process and other means as applicable.
- **Goal S-1**: Ensure a safe community.
  - **Policy S-1.26: Erosion and Sediment Control**. Continue to require the use of best management practices for erosion and sediment control measures with proposed development in compliance with applicable regional regulations.
  - **Policy S-1.27: Regional Water Quality Control Board Requirements**. Enforce stormwater pollution prevention practices and appropriate watershed management plans in the RWQCB general National Pollutant Discharge Elimination System requirements, the San Mateo County Water Pollution Prevention Program, and the City's Stormwater Management Program. Revise, as necessary, City plans so they integrate water quality and watershed protection with water supply, flood control, habitat protection, groundwater recharge, and other sustainable development principles and policies.

The Proposed Project would be consistent with the land use, circulation, open space, and safety goals, policies, and programs from ConnectMenlo because it would be designed in accordance with the goals, policies, and programs. The Proposed Project's use would be consistent with land use and zoning designations, ensuring orderly development and consistent land use patterns across Menlo Park. The proposed building would be designed to attract biotech, R&D, and/or other employers to Menlo Park by providing flexible space for employers to expand, which would encourage commercial development with innovative local job opportunities that provide a fiscal benefit to the City.

The Proposed Project would provide open space, including 19,399 sf of publicly accessible open space, and maintain bicyclist and pedestrian accessibility via existing sidewalks and bike lanes along O'Brien Drive. Furthermore, as part of the TDM program, a bicycle storage room would be provided at the Project site. The Proposed Project would also seek the LEED Gold certification equivalent, which would provide community amenities, as identified through community outreach, and adhere to all air and water quality standards and requirements. Therefore, the Proposed Project would not conflict with any goals, policies, or programs.

The Proposed Project would have a combined FAR of 124 percent; the maximum height of the proposed building would be approximately 85 feet. Across the entire Project site, including the existing buildings, the average building height would be 60.3 feet. Because these numbers are above the base level of development, both the proposed FAR and height would be permitted through the bonus-level development provisions in the zoning ordinance. Table 3.11-1 compares allowed development under LS zoning for both the base level and bonus level as well as the development proposed under the Proposed Project. As summarized in Table 3.11-1, with implementation of bonus-level development, the Proposed Project would be consistent with the FAR, height, and densities permitted at the Project site.

Table 3.11-1. Allowed and Proposed Development at the Project Site

	LS Zoning Requirements (Base Level)	LS Zoning Requirements (Bonus Level)	Proposed Development
Site Area	25,000 sf (minimum [min.]) 100 feet x 100 feet (min)	25,000 sf (minimum [min.]) 100 feet x 100 feet (min)	106,358 sf (Lot 1) 73,180 sf (Lot 2) 179,538 (Total)
Floor Area Ratio	55% (+10% commercial)	125% (+10% commercial)	124% (131,825 sf)[a]
Maximum Height[b]	35 feet (+10 feet, flood zone)	110 feet (+10 feet, flood zone)	100.75 feet[c]
Average Height[b,d]	35 feet (+10 feet, flood zone)	67.5 feet (+10 feet, flood zone)	60.58 feet
Open Space[e]	35,908 sf min (20% of total)	35,908 sf min (20% of total)	39,306 sf (21.8% of total)
Public Open Space[f]	17,954 sf min (10% of total)	17,954 sf min (10% of total)	19,399 sf (10.8% of total)

Source: Tarlton Properties and DES Architects + Engineers, 2021.

Notes:

a. Although the building site includes Parcels 1 and 2, the FAR calculated here for the development uses Parcel 1. No structure would be located on Parcel 2. However, Parcel 2 would include 11,500 sf of open space and 4,780 sf of public open space; these numbers are included in the open space totals for the Proposed Project.

b. Properties within the flood zone or subject to flooding and sea-level rise are allowed a 10-foot increase in average height and maximum height.

c. Does not include parapet or mechanical equipment.

d. Height is defined as average height of all buildings on one site where a maximum height cannot be exceeded.

e. Open space calculations are based on the square footage of the Project site and not on the new building area.

f. Public open space area is also included in Open Space totals.

Compatibility with Existing Land Uses

As described above, the Project site is in the LS-B zoning district. This designation provides for new office uses, along with light industrial and R&D uses as well as personal services. The Proposed Project would develop the site with an approximately 131,825 gsf building and 249 surface parking stalls, consistent with the land use designation. Overall, the land uses proposed at the Project site are consistent with existing land uses. The emphasis on R&D uses is compatible with the character of surrounding neighborhoods, and the increased FAR and density support the community's objective to encourage development of underutilized parcels.

Conclusion

The physical conditions, as they relate to land use plans and policies, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The analysis above is premised on City-approved and City-adopted community amenities or in-lieu fee provided by the Project Sponsor. ConnectMenlo Mitigation Measure LU-2 was applied to demonstrate consistency with the City General Plan. Therefore, with the community amenities provided by the Project Sponsor and approved by the City, no further mitigation would be required. The change in intensities and densities as a result of the Proposed Project would not, in itself, result in sustainable adverse effects on the compatibility of surrounding land uses, and the impacts would be ***less than significant***. No further study is required.

XII. Mineral Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site, as delineated in a local general plan, specific plan, or other land use plan?	☐	☐	☐	☐	☒

Setting

The Surface Mining and Reclamation Act of 1975 is state legislation that protects Mineral Resource Zones (MRZs). Part of the purpose of the act is to classify mineral resources in the state and transmit the information to local governments, which regulate land use in each region of the state. Local governments are responsible for designating lands that contain regionally significant mineral resources in local general plans to ensure resource conservation in areas with intensive competing land uses. The law has resulted in the preparation of mineral land classification maps, which delineate MRZs 1 through 4 for aggregate resources (sand, gravel, and stone).

There are no known mineral resources within the vicinity of the Project site. The California Geological Survey (CGS) Mineral Resource Zones and Resource Sectors map classifies the Project site as MRZ-1,[132] an area "where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence."[133]

General Plan Goals and Policies

No City General Plan goals and policies would be applicable to the Proposed Project.

[132] California Geological Survey. 1987. *Special Report 146 – Mineral Land Classification: Aggregate Materials in the San Francisco-Monterey Bay Area, Part II: Classification of Aggregate Resource Areas, South San Francisco Bay Production-Consumption Region.* Palo Alto quadrangle, Plate 2.40. Available: ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/SR_146-2/SR-146_Plate_2.40.pdf. Accessed: November 7, 2019.

Environmental Checklist and Discussion

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-2); it was determined that it would result in no impact. No mitigation measures were recommended.

Conclusion

There are no known mineral resources at the Project site, as indicated by the CGS MRZ. The Project site is not delineated as a locally important mineral resource by the CGS or on any County or City land use plan. Although there is limited information about the mineral resource potential of the Project site, the Project site and vicinity have been developed for uses related to research and development uses, which are incompatible with mineral extraction. The physical conditions, as they relate to mineral resources, have not changed in Menlo Park since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. ***No impact*** would occur, and no further study is needed.

b. Result in the loss of availability of a locally important mineral resource recovery site, as delineated in a local general plan, specific plan, or other land use plan? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-2); it was determined that it would result in no impact. No mitigation measures were recommended.

Conclusion

As stated above, the Project site is not delineated as a locally important mineral resource site by the County or City. The physical conditions, as they relate to mineral resources, have not changed in Menlo Park since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. ***No impact*** would occur, and no further study is needed.

XIII. Noise	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in a local general plan or noise ordinance or applicable standards of other agencies?	☒	☐	☐	☐	☐
b) Generate excessive ground-borne vibration or ground-borne noise levels?	☒	☐	☐	☐	☐
c) For a project in the vicinity of a private airstrip or an airport land use plan area or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒	☐

Setting

The Project site is bounded by a warehouse as well as light industrial, R&D, and life science uses to the north and west. To the south and west is O'Brien Drive, with similar uses on the other side of the street. The majority of the existing noise sources in the area are associated with local traffic on adjacent roadways. Noise-sensitive land uses, which are generally defined as locations where people reside or where the presence of unwanted sound could adversely affect use of the land, include a residential neighborhood approximately 300 feet south of the Project site. In addition, Wund3rSCHOOL/Open Mind School, a small private school, is adjacent to Parcel 2 to the east.

General Plan Goals and Policies

The City General Plan—specifically, the Land Use Element and the Noise Element—contains goals, policies, and programs that require local planning and development decisions to consider noise impacts. The following City General Plan goals, policies, and programs would minimize potential adverse impacts related to noise: Goal LU-4, Policy LU-4.5, and Goal N-1, Policy N-1.1, Policy N-1.2, Policy N-1.4, Policy N-1.6, Policy N-1.7, Policy N-1.8, Policy N-1.9, Policy N-1.10, and Policy N-1.D. In addition, land use compatibility noise standards are included in the City General Plan Noise Element.

According to the City General Plan Noise Element, noise levels up to 60 A-weighted decibels (dBA), day-night level (L_{dn}), are considered normally acceptable for single-family residential land uses; noise levels of up to 70 dBA L_{dn} are considered conditionally acceptable for such uses as long as noise insulation features are included in the design to reduce interior noise levels. For multi-family residential and hotel uses, noise levels of up to 65 dBA L_{dn} are considered normally acceptable; noise levels of 70 dBA L_{dn} considered conditionally acceptable. For office buildings and commercial uses, noise levels of up to 70 dBA L_{dn} are considered normally acceptable; noise levels of up to 77.5 dBA L_{dn} are considered conditionally acceptable. For industrial uses, noise levels up to 75 dBA L_{dn} are considered normally

acceptable; noise levels of up to 80 dBA L_{dn} are considered conditionally acceptable. For schools, churches, playgrounds, and neighborhood parks, noise levels up to 70 dBA L_{dn} are considered normally acceptable; there are no separate conditionally acceptable noise limits for these uses.

City of Menlo Park Municipal Code

In addition to the City General Plan, the City Municipal Code also contains noise regulations. Chapter 8.06 of the City Municipal Code contains noise limitations and exclusions for land uses within the city. The City Noise Ordinance addresses issues related to noise that would constitute a disturbance, as measured primarily at residential land uses. The City Municipal Code regulations below would be applicable to the Proposed Project.

Section 8.06.030, Noise Limitations

Except as otherwise permitted in this chapter, any source of sound in excess of the sound level limits set forth in Section 8.06.030 shall constitute a noise disturbance. For purposes of determining sound levels from any source of sound, sound level measurements shall be made at a point on the receiving property nearest where the sound source at issue generates the highest sound level.

1. For all sources of sound measured from any residential property:
   A. "Nighttime" hours (10:00 p.m. to 7:00 a.m.)—50 dBA
   B. "Daytime" hours (7:00 a.m. to 10:00 p.m.)—60 dBA

Section 8.06.040, Exceptions

a. Construction Activities
   1. Construction activities between the hours of 8:00 a.m. and 6:00 p.m. Monday through Friday.
   4. Notwithstanding any other provision set forth above, all powered equipment shall comply with the limits set forth in Section 8.06.040(b).

b. Powered Equipment
   1. Powered equipment used on a temporary, occasional, or infrequent basis operated between the hours of 8:00 a.m. and 6:00 p.m. Monday through Friday. No piece of equipment shall generate noise in excess of 85 dBA at 50 feet.

c. Deliveries
   1. Deliveries to food retailers and restaurants.
   2. Deliveries to other commercial and industrial businesses between the hours of 7:00 a.m. and 6:00 p.m. Monday through Friday and 9:00 a.m. to 5:00 p.m. Saturdays, Sundays, and holidays.

Furthermore, the City Zoning Ordinance also contains regulations related to roof-mounted equipment.

Section 16.08.095, Roof-mounted Equipment

Mechanical equipment, such as air-conditioning equipment, ventilation fans, vents, ducting, or similar equipment, may be placed on the roof of a building, provided that such equipment is screened from view, as observed at an eye level horizontal to the top of the roof-mounted equipment, except for the SP-ECR/D district, which has unique screening requirements, and all sounds emitted by such equipment shall not exceed 50 decibels (dB) at a distance of 50 feet from such equipment. (Ordinance 979, Section 3 [part], 2012; Ordinance 819, Section 1 [part], 1991)

Environmental Checklist and Discussion

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in a local general plan or noise ordinance or applicable standards of other agencies? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

Construction and operational noise effects were analyzed in the ConnectMenlo EIR as Impact NOISE-1 (pages 4.10-19 to 4.10-24). It was determined that the impact would be less than significant with the application of mitigation measures and compliance with mandatory City General Plan goals and policies. Projects that would result in the development of sensitive land uses, which the Proposed Project would not, must maintain an indoor L_{dn} of 45 dBA or less, as required by ConnectMenlo EIR Mitigation Measure NOISE-1a and existing regulations. Projects that could expose existing sensitive receptors to excessive noise must comply with ConnectMenlo EIR Mitigation Measures NOISE-1b and NOISE-1c to minimize both operational noise and construction-related noise. The topic of potential traffic noise effects was discussed in the ConnectMenlo EIR under Impact NOISE-3 (pages 4.10-29 to 4.10-36). It was determined that implementation of ConnectMenlo would not result in a substantial permanent increase in ambient noise on any of the identified roadway segments. No mitigation measures were recommended.

Project-Specific Discussion

Construction

The Proposed Project would involve demolition of three office/warehouse/R&D buildings at 1105, 1135, and 1165 O'Brien Drive (Parcel 1). In addition, the office/warehouse building at 1 Casey Court would be demolished (Parcel 2). The Proposed Project would construct a 131,285 gsf R&D building on Parcel 1 and a surface parking lot on Parcel 2. Demolition and construction activities would require the use of heavy construction equipment, including, but not limited to, dump trucks, cranes, forklifts, scissor lifts, excavators, trenchers, graders, backhoes, concrete mixer trucks, and concrete pump trucks.

Although construction activities are generally exempt in the city during daytime hours, construction noise is expected to be audible at nearby sensitive uses, including the adjacent school. Because construction noise may be audible at nearby sensitive uses, the impact would be potentially significant. In addition, construction is proposed to occur outside typical standard hours for Menlo Park, per Section 8.06 of the City Municipal Code. Therefore, to determine if construction would result in noise impacts, construction noise modeling would need to be conducted for the Proposed Project. Construction noise will require ***further environmental review*** in the EIR.

Operations – Traffic

Potential traffic noise impacts from plan development were analyzed in the ConnectMenlo EIR. The Proposed Project could increase traffic noise at certain locations because of the potential for an increase in the number of vehicle trips compared with the number assumed in the ConnectMenlo EIR transportation analysis. Therefore, this topic will require ***further environmental review*** in the EIR.

Operations – Other Operational Noise Sources

Other potential sources of Project-related operational noise include mechanical equipment, such as HVAC equipment and emergency generators, and the loading dock at the northwest side of the building. In addition, the roof of the proposed building would have an approximately 6,600-square-foot roof deck with landscaped areas and seating for use by employees of the Menlo Park Labs campus, which could generate noise. The ConnectMenlo EIR states that stationary noise sources, as well as landscaping and maintenance activities, shall comply with Chapter 8.06, Noise, of the City Municipal Code. Compliance with the mitigation measures from the ConnectMenlo EIR would ensure compliance with Chapter 8.06 of the City Municipal Code. However, generator noise could exceed the criteria for areas adjacent to existing sensitive receptors. Therefore, operation of the proposed mechanical equipment, emergency generator, loading dock, and the rooftop deck will require ***further environmental review*** in the EIR.

Conclusion

Physical conditions related to noise have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. Construction noise impacts will require further analysis (e.g., the level of construction noise from the Project will need to be quantified). With regard to traffic noise impacts, although potential traffic noise impacts from plan development were analyzed in the ConnectMenlo EIR, the Project could result in increased traffic noise at certain locations. This is because the possibility exists for an increased number of vehicle trips compared with the number assumed in the ConnectMenlo EIR transportation analysis. In addition, other operational noise sources, including the proposed mechanical equipment, emergency generator, loading dock, and rooftop deck, will be evaluated. Therefore, this topic will be the subject of ***further environmental review*** in the EIR.

b. Generation of excessive ground-borne vibration or ground-borne noise levels? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact NOISE-2 (pages 4.10-25 to 4.10-29). The impact was determined to be potentially significant. With implementation of Mitigation Measures NOISE-2a and NOISE-2b, this impact would be reduced to a less-than-significant level. The analysis concluded that, overall, vibration impacts related to construction would be short term, temporary, and generally restricted to areas in the immediate vicinity of construction activity. However, because Project-specific information was not available, the analysis did not quantify construction-related vibration impacts on sensitive receptors.

Implementation of Mitigation Measure NOISE-2a would reduce construction-related vibration impacts to a less-than-significant level through preparation of a vibration analysis to assess vibration levels and the use of alternate construction techniques to reduce vibration, if necessary. Specifically, according to Mitigation Measure NOISE-2a from the ConnectMenlo EIR, vibration levels must be limited to a peak particle velocity (PPV) of 0.126 inch per second (in/sec) at the nearest workshop,[134] a PPV of 0.063 in/sec at the nearest office, a PPV of 0.032 in/sec at the nearest residence during daytime hours, and a PPV of 0.016 in/sec at the nearest residence during nighttime hours. Regarding long-term construction impacts, ConnectMenlo requires projects to comply with Mitigation Measure NOISE-2b, which requires the City to implement best management practices as part of a project's approval process.

[134] The term "workshop" is used in the ConnectMenlo EIR to categorize industrial-type land uses that may be conducting manufacturing activities.

Project-Specific Discussion

Although pile driving would not be required for the Proposed Project, construction would require the use of other equipment that may generate vibration. The piece of equipment proposed for Project construction that would generate the greatest vibration level would be an auger drill. Large earthmoving equipment, such as an excavator, may also generate high levels of vibration compared with other proposed equipment and be operated in proximity to the nearby school.[135] During Project construction, vibration-generating construction equipment may be operated less than 10 feet from the nearby school yard, 80 feet from the nearby school building, and 25 to 50 feet from the nearby commercial and industrial buildings.

Conclusion

The physical conditions, as they relate to Project-specific vibration impacts, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There are no substantial changes in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR. However, ConnectMenlo Mitigation Measure NOISE-2a requires a Project-specific vibration analysis. This topic will require ***further environmental review*** in the EIR.

c. For a project located in the vicinity of a private airstrip or an airport land use plan area or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was discussed in the ConnectMenlo EIR as Impact NOISE-5 (page 4.10-38) and Impact NOISE-6 (page 4.10-38). It was determined that it would result in less-than-significant impacts.

Conclusion

The physical conditions, as they relate to the Project's adjacency to a private airstrip, public airport, or public use airport, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. As stated in the ConnectMenlo EIR, there are no private airstrips located within Menlo Park. In addition, there are no areas of Menlo Park which fall within an airport land use plan for a nearby public use airport. Although the Proposed Project would be approximately 1.9 miles from Palo Alto Airport, this area is not covered by the airport's influence area, nor is it within the airport's 55-decibel (dB) noise contour.[136] Implementation of the Proposed Project would therefore not expose people residing or working in the Project area to excessive noise levels. This impact would be ***less than significant***, and no new or more severe impacts beyond those examined in the ConnectMenlo EIR would occur.

XIV. Population and Housing	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	☒	☐	☐	☐	☐
b) Displace a substantial number of existing people or housing units, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒	☐

Setting

As discussed in more detail below, this topic will be analyzed further in the EIR. Therefore, the setting is not discussed in this document but will be provided instead in the EIR.

General Plan Goals and Policies

General plan goals and policies related to population and housing will be outlined and discussed in the EIR.

Environmental Checklist and Discussion

a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact POP-1 (pages 4.11-5 to 4.11-18) and determined to be less than significant. Within the ConnectMenlo EIR study area, new growth and future development would be guided by policy framework. No mitigation measures were recommended.

Project-Specific Discussion

The current Project site accommodates approximately 143 employees.[137,138] The Proposed Project would include construction of a 131,825 gsf R&D building that would accommodate approximately 328 employees,[139] increasing employment at the Project site by approximately 185 net employees upon implementation of the Proposed Project. Although the Proposed Project would not result in onsite residential population increases, the new employees could generate households within Menlo Park and the region. Using the average of 1.91 workers per work household[140] in San Mateo County, the Proposed Project would generate approximately 96 new households. On average, approximately 5.9 percent of Menlo Park's workforce also resides in Menlo Park,[141] which would result in up to six new households. With an average persons-per-household ratio of 2.64, the Proposed Project could generate up to 15 new residents within Menlo Park.[142] This represents a fraction of a percent of the total population of Menlo Park and is within the anticipated growth considered in the ConnectMenlo EIR.

Conclusion

The physical conditions, as they relate to population growth, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. However, as a result of the 2017 *City of East Palo Alto v. City of Menlo Park* settlement agreement, the EIR will evaluate population growth in more detail. In particular, a Housing Needs Assessment (HNA) will be prepared for the Proposed Project. Therefore, this topic ***requires further environmental review*** in the EIR.

b. Displace a substantial number of existing people or housing units, necessitating the construction of replacement housing elsewhere? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact POP-2 (pages 4.11-18 to 4.11-20) and Impact POP-3 (page 4.11-20) and determined to be less than significant. Within the ConnectMenlo EIR study area, existing policies would ensure that adequate housing would remain and that the

[137] Current employee estimates provided by the Project Sponsor are based on a generation rate of one employee per 400 gsf for the 26,911 gsf of R&D space at 1135 O'Brien Drive and 1165 O'Brien Drive plus one employee per 400 gsf for the 1,750 gsf of R&D space and one employee per 500 gsf for the 10,250 gsf of warehouse space at 1105 O'Brien Drive.

[138] Based on the Project Sponsor's estimate of one employee per 500 gsf for 20,955 gsf of warehouse space at 1 Casey Court.

[139] Employee estimate provided by the Project Sponsor, based on a generation rate of one employee per 400 sf.

[140] In making the translation from the estimated number of Project employees to the estimated number of housing units in demand, the analysis considers multiple-earner households. The analysis makes an adjustment to recognize that an added employee who lives in a household with one or more other workers is not responsible for creating demand for an entire additional housing unit, only a portion of an additional unit. There is no implicit assumption in the workers-per-household calculation that Project workers would live with one another. Multiple-earner households are a factor that must be recognized in the analysis, irrespective of where the other working member of the household is employed. A specific factor of 1.91 workers per worker household is the average number of workers in each working household in San Mateo County and derived from U.S. Census Bureau data (2015–2019 ACS).

[141] Keyser Marston Associates. 2019. *Initial Data: 1125 O'Brien Drive Project Housing Needs Analyses, Menlo Park, CA.*

[142] Ibid.

potential for any displacement of existing people or housing would be limited because new housing was proposed as part of ConnectMenlo to address local and regional housing needs. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to the displacement of housing units, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. In addition, the Project site does not include housing units. Therefore, no housing would be displaced as a result of the Proposed Project. Although approximately 143 employees currently work at the Project site, these employees could be accommodated within existing buildings at the Menlo Park Labs campus, including those on the Project site. Therefore, the Proposed Project would result in a ***less-than-significant impact*** related to the displacement of people or housing. No further study is needed in the EIR.

XV. Public Services	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:					
Fire protection?	☐	☐	☐	☒	☐
Police protection?	☐	☐	☐	☒	☐
Schools?	☐	☐	☐	☒	☐
Parks?	☐	☐	☐	☒	☐
Other public facilities?	☐	☐	☐	☒	☐

Setting

Fire Protection

Fire protection services in the Project area are provided by the Menlo Park Fire Protection District (MPFPD). The MPFPD service boundary covers 30 square miles and includes Menlo Park, Atherton, and East Palo Alto plus some unincorporated areas in San Mateo County.[143] Seven MPFPD fire stations serve an estimated population of approximately 90,000.[144] The MPFPD responds to approximately 8,500 emergencies per year and is part of the greater San Mateo County boundary-drop plan (i.e., the closest apparatus responds to each call, regardless of the department).[145,146] The adopted performance standard for response times establishes a goal that would have the first-response unit arrive on the scene of all Code 3 emergencies within 7 minutes, starting from the time of the call to the dispatch center, 90 percent of the time. The goal of the MPFPD's multi-unit response units is to arrive on scene within 11 minutes from the time of the call to the dispatch center. The MPFPD's average response times fall under the currently adopted 7-minute standard for first-response units.[147]

The MPFPD is organized into five Fire District Divisions as follows: Administrative Services, Human Resources, Fire Prevention, Operations, and Support Services. As of 2019, the MPFPD was budgeted for approximately 149 full-time-equivalent (FTE) employees. Of those, 109 FTE employees provide direct fire services, while the other 40 staff members handle daily administrative tasks related to

[143] Menlo Park Fire Protection District. 2021. *About the Fire District*. Available: https://www.menlofire.org/about-the-fire-district. Accessed: February 3, 2021.

[144] Ibid.

[145] Ibid.

[146] Menlo Park Fire Protection District. 2021. *2020–2021 Original Budget*. Available: https://www.menlofire.org/financials-and-budget. Accessed: February 3, 2021.

[147] Menlo Park Fire Protection District. 2015. *Standards of Cover Assessment.* Volume 1, Executive Summary. June 16. Available: https://evogov.s3.amazonaws.com/media/6/media/4966.pdf. Accessed: February 3, 2021.

financial services, maintenance of the MPFPD's fleet of vehicles, emergency preparedness, and the management of citizen volunteers in the Community Emergency Response Team program.[148] This equates to a ratio of approximately 1.66 firefighters per 1,000 people in the MPFPD service population.

Fire Station 2, at 2290 University Avenue, serves East Palo Alto and the Menlo Park Labs campus, which includes the Project site. Station 2 is manned by one captain and two firefighters per shift. Of the three on-duty personnel, one is a licensed paramedic.[149] Fire Station 2 was rebuilt in 2016. The 12,560 gsf facility includes three drive-through bays, eight dorm rooms, two offices, a conference room, a backup generator, a fuel tank, and a communications building with a 100-foot-tall monopole.[150]

Police Protection

Police services in the vicinity of the Project site are provided by the Menlo Park Police Department (MPPD). The Project site is located within Beat 3. The MPPD's current service population is approximately 42,000.[151] The MPPD is headed by a chief of police who oversees two divisions, the Patrol Operations Division and Special Operations Division. From 2019 to 2020, the Patrol Operations Division handled more than 23,000 calls for service. MPPD staffing includes 10.5 police administrators, 42.5 patrol operations employees, and 8.5 communications specialists, for a total of 61.5 FTE employees.[152] The current MPPD service ratio is 1.29 sworn officers per 1,000 people.

One police station, located at city hall, covers the entire service area. The MPPD also operates a police substation and neighborhood service center north of US 101 in the Belle Haven neighborhood. The Belle Haven Neighborhood Service Center and Substation houses the MPPD's Code Enforcement Office and Community Safety Police Officer. MPPD officers use the substation to make calls as well as interview and/or process suspects, victims, or witnesses. In addition, the substation serves as a place for the community to meet with police officers or gather.[153]

Schools

Four elementary/middle school districts and one high school district are within the boundaries of Menlo Park: Menlo Park City School District (CSD), Ravenswood CSD, Las Lomitas School District, Redwood CSD, and Sequoia Union High School District (SUHSD). However, the portion of Menlo Park that includes Las Lomitas School District, which is generally bounded by Alameda de las Pulgas to the north and I-280 to the south, is built out; currently, there is no substantial potential for new housing units. Therefore, this school district is not analyzed further in this section because the Proposed Project would not induce the construction of new housing in this area and generate new students.

Menlo Park City School District. The Menlo Park CSD serves parts of Menlo Park, Atherton, and unincorporated areas of San Mateo County. The Menlo Park CSD operates three elementary schools (Encinal School, Laurel School, and Oak Knoll School) and one middle school (Hillview Middle School). In 2018–2019 (the most recent data available), total student enrollment at the four schools was 3,023, with approximately 344 FTE staff members.[154] The Menlo Park CSD maintains a student-teacher ratio of 17.4 students per teacher.[155]

The three elementary schools currently exceed capacity; however, Hillview Middle School has additional capacity available.[156] To accommodate growth, the Laurel School Upper Campus was constructed; it opened on October 17, 2016, to 300 third- through fifth-grade students.[157] The Menlo Park CSD is required to accommodate students within its boundaries. When a school is at capacity, students can attend another school in the district. If all classes are at capacity, then the Menlo Park CSD may increase the class size or open new classrooms. The Menlo Park CSD currently uses the following student generation rates: 0.18 student per single-family unit and 0.44 student per multi-family unit.[158]

Ravenswood City School District. The Ravenswood CSD serves northern Menlo Park and East Palo Alto. The district operates two elementary schools, two middle schools, four academies, one charter school, and one development center. Two Ravenswood CSD schools are within Menlo Park, Belle Haven Elementary School and Willow Oaks Elementary School. The reported student enrollment for the 2018–2019 school year (the most recent data available) was 3,436; with 162 teachers, the student-teacher ratio would be approximately 21 students to each teacher. Enrollment at Ravenswood City Elementary, in East Palo Alto, has been declining since the 2015–2016 school year.[159] Furthermore, it is anticipated that the Ravenswood CSD will experience low to no growth in the near future.[160] The Ravenswood CSD's student generation rate is 0.39 student per single-family unit and 0.56 student per multi-family unit.[161]

Redwood City School District. The Redwood CSD serves elementary and middle school students in Redwood City and portions of San Carlos, Menlo Park, Atherton, and Woodside. The Redwood CSD has 16 schools that serve approximately 6,700 students. Of its more than 900 employees, approximately 400 are teachers, resulting in a student-teacher ratio of approximately 16.8 students

to each teacher.[162] The Redwood CSD's student generation rates for elementary schools are 0.36 student for single-family detached units, 0.18 student for single-family attached units, and 0.10 student for multi-family units. The Redwood CSD's student generation rates for middle schools are 0.10 student for single-family detached units, 0.06 student for single-family attached units, and 0.04 student for multi-family units.[163]

Sequoia Union High School District. The SUHSD operates four comprehensive high schools, one alternative high school, one technology- and design-focused high school, and additional programs. The SUHSD serves Atherton, East Palo Alto, San Carlos, Woodside, Belmont, Portola Valley, portions of unincorporated San Mateo County, and Menlo Park, and enrollment is steadily increasing.[164] Among these schools, Menlo-Atherton High School serves students residing in Menlo Park. In 2018–2019 (the most recent data available), total student enrollment at the high schools was approximately 10,246; with approximately 580 teachers, the student-teacher ratio would be approximately 17.7 students to each teacher.[165] TIDE Academy, a new high school at 150 Jefferson Drive, opened in August 2019 to accommodate enrollment growth. The SUHSD student generation rate is 0.2 student per housing unit.[166]

Parks

The Menlo Park Library and Community Services Department is responsible for providing recreational, educational, and cultural programs for residents of Menlo Park. Its facilities include 13 parks, three community centers, two public pools, three child care centers, two gymnasiums, and one gymnastics center. Included in the park and recreational areas are tennis courts, softball diamonds, picnic areas, dog parks, playgrounds, swimming pools, gymnastics centers, a skate park, a shared-use performing arts center, soccer fields, and open space.[167] An adopted City General Plan policy (Policy OSC-2.4) calls for maintaining a ratio of 5 acres of developed parkland per 1,000 residents. Currently, Menlo Park has an estimated population of approximately 34,138.[168] The City provides 221 acres of parkland for its residents, a ratio of 6.47 acres[169] of parkland per 1,000 residents.[170] Therefore, the City currently exceeds its goals.

[162] Redwood City School District. 2021. *RCSD Fast Facts.* Available: https://www.rcsdk8.net/domain/2477. Accessed: February 3, 2021.

[168] U.S. Census Bureau. 2021. *American Fact Finder, American Community Survey Demographic and Housing Estimates* (2014-2019 American Community Survey 5-year Estimates, ID DP05). Available: https://data.census.gov/cedsci/table?q=DP05&g=1600000US0646870&tid=ACSDP5Y2019.DP05&hidePreview=true. Accessed: February 3, 2021.

[169] Note that this is slightly different from the ratio included in the ConnectMenlo EIR because of the increase in population since release of the ConnectMenlo EIR.

[170] A total of 221 acres divided by 34,138 (existing population as of 2019) multiplied by 1,000 = 6.47 acres per 1,000 residents.

Libraries

Menlo Park has two libraries, Menlo Park Library on Alma Street and the Belle Haven Branch Library on Ivy Drive. In total, the libraries have approximately 37,800 gsf of space and approximately 14 FTE staff members. Operating as a department of the City of Menlo Park, the municipal libraries have approximately 23,600 registered borrowers and circulate 677,846 books and multi-media resources, including digital content.[171] The Belle Haven Branch Library is proposed for reconstruction as part of the Menlo Park Community Center, which is anticipated to open in 2023.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on public services. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on public services: Goal LU-1, Policy LU-1.1; Goal LU-4, Policy LU-4.5; Program LU-4.C; Goal LU-6, Policy LU-6.2; Goal LU-7, Policy LU-7.7; Goal CIRC-1, Policy CIRC-2.14; Goal CIRC-3; Goal S-1, Policy S-1.5, Policy S-1.29, Policy S-30, and Policy S-1.38; and Goal OSC-2, Policy OSC-2.1, Policy OSC-2.4, and Policy OSC-2.6.

Environmental Checklist and Discussion

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:

Fire Protection

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-1 (pages 4.12-8 to 4.12-12). With respect to the need for remodeled or expanded fire protection facilities in order to maintain acceptable service ratios, response times, or other performance standards, the impacts were determined to be less than significant. No mitigation measures were recommended.

Project-Specific Discussion

Because of the increase in employment at the Project site, it is anticipated that the Proposed Project would increase the daytime population by approximately 185 (i.e., net new employees). According to MPFPD standards, each employee would be equal to 0.58 resident.[172] This equates to approximately 107 people added to the service population. In addition, as stated in Section XIV, *Population and Housing*, the Proposed Project could induce up to 15 new Menlo Park residents.[173] Without an increase in existing MPFPD staffing, the ratio of one firefighter per 1,000 residents

[171] City of Menlo Park. 2016. *Menlo Park Library Strategic Plan, 2016–2020.* Available: https://menlopark.org/DocumentCenter/View/15808/Library-Strategic-Plan-2016-2020?bidId=. Accessed: February 3, 2021.

[172] Menlo Park Fire Protection District. 2016. *Menlo Park Fire Protection District Emergency Services and Fire Protection Impact Fee Nexus Study, 2015.* Available: https://evogov.s3.amazonaws.com/media/6/media/49065.pdf. Accessed: February 4, 2021.

[173] Includes employees who would both live and work in Menlo Park, plus their households.

would decrease slightly with implementation of the Proposed Project. However, no additional equipment would be needed to serve the proposed building at the Project site because similarly sized buildings are already served by the MPFPD.

The Proposed Project would be required to comply with all applicable MPFPD codes and regulations as well as standards related to fire hydrants (e.g., fire-flow requirements, spacing requirements), the design of driveway turnaround and access points, and other fire code requirements. For example, the MPFPD Fire Prevention Code, Section 903.2, requires automatic fire sprinkler protection for commercial occupancies of more than 5,000 gsf if the building is 40 feet or taller. Accordingly, the buildings on the Project site would require the installation of automatic fire sprinklers.

Conclusion

The physical conditions, as they relate to fire services, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would not result in substantial adverse environmental impacts associated with the provision of new or physically altered fire and emergency service facilities in order to maintain acceptable service ratios, response times, or other performance objectives. Fire service impacts as a result of the Proposed Project would be ***less than significant***. No further study is needed.

Police Protection

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-3 (pages 4.12-15 to 4.12-18) and determined to result in a less-than-significant impact. The MPPD indicated in the ConnectMenlo EIR that it can address issues related to maintaining adequate response times for the proposed development through staffing rather than facility expansion. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project could affect the MPPD by intensifying site activity and adding new employees, visitors, and residents. Specifically, the Proposed Project would increase the number of employees at the Project site by approximately 185. When calculating the service population, the MPPD considers employees who work in Menlo Park as one-third of a resident, resulting in approximately 61 additional daytime residents. In addition, the Proposed Project could induce up to 15 permanent residents to relocate to Menlo Park.[174] Without an increase in existing MPPD staffing, the ratio of 1.29 officers per 1,000 people would decrease slightly with implementation of the Proposed Project.[175] The added daytime and permanent residents would result in a slight decrease in the ratio of officers to residents.

[174] Includes employees who would both live and work in Menlo Park, plus their households.

[175] City of Menlo Park. 2017. *Staff Report: Agenda Item K-1 Police*. Available: https://www.menlopark.org/DocumentCenter/View/13411/K1---4th-Police-Unit?bidId=. Accessed: February 4, 2021.

Police surveillance in the Project area would continue, including routine patrols and responses to calls for assistance. The Proposed Project would not require the MPPD to expand its current service boundary to include the Project site because it is already within Beat 3. Furthermore, the MPPD has confirmed that no expansion of existing facilities or construction of additional facilities would be required to accommodate the increase in development with implementation of the ConnectMenlo General Plan.

Conclusion

The physical conditions, as they relate to police services, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Based on current service levels and the service levels expected to occur under the Proposed Project, it is not expected that new police facilities would need to be constructed, resulting in ***less-than-significant*** impacts. No further study is needed.

Schools

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-8 (pages 4.12-35 to 4.12-41) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As previously stated, four elementary/middle school districts and one high school district serve Menlo Park. Las Lomitas School District would not be affected by the indirect population increases associated with the Proposed Project and, therefore, is not considered in this analysis. The Proposed Project would consist of R&D uses; it would not construct residential units that would generate school-age students for the local school districts. However, as stated in Section XIV, *Population and Housing*, the Proposed Project would indirectly induce housing demand by increasing employment within Menlo Park. Specifically, it is estimated that up to six new Menlo Park households would be generated by the Proposed Project. Assuming the most conservative student generation rate for the school districts that serve Menlo Park (0.56 student per multi-family unit), the Proposed Project could generate approximately three new students. It is currently unknown which district would enroll these students; they would most likely be distributed throughout the districts. Therefore, the addition of Project-generated students would have a minimal effect; the districts would most likely be able to accommodate the students.

Residential and non-residential development, including the Proposed Project, is subject to Senate Bill 50 school impact fees (established by the Leroy F. Greene School Facilities Act of 1998). As a result of wide-ranging changes in the financing of school facilities, including the passage of state school facilities bonds, which are intended to provide a major source of financing for new school facilities, Section 65996 of the State Government Code states that the payment of the school impact fees established by Senate Bill 50, which may be required from a developer by any state or local agency, is deemed to constitute full and complete mitigation for school impacts from development. In addition, new residential development that may indirectly result from the

increase in employment and generate students would be subject to (i) separate CEQA review and (ii) residential school impact fees, which would be higher than non-residential school impact fees.

Conclusion

The physical conditions, as they relate to schools, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Because the Proposed Project (i) would be required to pay school impact fees to school districts serving the Project site and (ii) would not generate a substantial number of new students or trigger the need for new school facilities, impacts related to schools would be ***less than significant***. No further study is needed.

Parks

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impacts PS-5 and PS-6 (pages 4.12-23 to 4.12-26) and determined to result in a less-than-significant impact. The document noted that future development would be required to comply with existing regulations to minimize impacts related to park and recreational services and facilities. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project would generate approximately 185 net new employees at the Project site. These employees could use nearby parks as well as other parks and open space resources throughout Menlo Park. In addition, the new employees would be encouraged to use the proposed onsite facilities.

Development would add approximately 19,399 sf of public open space along the street frontage and approximately 6,600 sf of private open space on the rooftop deck. In total, open space would make up 21.8 percent of the Project site. The private open space that would be developed as part of the Proposed Project would be within a 6,600 sf useable roof deck with open areas, landscaping, and seating areas. The 19,399 sf of public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation.

Given the availability of City and regional parks, plus the proposed onsite private and public open space, employee growth related to development under the Proposed Project is not anticipated to increase the use of parks and recreational resources such that substantial physical deterioration would occur. Refer to Section XVI, *Recreation*, for additional analysis.

Conclusion

The physical conditions, as they relate to parks, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. As such, the impact of the Proposed Project on existing park and recreational resources would be ***less than significant***. Please refer to Section XVI, *Recreation*, for additional analysis of impacts on parks. No further study is needed.

Libraries

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-10 (pages 4.12-44 to 4.12-46) and determined to result in a less-than-significant impact. The EIR stated that future development would be required to comply with existing regulations to minimize impacts related to library services. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, the City's libraries offer a range of resources for the community. The Proposed Project is expected to increase the population in Menlo Park by adding up to 17 new residents. In addition, potential employees who live in San Mateo County could use the library. Given that the library currently serves approximately 23,600 registered borrowers, the increase in the potential number of patrons is minimal. It is expected that existing libraries in Menlo Park would be able to accommodate the increase in the number of residents in the area due to the Proposed Project.

Conclusion

The physical conditions, as they relate to libraries, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project is not expected to trigger the need for new or expanded library facilities. Therefore, impacts would be ***less than significant***. No further study is needed.

XVI. Recreation	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of a facility would occur or be accelerated?	☐	☐	☐	☒	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☐	☒	☐

Setting

The Menlo Park Library and Community Services Department is responsible for providing recreational and cultural programs for the residents of Menlo Park. Its facilities include 13 parks, three community centers, two public pools, three child care centers, two gymnasiums, and one gymnastics center. Included in the park and recreational areas are tennis courts, baseball and softball diamonds, picnic areas, dog parks, playgrounds, swimming pools, gymnastics centers, a skate park, a shared-use performing arts center, soccer fields, and open space.[176] An adopted City General Plan policy (Policy OSC-2.4) calls for a ratio of 5 acres of developed parkland per 1,000 residents. Currently, Menlo Park has an estimated population of approximately 34,138.[177] The City provides 221 acres of parkland for its residents, a ratio of 6.47 acres[178] of parkland per 1,000 residents.[179] Therefore, the City currently exceeds its goals.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on recreational resources. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on recreational resources: Goal LU-4, Policy LU-4.5; Goal LU-6, Policy LU-6.2; and Goal OSC-2, Policy OSC-2.1, Policy OSC-2.4, and Policy OSC-2.6.

[176] City of Menlo Park Library and Community Services Department. 2021. *Library and Community Services Department*. Available: https://www.menlopark.org/212/Community-Services. Accessed: February 3, 2021.

[177] U.S. Census Bureau. 2021. *American Fact Finder, American Community Survey Demographic and Housing Estimates* (2014–2019 American Community Survey 5-year Estimates, ID DP05). Available: https://data.census.gov/cedsci/table?q=DP05&g=1600000US0646870&tid=ACSDP5Y2019.DP05&hidePreview=true. Accessed: February 3, 2021.

[178] Note that this is slightly different from the ratio included in the ConnectMenlo EIR because of the increase in Menlo Park's population since release of the ConnectMenlo EIR.

[179] A total of 221 acres divided by 34,138 (existing population as of 2019) = 6.47 acres per 1,000 residents.

Environmental Checklist and Discussion

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of a facility would occur or be accelerated? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-6 (pages 4.12-24 to 4.12-26) and determined to result in a less-than-significant impact with respect to physical deterioration of park facilities. The document noted that future development would be required to comply with existing regulations to minimize impacts related to park and recreational services and facilities. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project would generate approximately 185 net new employees at the Project site. These employees could use nearby parks as well as other parks and open space resources throughout Menlo Park. In addition, the new employees would be encouraged to use the proposed onsite facilities. Development would add approximately 19,399 sf of public open space along the street frontage and approximately 6,600 sf of private open space at the rooftop deck. In total, open space would compose 21.8 percent of the Project site. The private open space proposed as part of the Proposed Project would be within a 6,600 sf useable roof deck with open areas, landscaping, and seating areas. The 19,399 sf of public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation.

Because the Proposed Project would generate approximately net 185 new employees, up to 17 new residents could be induced to move to Menlo Park. However, new residents could use parks and open space resources throughout Menlo Park. As explained above, the Library and Community Services Department currently exceeds its goal of 5 acres of parkland per 1,000 residents. The approximately 17 new residents in Menlo Park would not substantially change the existing ratio, and the City would still exceed its goal. Given the availability of City-maintained parks, population growth is not anticipated to increase the use of recreational resources to a degree that would result in substantial physical deterioration.

Conclusion

The physical conditions, as they relate to neighborhood and regional parks, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. An increase in the number of employees and the residential population would not exacerbate existing capacity issues because any increased use of recreational facilities would be spread out among several parks and recreational facilities in the area, including the amenities proposed as part of the Proposed Project. The Proposed Project would not trigger a need for the construction or expansion of parks or other recreational facilities. Therefore, the impact of the Proposed Project on existing park and recreational resources would be ***less than significant***. No further study is needed.

b. Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-6 (pages 4.12-23 to 4.12-24) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project would not include new or expanded Library and Community Services Department park facilities. However, as discussed above, the Proposed Project would include private and public open spaces on the Project site. Although the addition of onsite open space alone would most likely not result in a significant impact, the addition of onsite open space has been analyzed throughout this document in context with the rest of the Proposed Project.

Conclusion

The physical conditions, as they relate to park and recreational facilities, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Construction of private and public open space within the Project site would not have an adverse physical effect on the environment and therefore would result in ***less-than-significant*** impacts. No further study is needed.

XVII. Transportation	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3(b)?	☒	☐	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐	☐
d) Result in inadequate emergency access?	☒	☐	☐	☐	☐

Setting

As discussed in more detail below, this topic will be analyzed further in the EIR. Therefore, the setting is not discussed in this document but will be provided instead in the EIR.

General Plan Goals and Policies

Goals and policies related to transportation and traffic will be discussed in the EIR.

Environmental Checklist and Discussion

a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact TRANS-1 (pages 4.13-56 to 4.13-74). Development under ConnectMenlo was determined to result in significant and unavoidable impacts on roadway segments and study intersections, even with implementation of Mitigation Measures TRANS-1a (pages 4.13-62 and 4.13-63) and TRANS-1b (pages 4.13-70 to 4.13-72) from the ConnectMenlo EIR. However, adding travel lanes (as recommended in Mitigation Measure TRANS-1a) could require an additional right-of-way that is not under the jurisdiction of the City. In addition, although implementation of Mitigation Measure TRANS-1b would secure a funding mechanism for future roadway and infrastructure improvements, the City cannot guarantee improvements at any roadway segment or intersection. In addition, this topic was analyzed in the ConnectMenlo EIR as Impact TRANS-6 (pages 3.13-81 to 3.13-89); it was determined that impacts would be significant and unavoidable, even with implementation of Mitigation Measures TRANS-6a through TRANS-6c. Implementation of these mitigation measures cannot be guaranteed.

Project-Specific Discussion

Although the Proposed Project is within the development projections envisioned in the ConnectMenlo EIR, this topic requires further environmental review in the EIR. The transportation mitigation measures for the ConnectMenlo EIR anticipated that any project proposed prior to adoption of a Transportation Master Plan and updated Transportation Impact Fee, including the Proposed Project, would need to conduct a project-specific Transportation Impact Assessment (TIA) to determine the impacts and necessary transportation mitigation to be funded by that project. The requirement to conduct a project-specific TIA was also part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Pursuant to Public Resources Code Section 21099, traffic level of service is no longer an environmental impact within the meaning of CEQA. Therefore, the EIR will use VMT as the threshold of significance. A Traffic Impact Analysis will be prepared, per the settlement agreement with East Palo Alto, outside the CEQA process for informational purposes. Intersection-level analysis of the following eight intersections will be evaluated for compliance with the TIA guidelines:

1. Willow Road (SR 114) and O'Brien Drive (Menlo Park)
2. Willow Road and Newbridge Street (Menlo Park)
3. Willow Road and US 101 northbound off-ramp (Menlo Park)
4. Willow Road and US 101 southbound off-ramp (Menlo Park)
5. O'Brien Drive and Kavanaugh Drive (unsignalized) (Menlo Park)
6. University Avenue and Bayfront Expressway (Menlo Park)
7. University Avenue (SR 109) and O'Brien Drive (East Palo Alto)
8. University Avenue (SR 109) and Kavanaugh Drive (East Palo Alto)

Conclusion

An analysis of the Proposed Project's consistency with relevant adopted policies, plans, and programs will be presented in the EIR. This topic requires ***further environmental review*** in the EIR.

b. Conflict or be inconsistent with CEQA Guidelines section 15064.3(b)? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

VMT was analyzed in the ConnectMenlo EIR as TRANS-1b (pages 4.13-70 to 4.13-72). It was determined that ConnectMenlo would not exceed the existing VMT threshold of significance, resulting in less-than-significant impacts with respect to VMT.

Conclusion

The transportation mitigation measures for the ConnectMenlo EIR anticipated that any project proposed prior to adoption of a Transportation Master Plan and updated Transportation Impact Fee, including the Proposed Project, would need to conduct a project-specific TIA to determine the impacts and the necessary transportation mitigation to be funded by that project. The requirement to conduct a project-specific TIA was also part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. The TIA will analyze the Proposed Project's effect on VMT and

level of service, per the City's TIA guidelines and in compliance with the settlement agreement. VMT will be reported as the CEQA threshold of significance, and level of service will be provided for consistency with City policies as a non-CEQA analysis. Therefore, this topic requires ***further environmental review*** in the EIR.

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact TRANS-4 (page 4.13-77 to 4.13-79) and determined to have less-than-significant impacts because the zoning update includes design standards that require street improvements, and projects are required to be designed in accordance with these City standards. No mitigation measures were recommended.

Project-Specific Discussion

Although the Proposed Project would add vehicles at nearby intersections, the Proposed Project would not result in physical changes to the study intersections. Therefore, because design features at the intersections would not be altered as a result of the Proposed Project, collision rates are not expected to increase, and no additional hazards would occur.

The Project site would be accessible from two driveways on O'Brien Drive and one driveway on Casey Court, with the main access point on O'Brien Drive in the southwest corner of the Project site and the secondary access point on O'Brien Drive in the northeast corner of the Project site. In addition, a curb cut would be included at the front of the proposed building on O'Brien Drive, allowing drivers in vehicles, including shuttles, to drop off and pick up passengers.

Conclusion

The requirement to conduct a project-specific TIA was part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, this topic requires ***further environmental review*** in the EIR.

d. Result in inadequate emergency access? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact TRANS-5 (page 4.13-79 to 4.13-81) and determined to have less-than-significant impacts because the City would implement General Plan programs that would require continued coordination between the MPPD and MPFPD. In addition, proposed zoning would help to minimize traffic congestion. No mitigation measures were recommended.

Project-Specific Discussion

The Proposed Project would not include any characteristics (e.g., permanent road closures or roadway modifications) that would physically impair or otherwise interfere with emergency response or evacuation in the Project vicinity. Emergency access to the Project site would be provided from the parking lot entrance in the southwest portion of the Project site (off Casey Court).

Emergency vehicles would travel north through the Project site, turn east at the parking lot, then exit at the primary service driveway in the northeast corner of the Project site. In addition, emergency vehicles would have access to the curb cut at the front of the proposed building as well as a staging area on the south side of the proposed building along O'Brien Drive.

Conclusion

The requirement to conduct a project-specific TIA was part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, this topic requires ***further environmental review*** in the EIR.

XVIII. Tribal Cultural Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:					
a) Listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k)?	☒	☐	☐	☐	☐
b) Determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐	☐

Setting

As discussed in Section V, *Cultural Resources*, no previously recorded archaeological resources were identified within the Project site; however, one previously recorded archaeological resource was identified within 0.25 mile of the Project site. In addition, six studies have been conducted within 0.25 mile of the Project site, five evaluations and/or testing projects that focused on specific cultural resource sites and one archaeological reconnaissance project. The presence of resource P-41-000160 (CA-SMA-160) indicates that the area may have potential sensitivity for subsurface archaeological deposits. Refer to Section V, *Cultural Resources*, for further discussion of existing conditions.

Environmental Checklist and Discussion

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:

a. Listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k)? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

Tribal cultural resources, as defined by Public Resources Code Section 21074, were analyzed in the ConnectMenlo EIR as Impact CULT-1 (pages 4.4-12 to 4.9-15). Impacts were determined to be less than significant with implementation of Mitigation Measures CULT-2a, CULT-2b, and CULT-4 from the ConnectMenlo EIR.

Conclusion

The physical conditions, as they relate to tribal cultural resources, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There has been no substantial change since the ConnectMenlo EIR, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR. However, based on archival research, the area was determined to be sensitive for Native American resources. The Amah Mutsun Tribal Band of Mission San Juan Bautista and the Indian Canyon Mutsun Band of Costanoan expressed concern during consultation, believing that the area may contain archaeological resources, and requested sensitivity training for construction workers as well as tribal and archaeological monitoring of ground-disturbing activities. Therefore, the Proposed Project's impact on tribal cultural resources requires ***further environmental review*** in the EIR.

b. Determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-5 (page 4.4-21). Impacts were determined to be less than significant with implementation of Mitigation Measures CULT-2a, CULT-2b, and CULT-4.

Effects of the Project

As stated above, although no tribal cultural resources were identified within the Project site during consultation with California Native American tribes, the Amah Mutsun Tribal Band of Mission San Juan Bautista and the Indian Canyon Mutsun Band of Costanoan expressed concern, believing that the area may contain archaeological resources, and requested additional mitigation measures.

Conclusion

The physical conditions, as they relate to tribal cultural resources, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. However, the NAHC identified sensitive areas within or adjacent to the Project site. Based on archival research, the area was determined to be sensitive for Native American resources. Although such resources would not be affected by Project construction, the potential exists for as-yet undocumented resources that could be considered significant by California Native American tribes to be encountered. The Amah Mutsun Tribal Band of Mission San Juan Bautista and the Indian Canyon Mutsun Band of Costanoan expressed concern, believing that the area may contain archaeological resources, and requested additional mitigation measures. Therefore, the Proposed Project's impact on tribal cultural resources requires further environmental review in the EIR.

XIX. Utilities and Service Systems	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:					
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒	☐
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.	☐	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒	☐

Setting

Water Supply

Menlo Park Municipal Water provides water to approximately 16,000 residents through 4,000 service connections within two service areas, the Upper Zone (providing water to the Sharon Heights area) and the Lower Zone (providing water to areas east of El Camino Real). All water provided is purchased from the San Francisco Public Utilities Commission (SFPUC) and piped from the Hetch Hetchy reservoir in Yosemite National Park to Menlo Park through the San Francisco Regional Water System. The City does not own or operate a water treatment plant (WTP). Water purchased from the SFPUC may be treated at one or more of the WTPs operated by SFPUC, which periodically makes improvements to its WTPs in order to increase system reliability and accommodate projected growth in its regional service areas. On average, 85 percent of the regional water system's water comes from the Tuolumne River watershed; 15 percent comes from local watersheds in the East Bay and Peninsula.[180]

[180] Menlo Park Municipal Water. 2021. *Menlo Park Municipal Water*. Available: https://www.menlopark.org/131/Menlo-Park-Municipal-Water. Accessed: February 23, 2021.

In 2021, the City adopted its 2020 Urban Water Management Plan (UWMP), which was an update to the 2015 UWMP. The 2020 UWMP carries forward information from the 2016 UWMP that remains current and relevant while providing additional information as required by amendments to the UWMP Act (California Water Code 10610–10657). The 2020 UWMP concludes that, with water conservation measures implemented through its Water Shortage Consistency Plan (WSCP), the City would have water resources available to serve anticipated growth, which includes the growth anticipated in the ConnectMenlo EIR. The WSCP serves as a standalone document to be engaged in the case of a water shortage event, such as a drought or supply interruption, and defines specific policies and actions that can be implemented for various shortage-level scenarios (e.g., implementing customer water budgets and surcharges or restricting landscape irrigation to specific days and/or times). Consistent with DWR requirements, the WSCP includes six levels for addressing shortage conditions, ranging from a 10 percent to more than a 50 percent shortage.[181,182]

Onsite water lines connect to Menlo Park Municipal Water facilities. An existing 10-inch water main runs along the O'Brien Drive frontage between the curb and property line.

Wastewater Collection and Treatment

The sanitary sewer system in this area of the city is owned and operated by the West Bay Sanitary District, which provides wastewater collection and conveyance services to Menlo Park, Atherton, and Portola Valley and areas of East Palo Alto, Woodside, and unincorporated San Mateo and Santa Clara Counties. The district conveys raw wastewater through the Menlo Park pump station and force main to the Silicon Valley Clean Water (SVCW) pump station in Redwood City for treatment and discharge to San Francisco Bay.[183] The Project site connects to an existing 18-inch sanitary sewer that runs under O'Brien Drive and ultimately discharges to the SVCW pump station.

As noted in the ConnectMenlo EIR, the SVCW wastewater treatment plant (WWTP) treats raw wastewater from the city and discharges it to a deep-water channel in the Bay. The SVCW WWTP has an average dry-weather flow capacity of 29 million gallons per day (mgd) and a peak wet-weather flow of 71 mgd. In general, conveyance systems and treatment plants are designed and constructed to accommodate future capacity expansion, including additional base flows due to approved growth plus estimated wet-weather flows.

Stormwater

The Project site, located within the Menlo Park Labs campus, consists of four single-story buildings (at 1105, 1135, and 1165 O'Brien Drive and 1 Casey Court) and surface parking. The Project site covers approximately 4.12 acres. Stormwater flows from the Project site to three different outlets. A very small

[181] City of Menlo Park. 2021. *2020 Urban Water Management Plan for Menlo Park Municipal Water*. Available: https://www.menlopark.org/DocumentCenter/View/28016/Draft-Urban-Water-Management-Plan. Accessed: June 21, 2021.

[182] As mentioned above, the City receives its water from SFPUC. In April 2021, SFPUC issued a draft UWMP for adoption in July 2021. SFPUC's draft UWMP identified several potential future water supply scenarios. Scenarios that involve full adoption of the Bay-Delta Plan indicate substantial long-term water deficits during multi-year droughts. Such deficits could result in cities not receiving their full annual water allocations from the SFPUC. However, the City's WSCP would be implemented should this scenario occur, along with further reductions, as needed. Compliance with City code and ordinance requirements, the 2020 UWMP, and the WSCP, as well as any additional water reductions, would apply across the City's water department to all customers.

[183] West Bay Sanitary District. 2021. *About Us.* Available: https://westbaysanitary.org/about-us/. Accessed: February 23, 2021.

portion of it drains into an open drainage ditch along the west property line. Some flows from the Project site drain to an existing valley gutter that extends into the adjacent site to the north, then ultimately outlets to O'Brien Drive. The remainder of the Project site drains into onsite catch basins and area drains that connect to a bubble-up structure within O'Brien Drive. Currently, the Project site is approximately 92.8 percent of the total surface area is impervious, consisting of buildings, parking lots, and driveway aisles; approximately 7.2 percent the total surface area is pervious, consisting of landscaping and other pervious surfaces.

Solid Waste

Recology Incorporated provides solid waste collection and conveyance service for Menlo Park. Collected recyclables, organics, and garbage are conveyed to the Shoreway Environmental Center (Shoreway) in San Carlos for processing and shipment. Shoreway is owned by RethinkWaste (former South Bayside Waste Management Authority), a joint powers authority that comprises 12 public agencies, including the City of Menlo Park. As of January 1, 2011, Shoreway has been operated by South Bay Recycling under a 10-year contract with RethinkWaste. The primary goal of RethinkWaste is to provide cost-effective waste reduction, recycling, and solid waste programs to member agencies through franchised services and the services of other recyclers to divert 50 percent (minimum) of the waste stream from landfills, as mandated by California state law (Assembly Bill [AB] 939).[184]

Shoreway facilities consist of a transfer station, a materials recovery facility, a public recycling center, an environmental education center, Recology offices, and South Bay Recycling offices. Shoreway serves as a regional solid waste and recycling facility for the receipt, handling, and transfer of refuse, recyclables, and organic materials collected from the RethinkWaste service area (southern and central San Mateo County). Shoreway is separately permitted by the California State Integrated Waste Management Board to receive 3,000 tons per day of solid waste and recyclables.[185]

In 2019 (the most recent year available), the RethinkWaste service area (San Mateo County) produced approximately 144,705 tons of commercial solid waste, 44,314 tons of multi-family waste, and 179,782 tons of residential waste.[186] Overall, the service area experienced a 50 percent diversion rate by recycling and composting waste materials. Menlo Park had a slightly higher diversion rate than the county average, with approximately 62 percent of waste diverted from the landfill.[187] In 2019, Menlo Park's per capita solid waste disposal rate for residents was 5.3 pounds per day (ppd); the target per capita disposal rate for residents is 7.5 ppd. Menlo Park's per capita solid waste disposal rate for employees in 2019 was 3.7 ppd; the California Department of Resources Recycling and Recovery (CalRecycle) target per capita disposal rate for employees is 9.2 ppd.[188]

188 CalRecycle. 2020. *Jurisdiction Diversion/Disposal Rate Detail*. Menlo Park. Available: https://www2.calrecycle.ca.gov/LGCentral/DiversionProgram/JurisdictionDiversionPost2006. Accessed: February 3, 2021.

Materials not composted or recycled at Shoreway are sent to several different landfills in the area, with most going to the Ox Mountain Landfill (also known as Corinda Los Trancos Landfill) near Half Moon Bay. This landfill is expected to remain operational until 2034 and has a permitted throughput capacity of 3,598 tons per day.[189] In 2019, approximately 23,770 tons of waste from Menlo Park was going to the Ox Mountain Landfill.[190]

Natural Gas

PG&E's natural gas (methane) pipe delivery system includes 42,000 miles of distribution pipelines and 6,700 miles of transmission pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada. Transportation pipelines send natural gas from fields and storage facilities in large pipes under high pressure. Smaller distribution pipelines deliver gas to individual businesses and residences. PG&E's gas transmission pipeline systems serve approximately 15 million energy customers in California. The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols taking place along the pipelines.[191] The PG&E gas transmission pipeline nearest the Project site runs in a north–south direction, primarily along Sevier Avenue, west of the Project site, from US 101 to the inactive Dumbarton Rail Corridor.[192] Distribution gas pipelines are located throughout the Bayfront Area.

Telecommunications

There are numerous telecommunications providers in Menlo Park that offer DSL, wireless, cable, fiber, and copper services, including AT&T, XFINITY from Comcast, MegaPath, Etheric Networks, and CenturyLink Business, to residents and businesses in the city. The Project site receives services from AT&T, EarthLink, and XFINITY.[193] Telecommunications facilities include underground conduits and overhead cables throughout the vicinity of the Project site.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on utilities. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on public stormwater and solid waste: Goal LU-4, Policy LU-4.5; Goal LU-6, Policy LU-6.11; Goal LU-7, Policy LU-7.1 and Policy LU-7.5; Goal OSC-4, Policy OSC-4.2, Policy OSC-4.6, Policy OSC-4.7, and Policy OSC-4.8; and Goal S-1, Policy S-1.26 and Policy S-1.27. Goals and policies related to water and wastewater will be discussed in the EIR.

Environmental Checklist and Discussion

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or stormwater drainage, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects? (Less than Significant)

Analysis in the ConnectMenlo EIR

These topics were analyzed in the ConnectMenlo EIR under Impacts UTIL-2 (pages 4.14-28 and 4.14-29), UTIL-4 (pages 4.14-36 to 4.14-38), UTIL-5 (pages 4.14-38 to 4.14-41), UTIL-11 (pages 4.14-64 to 4.14-66), and UTIL-13 (pages 4.14-76 to 4.18-81) and determined to result in a less-than-significant impact. It is expected that the City will implement General Plan programs that require expansion of Menlo Park Municipal Water's conservation programs and future development to employ green building best practices. No mitigation measures were recommended. The ConnectMenlo EIR does not discuss impacts on telecommunication facilities.

Project-Specific Discussion

Water. As explained above, an existing 10-inch water main runs along the O'Brien Drive frontage between the curb and property line. The City's 2018 Water System Master Plan identified a deficiency in the volume of the existing water main and found that a 12-inch water main would be required to serve the west side of the O'Brien Drive life sciences service area. The City is in the process of developing a plan for upsizing the existing water main with property owners/project sponsors in the vicinity of the Project site. The water main would be required to be upsized prior to occupancy of any new buildings within the life sciences service area, and the Project Sponsor's participation would be ensured through Project conditions of approval.

During construction of the Proposed Project, multiple service connections to the existing buildings would be removed. Separate connections would be provided for fire service and for domestic water. Although, there would be an increase in the total landscaped area, water use would not increase substantially because the Proposed Project would include water-conserving plant material and irrigation systems, in compliance with the Water-Efficient Landscape Ordinance. The installation of new or expanded water lines on or adjacent to the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. These construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts.

The Proposed Project would be consistent with the type and intensity of development and population projections assumed for the Project site in the ConnectMenlo EIR. The net increase in the number of employees (i.e., 185) would not result in water use beyond the capacity of the existing water supply. Therefore, the Proposed Project would not result in a need for expanded treatment facilities or regional water system conveyance and storage facilities. In addition, the Project Sponsor would be required to coordinate with the City and Menlo Park Municipal Water to assess water flow requirements and ensure that the water delivery infrastructure, both existing and proposed, would be adequate for the Proposed Project.

Wastewater. The ConnectMenlo EIR determined that the increase in wastewater flows from implementation of ConnectMenlo would add to the capacity demands on the WWTP and its conveyance system. However, the effect would not be substantial and would be integrated into ongoing planning and budgeting processes to improve capacity, the conveyance system, and treatment processes. As noted above, the Proposed Project would be consistent with the type and

intensity of development and population projections assumed for the Project site in ConnectMenlo. In addition, the net increase in the number of employees (i.e., 185) would not result in wastewater generation that would be beyond the capacity of the existing wastewater system. Therefore, the Proposed Project would not trigger a need to expand the SVCW WWTP.

An existing 18-inch sanitary sewer currently runs under O'Brien Drive. A proposed 6-inch sanitary sewer line on the north side of the proposed building and would connect to this 18-inch sanitary sewer. A typical WBSD control manhole with a flow meter in it for recording flows would also be installed, providing an access point for sampling wastewater just before the connection point. Wastewater from the Project site would ultimately be discharged to the SVCW pump station in Redwood City. Installation of new or expanded sewer lines near the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. The construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts.

After an increase in size, the pipelines would have the capacity needed to support the Proposed Project's wastewater flows. In addition, the Project Sponsor would be required to coordinate with the City and the West Bay Sanitary District to assess wastewater flow requirements and ensure that the existing wastewater infrastructure would be adequate for the Proposed Project.

Stormwater. Operation of the Proposed Project would result in the construction of new stormwater facilities or expansion of existing facilities but would not cause significant environmental effects. Specifically, the bubble-up structure and valley gutter would be removed and a new 18-inch storm drain would be installed. Runoff would be collected and treated onsite before being released into a proposed 18-inch storm drain, extending from approximately 115 feet south of Casey Court to the Project site's storm drain outlet pipe. Hardscape would comprise concrete paving, decomposed granite paving, and concrete pavers. The landscaped area could include five areas with flow-through planters, bioretention areas, self-retaining areas, and self-treating areas positioned around the proposed building. The bioretention area would treat runoff from impervious areas, while flow-through planters, landscape planters, and self-treating pervious areas would treat rain that falls directly in those areas, retaining and infiltrating rainfall up to the design rainfall depth.

Implementation of the Proposed Project would add approximately 14,207 sf of net new pervious surfaces to the Project site (Parcel 1 and Parcel 2), for a total of approximately 27,284 sf of newly created or replaced pervious area. The Proposed Project would replace approximately 152,089 sf of impervious surfaces. As a result, the Project site would be approximately 84.8 percent impervious and 15.2 percent pervious, thereby increasing the total pervious surface area compared with existing conditions.

Because the Proposed Project would replace more than 10,000 sf of impervious surfaces, the Proposed Project would be regulated by provision C.3 of the Municipal Regional Permit. To meet San Mateo Countywide Water Pollution Prevention Program C.3 stormwater requirements, the Proposed Project would be required to treat runoff from all impervious areas. The Project site would be drained by a combination of existing and new onsite storm drain system facilities. However, the Proposed Project would reduce the amount of impervious surfaces, thereby directing less stormwater to these new onsite facilities. The system would ultimately convey runoff to flow-through planters, bioretention areas, self-retaining areas, and self-treating areas for stormwater treatment, capturing and treating runoff from the replaced or newly created impervious areas. The new development would have a larger landscaped area, which would result in a net decrease in the

amount of runoff leaving the site. The Project Sponsor would be required to develop and implement a final Stormwater Management Plan, with the goal of reducing the discharge of pollutants to the maximum extent practicable.

Runoff from the Project site would be collected and treated before being released into a proposed 18-inch storm drain, extending from approximately 115 feet south of Casey Court to the Project site's storm drain outlet pipe. The new development would have a larger pervious area than existing conditions, which would result in a net decrease in the amount of runoff leaving the site. Regardless, to help with stormwater flows, offsite improvements would consist of a new gutter catch basin near the northeast corner of the Project site and an 18-inch pipe that would drain north and connect to the existing catch basin and system just north of the intersection with Kavanaugh Drive.

Natural Gas and Electricity. During operation, the Proposed Project would meet 100 percent of its energy demand (electricity and gas), consistent with the requirements of City Municipal Code Section 16.44.130, through a combination of the purchase of 100 percent renewable electricity from Peninsula Clean Energy and implementation of reach-code-mandated onsite renewable energy systems. As needed, PG&E would provide gas and electrical power for the proposed facilities. Existing electricity and gas lines in the vicinity of the Project site would continue to serve the Proposed Project and may be upgraded, if necessary.

Annual natural gas usage, as allowed by City reach codes, would be required to be offset, per the City Zoning Ordinance.[194] The Project Sponsor would request an appeal (Ordinance No. 1057) for gas space heating because of the building's scientific laboratory uses.

The installation of new or expanded gas lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. However, these construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Proposed Project impacts. In addition, although construction related to the new or relocated gas and electric lines could result in short-term environmental effects (e.g., noise, dust, traffic, temporary service interruption), the work would comply with City and PG&E regulations as well as standard conditions for new construction related to infrastructure improvements. For example, these regulations and conditions would require new gas line construction, or the expansion of existing lines, to include best management practices (e.g., require construction areas to minimize dust generation, limit construction noise to daytime hours to limit impacts on sensitive receptors, use modern equipment to limit emissions). In addition, any such work would be subject to compliance with applicable regulations and standard conditions of approval for the Proposed Project, including City permits/review for construction (e.g., grading permits, private development review, encroachment permits). It is anticipated that no offsite natural gas facilities would need to be constructed or expanded as a result of the Proposed Project.

Telecommunications. Telecommunications lines may need to be extended or relocated as a result of the Proposed Project. The installation of new or expanded telecommunication lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. These construction impacts are discussed in the appropriate

[194] In 2019, the City of Menlo Park adopted local amendments to the State Building Code that require electricity to be the only fuel source for new buildings (not natural gas). This ordinance (Menlo Park Municipal Code Section 12.16) applies only to newly constructed buildings (i.e., from the ground up) and does not include additions or remodels.

topical sections of this Initial Study as part of the assessment of overall Proposed Project impacts. However, no offsite telecommunications facilities would need to be constructed or expanded as a result of the Proposed Project.

Conclusion

The physical conditions, as they relate to water, wastewater treatment facilities, stormwater, natural gas, and telecommunications, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project could require construction or expansion of water supply connections, wastewater connections, stormwater drainage facilities, natural gas lines, or telecommunication lines but would not lead to significant environmental impacts beyond the construction impacts discussed throughout this document. Impacts would be ***less than significant***.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under UTIL-1 (pages 4.14-24 to 4.14-27) and determined to result in a less-than-significant impact. The ConnectMenlo EIR determined that there would be an increase in water demand as a result of buildout of ConnectMenlo. Development would result in a demand for 343 million gallons per year (mgy), which represented 21 percent of the planning-level water demand forecast in the 2015 UWMP (the adopted UWMP at the time). The ConnectMenlo EIR concluded that the water supply would be adequate and able to meet increased demands in normal years as well as the additional demand generated by the increase in development associated with implementation of ConnectMenlo. Future development under ConnectMenlo would be required to comply with existing regulations, including City General Plan policies and zoning requirements, to minimize impacts related to water supplies. No mitigation measures were recommended.

Project-Specific Discussion

By 2040, during single and multiple dry years, Menlo Park Municipal Water's total annual water demand, including development associated with ConnectMenlo, is estimated to exceed the total annual supply by approximately 422 mgy and 652 mgy, respectively.[195] Development under ConnectMenlo would result in a daily demand of 343 mgy, which represents 23 percent of the planning-level water demand forecast in the 2020 UWMP. However, with the WSCP in place, the shortages in multiple dry years would be managed through demand reductions of up to 50 percent. In addition, although not required for the Proposed Project, Menlo Park Municipal Water is currently evaluating the feasibility of several other water supply projects, such as additional emergency water supply wells, that would help to supplement the water supply during dry years.

[195] City of Menlo Park. 2021. *2020 Urban Water Management Plan for Menlo Park Municipal Water*. Available: https://www.menlopark.org/DocumentCenter/View/28016/Draft-Urban-Water-Management-Plan. Accessed: June 21, 2021.

Furthermore, as part of a zoning update, ConnectMenlo includes green and sustainable building standards for the Bayfront Area. These standards require all new buildings within the Bayfront Area to be maintained without the use of well water and include dual plumbing systems for the use of recycled water. Under the zoning update, no potable water shall be used for decorative features, unless the water is recycled. Single-pass cooling systems are prohibited. Also, future development with a gross floor area of 100,000 sf or more must submit a proposed water budget for review by the City's Public Works Director prior to certification of occupancy. Because the Proposed Project would result in more than 100,000 sf of development, the Project Sponsor would be required to submit a water budget. Compliance with the water budget allocations would be ensured through annual monitoring by the City.

The Proposed Project would adhere to the zoning update and City requirements related to water use. The Proposed Project, which would result in a net increase in the number of employees (i.e., 185), would be consistent with the type and intensity of development and population projections assumed for the Project site in ConnectMenlo. As described above, although there would be an increase in the total landscaped area, water use would not increase substantially because the Proposed Project would include water-conserving plant material and irrigation systems, in compliance with the Water-Efficient Landscape Ordinance. In addition, piping for recycled water would be provided in the proposed building for urinals and toilets; irrigation piping would connect to the future Bayfront Recycled Water Treatment Facility. Therefore, there would be adequate water supplies available to serve the Proposed Project and reasonably foreseeable future development during normal, single, and multiple dry years.

Conclusion

The physical conditions, as they relate to water supplies, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The ConnectMenlo EIR determined that implementation of Menlo Park Municipal Water's Water Shortage Contingency Plan as well as green and sustainable building standards would ensure that this impact would be ***less than significant***.

c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR (pages 4.14-43 to 4.14-45) and determined to result in a less-than-significant impact. Future development is expected to tie into existing collection facilities. The installation of extension lines would comply with applicable sewer permits, which require projects to reduce impacts on service capacity. In addition, projects would be required to comply with existing regulations that promote water conservation and minimize impacts related to wastewater generation. No mitigation measures were recommended.

Project-Specific Discussion

As noted above, the SVCW WWTP has an average dry-weather flow capacity of 29 mgd and a peak wet-weather flow of 71 mgd. The SVCW WWTP currently has an average dry-weather flow of 16 mgd. The ConnectMenlo EIR determined that full buildout of ConnectMenlo would result in a net increase in the wastewater generation rate, estimated to total 309 mgy, or 0.85 mgd, which would not be significant relative to the currently available 13 mgd in excess dry-weather flow capacity.

The Proposed Project would be consistent with the type and intensity of development as well as the population projections assumed for the Project site in ConnectMenlo. Therefore, there would be adequate wastewater treatment capacity available to serve the Proposed Project's projected demand in addition to the provider's existing commitments.

Conclusion

The physical conditions, as they relate to wastewater treatment facilities, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Impacts would be ***less than significant***.

d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under Impact UTIL-8 (pages 4.14-52 to 4.14-55) and determined to result in a less-than-significant impact. Future development would be required to comply with existing regulations to minimize impacts related to solid waste disposal and attain solid waste reduction goals. No mitigation measures were recommended.

Project-Specific Discussion

The California Integrated Waste Management Act of 1989 (AB 939) requires municipalities to adopt an integrated waste management plan to establish objectives, policies, and programs related to waste disposal, management, source reduction, and recycling. In addition, Senate Bill 1383, passed in 2016, established a target that calls for a 50 percent reduction in organic waste by 2020 and 75 percent by 2025. The City of San Mateo and the City of Menlo Park have been working to meet these standards. As noted above, in 2019, San Mateo County experienced a 50 percent diversion rate by recycling and composting waste materials. Menlo Park had a slightly higher diversion rate than the county average, with approximately 62 percent of waste diverted from the landfill.[196]

Construction of the Proposed Project would generate waste but would remain within state and local standards. The proposed excavation would result in the export of approximately 4,000 cy of excavated material, 11,000 cy of demolition waste, and 4,000 cy of construction waste to offsite

[196] Recology San Mateo County. 2020. *Annual Report to the SBWMA for Year 2019.* Available: https://rethinkwaste.org/wp-content/uploads/2020/02/recology-annual-report-2019.pdf. Accessed: February 3, 2021.

locations. All soil and debris, including contaminated soil, would be off-hauled to the Dumbarton Quarry or a similar appropriate facility. The Proposed Project would be required to comply with the City's Construction and Demolition Recycling Ordinance, which requires salvaging or recycling of at least 60 percent of construction-related solid waste. Therefore, construction of the Proposed Project is not expected to have an impact on existing landfills.

Operation of the Proposed Project would result in the generation of solid waste beyond existing conditions but would continue to meet state and local standards for solid waste and recycling. The Proposed Project would generate approximately 185 net new employees at the Project site; it would also generate waste. Waste generated at the Project site would be collected by Recology San Mateo and hauled to Shoreway. Shoreway is permitted to receive 3,000 tons of refuse per day. Once collected and sorted at Shoreway, solid waste is transported to Ox Mountain, which is permitted to receive 3,598 tons per day. Solid waste generated by operation of the Proposed Project would represent a small percentage of the permitted capacity of Shoreway and Ox Mountain. As such, Shoreway and Ox Mountain would have adequate capacity for the Proposed Project. The Proposed Project would also be required to develop and implement a Zero-Waste Management Plan in accordance with City standards, which would further reduce waste generated from operations at the site.

Conclusion

The physical conditions, as they relate to landfills, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. The Proposed Project would be served by a landfill with sufficient permitted capacity to accommodate its solid waste disposal needs. In addition, the Proposed Project is within the growth projections of the ConnectMenlo EIR and, as such, would not result in impacts that were not already evaluated. The Proposed Project would not generate solid waste in excess of state or local standards or in excess of the capacity of local infrastructure or otherwise impair the attainment of solid waste reduction goals. Impacts would be ***less than significant***, and no further study is needed.

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under Impact UTIL-9 (pages 4.14-55 and 4.14-56) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

Construction and operation of the Proposed Project would comply with all applicable statutes and regulations related to solid waste. State law (AB 341 and AB 939) requires businesses to recycle and cities to divert 50 percent of their solid waste from landfills. The Proposed Project would adhere to these laws. In addition, the Proposed Project would be required to adhere to the City's Construction and Demolition Recycling Ordinance and Zero-Waste Management Plan requirements.

Conclusion

The physical conditions, as they relate to solid waste statutes and regulations, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Proposed Project. Implementation of the Proposed Project would have a ***less-than-significant*** impact with regard to compliance with solid waste–related management and reduction statutes and regulations. No further study is needed.

XX. Mandatory Findings of Significance	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐	☐
b) Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐	☐
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐	☐

Environmental Checklist and Discussion

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory? (Topic to Be Analyzed in the EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered impacts associated with biological resources and cultural resources. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Proposed Project, as discussed in Sections IV and Section V of this document.

Conclusion

The physical conditions related to degradation of the physical environment have not changed substantially in the ConnectMenlo area since preparation of the ConnectMenlo EIR. The Proposed Project would not result in a substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects

than those originally analyzed in the ConnectMenlo EIR; therefore, the Proposed Project would be within the scope of the ConnectMenlo project covered by the ConnectMenlo EIR, and there would be no new specific effects as a result of the Proposed Project. However, the BRA prepared for the Proposed Project identified mitigation measures to reduce impacts on special-status species and nesting sites. In addition, because of the archaeological sensitivity of the area, mitigation measures were requested during tribal consultation, including preconstruction archaeological resources sensitivity training and archaeological and tribal construction monitoring. Therefore, impacts on biological and archaeological resources will require ***further environmental review*** in the EIR.

b. Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.) (Topic to Be Analyzed in EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered cumulative impacts. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Proposed Project, as needed.

Project-Specific Discussion

As described throughout this document, the Proposed Project would result in several potentially significant Project-level impacts. However, ConnectMenlo EIR mitigation measures have been identified that would reduce these impacts to less than significant. Furthermore, all development projects are guided by the goals and polices identified in the City General Plan and regulations in the City Municipal Code. Therefore, compliance with applicable land use and environmental regulations would ensure that environmental effects associated with the Proposed Project would not combine with the effects of reasonably foreseeable future development in Menlo Park and cause cumulatively significant impacts. However, the Proposed Project could result in cumulative impacts related to air quality, biological resources, cultural and tribal resources, greenhouse gases, noise, transportation, and population and housing. These topics will be analyzed in greater detail in the EIR, including cumulative analysis.

Conclusion

The Proposed Project would not result in a substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, the Proposed Project would be within the scope of the ConnectMenlo project covered by the ConnectMenlo EIR, and there would be no new specific effects as a result of the Proposed Project. However, cumulative conditions related to air quality, biological resources, cultural and tribal resources, greenhouse gases, noise, transportation, and population and housing will be subject to ***further environmental review*** in the EIR.

c. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly? (Topic to Be Analyzed in EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered impacts associated with adverse effects on human beings. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Proposed Project, as discussed in Section I through Section XIX.

Project-Specific Discussion

As identified in this document, the Proposed Project would generally not directly or indirectly cause adverse effects on human beings with implementation of mitigation measures. Impacts that could affect the human environment, such as those related to aesthetics, agriculture, geology and soils, hazardous materials, hydrology, land use, minerals, public services, and recreation, would be less than significant. Regardless, impacts as a result of the Proposed Project related to air quality, biological resources, cultural and tribal resources, greenhouse gases, noise, and transportation could have a substantial adverse effect on human beings. In addition, although not expected to result in adverse impacts, population and housing will require further review.[197]

Conclusion

The physical conditions related to degradation of the physical environment have not changed substantially in the ConnectMenlo area since preparation of the ConnectMenlo EIR. For most topics, the Proposed Project would not result in a substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, for most topics, the Proposed Project would be within the scope of the ConnectMenlo project covered by the ConnectMenlo EIR, and there would be no new specific effects as a result of the Proposed Project. However, ***further environmental review*** will be required in the EIR related to air quality, biological resources, cultural and tribal resources, greenhouse gases, noise, population and housing, and transportation.

[197] No impacts related to population and housing are anticipated, but this topic will be included in the EIR, consistent with the 2017 *City of East Palo Alto v. City of Menlo Park* settlement agreement.

1.0 INTRODUCTION

On August 1, 2019, WRA, Inc. (WRA) conducted a biological resources assessment (BRA) at 1125 O'Brien Drive, located in Menlo Park, San Mateo County, California. On October 6, 2020, WRA conducted a subsequent assessment at the adjacent 1 Casey Court. The two sites comprise the proposed 1125 O'Brien Drive Development Project (Project) (Appendix A, Figures 1 and 2). This BRA is consistent with the requirements of Mitigation Measure BIO-1 of the ConnectMenlo Environmental Impact Report (EIR), and provides evidence to support the Project's review under the California Environmental Quality Act (CEQA).

The Project will be located on a building site which consists of three separate legal lots (1105, 1135, and 1165 O'Brien Drive and an adjacent drainage ditch, Study Area) which will be merged into one lot (Parcel 1 or Development Lot). Parcel 1 is 2.44 acres and is part of the Menlo Park Labs Campus (Campus). It is currently developed with three single-story buildings totaling approximately 38,900 sf. The Proposed Sponsor would demolish the existing buildings and construct a new 131,284 square foot five-story building that would include Research and Development (R&D) uses, office uses associated with the primary R&D use, and ground-floor commercial space. The roof of the building would have a 3,600 sf paved roof deck area with seating areas, and 3,000 sf of landscaping. The exterior of the Development Lot would feature an entry plaza, a shuttle stop, bioretention areas, and two driveways from O'Brien Drive. The Project would provide a total of 249 parking stalls, with approximately 89 stalls in a surface accessory parking lot west of the building and an additional 160 parking stalls serving the building on the property at the adjacent lot at 1 Casey Court (Parcel 2 or Accessory Parking Lot). Parcel 2 is 1.68 acres and currently developed with a single-story building of approximately 20,955 sf which would be demolished as part of the Project. The Project Area is a total of 4.12 acres and includes the Development Lot and the Accessory Parking Lot. The Project will retain existing stormwater drainage patterns.

There are currently 40 existing trees on the Project site, all of which would be removed during construction of the Project. Of these, 13 are heritage trees defined by the City of Menlo Park, within the Project Area according to the Project Plans (Appendix C). The Project Sponsor would be required to plant 13 trees to replace the removed heritage trees; however, 101 trees are proposed to be planted within the Project Area. No invasive plant species or noxious weeds would be planted in accordance to the Menlo Park Municipal Code.

This report describes the results of the biological resources assessments ofthe Study Area for the potential to support special-status species and the presence of other sensitive biological resources protected by local, state, and federal laws and regulations. The assessments did not constitute a protocol-level survey for individual listed species, as a protocol-level survey is not required in support of an EIR where species are not likely to occur. (*Association of Irritated Residents v County of Madera* (2003) 107 Cal.App.4th 1383, 1396). Consistent with the requirements of CEQA and Mitigation Measure BIO-1, this BRA provides information on the potential for jurisdictional habitat, sensitive habitat, and special-status plant and wildlife species to occur. Species that have a moderate or higher potential to occur may require a protocol-level survey or other mitigation to ensure that there will be no significant impacts. This BRA identifies one special-status wildlife species with a moderate or high potential to occur (white-tailed kite [*Elanus leucurus*]; moderate potential) and includes Mitigation Measure 1 to either avoid the nesting bird

season or conduct preconstruction nesting bird surveys and mitigation to reduce this impact to less than significant under CEQA. This assessment is based on information available at the time of the study and on-site conditions that were observed on August 1, 2019 and October 6, 2020.

2.0 REGULATORY BACKGROUND

The following sections explain the regulatory context of the BRA, including applicable laws and regulations that relate to the field investigations.

2.1 Special-Status Species

Special-status species include plant and wildlife species that have been formally listed, are proposed as endangered or threatened, or are candidates for such listing under the Federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA). These acts afford protection to both listed species and those that are formal candidates for listing. The federal Bald and Golden Eagle Protection Act also provides broad protections to both eagle species that in some regards are similar to those provided by the ESA. Additionally, the California Department of Fish and Wildlife (CDFW) Species of Special Concern, CDFW California Fully Protected Species, United States Fish and Wildlife Service (USFWS) Birds of Conservation Concern, and CDFW Special-status Invertebrates are all considered special-status species. Although these aforementioned species generally have no special legal status, they are given special consideration under the California Environmental Quality Act (CEQA). Bat species are also evaluated for conservation status by the Western Bat Working Group (WBWG), a non-governmental entity; bats named as "High Priority" or "Medium Priority" species for conservation by the WBWG are typically considered special-status and are also considered under CEQA (WBWG 2015). In addition to regulations for special-status species, most native birds in the United States (including non-status species) are protected by the federal Migratory Bird Treaty Act of 1918 (MBTA) and the California Fish and Game Code (CFGC) (i.e., Sections 3503, 3503.5, and 3513). Under these laws, deliberately destroying active bird nests, eggs, and/or young is illegal.

Plant species on the California Native Plant Society (CNPS) Rare and Endangered Plant Inventory with California Rare Plant Ranks of 1 and 2 are also considered special-status plant species and must be considered under CEQA. Rank 3 and Rank 4 species are afforded little or no protection under CEQA, but are included in this analysis for completeness. A description of the CNPS Ranks is provided below in Table 1.

Critical Habitat

Critical habitat is a term defined in the ESA as a specific and designated geographic area that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. The ESA requires federal agencies to consult with the USFWS to conserve listed species on their lands and to ensure that any activities or projects they fund, authorize, or carry out will not jeopardize the survival of a threatened or endangered species. In consultation for those species with critical habitat, federal agencies must also ensure that their activities or projects do not adversely modify critical habitat to the point that it will no longer aid in the species' recovery. In many cases, this level of protection is similar to that already provided to species by the ESA jeopardy standard. However, areas that are currently unoccupied by

the species but which are needed for the species' recovery are protected by the prohibition against adverse modification of critical habitat.

Table 1. Description of CNPS Ranks and Threat Codes

California Rare Plant Ranks (formerly known as CNPS Lists)	
Rank 1A	Presumed extirpated in California and either rare or extinct elsewhere
Rank 1B	Rare, threatened, or endangered in California and elsewhere
Rank 2A	Presumed extirpated in California, but more common elsewhere
Rank 2B	Rare, threatened, or endangered in California, but more common elsewhere
Rank 3	Plants about which more information is needed - A review list
Rank 4	Plants of limited distribution - A watch list
Threat Ranks	
0.1	Seriously threatened in California
0.2	Moderately threatened in California
0.3	Not very threatened in California

2.2 Sensitive Biological Communities

Sensitive biological communities include habitats that fulfill special functions or have special values, such as wetlands, streams, or riparian habitat. These habitats are protected under federal regulations, such as the Clean Water Act (CWA); state regulations, such as the Porter-Cologne Act, the CDFW Streambed Alteration Program, and the CEQA; or local ordinances or policies, such as city or county tree ordinances, Special Habitat Management Areas, and General Plan Elements.

Waters of the United States

The United States Army Corps of Engineers (Corps) regulates "Waters of the United States" under Section 404 of the Clean Water Act (CWA). Waters of the United States are defined in the Code of Federal Regulations (CFR) as including the territorial seas, and waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, such as tributaries, lakes and ponds, impoundments of waters of the U.S., and wetlands that are hydrologically connected with these navigable features (33 CFR 328.3). Potential wetland areas, according to the three criteria used to

delineate wetlands as defined in the Corps Wetlands Delineation Manual (Environmental Laboratory 1987), are identified by the presence of (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Unvegetated waters including lakes, rivers, and streams may also be subject to Section 404 jurisdiction and are characterized by an ordinary high water mark (OHWM) identified based on field indicators such as the lack of vegetation, sorting of sediments, and other indicators of flowing or standing water. The placement of fill material into Waters of the United States generally requires a permit from the Corps under Section 404 of the CWA.

Waters of the State

The term "Waters of the State" is defined by the Porter-Cologne Act as "any surface water or groundwater, including saline waters, within the boundaries of the state." The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCB) protect waters within this broad regulatory scope through many different regulatory programs. Waters of the State in the context of a CEQA Biological Resources evaluation include wetlands and other surface waters protected by the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*. The SWRCB and RWQCB issue permits for the discharge of fill material into surface waters through the State Water Quality Certification Program, which fulfills requirements of Section 401 of the CWA and the Porter-Cologne Water Quality Control Act. Projects that require a Clean Water Act permit are also required to obtain a Water Quality Certification. If a project does not require a federal permit, but does involve discharge of dredge or fill material into surface waters of the State, the SWRCB and RWQCB may issue a permit in the form of Waste Discharge Requirements.

Streams, Lakes, and Riparian Habitat

Streams and lakes, as habitat for fish and wildlife species, are subject to jurisdiction by CDFW under Sections 1600-1616 of the CFGC. Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term "stream", which includes creeks and rivers, is defined in the California Code of Regulations (CCR) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life [including] watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (14 CCR 1.72). In addition, the term "stream" can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife (CDFG 1994). "Riparian" is defined as "on, or pertaining to, the banks of a stream." Riparian vegetation is defined as "vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself" (CDFG 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from the CDFW.

Other Sensitive Biological Communities

Other sensitive biological communities not discussed above include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. CDFW ranks sensitive communities (alliances) as "threatened" or "very threatened" and keeps records of their occurrences in its California Natural Diversity Database (CNDDB; CDFW

2020). CNDDB vegetation alliances are ranked 1 through 5 based on NatureServe's (2010) methodology, with those alliances ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Impacts to sensitive natural communities identified in local or regional plans, policies, or regulations or those identified by the CDFW or USFWS must be considered and evaluated under CEQA (CCR Title 14, Div. 6, Chap. 3, Appendix G). Specific habitats may also be identified as sensitive in city or county general plans or ordinances.

2.3 Menlo Park Municipal Code

The Menlo Park Municipal Code contains all ordinances for the City of Menlo Park. The Menlo Park Municipal Code includes regulations relevant to biological resources within the Study Area as discussed below.

Heritage Trees

Chapter 13.24, "Heritage Trees", of the Menlo Park Municipal Code stipulates regulations designed to preserve and protect heritage trees within the City of Menlo Park. The ordinance defines a heritage tree as:

- A tree or group of trees of historical significance, special character, or community benefit, specifically designated by resolution of the City Council;
- An oak tree, which is native to California, and has a trunk with a circumference of 31.4 inches (or a diameter of 10 inches) or more, measured at 54 inches above natural grade. Trees with more than one trunk shall be measured at the point where the trunks divide, with the exception of trees that are under 12 feet in height, which will be exempt.
- All trees other than oaks which have a trunk with a circumference of 47.1 inches (or a diameter of 15 inches) or more, measured 54 inches above natural grade. Trees with more than one trunk shall be measured at the point where the trunks divide, with exception of trees that are under 12 feet in height, which will be exempt.

Because of their value to the City of Menlo Park, heritage trees may not be removed or have more than a quarter of their branches pruned within a 12-month period without a permit from the City's Director of Public Works, or his or her designee. The Director of Public Works, or his or her designee, may only issue a permit for the removal or major pruning of a heritage tree if he or she determines there is good cause for such action.

Any person who conducts any grading, excavation, demolition, or construction activity shall do so in such a manner as to not threaten the health or viability, or cause the removal of any heritage tree. A certified arborist shall prepare a tree protection plan when any work is to be performed within an area ten times the diameter of a heritage tree (i.e., the tree protection zone). The tree protection plan will be reviewed and approved by the Director of Community Development, or his or her designee, prior to the issuance of any permit for grading or construction.

Bird Friendly Design

Chapter 16.44.130 of the Menlo Park Municipal Code requires all new construction, regardless of size, to implement the following bird-friendly design measures:

- No more than 10% of a facade's surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes, but is not limited to, opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade
- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs
- Use of rodenticides shall not be allowed
- Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between ten (10) p.m. and sunrise.

Landscape Design Plan

Chapter 12.44.090 of the Menlo Park Municipal Code states that the use of invasive and/ or noxious plant species is strongly discouraged. Invasive species are defined as those plants not historically found in California that spread outside of cultivated areas and can damage environmental or economic resources. A noxious weed refers to any weed designated by the weed control regulations in the Weed Control Act that is identified on a regional district noxious weed list.

3.0 METHODS

On August 1, 2019, APNs 055-433-320 and 055-433-330 within the Study Area were traversed on foot. On October 6, 2020, the remainder of the Study Area was traversed on foot. These site visits were conducted to determine: (1) plant communities present within the Study Area, (2) if existing conditions provided suitable habitat for any special-status plant or wildlife species, and (3) if sensitive habitats were present.

3.1 Biological Communities

Prior to the BRA surveys, the Soil Survey of San Mateo County, California (U.S. Department of Agriculture [USDA] 1961) was examined to determine if any unique soil types that could support sensitive plant communities and/or aquatic features were present in the Study Area. Biological communities present in the Study Area were classified based on existing plant community descriptions described in the *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986) or the *Manual of California Vegetation* (Sawyer et.al. 2009). However, in some cases, it was necessary to identify variants of community types or to describe non-vegetated areas that are not described in the literature. Biological communities were classified as sensitive or non-sensitive as defined by CEQA and other applicable laws and regulations.

3.1.1 Non-sensitive Biological Communities

Non-sensitive biological communities are not afforded special protection under state, federal, or local laws, regulations, and ordinances. Impacts to such communities would not be significant under CEQA. These communities may, however, provide suitable habitat for some special-status plant or wildlife species.

3.1.2 Sensitive Biological Communities

Sensitive biological communities are given special protection under CEQA and other applicable federal, state, and local laws, regulations, and ordinances. Applicable laws and ordinances are discussed above in Section 2.0. Methods used to identify sensitive biological communities are discussed below.

Wetlands and Non-wetland Waters

The Study Area was surveyed to determine if any wetlands or non-wetland waters potentially subject to jurisdiction by the Corps, RWQCB, or CDFW were present. Consistent with the guidance provided by these agencies, including the State Wetland Definition and Procedures for Discharges of Dredged or Fill Materials to Waters of the State that was adopted by the State Water Resources Control Board on April 2, 2019 the BRA was based primarily on the presence of wetland plant indicators, but also included any observed indicators of wetland hydrology or wetland soils. Any potential wetland areas were identified as areas dominated by plant species with a wetland indicator status[1] of OBL (obligate), FACW (facultative wetland), or FAC (facultative) as provided on the Corps National Wetlands Plant List (Lichvar et al. 2016, as updated in 2018). Evidence of wetland hydrology can include direct (primary) indicators, such as visible inundation or saturation, algal mats, and oxidized root channels, or indirect (secondary) indicators, such as a water table within 2 feet of the soil surface during the dry season. Some indicators of wetland soils include dark colored soils, soils with a sulfidic odor, and soils that contain redoximorphic features as defined by the Corps Manual (Environmental Laboratory 1987), Arid West Regional Supplement (Corps 2008), and Field Indicators of Hydric Soils in the United States (Natural Resources Conservation Service [NRCS] 2018).

The preliminary non-wetland waters assessment was based primarily on the presence of unvegetated, ponded areas or flowing water, areas vegetated with hydrophytic plant species, or evidence indicating their presence, such as a high water mark or a defined drainage course. If the preliminary waters assessment identified potential wetlands, the collection of additional data will be necessary to prepare a formal delineation report suitable for submission to the Corps. However, no impacts to wetland habitats or waters are anticipated for Project implementation.

Other Sensitive Biological Communities

The Study Area was evaluated for the presence of other sensitive biological communities, including riparian areas and sensitive plant communities recognized by the CDFW. If

[1] OBL = Obligate, always found in wetlands (> 99% frequency of occurrence); FACW = Facultative wetland, usually found in wetlands (67-99% frequency of occurrence); FAC = Facultative, equal occurrence in wetland or non-wetlands (34-66% frequency of occurrence).

present in the Study Area, these sensitive biological communities were mapped and are described below.

3.2 Special-Status Species

3.2.1 Literature Review

The potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database search. Database searches for known occurrences of special-status species focused on the Palo Alto 7.5-minute United States Geological Survey (USGS) quadrangle. The following sources were reviewed to determine which special-status plant and wildlife species have been documented to occur in the vicinity of the Study Area:

- CNDDB records (CDFW 2020)
- USFWS Information for Planning and Conservation Species Lists (USFWS 2020)
- CNPS Inventory records (CNPS 2020)
- CDFG publication "California's Wildlife, Volumes I-III" (Zeiner et al. 1990)
- CDFG publication *California Bird Species of Special Concern* (Shuford and Gardali 2008)
- CDFW and University of California Press publication *California Amphibian and Reptile Species of Special Concern* (Thomson et al. 2016)
- *A Field Guide to Western Reptiles and Amphibians* (Stebbins 2003)

3.2.2 Site Assessment

A site assessment was conducted in the Study Area to search for suitable habitats for special-status species. Habitat conditions observed in the Study Area were used to evaluate the potential for presence of special-status species based on these searches and the professional expertise of the investigating biologist. The potential for each special-status species to occur in the Study Area was then evaluated according to the following criteria:

- No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
- Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
- Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- Present. Species is observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.

The site assessment was intended to identify the presence or absence of suitable habitat for each special-status species known to occur in the vicinity to determine its potential to occur in the Study Area. The site visits did not constitute a protocol-level survey and was not intended to determine the actual presence or absence of a species; however, if a special-status species was observed during the site visit, its presence was recorded and is discussed in Section 4.0, below.

Appendix B presents the evaluation of the potential for occurrence of each special-status plant and wildlife species known to occur in the vicinity of the Study Area with their habitat requirements, potential for occurrence, and rationale for the classification based on criteria listed above. Recommendations for further surveys for species with a moderate or high potential to occur in the Study Area are provided in Section 5.0 below.

4.0 RESULTS

The 4.12-acre Study Area is located in the northeastern portion of the Palo Alto USGS 7.5-minute quadrangle. The Study Area is relatively flat with elevations ranging from 10 to 13 feet above mean sea level. The Study Area is located approximately 0.5 mile south of Highway 84. Historic aerial imagery indicates that the Study Area and surrounding areas were utilized for agricultural purposes dating back to at least 1948 (Google Earth 2020). By 1991, the Study Area was occupied by the four buildings that presently exist. The Study Area is surrounded by commercial development utilized for warehousing and light industrial uses and the undeveloped right-of-way for the underground Hetch Hetchy Aqueduct operated by SFPUC.

The Study Area is underlain by one soil type, Urban land (USDA 1961). Urban land consists of areas where more than 85 percent of the surface is covered by asphalt, concrete, buildings, or other structures. Included in this soil type are small areas of Orthents, cut and fill, and Orthents, reclaimed. This soil type is considered to have a high runoff rate and is not considered a hydric soil.

4.1 Biological Communities and Land Cover Types

The Study Area is comprised of three land cover types, including developed, landscaped, and non-jurisdictional manmade and partially concrete-lined drainage ditch. No natural biological communities or sensitive communities were present within the Study Area. Table 2 provides land cover acreages in the Study Area. Figure 3 in Appendix A depicts the location and extent of each land cover type. A description of the land cover types found in the Study Area is provided below.

Table 2. Land Cover Types within the Study Area

Land Cover Type	Area (acres)[1]
Developed	3.65
Landscaped	0.24

[1] Due to rounding, subtotals do not equal total land area of the Project Site.

Land Cover Type	Area (acres)[1]
Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch	0.22 (525 ln. ft.)
Total	**4.12**

4.1.1 Non-sensitive Land Cover Types

Developed

Developed land cover occupies 3.65 acres of the Study Area. Developed land cover consists of four existing buildings in the central portion of the Study Area and paved parking areas and walkways surrounding the four buildings. Developed portions of the Study Area lack vegetation and are composed entirely of impervious surfaces.

Landscaped

Landscaped land cover occupies 0.24 acre of the Study Area. Landscaped land cover consists of planting strips adjacent to the sidewalk along O'Brien Drive and raised areas in the southeastern portion of the Study Area that contain planted trees and low-lying ornamental shrubs. Landscaped areas were also observed along the fenceline of the northern and eastern boundaries of the Study Area. Planted tree species within landscaped areas in the Study Area include raywood ash (*Fraxinus angustifolia*), purple leaf plum (*Prunus cerasifera*), Japanese privet (*Ligustrum japonicum*), giant yucca (*Yucca gigantea*), and coast redwood (*Sequoia sempervirens).* One remnant large coast live oak (*Quercus agrifolia*) is present on the northern edge of the Study Area within landscaped cover. All landscaped land cover within the Study Area appears to be maintained and frequently watered via an irrigation system.

Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch

A non-jurisdictional manmade and partially concrete-lined drainage ditchoccurs along the western edge of the Study Area. This feature (located in the Study Area) is approximately 525 linear feet in length and is approximately 0.22 acre in size. The drainage ditch is lined with concrete for most of its length and was constructed in upland areas sometime in the late 1960s when the Study Area was developed with commercial buildings as documented in the Stormwater Ditch Assessment written by WRA in January 2013 (WRA 2013). This feature has never been a blue line stream or a historic wetland. Moreover, both the Study Area and the stormwater conveyance system downstream of the ditch do not fall within the footprint of a historical stream, marsh, or wetland boundary. Prior discussions with the City of Menlo Park and East Palo Alto stormwater specialists confirmed that water entering the ditch from the south drains from upland sources from the City of East Palo Alto's paved streets (WRA 2013).

Stormwater that enters the ditch is urban runoff from a residential and commercial area. Stormwater enters the ditch at O'Brien Drive via a culverted, underground stormwater system to the south, and then it flows through the Study Area in the stormwater drainage ditch. An additional stormwater input from a Kelly Court stormdrain discharges into the stormwater drainage ditch in the northwestern portion of the Study Area via a 12-inch diameter stormwater pipe. The stormwater drainage ditch flows to an enclosed culvert

between several large commercial buildings that terminates in an area south of the berm along the elevated train tracks that is adjacent to lands mapped “depressional unnatural vegetated” habitats by the Bay Area Aquatic Resources Inventory (WRA 2013). In summary, the stormwater drainage ditch is part of a larger man-made stormwater conveyance system that drains wholly upland residential and commercial areas. The partially concrete-lined drainage ditch contains moderately hydrophytic vegetation, including patches of curly dock (*Rumex crispus*; FAC), tall flatsedge (*Cyperus eragrostis*; FACW), Italian rye grass (*Festuca perennis*; FAC), and bristly ox-tongue (*Helminthotheca echioides*; FAC), mixed with upland vegetation, such as prickly lettuce (*Lactuca serriola*; FACU), sweet fennel (*Foeniculum vulgare*; UPL), and slender oat (*Avena barbata*; UPL), which grows in sediment deposited and compacted at the bottom of the channel as a result of urban stormwater runoff. Two Chinese pistache (*Pistacia chinensis*, NR) are also located on the eastern side of the ditch, near the northern boundary of the Study Area. FAC vegetation that occurs in the ditch is equally likely to occur in wetland or upland conditions as defined by the National Wetland Plant List (Lichvar 2016, 2018). The ditch receives periodic hydrologic inputs during the rainy season, but is most likely dry for the remainder of the year between rain events. The ditch was dry during the site visit in October. It does not pond or hold water for significant durations between rain events, nor does it contain suitable habitat for sensitive wildlife species.

This man-made ditch would most likely not be subject to Corps jurisdiction under Section 404 of the CWA according to the (b)(5) exclusion in Final Rule, since this ditch was constructed in uplands. Historic aerial photographs clearly show that there is no evidence of tributaries or wetlands in the locations where this ditch was constructed. Furthermore, this ditch is an ephemeral feature (e.g., an ordinarily dry channel only flowing during or in immediate response to precipitation) and lacks the required perennial or intermittent flow to satisfy the ‘‘tributary’’ definition to be considered a CWA jurisdictional feature. Finally, stormwater control features constructed or excavated in upland or in non-jurisdictional waters to convey, treat, infiltrate, or store stormwater runoff are also exempt from CWA jurisdiction; however, the ultimate determination of jurisdiction is the responsibility of the regulatory agencies, and may differ from the conclusion reached by WRA. Additionally, this feature does not meet the definition of a wetland under the State Wetland Definition that was adopted on April 2, 2019 by the State Water Resources Control Board since it is artificial (not a wetland created by modification of surface waters of the state [state wetland criteria 2]), is less than 1 acre in size, was not approved for mitigation (state wetland criteria 3.a), is not identified in a water quality control plan (state wetland criteria 3.b), is subject to ongoing operation and maintenance (state wetland criteria 3.c), and is situated in a dense commercial setting (i.e., not part of a natural landscape [state wetland criteria 3.c]) (State Water Resources Control Board 2019). Per the State Wetland Rule, “all artificial wetlands that are less than an acre in size and do not satisfy the criteria set forth in 2, 3.a, 3.b, or 3.c are not waters of the state” (State Water Resources Control Board 2019). As such, the stormwater drainage ditch does not meet the State Wetland Definition; however, the ultimate determination of jurisdiction is the responsibility of the regulatory agencies.

4.1.2 Potentially Sensitive Biological Communities

No potentially sensitive biological communities exist within the Study Area.

4.2 Special Status Species

4.2.1 Plants

Based on a review of the resources and databases discussed in Section 3.2.1, 25 special-status plant species have been documented in the vicinity of the Study Area. The locations of 14 special-status plant species in the CNDDB within 5 miles of the Study Area are depicted on Figure 4 in Appendix A. Appendix B summarizes the potential occurrence for each special-status plant species located in the vicinity of the Study Area. No special-status plant species were observed during the site visit and none have potential to occur in the Study Area due to at least one of the following reasons:

- Absence of specific soil types (e.g., serpentine soils)
- Absence of suitable habitat (e.g., chaparral, grassland, coastal salt marsh)
- Dominance of invasive, non-native species
- Outside the geographic range of species (e.g., Study Area is below known elevation range)
- Outside the known distribution of species (e.g., Study Area is too far north)

4.2.2 Wildlife

Based on a review of the resources and databases listed in Section 3.2.1, 40 special-status wildlife species have been documented in the vicinity of the Study Area[2]. The locations of 28 special-status wildlife species in the CNDDB within 5 miles of the Study Area are depicted on Figure 5 in Appendix A. Appendix B summarizes the potential for each of these species to occur within the Study Area. Of the 40 special-status species examined, none are considered to have a high potential to occur in the study area and only one (1) was considered to have moderate potential to occur in the Study Area and is therefore discussed below. The remaining 39 species are considered unlikely, or have no potential, to occur in the Study Area for one or more of the following reasons:

- The Study Area is outside of the known or historical range of the species
- The Study Area lacks suitable aquatic habitat (e.g., rivers, streams, vernal pools)
- The Study Area lacks suitable foraging or breeding habitat (e.g., marshes)
- The Study Area lacks suitable nesting structures
- The Study Area lacks suitable soil for den development
- The Study Area lacks suitable burrows for occupancy
- No mine shafts, caves, or abandoned buildings are present
- There is a lack of connectivity with suitable occupied habitat

While the aforementioned factors contribute to the absence of many special-status wildlife species, the Study Area was determined to have adequate conditions and locality to warrant a moderate potential for one special-status species to occur. In addition, native nesting birds and roosting bats are protected by the MBTA and CFGC, as discussed below.

---

[2] The following species without special status, but which are tracked in the CNNDB, occur in the vicinity of the Study Area but are not addressed in this report: Santa Cruz Kangaroo Rat

Species with Moderate Potential to Occur in the Study Area

White-tailed Kite (*Elanus leucurus*), CDFW Fully Protected. Moderate Potential. White-tailed kites occur in low-elevation grassland, agricultural areas, wetlands, oak woodland, and savannah habitats. Riparian zones adjacent to open areas are also used. Vegetative structure and prey availability seem to be more important than specific associations with plant species or vegetative communities. Lightly grazed or ungrazed fields generally support large prey populations and are often preferred to other habitats. Kites primarily feed on small mammals, although birds, reptiles, amphibians, and insects are also taken. Nest trees range from single isolated trees to trees within large contiguous forests. Preferred nest trees are extremely variable, ranging from small shrubs (less than 10 feet tall), to large trees (greater than 150 feet tall) (Dunk 1995).

Although neither white-tailed kite nor any old stick nests of suitable size to support a white-tailed kite were observed during the site visits, suitable nesting habitat for this species is present within the Study Area or in the very close vicinity. Several suitably-sized nest trees are located within the Study Area, and adjacent properties possess large eucalyptus trees (*Eucalyptus globulus*) that could provide suitable nest sites for this species. Although the Study Area itself does not support foraging habitat for this species, open spaces less than 0.5 mile to the north and northeast provide excellent foraging opportunities for small birds and small mammals. Several CNDDB occurrences occur within approximately 6 miles of the Study Area. As such, white-tailed kite has moderate potential to occur on the Study Area.

4.2.3 Critical Habitat

The Study Area is not located within any units of designated critical habitat.

5.0 PROJECT IMPACTS AND MITIGATION MEASURES

Pursuant to Appendix G, Section IV of the State CEQA Guidelines, a project would have a significant impact on biological resources if it would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or,

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

These thresholds were utilized in completing the analysis of potential project impacts for CEQA purposes. For the purposes of this analysis, a "substantial adverse effect" is generally interpreted to mean that a potential impact could directly or indirectly affect the resiliency or presence of a local biological community or species population. Potential impacts to natural processes that support biological communities and special-status species populations that can produce similar effects are also considered potentially significant. Impacts to individuals of a species or small areas of existing biological communities may be considered less than significant if those impacts are speculative, beneficial, deminimis, and/or would not affect the resiliency of a local population.

Per Mitigation Measure BIO-1 of the ConnectMenlo EIR, a BRA should be conducted by a qualified biologist to determine if any sensitive biological resources are present on or within 10 feet of the Project Area (PlaceWorks 2016). As this BRA meets the requirements presented in Mitigation Measure BIO-1 of the ConnectMenlo EIR, this measure is not discussed in the sections below.

Potential impacts on existing biological resources were evaluated by comparing the quantity and quality of habitats present in the Project Area under baseline conditions to the anticipated conditions after implementation of proposed Project activities and are depicted on Figure 4. Direct and indirect impacts on special-status species and sensitive natural communities were assessed based on the potential for the species, their habitat, or the natural community in question to be disturbed or enhanced by construction or operation of the proposed Project. Table 3 lists permanent and temporary impacts proposed by the Project within each land cover type.

Table 3. Project Impacts within Each Land Cover Type in the Study Area

Land Cover Type	Permanent (acres)	Temporary (acres)
Developed	3.65	0.00
Landscaped	0.24	0.00
Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch	0.00	0.00
Total	**3.89**	**0.00**

5.1 Impact BIO-1: Special-Status Species

Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

The following impact analysis describes the Project's adverse effects on special-status species. The analysis is organized by the listing status (federal, state, and/or California Rare Plant Rank [CRPR]) of special-status species. Appendix B lists the potentially occurring special-status plant species, along with their listing status and basis for the determination of their absence from the Study Area.

Impact BIO-1a: Impacts on Federally- and State-Listed Special-Status Plants and CRPR 1 or 2 Plants

The Project Area has no potential to support special-status plant species due to the absence of suitable habitat and presence of non-native plant species. The proposed Project is not expected to impact any special-status plant species.

Level of Significance: No Impact

Impact BIO-1b: Impacts on Special-status and Non-special-status Native Nesting Birds

The Project has the potential to impact special-status and non-special-status native nesting birds protected by the MBTA and/or CFGC, including white-tailed kite. Project activities, such as vegetation removal, tree removal, and ground disturbance associated with development, have the potential to impact these species by causing direct mortality of eggs or young, or by causing auditory, vibratory, and/or visual disturbance of a sufficient level to cause abandonment of an active nest. If Project activities occur during the nesting season, which generally extends from February 1 through August 31, nests of both special-status and non-special-status native birds could be impacted by construction and other ground-disturbing activities. As such, impacts to nesting birds would be considered potentially significant under CEQA.

Level of Significance: Potentially Significant

<u>Mitigation Measure 1. Avoid the Bird Nesting Season or Conduct Pre-Construction Nesting Bird Surveys</u>

Project activities such as vegetation removal, grading, or initial ground-disturbance, will be conducted, or at least commenced, between September 1 and January 31 (outside of the February 1 to August 31 nesting season) to the extent feasible.

If Project activities must be conducted during the nesting season, a pre-construction nesting bird survey will be conducted by a qualified biologist no more than 14 days prior to vegetation removal or initial ground disturbance. The survey will include the Project Area and immediately adjacent area to identify the location and status of any nests that could potentially be affected either directly or indirectly by Project activities.

If active nests of native nesting bird species are located, a work exclusion zone will be established around each nest by the qualified biologist. Established exclusion zones will remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes will be determined by a qualified biologist and will vary based on species, nest location, existing visual buffers, noise levels, and other factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 300 feet for kites. Exclusion zone size will be reduced from established levels by a qualified biologist if nest monitoring findings indicate that Project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest. After the nesting effort is complete, the tree can be removed.

Mitigation Measure 2. Inhibition of Nesting

If construction activities begin during the nesting season, all potential nesting substrates, such as trees, that are proposed for removal must be removed outside the nesting season (February 1-August 31), which would preclude the initiation of nest creation in these trees, or unoccupied trees can be removed at any time following a preconstruction nesting survey.

Level of Significance After Mitigation: Less Than Significant

5.2 Impact BIO-2: Sensitive Communities

Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW and USFWS.

The CDFW defines sensitive natural communities and vegetation alliances using NatureServe's standard heritage program methodology (CDFG 2007), as described above in Section 2.2. Project impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, were considered and evaluated. Furthermore, aquatic, wetland, and riparian habitats are also protected under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by the Corps, RWQCB, the CDFW, and/or the USFWS.

Impact BIO-2a: Impacts on Riparian Habitat or Other Sensitive Natural Communities

The Project has no potential to impact riparian habitat or any sensitive natural communities due to the absence of riparian habitat and natural communities within and immediately adjacent to the Project Area. The proposed Project is not expected to impact riparian habitat or any sensitive natural communities.

Level of Significance: No Impact

5.3 Impact BIO-3: Jurisdictional Waters

Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

Wetlands are considered sensitive environmental resources protected at federal, state, and local levels. They provide unique habitat functions and values for wildlife, and provide habitat for plant species adapted to wetland hydrology. Throughout California, the quality and quantity of wetlands has dramatically declined owing to the construction of dams, dikes, and levees, as well as because of water diversions, the filling of wetlands for development, and the overall degradation of water quality by inputs of runoff from agricultural, urban, and infrastructure development and other sources.

Impact BIO-3a: Impacts on Jurisdictional Waters

Based on the discussion in Section 4.1.1, the man-made concrete-lined ditch along the western boundary of the Project Area would not be subject to Corps jurisdiction under Section 404 of the CWA and this feature does not meet the definition of a wetland under the State Wetland Definition that was adopted on April 2, 2019 by the State Water Resources Control Board. Further, the Project is not anticipating impacts to the ditch, therefore no permits from the Corps or RWQCB would be required for the project.

Level of Significance: No Impact

5.4 Impact BIO-4: Wildlife Movement

Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

For many species, the landscape is a mosaic of suitable and unsuitable habitat types. Environmental corridors are segments of land that provide a link between these different habitats while also providing cover. Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: (1) as habitat patches become smaller they are unable to support as many individuals (patch size), and (2) the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity).

The Project Area is not considered a wildlife corridor, though local wildlife may move through it. The surrounding area is largely fragmented due to the presence of extensive existing light industrial development, which includes roads. The location of the Project Area within a surrounding matrix of residential and light industrial activities suggests that no impacts will occur to species movement as a result of Project activities.

Level of Significance: Less Than Significant

5.5 Impact BIO-5: Impacts due to Conflicts with Local Policies

Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Impact BIO-5a: Impacts on Heritage Trees

According to the Project Plans (Appendix C), the Project Area contains 40 trees, including 13 potential heritage trees, as defined by the City of Menlo Park Municipal Code. Some of these trees may be removed during the Project. An approved tree removal permit should be obtained in accordance with provisions outlined in Chapter 13.24 of the Menlo Park Municipal Code prior to any pruning or removal of any heritage tree in the Project Area. The Project proposes to provide replacement trees for all heritage trees removed in accordance with the Menlo Park Municipal Code. A tree protection plan should be prepared by a certified arborist if work is proposed in the tree protection zone of heritage trees proposed for retention. With adherence to Chapter 13.24 of the City Municipal Code, impacts on heritage trees would be less than significant.

Level of Significance: Less Than Significant

Impact BIO-5b: Impacts Related to compliance with Municipal Code 16.44.130 (6), Bird Safe Designs

The proposed Project will include the construction of a new building with a maximum height of 88.5 feet, utilizing glazing (i.e. glass surfaces) as a primary design component. Generally speaking, buildings that feature extensive amounts of clear or especially reflective glass on the exterior and/or heavily vegetated areas directly adjacent to buildings can result in a relatively high incidence of bird collisions. Though not thoroughly understood, it is presumed that birds in flight see through glass facades and discern apparently desirable areas on the other side, and/or interpret reflections of the surrounding environment (e.g., the sky, vegetation) to be actual habitat or otherwise attractive space. This causes building features, such as transparent corners, glass guardrails, or contiguous areas of untreated glass, to present a potential risk for avian collision mortality. Vegetated pathways leading towards building facades can also encourage birds to fly towards buildings, resulting in collisions primarily on the lower stories (i.e., 60 feet and below) because most bird species spend most of their time in this elevation range engaging in foraging, breeding, and other behaviors (San Francisco Planning Department 2011). Lastly, lighting associated with development can disorient or attract migrating birds, particularly at night, creating increased collision risk if high-use avian habitats are nearby.

Despite the Study Area's location (i.e., in the general vicinity of the San Francisco Bay and associated avian habitat), the general land use surrounding the Study Area can be classified as dense light industrial or residential. Natural habitats are extremely limited in the surrounding area, and what natural cover does exist is mainly composed of landscaped areas. While birds may use landscaped areas for nesting, they typically do not do so in large numbers. Additionally, the relatively high level of baseline disturbance surrounding the Study Area would contribute to a reduced level of bird nesting in the immediate vicinity. Thus, although occasional collisions may occur by urban-adapted passerine species, they would likely be very few in number due to the limited avian habitat directly adjacent to the Study Area. Several avian species are known to use habitats of nearby Don Edwards National Wildlife Refuge both to nest and to congregate during migration; however, the fact that the Study Area is surrounded on all sides by dense urban development and does constitute a wildlife movement corridor make it highly unlikely that the proposed structure would pose a significant obstruction to bird movement or mortality risk.

The structure will be constructed, by nature, within the high collision elevation zone (i.e. within 60 feet of the ground), but incorporates design aspects to reduce the likelihood of avian collisions (described below), including complying with the following items outlined in Municipal Code Chapter 16.44.130 (6):

- No more than 10 percent of a facade's surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes but is not limited to, opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between ten (10) p.m. and sunrise
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade

- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs
- Use of rodenticides shall not be allowed

All glazing used in the building design is indicated in the Project plans to be bird-friendly, particularly in areas where glazing comprises more than 10 percent of the building's elevation. Other portions of glass that are not treated with anti-reflective coatings are otherwise textured or fritted to create "visual noise". Guardrails on stairways and patios will be composed of wire mesh rather than glass so as not to present collision risk. All elevations of the building will additionally incorporate variations in surface color, texture, and "relief", which aid in providing birds the opportunity to see the building before colliding with it. Lighting associated with the building will be scheduled to comply with the municipal code, and thus limit potential disorientation or attraction from nearby high-use avian habitat. Overall, building design elements have been incorporated that comply with Municipal Code Chapter 16.44.130 (6) and provide additional protections against avian collisions.

Level of Significance: Less than Significant

5.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan

Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

The Project will not conflict with the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state habitat conservation plan. The Study Area is not within a geographic area covered by an adopted HCP or a natural community conservation plan. The Stanford HCP, associated with an area in the Matadero/Deer Creek and San Francisquito watersheds, is the closest such plan, located approximately 3 miles to the south. This BRA was prepared for the Project in accordance with Mitigation Measure BIO-1 of the ConnectMenlo EIR, which has not been altered with significant information that would affect this Project since its preparation in 2016. Therefore, since the Study Area is not covered under an existing HCP, the Project would have no impact on provisions of an adopted, HCP, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

Level of Significance: No Impact

5.7 Cumulative Impacts

Cumulative impacts on the biological resources that could be affected by the Project may result from a number of past, current, and reasonably foreseeable future projects that occur in the area. Although such projects could result in impacts on these sensitive habitats and species, it is expected that most current and future projects that impact these species and their habitats would be required to mitigate these impacts through the CEQA, Section 1602, or Section 404/401 permitting process, as well as through the ESA Section 7 consultation process. As a result, most projects in the region will mitigate their impacts on these resources, minimizing cumulative impacts on these species.

Through implementation of the avoidance and minimization measures incorporated into the Project, it will not result in a cumulatively considerable contribution to any significant cumulative impacts to biological resources.

Level of Significance: No Impact

APPENDIX B

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES POTENTIALS TABLE

[this page left blank intentionally]

Appendix B. Potential for Special Status Plant and Wildlife Species to Occur in the Study Area. List compiled from the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (2020), U.S. Fish and Wildlife Service (USFWS) Species Lists (2020), and California Native Plant Society (CNPS) Electronic Inventory (2020) searches focused on the Palo Alto USGS 7.5' quadrangle.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Plants				
San Mateo thorn-mint *Acanthomintha duttonii*	FE, SE, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 160 to 985 feet (50 to 300 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Franciscan onion *Allium peninsulare var. franciscanum*	Rank 1B.2	Cismontane woodland, valley and foothill grassland. Elevation ranges from 170 to 1000 feet (52 to 305 meters). Blooms (Apr)May-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
bent-flowered fiddleneck *Amsinckia lunaris*	Rank 1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland. Elevation ranges from 5 to 1640 feet (3 to 500 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
California androsace *Androsace elongata ssp. acuta*	Rank 4.2	Chaparral, cismontane woodland, coastal scrub, meadows and seeps, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 490 to 4280 feet (150 to 1305 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Kings Mountain manzanita *Arctostaphylos regismontana*	Rank 1B.2	Broadleafed upland forest, chaparral, north coast coniferous forest. Elevation ranges from 1000 to 2395 feet (305 to 730 meters). Blooms Dec-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Brewer's calandrinia *Calandrinia breweri*	Rank 4.2	Chaparral, coastal scrub. Elevation ranges from 30 to 4005 feet (10 to 1220 meters). Blooms (Jan)Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Congdon's tarplant *Centromadia parryi ssp. congdonii*	Rank 1B.1	Valley and foothill grassland (alkaline). Elevation ranges from 0 to 755 feet (0 to 230 meters). Blooms May-Oct(Nov).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Crystal Springs fountain thistle *Cirsium fontinale var. fontinale*	FE, SE, Rank 1B.1	Chaparral (openings), cismontane woodland, meadows and seeps, valley and foothill grassland. Elevation ranges from 145 to 575 feet (45 to 175 meters). Blooms (Apr)May-Oct.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
lost thistle *Cirsium praeteriens*	Rank 1A	Elevation ranges from 0 to 330 feet (0 to 100 meters). Blooms Jun-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
round-headed Chinese-houses *Collinsia corymbosa*	Rank 1B.2	Coastal dunes. Elevation ranges from 0 to 65 feet (0 to 20 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
San Francisco collinsia *Collinsia multicolor*	Rank 1B.2	Closed-cone coniferous forest, coastal scrub. Elevation ranges from 95 to 820 feet (30 to 250 meters). Blooms (Feb)Mar-May.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
western leatherwood *Dirca occidentalis*	Rank 1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, north coast coniferous forest, riparian forest, riparian woodland. Elevation ranges from 80 to 1395 feet (25 to 425 meters). Blooms Jan-Mar(Apr).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Hoover's button-celery *Eryngium aristulatum var. hooveri*	Rank 1B.1	Vernal pools. Elevation ranges from 5 to 150 feet (3 to 45 meters). Blooms (Jun)Jul(Aug).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Jepson's coyote thistle *Eryngium jepsonii*	Rank 1B.2	Valley and foothill grassland, vernal pools. Elevation ranges from 5 to 985 feet (3 to 300 meters). Blooms Apr-Aug.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
fragrant fritillary *Fritillaria liliacea*	Rank 1B.2	Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. Elevation ranges from 5 to 1345 feet (3 to 410 meters). Blooms Feb-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Marin western flax *Hesperolinon congestum*	FT, ST, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 15 to 1215 feet (5 to 370 meters). Blooms Apr-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
woolly-headed lessingia *Lessingia hololeuca*	Rank 3	Broadleafed upland forest, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 45 to 1000 feet (15 to 305 meters). Blooms Jun-Oct.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
arcuate bush-mallow *Malacothamnus arcuatus*	Rank 1B.2	Chaparral, cismontane woodland. Elevation ranges from 45 to 1165 feet (15 to 355 meters). Blooms Apr-Sep.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Davidson's bush-mallow *Malacothamnus davidsonii*	Rank 1B.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland. Elevation ranges from 605 to 3740 feet (185 to 1140 meters). Blooms Jun-Jan.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Mt. Diablo cottonweed *Micropus amphibolus*	Rank 3.2	Broadleafed upland forest, chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 145 to 2705 feet (45 to 825 meters). Blooms Mar-May.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
woodland woolythreads *Monolopia gracilens*	Rank 1B.2	Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, north coast coniferous forest (openings), valley and foothill grassland. Elevation ranges from 325 to 3935 feet (100 to 1200 meters). Blooms (Feb)Mar-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Choris' popcornflower *Plagiobothrys chorisianus var. chorisianus*	Rank 1B.2	Chaparral, coastal prairie, coastal scrub. Elevation ranges from 5 to 525 feet (3 to 160 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
slender-leaved pondweed *Stuckenia filiformis ssp. alpina*	Rank 2B.2	Marshes and swamps (assorted shallow freshwater). Elevation ranges from 980 to 7055 feet (300 to 2150 meters). Blooms May-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
two-fork clover *Trifolium amoenum*	FE, Rank 1B.1	Coastal bluff scrub, valley and foothill grassland (sometimes serpentine). Elevation ranges from 15 to 1360 feet (5 to 415 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
caper-fruited tropidocarpum *Tropidocarpum capparideum*	Rank 1B.1	Valley and foothill grassland (alkaline hills). Elevation ranges from 0 to 1495 feet (1 to 455 meters). Blooms Mar-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
MAMMALS				
salt-marsh wandering shrew *Sorex vagrans halicoetes*	SSC	Salt marshes of the south arm of San Francisco Bay. Medium high marsh 6 to 8 feet above sea level where abundant driftwood is scattered among *Salicornia*.	**No Potential.** No salt marsh habitat is present on the Study Area.	No further action necessary
pallid bat *Antrozous pallidus*	SSC, WBWG High	Found in a variety of habitats ranging from grasslands to mixed forests, favoring open and dry, rocky areas. Roost sites include crevices in rock outcrops and cliffs, caves, mines, and also hollow trees and various manmade structures such as bridges, barns, and buildings (including occupied buildings). Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	**No Potential.** No rock outcroppings or other suitable human structures exist on the Study Area to provide roost habitat for this species.	No further action necessary
Townsend's big-eared bat *Corynorhinus townsendii*	SSC, WBWG High	Associated with a wide variety of habitats from deserts to higher-elevation mixed and coniferous forests. Females form maternity colonies in buildings, caves and mines, and males roost singly or in small groups. Foraging typically occurs at edge habitats near wooded areas, e.g. along streams.	**No Potential.** No potential roost habitat for this species exists on or near the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
hoary bat *Lasiurus cinereus*	WBWG Medium	Prefers open forested habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths.	**Unlikely.** Though individuals may forage or roost in broad-leafed trees on the Study Area, all nearby occurrences in CNDDB are extremely old specimen collection samples that do not suggest the species is still present nearby. Furthermore, ongoing antropogenic disturbance around the Study Area is likely to deter bat roosting.	No further action necessary
San Francisco dusky-footed woodrat *Neotoma fuscipes annectens*	SSC	Forest habitats of moderate canopy and moderate to dense understory. Also in chaparral habitats. Constructs nests of shredded grass, leaves, and other material. May be limited by availability of nest-building materials.	**No Potential.** No dense understory with significant availability of nest-building materials is present on the Study Area.	No further action necessary
salt-marsh harvest mouse *Reithrodontomys raviventris*	FE, SE, CFP	Endemic to emergent salt and brackish wetlands of the San Francisco Bay Estuary. Pickleweed marshes are primary habitat; also occurs in various other wetland communities with dense vegetation. Does not burrow, builds loosely organized nests. Requires higher areas for flood escape.	**No Potential.** No salt marsh habitat is present on the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	**No Potential.** All open areas within the Study Area are landscaped, indicating that no suitable burrow locations exist for this species.	No further action necessary
BIRDS				
white-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	**Moderate Potential.** Several large trees at the perimeter of the Study Area could support nesting of this species.	Pre-construction nesting bird surveys should be conducted to ensure no nesting activity by this species is occurring on or near the Study Area. See Mitigation Measure 1 for further detail.
bald eagle *Haliaeetus leucocephalus*	FD, SE, CFP, BCC	Occurs year-round in California, but primarily a winter visitor; breeding population is growing. Nests in large trees in the vicinity of larger lakes, reservoirs and rivers. Wintering habitat somewhat more variable but usually features large concentrations of waterfowl or fish.	**Unlikely.** The nearest large body of water to the Study Area is San Francisco Bay, which does not provide ideal foraging habitat for this species. Suitable nest trees are also limited in the vicinity.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
yellow rail *Coturnicops noveboracensis*	BCC, SSC	Summer resident in eastern Sierra Nevada in Mono County, breeding in shallow freshwater marshes and wet meadows with dense vegetation. Also a rare winter visitor along the coast and other portions of the state. Extremely cryptic.	**No Potential.** The Study Area is located outside the known breeding range of this species.	No further action necessary
California black rail *Laterallus jamaicensis coturniculus*	ST, CFP	Year-round resident in marshes (saline to freshwater) with dense vegetation within four inches of the ground. Prefers larger, undisturbed marshes that have an extensive upper zone and are close to a major water source. Extremely secretive and cryptic.	**No Potential.** No tidal marsh habitat is present on the Study Area.	No further action necessary
California Ridgway's (clapper) rail *Rallus obsoletus obsoletus*	FE, SE, CFP	Year-round resident in tidal marshes of the San Francisco Bay estuary. Requires tidal sloughs and intertidal mud flats for foraging, and dense marsh vegetation for nesting and cover. Typical habitat features abundant growth of cordgrass and pickleweed. Feeds primarily on molluscs and crustaceans.	**No Potential.** No tidal marsh habitat is present on the Study Area.	No further action necessary
western snowy plover *Charadrius nivosus (alexandrines) nivosus*	FT, SSC, BCC, RP	Federal listing applies only to the Pacific coastal population. Year-round resident and winter visitor. Occurs on sandy beaches, salt pond levees, and the shores of large alkali lakes. Nests on the ground, requiring sandy, gravelly or friable soils.	**No Potential.** Salt flats, sandy beaches, or graveled areas suitable for nesting by this species are not present on the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
California least tern *Sternula antillarum browni*	FE, SE, CFP	Summer resident along the coast from San Francisco Bay south to northern Baja California; inland breeding also very rarely occurs. Nests colonially on barren or sparsely vegetated areas with sandy or gravelly substrates near water, including beaches, islands, and gravel bars. In San Francisco Bay, has also nested on salt pond margins.	**No Potential.** Barren substrates necessary for nesting of this species are not present on the Study Area.	No further action necessary
black skimmer *Rynchops niger*	BCC, SSC	Found primarily in southern California; South San Francisco Bay has a small resident population. Nests colonially on gravel bars, low islets, and sandy beaches	**No Potential.** Though the Study Area is within 0.75 mile of potential nesting and foraging habitat, the Study Area itself provides no habitat value for this species due to lack of aquatic features or associated terrestrial areas.	No further action necessary
marbled murrelet *Brachyramphus marmoratus*	FT, SE	Predominantly coastal marine. Nests in old-growth coniferous forests up to 30 miles inland along the Pacific coast, from Eureka to Oregon border, and in Santa Cruz/San Mateo Counties. Nests are highly cryptic, and typically located on platform-like branches of mature redwoods and Douglas firs. Forages on marine invertebrates and small fishes.	**No Potential.** No large stands of coniferous forest are present on or near the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
burrowing owl *Athene cunicularia*	SSC, BCC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels.	**No Potential.** No burrowing mammal activity was observed on the Study Area, nor were any suitable burrows surrogates.	No further action necessary
San Francisco common yellowthroat *Geothlypis trichas sinuosa*	BCC, SSC	Resident of the San Francisco Bay region, in fresh and salt-water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	**No Potential.** No suitable salt-marsh or wetland habitat for this species exists on the Study Area.	No further action necessary
Alameda song sparrow *Melospiza melodia pusillula*	BCC, SSC	Year-round resident of salt marshes bordering the south arm of San Francisco Bay. Inhabits primarily pickleweed marshes; nests placed in marsh vegetation, typically shrubs such as gumplant.	**No Potential.** No salt-marsh habitat exists on the Study Area.	No further action necessary
great blue heron *Ardea herodias*	none (breeding sites protected by CDFW); CDF sensitive	Year-round resident. Nests colonially or semi-colonially in tall trees and on cliffs, also sequested terrestrial substrates. Breeding sites usually in close proximity to foraging areas: marshes, lake margins, tidal flats, and rivers. Forages primarily on fishes and other aquatic prey, also smaller terrestrial vertebrates.	**No Potential.** No aquatic features are present sufficiently close to the Study Area to suggest the establishment of a nesting colony by this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
snowy egret *Egretta thula*	none (breeding sites protected by CDFW)	Year-round resident. Nests colonially, usually in trees, at times in sequestered beds of dense tules. Rookery sites usually situated close to foraging areas: marshes, tidal-flats, streams, wet meadows, and borders of lakes.	**No Potential.** No aquatic features are present sufficiently close to the Study Area to suggest the establishment of a nesting colony by this species.	No further action necessary
AMPHIBIANS				
Santa Cruz black salamander *Aneides flavipunctatus niger*	SSC	Climbing salamanders of the genus *Aneides* frequent damp woodlands and are usually found hiding under various debris (i.e. bark, woodrat nests, logs). The Santa Cruz black salamander exists south of the San Francisco Bay and was only recently recognized as a separate and protected species. Santa Cruz black salamander is highly sedentary, preferring to stay hidden under riparian debris.	**No Potential.** The Study Area is outside the known breeding range of this species, and does not possess wetland habitat	No further action necessary
California tiger salamander *Ambystoma californiense*	FE/FT, ST, RP	Populations in Santa Barbara and Sonoma counties currently listed as endangered; threatened in remainder of range. Inhabits grassland, oak woodland, ruderal and seasonal pool habitats. Adults are fossorial and utilize mammal burrows and other subterranean refugia. Breeding occurs primarily in vernal pools and other seasonal water features.	**No Potential.** No perennial aquatic habitat or suitable burrows are present on the Study Area to support this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
California giant salamander *Dicamptodon ensatus*	SSC	Occurs in the north-central Coast Ranges. Moist coniferous and mixed forests are typical habitat; also uses woodland and chaparral. Adults are terrestrial and fossorial, breeding in cold, permanent or semi-permanent streams. Larvae usually remain aquatic for over a year.	**No Potential.** No forested habitat exists on the Study Area to support this species.	No further action necessary
California red-legged frog *Rana draytonii*	FT, SSC, RP	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	**No Potential.** The Study Area is outside the known breeding range for this species.	No further action necessary
foothill yellow-legged frog *Rana boylii*	SC, SSC	Found in or adjacent to rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates.	**No Potential.** The Study Area is outside the known breeding range for this species.	No further action necessary
REPTILES				

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
Pacific (western) pond turtle *Actinemys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying.	**No Potential.** No perennial water bodies are present on the Study Area.	No further action necessary
green sea turtle *Chelonia mydas*	FT (west coast populations)	Found in fairly shallow waters inside reefs, bays and inlets with marine grass and algae. Open beaches with a sloping platform and minimal disturbance are required for nesting. This species exhibits high site fidelity.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
Alameda whipsnake *Masticophis lateralis euryxanthus*	FT, ST	Inhabits chaparral and foothill-hardwood habitats in the eastern Bay Area. Prefers south-facing slopes and ravines with rock outcroppings where shrubs form a vegetative mosaic with oak trees and grasses and small mammal burrows provide basking and refuge.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary
San Francisco garter snake *Thamnophis sirtalis tetrataenia*	FE, SE, CFP, RP	Vicinity of freshwater marshes, ponds and slow moving streams in San Mateo County and extreme northern Santa Cruz County. Prefers dense cover and water depths of at least one foot. Upland areas near water are also very important.	**No Potential.** No aquatic habitat with potential to support this species is present within or in the vicinity of the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
FISHES				
Delta smelt *Hypomesus transpacificus*	FT, SE, RP	Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
longfin smelt *Spirinchus thaleichthys*	FC, ST, SSC, RP	Euryhaline, nektonic and anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15 to 30 ppt, but can be found in completely freshwater to almost pure seawater.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
tidewater goby *Eucyclogobius newberryi*	FE, SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches; requires fairly still but not stagnant water and high oxygen levels.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
INVERTEBRATES				

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
vernal pool fairy shrimp *Branchinecta lynchi*	FT, SSI, RP	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	**No Potential.** No vernal pool habitats exist on the Study Area.	No further action necessary
vernal pool tadpole shrimp *Lepidurus packardi*	FE, SSI, RP	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	**No Potential.** No vernal pool habitats exist on the Study Area.	No further action necessary
California linderiella *Linderiella occidentalis*	SSI	Seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and TDS.	**No Potential.** No seasonal pools exist on the Study Area.	No further action necessary
San Bruno elfin butterfly *Callophrys mossii bayensis*	FE, SSI	Limited to the vicinity of San Bruno Mountain, San Mateo County. Colonies are located on in rocky outcrops and cliffs in coastal scrub habitat on steep, north-facing slopes within the fog belt. Species range is tied to the distribution of the larval host plant, Sedum spathulifolium.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
Bay checkerspot butterfly *Euphydryas editha bayensis*	FT, SSI, RP	Restricted to native grasslands on outcrops of serpentine soil in the vicinity of San Francisco Bay. *Plantago erecta* is the primary host plant; *Orthocarpus densiflorus* and *O. purpurscens* are the secondary host plants.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary
Mission blue butterfly *Icaricia icarioides missionensis*	FE, SSI, RP	Inhabits grasslands and coastal chaparral of the San Francisco peninsula and southern Marin County, but mostly found on San Bruno Mountain. Three larval host plants: *Lupinus albifrons*, *L. variicolor*, and *L. formosus*, of which *L. albifrons* is favored.	**No Potential.** No grassland or chaparral habitat exists on the Study Area to support this species or its host plants.	No further action necessary
Myrtle's silverspot butterfly *Speyeria zerene myrtleae*	FE, RP, SSI	Restricted to the fog belt of northern Marin and southernmost Sonoma County, including the Point Reyes peninsula; extirpated from coastal San Mateo County. Occurs in coastal prairie, dunes, and grassland. Larval foodplant is typically *Viola adunca*. Adult flight season may range from late June to early September.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary

*** Key to status codes:**

FE	Federal Endangered
FT	Federal Threatened
FC	Federal Candidate
BCC	USFWS Birds of Conservation Concern
SE	State Endangered
ST	State Threatened
SC	State Candidate

SSC	CDFW Species of Special Concern
CFP	CDFW Fully Protected Animal
WBWG	Western Bat Working Group High or Medium Priority Species
Rank 1A	CNPS Rank 1A: Plants presumed extinct in California
Rank 1B	CNPS Rank 1B: Plants rare, threatened or endangered in California and elsewhere
Rank 2A	CNPS Rank 2A: Plants presumed extirpated in California, but more common elsewhere
Rank 2B	CNPS Rank 2B: Plants rare, threatened, or endangered in California, but more common elsewhere

Potential to Occur:
No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.

Results and Recommendations:
Present. Species was observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.
Not Present. Species is assumed to not be present due to a lack of key habitat components.
Not Observed. Species was not observed during surveys.

PROJECT NAME: 1125 O'BRIEN DRIVE
CONSISTS OF TWO PARCELS

PARCEL 1 - DEVELOPMENT LOT
- CONSISTS OF MERGED PROPERTY LOTS 1105, 1135-1165 O'BRIEN DRIVE PLUS A DRAINAGE DITCH
- EXISTING BUILDINGS:

1105 & 1135-1165 O'BRIEN
GROSS FLOOR AREA: 38,688 SF (.40 F.A.R.)
BLDGS. HEIGHT: 20 FT
(E) PARKING SPACES: 101
(E) PARKING RATIO: (3.3 / 1,000 SF)
- PROPOSED: 5-STORY BUILDING AND SURFACE PARKING

PARCEL 2 - ACCESSORY PARKING LOT
- CONSISTS OF 1 CASEY COURT PROPERTY
- EXISTING BUILDING:

1 CASEY CT
GROSS FLOOR AREA: 20,955 SF (APPROX)
BLDG HEIGHT: 19.2 FT
(E) PARKING SPACES: 44
(E) PARKING RATIO: (2 / 1,000 SF)
- PROPOSED: SURFACE PARKING

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
1	Modesto ash (*Fraxinus v.* 'Modesto')	22	35	50%	30%	Poor	Low	X	X
	Comments: Base/root crown grows against and 1-inch over adjacent curb. Curb and gutter are cracked and pushed slightly towards street. Partly beneath high-voltage wires and crown is reduced; wounds throughout are decaying. Highly elevated canopy, and multiple leaders originate at 9' high. Between two dominant leaders is a distinct seam indicative of a narrow crack where slight separation has occurred.								
2	Bradford flowering pear (*Pyrus c.* 'Bradford')	<15	35	60%	30%	Poor	Low		
	Comments: Crown reduced in past. Multi-leaders at 7' high and form weak attachments. Leggy form and a broad spreading crown. Infected with fireblight.								
3	Bradford flowering pear (*Pyrus c.* 'Bradford')	13	30	60%	30%	Poor	Low		
	Comments: Crown reduced in past. Narrow form and multiple leaders begin at 8' high, numerous forming weak attachments. Large prior, decaying cut at 5' high. Infected with fireblight.								
4	Modesto ash (*Fraxinus v.* 'Modesto')	18	30	60%	20%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Base is 6" from back of curb, and has a pronounced surface root mass towards curb and gutter. Multiple leaders begin 6.5' high, and there is large decay column from this point down to soil grade. Buried root collar upslope. Highly elevated canopy.								
5	Modesto ash (*Fraxinus v.* 'Modesto')	22	35	60%	30%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Base is near curb. Multiple leaders begin at 5' high. Buried root collar upslope.								
6	Coast redwood (*Sequoia sempervirens*)	35	80	60%	70%	Fair	Good	X	
	Comments: Curb is raised 9' from trunk. Water meter is 6' feet from trunk. Canopy grows to 5.5' high. Lower trunk leans east, then at ~35', sweeps towards vertical.								

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
7	Coast redwood (*Sequoia sempervirens*)	29	95	80%	40%	Fair	Moderate	X	
	Comments: Formed by two trunks which form a union up to 4' high. Full crown, canopy nearing 8' high.								
8	Modesto ash (*Fraxinus v.* 'Modesto')	17	45	50%	30%	Poor	Low	X	X
	Comments: Grows alongside, and has a nearly one sided canopy away from #6 and 7. Crown was reduced some time ago, and canopy is highly elevated. Large decaying basal wound. Buried root collar.								
9	Aristocrat flowering pear (*Pyrus c.* 'Aristocrat')	7	20	60%	30%	Poor	Low		
	Comments: Within courtyard. Leans NW towards building. Low crown over south side. Base is flat along NE side, likely from a girdling root and/or old wound.								
10	Aristocrat flowering pear (*Pyrus c.* 'Aristocrat')	10	30	60%	70%	Fair	Moderate		
	Comments: Within courtyard. Small girdling root, and has a slight SW lean. Infected with fireblight.								
11	Purple-leaf plum (*Prunus c.* 'Krauter Vesuvius')	6	15	70%	40%	Fair	Moderate		
	Comments: Adjacent to courtyard. Low-branching structure begins at 3' high. Leans east.								
12	Modesto ash (*Fraxinus v.* 'Modesto')	18	40	50%	20%	Poor	Low	X	X
	Comments: Mostly beneath high-voltage wires, and section of crown is reduced. Highly elevated canopy. Multiple leaders at 5' high. Has a large basal wound. Buried root collar. Adjacent curb is 14" away from base and is cracked/pushed out. History of limb failure at multiple locations, all with decaying wounds.								
13	Modesto ash (*Fraxinus v.* 'Modesto')	18	40	50%	30%	Poor	Low	X	X
	Comments: Mostly beneath high-voltage wires, and crown is reduced. Adjacent curb is 18" from base and raised. Has a highly elevated canopy. Multiple leaders at 6.5' high.								

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
14	Shamel ash (*Fraxinus uhdei*)	19	35	60%	30%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Surface roots radiate 10' east towards NE. Base is at edge of driveway apron, the buttress root growing over concrete by 6". Adjacent curb is cracked and pushed out. Asphalt within lot is rippled from roots. Pronounced buttress root area at an elevation higher than adjacent curb and driveway apron.								
15	Modesto ash (*Fraxinus v.* 'Modesto')	14	35	50%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Buried root collar. Codominant leaders at 8' high. Trunk is at corner of driveway apron and curb, which is 4" away. Large decaying wound 4.5' along the trunk's east side, created from a prior limb failure.								
16	Raywood ash (*Fraxinus a.* 'Raywood')	10	30	40%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Very thin and highly elevated canopy. Curb is within 2' from base. Phone and cable wires through canopy.								
17	Modesto ash (*Fraxinus v.* 'Modesto')	13	35	60%	40%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Buried root collar. Curb is 6" from base. Water meter is <3' from base. Phone and cable routed through canopy.								
18	Raywood ash (*Fraxinus a.* 'Raywood')	9	25	50%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and was extensively pruned sometime ago. Curb is 6" from base. Leggy remaining form. Phone and cable wires routed through canopy.								
19	Columbia London plane (*Platanus × h.* 'Columbia')	10	35	70%	40%	Fair	Moderate		X
	Comments: Beneath high-voltage wires and leans towards street. Buttress root 6" from cracked curb. Crown is not yet reduced, but will inevitably as foliage nears wires. Phone and cable routed through canopy.

TITLE EXCEPTION NOTES

NOTE: THE FOLLOWING ITEMS CONTAINED IN SCHEDULE "B" OF THE HEREON REFERENCED PRELIMINARY TITLE REPORT ARE NOT A MATTER OF SURVEY: 1, 2, 3 & 7.

(4) THE EFFECTS OF AN EASEMENT FOR ELECTRIC ENERGY AND COMMUNICATION SERVICES AND INCIDENTAL PURPOSES, RECORDED NOVEMBER 03, 1962 AS INSTRUMENT NO. 67017U IN BOOK 4198, PAGE 651 OF OFFICIAL RECORDS.
IN FAVOR OF: PACIFIC GAS AND ELECTRIC COMPANY AND PACIFIC TELEPHONE AND TELEGRAPH COMPANY
(THE LOCATION OF SAID EASEMENT HAS BEEN PLOTTED HEREON)

(5) THE FACT THAT THE LAND LIES WITHIN THE BOUNDARIES OF THE ORDINANCE ADOPTING COMMUNITY DEVELOPMENT PLAN FOR THE LAS PULGAS PROJECT AREA AND MAKING CERTAIN FINDINGS AND DETERMINATIONS PURSUANT TO THE COMMUNITY REDEVELOPMENT LAW OF THE STATE OF CALIFORNIA REDEVELOPMENT PROJECT AREA, AS DISCLOSED BY THE DOCUMENT RECORDED DECEMBER 21, 1981 AS INSTRUMENT NO. 19388-AT OF OFFICIAL RECORDS.

DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED SEPTEMBER 11, 1991 AS INSTRUMENT NO. 91120049 OF OFFICIAL RECORDS.
DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED SEPTEMBER 11, 1991 AS INSTRUMENT NO. 91120050 OF OFFICIAL RECORDS.
DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED AUGUST 10, 1995 AS INSTRUMENT NO. 95081846 OF OFFICIAL RECORDS.
(BLANKET IN NATURE)

(6) THE EFFECTS OF AN EASEMENT SHOWN OR DEDICATED ON THE MAP FILED OR RECORDED MAY 24, 1967 AND ON FILE IN BOOK 3, PAGE 3, OF PARCEL MAPS.
FOR: DRAINAGE CANAL AND INCIDENTAL PURPOSES.
(THE LOCATION OF SAID EASEMENT HAS BEEN PLOTTED HEREON)

VICINITY MAP

NOT TO SCALE

GENERAL NOTES

1. ALL DISTANCES SHOWN HEREON ARE IN FEET AND DECIMALS THEREOF.
2. APN: 055-433-350
3. THIS SURVEY WAS PREPARED FROM INFORMATION FURNISHED IN A PRELIMINARY TITLE REPORT PREPARED BY FIRST AMERICAN TITLE INSURANCE COMPANY DATED AS OF JANUARY 11, 2019, FILE NUMBER NCS-944278-SM, FURNISHED TO KIER & WRIGHT CIVIL ENGINEERS & SURVEYORS, INC BY TARLTON PROPERTIES, INC. ON JANUARY 30, 2019. NO LIABILITY IS ASSUMED FOR MATTERS OF RECORD NOT STATED IN SAID REPORT THAT MAY AFFECT THE TITLE LINES, OR EXCEPTIONS, OR EASEMENTS OF THE PROPERTY.
4. BASIS OF BEARINGS:
   THE BEARING OF NORTH 89°11'17" EAST TAKEN ON THE CENTERLINE OF O'BRIEN DRIVE AS SHOWN ON THAT CERTAIN FINAL MAP OF MENLO BUSINESS PARK FILED FOR RECORD ON APRIL 9, 1984 IN BOOK 111 OF MAPS AT PAGES 50-52, SAN MATEO COUNTY RECORDS WAS TAKEN AS THE BASIS OF ALL BEARINGS SHOWN HEREON.
5. PHYSICAL ITEMS SHOWN ON THIS SURVEY ARE LIMITED TO THOSE ITEMS VISIBLE AS OF THE DATE OF THIS SURVEY. SUBSURFACE STRUCTURES, IF ANY, ARE NOT SHOWN. SAID SUBSURFACE OBJECTS MAY INCLUDE, BUT ARE NOT LIMITED TO, CONCRETE FOOTINGS, SLABS, SHORING, STRUCTURAL PILES, UTILITY VAULTS, PIPING, UNDERGROUND TANKS, AND ANY OTHER SUBSURFACE STRUCTURES NOT REVEALED BY A SURFACE INSPECTION.

2016 ALTA/NSPS TABLE A OPTIONAL SURVEY ITEMS

2 THE SUBJECT PROPERTY ADDRESS IS KNOWN AS: VACANT LAND (NO ADDRESS)

3 THE SUBJECT PROPERTY IS SHOWN ON THE FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) FLOOD INSURANCE RATE MAP (FIRM) FOR SAN MATEO COUNTY, CALIFORNIA, MAP NUMBER 06081C 0307 E FOR COMMUNITY NUMBER 060321, WITH AN EFFECTIVE DATE OF OCTOBER 16, 2012, AS BEING LOCATED IN FLOOD ZONE "AE".

AREAS OF THE 1% ANNUAL FLOOD (100-YEAR FLOOD), ALSO KNOW AS THE BASE FLOOD, IS THE FLOOD THAT HAS A 1% CHANCE OF BEING EQUALED OR EXCEEDED IN ANY GIVEN YEAR; BASE FLOOD ELEVATION DETERMINED AS 11.7 FEET.

INFORMATION WAS OBTAINED FROM THE FEMA WEBSITE (WWW.FEMA.GOV) ON FEBRUARY 5, 2019.

4 GROSS LAND AREA: AS SHOWN HEREON

6(B) ZONING NOTE: THIS SURVEY MAKES NO EVALUATION AS TO COMPLIANCE WITH ZONING CODES AND/OR ORDINANCES OTHER THAN CURRENT MUNICIPAL BUILDING SETBACK LINE LOCATIONS.

THE SUBJECT PROPERTY IS CURRENTLY ZONED "LS-B"; LIFE SCIENCES-BONUS DISTRICT

THE CURRENT BUILDING SETBACKS FOR THIS ZONING DESIGNATION ARE:
STREET SIDE: 5 FEET
INTERIOR SIDE: 10 FEET
REAR: 10 FEET

MAXIMUM FLOOR AREA RATIO:
BASE LEVEL: 55% PLUS 10% COMMERCIAL
BONUS LEVEL: 125% PLUS 10% COMMERCIAL

MAXIMUM BUILDING HEIGHT:
BASE LEVEL: 35 FEET
BONUS LEVEL: 110 FEET

INFORMATION WAS OBTAINED FROM THE CITY OF MENLO PARK ZONING WEBSITE ON FEBRUARY 6, 2019.

8 SUBSTANTIAL FEATURES OBSERVED IN THE PROCESS OF CONDUCTING THE SURVEY SUCH AS PARKING LOTS, BILLBOARDS, SIGNS, SWIMMING POOLS, LANDSCAPED AREAS, ETC. SHOWN HEREON.

9 THERE WERE NO PARKING STALLS OBSERVED WITHIN THE BOUNDARY OF THE SUBJECT PROPERTY DURING THE COURSE OF THIS SURVEY.

13 NAMES OF ADJOINING OWNERS OF PLATTED LANDS ACCORDING TO CURRENT PUBLIC RECORDS. SHOWN HEREON.

14 DISTANCE TO THE NEAREST INTERSECTING STREET AS SPECIFIED BY THE CLIENT. SHOWN HEREON.

16 AS OF THE DATE OF THIS SURVEY, THERE IS OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS.

17 AS OF THE DATE OF THIS SURVEY, THERE ARE NO PROPOSED CHANGES IN STREET RIGHT OF WAY LINES, AS AVAILABLE FROM THE CONTROLLING JURISDICTION. THERE IS NO OBSERVED EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIRS.

LEGAL DESCRIPTION

Real property in the City of Menlo Park, County of San Mateo, State of California, described as follows:

ALL THAT CERTAIN STRIP OF LAND BEING APPROXIMATELY 20' WIDE X 524' IN LENGTH, AND DESIGNATED AS "LANDS OF KAVANAUGH" AS SHOWN ON THAT CERTAIN MAP ENTITLED, "PARCEL MAP SUBDIVISION OF A PORTION OF THE LANDS OF KAVANAUGH (BOOK 2721 O.R. 180) MENLO PARK, SAN MATEO COUNTY, CALIFORNIA", WHICH MAP WAS FILED IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SAN MATEO, STATE OF CALIFORNIA ON MAY 24, 1967 IN BOOK 3 OF PARCEL MAPS, PAGE 3, SAID STRIP OF LAND ALSO IDENTIFIED THEREON AS "20' STRIP FOR DRAINAGE CANAL" LYING ADJACENT TO AND WESTERLY OF, "PARCEL 1" ON SAID PARCEL MAP AND THE LANDS IDENTIFIED AS "RECORD OF SURVEY (VOL. 5 OF L.L.S. MAPS, PAGE 12)" ON SAID PARCEL MAP.

SURVEYOR'S CERTIFICATE

TO: TARLTON PROPERTIES, INC.
AND: FIRST AMERICAN TITLE INSURANCE COMPANY

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE 2016 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS, AND INCLUDES 2, 3, 4, 6(b), 8, 13, 14, 16 AND 17 OF TABLE A THEREOF. THE FIELD WORK WAS COMPLETED ON FEBRUARY 7, 2019.

APPENDIX D

OBSERVED SPECIES LIST

[this page left blank intentionally]

Appendix D. Plant and wildlife species observed within the Study Area during the August 1, 2019 and October 6, 2020 site visits.

Plants						
Scientific Name	**Common Name**	**Origin**	**Form**	**Rarity Status[1]**	**CAL-IPC Status[2]**	**Wetland Status (AW 2016)[3]**
Avena barbata	Slim oat	non-native (invasive)	annual, perennial grass		Moderate	
Callistemon sp.						
Cinnamomum camphora	Camphor tree	non-native	tree			UPL
Cyperus eragrostis	Tall cyperus	native	perennial grasslike herb			FACW
Festuca perennis	Italian rye grass	non-native (invasive)	annual, perennial grass		Moderate	FAC
Foeniculum vulgare	Fennel	non-native (invasive)	perennial herb		High	
Fraxinus sp.						
Hedera helix	English ivy	non-native (invasive)	vine, shrub		High	FACU
Helminthotheca echioides	Bristly ox-tongue	non-native (invasive)	annual, perennial herb		Limited	FAC
Juglans hindsii	Northern California black walnut	native	tree			FAC
Juncus sp.						
Lactuca serriola	Prickly lettuce	non-native	annual herb			FACU
Ligustrum japonicum	Japanese privet	non-native	tree			
Muhlenbergia rigens	Deergrass	native	perennial grass			FAC
Platanus x *hispanica*	London plane tree	non-native	tree			
Quercus agrifolia	Coast live oak	native	tree			
Rumex crispus	Curly dock	non-native (invasive)	perennial herb		Limited	FAC
Sequoia sempervirens	Coast redwood	native	tree			
Yucca gigantea	Giant yucca	non-native	tree			

Wildlife		
Scientific Name	**Common Name**	**Status**
Corvus brachyrhynchos	American crow	None
Haemorhous mexicanus	House finch	None

Junco hyemalis	Dark-eyed junco	None
Mimus polyglottos	Northern mockingbird	None
Zenaida macroura	Mourning dove	None
Zonotrichia leucophrys	White-crowned sparrow	None

- All species identified using the *Jepson eFlora* [Jepson Flora Project (eds.) 2019]; nomenclature follows *Jepson eFlora* [Jepson Flora Project (eds.) 2019]

[1]Rarity Status: The CNPS Inventory of Rare and Endangered Plants (CNPS 2019)

FE:	Federal Endangered
FT:	Federal Threatened
SE:	State Endangered
ST:	State Threatened
SR:	State Rare
Rank 1A:	Plants presumed extinct in California
Rank 1B:	Plants rare, threatened, or endangered in California and elsewhere
Rank 2:	Plants rare, threatened, or endangered in California, but more common elsewhere
Rank 3:	Plants about which we need more information – a review list
Rank 4:	Plants of limited distribution – a watch list

[2]Invasive Status: California Invasive Plant Inventory (Cal-IPC 2019)

High:	Severe ecological impacts; high rates of dispersal and establishment; most are widely distributed ecologically.
Moderate:	Substantial and apparent ecological impacts; moderate-high rates of dispersal, establishment dependent on disturbance; limited-moderate distribution ecologically
Limited:	Minor or not well documented ecological impacts; low-moderate rate of invasiveness; limited distribution ecologically
Assessed:	Assessed by Cal-IPC and determined to not be an existing current threat

[3]Wetland Status: National List of Plant Species that Occur in Wetlands, California – Arid West (Lichvar et al. 2016)

OBL:	Almost always found in wetlands;
FACW:	Usually found in wetlands
FAC:	Equally found in wetlands and uplands
FACU:	Usually not found in wetlands
UPL:	Almost never found in wetlands
NL:	Not listed, assumed almost never found in wetlands
NI:	No information; not factored during wetland delineation

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The property at 1135-1165 O'Brien Drive contains two one-story, tilt-up concrete, utilitarian-style office and warehouse buildings located within the Menlo Park Labs Campus, which is comprised of several properties that were originally part of the Kavanaugh Industrial Park, in the City of Menlo Park. The subject buildings are conjoined at their east and west facades and together occupy an irregular footprint. The west building is known as 1135 O'Brien Drive and the east building is known as 1165 O'Brien Drive. Both buildings are clad in stucco and are minimally decorated.

The south (primary) façade of 1135 O'Brien Drive is comprised of nine (partially-visible) structural bays separated by square support columns. The façade features three entrances, consisting of three fully-glazed aluminum-framed doors surrounded by aluminum-framed window assemblies. Each entrance is situated beneath concrete awnings and flanked by a large rectangular pillar that extends from the ground to a point above the building's roofline. Concrete panels have been applied as cladding to the façade above the window-line. The east and west facades of 1135 O'Brien are nearly identical; a row of vertically-oriented windows punctuate the upper half of both facades. Vertical scoring is present at regular intervals. The north façade of 1135 O'Brien Drive faces a private parking lot and is not visible from the public right-of-way. (See continuation sheet.)

B1. Historic Name: Jupiter Engineering
B2. Common Name: 1135-1165 O'Brien Drive
B3. Original Use: Office/Warehouse B4. Present Use: Office/Warehouse
***B5. Architectural Style:** Mid-Century Modern/Vernacular
***B6. Construction History:** (Construction date, alteration, and date of alterations)

An original building permit was not located at the Melo Park Building Division for either 1135 O'Brien Drive or 1165 O'Brien Drive, however an alteration permit dated April 10, 1964 was located for 1165 O'Brien Drive, indicating the building had been constructed by that date. An aerial photograph indicates that 1135 O'Brien was constructed by January 2, 1964 (UC Santa Barbara 1964). The architect and builder for both buildings are unknown. Subsequent building permits indicate that 1165 O'Brien Drive received a new roof in 1983 and that new exterior lighting was added in 2008. Architectural plans obtained from DES Architects / Engineers, in conjunction with historic Google Streetview images from 2007, indicate that substantial alterations were made to the façade of both 1135 O'Brien Drive and 1165 O'Brien Drive circa 2008. Alterations made at this time included: the removal or concealment of decorative cladding above the building's north and east entrances, the addition of new window openings on the building's south and east facades, and the addition of rectangular buttresses adjacent the building's north and east entrances.

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

(Sketch Map with north arrow required.) N

***P3a. Description (continued):**

The east (primary) façade of 1165 O'Brien Drive is similar in appearance to the south façade of 1135 O'Brien Drive. It features a single entrance consisting of a pair of fully-glazed aluminum-framed doors within an aluminum-framed window assembly. This entrance is situated beneath a concrete awning and flanked by a rectangular pillar. The lower half of this façade is punctuated by fixed, vertically-oriented windows; concrete panels have been applied as cladding to the façade above the window-line . The south façade of 1165 O'Brien drive features a single entrance consisting of a single, fully-glazed aluminum-framed door assembly within an aluminum-framed window assembly set beneath a concrete awning. A second concrete awning on this façade shields an aluminum-framed window assembly. The north façade of 1165 O'Brien Drive is identical in overall appearance to the east and west facades of 1135 O'Brien Drive; vertical scoring is present, and a row of vertically-oriented fixed windows punctuate the upper half of the façade. The west façade of 1165 O'Brien Drive faces a private parking lot and is not visible from the public right-of-way.

***B10. Significance (continued):**

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression, and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970), and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesman Journal* 1974). The company is no longer extant.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Today 1135-1165 O'Brien Drive is part of the Menlo Park Labs Campus, a collection of properties owned and managed by Tarlton Properties (Tarlton 2020).

Ownership and Occupant History

An original building permit was not located for 1135-1165 O'Brien Drive, however an aerial photograph and a 1964 alterations permit indicate that the buildings were constructed in or prior to 1964. These buildings were part of the Kavanaugh Industrial Park and were likely constructed for Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early resident of Menlo Park (*The Almanac 2011;* West 1983). Available city and county directories were consulted to establish the building's occupant history. The building has had numerous tenants over the years. The first known occupants of the building, starting in 1965, were Jupiter Engineering, Hollywood Radio & Electronics, Fabrecor Inc. Insulating Materials, and Signma Industries. Jupiter Engineering was the longest-running tenant, occupying the building from 1965-1993, however the building included other tenants during this same timeframe. Sigma Industries occupied the building from 1965-1971, and Hollywood Radio & Electronics occupied the building from 1965-1967. In 1994, the building was occupied by L M B Industrial and Universal Plastic Service(s). No occupancy data is available for 1994-1995. Westt Inc. occupied by the building form 1997-2005. From 2000-2003, Michael Cabak, a little-known civil and structural engineer, was listed at the building. Newspaper research suggests Cabak started his career in the early 1960s, forming Cabak and Thorne Associates (also known as Cabak and Associates or simply Cabak Associates) by the late 1960s. The firm appears to have dissolved by the 1980s or 1990s. Spinal Modulation Inc. occupied the building from 2009-2015. Applied Stemcell Inc. occupied the building from 2013-2016. Immutics is the building's only known current tenant. The building has been owned by O'Brien Drive Portfolio LLC since 2007.

National Register of Historic Places/California Register of Historical Resources Evaluation of 1135-1165 O'Brien Drive

1135-1165 O'Brien Drive is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 1135-1165 O'Brien Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The buildings are a typical product of mid-twentieth century suburban industrial office park development, which was a widespread development pattern

throughout the South Bay region during the same period that resulted in the construction of many similar buildings that housed a range of small-scale companies. Research did not find the buildings to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants did not reveal that the buildings fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, 1135-1165 O'Brien Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The original owner of the office and industrial park that contained the building, Clarence Kavanaugh, was a local real estate developer from a prominent Menlo Park family, although research uncovered limited information on Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Research did not reveal any other associations with potentially significant persons. For these reasons, 1135-1165 O'Brien Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The subject building's architect is unknown, and the buildings themselves—tilt-up concrete, utilitarian-style office and warehouse buildings—are typical example of mid-twentieth century industrial office park architecture found in suburban environments throughout the Bay Area. For these reasons, the buildings at 1135-1165 O'Brien Drive are not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the buildings under NRHP Criteria A-D and CRHR Criteria 1-4, 1135-1165 O'Brien Drive is ineligible for individual listing in the NRHP and CRHR. The properties are therefore not historical resources for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The property at 1175-1185 O'Brien Drive contains a one-story, tilt-up concrete, utilitarian-style office and warehouse building located within an office park area that was historically known as the Kavanaugh Industrial Park in the City of Menlo Park. This rectangular-plan building does not fill its entire lot and is set back approximately 50 feet from the lot line at O'Brien Drive. The east (primary), which faces a surface parking lot accessible from O'Brien Drive, is clad in stucco and minimally decorated. The east façade features 5 structural bays separated by square columns. The lower half of this façade features two aluminum-framed doors set within an aluminum-framed window assembly. A series of fixed aluminum-framed windows punctuate the façade on either side of these doors. Roman brick veneer decorates the façade at the base of the storefront. The façade above the storefront level is decorated with a series of concrete panels that extrude slightly from the façade. The north and south facades of the building are identical and consist of five structural bays punctuated by a series of horizontally-oriented aluminum-framed fixed windows at the ground level and no fenestration above. The building's north and south facades feature five structural bays separated by square columns. Each structural bay is fenestrated by fixed aluminum-framed windows. The building's west façade also consists of five structural bays separated by square columns, however this façade is punctuated by two loading bay doors—one located near the building's northwest corner and the other located near the building's southwest corner.

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

SA few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression, and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970), and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesman Journal* 1974). The company is no longer extant. The original building permit for 1075 O'Brien Drive indicates that, in addition to master planning the project, Johnson & Mape also served in the role of contractor for the building at 1075 O'Brien Drive.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped

until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Ownership and Occupant History

The original building permit indicates that 1175-1185 O'Brien Drive was constructed for Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early resident of Menlo Park (*The Almanac 2011;* West 1983). Available city and county directories were consulted to establish the building's occupant history. The building's first known occupant was Physical Electronic Laboratories, which occupied the building from 1963-1976. The building was also occupied by Iconix Inc Scientific Instrument Manufacturers from 1965-1971. Cal Pipe Co. occupied the building from 1976-1988. Interlog Corporation occupied the building in 1977 but apparently no other year. Rod L Electronics / Sonic Electronics occupied the building from 1979-1981. Dura Spray Foam Inc was the building's longest tenant, occupying the property from 1986 up to the present. Menlo Park Windustrial occupied the building from 1989 until 2003. C S Bio Co. is a current tenant, however city directory research did not reveal when this company's tenancy began. The building has been owned by CCS Management LLC since 2017.

National Register of Historic Places/California Register of Historical Resources Evaluation of 1175-1185 O'Brien Drive

1175-1185 O'Brien Drive is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 1175-1185 O'Brien Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The building is a typical product of mid-twentieth century suburban industrial office park development, which was a widespread development pattern throughout the South Bay region during the same period that resulted in the construction of many similar buildings that housed a range of small-scale companies. Research did not find the building to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, the building at 1175-1185 O'Brien Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The original owner of the office and industrial park that contained the building, Clarence Kavanaugh, was a local real estate developer from a prominent Menlo Park family, although research uncovered limited information on Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Research did not reveal any other associations with potentially significant persons. For these reasons, 1175-1185 O'Brien Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The subject building's architect is unknown, and the building itself—a tilt-up concrete, utilitarian-style office and warehouse building—is a typical example of mid-twentieth century industrial office park architecture found in suburban environments throughout the Bay Area. For these reasons, the building at 1175-1185 O'Brien Drive is not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 1175-1185 O'Brien Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The building at 20 Kelly Court is a two- to three-story building containing offices and research and development facilities located at the north end of the Kelly Court cul-de-sac in Menlo Park, California. It is located within an office park setting that was historically known as the Kavanaugh Industrial Park. The parcel containing 20 Kelly Court is adjacent to other warehouse and commercial office buildings; the Hetch-Hetchy right of way runs north of the parcel. The parcel contains vehicular drives and surface parking that surround the building to the west, north, and east. The building's façades are lined by planting beds containing decorative landscaping of grasses, shrubs, and immature trees.

Original building permits could not be accessed during the preparation of this DPR form due to COVID-19 restrictions. The building at 20 Kelly Court was originally constructed in 1962 as a square-plan building with tilt-up concrete exterior walls. By 1980, an 'L'-plan building was constructed immediately east of 20 Kelly Court, within the current boundaries of parcel 055-433-340. Historic aerial photographs reveal that an addition or canopy structure was constructed at the rear of the original 20 Kelly Court building between 1982 and 1991. The adjacent 'L'-plan building was demolished between 2012 and 2014, the year the east addition of the building was completed. The rear addition or canopy of 20 Kelly Court was removed between 2014 and 2016 (NETR 1960, 1968, 1980, 1982, 1991, 2012, 2014).

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

(Sketch Map with north arrow required.)

***P3a. Description (continued):**

The building is composed of two volumes built separately. The original, c.1962 volume forms the western half of the building and is two stories in height, featuring tilt-up concrete exterior walls with limited fenestration. The eastern half of the building is a three-story, contemporary-style addition constructed in 2014. The simple and utilitarian Modernist-influenced style of the original building contrasts with the newer east addition, which has extensive glazing at the primary (south) façade and is composed of large cubic masses. The most visually prominent of these masses is located at the building's southeast corner and is offset 45 degrees from the primary axis of the building's generally rectangular plan. The building's component roof planes are flat and feature various types of mechanical equipment that support building tenant operations.

At the primary façade, the western (original) volume features five structural bays separated by slightly recessed, vertical piers. The main entrance to this half of the building is located within the second-to-westernmost bay, is in an aluminum frame, and holds a paired, fully glazed door surrounded by plate glass windows. A simple, non-historic framing feature is attached to the façade surrounding the entrance, which is also flanked by two fixed, rectangular windows. The western half of the primary façade also features a downspout and a painted logo that identifies the building's current tenant. The eastern half of the primary façade, corresponding to the 2014 addition, continues the plane of the original building via an extended-height one-story base that is clad in a grid of stuccoed panels. Above this base, the façade has stepped massing and is fully glazed within an aluminum grid. The offset mass at the building's southeast corner similarly features an aluminum grid of window frames, which is integrated with a secondary grid of projecting metal fins. The southeast face of this mass contains an entrance composed of a single fully glazed door underneath a projecting canopy.

The west and north (rear) façades are not visible from the public right-of-way. Based upon aerial images accessed via Google Maps, the west façade (belonging entirely to the 2014 addition) features an irregular arrangement of rectangular masses and window arrangements. One projection near the north end of the façade integrates balconies at the second and third stories. The rear façade is similarly irregular in design and, at its center, features a projecting volume with angled footprint. To the rear of the original building volume is a fenced utility enclosure with a broad vehicular opening facing north. The west façade, belonging to the original building volume, contains five structural bays. One door is located within the southernmost bay. (Google 2021)

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford

Research Institute was established in 1946 (known as SRI International by 1970) and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesman Journal* 1974). The company is no longer extant.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought-after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Ownership and Occupant History

The original building permit for the 1962 construction of 20 Kelly Court was not available for review during the preparation of this DPR form. However, it is likely that the building was constructed for Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early resident of Menlo Park: the building is located within the Kavanaugh Industrial Park, and newspapers and permit records indicate Kavanaugh constructed the neighboring buildings at 10 Kelly Court and 1075 O'Brien Drive (*The Almanac* 2011*;* West 1983; *The Times* 1968:72; City of Menlo Park Building Division 1959). Due to restrictions as a result of the COVID-19 pandemic during the preparation of this DPR form, investigators were not able to access the full series of city directories held by local libraries, but rather identified past tenants and owners of the building using select city and county directories available through Ancestry.com.

The earliest identified tenant of 20 Kelly Court, and likely the original tenant, was the Humphreys Leather Goods Company, first listed at this address in the Menlo Park city directory published in 1963, the year after the building's construction (R.L. Polk & Co. 1963:66). Humphreys Leather Goods was a Chicago-based manufacturer of leather products, particularly men's belts. The company had a presence in Palo Alto prior to the construction of 20 Kelly Court and was a California supplier of Sears, Roebuck and Company (*The Times* 1961:12). In the 1970s, the company touted itself as "probably the largest manufacturer of mens [*sic*] leather belts in the country" (*St. Louis Post-Dispatch* 1972:82), and its Menlo Park location at 20 Kelly Court appears to have been a regional manufacturing facility that supported a nationwide supply chain. Humphreys Leather Goods remained in the building at 20 Kelly Court until at least 1971, but city directories list the building as vacant in 1973 (R.L. Polk & Co. 1971:62; R.L. Polk & Co. 1973:64). The abandonment of 20 Kelly Court corresponds to the company's sale to the Scott & Fetzer Company in 1972 (*The Boston Globe* 1972:24).

The subsequent identified occupant of 20 Kelly Court was L & R Box Company, as listed in the 1977 Menlo Park city directory; the following year, the city directory identified the occupant as Parsons Engineering Inc., who utilized the building as a plant (R.L. Polk & Co. 1977:81; R.L. Polk & Co. 1978:81). Newspaper research did not uncover any details on these tenants, and subsequent city directories are not available. However, auction announcements published in 1992 editions of *The San Francisco Examiner* identified the building's tenant at that time as Electrochimica, a machine shop (*The San Francisco Examiner* 1992:B-6).

The building's current owner is CCS Management, LLC, and its occupant is CSBio, a manufacturer of peptides and peptide synthesizers that utilizes 20 Kelly Court as a production facility (County of San Mateo 2021; CSBio 2021).

National Register of Historic Places/California Register of Historical Resources Evaluation of 20 Kelly Court
20 Kelly Court is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 20 Kelly Court under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The building's first identified tenant, the Humphreys Leather Goods Company, occupied 20 Kelly Court beginning upon the completion of the building in 1962 or soon afterward. Humphreys Leather Goods occupied the building for approximately a decade, utilizing it as a production facility or warehouse supporting the larger company's national sales network. While the building contributed to Humphreys Leather Goods' high-volume production of men's leather belts, the building appears to have been a regional outpost of the company, which was based in Chicago. The production and sale of clothing items is not an industry that propelled Menlo Park to regional or national attention during the 1960s and 1970s, and subsequent tenants do not appear to have been economically influential in the Bay Area. Rather, the building is unremarkable in the context of mid-twentieth century suburban industrial office park development; the Kavanaugh Industrial Park was representative of a widespread pattern throughout the South Bay region during the same period that resulted in the construction of many similar developments containing a range of small-scale companies and ancillary industries. Research did not find the building to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, the building at 20 Kelly Court is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The original owner of the office and industrial park that contained the building, Clarence Kavanaugh, was a local real estate developer from a prominent Menlo Park family, although research uncovered limited information on Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Furthermore, Kavanaugh would have had a limited association with a building in his industrial park such as 20 Kelly Court, which would not directly or meaningfully express achievements in his professional life. Research did not reveal any other associations with potentially significant persons who may have been employed in the subject building. It is likely that any significant person associated with the subject property would have been widely publicized in local newspaper accounts, but newspaper research yielded no such evidence of associations with significant individuals. For these reasons, 20 Kelly Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The original portion of the building is a tilt-up concrete, utilitarian-style warehouse that is a typical example of mid-twentieth century industrial office park architecture found in suburban environments throughout the Bay Area. It is as unremarkable as numerous warehouses within the surrounding Kavanaugh Industrial Park, and it exhibits only the most basic characteristics of the Mid-Century Modern architectural style: rectangular massing, horizontal orientation, and lack of decorative ornament. These elements supported the building's original function as a warehouse rather than contributed to a significant expression of stylistic trends. Furthermore, the large 2014 addition doubled the size of the building's footprint and introduced a stylistically dissimilar volume that also limits its ability to embody the distinctive characteristics of a type, period, or method of construction. Research did not identify the building's architect or designer, but its simple and utilitarian design does not suggest the innovative point of view of a master architect or design firm. For these reasons, the building at 20 Kelly Court lacks high artistic merit and is not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 20 Kelly Court is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The property at 1075 O'Brien Drive contains a one-story, tilt-up concrete, utilitarian-style office and warehouse building located within an office park setting that was historically known as the Kavanaugh Industrial Park. This rectangular-plan building does not fill its entire lot and is set back approximately 60 feet from the lot line at O'Brien Drive and approximately 20 feet from Kelly Court. Both the south (primary) façade and west facade face surface parking lots. The south façade is comprised of five structural bays separated by square support columns. The middle of these bays contains three vertical pre-cast panels featuring an integral pebble mosaic. The four structural bays on either side of these mosaic panels are slightly recessed and divided horizontally by concrete awnings. Below these awnings, the façade is clad in roman brick veneer; above these awnings the façade is clad in stucco. A fully-glazed aluminum-framed door is located near the building's southeast corner, and a solid door is located near the building's southeast corner. The doorway at the southwest corner is part of a larger assembly featuring two large aluminum-framed windows. The building's east and west facades are nearly identical, featuring a row of fixed aluminum-framed l windows. Aluminum-framed doors are located near the building's northwest and northeast corners (one at each corner). The building's north façade features two loading bay doors—one located near the building's northwest corner and the other located near the building's northeast corner.

***B5. Architectural Style:** Mid-Century Modern/Vernacular
***B6. Construction History:** (Construction date, alteration, and date of alterations)

The building at 1075 O'Brien Drive was constructed circa 1960 per the original building permit (dated December 1, 1959) located at the Menlo Park Building Division. No architect is explicitly listed on the original building permit for 1075 O'Brien, however accompanying documentation, including an original architectural rendering (Figure 4) suggests the building was designed by Simpson & Stratta Consulting Engineers. Supporting documentation further indicates that the builder was Johnson & Mape Construction Co. Subsequent building permits indicate that alterations of an unknown scope were made to the original design in April and May of 1960. Exterior signs, which are no longer extant, were added to the building in June 1960 and December 1961. An unspecified addition to the building—possibly to the rear of the structure—was constructed in November 1962.

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970) and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesmen Journal* 1974). The company is no longer extant. The original building permit for 1075 O'Brien Drive indicates that, in addition to master planning the project, Johnson & Mape also served in the role of contractor for the building at 1075 O'Brien Drive.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped

until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought-after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Simpson & Stratta, the likely architects of the subject building, was formed in 1962 as a partnership between James L. Stratta and Albert T. Simpson. The firm later incorporated and became known as Simpson, Stratta, and Associates, Architects and Engineers (*The Times* 1961). Research did not uncover extensive information on the personnel involved in the firm or its body of work, and the firm is not mentioned in the *San Francisco Modern Architecture and Landscape Design 1935-1970 Historic Context Statement*, which outlines important firms that made contributions to the development of modern architecture in the Bay Area in the late 20th century(San Francisco Planning Department 2010). Available newspaper articles indicate that Simpson, Stratta & Associates was regionally active, and that its projects included the Fairchild Semiconductor Division Planting Facility in Mountain View, the Memorex Corporation Research Facility Building IV in Santa Clara County, and a building with office-warehouse units in the South San Francisco Industrial Park. The Memorex complex, consisting of corporate offices and warehouses, is considered to be Silicon Valley's first corporate campus and one of the first in the nation (Cruz 2013). In 1975, Simpson, Stratta & Associates also designed a manufacturing plant for Digital Telephone Systems in Ignacio, Novato, in Marin County (*Daily Independent Journal* 1974).Generally, Simpson, Stratta & Associates designed utilitarian style light industrial buildings with little to no ornament. Albert T. Simpson died in 1976 at age 53 (*San Francisco Examiner* 1976). Research indicates that Simpson, Stratta, and Associates remained active until at least 1978 (*Napa Valley Register* 1978).

Ownership and Occupant History

The original building permit indicates that 1075 O'Brien was constructed for Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early resident of Menlo Park (*The Almanac 2011;* West 1983). Available city and county directories were consulted to establish the building's occupant history. The first known tenant was Pam-Pro Plastics, which occupied the building from 1961-1973. Roberts Industries occupied the building from c.1976-1981. Impressions Plus occupied the building from c.1986-1990. Environmental Systems / New West Marketing occupied the building from 1994-1996. One Stanley Roberts—who may have been the owner—is listed at the address from 2000-2003. O'Brien Drive Portfolio LLC has owned the property since 2007. No Menlo Park Directories were located for 1974-1975, 1982-1985, and 1991-1992. The building was either vacant or no occupancy data was collected by the city directory for 1993, 1997-1999, and 2004-2012. The address was omitted from Menlo Park City directories from 2014-2017.

National Register of Historic Places/California Register of Historical Resources Evaluation of 1075 O'Brien Drive

1075 O'Brien Drive is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 1075 O'Brien Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The building is a typical product of mid-twentieth century suburban industrial office park development, which was a widespread development pattern throughout the South Bay region during the same period that resulted in the construction of many similar buildings that housed a range of small-scale companies. Research did not find the building to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, the building at 1075 O'Brien Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The original owner of the office and industrial park that contained the building, Clarence Kavanaugh, was a local real estate developer from a prominent Menlo Park family, although research uncovered limited information on Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park

during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Research did not reveal any other associations with potentially significant persons. For these reasons, 1075 O'Brien Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The subject building is a tilt-up concrete, utilitarian-style office and warehouse building—is a typical example of mid-twentieth century industrial office park architecture found in suburban environments throughout the Bay Area. The building's architect was =Simpson & Stratta, a firm that designed numerous Bay Area industrial offices in the mid-to-late 1960s. Simpson & Stratta does not appear meet the threshold of a master architectural design firm; much of their work reflected the popular Modernist-indebted styles of the era without appearing to have made groundbreaking contributions to the field of architectural design, and the subject building is a modest example of the firm's work, especially when compared to its design of Research Facility Building IV for the Memorex Corporation. Furthermore, 1075 O'Brien Drive appears to have been a minor and unexceptional project within the firm's body of work. For these reasons, the building at 1075 O'Brien Drive is not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 1075 O'Brien Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The property at 1105 O'Brien Drive contains a one-story, tilt-up concrete, utilitarian-style office and warehouse building located within the Menlo Park Labs Campus, which is comprised of several properties that were originally part of the Kavanaugh Industrial Park, in the City of Menlo Park. The rectangular-plan building does not fill its entire lot and is set back approximately 50 feet from the lot line at O'Brien Drive. The south (primary) façade faces a surface parking lot accessible from O'Brien Drive. The first floor of this façade, which is clad in Roman brick veneer, is slightly recessed and contains a central main entrance. This entrance consists of a fully-glazed aluminum-frame door surrounded by an aluminum-framed window assembly. A series of metal-braced rectangular columns support the second story of the primary façade. These braces are located in the structural bays flanking the main entrance. The second story of the primary façade is clad in smooth, minimally-decorated stucco and is devoid of fenestration. The east and west façades are identical and are divided by a series of support columns into six structural bays. Both façades feature no fenestration. The rear (north) façade faces a private parking lot and is not visible from the public right-of-way.

The building at 1105 O'Brien Drive was constructed in 1962, per the original building permit located at the Menlo Park Building Division. No architect is listed on this building permit, however the permit indicates the builder was Johnson & Mape Construction Company. Subsequent building permits indicate that in 2008, the building received seismic upgrades, including the addition of the extant braces on the south façade. In 2014 HVAC units were installed on the roof.

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression, and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970), and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesman Journal* 1974). The company is no longer extant.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannaon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

The Menlo Park Labs campus was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannaon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Today, 1105 O'Brien Drive is part of the Menlo Park Labs Campus, a collection of properties owned and managed by Tarlton Properties (Tarlton 2020).

Ownership and Occupant History

The original building permit indicates that 1105 O'Brien was constructed for Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early resident of Menlo Park (*The Almanac 2011;* West 1983). Available city and county directories were consulted to establish the building's occupant history. The first known occupant of the building was Integrated Handling Systems, which occupied the building from 1963 through 1967. In 1965, the building was also shared with two other firms: Industrial Lift Trucks and Pneuma Grip Western. No city or county directories were located for 1968-1970. Sigmaform Corporation used the building as a warehouse in 1971. The building was listed as vacant in 1973. Jupiter Engineering occupied the building in 1976-1977. A firm with the abbreviated title "Production Prftblty" occupied the building from 1978-1980. The address was either not listed in city and county directories or was listed as vacant from 1981 through 1996. Hytec Coolers started occupying the building in 1997 and remained there through 2013. Kateeva Inc. is listed at the address in 2015. The current office/R&D tenant of the building is not known. O'Brien Drive Portfolio LLC has owned the property since 2007.

National Register of Historic Places/California Register of Historical Resources Evaluation of 1105 O'Brien Drive

1105 O'Brien Drive is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 1105 O'Brien Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The building is a typical product of mid-twentieth century suburban industrial office park development, which was a widespread development pattern throughout the South Bay region during the same period that resulted in the construction of many similar buildings that housed a range of small-scale companies. Research did not find the building to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, the building at 1105 O'Brien Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The original owner of the office and industrial park that contained the building, Clarence Kavanaugh, was a local real estate developer from a prominent Menlo Park family, although research uncovered limited information on Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Research did not reveal any other associations with potentially significant persons. For these reasons, 1105 O'Brien Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The subject building's architect is unknown, and the building itself—a tilt-up concrete, utilitarian-style office and warehouse building—is a typical example of mid-twentieth century industrial architecture found in suburban environments throughout the Bay Area. For these reasons, the building at 1105 O'Brien Drive is not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 1105 O'Brien Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The property at 1215 O'Brien Drive contains a one-story, tilt-up concrete, utilitarian-style office and warehouse building that is located on a 0.92-acre lot located within an office park setting that was historically known as the Kavanaugh Industrial Park. The rectangular-plan building is approximately 17,500 square feet in size and clad in stucco. It does not fill its entire legal parcel and is set back from the lot line at O'Brien Drive between 50 and 90 feet. The building is capped by a flat roof. The east (primary) façade faces a paved surface parking lot and is comprised of seven structural bays, two of which feature decorative vertical scoring. Three of the bays feature entrances that are comprised of fully glazed aluminum-framed doors set within aluminum-framed window assemblies. Entrances containing bays alternate with the scored portions of the east façade. Each entrance is situated beneath rectangular concrete canopies. The north and south façades are identical to each other. The upper half of these façades is punctuated by a row of vertically oriented aluminum-framed hung windows. Vertical scoring is present at regular intervals. The rear façade is comprised of nine structural bays devoid of embellishment. Identical fully glazed aluminum-framed doors set within aluminum-framed window assemblies are present at three locations.

B3. Original Use: Office/Warehouse B4. Present Use: Office/Warehouse
***B5. Architectural Style:** Mid-Century Modern/Vernacular
***B6. Construction History:** (Construction date, alteration, and date of alterations)

Research into the building's construction and alterations history was limited by COVID-19 restrictions. No year-built data was available for the property through ParcelQuest; however, historical aerial photographs indicate that the subject building was constructed sometime between May 11, 1965 and May 2, 1968 (ParcelQuest 2021; University of California Santa Barbara 1965; 1968). Research did not reveal an original architect or builder, although Johnson & Mape Construction Company, a firm that specialized in pre-cast concrete construction, is known to have constructed other buildings in the Kavanaugh Industrial Park and may have built the subject building as well. For example, original building permits for 1075 O'Brien Drive and 1105 O'Brien Drive indicate that Johnson & Mape was the construction contractor for those buildings. Research did not yield an original photograph or plans of the building. No major alterations are evident.

Historic Context: Menlo Park
The following historic context is summarized from Placeworks, *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update* (2016) and supplemented from additional sources as cited.

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula, approximately 20 miles south of current-day San Francisco. Oliver and McGlynn gave Menlo Park its name when they established "Menlough", a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

(Sketch Map with north arrow required.) N

***P3a. Description (continued):**

A paved parking lot, which currently functions as a play area, is located adjacent the west façade. Landscaping around the property includes a row of trees along the north and south property lines. The east property line is delineated by a few trees and shrub-like plantings. The hardscape of the east façade has been softened by a variety of shrubs and low trees planted against the side of the building. No landscaping is present to the west of the building.

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970) and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

The Kavanaugh Industrial Park, which included the subject building, is an early example of such industrial development in Menlo Park in the 1950s—a time when many industrial office parks developed across the country. The campus, which was originally known as the Kavanaugh Industrial Park occupies an irregular footprint (Figure 3) and is located east of Willow Drive, between the Belle Haven neighborhood and East Palo Alto. It is named after the park's original developer, Clarence Kavanaugh, a local real-estate developer and great-grandson of Charles Kavanaugh, an early "pioneer" of Menlo Park (*The Almanac 2011;* West 1983).

Plans for the 40-acre development were first announced in 1955 by Johnson & Mape, a firm that specialized in pre-cast concrete construction and master-planned the project (*The Times* 1955). Newspaper research indicates that Johnson & Mape was active from the early 1950s through at least part of the 1970s, eventually opening offices in Bellevue, Washington, and Reno, Nevada (*Reno Gazette-Journal* 1969; *Statesman Journal* 1974). The company is no longer extant. The original building permit for 1215 O'Brien Drive indicates that, in addition to master planning the project, Johnson & Mape also served in the role of contractor for the building at 1215 O'Brien Drive.

Historic aerial photographs indicate that the Kavanaugh Industrial Park was developed in phases over a period of several decades. The development is primarily served by O'Brien Drive, and in the park's early years this roadway extended only as far as its current intersection with Kavanaugh Drive. Thus, development in the early years of the industrial park was limited to the lots adjoining this roadway segment. In 1955 there were just two buildings in the park (985 O'Brien Drive and 1001-1015 O'Brien Drive). A decade later, the park featured more than 20 buildings, which included the subject building. Significant portions of the industrial park remained undeveloped until the 1980s or 1990s, when O'Brien Drive was extended east to University Avenue. By 1993, an additional 14 office or industrial buildings were constructed along this new segment (UC Santa Barbara Digital Aerial Photography Collection 1955-1993).

The Kavanaugh Industrial Park was not the only such development in the Menlo Park area during the post-World War II period. A larger and better-known example is the Bohannon Industrial Office Park, a 200-acre park located a mile to the northwest of the Menlo Parks Lab campus, immediately west of the Belle Haven neighborhood. This office park opened in 1954—a year before Clarence Kavanaugh announced plans for his own.

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought-after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Ownership and Occupant History

Ownership and occupancy research was limited due to COVID-19 restrictions during the preparation of this DPR form. Investigators were not able to access the full series of city directories held by local libraries, but rather identified past tenants and owners of the building using historic newspapers and city and county directories available through Ancestry.com. Some Menlo Park City directories are available online, but only intermittently within the 1939-1978 period.

The property at 1215 O'Brien Drive does not appear in either the 1965 or 1967 city directories (R.L. Polk and Company 1965:99; R.L. Polk and Company 1967:113). The property does, however, appear in the directory for 1971 (the next available year), listing the occupant as Integrated Handling Systems, a distributor of warehouse equipment (R.L. Polk and Company 1971:97). The building continued to be occupied by Integrated Handling Systems until at least 1986 (*San Francisco Examiner* 1986). By 1991, the building was occupied by Storybook Heirlooms, a clothing retailer (*San Francisco Examiner* 1991). The building is currently owned by Sahyoun Menlo Limited Partnership LP and occupied by Wund3rSCHOOL, a preschool program (ParcelQuest 2021; Google Maps 2021). Research yielded no other ownership or occupancy information.

National Register of Historic Places/California Register of Historical Resources Evaluation of 1215 O'Brien Drive

1215 O'Brien Drive is not currently listed in, and has not been previously found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 1215 O'Brien Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

Research did not reveal the subject property to have been associated with any event(s) of historical significance. The building is a typical product of mid-twentieth century suburban industrial office park development, which was a widespread development pattern throughout the South Bay region during the same period that resulted in the construction of many similar buildings that housed a range of small-scale companies. Research did not find the building to have been associated with any other important single events, patterns of events, repeated activities, or historic trends. Research conducted on the building's owners and occupants was limited by COVID-19 restrictions. It is likely that any tenant involved in significant work at the subject property would have been more widely publicized in local newspaper accounts, but newspaper research yielded no evidence that the subject building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. For these reasons, the building at 1215 O'Brien Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

Research did not reveal the subject property to have been associated with the lives of any persons significant at the local, state, or national level. The building is situated within an industrial park originally owned by Clarence Kavanaugh, a local real estate developer from a prominent Menlo Park family. Research uncovered limited information about Kavanaugh and his role as a real estate developer in the South Bay. Kavanaugh does not appear to have been an especially prominent figure in and around Menlo Park during the post-World War II period, and his relatively small-scale development activities do not qualify Kavanaugh as a significant individual. Furthermore, Kavanaugh would have had a limited association with a building in his industrial park such as 1215 O'Brien Drive, which would not directly

or meaningfully express achievements in his professional life. Research did not reveal any other associations with potentially-significant persons. For these reasons, 1215 O'Brien Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

The subject property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it represent the work of a master or possess high artistic value. The building is a tilt-up concrete, utilitarian-style office and warehouse building that utilized a common, undistinguished design and construction methods. It is a typical example of mid-twentieth century industrial office park architecture found in suburban environments throughout the Bay Area. The building's architect is unknown; however, the building's simply and utilitarian design does not appear to reflect the innovative point of view of a master architect or design firm. For these reasons, the building at 1215 O'Brien Drive is not significant under NRHP/CRHR Criterion C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion
Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 1215 O'Brien Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Lead Agency: City of Menlo Park, Planning Division

Project Title: 1125 O'Brien Drive Project

Project Location: 1105, 1135, and 1165 O'Brien Drive and 1 Casey Court
Bayfront Area, City of Menlo Park

INTRODUCTION

The City of Menlo Park (City) is the lead agency for the 1125 O'Brien Drive Project (Proposed Project). Pursuant to the California Environmental Quality Act (CEQA), upon deciding to prepare an environmental impact report (EIR), the City, as lead agency, must issue a Notice of Preparation (NOP) to inform trustee and responsible agencies, as well as the public, of the decision to undertake preparation of an EIR. The purpose of this NOP is to describe the Proposed Project and its potential environmental effects to those who may wish to comment about the scope and content of the information to be considered in the EIR. Agencies should comment on such information as it relates to their statutory responsibilities in connection with the Proposed Project. Agencies and the public are invited to provide comments on the scope and content of the environmental review, the potential mitigation strategies, and the Project alternatives by **5:00 p.m. on Monday, August 30, 2021.**

A description of the Proposed Project, including its location, and a discussion of the environmental factors that may be affected by development of the Proposed Project are provided below. The EIR will evaluate Project-specific and cumulative impacts, identify feasible mitigation measures to reduce or avoid significant Project impacts, and identify a reasonable range of alternatives to the Proposed Project and their comparative environmental effects.

SCOPING MEETING

A public scoping session will be held as part of the Planning Commission meeting on **Monday, August 9, 2021, via Zoom at 7:00 p.m.,** or as near as possible thereafter. In response to the ongoing COVID-19 pandemic, the Planning Commission meeting will be held remotely. To access the online meeting, as well as the meeting agenda, please visit www.menlopark.org/371/Planning-Commission. Trustee and responsible agencies, as well as members of the public, are invited to attend the meeting to learn more about the Proposed Project and provide input on the scope and content of the EIR through public comment. The scoping process is designed to enable the City to determine the scope and content of the EIR at an early stage; identify a range of actions; evaluate potentially significant environmental effects, along with the alternatives and mitigation measures to be analyzed in the EIR; and eliminate any unimportant issues.

SUBMITTING COMMENTS

Comments regarding the appropriate scope of analysis and content for the EIR are invited from all interested parties. Please submit comments to the City no later than **5:00 p.m. on Monday, August 30, 2021**. However, we would appreciate your response at the earliest possible date. Please send your written comments to David Hogan at the address shown below with "1125 O'Brien Drive Project EIR" as the subject. Because of the ongoing COVID-19 pandemic, emailed comments are preferred. Public agencies that provide comments are asked to include the name of a contact person for the agency.

David Hogan, Contract Planner

Phone: 650.330.6702
City Website: menlopark.org
Project Website: https://www.menlopark.org/1419/1105-1165-OBrien-Drive

PROJECT LOCATION AND EXISTING CONDITIONS

The Project site, which is located at 1105, 1135, and 1165 O'Brien Drive and 1 Casey Court, is north of US 101 in the city of Menlo Park (as shown in Figure 1). The site is bounded by the Hetch Hetchy right-of-way to the north, O'Brien Drive to the east and south, and a warehouse to the west adjacent to Kelly Court. In addition, Dura-Foam Roofing and Wund3rSCHOOL/Open Mind School, a small private school, are slightly north of the Project site. Farther north, beyond the campus, are the Dumbarton Rail Corridor (inactive) and State Route 84. Neighborhoods in East Palo Alto are located east and south of the Project site. A Menlo Park neighborhood, Belle Haven, is west of the Project site, across Willow Road. The closest single-family residences are approximately 300 feet from the Project site.

The Project site is zoned Life Science, Bonus (LS-B) per the General Plan and M-2 Zoning Update (referred to as ConnectMenlo).The Development Lot (Parcel 1) includes the existing buildings at 1105, 1135, and 1165 O'Brien Drive. The three single-story buildings, with a maximum height of 20 feet, are located on two properties (Assessor's Parcel Numbers [APNs] 055-433-320 and 055-433-330). Also part of the Development Lot is an adjacent property to the west (APN 055-433-350) with an approximately 20-foot-wide drainage ditch that runs from storm drains in East Palo Alto. In total, the Development Lot has a lot area of 2.44 acres (106,355 square feet [sf]). Two of the existing office/research-and-development (R&D) buildings have a total area of approximately 26,911 gross square feet (gsf); the existing office/warehouse building has a total area of approximately 12,000 gsf, resulting in a total floor

area ratio (FAR) of approximately 37 percent across the three buildings. The buildings are surrounded by surface parking lots with 98 uncovered stalls. Minimal decorative landscaping is included at the front entries to the buildings or along the O'Brien Drive frontage. In addition, the Proposed Project includes development of a second parcel (Accessory Parking Lot or Parcel 2) located at 1 Casey Court (APN 055-433-180). This parcel would be used for surface parking. The Accessory Parking Lot has an area of approximately 1.68 acres (73,000 sf). The existing office/warehouse building on the parcel has a total area of approximately 20,955 gsf, a FAR of approximately 29 percent, and a height of approximately 19.2 feet. The Accessory Parking Lot currently has onsite surface parking with 44 uncovered stalls. Minimal landscaping exists on the property.

PROJECT DESCRIPTION

The Project Sponsor is seeking approval of bonus-level development, pursuant to provisions of the City Zoning Ordinance applicable to the Life Sciences (LS) zoning district, in order to permit construction of an approximately 131,825 gsf building for R&D and commercial uses as well as surface parking lots. Under the Proposed Project, the four existing buildings at 1105, 1135, and 1165 O'Brien Drive and 1 Casey Court would be demolished.

The Proposed Project would involve construction of a new five-story building with an area of approximately 131,825 gsf that would include R&D uses, office uses associated with the primary R&D use, a 500 sf chemical storage area associated with the primary R&D use, and ground-floor commercial space. The Proposed Project would have a maximum height of approximately 100.8 feet and a combined FAR of 1.24, or 124 percent. Across the Project site, the average building height would be approximately 60.6 feet. Furthermore, because the Project Sponsor is proposing bonus-level development, the City Zoning Ordinance requires the Project Sponsor to provide community amenities in exchange for bonus-level development.

The proposed building would accommodate approximately 124,821 gsf of R&D and associated office uses for life sciences, 2,659 gsf of ground-floor commercial/restaurant space, 500 sf of chemical storage space, 775 gsf for bicycle storage, and 3,070 gsf for storage/elevators/stairs. The building would be designed with the flexibility to accommodate a single R&D/life science tenant or meet the needs of multiple tenants. To the west would be approximately 89 surface parking stalls, with access to an additional 160 surface parking stalls on the adjacent Accessory Parking Lot.

In total, approximately 39,306 sf of open space would be provided throughout the Project site. The private open space proposed as part of the Project would include a 6,600 sf roof deck with landscaping and seating areas. The public open space along the street frontage would be landscaped with berms, trees, bioretention areas, and California-native vegetation. The public open space would be approximately 19,399 square feet in size. Furnishings at the public space adjacent to the proposed commercial/restaurant space may include trash receptacles as well as benches and outdoor furniture. The Project site would continue to be accessible from two driveways on O'Brien Drive as well as one on Casey Court. In addition, a secondary driveway would be provided in the northeastern portion of the Project site. A curb cut out would be included at the front of the proposed building on O'Brien Drive.

PROJECT APPROVALS

The following City discretionary approvals/actions[1] would be required prior to development at the Project site:

- Use Permit
- Architectural Control
- Lot Merger and/or Lot Line Adjustment
- Heritage Tree Removal Permit
- Below-Market-Rate Housing Agreement
- Environmental Review

As part of the Project review process conducted by the City, and not as part of the environmental review, a fiscal impact analysis would be prepared as well as a Housing Needs Assessment (HNA), pursuant to the terms of the settlement agreement with the City of East Palo Alto. In addition, an appraisal would identify the value of the community amenity to be provided in exchange for bonus-level development. Review of the Proposed Project by the City Planning Commission would be conducted as a part of the EIR review and entitlement process. The Planning Commission would be the final decision-making body on the requested land use entitlements and certification of the EIR.

RESPONSIBLE AGENCIES

The agencies listed below are expected to review the draft EIR to evaluate the Proposed Project:

- Bay Area Air Quality Management District
- California Department of Transportation
- California Regional Water Quality Control Board, San Francisco Bay Region/San Mateo Countywide Water Pollution Prevention Program
- City/County Association of Governments
- San Mateo County Transportation Authority
- Menlo Park Fire Protection District
- San Mateo County Environmental Health Division
- West Bay Sanitary District
- Native American Heritage Commission
- San Francisco Public Utilities Commission

[1] Determination of the final list of required discretionary approvals/actions would be based on the final development characteristics and site plans for the Proposed Project, which would be finalized prior to issuance of any permits or agreements.

INTRODUCTION TO EIR

The Project site is within the ConnectMenlo study area. ConnectMenlo, which updated the City General Plan Land Use and Circulation Elements and rezoned land in the M-2 Area (now referred to as the Bayfront Area), was approved on November 29, 2016. Because the City General Plan is a long-range planning document, the ConnectMenlo EIR was prepared as a program EIR, pursuant to CEQA Guidelines Section 15168. If a later activity would have effects that were not examined in the program EIR, Section 15168(c)(1) of the CEQA Guidelines states that a new initial study must be prepared. Section 15168(d) of the CEQA Guidelines provides the information needed for simplifying the preparation of environmental documents and incorporating by reference analyses and discussions as well as mitigation measures.

An initial study has been prepared to evaluate the potential environmental impacts of the Proposed Project and determine what level of additional environmental review is appropriate. In accordance with the requirements outlined in Section 15168(c) of the CEQA Guidelines, the initial study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and determine whether the Proposed Project is within the parameters of the ConnectMenlo EIR. The initial study is available for review online through the Project website listed above. Because of the ongoing COVID-19 pandemic, hard copies are not currently available. Please contact David Hogan at dwhogan@menlopark.org if you require additional assistance.

As stated above, Section 15168(d) of the CEQA Guidelines provides for simplifying the preparation of environmental documents by incorporating by reference analyses and discussions. Where an EIR has been prepared or certified for a program or plan, the environmental review for a later activity consistent with the program or plan should be limited to effects that were not analyzed as significant in the prior EIR or that are susceptible to substantial reduction or avoidance (CEQA Guidelines Section 15152[d]). By tiering from the ConnectMenlo EIR, the environmental analysis for the Proposed Project relies on the ConnectMenlo EIR where applicable.

Based on the findings in the initial study, the ConnectMenlo EIR serves as adequate environmental analysis for some of the effects of the Proposed Project (e.g., is incorporated by reference, pursuant to Sections 15150, 15130, and 15183); however, a focused EIR will be prepared for potentially significant impacts that need further discussion and/or mitigation beyond that provided in the ConnectMenlo EIR. The focused EIR for the Proposed Project will be prepared and processed in accordance with CEQA and the CEQA Guidelines. In addition, pursuant to the settlement agreement in the *2017 City of East Palo Alto v. City of Menlo Park* case, certain topics have been identified as needing further environmental review. This EIR and the Initial Study were prepared in accordance with the terms of the 2017 settlement agreement, which allows simplification in accordance with CEQA Guidelines Section 15168 for all topic areas, except housing and transportation, and incorporates by reference the information contained in the ConnectMenlo Final EIR, as applicable.

The focused EIR will include an analysis of the potentially significant impacts of the Proposed Project on transportation. Furthermore, separate and apart from the focused EIR, the settlement agreement requires the preparation of an HNA to determine the potential multiplier effect from indirect and induced employment caused by the Proposed Project and its relationship to the regional housing market and displacement. The City anticipates that the HNA for the Proposed Project will be made available when the public draft of the focused EIR is released for review and comment. It must be noted that the HNA prepared for the Proposed Project, pursuant to the settlement agreement, is not required by CEQA. Regardless, the focused EIR will include an analysis of population and housing impacts, consistent with the information provided in the HNA.

PROBABLE ENVIRONMENTAL EFFECTS

Based on the conclusions in the initial study, the following topics will not be analyzed further in the focused EIR: aesthetics, agricultural and forestry resources, energy, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, public services, recreation, and utilities and service systems. The focused EIR will analyze whether the Proposed Project would have a significant environmental impact related to the following areas:

- Air Quality
- Biological Resources
- Cultural and Tribal Resources
- Greenhouse Gas Emissions
- Noise
- Population and Housing[2]
- Transportation

ALTERNATIVES

Based on the significance conclusions from the focused EIR, alternatives to the Proposed Project will be analyzed to reduce identified impacts. Section 15126.6(e) of the CEQA Guidelines requires evaluation of a no-project alternative. Other alternatives may be considered during preparation of the focused EIR. These will comply with the CEQA Guidelines, which call for a "range of reasonable alternatives to the project, or to the location of the project, that would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project." The focused EIR will discuss the process by which alternatives are identified. This includes consideration of any feasible alternatives suggested during the scoping process.

EIR PROCESS

Following the close of the NOP comment period, a draft focused EIR will be prepared that considers all NOP comments. In accordance with CEQA Guidelines Section 15105(a), the draft focused EIR will be released for public review and comment over a required 45-day review period. Following the close of the 45-day public review period, the City will prepare a final EIR, which will include responses to all substantive comments received on the draft focused EIR. The draft focused EIR, all public comments and recommendations, a list of all persons and organizations commenting on the draft focused EIR, all responses to comments prepared by the City, and any other information added by the City will compose the final EIR; thereafter, the final EIR will be considered by the Planning Commission and City Council when making the decision whether to certify the final EIR and approve or deny the Proposed Project.

Katie Meador, Senior Planner
City of Menlo Park

7/26/2021
Date

[2] No significant impacts related to population and housing are anticipated, but this topic will be included in the EIR, consistent with the 2017 *City of East Palo Alto v. City of Menlo Park* settlement agreement.

ENVIRONMENTAL IMPACT REPORT

SCOPING SESSION

REPORTER'S TRANSCRIPT OF PROCEEDINGS

MONDAY, AUGUST 23, 2021

Taken before AMBER ABREU-PEIXOTO

(Via ZOOM Videoconference)

Certified Shorthand Reporter No. 13546

State of California

Monday, August 23, 2021

ATTENDEES

THE PLANNING COMMISSION:

Michael C. Doran - Chairperson
Henry Riggs
Camille Kennedy
Chris DeCardy - Vice Chairperson
Cynthia Harris
Andrew Barnes

SUPPORT STAFF:

Matt Pruter, Associate Planner
Corinna Sandmeier, Senior Planner
Kyle Perata, Principal Planner
David Hogan, Contract Planner

PROJECT PRESENTERS:

Anthony Bonifacio, Tarlton Properties
Elke MacGregor, DES Architects

CONSULTANTS:

Kirsten Chapman, ICF
Lang Chin, Hexagon

---o0o---

BE IT REMEMBERED that, pursuant to Notice of the Meeting, and on August 23, 2021, 7:52 p.m., via ZOOM Videoconference, before me, AMBER ABREU-PEIXOTO, CSR 13546, State of California, there commenced a Planning Commission meeting under the provisions of the City of Menlo Park.

P R O C E E D I N G S

--o0o--

CHAIR MICHAEL DORAN: The next item on our agenda is Environmental Impact Report Scoping Session on 1105, 1135, 1165 O'Brien Drive, and 1 Casey Court (referred to as the 1125 O'Brien Drive Project).

This is a request for environmental review for a use permit, architectural control, and Below Market Rate (BMR) Housing Agreement for the construction of a new five-story research and development (R&D) building, approximately 131,825 square feet of gross floor area in size, including chemical storage areas associated with the primary R&D use, and a ground-floor commercial space on a four-parcel site in the LS-B (Life Sciences, Bonus) zoning district.

A new surface parking lot would be constructed at -- on 1 Casey Court. The four existing one-story office and R&D buildings would be demolished. As part of the project, 13 heritage trees are proposed for removal. The proposed project would include a BMR agreement per the City's Ordinance and Guidelines. The proposal includes a request for an increase in height and floor area ratio

(FAR) under the bonus level development allowance in exchange for community amenities.

The proposed project also includes a lot merger and/or lot line adjustment to modify the existing parcels. An Initial Study has been prepared and is included with the Notice of Preparation (NOP) for the proposed project. The NOP and Initial Study were released on Friday, July 30th, 2021.

The Initial Study scopes out the following environmental topics from further review: Aesthetics, agricultural and forestry resources, energy, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, public services, recreation, and utilities and service systems.

The focused EIR will address potential physical environmental effects of the proposed project that have not been scoped out, as outlined in the California Environmental Quality Act (CEQA), in the following areas: Air quality, biological resources, cultural and tribal resources, greenhouse gas emissions, noise, population/housing, and transportation.

The City is requesting comments on the scope and content of the focused EIR. The project location does not contain a toxic site, pursuant to Section 6596.2 of the

Government Code.

Comments on the scope and content of the focused EIR are due by 5:30 p.m., on Tuesday, August 31st, 2021. We do have a staff report on this by Ms. Meador.

Ms. Meador, do you have anything to add to the staff report?

MR. PERATA: So Chair Doran, Principal Planner Kyle Perata. I'll actually be doing the staff presentation tonight. We're actually transitioning this project from Kaitie to our contract planner, David Hogan, but I'll bridge the gap tonight for you. So I do have a presentation. And so if we can get that up.

I'll just start with a few opening remarks; one that I'd like to just update the Planning Commission on. The NOP that originally was published identified the end date for comments as Monday, August 30th. We've extended that one day, due to a delay in posting the Notice of Preparation on the state clearinghouse's website. So it's been extended for one day.

We have updated the agencies that received the -- and interested parties that received the NOP previously. And then tonight, we're updating the Planning Commission with that.

So with that, I can take any questions to start, or I can move into my presentation.

CHAIR MICHAEL DORAN: Do we have any questions for Mr. Perata at this time?

Not seeing any, if you want to launch into the presentation.

MR. PERATA: Sure. So let me get this full screen here. Thank you very much.

As I mentioned, I'll be doing the presentation tonight. We have two items in front of the Planning Commission. It is the EIR Scoping Session and the project study session for 1125 O'Brien Drive. That's the project name that the City is using. It does encompass four existing buildings at 1125 to 1135 O'Brien Drive, and a building at 1 Casey Court, as mentioned in the opening remarks by the Chair.

There are two existing parcels that comprise the project site. Two existing parcels with buildings and the undeveloped drainage ditch parcel is also part of the project site. So there's actually three parcels. The project site is located on O'Brien Drive, kind of at the bend between Willow Road and University Avenue.

And so, as I mentioned, the purpose tonight are two items. So the first item is the Environmental Impact Report Scoping Session. That's an opportunity for members of the public and the Planning Commission to provide comments on the scope and content of the EIR, including

potential alternatives to be studied.

Following the close of the EIR Scoping Session, we'll move into a study session. That's an opportunity for the Planning Commission and members of the public to provide feedback on the project, including the overall project design, such as architectural design, open space, layout design, location, proposed uses within the project, and also community amenity and building height.

I do have a separate presentation I can pull up at the study session with a list of, kind of, key topics, basically reiterating this list here (indicating), but in a bolded form for the Commission to consider. Those are also summarized in more detail in the staff report. And no action will be taken at tonight's meeting.

And so the --

CHAIR MICHAEL DORAN: Thank you.

MR. PERATA: Sorry.

So the recommended format we do have for the EIR Scoping Session -- we'll start, actually, with a presentation by the applicant, instead of the EIR consultant. Apologies for the typo here (indicating). The staff report identifies the applicant would go first, and then the EIR consultant.

The EIR consultant presentation will go last to set up the framework for the public comments and

Commission's discussion and comment for the EIR scoping content. That presentation by the applicant will be done at this time to provide context. So we won't do a presentation again for the study session. This has been the standard format for the last few EIR scoping sessions.

Following both presentations, we'll move into public comment. We recommend that the Commission hold questions that clarify to the end of this presentation and only ask clarifying questions prior to public comment. Save any discussion, comments and questions for after public comment.

With that, we'll close the scoping session and then move into the study session, which is another opportunity to provide more focused comments on the overall design, rather than the EIR.

So that concludes my presentation. With that, I'll turn it over to the applicant's team. And following the applicant team's presentation, ICF, the City's EIR consultant will make their presentation.

Happy to take any clarifying questions before doing that, though.

CHAIR MICHAEL DORAN: Do we have any clarifying questions for Mr. Perata?

I don't see any. Let's proceed.

MR. BONIFACIO: Good evening. My name is Anthony

Bonifacio, Vice-President at Tarlton Properties. I'd like to thank members of the Commission for the opportunity to return with our improved project from its original presentation in 2018. Our project, as described previously, is on the north side of O'Brien Drive, between Kelly Court and Casey Court.

So I don't think I have control of the slides. There we go (indicating).

Okay. Just as a refresher, this slide reflects the original design, where we received numerous comments from the Commission regarding the prominence of the parking structure along O'Brien.

The revision and revised mural has removed this structure and now surface parked the entire project on this parcel and the adjacent parcel at 1 Casey Court.

Also described previously, the project is made of two parcels. Parcel 1 consists of merged lots or merged property lots, 1105 and 1135 through 1165, along with a drainage ditch. On this lot are existing one-story tilt concrete buildings. And on the second parcel is -- at 1 Casey Court is an industrial building as well.

We have -- this slide reflects our aggregated -- that we have aggregated a majority of the public open space along O'Brien Drive.

And right now, I'd like to turn over to Elke

MacGregor, our architect, who is with DES, to go over design and architecture elements.

MS. MACGREGOR: Good evening. My name is Elke MacGregor. Pleasure to see many commissioners we've seen before.

We are bringing to you a building that is another step beyond a lot of the buildings that Tarlton Properties has currently in this area. And this building is aligned with the street scape here and pushed back as far as possible from the street, so we can get a pedestrian-friendly public open space along the front of the building. You can see that from the last slide and this one.

We have, along the back of the building, a service yard and a -- oh. This is the plaza in front of the building. It shows you that public open plaza there, on the right-hand side of the cafe, that's open to the public, and a large two-story lobby space.

The next slide shows a roof deck that the building has. So this building has a roof deck. In the back corner of the roof deck, you can see there's an architectural fin that doubles as some shading on the roof deck area. And this is a roof deck that would be open to the tenants of the building, not to the public.

The last slide shows some of the finishes -- oh.

Sorry. It gives you a perspective view down on the roof deck on the front of the building.

And if we can go back to the slide -- yes. Thanks, Anthony.

So the -- this describes a little bit more of the site and shows you that -- this large plaza in front of the building, that is up against the street, to the service yard in the back, and has two driveways; one off the street on the right-hand side, and one on the south side, going into O'Brien Drive. Originally we had five drive aisles coming off O'Brien Drive. This greatly reduces and makes that street a lot safer.

The other aspect of this site is that we've captured the back parking area on Casey Court, instead of having a parking garage. And so what this allowed us to do as well is to incorporate one other pedestrian-friendly area in between the two sites. And from Casey Court, because we have a very limited street access -- can we go up one more slide -- back one.

In this slide, you can see, Casey Court has very limited street access. So we've done what we can to make the access to the public landscaping from that corner of the street, and it extends between both the properties, giving you this quiet walking space and seating areas between the two parking spaces.

The building itself is high-performance, bird-friendly glazing. We have quite a bit of vertical mullions. They're actually extended out so we have more shading, solar shading on that area. We have high efficiency HVAC. Very environmentally-friendly building, with bicycle parking, showers, lockers.

The landscaping is all drought tolerant, like all the rest of the buildings on O'Brien Drive that are managed by Tarlton Properties.

And the last element here is the shuttle parking. So there's -- just at the front of the building, you can see, just at the bottom of this slide, there's a shuttle access. So what Tarlton provides, throughout their properties, is shuttles to BART and Caltrain and across the bay. And so the hope is that we can bring less car traffic to these areas and improve the public access to transit.

I think we mentioned the cafe in the corner as well.

I think that concludes most of the architectural features on the building.

CHAIR MICHAEL DORAN: Thank you.

Do we have anyone else to speak for the applicant, before we go to the EIR consultant?

MR. BONIFACIO: We do not.

Thank you to the Commission for your time. We look forward to any questions -- or answering any questions you may have.

CHAIR MICHAEL DORAN: Do we have any clarifying questions for the applicant at this time?

Okay. I think we'll move to the EIR consultant's report presentation.

MS. CHAPMAN: Hi. Good evening, Commissioners and members of the public. Thank you for coming out tonight to the scoping session for the 1125 O'Brien Drive project. My name is a Kirsten Chapman, and I work for the environmental consulting firm ICF. We will be preparing the environmental review component for the project. I am the project manager.

Also here tonight with us is Lang Chin, from Hexagon, who will be preparing the transportation analysis.

Should you have any questions after the presentation regarding the environmental review process, we will take note of them, and we can respond to them accordingly.

Let's see. Hold on. Yeah. Okay.

My presentation will cover the scoping process and the environmental process. I will also explain how to submit comments on the scope of the EIR and describe the

next steps. So the EIR team consists of the City of Menlo Park as the lead agency; meaning, they have the principal responsibility for carrying out the project.

ICF will be the lead EIR consultant, and we will prepare all sections of the EIR, with the assistance from Hexagon on the transportation analysis, and then also Keyser Marston & Associates for the housing needs assessment.

So we won't go over the project overview of the existing site because the applicant has given us the presentation already. But you can see the project site. And in our document we do refer to Parcel 1 and Parcel 2. And Parcel 1 is where the new R&D building will be constructed. And Parcel 2 will have the surface parking lot.

So tiering from the ConnectMenlo EIR, the project site is within the ConnectMenlo study area. And the ConnectMenlo EIR was prepared as a programatic EIR, which simplifies the EIR process for future projects by incorporating, by reference, the analysis and the discussion that has been presented in the programatic EIR.

By tiering the ConnectMenlo EIR, the environmental analysis for this project relies on the EIR for the following topics: It relies on it for the general background and the setting, the overall growth-related

issues, issues that were evaluated in ConnectMenlo EIR, for which there are no significant information that would require further analysis and assessment of cumulative impacts and mitigation measures adopted and incorporated into the ConnectMenlo EIR.

However, due to the 2017 City of East Palo Alto versus City of Menlo Park settlement agreement, certain topics are required to be fully analyzed in the project level EIR, regardless of whether subsequent activities are found to be within the program's EIR scope.

This slide shows the general steps involved with the CEQA process for the project. The NOP, along with the Initial Study, which we will discuss next, was released on July 30th. The NOP comment period closes on August 31st.

Following the close of the scoping period, we will begin preparing the draft EIR. When the draft EIR is released for public review, a public hearing will be held to solicit comments on the adequacy of the EIR.

A final EIR will then be prepared, and it will address all of the comments received during the draft EIR period, both written and at the hearing.

A certification hearing for the final EIR will be held before the Planning Commission and City Council. And after the EIR is certified, the project can then be approved. And following approval of the project, a Notice

of Determination would be issued.

So an Initial Study was prepared to evaluate the potential environmental impacts of the project and to determine what level of additional analysis would be required in the EIR. The Initial Study was prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR, and the Initial Study also discussed whether the project is within the parameters of the ConnectMenlo EIR.

Based on the checklist, the following topics will be scoped out for further analysis in the EIR: Aesthetics, agricultural resources, historic resources, geology and soils, hazards, hydrology, land use, mineral resources, public services and utilities.

So due to the 2017 settlement agreement with East Palo Alto, the focused EIR will be prepared. The EIR is a tool for identifying physical impacts to the environment by using the analysis conducted by our EIR team.

The EIR will also be used to inform the public and decision-makers about a project prior to project approval, recommend ways to reduce potential impacts and consider alternatives that could lessen the identified physical impacts of the project itself.

So shown here, air quality, biological resources -- in particular, special status species and nesting sites

-- archeological and tribal resources, greenhouse gas emissions, noise, and traffic will all be analyzed in the EIR.

In addition, alternatives to the project will be analyzed to fully reduce -- to potentially reduce the identified impacts. CEQA guidelines require the evaluation of a "no project alternative," and other alternatives will be considered and will comply with CEQA.

So the purposes of our scoping hearing and the scoping period that was discussed previously, we are currently in the scoping phase of the project. This is the initial stage of the EIR process.

The purpose of the scoping phase is to gather public input, identify key environmental issues, identify -- early identification of possible mitigation measures that were not considered in the ConnectMenlo EIR, and also to consider possible project alternatives.

Although my presentation included -- well, I'm sorry. I guess my presentation did not include an overview of the project because the Applicant did. But I do want to note that the intent of tonight's CEQA meeting, as well as the scoping phase for the CEQA process, is not focused on comments of the project itself or its merits. Instead, the comments for this part of the session should be focused on the environmental impacts of the project.

So submitting comments. You can submit comments on the scope of the project -- or the scope of the EIR via e-mail or letter to David Hogan, who is the contract planner for the City of Menlo Park.

As Mr. Perata mentioned earlier, he is bridging the gap between the staffing change, but David Hogan is the planner for this project.

You can also speak tonight, and we will note your comments and consider them during the preparation of the draft EIR. All comments must be received by August 31st, at 5:00 p.m.

So thank you again for joining us tonight, and we look forward to receiving your comments.

CHAIR MICHAEL DORAN: Thank you. Do we have any clarifying questions for Ms. Chapman?

Not seeing any. So I think we should open it for public comment.

Mr. Perata, do we normally do one public comment period for the EIR and the study session? Or do we open it up again later, for comments in the study session?

MR. PERATA: Yes. Great question.

We should open up public comment right now for just the EIR scoping session. And we'll ask members of the community to save any comments on the study session for when we open that item.

So we'll want to close this item and then move to the study session later and do a separate public comment at that time.

And, just as a reminder, if the Commissioners could stay focused on the EIR scoping topics for this component, this item, and then save any design-related questions for the study session, that would be appreciated.

CHAIR MICHAEL DORAN: Thanks.

Okay. So I want to open it up for comments on the EIR scoping session now.

Mr. Pruter, do we have any hands raised?

MR. PRUTER: Thank you, again, Chair Doran.

At this time, I do not see any hands raised. But as a reminder, if anyone would like to speak and provide comments regarding the public scoping aspect of this project, please raise your hand with the hand icon. Or if you're on the phone, you can press star 9, once again.

And I still see no hands raised or comment request at this time.

CHAIR MICHAEL DORAN: Okay. Let's just give it a few moments.

Still no hands raised?

MR. PRUTER: Still no hands raised.

CHAIR MICHAEL DORAN: Okay. I'm going to close

public comments on the EIR scoping session, bring it back to the dias for any questions or comments from the commission.

Mr. Decardy?

COMMISSIONER DECARDY: Thank you, Chair Doran. Thank you for the presentation. So I'm looking forward to the discussion of the project later on.

Specifically to the EIR, through the Chair, if I could ask a question of Ms. Chapman, that would be great.

CHAIR MICHAEL DORAN: Certainly.

COMMISSIONER DECARDY: So in your presentation, you mentioned consideration of alternatives. So right now, going in, you said you have a "no project" alternative. You'll obviously do an EIR for the project.

What would go into your consideration for a different alternative? What are you looking for, and what would be the consideration for a third or a fourth or a fifth alternative?

MS. CHAPMAN: Yes. Thank you.

So for alternatives, we mainly look to reduce any significant and unavoidable impacts to a project.

So if there would be a significant and unavoidable impact to traffic, for example, we would then consider ways to reduce that traffic impact. So, for example, we would reduce the size of the building and the

size of the work force so there are fewer people who would be traveling to the project site. And, therefore, there would be a reduction in traffic. That is, again, just an example.

So usually the alternatives are a reduction of size and employees at the project to reduce the impacts.

For other projects that we're working on in Menlo Park, we are analyzing a base-level alternative. So some projects are -- in Menlo Park, they are applying for a bonus level development. So we will analyze the base level instead and see if that reduces the impacts. It may not reduce the impacts, but it's still something that is a feasible alternative.

And, also, when we look at alternatives, we have to look at what is feasible and what is viable for the applicant. We can't just say, "We are going to have 50 percent of a building." That would not be, most likely, a feasible alternative for the applicant that they would be interested in pursuing. And, therefore, that would be considered and rejected.

MR. DECARDY: Thank you. That's very helpful.

So, actually, your hypothetical is exactly my question. It's the intersection of transportation and greenhouse gas emissions and the impact on that part of our community. On both of those, it looks like, from

reading through what you just submitted, that the ConnectMenlo EIR, the program EIR essentially has already concluded that there are significant, unavoidable impacts, despite the invitation of mitigation measures.

So does that essentially -- is that a piece of the program EIR that then says you wouldn't take a look at those elements?

MS. CHAPMAN: Greenhouse gases and traffic?

COMMISSIONER DECARDY: Traffic, yes.

MS. CHAPMAN: Yeah. We will absolutely be looking at those.

Just because the ConnectMenlo EIR determined that all of ConnectMenlo would result in a significant and unavoidable impact to those topics, that does not mean that this one project would as well. So we will be analyzing that in more detail.

At this time, I don't know what the conclusions will be for those topics, but we will be analyzing them fully in the EIR.

COMMISSIONER DECARDY: Okay. So I'm really pleased that the project we'll talk about later has wiped out the parking garage. We now have surface parking.

Is one of the things you look at, a significant reduction in surface parking that would actually not mean that you would have to reduce the size of the building or

the workforce, but would essentially, you know, drive the demand for alternative modes of getting to the site, especially that the applicant said they already have a shuttle?

Is that a consideration?

MS. CHAPMAN: We can certain -- I've made note of it. And we can certainly discuss that in further detail, to analyze that as an alternative. Yes.

COMMISSIONER DECARDY: I appreciate my fellow commissioners on this.

I will just say one last thing, which is my opinion on this, which is -- my commissioners heard us as we were actually approving the final EIR on another project last time.

EIRs are designed for sunshine. They're designed for the community to be able to have input. Just because we have had a program EIR in place, something that was done in 2015 or 2016, when the community is having significant impacts in development and growth that continues, means that they've got to be able to see and understand analysis that allows them to compare alternatives.

So what has happened, time and time again, when I have raised the question about parking and about transportation, demand in reducing that, is that it does

not get included as an alternative. We end up with the baseline. We end up with something fully built out. We end up with the alternative project.

Turns out, the alternative project is better for the community because of what it delivers in doing nothing, but it's worse for the community, if you did everything; and, therefore, the project falls right in the middle.

That is useless. That is a useless EIR for the community to be able to understand what is happening with a particular project and for them to be able to ask questions and have a determination, based on the expertise that you all are bringing to this.

So if we don't find some alternative that allows the community to be able to assess those questions around all of the traffic that is coming in and out of the community and the associated impacts, that is not going to be okay in this mix.

So I'm frustrated and done with certifying EIRs that essentially do not give the community the information they need, the sunshine, to be able to engage with these projects in that kind of way.

So I say that forcefully, mostly because of past practice and our history here, and not because I have any preconceived notions about where you're going to end up

with the project.

And, again, I thank my commissioners for allowing me the time.

CHAIR MICHAEL DORAN: Thank you.

Do we have other commissioners who would like to speak at this time?

Commissioner Kennedy.

COMMISSIONER KENNEDY: So I will lend my support to everything that Commissioner Decardy just said. The whole purpose of EIRs is to protect communities that lack power to speak for themselves, you know. And so we continue to expand our city exponentially, whether the projects are good, or they're less good, or they're just bad; right?

The bottom line is, we don't really provide the "no alternative." Right? And so, you know, I think it really is our jobs to be the voice for all members of the community, not just for the developers.

As much as we might love the developer, and we might love the project and the projects are done really, really well, that doesn't solve the problem that there are communities that don't have the voice to say, "Leave the" -- "Put nothing up there." Right? Let's -- it's too much.

CHAIR MICHAEL DORAN: Thank you.

Other commissioners?

Commissioner Riggs.

COMMISSIONER RIGGS: Thank you. Is my mic on this time? Yes.

CHAIR MICHAEL DORAN: It is.

COMMISSIONER RIGGS: So I'm gratified to see that we will be addressing transportation and housing. Even though this project is on a location that already consists of this use, and there is not a huge increase in density, it is important to note that any bonus-level project doubles -- I think more than doubles -- the FAR and height, and that the impacts are, nonetheless, readable and significant to the adjacent communities and in subsequent communities.

I did want to ask about water systems, and to what degree they will be covered in the EIR -- what the expectations are for -- under the EIR.

Since 2016, "not-assisted" was the new subject, and it certainly dates back decades before 2016, but we have a limited amount of water in this state. And on the peninsula, we continue to grow.

Communities like Menlo Park have an open door to development and then turn and scratch their heads about, "Oh, my heavens. We don't have what is needed to support this, in housing or transportation or utilities." That

activity continues up and down the peninsula.

As part of the EIR, I think we have to seriously look at where additional water is coming from and also what the potential for gray water system is to offset that use.

And then I expect that it would also be an EIR issue that we continue to have surface parking. This is a condition that I, at least, had hoped would go away, as we rezoned for higher density and required open space. When we have an entire lot designated for parking, we have an entire lot that is a heat island. And I think it's appropriate to evaluate that heat island, in terms of alternatives.

Those alternatives could be anything from shade trees to a ray of solar panels, but something other than simply providing 120-degree asphalt.

Those are my comments in regard to the EIR.

CHAIR MICHAEL DORAN: Thank you.

Do we have other comments from the commission?

Commissioner Harris.

COMMISSIONER HARRIS: Thank you. I just also wanted to reiterate what my fellow commissioners have said about parking and housing.

A ray of solar panels sounds great, Commissioner Riggs. But I also am most concerned about the

transportation impact analysis and what mitigation can be utilized, as well as what we're comparing it to. Less parking, not more, with the housing impact.

So I would agree with most of my other commissioners. So I just wanted to put that out there.

Thanks.

CHAIR MICHAEL DORAN: Thank you.

Any other comments, questions? Anything else from the commission?

So, Mr. Perata, do -- have we provided enough input for the scoping session?

Are there specific questions that you would like to have the commission address, in terms of the scoping?

MR. PERATA: Thank you for the opportunity to address that.

The scoping is an opportunity for the commission and the public to provide general comments on the overall scoping content. So I think, you know, the comments we've received tonight -- you know, we will be considering them as part of our development of the draft EIR. And, ultimately, we are also in an EIR comment period, so we're also soliciting feedback from state agencies, members of the communities through that comment, the NOP/EIR scoping period. So we'll certainly be considering those comments as well.

This is just an opportunity to provide verbal comments by the Planning Commission and the members of the community. So I think we can certainly end this item, if there are no other commissioner comments or questions. I'm certainly happy to continue the discussion, if there are.

CHAIR MICHAEL DORAN: Any other comments? Final chance from the commission.

Not seeing any other comments.

So I'm going to close the scoping session of the EIR. That will close the public hearing portion of tonight's meeting and move to the study session on the same project.

(WHEREUPON, Agenda Item F3 ended at 8:31 p.m.)

Re: 2021080010, 1125 O'Brien Drive Project, San Mateo County

Dear Ms. Meador:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1 (b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Katy.Sanchez@nahc.ca.gov.

Sincerely,

Katy Sanchez

Subject: 1125 O'Brien Drive Project

Dear Mr. Hogan:

Thank you for sending the recent Notice of Preparation (**NOP**) and Initial Study (**IS**) stating that the **City of Menlo Park** will be the lead agency that will prepare an Environmental Impact Report (**EIR**) for the **1125 O'Brien Drive Project** (**Project**). The proposed project would include the demolition of existing structures and the removal of 13 trees, and the construction of a new five-story research and development (R&D) building, approximately 131,825 square feet of gross floor area in size, including chemical storage areas associated with the primary R&D use, and a ground-floor commercial space on a four-parcel site in the LS-B (Life Sciences, Bonus) zoning district. A new surface parking lot with approximately 160 spaces would be constructed on 1 Casey Court.

The SFPUC's water transmission pipeline right-of-way, which is owned in fee by the City and County of San Francisco (**SFPUC Fee**) is located on the north side of the proposed project site. The proposed 160-space surface parking lot on 1 Casey Court associated with the Project would be adjacent to the SFPUC Fee. The SFPUC Fee is part of the Hetch Hetchy Regional Water System right-of-way (ROW). This ROW contains three large water transmission pipelines known as Bay Division Pipelines Nos. 1, 2, and 5 (**BDPLs Nos. 1, 2, and 5**) which provide drinking water to 2.7 million customers in the San Francisco Bay Area. The SFPUC Fee, in Assessor's Parcel Number 093570020, is currently under a lease, license, or permit to: 1) Gachina Landscape Management (SFPUC Parcel 2008; Lease L3871) for material and equipment storage; and 2) Lincoln Property Company (SFPUC Parcel No. 2008, Permit P3355A) for an access roadway.

The SFPUC provides the following comments on the scope and content of the Project EIR.

1. Thank you for providing details about the SFPUC's land tenure in environmental review documents prepared thus far, and please continue to provide this information in the EIR for the proposed project. Please add that If construction/work is proposed on or within the SFPUC ROW (including utility connections, permanent access to the Project, construction access or use, or street/sidewalk modifications) as part of the Project or in the future, then the project sponsor is required to participate in the SFPUC's **Project Review Process** (further information below) prior to receiving written authorization from the SFPUC to implement any improvements within the SFPUC ROW.

2. In the absence of written SFPUC authorization for the use of its ROW, the project sponsor should implement appropriate measures during construction of the proposed project to prevent encroachment of construction vehicles, equipment, and materials onto the SFPUC ROW. In addition, access over or across the SFPUC ROW is not allowed without written authorization. Appropriate measures could include temporary construction fencing, tailgates for construction crews to communicate restrictions and prohibitions related to the SFPUC ROW during construction, and/or a buffer area on the north side of the Project site.

3. The project sponsor must provide proper and permanent drainage of the proposed parking lot on Casey Court within the project site so that the Project site does not drain onto the SFPUC

ROW. The project sponsor (and future owners of the Project property) must maintain the parking lot and its drainage system in good working order.

4. Please include the SFPUC on any emergency contact list in the event of a chemical spill, hazard, or other emergency from the proposed 500 square-foot chemical storage area or during operation of the primary R&D use of the project site. The emergency contact for the SFPUC is: SFPUC Millbrae Dispatch, at (650) 872-5900. Please ask Millbrae Dispatch to inform the SFPUC ROW Manager and/or SFPUC Peninsula Watershed Manager of the emergency. Millbrae Dispatch operates 24-hours daily, 7 days a week.

SFPUC Project Review Process

All proposed projects and activities on SFPUC lands must be reviewed by the SFPUC's Project Review Committee (committee) to determine whether a proposal is compatible with SFPUC adopted plans and policies ***prior*** to obtaining written authorization from the SFPUC. During Project Review, the committee may require modifications to the proposal and/or require implementation of avoidance and minimization measures to reduce negative impacts and to ensure that the proposal conforms to applicable plans and policies. Therefore, it is important to schedule projects for review at the earliest opportunity to address any potential project issues.

To initiate the Project Review process, project sponsors must visit the SFPUC's Project Review Committee webpage at https://sfpuc.org/construction-contracts/lands-rights-of-way/project-review-and-land-use-bay-area to download a copy of the current Project Review application. Once the application is completed, the project sponsor must email their application and supporting attachments (project description, maps, drawings and/or plans) to projectreview@sfwater.org. Completed applications with required attachments are scheduled in the order they are received for the next available Project Review Committee meeting date.

Future Project Public Notices

Please send electronic updates and public notices for the Project to me, with a copy to Tonette Wong (SFPUC Real Estate Services) at TVWong@sfwater.org. Please mail paper notices to the following address:

San Francisco Public Utilities Commission
Real Estate Services
525 Golden Gate Avenue, 10th Floor
San Francisco, CA 94102

Please let me know if you have any questions or need further information.

Regards,

Joanne Wilson

Re: 1125 O'Brien Drive Project Notice of Preparation (NOP)

Dear David Hogan:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the 1125 O'Brien Drive Project. We are committed to ensuring that impacts to the State's multimodal transportation system and to our natural environment are identified and mitigated to support a safe, sustainable, integrated and efficient transportation system. The following comments are based on our review of the July 2020 NOP.

Project Understanding
The proposed project would involve construction of a new five-story building with an area of approximately 131,825 gross square feet that would include R&D uses, office uses associated with the primary R&D use, a 500 sf chemical storage area associated with the primary R&D use, and ground-floor commercial space. The project would have a maximum height of approximately 100.8 feet and a combined FAR of 1.24, or 124 percent. The project proposes to provide community amenities in exchange for a bonus-level development approval. The project site is located west of Willow Road and south of State Route (SR)- 84.

Travel Demand Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Transportation Impact Studies, please review Caltrans' Transportation Impact Study Guide (*link*).

If the project meets the screening criteria established in Menlo Park's adopted Vehicle Miles Traveled (VMT) policy to be presumed to have a less-than-significant VMT impact and exempt from detailed VMT analysis, please provide justification to support the exempt status in align with the City's VMT policy. Projects that do not meet the screening criteria should include a detailed VMT analysis in the DEIR, which should include the following:

- VMT analysis pursuant to the City's guidelines or the Office of Planning and Research's (OPR) Technical Advisory. Projects that result in automobile VMT per capita above the threshold of significance for existing (i.e. baseline) city-wide or regional values for similar land use types may indicate a significant impact. If necessary, mitigation for increasing VMT should be identified. Mitigation should support the use of transit and active transportation modes. Potential mitigation measures that include the requirements of other agencies such as Caltrans are fully enforceable through permit conditions, agreements, or other legally-binding instruments under the control of the City.

- A schematic illustration of walking, biking and auto conditions at the project site and study area roadways. Potential safety issues for all road users should be identified and fully mitigated.

- The project's primary and secondary effects on pedestrians, bicycles, travelers with disabilities and transit performance should be evaluated, including countermeasures and trade-offs resulting from mitigating VMT increases. Access to pedestrians, bicycle, and transit facilities must be maintained.

- Clarification of the intensity of events/receptions to be held at the location and how the associated travel demand and VMT will be mitigated.

Mitigation Strategies
Location efficiency factors, including community design and regional accessibility, influence a project's impact on the environment. Using Caltrans' *Smart Mobility 2010: A Call to Action for the New Decade*, the proposed project site is identified as a Close-In Compact Community where community design is fair and regional accessibility is strong.

Given the place, type and size of the project, the Environmental Impact Report (EIR) should include a robust Transportation Demand Management (TDM) Program to reduce VMT and greenhouse gas emissions from future development in this area. The measures listed below have been quantified by California Air Pollution Control Officers Association (CAPCOA) and shown to have different efficiencies reducing regional VMT:

- Project design to encourage mode shift like walking, bicycling and transit access;
- Transit and trip planning resources such as a commute information kiosk;
- Real-time transit information systems;
- Implementation of a neighborhood electric vehicle (EV) network, including designated parking spaces for EVs;
- Designated parking spaces for a car share program;
- Wayfinding and bicycle route mapping resources;
- Aggressive trip reduction targets with Lead Agency monitoring and enforcement;
- Incorporation of bicycle lanes in street design;
- Pedestrian network improvements;
- Limiting parking supply; and/or
- Bike parking near transit facilities.

Using a combination of strategies appropriate to the project and the site can reduce VMT, along with related impacts on the environment and State facilities. TDM programs should be documented with annual monitoring reports by a TDM coordinator to demonstrate effectiveness. If the project does not achieve the VMT reduction goals, the reports should also include next steps to take in order to achieve those targets.

Please reach out to Caltrans for further information about TDM measures and a toolbox for implementing these measures in land use projects. Additionally, Federal Highway Administration's Integrating Demand Management into the Transportation Planning Process: A Desk Reference (Chapter 8). The reference is available online at: http://www.ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf.

Transportation Impact Fees
We encourage a sufficient allocation of fair share contributions toward multimodal and regional transit improvements to fully mitigate cumulative impacts to regional transportation. We also strongly support measures to increase sustainable mode shares, thereby reducing VMT. Caltrans welcomes the opportunity to work with the City and local partners to secure the funding for needed mitigation. Traffic mitigation- or cooperative agreements are examples of such measures.

Please identify in text and graphics existing and proposed improvements for the pedestrian, bicycle, and transit networks. The City should estimate the cost of needed improvements, expansion, and maintenance for the Plan area, as well as identify viable sources of funding, correlated with the pace of improvements, and a scheduled plan for implementation along with the EIR.

Lead Agency
As the Lead Agency, the City of Menlo Park is responsible for all project mitigation, including any needed improvements to the State Transportation Network (STN). The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Equitable Access
If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Laurel Sears at laurel.sears@dot.ca.gov. Additionally, for future notifications and requests for review of new projects, please email LDIGR-D4@dot.ca.gov.

Sincerely,

Mark Leong

1. Introduction

This report presents the analysis methodology and findings of the level of service (LOS) assessment conducted for the proposed life science research and development project at 1125 O'Brien Drive in Menlo Park. The project proposes to demolish a total of 28,661 square feet (s.f.) of existing research-and-development (R&D) uses and 31,205 s.f. of existing warehouse uses to develop a 131,825 s.f. building for R&D uses along with a ground-floor café. The new 5-story R&D building along with surface parking would be developed on three parcels, which would be merged. This combined parcel is referred to as 'Parcel 1'. Parcel 1 would be accessible from two driveways on O'Brien Drive. A 1.68-acre parcel adjacent to Parcel 1 would be converted to an accessory parking lot. This parcel is referred to as 'Parcel 2'. It would be accessible from a driveway on Casey Court.

The existing road network is not laid out consistent with the cardinal directions. As a result, for the purpose of this report, the following streets are assumed to run in a north-south direction.

- US 101
- Newbridge Street
- O.Brien Drive
- Kavanaugh Drive
- Bayfront Expressway

The following streets are assumed to run in an east-west direction:

- Willow Road
- University Avenue

The project site and the surrounding study area are shown on Figure 1. The project site plan is shown on Figures 2A and 2B.

Non-CEQA Level of Service (Roadway Congestion Analysis)

The City's Transportation Analysis (TA) Guidelines require that the TA analyze Level of Service (LOS) for local planning purposes. An LOS analysis was conducted to identify whether the proposed project would comply with local policies.

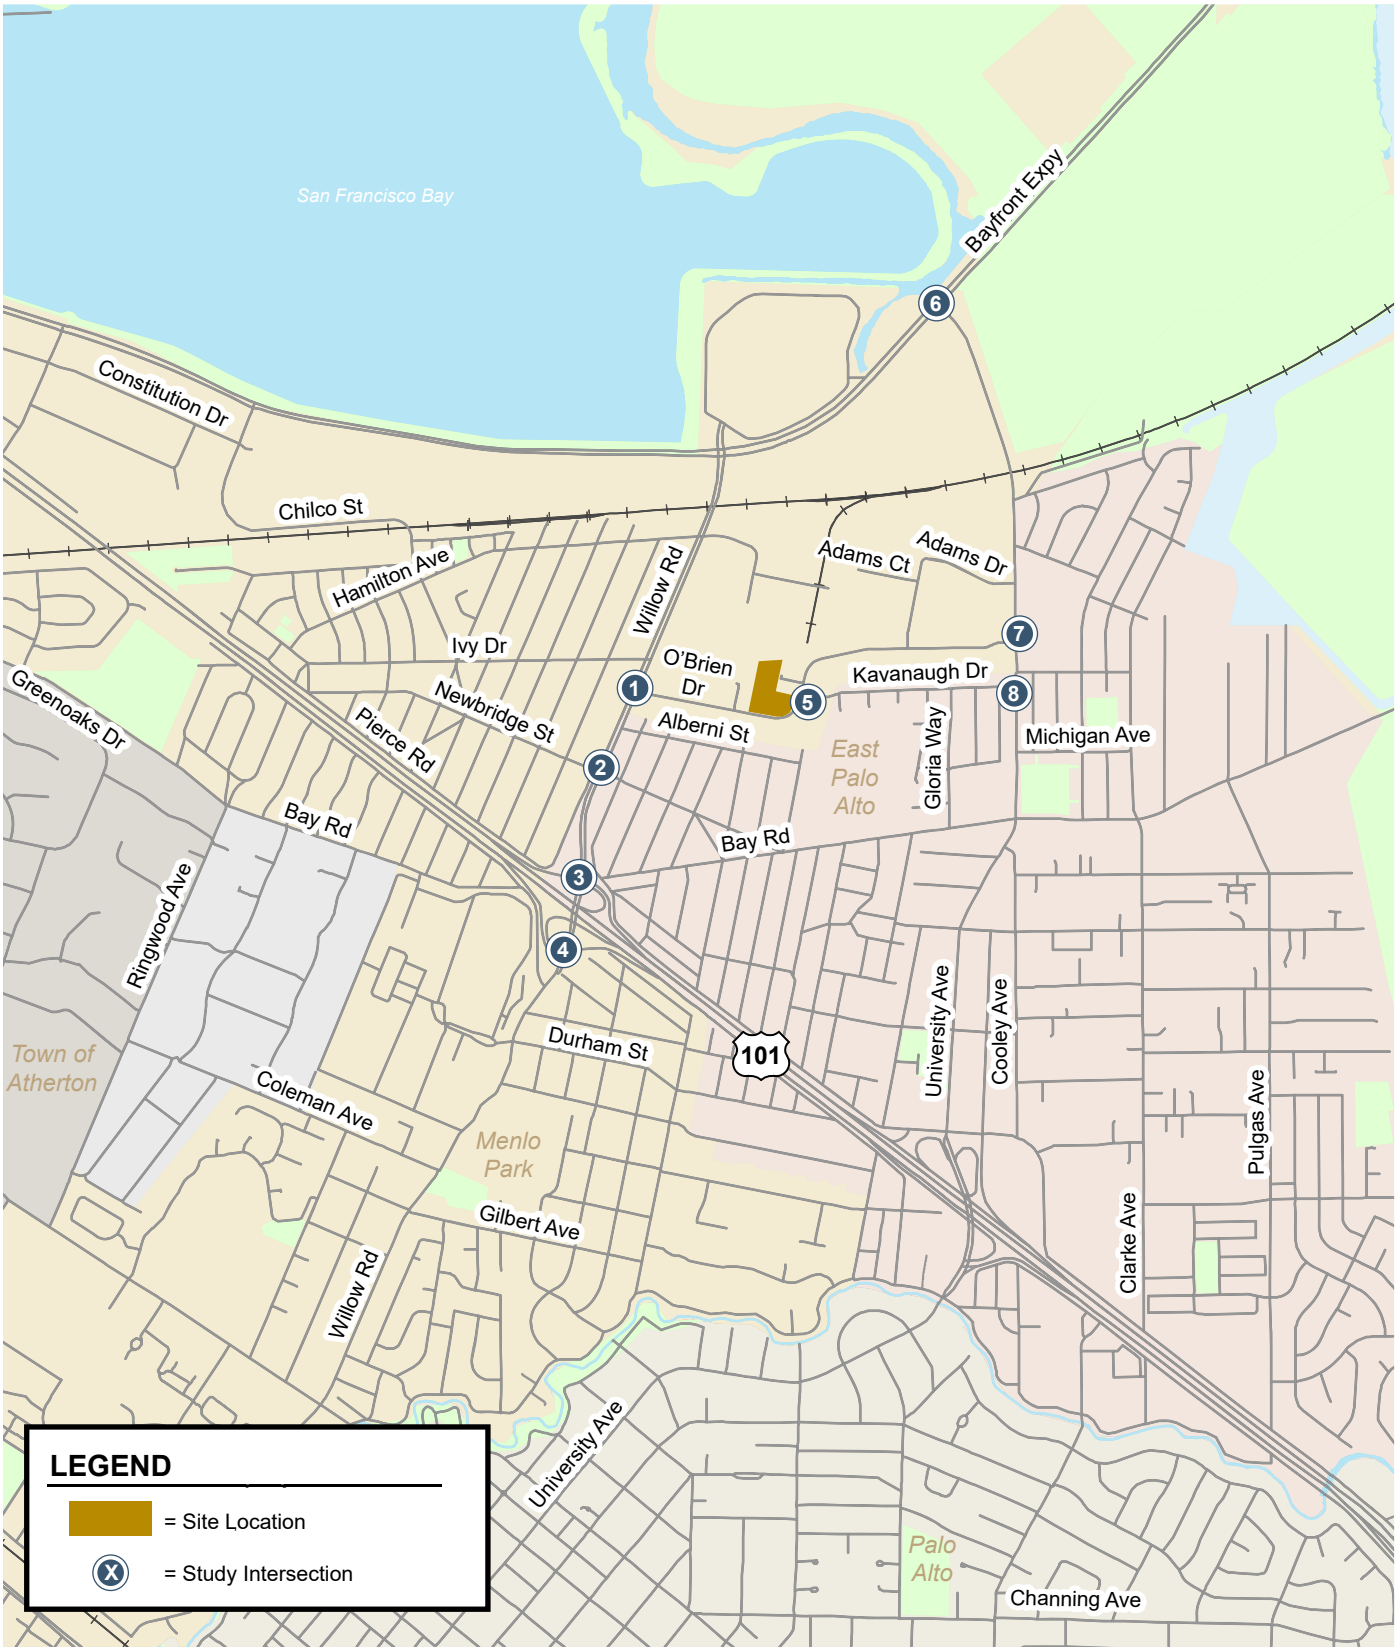
Study Intersections

The traffic analysis is based on the AM and PM peak-hour level of service for 7 signalized intersections and one unsignalized intersection in the vicinity of the project site as illustrated on Figure 1. The study

intersections were specified by the City of Menlo Park and the City of East Palo Alto. The study intersections are listed below.

1. Willow Road (SR 114) and O'Brien Drive [Menlo Park]
2. Willow Road (SR 114) and Newbridge Street [Menlo Park]
3. Willow Road and US 101 Northbound Ramps [Caltrans]
4. Willow Road and US 101 Southbound Ramps [Caltrans]
5. O'Brien Drive and Kavanaugh Drive (unsignalized) [Menlo Park]
6. University Avenue and Bayfront Expressway [Menlo Park]*
7. University Avenue (SR 109) and O'Brien Drive [East Palo Alto]
8. University Avenue (SR 109) and Kavanaugh Drive [East Palo Alto]

*Denotes CMP intersection



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 1
Site Location and Study Intersections

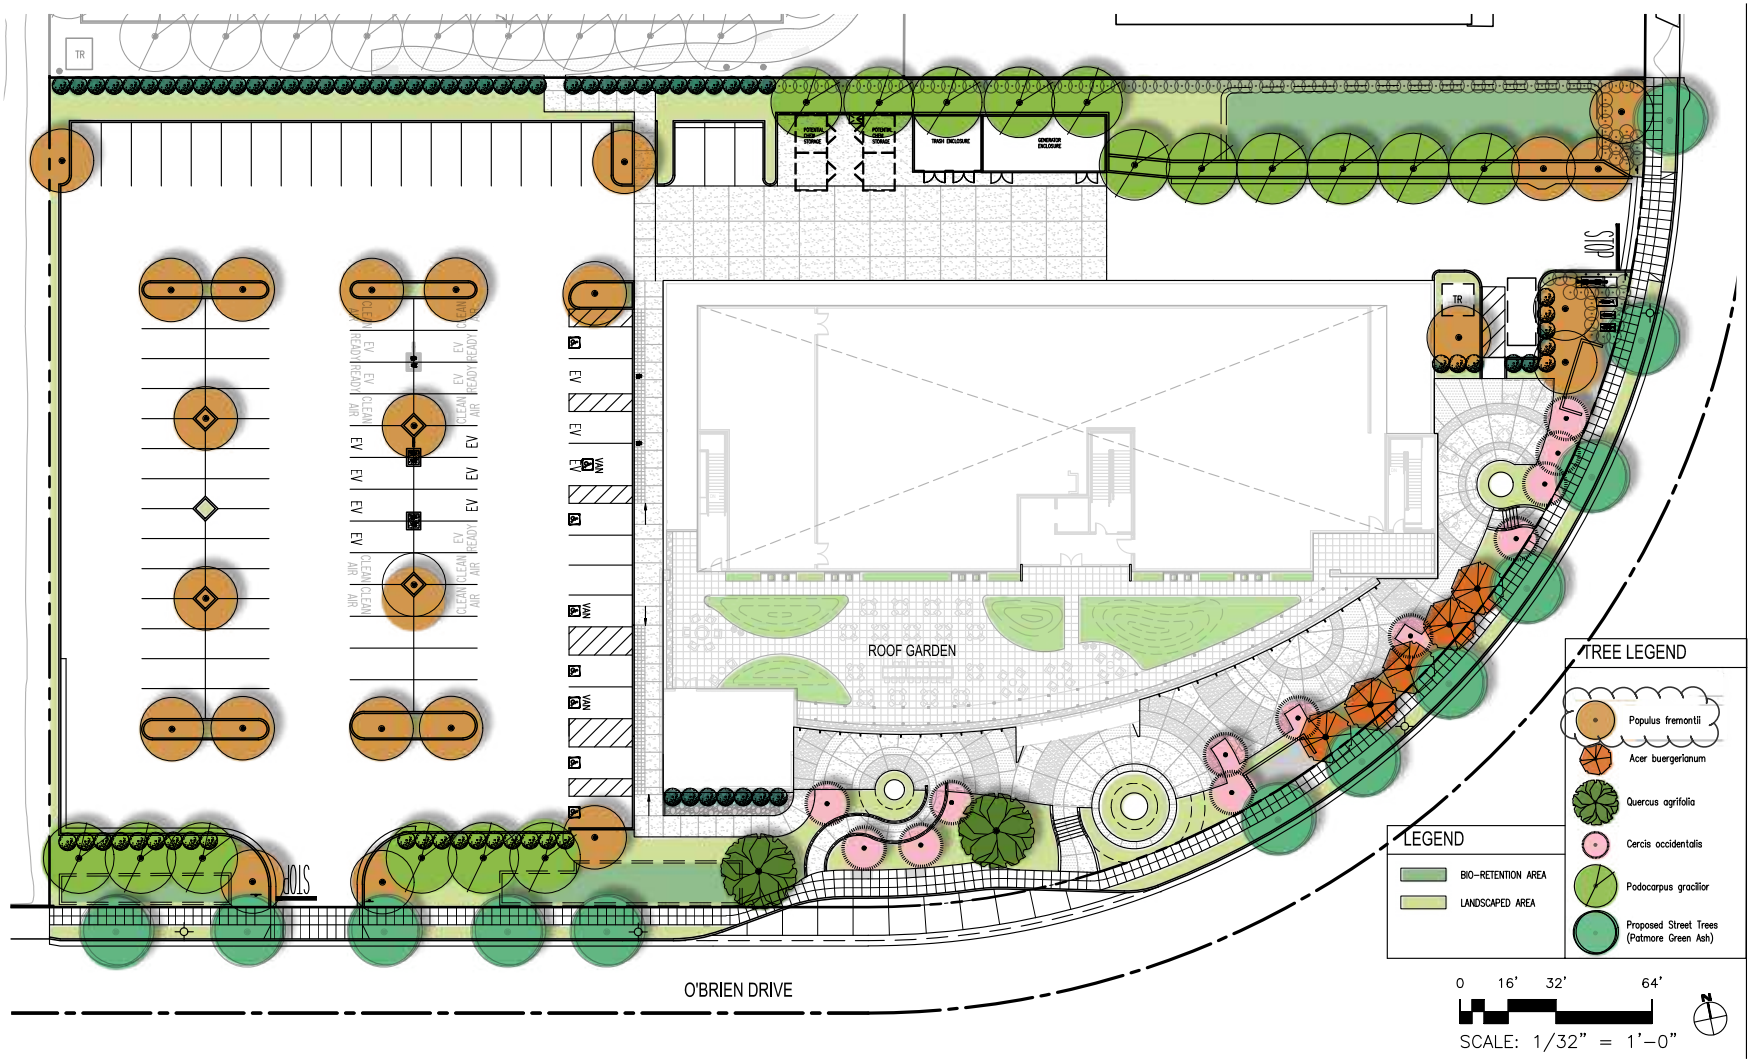


Figure 2A
Project Site Plan - Parcel 1

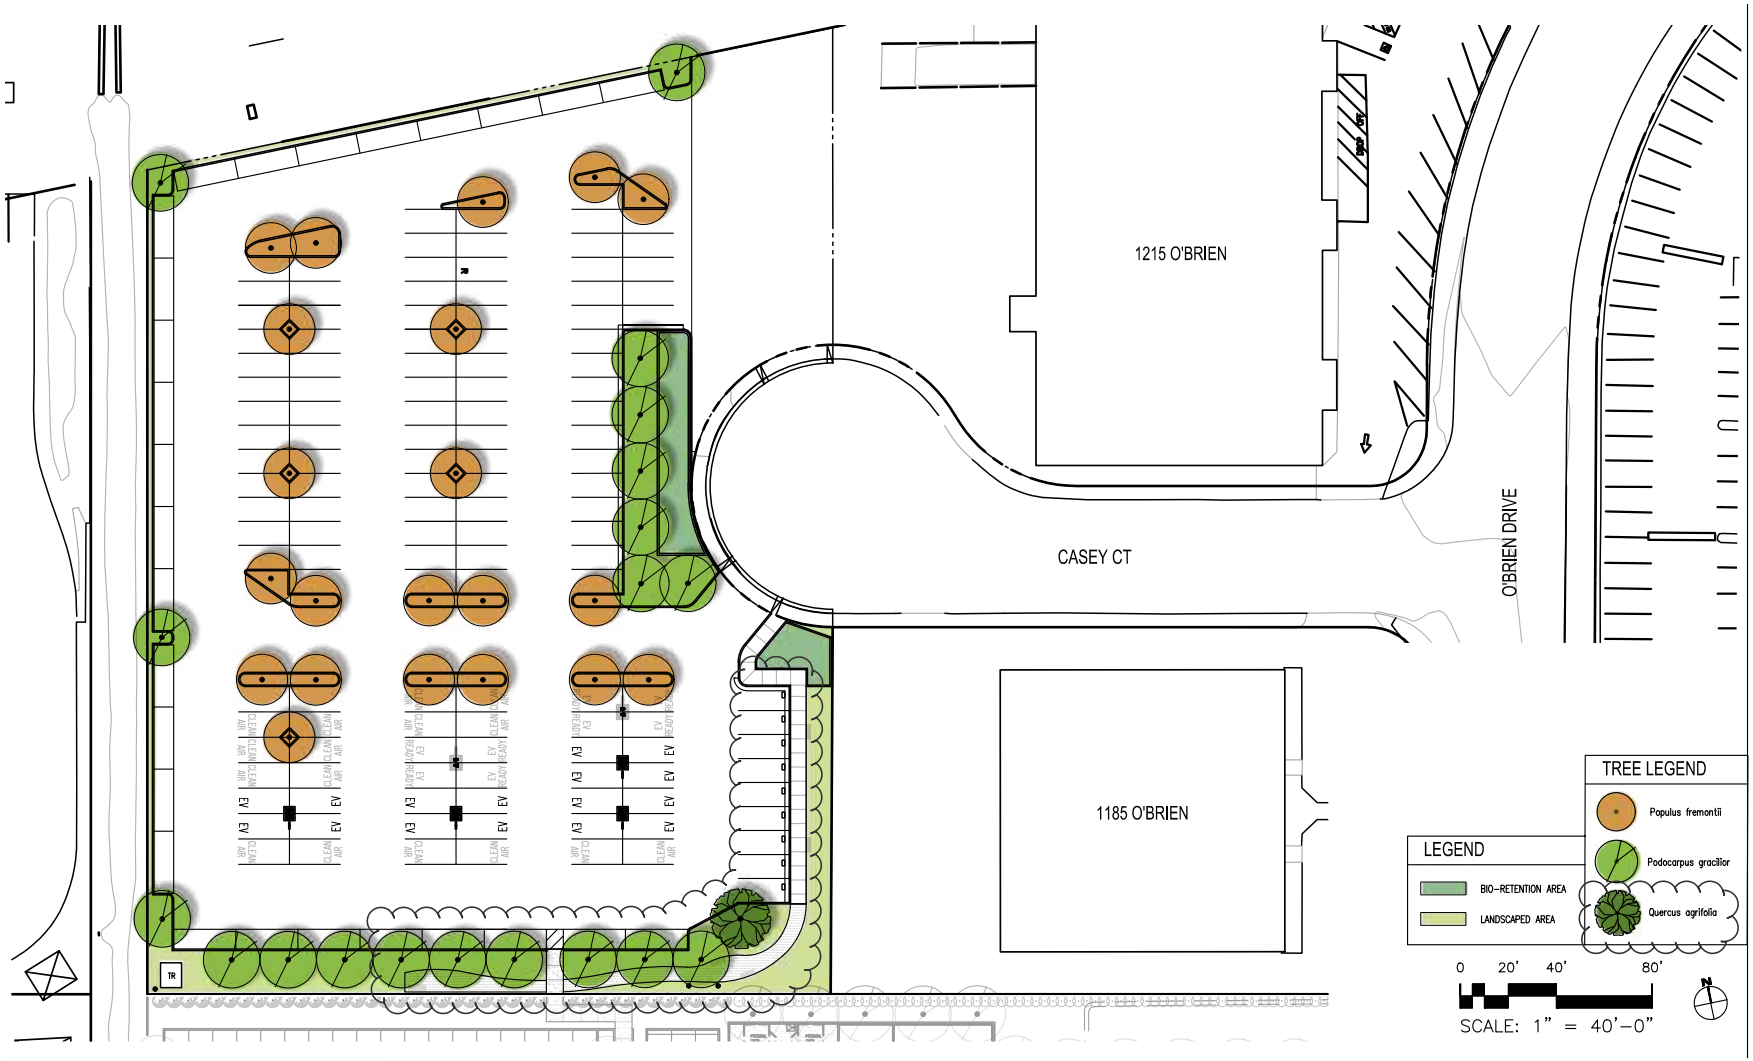

Figure 2B
Project Site Plan - Parcel 2

Traffic conditions at the study intersections were analyzed for the weekday AM and PM peak hours of adjacent street traffic. The AM traffic was counted from 7:00 AM to 10:00 AM, and the PM traffic was counted from 4:00 PM to 7:00 PM on a typical weekday. These are the hours during which most traffic congestion occurs on the roadways. The analysis is based on the busiest one hour during each peak period.

The proposed project would add a minimal number of trips to freeway ramps; therefore, a freeway ramp analysis is not necessary. However, the number of trips added to freeway ramps is presented.

Traffic conditions were evaluated for the following scenarios:

Scenario 1: *Existing Conditions.* Existing traffic volumes at the study intersections are based on traffic counts obtained from the City of Menlo Park and/or previous studies for other nearby developments in East Palo Alto.

Scenario 2: *Near-term (2025) Conditions.* The near-term scenario assumed a year 2025 horizon and was analyzed using the Menlo Park travel demand forecasting model. Traffic and roadway improvements associated with approved developments were assumed as directed by City Staff.

Scenario 3: *Near-term (2025) plus Project Conditions.* Near-term traffic volumes with the project were estimated by adding to near-term traffic volumes the additional traffic generated by the project. Near-term plus project conditions were evaluated relative to near-term conditions.

Scenario 4: *Cumulative (2040) Conditions.* 2040 model run results for the City of Menlo Park were used to describe operating conditions at the study intersections under cumulative (2040) conditions. The City has determined that the proposed project was included in the Year 2040 model forecasts. Therefore, the cumulative (2040) no project traffic volumes were estimated by subtracting the trips generated by the proposed project from the cumulative (2040) plus project traffic volumes.

Scenario 5: *Cumulative (2040) Plus Project Conditions.* The cumulative plus project scenario was analyzed using the model. The cumulative plus project scenario was evaluated relative to the cumulative scenario.

Methodology

This section presents the methods used to determine the traffic conditions at the study intersections for each scenario described above. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards and criteria used to determine if a project is compliant with local policies.

Data Requirements

The data required for the analysis were obtained from the City of Menlo Park, field observations, and previous studies. The following data were obtained from these sources:

- existing peak-hour intersection turning-movement volumes,
- existing lane configurations,
- signal timing and phasing, and
- list of approved projects.

Intersection Level of Service Methodologies

Traffic conditions were evaluated using level of service (LOS). Level of service is a description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or forced-flow conditions with extreme delays (see Table 1). Traffic conditions were evaluated using LOS.

Per City of Menlo Park's LOS standard (Policy CIRC-3.4 in the Circulation Element of the City's General Plan, adopted on November 29, 2016), the City strives to maintain LOS D at all City-controlled signalized intersections during peak hours, except at the intersection of Ravenswood Avenue and Middlefield Road and at intersections along Willow Road from Middlefield Road to US 101 where the City's goal is LOS E. The City shall work with Caltrans to ensure that average stopped delay on local approaches to State-controlled signalized intersections does not exceed LOS E. The City of East Palo Alto level of service standard for all intersections is LOS D or better.

Microscopic Simulation of Study Intersections

Due to the close proximity of four study intersections along Willow Road, they were analyzed using the Synchro/SimTraffic 9 software. Unlike macroscopic models of isolated intersection operations, such as the Highway Capacity Manual methodology, SimTraffic is a microscopic model that measures the full impact of queuing and intersection blockages. This software also provides a visual animation of the traffic operations. Simulated delay values were correlated to the level of service definitions set forth in the Highway Capacity Manual (HCM) methodology. The Willow Road traffic operations analysis is included in Appendix B.

Macroscopic Analysis of Signalized Intersections

Traffic operations at all the signalized study intersections in the City of Menlo Park were evaluated using VISTRO software based on the level-of-service method described in the Highway Capacity Manual (HCM) 6th Edition per the City of Menlo Park guidelines. The study intersections in the City of East Palo Alto were evaluated using TRAFFIX software based on the 2000 HCM methodology per the City of East Palo Alto guidelines. While slightly different, both The HCM methodologies evaluate signalized intersection operations on the basis of average control delay time for all vehicles at the intersection.

Unsignalized Intersection

Peak-hour levels of motor vehicle delay at the unsignalized study intersection in Menlo Park were evaluated using VISTRO software based on the HCM 6th Edition. For all-way stop-controlled intersections, the average delay (and LOS) for all movements is reported. Table 2 summarizes the relationship between average control delay per vehicle and LOS for unsignalized intersections.

Traffic Signal Warrant Analysis

An assessment of the need for signalization was conducted for unsignalized study intersections. For this study, the need for signalization was assessed on the basis of the peak hour volume signal warrant (Warrant #3) described in the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD). This method provides an indication of whether traffic conditions and peak-hour traffic levels are, or would be, sufficient to justify the installation of a traffic signal. It should be noted that it is just one of the factors/warrants used to indicate whether installation of a traffic control signal is justified.

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B	Operations characterized by good signal progression and/or short cycle lengths. More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	10.1 to 20.0
C	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though some vehicles may still pass through the intersection without stopping.	20.1 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes of such delay levels.	greater than 80.0

Source: Transportation Research Board, *Highway Capacity Manual 6th Edition* (Washington, D.C., 2016), p.16-19.

Table 2
Unsignalized Intersection Level of Service Definition Based on Average Delay

Level of Service	Description	Average Delay Per Vehicle (Sec.)
A	Little or no traffic delay	10.0 or less
B	Short traffic delays	10.1 to 15.0
C	Average traffic delays	15.1 to 25.0
D	Long traffic delays	25.1 to 35.0
E	Very long traffic delays	35.1 to 50.0
F	Extreme traffic delays	greater than 50.0

Source: Transportation Research Board, *Highway Capacity Manual 6th Edition* (Washington D.C., 2016).

Level of Service Standards and Adverse Effect Criteria

City of Menlo Park Definition of Adverse Effect

The following thresholds are from the City of Menlo Park's TA Guidelines. The proposed project's compliance with local policies was evaluated based on these thresholds.

- A project is considered potentially noncompliant with local policies if the addition of project traffic causes an intersection on a collector street operating at LOS A through C to operate at an unacceptable level (LOS D, E or F) or have an increase of 23 seconds or greater in average vehicle delay, whichever comes first. Potential noncompliance shall also include a project that causes an intersection on arterial streets or local approaches to State controlled signalized intersections operating at LOS A through D to operate at an unacceptable level (LOS E or F) or have an increase of 23 seconds or greater in average vehicle delay, whichever comes first.
- A project is also considered potentially noncompliant if the addition of project traffic causes an increase of more than 0.8 seconds of average delay to vehicles on all critical movements for intersections operating at a near-term LOS D through F for collector streets and at a near-term LOS E or F for arterial streets. For local approaches to State controlled signalized intersections, a project is considered to be potentially noncompliant if the addition of project traffic causes an increase of more than 0.8 seconds of delay to vehicles on the most critical movements for intersections operating at a near-term LOS E or F.

At an unsignalized intersection, the proposed project is considered to have an adverse effect if it causes operations at LOS A through D to an unacceptable level (LOSE or F).

For signalized intersections in the City of Menlo Park involving state routes, the project is considered potentially non-compliant with local policies if for any peak hour:

- The level of service degrades from an acceptable LOS D or better under existing conditions to an unacceptable LOS E or F under existing plus project conditions, and the average delay per vehicle increases by four seconds or more, or
- The level of service is an unacceptable LOS E or F under existing conditions and the addition of project trips causes an increase in the average control delay at the intersection by four seconds or more.

City of East Palo Alto Definition of Adverse Effect

The following thresholds are from the City of East Palo Alto's TA Guidelines. The proposed project's compliance with local policies was evaluated based on these thresholds:

At a signalized intersection, the project is considered to have an adverse effect if it:

- Causes operations to degrade from LOS D (or better) to LOS E or F; or
- Exacerbates LOS E or F conditions by both increasing critical movement delay by four or more seconds and increasing volume-to-capacity ratio (V/C ratio) by 0.01 at an intersection evaluated using the TRAFFIX software; or
- Increases the V/C ratio by > 0.01 at an intersection that exhibits unacceptable operations, even if the calculated LOS is acceptable; or
- Causes planned future intersections to operate at LOS E or F.

2. Non-CEQA Level of Service Transportation Analysis

This chapter describes the level of service transportation analysis including the method by which project traffic is estimated and any adverse effects to intersection levels of service caused by the proposed project under near-term (2025) and cumulative (2040) conditions. This chapter also includes the intersection vehicle queuing analysis, site access and on-site circulation review, parking analysis, and CMP compliance discussion.

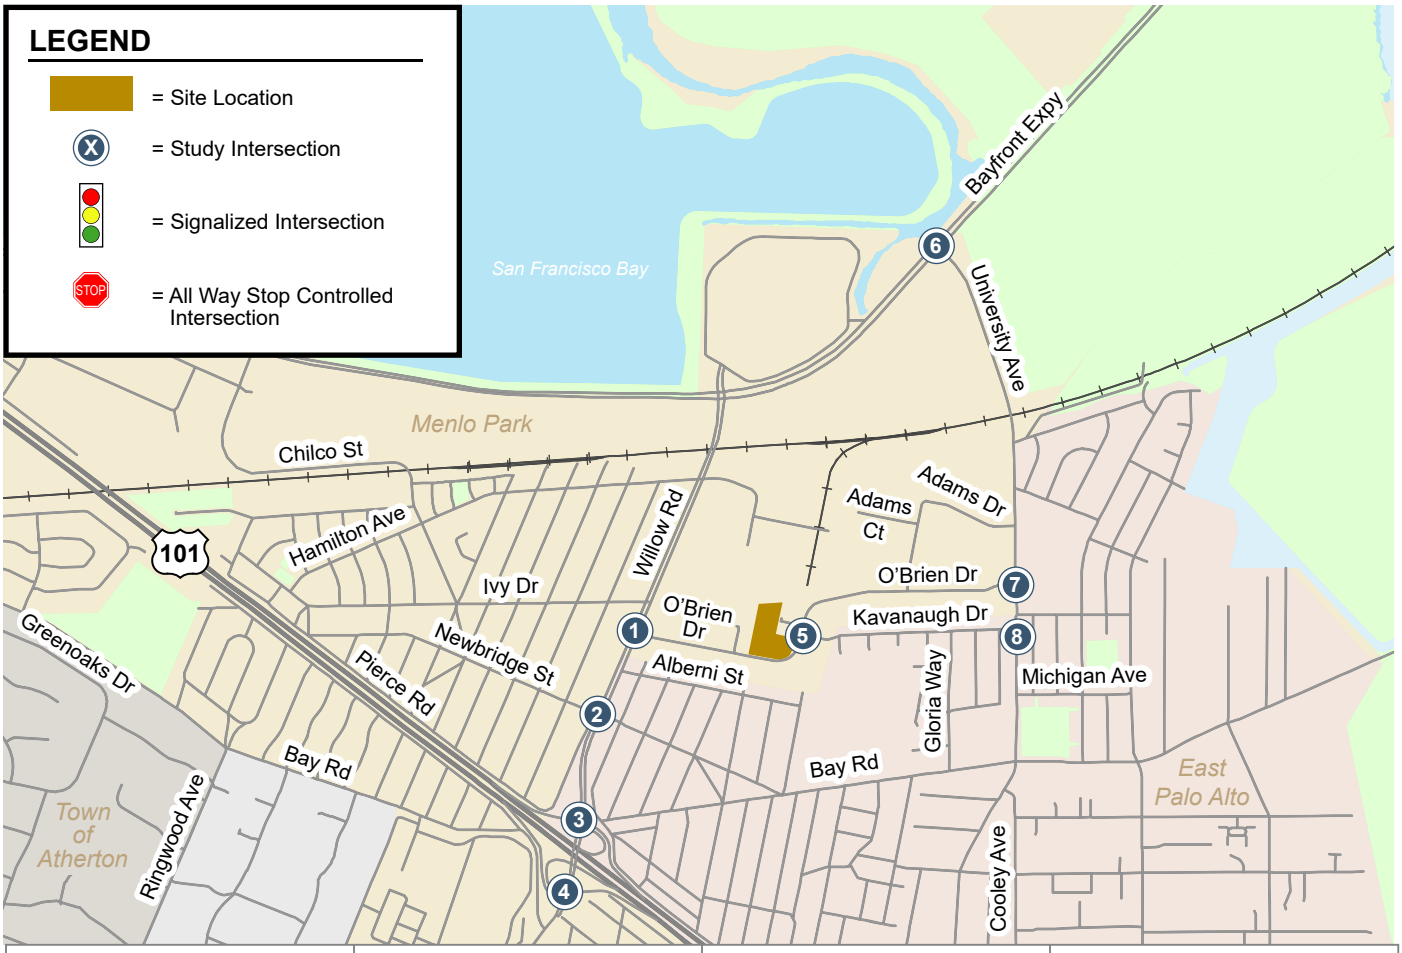
Existing Conditions

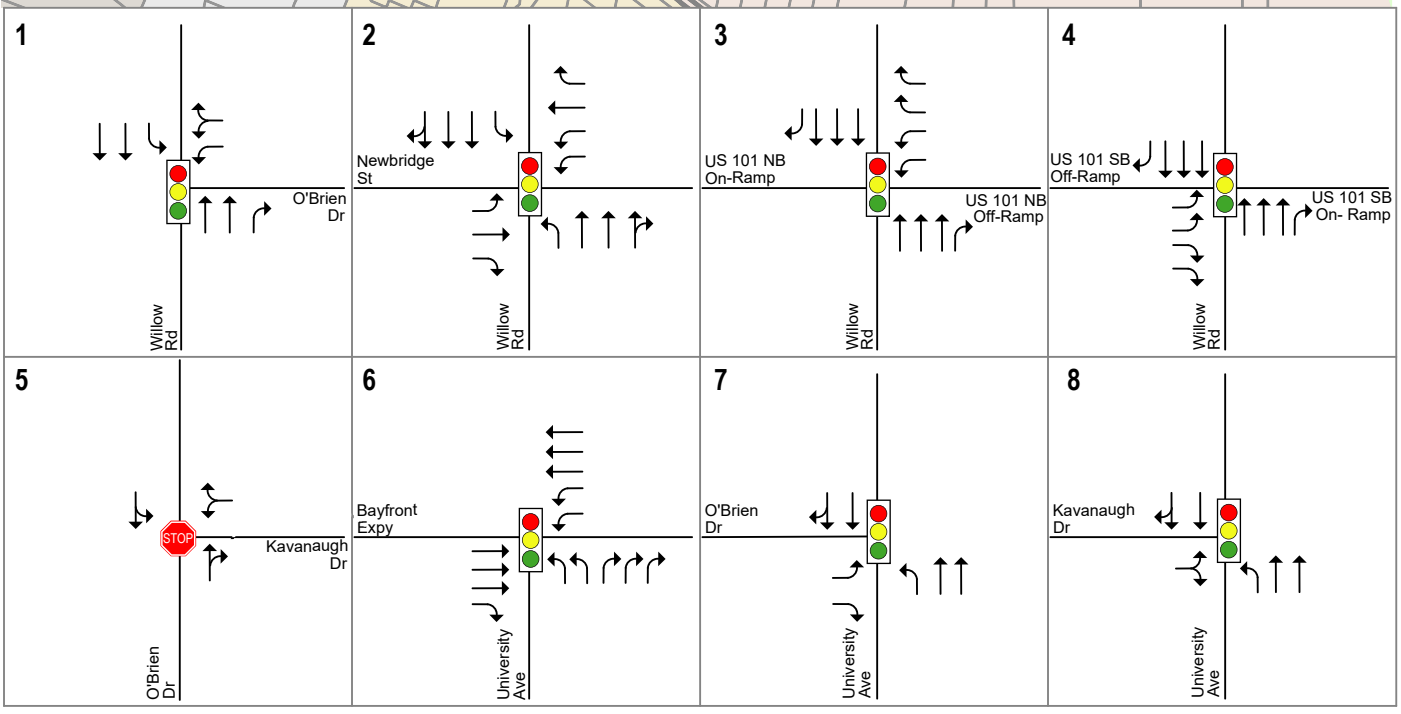
This section describes the existing level of service at the study intersections during the weekday AM and PM peak hours.

Existing Lane Configurations and Traffic Volumes

The existing lane configurations at the study intersections were provided by the City of Menlo Park or obtained from field observations (see Figure 3).

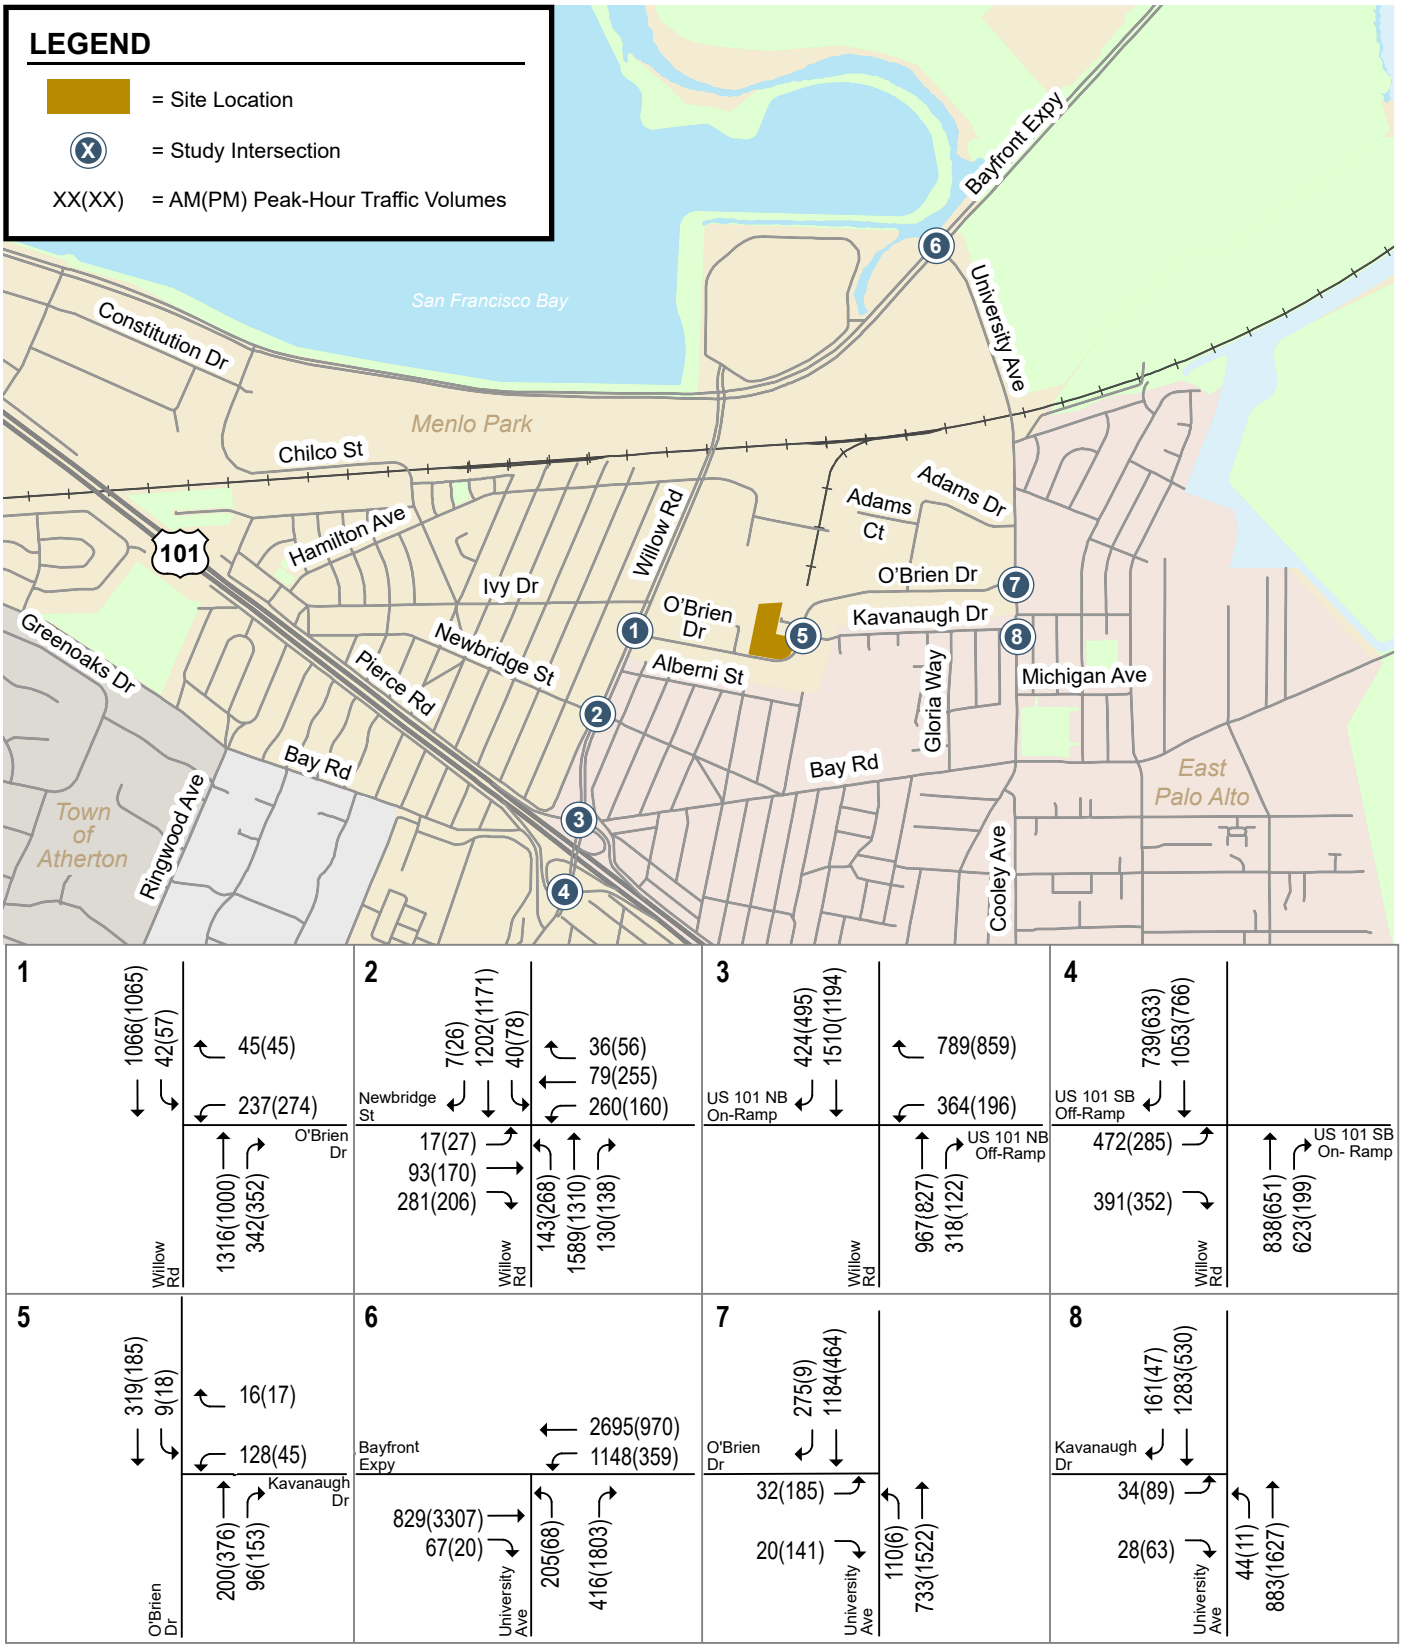
Existing traffic volumes were obtained from counts conducted in 2019, prior to the COVID-19 pandemic. The existing traffic volumes at the study intersection are shown on Figure 4. The traffic count data are included in Appendix A.





NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 3
Existing Lane Configurations



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 4
Existing Traffic Volumes

Existing Intersection Levels of Service

The results of the intersection level-of-service analysis under existing conditions show that many of the study intersections operate at an unacceptable level (see Table 3). As noted in the ConnectMenlo DEIR, the counted traffic volumes at the Menlo Park study intersections along Willow Road did not appropriately reflect the actual traffic demand, and isolated intersection analysis fails to capture these results. Therefore, instead of calculated level of service, the existing level of service results are reported based on level of service as identified by field observations and microsimulation to reflect "unserved demand". The microsimulation methodology and assumptions for Willow Road are documented in Appendix B. The intersection level of service calculation sheets are included in Appendix E. The following 5 study intersections currently operate at an unacceptable level of service during at least one peak hour:

#1: Willow Road (SR 114) and O'Brien Drive – AM and PM peak hours
#2: Willow Road (SR 114) and Newbridge Street– AM and PM peak hours
#3: Willow Road (SR 114) and US 101 Northbound Ramps– AM and PM peak hours
#4: Willow Road (SR 114) and US 101 Southbound Ramps– PM peak hour
#6: University Avenue (SR 109) and Bayfront Expressway (SR 84) – PM peak hour

Table 3
Existing Intersection Level of Service

#	Intersection	Peak Hour	Count Date	Jurisdiction	GP Policy Standard	Intersection Control	Existing Conditions Avg. Delay (sec)[1]	Existing Conditions LOS
1	Willow Road & O'Brien Drive[1]	AM	3/21/2019	Menlo Park	D	Signal	**58.9**	**E**
		PM	3/21/2019				**>120**	**F**
2	Willow Road & Newbridge Street[1]	AM	3/21/2019	Menlo Park	D	Signal	**93.4**	**F**

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear are estimated using a three-step process: 1) trip generation, 2) trip distribution, and 3) trip

assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site is estimated for the AM and PM peak hours. As part of the project trip distribution, an estimate is made of the directions to and from which the project trips would travel. In the project trip assignment, the project trips are assigned to specific streets and intersections. These procedures are described below.

Trip Generation

Through empirical research, data have been collected that quantify the amount of traffic produced by many types of land uses. These data are compiled in the Institute of Transportation Engineers' (ITE) Trip Generation Manual, 11th Edition (2021). The magnitude of traffic added to the roadway system by a development is estimated by multiplying the applicable trip generation rates by the size of the development. The trip generation rates published for Research and Development Center (Land Use Code 760) were used to estimate the trips generated by the project. The project would also include a café. It is assumed that the café would serve predominantly employees in the building or other employees within walking distance and would be operational for limited hours in the day (7:30 am to 9:30 am and 11 am to 2 pm). No external vehicle trips would be generated. Café employee trips are captured in the R&D trip generation rates. Based on the ITE rates for R&D, the project would generate 136 gross AM peak-hour trips and 129 gross PM peak-hour trips prior to taking any trip reduction credits as described below.

The project has developed a Transportation Demand Management (TDM) plan to reduce vehicle trips by 20 percent as required by the Menlo Park Municipal Code (Section 16.45.090 Transportation Demand Management). Therefore, this analysis assumes that the project site would achieve at a minimum a 20 percent reduction in daily trips and peak-hour trips. The TDM plan is attached in Appendix D.

Trips associated with the existing uses on the project site were credited against the new trip generation. The trips generated by the existing buildings on the site were estimated based on ITE 11th Edition trip rates for Research and Development Center (Land Use Code 760) and Warehousing (Land Use 150).

As shown in Table 4, with the required TDM reduction and the existing trip credit, the project is expected to generate a net total of 798 new daily trips including 74 (61 in and 13 out) new AM peak hour trips and 69 (11 in and 58 out) new PM peak hour trips.

Table 4
Project Trip Generation Estimates

Land Use	Size	Unit	Daily Rate	Daily Trips	AM Peak Hour Peak Rate	AM Peak Hour Trips In	AM Peak Hour Trips Out	AM Peak Hour Total Trips	PM Peak Hour Peak Rate	PM Peak Hour Trips In	PM Peak Hour Trips Out	PM Peak Hour Total Trips

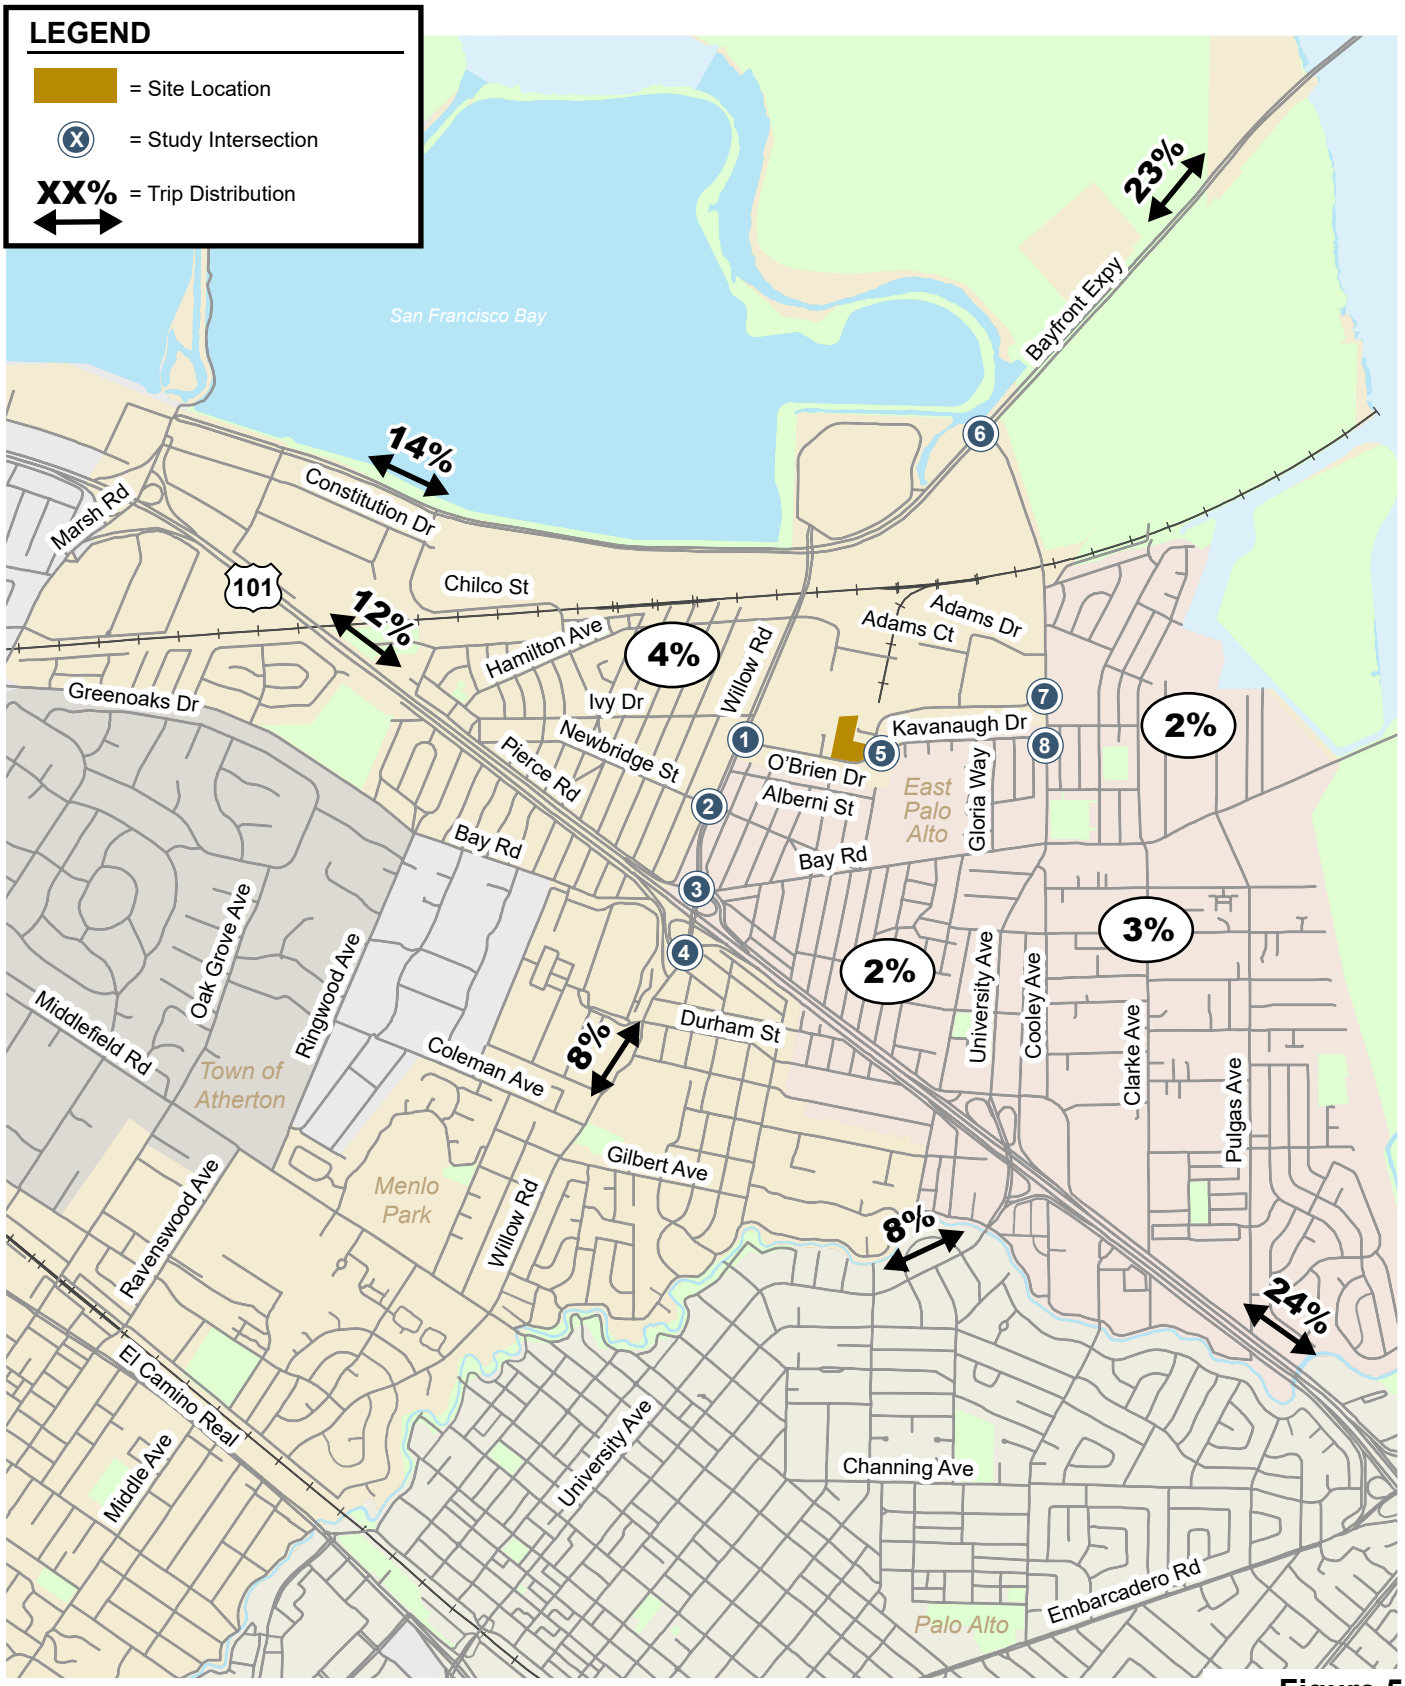
Net Project Total				**798**		**61**	**13**	**74**		**11**	**58**	**69**

Notes:
All rates are from: Institute of Transportation Engineers, *Trip Generation, 11th Edition*
1. It is assumed that the proposed café would serve predominantly employees in the building or other employees within walking distance. No external vehicle trips would be generated. Café employee trips are captured in the R&D trip generation rates.
2. Land Use Code 760: Research and Development Center (average rates, expressed in trips per 1,000 s.f. gross floor area)
3. Existing uses are based on the descriptions in the Initial Study report dated July 2021: 26,911 gsf of R&D space at 1135 O'Brien Drive and 1165 O'Brien Drive, 1,750 gsf of R&D space and 10,250 gsf of warehouse space at 1105 O'Brien Drive, and 20,955 gsf of warehouse space at 1 Casey Court.
4. Land Use Code 150: Warehousing (average rates, expressed in trips per 1,000 s.f. gross floor area)

Trip Distribution and Assignment

The trip distribution pattern for the proposed project was developed based on the City of Menlo Park's travel demand model. Under near term (2025) conditions, there is almost no residential development in the local area near the project site. In year 2040, a large number of residential units were assumed in the Facebook Willow Campus development near the project site, which will result in a higher percentage of project trips remaining local (such as project employees who could be living in the Willow Campus). Therefore, different trip distribution patterns were developed for cumulative (2040) plus project conditions compared to near term (2025) plus project conditions to account for the Facebook Willow Campus development near the project site assumed in 2040. The project trip distribution pattern for the proposed project under near term (2025) plus project conditions is shown on Figure 5. The project trip distribution pattern under cumulative (2040) plus project conditions is shown on Figure 6. The net project trip assignment under near term (2025) plus project conditions is shown on Figure 7. The net project trip assignment under cumulative (2040) plus project conditions is shown on Figure 8.



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 5
Project Trip Distribution under Near-Term (2025) Plus Project Conditions

Figure 8
Project Trip Assignment under Cumulative (2040) Plus Project Conditions

Near-Term (2025) Scenario

Near-Term (2025) Traffic Volumes

Near term (2025) scenario forecasts of turning movements for the study intersections were completed using the latest Menlo Park travel demand forecast model.

The model is a mathematical representation of travel within the nine Bay Area counties, as well as the Santa Cruz, San Benito, Monterey, and San Joaquin counties. The base model structure was developed by the Metropolitan Transportation Commission (MTC) and further refined by the City/County Association of Governments (C/CAG) and Santa Clara Valley Transportation Authority (VTA) for use within San Mateo County and Santa Clara County. The City further refined this model for application within Menlo Park to add more detail to the zone structure and transportation network. There are 81 transportation analysis zones (TAZs) within the model to represent the City of Menlo Park.

For the near-term (2025) scenario, land use data outside of Menlo Park and East Palo Alto were provided by the Association of Bay Area Governments (ABAG) and refined by VTA and C/CAG. Within the City of Menlo Park and the City of East Palo Alto, year 2025 land use data was further refined by adding the following approved developments (as of August 2021) to the existing land use.

- 1162 El Camino Real
- Menlo Portal
- 111 Independence Drive
- Menlo Uptown
- 301 Constitution Drive
- Menlo Gateway
- 1285 El Camino Real
- 123 Encinal Avenue
- 1010-1026 Alma Street
- 650-660 Live Oak Avenue
- 1275 El Camino Real
- Facebook Expansion Project (301-309 Constitution Drive)
- 500 El Camino Real
- New Magnet High School
- 1300 El Camino Real
- 1021 Evelyn Street
- 40 Middlefield Road
- 949 El Camino Real
- 1540 El Camino Real
- 115 El Camino Real
- 506-556 Santa Cruz Avenue
- 1125 Merrill Street
- 409 Glenwood Avenue
- 706-716 Santa Cruz Avenue
- 1345 Willow Road
- 201 El Camino Real
- 1021 Runnymede Street (East Palo Alto)

The forecasted intersection turning movements were adjusted based on existing volumes to generate traffic volumes under the near-term no project (see Figure 9). For the near-term (2025) plus project scenario, the net new trips generated by the proposed project were added to the near-term (2025) traffic volumes to derive the near-term (2025) plus project traffic volumes (see Figure 10).The volume summary table is included in Appendix C.

Near-Term (2025) Roadway Network

The roadway network under the near-term (2025) scenarios is assumed to be the same as under existing conditions.

Intersection Levels of Service

Near-term (2025) No Project Intersection Levels of Service

The results of the intersection level of service analysis under near-term (2025) no project conditions are summarized in Table 5. The Willow Road corridor was analyzed using the Simtraffic microsimulation model as described in Chapter 1. The microsimulation model indicates that the intersections would experience capacity issues where the demand cannot be served by the intersections. Oversaturated conditions would operate at LOS F and are indicated using 'OVERSAT' in the tables below. In order to determine the added critical delay at the Willow Road intersections, the Vistro software was used. The intersection LOS calculation sheets are included in Appendix E. The following 5 study intersections would operate at an unacceptable level of service during at least one peak hour:

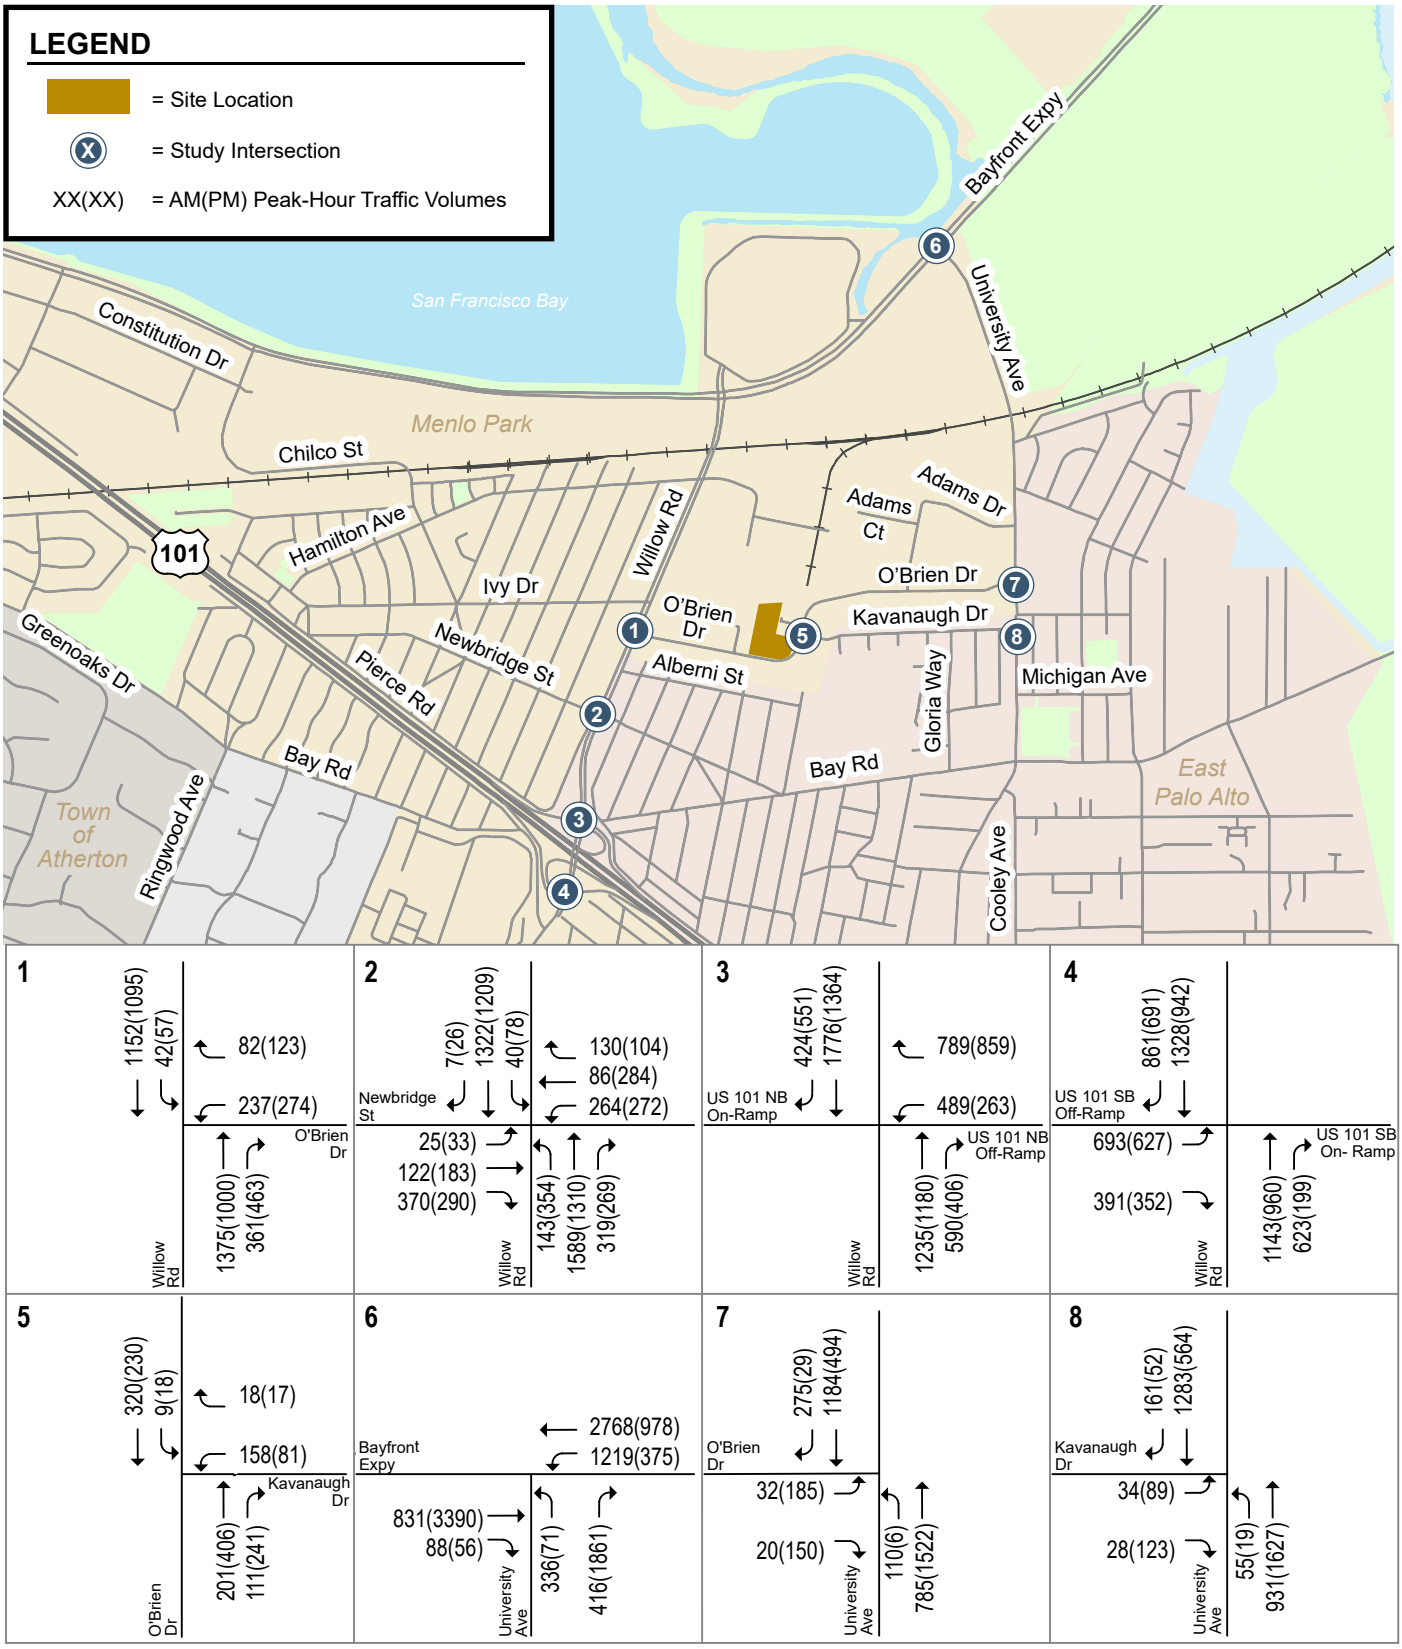
#1: Willow Road (SR 114) and O'Brien Drive – AM and PM peak hours
#2: Willow Road (SR 114) and Newbridge Street – AM and PM peak hours
#3: Willow Road (SR 114) and US 101 Northbound Ramps – AM and PM peak hours
#4: Willow Road (SR 114) and US 101 Southbound Ramps – AM and PM peak hours
#6: University Avenue (SR 109) and Bayfront Expressway (SR 84) – PM peak hour

Near term (2025) Plus Project Intersection Levels of Service

The results of the intersection level of service analysis under near term (2025) plus project conditions are summarized in Table 5. Under near-term plus project conditions, the project trips would result in non-compliance at the following four intersections during either the AM or the PM peak hour as compared to near term conditions:

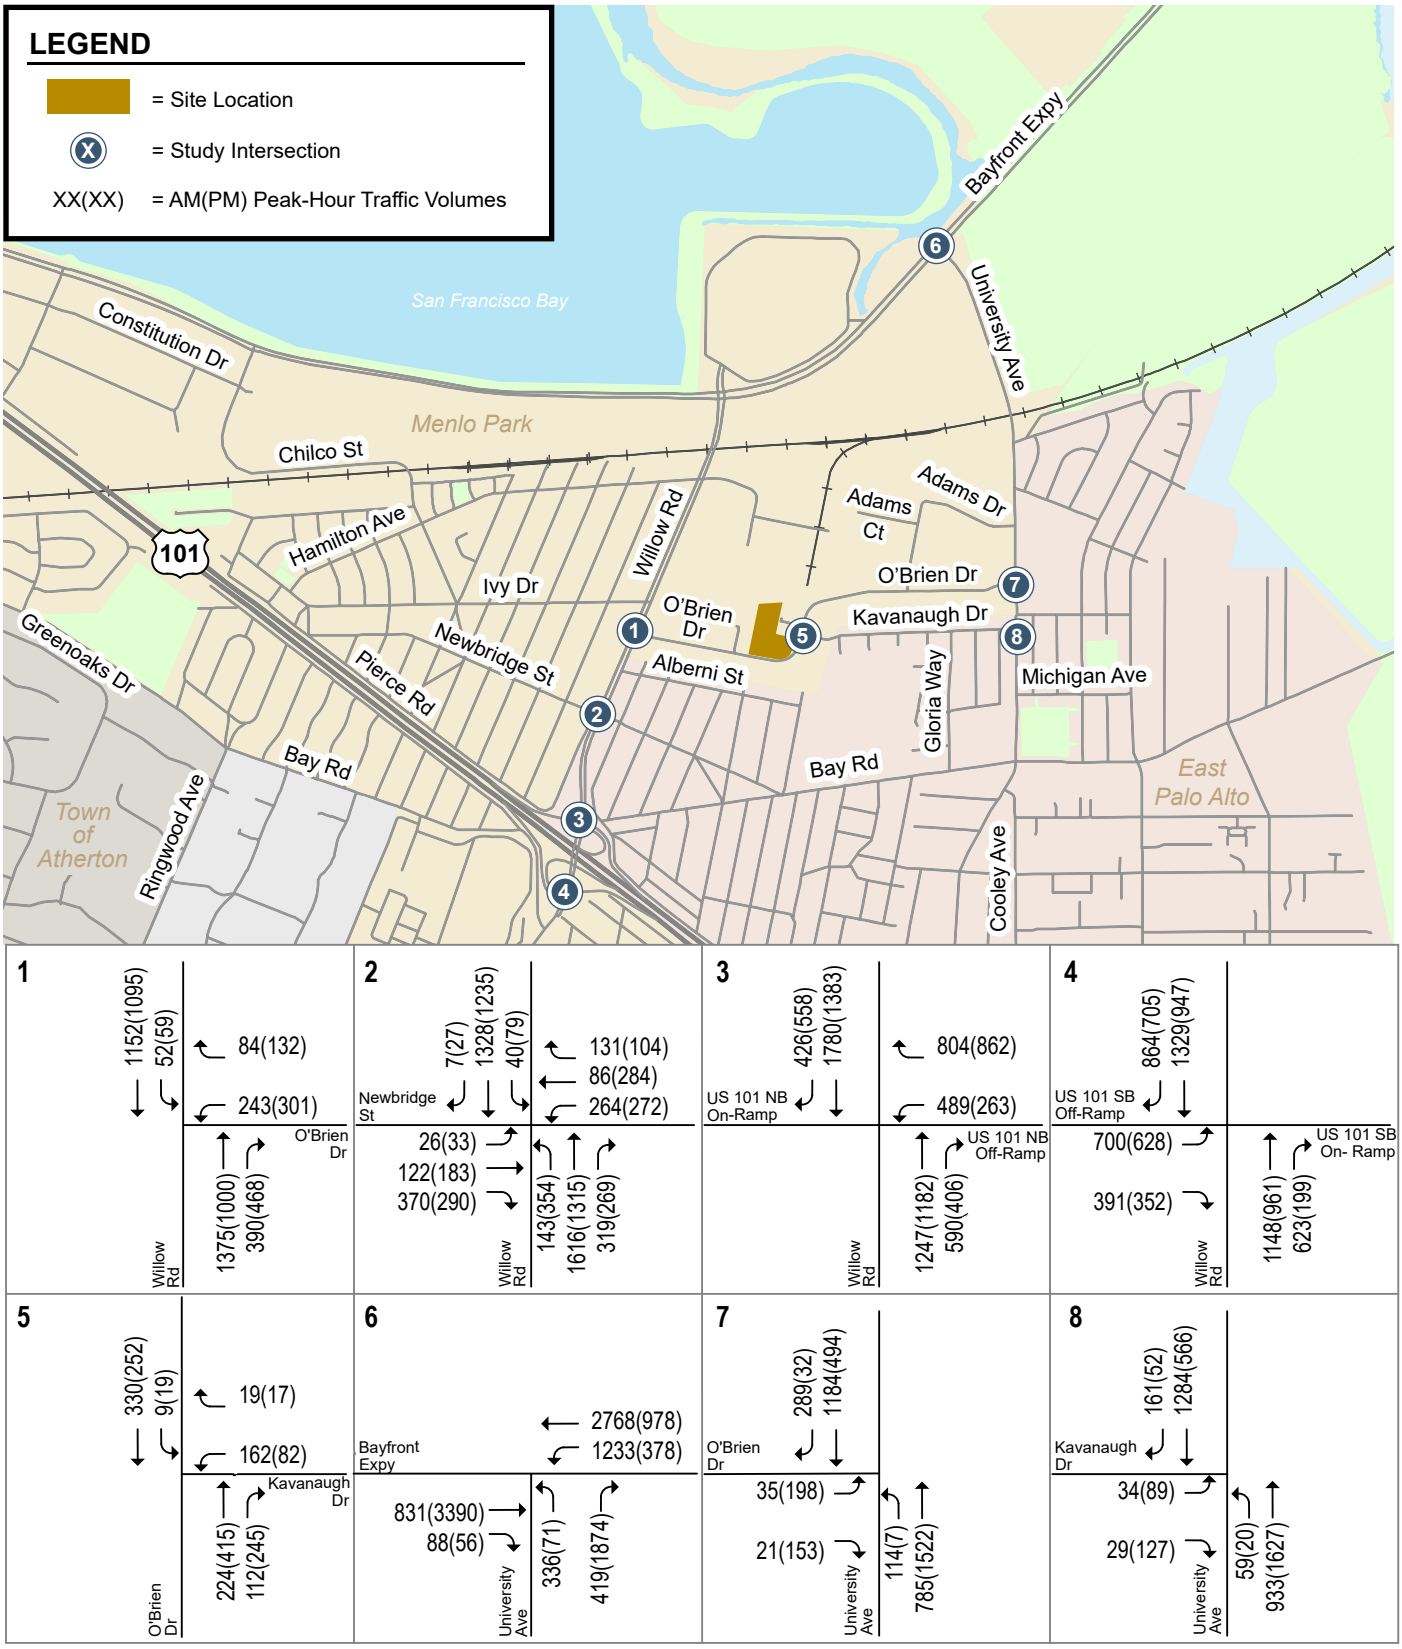
#1: Willow Road (SR 114) and O'Brien Drive – AM and PM peak hours
#3: Willow Road (SR 114) and US 101 Northbound Ramps – PM peak hour
#4: Willow Road (SR 114) and US 101 Southbound Ramps – PM peak hour
#5: O'Brien Drive and Kavanaugh Drive – PM peak hour

The O'Brien Drive and Kavanaugh Drive intersection would not meet the MUTCD peak hour signal warrant under near-term no project or near-term plus project conditions during either peak hour. Therefore, signalization is not recommended.



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 9
Near-Term (2025) No Project Traffic Volumes



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Notes:
* Denotes CMP Intersection
AWSC - All Way Stop Control
[1] Average delay is reported for signalized and AWSC intersections.
"OVERSAT" indicates that the SimTraffic microsimulation model indicates that the intersection would experience capacity issues where the demand cannot be served by the intersection. Oversaturated intersections would operate at LOS F.
[1]Intersections were analyzed using Synchro/SimTraffic software due to the close proximity of these intersections. Changes in average delay and critical delay calculated using Vistro.
Bold indicates substandard level of service
Bold indicates noncompliance. The project exceeds thresholds in the Jurisdiction's Guidelines.

Adverse Effects and Recommended Improvements

The intersection effects and recommended modifications to improve the intersections to pre-project conditions are described below.

#1 Willow Road (SR 104) and O'Brien Drive

This intersection is expected to operate at an unacceptable LOS F during both peak hours under near-term (2025) conditions. The addition of project traffic would cause the critical movement delay on the local northbound shared left-right movement to increase by more than 0.8 seconds during both peak hours. This constitutes non-compliance according to the thresholds established by the City of Menlo Park. The unacceptable level of service is primarily due to the existing congestion on Willow Road.The City of Menlo Park is implementing a traffic signal adaptive coordination system on the Willow Road corridor to improve traffic flow. Adaptive traffic control is a technology that automatically adjusts traffic signal timing based on actual traffic demand at an intersection. This measure will improve the intersection operations and could reduce the intersection delay. It is expected that this improvement would reduce the critical movement delay on the local approach and would avoid the adverse effect during the AM peak hour. However, the reduction in delay due to adaptive signal coordination is not expected to be sufficient to avoid the adverse effect of the project at this intersection during the PM peak hour or to bring the intersection into compliance with the City's level of service policy. Other possible physical intersection improvements are considered infeasible due to right-of-way constraints and/or adverse effects on pedestrian and bicycle travel. The project would pay traffic impact fees according to the City's current Traffic Impact Fee (TIF) schedule, which could be used to contribute to other transportation improvements in the area.

#3 Willow Road (SR 114) and US 101 Northbound Ramps

This intersection is expected to operate at an unacceptable LOS F during both peak hours under near term (2025) conditions. The addition of project traffic would cause the delay at this intersection to increase by more than four seconds during the PM peak hour. This constitutes non-compliance according to the thresholds established by Caltrans.The delay caused at this intersection is due to the congestion on Willow Road. The City of Menlo Park is implementing a traffic signal adaptive coordination system on the Willow Road corridor to improve traffic flow. Adaptive traffic control is a technology that automatically adjusts traffic signal timing based on actual traffic demand at an intersection. This measure will improve the intersection operations and could reduce the intersection delay. The reduction in delay due to adaptive signal coordination is not expected to bring the intersection in compliance with the Caltrans level of service policy. Other physical intersection improvements are considered infeasible due to right-of-way constraints and/or adverse effects on pedestrian and bicycle travel. The project would pay traffic impact fees according to the City's current TIF schedule which could be used to fund to other transportation improvements in the area.

#4 Willow Road (SR 114) and US 101 Southbound Ramps

This intersection is expected to operate at an unacceptable LOS F during both peak hours under near term (2025) conditions. The addition of project traffic would cause the delay at this intersection to increase by more than four seconds during the PM peak hour. This constitutes non-compliance according to the thresholds established by Caltrans.The delay caused at this intersection is due to the congestion on Willow Road. The City of Menlo Park is implementing a traffic signal adaptive coordination system on the Willow Road corridor to improve traffic flow. Adaptive traffic control is a technology that automatically adjusts traffic signal timing based on actual traffic demand at an intersection. This measure will improve the intersection operations and could reduce the intersection delay. The reduction in delay due to adaptive signal coordination is not expected to bring the intersection in compliance with the City's level of service policy. Other physical intersection

improvements are considered infeasible due to right-of-way constraints and/or adverse effects on pedestrian and bicycle travel. The project would pay traffic impact fees according to the City's current TIF schedule which could be used to fund other transportation improvements in the area.

#5 O'Brien Drive and Kavanaugh Drive

This intersection is expected to operate at an acceptable LOS B during the AM peak hour and an unacceptable LOS D during the PM peak hour under near term conditions. The addition of project traffic would cause the average critical delay to increase by more than 0.8 seconds during the PM peak hour. This constitutes non-compliance according to the thresholds established by the City of Menlo Park.

Since the intersection currently operates as all-way-stop-controlled, potential modification to bring the intersection to pre-project conditions would be to signalize it. However, the intersection would not meet the MUTCD signal warrant during either peak hour under project conditions (See Appendix F). The intersection lane configuration could be modified to include additional turn lanes. However, this would not result in an improvement in average critical delay, and the intersection would continue to be non-compliant. Other physical intersection improvements are considered infeasible due to right-of-way constraints and/or adverse effects on pedestrian and bicycle travel. The project would pay traffic impact fees according to the City's current TIF schedule which could be used to fund other transportation improvements in the area.

Cumulative (2040) Scenario

Cumulative (2040) Traffic Volumes

Cumulative (2040) scenario forecasts of turning movements for the study intersections were completed using the latest Menlo Park travel demand forecast model.

For the cumulative scenario, the City of Menlo Park land use assumed the buildout of the General Plan. Pending developments as of December 2020 within the City of East Palo Alto were added to the near-term land use to represent the year-2040 land use for the city. Land use growth for other Bay Area regions for year 2040 were taken from Association of Bay Area Governments (ABAG) projections and refined by VTA and C/CAG. Table 6 shows the socioeconomic model inputs for the entire Bay Area by county.

Table 6
Socioeconomic Model Inputs for Bay Area

County	Year 2040 Project Conditions Model Land Use Data			
	Total Households	Total Population	Employed Residents	Total Jobs
San Francisco	447,340	1,076,365	559,923	759,509
San Mateo	320,377	909,511	444,478	481,116
Santa Clara	818,369	2,406,587	1,158,389	1,229,995
Alameda	705,337	1,965,356	891,473	947,642
Contra Costa	464,151	1,328,458	579,757	467,333
Solano	168,706	494,363	224,059	179,946
Napa	56,312	158,792	69,450	89,554
Sonoma	220,740	591,546	284,856	257,466
Marin	112,046	274,489	136,554	129,150
City of Menlo Park	18,532	46,741	21,369	60,969

The proposed project is included in the Year 2040 model forecasts. Therefore, the forecasted intersection turning movements were adjusted based on existing volumes to generate traffic volumes under the cumulative plus project conditions. Project trips were subtracted from cumulative plus project traffic volumes to generate cumulative no project conditions. Figure 11 shows cumulative no project traffic volumes and Figure 12 shows cumulative plus project traffic volumes. The volume summary table is included in Appendix C.

Cumulative (2040) Roadway Network

The roadway network under the cumulative (2040) scenarios is assumed to be the same as under existing conditions.

Cumulative (2040) Intersection Levels of Service

Cumulative (2040) No Project Intersection Levels of Service

The results of the intersection level of service analysis under cumulative (2040) no project conditions are summarized in Table 7. The Willow Road corridor was analyzed using the Simtraffic microsimulation model as described in Chapter 1. The microsimulation model indicates that the intersections would experience capacity issues where the demand cannot be served by the intersections Oversaturated conditions would operate at LOS F and are indicated using 'OVERSAT' in the tables below. The intersection levels of service calculation sheets are included in Appendix E. The following 6 study intersections would operate at an unacceptable level of service during at least one peak hour:

#1: Willow Road (SR 114) and O'Brien Drive – AM and PM peak hours
#2: Willow Road (SR 114) and Newbridge Street – AM and PM peak hours
#3: Willow Road (SR 114) and US 101 Northbound Ramps – AM and PM peak hours
#4: Willow Road (SR 114) and US 101 Southbound Ramps – AM and PM peak hours
#5: O'Brien Road and Kavanaugh Drive (unsignalized) - AM and PM peak hours
#6: University Avenue (SR 109) and Bayfront Expressway (SR 84) – PM peak hour

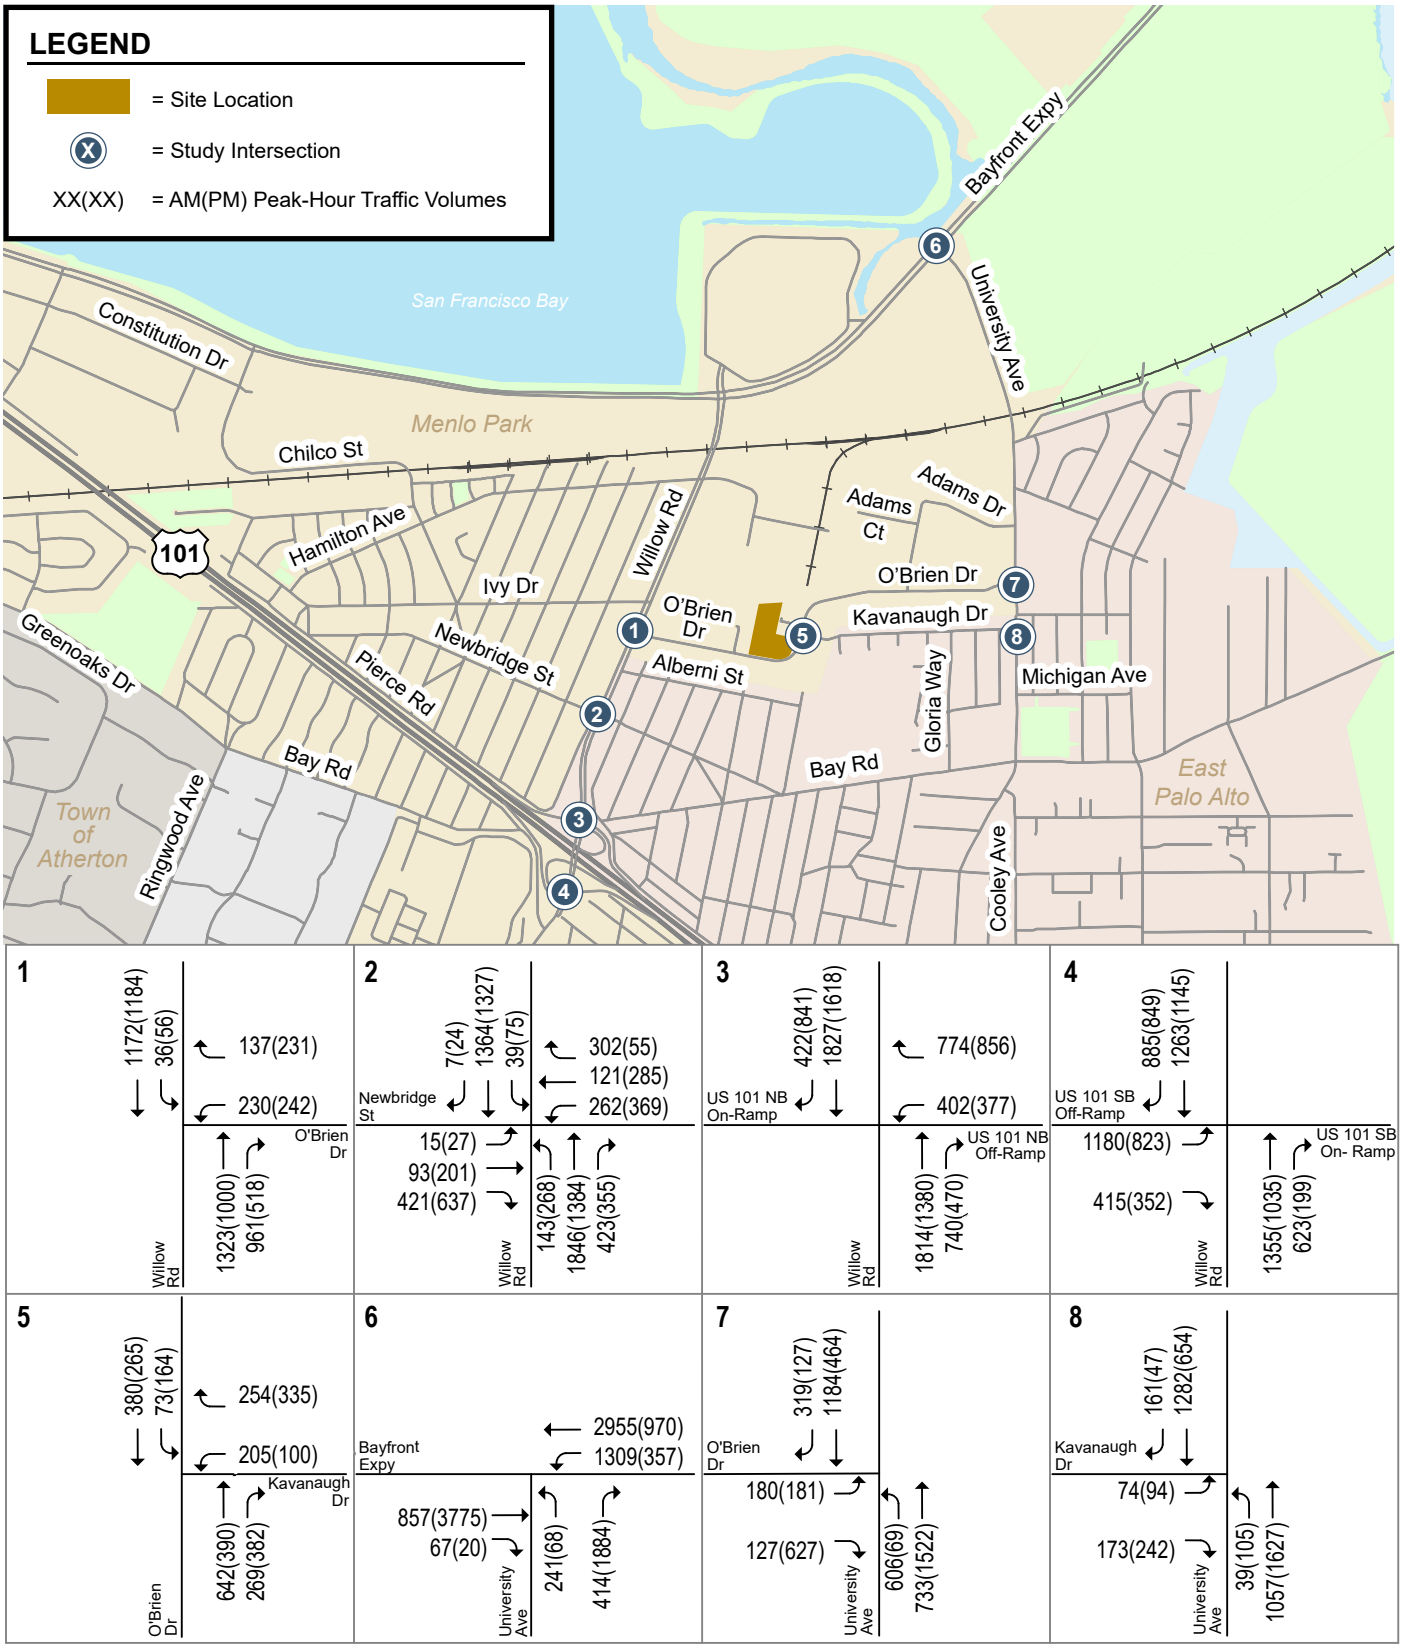
Cumulative (2040) Plus Project Intersection Levels of Service

The results of the intersection level of service analysis under cumulative (2040) plus project conditions are summarized in Table 7. Under cumulative (2040) plus project conditions, the project trips would result in non-compliance at the the following five intersections during either the AM or the PM peak hour as compared to cumulative (2040) conditions:

#1: Willow Road (SR 114) and O'Brien Drive – PM peak hour
#2: Willow Road (SR 114) and Newbridge Street – AM peak hour
#3: Willow Road (SR 114) and US 101 Northbound Ramps – PM peak hour
#4: Willow Road (SR 114) and US 101 Southbound Ramps – PM peak hour
#5: O'Brien Road and Kavanaugh Drive (unsignalized) - AM and PM peak hours

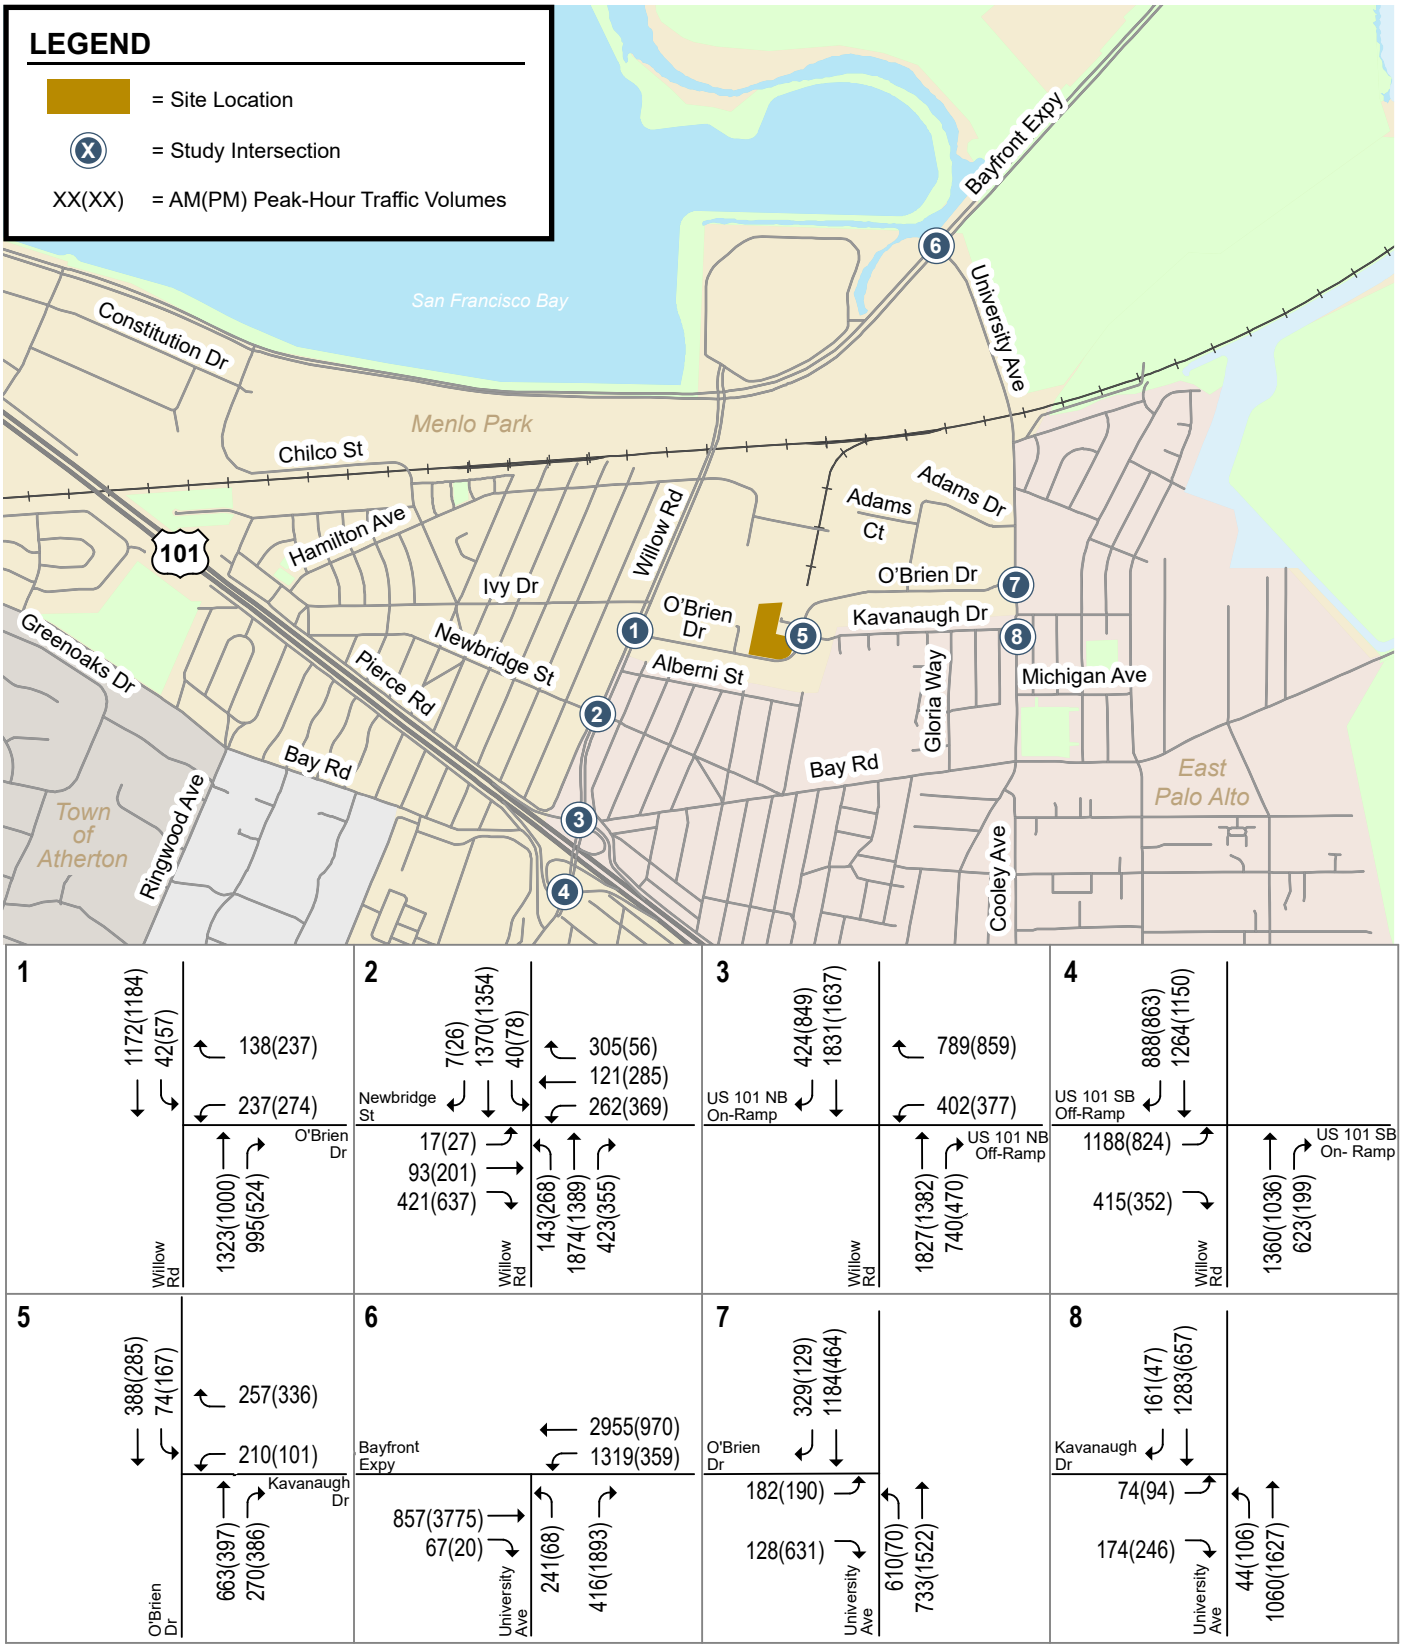
In addition to the four intersections that would be non-compliant with local policies under near term (2025) plus project conditions, the proposed project would cause one additional intersection at Willow Road (SR 114) and Newbridge Street to be potentially non-compliant with local policies during the AM peak hour under cumulative (2040) plus project conditions. For intersections #1, #3, and #4, which would be non-compliant with local policies under near term (2025) plus project conditions, no additional improvements are proposed to address the cumulative non-compliance. The intersection at O'Brien Road and Kavanaugh Drive would need additional measures. Adverse effects and recommended

improvements for the additional intersections that are non-compliant under cumulative conditions are described below.



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Figure 11
Cumulative (2040) No Project Traffic Volumes



NOTE: For the purposes of this study, US 101 and all parallel streets are considered to run north to south. Conversely, Willow Road, University Avenue and all streets parallel are defined as running east to west.

Notes:
* Denotes CMP Intersection
AWSC - All Way Stop Control
[1] Average delay is reported for signalized and AWSC intersections.
"OVERSAT" indicates that the SimTraffic microsimulation model indicates that the intersection would experience capacity issues where the demand cannot be served by the intersection. Oversaturated intersections would operate at LOS F.
[1]Intersections were analyzed using Synchro/SimTraffic software due to the close proximity of these intersections. Changes in average delay and critical delay calculated using Vistro.
Bold indicates substandard level of service
Bold indicates noncompliance. The project exceeds thresholds in the Jurisdiction's Guidelines.

Adverse Effects and Recommended Improvements (Cumulative 2040)

#2 Willow Road (SR 104) and Newbridge Street

This intersection is expected to operate at an unacceptable LOS F during the AM and PM peak hours under cumulative (2040) conditions. The addition of project traffic would cause the critical movement delay on the local northbound through movement to increase by more than 0.8 seconds during the AM peak hour. This constitutes non-compliance according to the thresholds established by the City of Menlo Park.The Willow Road Corridor Improvement Project in the City's Transportation Master Plan and the City's TIF recommends modifying the signal timing to a protected left-turn phasing operation on Newbridge Street, provide a leading left-turn phase on southbound Newbridge Street and a lagging left-turn phase on northbound Newbridge Street, and optimize signal timing. While this modification would improve the overall operation of the intersection, it would not address the deficiency caused by the project on the local approaches to the intersection according to the thresholds established by the City of Menlo Park.

Other physical intersection improvements are considered infeasible due to right-of-way constraints and/or adverse effects on pedestrian and bicycle travel. The project would pay traffic impact fees according to the City's current TIF schedule to contribute to other transportation improvements in the area.

#5 O'Brien Drive and Kavanaugh Drive

This intersection is expected to operate at an unacceptable LOS F during both peak hours under cumulative conditions. With the addition of project traffic, the intersection would continue to operate at an unacceptable LOS F during both peak hours with an increase in average critical delay of greater than 0.8 seconds. This constitutes non-compliance during both peak hours according to the thresholds established by the City of Menlo Park.

Since the intersection currently operates as all-way-stop-controlled, potential modification to bring the intersection to pre-project conditions would be to signalize it. The intersection would meet the MUTCD signal warrant during both peak hours under cumulative no project and cumulative plus project conditions (See Appendix F). Along with a new traffic signal, appropriate pedestrian and bicycle accommodation should be provided at this intersection. This includes the proposed Class II bicycle lanes along O'Brien Drive between Willow Road and University Avenue, pedestrian countdown timers, Americans with Disabilities Act (ADA) compliant curbs, and bicycle detection loops. With these improvements, the intersection would operate acceptably at LOS C during both peak hours under cumulative plus project conditions. However, a decision for signalization should not be made until signal warrants conducted with a future year's actual counts have been met. It is important to note that the intersection would be located approximately 300 feet west of the proposed roundabout at O'Brien Drive and Loop Road. Prior to a decision for signalizing this intersection, further analysis should be conducted to ensure that queues resulting from the signal would not back into the roundabout and cause a gridlock situation. The project would reduce its adverse effect on the traffic operations at this intersection by a fair-share contribution for the signal improvements.

Alternatively, traffic calming measures could be installed to discourage the use of Kavanaugh Drive, which is a residential street, and encourage vehicles to use O'Brien Drive and Adams Drive instead. Kavanaugh Drive is located within the City of East Palo Alto, and the City of Menlo Park does not have jurisdiction to install traffic calming along this street. Other measures such as peak period turning movement restrictions could be considered to discourage traffic from using Kavanaugh Drive and improve intersection operations.

Other Transportation Issues

This section presents other transportation issues associated with the project. These include an analysis of:

- Site access and on-site circulation
- Vehicle queuing
- Parking assessment
- CMP Compliance

The analyses in this section are based on professional judgment in accordance with the standards and methods employed by the traffic engineering community.

Site Access and On-Site Circulation

Site access and on-site circulation were evaluated using commonly accepted transportation principles. This review is based on the site plan prepared by DES Architects and Engineers dated January 27, 2021. Subsequent revisions to the project plan set have not altered access or onsite circulation.

Vehicle Site Access and Circulation

The project site currently consists of several parcels, which can be accessed by four driveways on O'Brien Drive and one driveway on Casey Court. The proposed new 5-story R&D building along with surface parking would be developed on three parcels, which would be merged. This combined parcel is referred to as 'Parcel 1'. A 1.68-acre parcel adjacent to Parcel 1 would be converted to an accessory parking lot. This parcel is referred to as 'Parcel 2'.

Parcel 1 would be accessible from two driveways on O'Brien Drive. The driveway on the southwest side of the project site would be the primary entrance/exit for the building and would provide direct access to a surface parking lot. The driveway on the northeast portion of the project site is the secondary entrance/exit. It provides access to the loading areas and the surface parking lot. The existing middle two driveways on O'Brien Drive would be closed off with sidewalk and landscaping. Parcel 2 would continue to be accessible from only Casey Court. It would only have a surface parking lot. Parcels 1 and 2 would not be connected internally for vehicles. Drivers finding no available spaces in one of the parking lots would have to exit the site to enter the other parking area.

> **Recommendation:** It is recommended that a parking operations plan be implemented. Visitors should be directed to Parcel 1, and visitor parking spaces should be marked. Employees should be assigned to park in either Parcel 1 or Parcel 2 so there is no need to circulate between the two parking areas.
>
> The O'Brien Drive and Casey Court driveways would lead to 26- to 27-foot wide two-way drive aisles providing access to the surface parking lots, which would have 90-degree parking spaces. The drive aisle width conforms with the City's design standards (City of Menlo Park's Parking Stalls and Driveway Design).

The project also proposes a shuttle loading space along O'Brien Drive in front of the building to facilitate passenger loading.

Driveway Operations

The total volume estimated to use the primary driveway on O'Brien Drive is 34 trips (28 in and 6 out) during the AM peak hour and 30 trips (4 in and 26 out) during the PM peak hour. Under cumulative plus project conditions the driveway would operate at an acceptable LOS C or better during both peak hours. Because of the low driveway volume, no turn lanes on O'Brien Drive would be needed.

The total volume estimated to use the Casey Court driveway upon the completion of the project is 40 vehicles (33 inbound and 7 outbound) during the AM peak hour and 39 vehicles (7 inbound and 32 outbound) during the PM peak hour. Casey Court is a minor roadway ending in a cul-de-sac; therefore, the driveway is expected to operate acceptably during both peak hours under cumulative plus project conditions.

Sight Distance

The proposed driveway locations were evaluated to determine if the sight distance at the driveways would be adequate. The project driveways should be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on adjacent roadways. Any landscaping and signage should be located in such a way as to ensure an unobstructed view for drivers entering and exiting the site. Adequate sight distance reduces the likelihood of a collision at driveways and provides drivers with the ability to locate sufficient gaps in traffic to exit a driveway. Sight distance of a driveway is evaluated based on the stopping sight distance recommended by Caltrans for a given design speed.

The speed limit along O'Brien Drive near the project site is 25 mph. The Caltrans recommended stopping sight distance on O'Brien Drive is 150 feet. The primary driveway with direct access to the surface parking lot on O'Brien Drive is located about 215 feet north of the curve on O'Brien. Currently, on-street parking is allowed along O'Brien Drive. The City has plans to remove the on-street parking on O'Brien Drive and install Class II bike lanes between Willow Road and University Avenue. However, the current site plan shows tall vegetation that would block a driver's ability to see 150 feet down the street.

> **Recommendation:** The current on-street parking should be removed for 20 feet (or one car parking space) on either side of both project driveways. In addition, the landscape plan should be modified to ensure that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on O'Brien Drive.

The driveway on the southeast side of the project site is located at the end of curve on O'Brien. There are no roadway curves or landscaping features east of the driveway that would obstruct the vision of exiting drivers. West of driveway, the area crossing the sight line between points A and C (see Figure 13) should be flat, and no planting or structures over 2 feet tall should be placed within the sight triangle to guarantee outbound drivers at this project driveway could see vehicles approaching on eastbound O'Brien Drive 150 feet away.

The project driveway at Casey Court would be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on Casey Court.

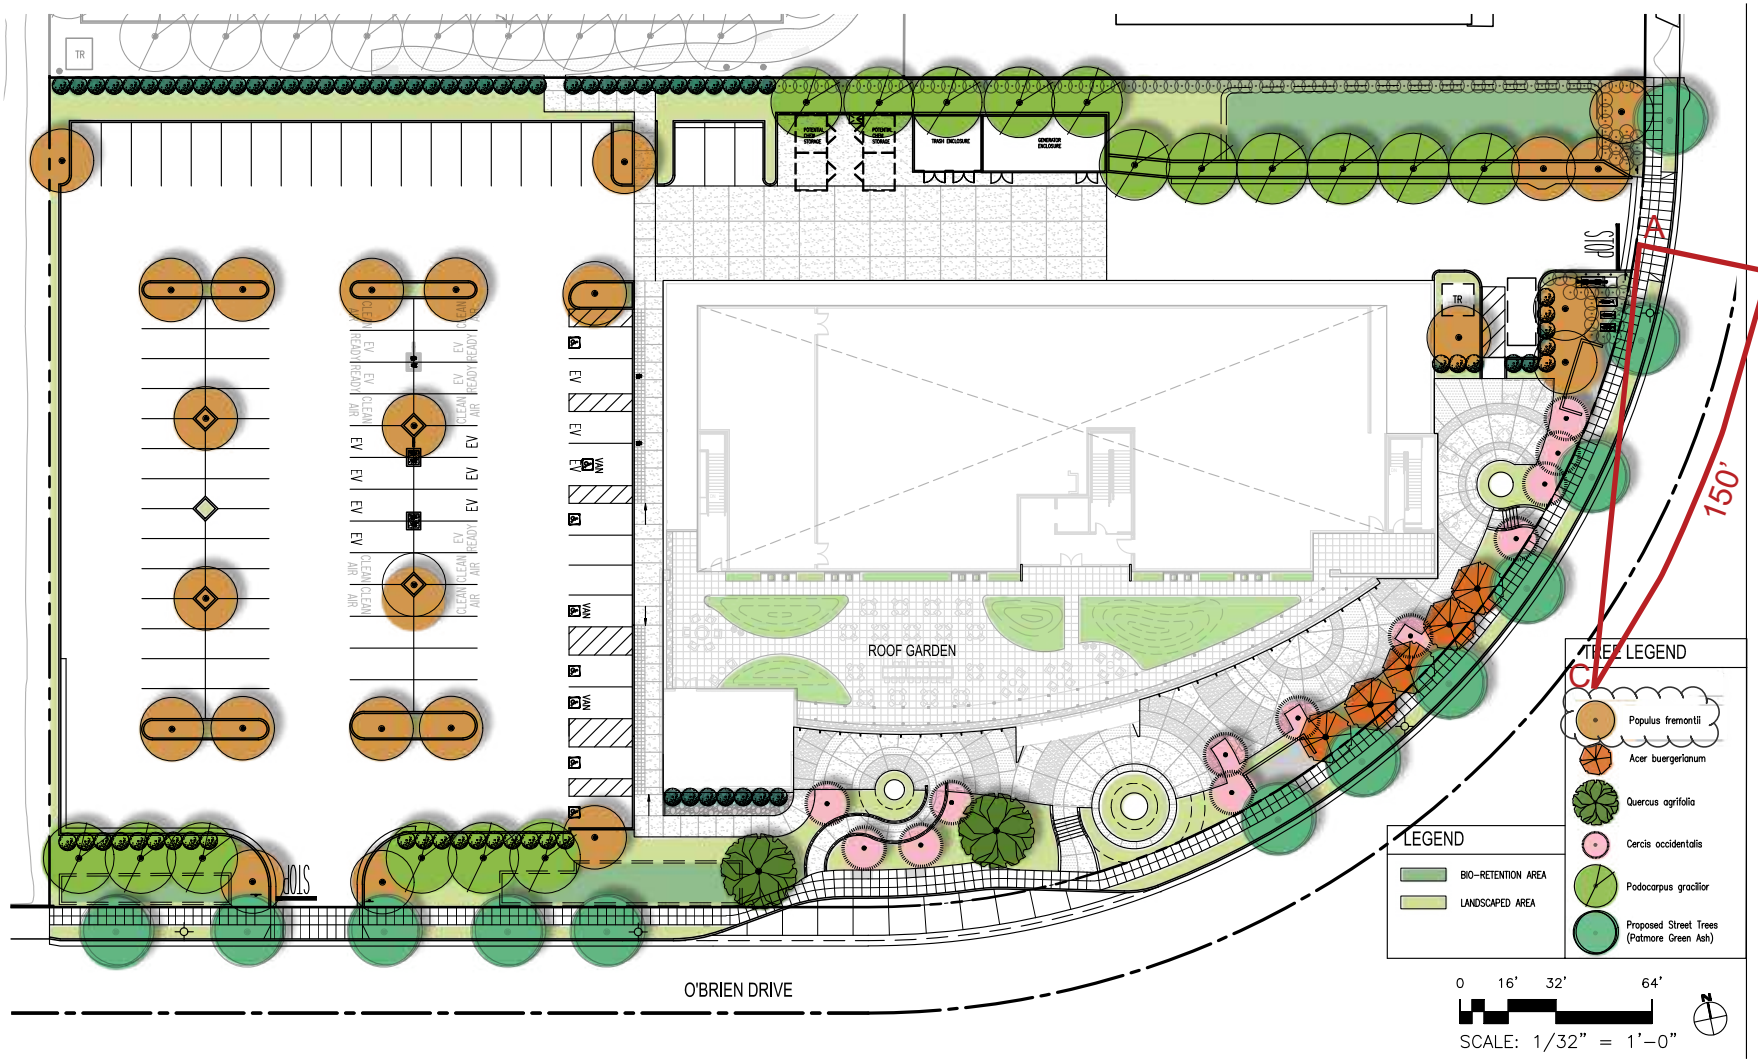

Figure 13
Sight Distance at the Southeast Driveway

Emergency Vehicles, Truck Access and Circulation

Emergency vehicles would be able to circulate around the building. They would enter from the southeast driveway and exit from the northwest driveway (see Figure 14).

The site plan shows a trash enclosure along the eastern edge of Parcel 1. Garbage trucks would enter the site from the southeast driveway on O'Brien Drive to access the enclosure, circulate through the surface parking lot, and exit from the northwest driveway on O'Brien Drive (see Figure 15).

The site plan shows a truck dock along the eastern edge of the building and one loading space for small delivery trucks/vans next to the southeast driveway. The current site plan shows that delivery trucks would access Parcel 1 using the primary driveway located on the northwest side of the project site and exit from the southeast side of the project site to O'Brien Drive. The delivery trucks would circulate through the surface parking lot and back into the truck dock or the loading area without having to turn around on site (see Figure 16). Small delivery trucks/vans could access the project site and circulate around the site as regular vehicles.

Transit, Pedestrian and Bicycle Analysis

The project site is located in a commercial and industrial area with limited pedestrian facilities. In the vicinity of the project site, sidewalks are only present along a small section of O'Brien Drive north of Kelly Court. The project would add a sidewalk along its frontage on O'Brien Drive where no sidewalk exists today. The project site plan shows that the project would provide a pedestrian path with stairs connecting the entry lobby of the building with the sidewalk on O'Brien Drive. A pedestrian walkway is also planned along the north side of the building connecting to the accessory parking lot on Parcel 2.

The existing development on Casy Court does not include a public sidewalk. In addition, the project plans do not anticipate a sidewalk along the Casey Court frontage. To facilitate non-vehicluar transportation, there is a need to facilitate the safe movement of pedestrians.

> **RECOMMENDATION:** It is recommended that the project install a sidewalk along its frontage on Casey Court to provide better a pedestrian connection between the project site and the surrounding area.

The Project site would be accessible to bicyclists via planned bicycle lanes along O'Brien Drive, which would connect to the existing bike lanes along Willow Road. No additional bicycle or pedestrian connections or linkages are proposed as part of the Proposed Project.

The free Caltrain shuttle (M4 Willow Road Shuttle) stops within walking distance of the project site. The project proposes a duck-out in front of the building on O'Brien Drive, allowing drivers in vehicles, including shuttles, to drop off and pick up passengers. A shuttle stop is proposed along the project frontage at the duck-out. This shuttle stop would provide a convenient location for employees and visitors of the project to access the Menlo Business Park's shuttle system. Within ¼ mile of the Project Site, there are also bus stops for San Mateo County Transit District (SamTrans) routes, AC Transit, and the Menlo Park Shuttle Service. However, there are no continuous pedestrian facilities connecting the project site to these bus stops.

PLAN NORTH

Intersection Vehicle Queuing

For selected high-demand movements at the study intersections, the estimated maximum vehicle queues were compared to the existing or planned storage capacity. The queuing analysis is used to determine the appropriate storage lengths for the high-demand turn lanes where the proposed project would add a substantial number of trips to these movements. Vehicle queues were estimated using Vistro for intersections analyzed with this software and a Poisson probability distribution for intersections analyzed in Traffix. Poisson probability distribution estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$\text{Probability } (X=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:

Probability (X=n) = probability of "n" vehicles in queue per lane

n = number of vehicles in the queue per lane

λ = Average number of vehicles in queue per lane (vehicles per hour per lane/signal cycles per hour).

The basis of the analysis is as follows: (1) Vistro or the Poisson probability distribution is used to estimate the 95th percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement.

For signalized intersections, the 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles. Or, a queue length larger than the 95th percentile queue would only occur on five percent of the signal cycles (about three cycles during the peak hour for a signal with a 60-second cycle length). Therefore, left-turn storage pocket designs based on the 95th percentile queue length would ensure that storage space would be exceeded only five percent of the time. The 95th percentile queue length is also known as the "design queue length."

The analysis of intersection levels of service was supplemented with a vehicle queuing analysis for intersection turning movements where the project would add at least 10 peak-hour left turns at signalized intersections. This analysis provides a basis for estimating future storage requirements at the intersections. The following turn movements were selected for evaluation:

- Northbound left-turn from O'Brien Drive to Willow Road
- Westbound left-turn from Willow Road to O'Brien Drive
- Northbound left-turn from Bayfront Expressway to University Avenue
- Southbound left-turn from O'Brien Drive to University Avenue

Vehicle queuing issues are not considered CEQA impacts. The queuing analysis at each of the selected locations is discussed further below and summarized in Table 8.

Northbound left-turn from O'Brien Drive to Willow Road

The northbound approach at the intersection of O'Brien Drive and Willow Road includes one left-turn lane and one shared right-left turn lane. Thus, the queuing analysis reflects the combined storage and queue length for both movements. The left-turn pocket is only 50 feet long. The shared right-left turn lane is approximately 900 feet away from Kelly Court, the first intersection, located along O'Brien Drive.

Therefore, the total storage for northbound traffic is 950 feet. Under all scenarios, the vehicle queues on northbound O'Brien Drive would be accommodated within the available storage. However, it should be noted that there are several driveways between Kelly Court and Willow Road along O'Brien Drive, and the queuing along O'Brien Drive may affect the driveway operations.

Westbound left-turn from Willow Road to O'Brien Drive

Under all scenarios, the westbound left-turn queue is projected to be less than the available storage capacity during the AM and PM peak hours.

Northbound left-turn from Bayfront Expressway to University Avenue

Under all scenarios, the northbound left-turn queue is projected to be less than the available storage capacity during the AM and PM peak hours.

Southbound left-turn from O'Brien Drive to University Avenue

The existing vehicle storage for the southbound left turn pocket on O'Brien Drive at University Avenue is 60 feet, which provides enough spaces for 2 vehicles. Under existing and background conditions, the 95th percentile queue exceeds the storage length of the turn pocket by one vehicle during the AM peak hour and 11 vehicles during the PM peak hour. The project would add one vehicle to the 95th percentile queue during the AM peak hour. There would be no increase to the 95th percentile queue length during the PM peak hour. There is room to extend the left turn pocket to accommodate the estimated 95th percentile queue of 325 feet, but extending the left turn pocket could make installation of a future bike lane infeasible. Therefore, extension of the left turn lane is not recommended.

.

Parking Assessment

Based on the City's parking requirements for the Life Science (LS) zoning district (Municipal Code Section 16.44.080), research and development uses are required to provide between 1.5 and 2.5 spaces for every 1,000 square feet, which translates to a minimum of 198 spaces and a maximum of 330 spaces. The project proposes to provide 246 vehicular parking spaces, which would meet the City's requirement.

The City requires short-term and long-term bicycle parking based on each specified land use. The project requires 20 long-term spaces and 6 short-term spaces, for a total of 26 bicycle parking spaces.

The project proposes to provide 20 bike lockers (long-term bike parking) in a bike storage room located on level 1 at the northeast corner of the main building, and 6 bike racks (short-term bike parking) on site. The proposed bicycle parking spaces would comply with the City requirements.

CMP Compliance

The City/County Association of Governments (C/CAG) for San Mateo County has established trip reduction goals for new development within the county. C/CAG separates new developments into small projects and large projects. Non-residential projects (Office, R&D, Industrial, and Institutional) larger than 50,000 square feet (generating more than 500 average daily trips) are considered to be large projects. The proposed project is not located within 0.5 miles of a transit station providing "high-quality transit" service. Therefore, it is a non-transit proximate project. The recommended vehicle trip reduction target for large non-residential (Office, R&D, Industrial, and Institutional) projects that are non-transit proximate is 35 percent.While the C/CAG goal is a 35 percent trip reduction, the project will be monitored and evaluated based on the City's goal of a 20 percent trip reduction.

To accomplish the reduction goal, C/CAG provides a list of potential TDM measures, some of which are required and some of which are optional. Each measure has an associated point value and reduction percentage. Based on the C/CAG TDM policy, the project must first fulfill all required measures prior to selecting a sufficient number of additional recommended measures to achieve the minimum 35 percent trip reduction.

As shown in Table 9, the project will achieve the reduction goal of 35 percent with a combination of the required and additional TDM measures included in the *Transportation Demand Management (TDM) plan Memorandum for 1125 O'Brien Drive, January 26, 2021* meeting the C/CAG minimum requirement of 35 percent trip reduction.

C/CAG also requires the following for large non-residential projects:

- Monitoring and reporting for 20 years post-occupancy
- A TDM self-certification status form biennially for 18 years post occupancy.
- Travel surveys of employees/occupants biennially - beginning in the third year post-occupancy for a period of six years and then triennially for the remaining 12 years.

Recommendations: It is recommended that the project TDM plan be updated to include all required C/CAG TDM measures and the required TDM monitoring and reporting program per C/CAG guidelines.

Table 9
Proposed TDM Measures and Estimated Trip Reductions

Subject: Willow Village – Willow Road Traffic Operations Analysis

Introduction

This report presents the results of the corridor study conducted along Willow Road between Bayfront Expressway to the north and Durham Road to the south in the City of Menlo Park, California. The objective of the study was to quantify peak hour intersection operations taking into consideration the effect of vehicular queueing on Willow Road. Presented in this report are the results of a detailed analysis of the existing traffic operations at intersections along Willow Road. A map of the study area is shown on Figure 1.

Scope of Study

This study was conducted for the purpose of documenting existing traffic operations along Willow Road. This corridor study includes an analysis of weekday AM (7-10 AM) and PM (4-7 PM) peak hour traffic conditions for the following nine signalized intersections along Willow Road. These intersections are shown on Figure 1.

Study Intersections

1. Bayfront Expressway & Willow Road
2. Hamilton Avenue & Willow Road
3. Ivy Drive & Willow Road
4. O'Brien Drive & Willow Road
5. Newbridge Street & Willow Road
6. US 101 NB Ramps & Willow Road
7. US 101 SB Ramps & Willow Road
8. Bay Road & Willow Road
9. Hospital Plaza/Durham Street & Willow Road

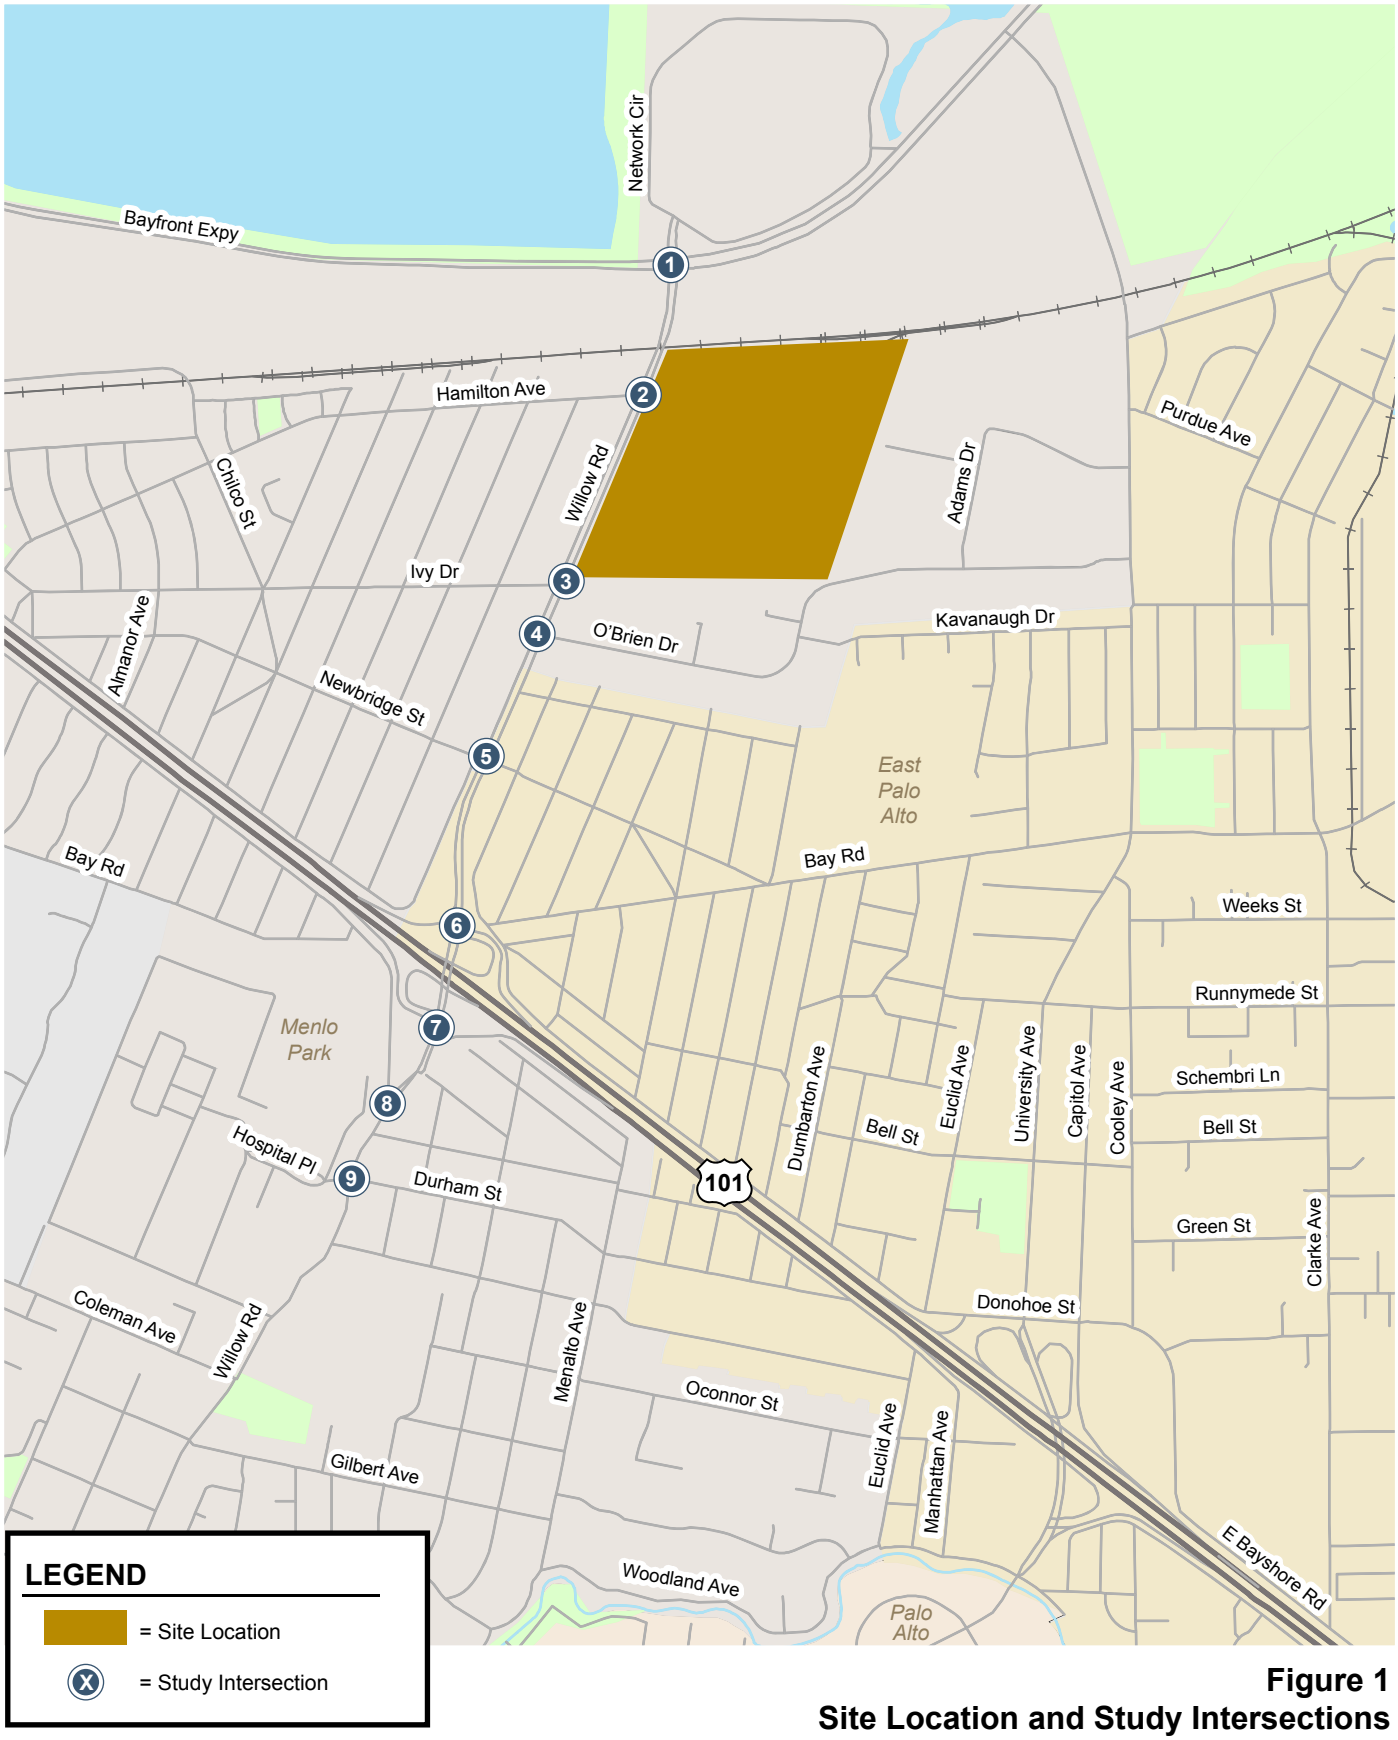

Figure 1
Site Location and Study Intersections

Data Collection

Hexagon collected existing roadway geometry, peak hour intersection turning movement volumes, travel time runs and intersection queuing characteristics within the study area during March and April 2019. Most traffic congestion in the study area was observed to occur during the morning (7:00 – 10:00 AM) and evening (4:00 – 7:00 PM) peak commute hours. It is noted that during the time when the traffic counts were conducted, the US 101 improvements at the Willow Road interchange were not fully constructed. The existing conditions analysis was calibrated and validated based on the March/April 2019 lane geometry, traffic counts and field observations of queueing in the study area, when the US 101 interchange improvements were still under construction. Since then, US 101 interchange improvements at Willow Road have been completed. The lane geometry at the study intersections are shown on Figure 2.

Intersection Turning Movements Counts

Traffic counts at the study intersections were not all conducted on the same day. Intersection turning movements counts at the intersections of Bayfront/Willow and Bay/Willow were conducted on April 23, 2019 for both the AM and PM peak hour durations. AM and PM peak hour turning movement counts for intersections at Hamilton/Willow, Ivy/Willow, O'Brien/Willow and Newbridge/Willow were conducted on March 21st, 2019. AM and PM peak hour turning movement counts at the US 101 NB/Willow and US 101/SB Willow intersections were conducted on March 13, 2019. AM and PM peak hour traffic counts at the Durham/Willow intersection were conducted on April 16, 2019.

The AM peak hour turning movement vehicular volumes at all study intersections are shown on Figure 3 and the PM peak hour turning movement vehicular volumes (occurring between 5:00 – 6:00pm) are shown on Figure 4 for all study intersections.

Demand Volumes

As discussed below, field observations showed that queuing occurs for some turning movements, particularly during the PM peak period along the Willow Road corridor. The vehicles in queue represent unserved demand during the peak hour periods. In order to account for the unserved demand, turning movements counts at all study intersections along the corridor were balanced, and the turning movement volumes were adjusted by adding the number of queued vehicles to the count volumes. The number of queued vehicles were calculated based on how far vehicular queues extended on the roadways during some cycles observed during the peak hour. The demand volumes are also shown on Figure 3 and Figure 4.

Field Observations

Hexagon conducted field observations of traffic congestion and vehicle queuing at the study intersections during the AM and PM peak periods in March 2019. Field observations showed that some operational problems currently occur during the peak commute hours. These problems are described below.

Willow Road and Bayfront Expressway

During the AM peak hour, the eastbound left-turn queue exceeded the storage length. The eastbound left-turn traffic encroached into the closest eastbound through lane. The eastbound left-turn traffic required more than one cycle to clear the intersection. The northbound left-turn was observed to back up traffic (possibly) due to the westbound red light at the Willow Road/Hamilton Avenue intersection. This backup caused the westbound through lane to wait to clear the Willow

Road/Bayfront Expressway intersection until there was room to clear the intersection. The westbound through lane occasionally required more than one cycle to clear the intersection.

During the PM peak hour, the eastbound right-turn queue exceeded the storage length and spilled into the nearest through lane. The eastbound right-turn lane occasionally required more than one cycle to clear the intersection.

Willow Road between Hamilton Avenue and Hospital Plaza/Durham Street

During the AM peak hour, there was heavy demand on westbound Willow Road along this corridor. Westbound vehicles often required multiple cycles to clear an intersection. As a result, the southbound right-turn and northbound left-turn movements on the side streets turning onto westbound Willow Road also required multiple cycles to clear the intersection. The westbound queue was usually able to clear at the Willow Road/Durham Street intersection due to the long through phase. The eastbound left-turn movement at the Newbridge Street intersection received heavy demand and occasionally required two signal cycles to clear. Vehicles at the US 101 northbound off-ramp turning right onto eastbound Willow Road frequently queued onto the auxiliary lane on US 101 and required multiple cycles to clear.

During the PM peak hour, there was heavy demand on eastbound Willow Road along this corridor. Eastbound vehicles often required multiple cycles to clear an intersection. As a result, the northbound right-turn and southbound left-turn movements on the side streets turning onto eastbound Willow Road also required multiple cycles to clear the intersection. The westbound left-turn movement at the Hamilton Avenue intersection received heavy demand that often required two signal cycles to clear. Vehicles at the US 101 northbound off-ramp turning right onto eastbound Willow Road frequently queued onto the auxiliary lane on US 101 and required multiple cycles to clear. Vehicles at the US 101 southbound off-ramp turning left onto eastbound Willow Road were often impacted by eastbound spillback queues and were observed to block the westbound through movement. The southbound left-turn queue extended onto US 101 southbound and impacted freeway operations.

Travel Time Runs

Hexagon collected Bluetooth travel time data on May 22, 2019 to determine the AM and PM peak hour travel time on eastbound and westbound Willow Road between Bayfront Expressway and Coleman Avenue. Bluetooth sensors were placed at nine locations along the study corridor. Two sensors were placed south of Bayfront Expressway to capture eastbound and westbound traffic on Willow Road near the intersection. Sensors capturing both directions of traffic were placed along Willow Road at the intersections of Hamilton Avenue, Ivy Drive, O'Brien Drive, Newbridge Street, Bay Road, Durham Street, and Coleman Avenue. These sensors anonymously record timestamps when vehicles with Bluetooth-capable devices pass them. In order to deem the data as valid, two requirements were applied to the data: a) sampled travel time cannot be lower than the free-flow travel time resulting from a speed of 40 mph, and b) sampled travel time cannot be longer than 3 signal cycles unless justified by field observations. Using these requirements, valid Bluetooth data at the intersections varied from 0.4% to 22% of the existing traffic counts. AM and PM peak hour travel times on eastbound and westbound Willow Road are summarized in Table 1.

As shown in Table 1, the travel time on eastbound Willow Road varied between 3 minutes and 26 minutes during the AM peak hour, with an average travel time of 9 minutes. During the PM peak hour, the travel varied between 8 minutes and 38 minutes, with an average travel time of 18 minutes. The travel time on westbound Willow Road varied between 4 minutes and 35 minutes with an average of 12 minutes during the AM peak hour and between 2 minutes and 31 minutes with an average travel time of 9 minutes during the PM peak hour. Field observations conducted during the PM peak hour indicated that the high demand for traffic on eastbound Willow Road to turn onto southbound Bayfront Expressway caused vehicular queues to extend through the upstream intersections affecting traffic progression on eastbound Willow Road.

Notes:
WB = Westbound, EB = Eastbound

[1] Two validity requirements were applied: a) sampled travel time cannot be lower than a free-flow travel time resulting from a speed of 40 mph, and b) sampled travel time cannot be longer than 3 signal cycles unless justified by field observations.

Analysis Methodology

This section describes the methods and performance criteria use to evaluate traffic operations along the Willow Road corridor between Bayfront Expressway and Durham Street.

Analysis Method

Due to the close spacing of the study intersections, the intersection analysis was conducted using the SimTraffic (version 10) software, using methodologies consistent with the *Highway Capacity Manual 2010* (Transportation Research Board, 2011). Unlike macroscopic models of isolated intersection operations, such as the *Highway Capacity Manual* intersection level of service methodology, SimTraffic is a microscopic model that measures the full impact of queuing and blocking attributed to closely spaced intersections. In addition to reporting statistics such as average vehicle delay, the simulation software produces visual animation files that depict traffic operations.

Per Caltrans guidelines, the simulation analysis reflects pent-up traffic demand that is unable to be served during the peak hour and thus is not reflected in existing intersection turning-movement counts. The existing traffic demand was estimated based on the turning-movement count volumes and the observed queue lengths. The existing conditions SimTraffic model was calibrated and validated to existing conditions based on existing lane geometry (as of March 2019), existing AM and PM peak hour traffic counts, observed peak-hour vehicular queues, and the observed signal timings. The procedures used are consistent with *Traffic Analysis Toolbox Volume III" Guidelines for Applying Traffic Microsimulation Modeling Software (*FHWA, 2004).

Level of Service Criteria

The average delay time (measured in seconds per vehicle) calculated by the simulation model was correlated to Level of Service (LOS) based on the thresholds contained in the *2010 Highway Capacity Manual*. Level of Service is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The correlation between delay and level of service is shown on Table 2 for signalized intersections. All study intersections along Willow Road between Bayfront Expressway and US 101 interchange are under the jurisdiction of Caltrans. Caltrans maintains a minimum level of service (LOS) at the transition between LOS C and LOS D for all of its facilities. Where an existing facility is operating at less than the LOS C/D threshold, the existing LOS should be maintained. The study intersections of Willow/Bay and Willow/Hospital Plaza-Durham Street are under the jurisdiction of the City. The City of Menlo Park level of service standard is LOS D or better for all signalized study intersections.

Measures of Effectiveness

The following Measures of Effectiveness (MOEs) computed with the SimTraffic model are used to quantify and validate traffic operations along Willow Road between Bayfront Expressway and Durham Street:

- Volume Served – The number of vehicles that can be served by the corridor during the analysis period. At locations where the demand exceeds capacity, the volume served will be less than the demand volume.
- Total Travel Time – The average time taken by all vehicles to travel through the corridor during the peak hour. It includes the average delay through the corridor, vehicles queues, and impedance caused by merging vehicles.

- LOS - The weighted average delay (measured in seconds per vehicle) calculated by the microscopic simulation model was correlated to LOS based on the thresholds contained in the *2010 Highway Capacity Manual*.

Table 2
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (Sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B	Operations characterized by good signal progression and/or short cycle lengths. More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	10.1 to 20.0
C	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though may still pass through the intersection without stopping.	20.1 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lenghts, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes of such delay levels.	greater than 80.0

Existing Conditions Traffic Operations Analysis

This section describes the development, calibration and validation of the Synchro model that was used to evaluate existing peak hour conditions along Willow Road.

Model Development and Calibration

The Synchro model was developed by drawing the roadway network using an aerial photo of the study area as a background image. Geometric information such as number of lanes, curvature, turn restrictions, and location of lane drops, and lane additions were based on aerial photographs and field observations conducted in March 2019. Intersection signal operations were based on signal timing information that was provided by the City. Adjustments were made to the signal timing based on measuring the cycle lengths and splits at each of the study intersections in the field. Where unsignalized driveways with heavy traffic turning into and out of the driveways are located on Willow

Road between the signalized intersections, saturation flow rates for Willow Road were adjusted. The existing AM and PM peak hour demand volumes were used as input volumes to develop the existing conditions model. It is noted that the Willow Road/US 101 interchange improvements were not completed when the traffic counts were done in March/April 2019. As a result, existing AM and PM peak hour conditions were calibrated and validated based on the lane geometry, traffic volumes, travel time runs and field observations that were conducted in 2019. Since then, the US 101/Willow Road interchange improvements have been completed. At both the US 101 off-ramps, no right-turn-on red was assumed.

The Synchro model was validated to existing conditions using the criteria described in *Traffic Analysis Toolbox Volume III: Guidelines for Applying Traffic Microsimulation Modeling Software* (FHWA Department of Transportation, 2004). The software's default data on vehicle and driver characteristics were used. A number of iterations were required to successfully validate the existing conditions model to observed conditions. Further refinements were made at specific locations during the model calibration process. For example, for the eastbound Willow Road segment between Hamilton and Ivy Drive, the model showed a higher throughput for the eastbound traffic compared to the traffic counts during the PM peak hour. The headway factors for the eastbound through lanes were adjusted (to account for traffic turning in and out of the unsignalized driveways between Hamilton Avenue and Ivy Drive) so that the model served volume matched the traffic counts at this intersection. Increasing the headway factor for the eastbound approach on Willow Road caused vehicles to slow down resulting in longer travel time for eastbound Willow Road attributed to traffic slow down due to traffic turning into and out of the unsignalized driveways between Hamilton Avenue and Ivy Drive.

Model Validation

During the validation process, the model estimates were compared to the field data to measure the model's accuracy. The following criteria were used:

- Turning movement volumes for more than 85% of the cases should have a GEH (Geoffrey E. Havers) statistic of less than 5. The GEH statistic is a measure of goodness of fit named after the statistician who developed it. The model served volume at each of the five study intersections was compared to the raw turning movement counts. The GEH statistic for the individual turning movements was calculated to be less than 5 at most of the locations, and the GEH statistic for the total volume through the intersection was also calculated to be less than 5 (see Table 3). The formula for GEH statistic is shown below:

$$GEH = \sqrt{\frac{2(M-C)^2}{M+C}}$$

  - Where M is the hourly traffic volume from the Synchro model and C is the real-world hourly traffic count.

- Average travel time runs should fall within the range observed in the field. The model estimated average travel time on eastbound Willow Road was approximately 8 minutes during the AM peak hour and 23 minutes during the PM peak hour (see Table 4 and Table 6). The blue tooth travel time runs on eastbound Willow Road showed that the average travel time was approximately 9 minutes during the AM peak hour and 18 minutes during the PM peak hour. The model estimated average travel time on westbound Willow Road was approximately 13 minutes during the AM peak hour and 9 minutes during the PM peak hour (see Table 5 and Table 7). The Bluetooth travel time runs on westbound Willow Road showed that the travel time averaged approximately 12 minutes during the AM peak hour and 9 minutes during the PM peak hour. Although the average travel times between intersections varied widely between the model data and the Bluetooth data, the overall

average travel time on eastbound and westbound Willow Road between Bayfront Expressway and Durham Road matched well during both the peak hours.

- The visual queuing shown in the model should match queues observed in the field. Queues shown in the model matched field observations. The model showed long queues on westbound Willow Road during the AM peak hour and on eastbound Willow Road during the PM peak hour in the study area. The queues extended from the Bayfront Expressway past Durham Road during the PM peak hour. The model queues matched the queues observed in the field.

O'Brien Dr	Newbridge St	23	49	131.6	269%	82.6
Newbridge St	Bay Rd	26	148	211.1	143%	63.1
Bay Rd	Durham	27	112	97.4	87%	-14.6
	Total (in seconds)		**549**	**526.3**	96%	-22.7
	Total (in minutes)		**9.15**	**8.77**		

Note:- The bluetooth data showed that the travel time on westbound Willow Road varied between 2 minutes and 31 minutes during the PM peak hour, with an average travel time of approximately 9 minutes. The travel time from the model falls within this range.

Existing Conditions Level of Service Analysis

The calibrated and validated SimTraffic model was used to analyze traffic operations at the nine study intersections along the corridor. Table 8 shows the average weighted delay and the corresponding LOS during the AM and PM peak hour periods under existing conditions. The weighted average delay (measured in seconds per vehicle) calculated by the microscopic simulation model was correlated to LOS based on the thresholds contained in the *2010 Highway Capacity Manual*. Also provided in the table is the delay and LOS at the study intersections that were reported in previous studies using Vistro software. The large variance in the delay and LOS is primarily because the Vistro model did not take into account the delay caused by downstream queues on Willow Road during the AM and PM peak hours. The simulation analysis showed that all

study intersections along Willow Road between Bayfront Expressway and Durham Street operate at unacceptable levels of service during at least one of the peak hours.

The analysis showed that during the AM peak hour, all study intersection along Willow Road between Bayfront Expressway and US 101 northbound off-ramp currently operate at unacceptable LOS E or F. During the PM peak hour, the analysis showed that all study intersections along Willow Road currently operate at unacceptable LOS E or F except for the intersection of Willow Road and Ivy Drive. During the PM peak hour, the poor levels of service along Willow Road is attributed to the heavy demand on eastbound Willow Road. Due to the close proximity of the traffic signal at Ivy Drive to the traffic signal at O'Brien Drive, the queues on eastbound Willow Road at Ivy Drive spill over into the upstream intersection at O'Brien Drive. The delay caused by this spill over queue is reflected in the delay reported for the Willow Road/O'Brien Drive intersection. The delay reported for the Willow Road/Ivy Drive intersection reflects delay for the eastbound approach only between Ivy Drive and O'Brien Drive, which is a short segment that measures approximately 270 feet in length.

Table 8
Existing Conditions Level of Service Analysis

					Existing Conditions			
					SimTraffic		Vistro [1]	
#	Intersection	Control	Peak Hour	Count Date	Avg. Delay [2]	LOS	Avg. Delay [2]	LOS

			PM	04/16/19	**167.7**	**F**	16.6	B

Notes:
Avg Delay = Average Delay in seconds; LOS = Level of Service
[1] Average delay was obtained from the Vistro files provided by Kittleson & Associates.
[2] At signalized intersections, delay shown is the weighted average delay for all vehicles entering the intersection.
Bold indicates a substandard level of service.

Appendix D
Transportation Demand Management (TDM) Plan

[this page left blank intentionally]

Kimley»Horn

MEMORANDUM

To: Ron Krietemeyer
Tarlton Properties, Inc.

From: Michael Mowery, P.E.
Ben Huie, P.E.

Date: January 26, 2021

Subject: **Transportation Demand Management (TDM) Memorandum for 1125 O'Brien Drive**

Kimley-Horn and Associates, Inc. (KHA) was retained by Tarlton Properties, Inc. to prepare a transportation demand management (TDM) memorandum for the project located at 1125 O'Brien Drive (previously known as 1105 O'Brien Drive) in Menlo Park, CA. The proposed project will replace the three existing research and development (R&D) buildings at 1105, 1135, and 1165 O'Brien Drive (totaling 38,688 square feet) with one R&D building totaling 130,510 square feet. The project is also proposing to replace the existing 20,955 square-foot warehouse at 1 Casey Court with a surface parking lot. Per the zoning ordinance in the City of Menlo Park City Code[1], new construction development projects are required to develop a TDM plan to reduce the number of vehicle trips to at least 20 percent below the standard trip generation rates for the project.

PROJECT PEAK HOUR TRIPS

The number of project trips for the project site was estimated using the industry standard Institute of Transportation Engineer's (ITE) *Trip Generation Manual*[2]. This reference estimates project trips based on land use from survey data. Since the proposed project is not a new project, but replacing existing land uses, trip rates were calculated for both the proposed use and the existing uses.

Table 1 summarizes the trip generation for the existing use. Specific details of the trip generation are provided in **Attachment A**.

Table 1 – Trip Generation Summary – Existing Use

Existing Use	Vehicle Trips	
	AM Peak	PM Peak
38.688 KSF R&D	16	19
20.955 KSF Warehouse	28	30
Total	**44**	**49**

[1] Zoning Ordinance 16.44.090 Transportation demand management, City of Menlo Park, October 2017.
[2] *Trip Generation Manual, 10th Edition*, Institute of Transportation Engineers, 2017.

The existing land uses result in 44 AM peak hour trips and 49 PM peak hour trips. No adjustments for trip reductions (e.g. pass-by trips or internal capture) were used in this calculation. The existing use trips will be used as a trip credit for determining the overall net change in proposed project trips.

The proposed project is 130.510 KSF of R&D. **Table 2** summarizes the trip generation for the proposed use. Specific details of the trip generation are provided in **Attachment A**.

Table 2 – Trip Generation Summary – Proposed Use

Proposed Use	Vehicle Trips	
	AM Peak	PM Peak
130.510 KSF R&D	55	64

The proposed land uses result in 55 AM peak hour trips and 64 PM peak hour trips. A TDM program was proposed to reduce the vehicle trips by at least 20 percent for the proposed project or by 11 AM peak hour trips and by 13 PM peak hour trips.

TRANSPORTATION DEMAND MANAGEMENT PROGRAM

The following summarizes an initial approach to the proposed TDM program for the proposed project at 1125 O'Brien Drive. It is assumed that the TDM program will be refined over time to adapt to changing transportation trends and to maximize the efficiency of the program. The TDM program is specifically designed to focus on incentives and rewards for employees to participate in the program rather than penalties for not participating.

POTENTIAL PROGRAM ELEMENTS

Tarlton Properties, Inc. should offer a combination of program elements to encourage employees to utilize alternative modes of transportation to driving alone. Potential program elements are listed below:

- Participation in a local transportation management association (TMA)
- Preferential carpool parking spaces
- Preferential vanpool parking spaces
- Designated parking spaces for car share vehicles
- Pay for parking program
- Bike share program
- Subsidized transit tickets for employees
- Subsidy for carpool, vanpool, shuttle, or bus service
- Compressed workweek program
- Alternate hours workweek program
- Telecommuting
- Passenger loading zones for carpools and vanpools
- Safe and well-lit and accessible routes to nearby transit or shuttle stops
- Car share membership for employees
- Guaranteed ride home program

- Bike lockers/racks
- Showers/changing rooms
- Shuttle service
- Vanpool program
- Commute assistance center
- Parking cash out program

These program elements are listed in the City of Menlo Park's *Transportation Demand Management Program Guidelines*. Additionally, the City/County Association of Governments of San Mateo County (C/CAG) has its own guidelines for a TDM program mentioned in the *Revised C/CAG Guideline for the Implementation of the Land Use Component of the Congestion Management Program*. Each of these documents summarizes the potential program measures, a description of each measure, and the trip credits associated with each measure.

PROPOSED PROGRAM ELEMENTS

Tarlton Properties, Inc. is interested in working with the City to develop a practical TDM plan that can be both effective and provide the most value for all parties. An initial set of TDM measures are proposed for the 1125 O'Brien Drive project and is summarized in **Table 3**. Please note that the measures listed in **Table 3** only reflect measures that include a trip credit per the City's TDM guidelines. There are four additional TDM measures proposed by the Project, but are not listed in **Table 3** because they are not listed within the City's TDM guidelines.

Table 3 – Proposed TDM Measure Summary

TDM Measure	Number of Trips Credited	Peak Hour Trip Credits	Program Elements	Trip Credits[1]
Bike Storage	One credit per 3 bike lockers/racks	1/3	26	9
Showers/Changing Rooms	Two credits per 1 shower/changing room	2	4	8
Subsidized transit tickets (Go Pass for Caltrain)[2]	One trip credit for each transit pass provided	1	100	100
Commute assistance center				
Computer kiosk connected to Internet	*One peak hour trip credited for each feature*	*1*	*1*	*1*
Combine any two of these elements and receive additional five credits	Five trip credits for combination of two elements	5	1	5
			Total Trip Credits:	**123**

[1]The number of peak hour trips credited is outlined in the City of Menlo Park's *Transportation Demand Management (TDM) Guidelines*.

[2]A Caltrain Go Pass must be offered to every employee who works more than 20 hours per week. For calculation purposes, it was assumed that 100 employees would be offered the Caltrain Go Pass.

The number of trip credits was determined from the City of Menlo Park's TDM Guidelines. The following provides a brief description of each proposed TDM element:

- **Bike Storage**: Bike lockers are proposed to be located on the northwest corner of the R&D building on Level 1, as shown on the proposed site plan. Secure bike storage lockers for 20 bicycles are proposed. The bike lockers will provide a safe storage for bikes at work. Additionally, bike racks for six (6) bicycles are proposed and are located near the entry plaza, as shown on the proposed site plan.
- **Showers/Changing Rooms**: Four (4) showers/changing rooms are proposed for the building and will be accessible to all tenants. The shower/changing rooms provide a dedicated facility for the cyclists and persons walking to work. This measure, combined with the bike lockers/racks, should provide employees with a great alternative for commuting to work.
- **Subsidized Transit Tickets**: Caltrain Go Passes will be provided to employees at no cost to the employees. The Caltrain Go Pass allows for unlimited rides, seven days a week. The cost of the Go Pass is $237.50 per person, but a minimum of $19,950 per employer. A Go Caltrain Go Pass must be provided to every employee that works 20 hour or more. This equates to 84 Go Passes at a minimum to distribute to all employees. For TDM calculations, it was assumed that 100 Go Passes will be provided for this specific site.
- **Commute Assistance Center**: A Commute Assistance Center will be provided with a computer kiosk connected to internet. The center should encourage employees to use transit to commute to work and provide ease of access to determine the optimal mode of transportation home.
- **Combination of Two Elements**: Combining at least two elements in the TDM program results in five additional peak hour trips. By offering complimentary TDM elements, experience has shown that the effectiveness of the program increases.

In addition to the measures listed above, the following measures are proposed by the project but do not have trip credits associated with them because they were not listed in the City's TDM guidelines.

- **Bike Share Program**: A bike share program is provided for use by the employees of the project. The bikes will be free for the first hour of use each day. There are bicycle hubs located throughout Menlo Park Labs. The closest hub to this project is located 800 feet to the west near 1001 O'Brien Drive.
- **Enterprise Car Share Program**: A Car Share program provided by Enterprise allows employees of tenants in the business park to gain access to vehicles on a time basis. The vehicles are located at the corner of O'Brien Drive and Adams Drive.
- **Shuttle Stop**: A shuttle stop is proposed along the project frontage on O'Brien Drive between the entry plaza and the parking garage access driveway. This shuttle stop will provide a convenient location for employees and visitors of the project to access the Menlo Business Park's shuttle system. The shuttle system provides wi-fi installed shuttle buses that provide commuters access to the site from the Union City/Fremont BART stations, Palo Alto Caltrain Station, and various stops in San Francisco.

- **Electric Vehicle (EV) Charging Stations**: The project proposes 25 electric vehicle (EV) charging stations and 13 prewired spaces, including 20 clean air/vanpool/EV spaces. These parking spaces should incentivize employees to use a more environmentally friendly clean air vehicle for their commute, or to use a van that removes peak hour vehicles for the passengers that are no longer driving to and from work.

As shown in **Table 3**, the proposed TDM measures total to 123 trip credits. Although the TDM program results in 123 trip credits, the effectiveness of the TDM program was calculated separately.

EFFECTIVENESS OF TDM PROGRAM ELEMENTS

The effectiveness of the TDM plan was predicted using the COMMUTER model developed by the United States Environmental Protection Agency (EPA). The COMMUTER model is a spreadsheet based model that predicts the travel and emission effects resulting from an employer implemented transportation management program. The model allows for inputs to local work-trip mode shares, work trip lengths, vehicle occupancy, financial incentives for alternative modes of transportation, employer participation rates, and the level of each program to determine the predicted trip reduction rates. After inputting all the specific TDM measures for the proposed project (measures listed in **Table 3** and the other measures with no trip credits assigned), the anticipated trip reduction percentage is 33.3 percent and the anticipated VMT reduction is 24.1 percent. The COMMUTER model output for this project is shown in **Attachment B**.

The anticipated trip reduction of 33.3 percent was applied to the proposed project trips only, not the trip credits. Applying the 33.3 percent TDM reduction to the proposed project trips results in a net new -7 AM peak hour trips and -6 PM peak hour trips.

As of June 16, 2020, the City has adopted new VMT thresholds and methods described in their staff report to City Council on June 23, 2020. Under the new VMT thresholds, office uses have a VMT impact threshold of 15 percent below the average Citywide VMT. Based on preliminary outputs from the City's travel demand model, the project's VMT would be 16.1. A 24.1 percent reduction would equate to a project VMT of 12.22. Comparing this to the City's VMT threshold of 12.7 (= 14.9 x 0.85), then the project is expected to have a less than significant VMT impact with the TDM plan.

CONCLUSION

The proposed project is anticipated to generate a net new 11 AM peak hour trips and 15 PM peak hour trips without the TDM program. The Life Sciences zoning regulations (Section 16.44.090) requires a TDM program to reduce the vehicle trips by at least 20 percent for the proposed project. The proposed TDM plan resulted in a 33.3 percent TDM reduction. This resulted in a net new -7 AM peak hour trips and -6 PM peak hour trips by the proposed project.

Based on preliminary outputs from the City's travel demand model, the project's VMT would be 16.1. A 24.1 percent reduction would equate to a project VMT of 12.22. Comparing this to the City's VMT threshold of 12.7, then the project is expected to have a less than significant VMT impact with the TDM plan.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
20	Willow Rd (SR 114) /Newbridge St	Signalized	HCM 6th Edition	NB Left	1.340	164.6	F
200	O'Brien Drive/Kavanaugh Drive	Signalized	HCM 6th Edition	WB Right	0.786	24.6	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Turning Movement Volume: Summary

ID	Intersection Name	Northbound			Southbound			Eastbound			Westbound			Total Volume
		Left	Thru	Right	Left	Thru	Right	Left	Thru	Right	Left	Thru	Right	
20	Willow Rd (SR 114)/Newbridge St	143	1874	423	40	1370	7	17	93	421	262	121	305	5076

ID	Intersection Name	Northbound		Southbound		Westbound		Total Volume
		Thru	Right	Left	Thru	Left	Right	
200	O'Brien Drive/Kavanaugh Drive	663	270	74	388	210	257	1862

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
20	Willow Rd (SR 114) /Newbridge St	Signalized	HCM 6th Edition	SB Right	1.345	177.6	F
200	O'Brien Drive/Kavanaugh Drive	Signalized	HCM 6th Edition	WB Right	0.784	33.7	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 20: Willow Rd (SR 114)/Newbridge St

Control Type:	Signalized	Delay (sec / veh):	177.6
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.345

Intersection Level Of Service Report
Intersection 200: O'Brien Drive/Kavanaugh Drive

Control Type:	Signalized	Delay (sec / veh):	33.7
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.784

Intersection Setup

Name	O'Brien Drive		O'Brien Drive		Kavanaugh	
Approach	Northbound		Southbound		Westbound	
Lane Configuration						
Turning Movement	Thru	Right	Left	Thru	Left	Right
Lane Width [ft]	12.00	12.00	12.00	12.00	12.00	12.00
No. of Lanes in Entry Pocket	0	0	1	0	0	1
Entry Pocket Length [ft]	100.00	100.00	100.00	100.00	100.00	100.00
No. of Lanes in Exit Pocket	0	0	0	0	0	0
Exit Pocket Length [ft]	0.00	0.00	0.00	0.00	0.00	0.00
Speed [mph]	30.00		30.00		30.00	
Grade [%]	0.00		0.00		0.00	
Curb Present	No		No		No	
Crosswalk	No		Yes		No	

Volumes

Notes:

Transportation Demand Management (TDM) Memorandum

[this page left blank intentionally]

Kimley»Horn

MEMORANDUM

To:	Ron Krietemeyer Tarlton Properties, Inc.
From:	Ben Huie, P.E.
Date:	April 2, 2021
Subject:	**Transportation Demand Management (TDM) Memorandum for 1125 O'Brien Drive**

Kimley-Horn and Associates, Inc. (KHA) was retained by Tarlton Properties, Inc. to prepare a transportation demand management (TDM) memorandum for the project located at 1125 O'Brien Drive (previously known as 1105 O'Brien Drive) in Menlo Park, CA. The proposed project would replace the three existing research and development (R&D) buildings at 1105, 1135, and 1165 O'Brien Drive (totaling 38,688 square feet) with one R&D building totaling 130,510 square feet. The project is also proposing to replace the existing 20,955 square-foot warehouse at 1 Casey Court with a surface parking lot. Per the zoning ordinance in the City of Menlo Park City Code[1], new construction development projects are required to develop a TDM plan to reduce the number of vehicle trips to at least 20 percent below the standard trip generation rates for the project. In addition, the project would be required to meet the applicable City of Menlo Park vehicle miles traveled (VMT) threshold of 15 percent below the existing Citywide VMT per employee.

PROJECT PEAK HOUR TRIPS

The number of project trips for the project site was estimated using the industry standard Institute of Transportation Engineer's (ITE) *Trip Generation Manual*[2]. This reference estimates project trips based on land use from survey data. Since the proposed project is not a new project, but replacing existing land uses, trip rates were calculated for both the proposed use and the existing uses.

Table 1 summarizes the trip generation for the existing use. Specific details of the trip generation are provided in **Attachment A**.

[1] Zoning Ordinance 16.44.090 Transportation demand management, City of Menlo Park, October 2017.
[2] *Trip Generation Manual, 10th Edition*, Institute of Transportation Engineers, 2017.

Table 1 – Trip Generation Summary – Existing Use

ITE Land Use Code	Existing Use	Vehicle Trips	
		AM Peak	PM Peak
760	38.688 KSF R&D	16	19
150	20.955 KSF Warehouse	28	30
Total		**44**	**49**

The existing land uses result in 44 AM peak hour trips and 49 PM peak hour trips. No adjustments for trip reductions (e.g. pass-by trips or internal capture) were used in this calculation. The existing use trips will be used as a trip credit for determining the overall net change in proposed project trips.

The proposed project is 130.510 KSF of R&D. **Table 2** summarizes the trip generation for the proposed use. Specific details of the trip generation are provided in **Attachment A**.

Table 2 – Trip Generation Summary – Proposed Use

ITE Land Use Code	Proposed Use	Vehicle Trips	
		AM Peak	PM Peak
760	130.510 KSF R&D	55	64

The proposed land uses result in 55 AM peak hour trips and 64 PM peak hour trips. **This TDM program was proposed to reduce the vehicle trips by at least 20 percent** for the proposed project or by 11 AM peak hour trips and by 13 PM peak hour trips.

PROJECT VMT

As of June 16, 2020, the City has adopted new VMT thresholds and methods described in their staff report to City Council on June 23, 2020. The VMT threshold for an office use is 15 percent below the average Citywide VMT. The average Citywide VMT is 14.9 VMT per employee. Therefore, **the VMT threshold would be 12.7 VMT per employee** or 15 percent less than 14.9 VMT per employee. The project's VMT was based on the VMT for office uses in its traffic analysis zone (TAZ) as determined by the City's travel demand model. The project's TAZ indicates the VMT as 16.1 VMT per employee. Therefore, the project would need a 21.1 percent VMT reduction to be below the City's established VMT threshold. This TDM program was proposed to reduce the project's VMT by at least 21.1 percent.

TRANSPORTATION DEMAND MANAGEMENT PROGRAM

The following summarizes an initial approach to the proposed TDM program for the proposed project at 1125 O'Brien Drive. It is assumed that the TDM program will be refined over time to adapt to changing transportation trends and to maximize the efficiency of the program. The TDM program is specifically designed to focus on incentives and rewards for employees to participate in the program rather than penalties for not participating.

POTENTIAL PROGRAM ELEMENTS

Tarlton Properties, Inc. should offer a combination of program elements to encourage employees to utilize alternative modes of transportation to driving alone. Potential program elements are listed below:

- Increase employment density
- Participation in a local transportation management association (TMA)
- Preferential carpool parking spaces
- Preferential vanpool parking spaces
- Designated parking spaces for car share vehicles
- Pay for parking program
- Bike share program
- Subsidized transit tickets for employees
- Subsidy for carpool, vanpool, shuttle, or bus service
- Compressed workweek program
- Alternate hours workweek program
- Telecommuting
- Passenger loading zones for carpools and vanpools
- Safe and well-lit and accessible routes to nearby transit or shuttle stops
- Car share membership for employees
- Guaranteed ride home program
- Bike lockers/racks
- Showers/changing rooms
- Shuttle service
- Vanpool program
- Commute assistance center
- Parking cash out program

These program elements are listed in the City of Menlo Park's *Transportation Demand Management Program Guidelines*. Additionally, the City/County Association of Governments of San Mateo County (C/CAG) has its own guidelines for a TDM program mentioned in the *Revised C/CAG Guideline for the Implementation of the Land Use Component of the Congestion Management Program*. Each of these documents summarizes the potential program measures, a description of each measure, and the trip credits associated with each measure.

PROPOSED PROGRAM ELEMENTS

Tarlton Properties, Inc. is interested in working with the City to develop a practical TDM plan that can be both effective and provide the most value for all parties. An initial set of TDM measures are proposed for the 1125 O'Brien Drive project and is summarized in **Table 3**. Please note that the measures listed in **Table 3** only reflect measures that include a trip credit per the City's TDM guidelines. There are five additional TDM measures proposed by the Project, but are not listed in **Table 3** because they are not listed within the City's TDM guidelines.

Table 3 – Proposed TDM Measure Summary

TDM Measure	Number of Trips Credited	Peak Hour Trip Credits	Program Elements	Trip Credits[1]
Bike Storage	One credit per 3 bike lockers/racks	1/3	26	9
Showers/Changing Rooms	Two credits per 1 shower/changing room	2	4	8
Subsidized transit tickets (Go Pass for Caltrain)[2]	One trip credit for each transit pass provided	1	100	100
Commute assistance center				
Computer kiosk connected to Internet	*One peak hour trip credited for each feature*	*1*	*1*	*1*
Combine any two of these elements and receive additional five credits	Five trip credits for combination of two elements	5	1	5
			Total Trip Credits:	**123**

[1]The number of peak hour trips credited is outlined in the City of Menlo Park's *Transportation Demand Management (TDM) Guidelines*.

[2]A Caltrain Go Pass must be offered to every employee who works more than 20 hours per week. For calculation purposes, it was assumed that 100 employees would be offered the Caltrain Go Pass.

The number of trip credits was determined from the City of Menlo Park's TDM Guidelines. The following provides a brief description of each proposed TDM element:

- **Bike Storage**: Bike lockers are proposed to be located on the northwest corner of the R&D building on Level 1. Secure bike storage lockers for 20 bicycles are proposed. The bike lockers will provide a safe storage for bikes at work. Additionally, bike racks for six (6) bicycles are proposed and are located near the entry plaza, as shown on the proposed site plan.
- **Showers/Changing Rooms**: Four (4) showers/changing rooms are proposed for the building and will be accessible to all tenants. The shower/changing rooms provide a dedicated facility for the cyclists and persons walking to work. This measure, combined with the bike lockers/racks, should provide employees with a great alternative for commuting to work.
- **Subsidized Transit Tickets**: Caltrain Go Passes will be provided to employees at no cost to the employees. The Caltrain Go Pass allows for unlimited rides, seven days a week. The cost of the Go Pass is $237.50 per person, but a minimum of $19,950 per employer. A Go Caltrain Go Pass must be provided to every employee that works 20 hour or more. This

equates to 84 Go Passes at a minimum to distribute to all employees. For TDM calculations, it was assumed that 100 Go Passes will be provided for this specific site.

- **Commute Assistance Center**: A Commute Assistance Center will be provided with a computer kiosk connected to internet. The center should encourage employees to use transit to commute to work and provide ease of access to determine the optimal mode of transportation home.
- **Combination of Two Elements**: Combining at least two elements in the TDM program results in five additional peak hour trips. By offering complimentary TDM elements, experience has shown that the effectiveness of the program increases.

In addition to the measures listed above, the following strategies and measures are proposed by the project but do not have trip credits associated with them because they were not listed in the City's TDM guidelines.

- **Increase Employment Density**: Projects that increase the density of jobs per unit area typically reduce the distance that people travel and also provide greater options for implementing other TDM measures. As an example, projects with denser employment may result in increased transit ridership, which may justify increasing transit service to the area.
- **Bike Share Program**: A bike share program is provided for use by the employees of the project. The bikes will be free for the first hour of use each day. There are bicycle hubs located throughout Menlo Park Labs. The closest hub to this project is located 800 feet to the west near 1001 O'Brien Drive.
- **Enterprise Car Share Program**: A Car Share program provided by Enterprise allows employees of tenants in the business park to gain access to vehicles on a time basis. The vehicles are located at the corner of O'Brien Drive and Adams Drive.
- **Shuttle Stop**: A shuttle stop is proposed along the project frontage on O'Brien Drive between the entry plaza and the parking garage access driveway. This shuttle stop will provide a convenient location for employees and visitors of the project to access the Menlo Business Park's shuttle system. The shuttle system provides wi-fi installed shuttle buses that provide commuters access to the site from the Union City/Fremont BART stations, Palo Alto Caltrain Station, and various stops in San Francisco.
- **Electric Vehicle (EV) Charging Stations**: The project proposes 25 electric vehicle (EV) charging stations and 13 prewired spaces, including 20 clean air/vanpool/EV spaces. These parking spaces should incentivize employees to use a more environmentally friendly clean air vehicle for their commute, or to use a van that removes peak hour vehicles for the passengers that are no longer driving to and from work.

As shown in **Table 3**, the proposed TDM measures total to 123 trip credits. Although the TDM program results in 123 trip credits, the effectiveness of the TDM program was calculated separately.

EFFECTIVENESS OF TDM PROGRAM ELEMENTS

The effectiveness of the TDM plan was predicted using two separate methodologies:

1. COMMUTER model developed by the United States Environmental Protection Agency (EPA)
2. California Air Pollution Control Officers Association (CAPCOA) *Quantifying Greenhouse Gas Mitigation Measures*

The COMMUTER model methodology was used on previous TDM plans for the Tarlton properties. The CAPCOA methodology has been added as a supplement to be consistent with the methodologies used on other TDM plans in the City of Menlo Park.

COMMUTER Model

The COMMUTER model is a spreadsheet based model that predicts the travel and emission effects resulting from an employer implemented transportation demand management program. This model was created by the Environmental Protection Agency (EPA) and is based on the Federal Highway Administration (FHWA) Travel Demand Manage Evaluation Model. This model incorporates local survey data in its calculations, resulting in more locally-driven outputs than other models or tools.

The model allows for inputs to local work-trip mode shares, work trip lengths, vehicle occupancy, financial incentives for alternative modes of transportation, employer participation rates, and the level of each program to determine the predicted trip reduction rates. After inputting all the specific TDM measures for the proposed project (measures listed in **Table 3** and the other measures with no trip credits assigned), the COMMUTER model estimates the trip reduction percentage to be 33.3 percent and the estimated VMT reduction to be 24.1 percent. The COMMUTER model output for this project is shown in **Attachment B**.

CAPCOA Methodology

The CAPCOA methodology is based on the *Quantifying Greenhouse Gas Mitigation Measures* reference. This document estimates trip reductions, VMT reductions, and emissions reductions based on various relevant data sources, reports, and studies around the world.

Focusing on the transportation section, the estimated trip reduction and VMT reduction ranges for various measures are based on different transportation categories. In addition to the specific reductions for each measure, the CAPCOA methodology provides guidance on maximum reductions due to similar measures. The intent is to not double count measures that are similar and work in harmony with similar measures within the same category. CAPCOA provides the following equation for determining reductions when combining similar measures:

Combined Reduction Percentage = 1 – [(1-A) x (1-B) x (1-C)]

where: A, B, and C = Individual mitigation measure reduction percentages

Table 4 shows the estimated trip reduction and VMT reduction for each proposed TDM measure using the CAPCOA methodology. It should be noted that CAPCOA only provides a VMT reduction for many of the measures and no trip reduction. Therefore, it was assumed that the estimated trip reduction would be the same as the VMT reduction. This correlation between trips and VMT is shown in the calculations for TRT-4. As shown in **Table 4**, the estimated trip reduction is 27.1% and the estimated VMT reduction is 27.1% based on CAPCOA methodology.

Table 4 – Estimated Trip and VMT Reductions - CAPCOA

TDM Measure	CAPCOA Measure #	Estimated Trip Reduction[A]	Estimated VMT Reduction
Bike Storage	(SDT-6)[B]	0.625%	0.625%
Showers/Changing Rooms	(TRT-5)[C]	1.375%	1.375%
Subsidized transit tickets (Go Pass for Caltrain)[2]	(TRT-4)[D]	20%	20%
Commute assistance center	-	-	-
Bike Share Program	(TRT-12)[E]	0%	0%
Car Share Membership	(TRT-9)[F]	0.37%	0.37%
Employee-Sponsored Vanpool/Shuttle Program	(TRT-11)[G]	6.7%	6.7%
Total – Individual Reductions		**29.07%**	**29.07%**
Combined Reduction Adjustment[H]		**27.1%**	**27.1%**

[A] For many of the TDM measures, CAPCOA only provides a VMT reduction. Therefore, it was assumed that the trip reduction would be the same as the VMT reduction in these instances.

[B] For SDT-6, the alternative literature states a 0.625% reduction in VMT.

[C] For TRT-5, the alternative literature states a 2% reduction in vehicle trips is allowed for end of trip facilities. Since this measure is combined with the bicycle storage for end of trip facilities, this measure is the difference between 2% and the 0.625% for the bike storage (2% - 0.625% = 1.375%).

[D] For TRT-4, the vehicle trip reduction is calculated as:

% VMT reduction = % reduction in commute vehicle trips x % employees eligible x adjustment from commute vehicle trips to commute VMT

The % reduction in commute vehicle trips is based on the daily transit subsidy of $6.40 or the roundtrip Clipper card fare of one zone for Caltrain. This results in a 20% commute trip reduction. It is assumed that 100% of employees would be eligible and the adjustment factor from commute vehicle trips to commute VMT = 1.0.

[E] For TRT-12, the reduction was 0% because typically bike share programs have a minimal impact when implemented alone. They are typically combined with bicycle infrastructure additions in order to experience a reduction.

[F] For TRT-9 the VMT reduction is calculated as:

% VMT reduction = % reduction in car share member annual VMT x # of car share members per shared car / deployment level based on urban or suburban context

The % reduction in car share member annual VMT is 0.37 based on literature. The # of car share members per shared car is 20 based on literature. The deployment level for a suburban context is 1 shared car per 2,000 people.

[G] For TRT-11 the VMT reduction is calculated as:

% VMT reduction = % shift in vanpool mode share of commute trips x % employees eligible x adjustments from vanpool mode share to commute VMT

The % shift in vanpool mode share of commute trips ranges from 2% - 20% and therefore 10% was used as an approximate middle point. 100% of employees are eligible. The adjustment from vanpool mode share to commute VMT is 0.67.

[H] The combined reduction adjustment is calculated as:

Combined Reduction Percentage = 1 – [(1-A) x (1-B) x (1-C) x (1-D) x (1-E)], where: A, B, C, D, E are individual mitigation measure reduction percentages

Combined Reduction Percentage = 1 – [(1-0.625%) x (1-1.375%) x (1-20%) x (1-0.37%) x (1-6.7%)]

Combined Reduction Percentage = 27.1%

Additional VMT Reduction Strategies

In addition to the trip reductions and VMT reductions shown in **Table 4**, CAPCOA also provides guidance on location/land use strategies that assist in reducing vehicle trips and VMT. As detailed in CAPCOA measure LUT-1, an increase in land use density typically reduces distances of travel and allows the option for more modes of transportation to be provided in the area. The estimated VMT reduction is calculated as follows:

% VMT reduction = (percentage increase in job per job acre) x (elasticity of VMT with respect to density

% VMT reduction = (# of jobs per acre – 20) / 20 x 0.12

For this proposed project, the estimated % VMT reduction would be:

% VMT reduction = [(228 jobs / 4 acres) – 20] / 20 x 0.12

% VMT reduction = 22.2%

Tarlton TDM Monitoring

A TDM plan was proposed and implemented for a similar project on a nearby property at 1305 O'Brien Drive, which is operated by the same applicant as the proposed project here. This project was completed and the TDM effectiveness has been monitored since 2018. The vehicular traffic at each of the project's driveways were counted in 2018, 2019, and 2020 as part of the TDM Monitoring process. Based on this monitoring, the TDM plan for 1305 O'Brien Drive achieved a 32 percent to 40 percent trip reduction for the AM and PM peak hours in 2018 and 2019. The results from the 2020 TDM monitoring were not used because of the impact from COVID-19. As shown from a similar Tarlton project, a maximum trip reduction of 40 percent was achieved, which suggests that the COMMUTER model and CAPCOA methodology provide an accurate estimation of the effectiveness of the proposed TDM program when considering the combination of the TDM and increase in land use density.

TDM REDUCTIONS

Peak Hour Trip Results

The estimated trip reduction for the proposed TDM plan is 33.3 percent based on the COMMUTER model and 27.1 percent based on the CAPCOA methodology. For a more conservative methodology, the 27.1 percent trip reduction for the TDM plan was applied to the project's trip generation. **Table 5** shows the net new project trips based on the existing trips, and the proposed trips with the TDM reduction. Applying the 27.1 percent TDM reduction to the proposed project trips results in a net new -4 AM peak hour trips and -2 PM peak hour trips.

Table 5 – Trip Generation Summary – Net New Trips

Existing or Proposed	ITE Land Use Code	Land Use	Vehicle Trips	
			AM Peak	PM Peak
Existing	760	38.688 KSF R&D	-16	-19
	150	20.955 KSF Warehouse	-28	-30
		Net Existing Trips	**-44**	**-49**
Proposed	760	38.688 KSF R&D	55	64
		TDM Reduction (27.1%)	-15	-17
		Net Proposed Trips	**40**	**47**
Net New Project Trips			**-4**	**-2**

VMT Results

The estimated VMT reduction for the proposed TDM plan is 24.1 percent based on the COMMUTER model and 27.1 percent based on the CAPCOA methodology. For a more conservative methodology, the 24.1 percent VMT reduction for the TDM plan was applied to the project's VMT. As stated previously, the project is estimated to have a VMT of 16.1 VMT per employee. After applying a 24.1 percent reduction, the project VMT with the TDM plan would be 12.2. The project's VMT with the TDM plan would be below the City's VMT threshold of 12.7 (= 14.9 x 0.85). Therefore, the project is expected to have a less than significant VMT impact with the TDM plan.

CONCLUSION

The proposed project is anticipated to generate a net new 11 AM peak hour trips and 15 PM peak hour trips without the TDM program. The Life Sciences zoning regulations (Section 16.44.090) requires a TDM program to reduce the vehicle trips by at least 20 percent for the proposed project. The proposed TDM plan would result in a 33.3 percent TDM reduction using the COMMUTER model and a 27.1 percent trip reduction using the CAPCOA methodology. Using the 27.1 percent trip reduction for a more conservative result, the project would result in a net new -4 AM peak hour trips and -2 PM peak hour trips. In addition, the proposed TDM plan would result in a 24.1 percent TDM reduction using the COMMUTER model and a 27.1 percent trip reduction using the CAPCOA methodology. Using the 24.1 percent VMT reduction for a more conservative result, the project VMT would be 12.2 VMT per

employee, which is less than the City's VMT threshold of 12.7. Therefore, the project is expected to have a less than significant VMT impact with the TDM plan.

Total		**52.3920**	**0.0000**	**0.0000**	**52.3920**

1125 O'Brien Project - Mitigated - San Mateo County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1125 O'Brien Project - Mitigated

San Mateo County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Research & Development	129.17	1000sqft	2.97	129,166.00	0
Parking Lot	89.00	Space	0.76	33,600.00	0
Parking Lot	160.00	Space	1.35	60,000.00	0
High Turnover (Sit Down Restaurant)	2.66	1000sqft	0.06	2,659.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2023
Utility Company	Peninsula Clean Energy				
CO2 Intensity (lb/MWhr)	0	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - All data provided by applicant

Construction Phase - Applicant did not provide Arch Coating details = default values

Off-road Equipment - data from applicant

Off-road Equipment - All info provided by applicant

Off-road Equipment - All info provided by applicant

Trips and VMT - Grading Phase: Export to Dumbarton dump site, 600 trips x 40mi, CA92. Import from south bay source to be named, 1400 trips x 60mi, CA101, CA 85 ; All hauling trips provided by applicant

Demolition - Existing buildings are 59,866 sf and Existing paved areas are 10,437

Grading -

Architectural Coating - Arch Coating not provided by applicant = default values

Date: 1/20/2023 4:36 PM

1125 O'Brien Project - Mitigated - San Mateo County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Vehicle Trips - data from traffic engineers

Area Coating -

Energy Use - data from applicant

Solid Waste - data from applicant

Construction Off-road Equipment Mitigation - Tier 4F Mitgiation

Stationary Sources - Emergency Generators and Fire Pumps EF - data from manufacturer's data sheet

3.0 Construction Detail

Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	11/1/2021	11/26/2021	5	20	
2	Site Preparation	Site Preparation	11/27/2021	11/30/2021	5	2	
3	Grading	Grading	12/1/2021	12/6/2021	5	4	
4	Building Construction	Building Construction	12/7/2021	9/12/2022	5	200	
5	Paving	Paving	9/13/2022	9/26/2022	5	10	
6	Architectural Coating	Architectural Coating	9/27/2022	10/10/2022	5	10	

Acres of Grading (Site Preparation Phase): 1.88

Acres of Grading (Grading Phase): 4

Acres of Paving: 0

Residential Indoor: 0; Residential Outdoor: 0; Non-Residential Indoor: 89,850; Non-Residential Outdoor: 29,950; Striped Parking Area: 0 (Architectural Coating – sqft)

OffRoad Equipment

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Rubber Tired Dozers	1	8.00	247	0.40
Demolition	Tractors/Loaders/Backhoes	3	8.00	97	0.37
Site Preparation	Graders	1	8.00	187	0.41
Site Preparation	Rubber Tired Dozers	1	7.00	247	0.40
