EXECUTIVE SUMMARY

This Phase I environmental site assessment was conducted in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E1527-13. The purpose of this assessment was to determine if Recognized Environmental Conditions (RECs) were present within the property located at 9470 Moody Street, in the City of Cypress, California. A review of the site conditions at the time of this assessment, the site's background, and a summary of potential RECs at the site are provided below.

Site Description

At the time of this assessment, the site was in use by the Cypress School District. The school district's office building, an education center, and a warehouse were located in the site's western portion. These buildings were adjoined by landscaped areas, paved walkways, and asphalt-paved driveways and parking areas. The school district's maintenance office building and an adjoining vehicle maintenance building were located on the site's south-central side. These two buildings were adjoined by landscaped areas and asphalt-paved parking areas. Four storage buildings, three portable office/computer/training buildings, a maintenance shop, and an equipment storage building were located in the site's east-central portion. These buildings were adjoined by open equipment storage areas, asphalt-paved parking areas, unpaved areas, and landscaped areas. An undeveloped open field and a soil stockpile were located in the site's northern portion.

Site Background

Based on data collected during this assessment, the site was in an undeveloped and vacant state between at least the 1920s and the 1940s. The site was part of a relatively large agricultural field in the early 1950s. The site has been in use by the Cypress School District since the 1960s. Four of the onsite buildings (the district office building, educational center, warehouse, and maintenance offices / vehicle maintenance building) were constructed in the site's western and southern portions between 1964 and 1968. The maintenance shop, six storage buildings, and a portable office building were constructed within the site's east-central portion between 1968 and 1990. One of these buildings was removed in earlier 2020. A second portable office building was constructed within this portion of the site between 1994 and 2002. A third portable office building was constructed in this area between 2009 and 2011.

Onsite Hazardous Material Sources and Releases

One underground 5,000-gallon gasoline storage tank and an adjoining underground 550-gallon waste oil storage tank were installed north of the maintenance building in approximately 1982. These tanks were removed from the site in January 1994. Approximately 348 tons of gasoline-impacted soil was removed from this location in October 1994. Following the removal of soil, two groundwater wells were installed within the immediate vicinity of the former gasoline tank. Gasoline-related contaminants were either not detected in the collected groundwater samples or were reported at concentrations that were less than maximum contaminant levels. In December 2002, soil and groundwater samples were collected from the

immediate vicinity of the former gasoline tank in order to assess the residual contaminant concentrations in this area. The collected soil and groundwater samples were reported with no detectable gasoline-related contaminants. Based on these findings, the Orange County Health Care Agency (OCHCA) closed this case.

A second underground waste oil storage tank was formerly located immediately north of the vehicle maintenance building. This tank and its contents were removed. A wastewater clarifier is located immediately adjacent to this former tank. A second wastewater clarifier associated with a vehicle washing area is located immediately east of the vehicle maintenance building.

The soil and/or groundwater beneath the former tanks, clarifiers, and two relatively large lifts within the western portion of the vehicle maintenance building were tested in 2017. All of the collected soil and groundwater samples were reported with either no detectable contaminant concentrations or trace concentrations (well below agency screening levels).

Regional Hazardous Material Releases

Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low potential that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

Recognized Environmental Conditions

RECs were not identified within the site during this assessment.

One historical REC was identified at the site. Historical RECs refer to a past release that has been remediated to below residential-cleanup standards, and given regulatory closure with no use restrictions. This historic REC, as noted above, is the fuel release from a former underground storage tank. The impacted soil formerly located adjacent to this tank was removed. The remaining soil and groundwater were tested during two separate sampling events and reported with very low to no detectable contaminant concentrations.

With the exception of asbestos-containing materials, no Other Environmental Conditions (OECs) were encountered within the site. OECs are features or issues that, while being judged to have a relatively low probability of resulting in significant contaminant impact to the site, should be considered in project planning and risk management. It is considered likely that asbestos-containing materials were used within the buildings constructed before 1980. Asbestos-containing building materials and lead-based paint were phased out in the mid- to late 1970s. Asbestos and lead surveys were not conducted as part of this assessment.

Recommendations

Based on the findings of this assessment, there are no known or suspected onsite conditions that would warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Additional environmental studies are not recommended for the site.

Phase I Environmental Site Assessment Report

9470 Moody Street, Cypress, CA

1.0 INTRODUCTION

1.1 PURPOSE

Black Rock Geosciences prepared this Phase I Environmental Site Assessment (ESA) report for the property located at 9470 Moody Street, in the city of Cypress, California (Figure 1). The purpose of this Phase I was to identify apparent and potential sources of contamination that, by their association or proximity to the site, could represent a recognized environmental condition (REC) as defined by American Society for Testing and Materials (ASTM) Standard No. E1527-13. A REC is defined as the presence or likely presence of hazardous substances or petroleum products in, on, or at a property, due to any release to the environment, under any conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

1.2 SCOPE OF WORK

This Phase I environmental site assessment was conducted in general conformance with the scope and limitations of ASTM Standard E1527-13. The scope of work for this assessment included the following.

- Site reconnaissance to visually assess current site utilization, potential onsite use or storage of hazardous materials, and indications of surface and subsurface contamination.
- Review of local geology and hydrogeology using readily available data.
- Review of current and historical conditions and uses of the site and immediate vicinity using available resources, including:
  - historical aerial photographs and topographic maps,
  - environmental and geologic reports and maps,
  - state and federal government databases, and
  - local agency files.
- Preparation of this report.

Data gaps to the ASTM Standard E1527-13 for this report included the following:

- Interviews with representatives of the site and adjoining properties,
- Review of chain of title documents, and
- An assessment of the site's purchase price and the fair market value.

The references used in this study are listed in Section 9.0. Color photocopies of selected photographs taken during the site reconnaissance are included in Appendix A. Copies of aerial photographs, topographic maps, and an assessor parcel map are provided in Appendix B. The search of government documents was subcontracted to Environmental Data Resources, Inc. (EDR). A copy of EDR's report is included in Appendix C. Agency documents are provided in Appendix D.

2.0 SITE OVERVIEW

2.1 LOCATION

The subject site includes approximately 6.3 acres of land located at 9470 Moody Street, in the city of Cypress, California (Figures 1 and 2). It is located immediately northeast of Moody Street and Orange Avenue. A parcel map that includes the site (244-092-30) is provided in Appendix B.

2.2 DESCRIPTION

At the time of this assessment, the site was in use by the Cypress School District. The school district's office building, an education center, and a warehouse were located in the site's western portion (Figure 2). These buildings were adjoined by landscaped areas, paved walkways, and asphalt-paved driveways and parking areas. The school district's maintenance office building and an adjoining vehicle maintenance building were located on the site's south-central side. These two buildings were adjoined by landscaped areas and asphalt-paved parking areas. Four storage buildings, three portable office/computer/training buildings, a maintenance shop, and an equipment storage building were located in the site's east-central portion. These buildings were adjoined by open equipment storage areas, asphalt-paved parking areas, unpaved areas, and landscaped areas. An undeveloped open field and a soil stockpile were located in the site's northern portion. For a more detailed description of the site, refer to Section 3.1 of this report.

2.3 BACKGROUND

Based on data collected during this assessment, the site was in an undeveloped and vacant state between at least the 1920s and the 1940s. The site was part of a relatively large agricultural field in the early 1950s. The site has been in use by the Cypress School District since the 1960s. Four of the onsite buildings (the district office building, educational center, warehouse, and maintenance offices / vehicle maintenance building) were constructed in the site's western and southern portions between 1964 and 1968. The maintenance shop, six storage buildings, and a portable office building were constructed within the site's east-central portion between 1968 and 1990. One of these buildings was removed in earlier 2020. A second portable office building was constructed within this portion of the site between 1994 and 2002. A third portable office building was constructed in this area between 2009 and 2011.

2.4 TOPOGRAPHY

The subject site is located approximately 35 feet above mean sea level (USGS, 1981; Figure 1). The site and immediate site vicinity slope very gently toward the west-southwest.

2.5 GEOLOGY

Soils underlying the site are comprised of Recent-age river deposits (Morton and Miller, 1981). These deposits are comprised of mixtures and layers of clay, silt, sand, and gravel. The soils encountered during past onsite investigations were comprised of silty fine sand to a depth of at least 10 feet (BRG, 2017).

2.6 HYDROGEOLOGY

Perched groundwater was encountered during a previous onsite investigation at depths between 8 and 10 feet. The groundwater flow direction beneath the site is reported to be to the west (OCWD, 2009).

3.0 ASSESSMENT REVIEW

3.1 SITE INSPECTIONS AND OBSERVATIONS

On November 19, 2020, a Black Rock Geosciences' representative visited the site in order to assess its current utilization, hazardous material storage areas, and to visually search for indications of surface and subsurface contamination. Photographs taken during the site visit are included in Appendix A. Observations made during the site reconnaissance are presented below.

- At the time of this assessment, the site was in use by the Cypress School District. The school district's office building was located in the site's southwestern corner (Photo Nos. 1, 2, and 3). The interior of this building was previously noted to include a reception area, a relatively large conference room, and offices. These areas contained typical office equipment and supplies. The school district's office building was adjoined by landscaped areas, paved walkways, and asphalt-paved driveways and parking areas (Photo Nos. 3 and 4).
- An educational center (containing classrooms) was located north of the school district's office building (Photo Nos. 5 and 6). The interior of this building was noted to contain typical classroom and office furniture and supplies.
- A warehouse was located east of the educational center (Photo Nos. 7 and 8). This building's interior contained abundant stacked and shelved school supplies. An exterior freezer and refrigerator adjoined the southern side of this building (Photo No. 9). These structures were secured within a chain link fence.
- An electrical systems enclosure was located northeast of the district's office building. The interior of this enclosure was not viewed at the time of the site reconnaissance.
- The school district's maintenance office building and adjoining vehicle maintenance building were located on the site's south-central side (Photo Nos. 10 and 11). These two buildings were generally adjoined by asphalt pavement and landscaped areas. The office building's interiors contained offices and a wood-working shop.
- The vehicle maintenance building contained buses and abundant maintenance equipment and supplies. Indications of potentially hazardous material releases were not observed within this building. One set of underground hydraulic lifts was observed beneath one of the parked busses. No other lift systems were encountered or reported within this shop.
- A wastewater or storm water inlet and adjoining wastewater clarifier (Photo No. 12) were located immediately north of the vehicle maintenance building. Indications of hazardous material placement within the water inlet were not observed at the time of the site reconnaissance.
- A concrete-paved vehicle washing pad was located immediately east of the vehicle maintenance building (Photo No. 13). A drain within the central portion of the pad led to an adjoining wastewater clarifier (Photo No. 14). Indications of potentially hazardous material releases within the vehicle washing area were not observed at the time of the site reconnaissance.
- The area north of the maintenance office building and adjoining vehicle maintenance building was paved with concrete and partially used as a bus parking area (Photo Nos. 15 and 16). Fueling systems for these buses were not encountered.

- A maintenance shop building was located northeast of the vehicle maintenance building (Photo No. 17). This building contained abundant equipment and supplies. Indications of hazardous material releases were not observed within this building.
- An enclosed tractor parking shed was located on the eastern side of the maintenance shop building (Photo Nos. 18 and 19). An equipment storage building was located immediately east of the tractor parking enclosure (Photo No. 20). This building contained abundant equipment and tools, such as lawn mowers, ladders, and boxed items.
- Three portable office/computer/training buildings were located immediately west of the maintenance shop building. These buildings were noted to contain offices, computer equipment, and training rooms. A paint storage shed was located adjacent to these buildings (Photo No. 21). A 20- to 30-gallon drum containing an acid solution was located within a spill-containment structure south of this shed. A 55-gallon drum containing apparent oil filters was located north of this building (Photo No. 22). Indications of releases from these drums were not encountered at the time of this assessment.
- Four storage buildings used by the district and three relatively large storage containers used by the boy scouts were located in the site's east-central portion (Photo Nos. 23 through 27). These buildings and storage containers were adjoined by unpaved areas and some landscaping. Some of the open areas within this portion of the site were also in use as storage areas. An empty drum storage area was located adjacent to one of the buildings. Hazardous material sources and/or releases were not observed within this portion of the site.
- A relatively large gravel-covered area was located in the site's southeastern portion, east of the vehicle maintenance building (Photo No. 28). Some vehicles were parked within this portion of the site. Hazardous material sources and/or releases were not observed in this area.
- A well-maintain lawn with well-established trees and picnic tables was located in the site's central portion (Photo No. 29).
- A relatively large soil stockpile was located in the site's northeastern portion (Photo No. 30). Indications of potentially hazardous materials within this stockpile were not encountered.
- An undeveloped open field occupied the site's northern portion (Photo No. 31). This area was surfaced with soil and relatively short vegetation.
- None of the following were observed within the site:
  - Underground storage tanks
  - Aboveground storage tanks
  - Indications of septic systems
  - Groundwater and/or vadose zone wells
  - Mounds or depressions suggesting trash or other solid waste disposal areas
  - Pools of liquid or potentially hazardous substances
  - Wastewater discharge pipes
  - Ponds, pits, or sumps
  - Unusual or noxious odors

3.2 PROJECT VICINITY

Properties adjoining the site were reviewed for evidence of possible contaminant releases. A brief description of these properties is provided below.

- Single-family homes were located immediately north of the site (Photo No. 32). Hazardous material sources and/or releases were not observed within the visible portions of these properties.
- The property located immediately east of the site was occupied by a Mormon church (Photo No. 33). This church was adjoined by landscaped areas and asphalt-paved driveways and parking areas. Hazardous material sources and/or releases were not observed within the visible portions of this property.
- Orange Avenue is located along the site's southern side (Photo No. 34). Relatively new residential dwellings were located immediately south of Orange Avenue and the site. Hazardous material sources and/or releases were not observed within the roadway or visible portions of the properties located south of the site.
- Moody Street is located along the site's western side (Photo Nos. 35 and 36). The property located west of the site's southern side and Moody Street was in commercial use. The relatively small strip mall on this property included a dry-cleaning facility, a clothing alteration shop, a hair salon, a nails shop, and a liquor mart. An animal hospital was located immediately north of this strip mall. The properties located west of the site's northern portion were in residential use (single-family dwellings. With the exception of the dry cleaners, potential hazardous material sources were not observed. Due to the location of the dry cleaners (down gradient of site), any hazardous materials released at that location would not be considered a threat to the soil and/or groundwater underlying the site.

3.3 REVIEW OF AERIAL PHOTOGRAPHS

The following aerial photographs were reviewed in order to assess land use over time and to look for evidence of potentially hazardous material storage, usage, and/or disposal areas. Copies of these photographs are provided in Appendix B. As noted in these photographs, indications of potential contaminant sources, such as landfills, large aboveground tanks, oil wells, or pipelines, are not visible onsite.

Aerial Photograph Review	
Date	**Observations**
1927	In the 1927 aerial photograph, the site is covered with soil and a relatively light growth of vegetation. Manmade structures are not visible within the site. The site appears in an undeveloped and natural state. The property located immediately north of the site is in a similar state to that observed onsite. The property located immediately east of the site appears in use as an agricultural field. Moody Street and Orange Avenue are visible along the site's western and southern sides. The properties located south, southwest, and west of these roadways and the site are undeveloped and in similar state to that observed within the site. Indications of potential contaminant sources, such as landfills, large aboveground tanks, oil wells, or pipelines, are not visible onsite or within the adjoining properties.

Aerial Photograph Review	
Date	**Observations**
1938 1947	In the 1938 and 1947 aerial photographs, the site and properties to the north, east, south, and west appear in a similar state to that observed in in the 1927 aerial photograph. A tank farm (aboveground oil storage tanks) is now visible immediately southwest of the site and the adjoining street intersection. With the exception of the tank farm, which is located down-gradient of the site, potential contaminant sources are not visible within the site or adjoining properties.
1952	In the 1952 aerial photograph, the site and property located immediately to the north are covered with soil and a very light growth of vegetation. The site and this property appear to be in agricultural use (fields). Scattered small building structures (suspected dwellings) and equipment are visible within the properties to the east, south, and west. A tank farm remains visible southwest of the site.
1968	In the 1968 aerial photograph, four buildings are visible within the site's western and southern portions (similar to present). These buildings are adjoined by paved and soil-covered areas. The properties located immediately north and east of the site are covered with a light growth of vegetation. Residential-size buildings are scattered within the properties located east of the site. An apparent aboveground water tank is visible within the property located south of the site and Orange Avenue. This property is noted to be a pumping station (with groundwater well) in the topographic maps dated 1964, 1972, and 1981. A tank farm remains visible southwest of the site. An undeveloped property and residential development are visible west of the site and Moody Street.
1976 1990 1994 2005 2011	In the 1976, 1990, 1994, 2005, and 2011 aerial photographs, six to thirteen buildings are now visible within the site. These buildings are adjoined primarily by paved areas, landscaped areas, and non-landscaped areas. The site's northern portion appears undeveloped and covered with a relatively light growth of vegetation. The property located immediately north of the site is now part of a relatively large residential development (single-family dwellings). The property located immediately east of the site appears in use as a church, similar to present. The aboveground water tank located south of the site was removed between 2005 and 2011. The tank farm located southwest of the site was removed between 1976 and 1990. This tank farm was being redeveloped as a residential neighborhood in 1990. The strip mall west of the site was developed 1968 and 1976.
2018 (Figure 2)	Similar to 2010. The site is in a similar state to that observed during the site reconnaissance.

3.4 REVIEW OF MAPS AND REPORTS

3.4.1 USGS TOPOGRAPHIC MAPS

Topographic maps (Anaheim and Orange, California quadrangles) dating between 1902 and 1981 were reviewed as part of this assessment. Copies of these maps are provided in Appendix B of this report. A description of these maps is provided on the table below. As noted on these maps, structures of concern, such as pipelines, oil wells, and landfills are not shown within the site.

Topographic Map Review	
Date	**Observations**
1902	As noted in the 1902 topographic map, aboveground structures are not shown within the site. A north-south trending roadway passes along the site's western side. Other uses of the site and adjoining properties are not depicted on this map. Structures of concern, such as pipelines, oil wells, aboveground tanks, and landfills, are not shown within the site or immediate site vicinity.
1947 & 1950	In the 1947 and 1950 topographic maps, manmade structures are not shown within the site. Moody Street and Orange Avenue are shown along the site's western and southern sides, respectively. Residential-size building structures are shown scattered east and northwest of the site. Numerous aboveground oil tanks (labeled "Oil Tank Farm") are shown immediately southwest of the site and the adjoining street intersection. No other potential structures of concern are shown within the immediate site vicinity.
1964	In the 1964 topographic map, manmade structures are not shown within the site. The property located west of the site's northern portion and Moody Street is shown as being developed. The remaining western, northern, and eastern properties appear partially developed (scattered small building structures). A pumping station is shown immediately south of the site. An oil tank farm remains shown immediately southwest of the site.
1972 & 1981	In the 1972 and 1981 topographic maps, five to six buildings are shown within the site. The use of the site is not stated, but believed to be part of the school district. The pumping station and oil tank farm remain shown south and southwest of the site, respectively. The properties located west, north, and east of the site are shown as developed to partially developed. With the exception of the tank farm, structures of concern are not shown within the site or immediate site vicinity.

3.4.2 SANBORN INSURANCE MAPS

Sanborn Maps, requested for this assessment, were not found for the site or site vicinity.

3.4.3 ASSESSOR PARCEL MAPS

An assessor parcel map and associated property profile were obtained for the site for review. A copy of the assessor parcel map is included in Appendix B. The assessor parcel map shows the location and dimensions of the parcel included within this assessment. Easements through the site, including for chemical and/or petroleum hydrocarbon pipelines, are not shown on this map.

The property profile reports that the owner of the onsite parcel (APN 224-092-30) is the "Cypress School District". Owners commonly associated with hazardous material use, such as dry cleaners and fuel service stations, were not listed in the property profile. The use of the site is noted as being "Tax Exempt." Aboveground buildings are not listed at the site. The site is noted to be 6.29 acres in area. No other pertinent data, including building dates and sizes, were provided within the property profile.

3.4.4 STREET DIRECTORIES

Street directories typically list the year and reported occupant for each site address. The site's address (9470 Moody Street) was listed between 1975 and 2008 with the following uses:

- Cypress School District Administration offices;
- Cypress School District Human Resources;
- Cypress School District Maintenance and Transportation; and
- Cypress School District Purchasing.

As noted above, the associated uses of the site address are related to the administration purposes for the school district. Property uses that may suggest that hazardous material sources (such as fuel service stations or oil-related operations) were not listed in the street directories searched.

3.5 ENVIRONMENTAL DATABASE REVIEW

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for the site and properties up to 1 mile away from the site. The search met the specific requirements of ASTM Standard Practice for Environmental Site Assessments E1527-13, including those associated with government databases, search distances, and data currency. EDR's report, dated November 17, 2020, is included as Appendix C of this report. Pages 4 through 16 of the Executive Summary for EDR's report list the federal and state environmental databases searched for this assessment. A description of these databases is provided at the end of EDR's report.

A map provided in the EDR report shows the location of the subject site and properties within the search distances defined by ASTM (see Page 2 in Appendix C). As noted in the EDR report, the site is listed within 15 of the environmental databases searched. It is listed as generating and disposing offsite the following materials: asbestos-containing materials, latex waste, inorganic solid waste, other organic solids, waste oil, mixed oil, alkaline solutions without metals, materials containing polychlorinated biphenyls (PCBs), unspecified solvent mixtures, and laboratory chemicals. Releases of these materials were not reported.

The site is also listed as a result of formerly using underground storage tanks that contained waste oil and gasoline. A release of gasoline was reported in 1994 from a 5,000-gallon underground storage tank. This case is reported as having been closed in 2003. The impacted soil (348 tons) was excavated and transported from the site in 1994 (see Section 3.6.1). Subsequent testing revealed trace gasoline-related contaminants in the underlying soil (below cleanup levels). No additional contaminant releases have been reported at the site. Note that a 500-gallon underground waste oil storage tank was also located at the site (removed in 1994 and reported with no releases).

There are 34 properties listed within 1 mile of the site that have, or have had the potential to release hazardous materials into the subsurface soil and/or groundwater. Six of these properties are located immediately adjacent to the site or up-gradient (east) and within 1/4 mile of the site. Hazardous materials released at such properties would, due to their location, have the greatest potential to impact the soil and/or groundwater underlying the site. Impacted groundwater beneath these offsite properties could migrate into or toward the subject site. A description of these properties is listed on the table below.

Summary of EDR® Properties Located Upgradient and within ¼ Mile of the Site			
EDR ID No.	**Property/Business Name & Address**	**Listed Databases**	**Comments**
B16	Kathleen Majeski 5136 Edgemont Cir., Cypress, CA	RCRA NonGen/NLH	This property is listed as not being a generator of potentially hazardous waste. Releases of these materials were not reported.
17	Pacific Terminal Alnor Facility 5042 Orange Ave., Cypress, CA	HIST UST	A waste oil storage tank (circa 1968) was reported on this adjoining (southern) property. Releases from this tank were not reported. This property has since been redeveloped for residential use.
24	Lisa Brandon 5196 Edgemont Cir., Cypress, CA	RCRA NonGen/NLH	This property is listed as not being a generator of potentially hazardous waste. Releases of these materials were not reported.
31	Denise Garu 9333 Vista Serena, Cypress, CA	RCRA NonGen/NLH	This property is listed as not being a generator of potentially hazardous waste. Releases of these materials were not reported.
41	Darren Knowles 5304 Vista Hermosa, Cypress, CA	RCRA NonGen/NLH	This property is listed as not being a generator of potentially hazardous waste. Releases of these materials were not reported.
H37 H38 H39	Cypress Civic Center 5275 Orange, Ave., Cypress, CA	RCRA NonGen/NLH, LUST	This property is listed as not being a generator of potentially hazardous waste. Gasoline was released from an underground fuel tank on this property (reported in 2004). Further documentation for this release was not provided in this database or the State database.

Table information source: EDR. These properties and a description of the acronyms above are identified on Pages 4 through 16 of the Executive Summary of EDR's Report (Appendix C).

As noted on the table above, none of the adjoining and up-gradient properties were reported with potentially hazardous material releases. The closest of these properties, which is located immediately south of the site (formerly Pacific Terminal Alnor Facility) is listed in the HIST UST database as a result of maintaining a historic underground waste oil storage tank. Releases from this tank were not reported. Due to the absence of reported releases at this property and subsequent removal of all structures (between 2005 and 2006), the potential contaminants formerly located within this property are not considered a threat to the soil and/or groundwater underlying the site.

The remaining listed properties are located cross-gradient or down-gradient of the site. Hazardous materials released at these properties would be anticipated to migrate past or away from the site. Based on a review of the properties listed in the environmental databases searched, none are considered to have the potential to impact the soil and/or groundwater underlying the subject site.

3.6 AGENCY CONTACT AND MATERIALS

Environmental records pertaining to the site and vicinity were obtained from the following sources. A summary of the records found are discussed below.

- Orange County Health Care Agency
- Regional Water Quality Control Board
- California Department of Toxic Substances Control
- California Division of Oil, Gas, and Geothermal Resources
- South Coast Air Quality Management District

3.6.1 ORANGE COUNTY HEALTH CARE AGENCY

The Orange County Health Care Agency (OCHCA) was contacted in order to obtain their in-house records for the site. Such records would include information about potentially hazardous material storage containers (including underground storage tanks) and known or suspected potentially hazardous material releases. The OCHCA had records for the site in the underground storage tank database. A copy of these records is provided in Appendix D. As noted in these records, two underground storage tanks (a 5,000-gallon gasoline tank and a 500-gallon waste oil tank) were removed from the site in January 1994. Two soil samples collected immediately beneath the gasoline tank were reported with elevated gasoline-related contaminants. Four soil borings were sampled to depths of 20 feet (at 5-foot intervals) around the former gasoline tank in May 1994. Gasoline-related contaminants were not detected in the soil samples collected from these borings. In October 1994, 348 tons of impacted soil were excavated from the former gasoline tank location and transported offsite for treatment. One of the six verification soil samples collected from the sidewalls of the excavation was reported with relatively low toluene, ethylbenzene, and xylene concentrations. The OCHCA noted that the remaining contaminant levels should not impact the groundwater at levels exceeding the Santa Ana Regional Water Quality Control Board's (RWQCB) low risk levels.

Two groundwater wells were installed within the immediate vicinity of the former gasoline tank between April 1997 and March 2000. Gasoline-related contaminants were either not detected in groundwater samples collected from these wells or were reported at concentrations that were less than the maximum contaminant levels for drinking water.

In December 2002, verification soil and groundwater sampling were collected within the vicinity of the former gasoline tank. The soil and groundwater collected from these borings were reported with no detectable gasoline-related contaminants. As a result, the OCHCA closed this case in January 2003.

3.6.2 REGIONAL WATER QUALITY CONTROL BOARD

Records from the Regional Water Quality Control Board (RWQCB) were searched via their online search program at http://geotracker.swrcb.ca.gov. A search of this database revealed no properties located up-gradient (east) and within ¼ mile of the site. The site, however, is listed as a result of the gasoline release that was reported by the OCHCA. The RWQCB also reports that this case was closed in 2003.

3.6.3 DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Records from the Department of Toxic Substances Control (DTSC) were searched via their online search program at http://www.envirostor.dtsc.ca.gov/public. A search of this database revealed no DTSC-regulated properties within 1/4 mile and up-gradient of the site, or within the immediately site vicinity (see Appendix D2).

3.6.4 CALIFORNIA DIVISION OF OIL, GAS, AND GEOTHERMAL RESOURCES

Oil well maps provided by the California Division of Oil, Gas, and Geothermal Resources (CDOGGR) were searched via their search program at http://maps.conservation.ca.gov/oilgas/. Based on a review of the maps provided by CDOGGR, there are no oil wells located within ¼ mile of the site. The closest oil well shown (Charles T.B. Jones "Charles T.B. Jones" 1) is located approximately 0.9 mile southeast (cross gradient) of the site. This well is noted to be an idle oil and gas well. Due to the location and distance to

this well, any potentially hazardous material releases related to this well are not considered a threat to the soil and/or groundwater underlying the site.

3.6.7 SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

Records from the South Coast Air Quality Management District (AQMD) were searched via their on-line search program at http://www.aqmd.gov. The site is listed in the AQMD database as a result of obtaining a permit to store and dispense gasoline in 1982. No other permits, including for remedial systems, were applied for or issued to the site.

Two properties in the immediate vicinity of the site has been issued permits by the AQMD. A dry-cleaning facility (Green World Cleaners) located approximately 215 feet west (downgradient) of the site was granted a permit in 1995 to operate dry cleaning equipment with solvents. The school located immediately southeast of the site and Orange Avenue (the Oxford Academy) was granted permits between 2001 and 2010 for Banking Plans. This pertains to the reduction of refrigeration emissions from stationary air conditions systems. Records indicating that potentially hazardous materials have been released at these two listed properties were not provided in the AQMD database.

4.0 SUBSURFACE ENVIRONMENTAL INVESTIGATIONS

4.1 GEOPHYSICAL SURVEY

A geophysical survey was conducted at the site in September 2017 (BRG, 2017). This investigation included the use of magnetometers and a ground-penetrating radar. The geophysical survey began immediately north of the maintenance building in the vicinity of a former waste oil tank (Figure 3). This tank's approximate location was determined with a map and by following the inductance signature along the waste oil drain pipeline that started at the fill port within the maintenance area. This fill port had been infilled with concrete, indicating that the tank had previously been removed and all lines were capped appropriately. The former location of the tank was identified during the geophysical survey. A hand auger boring was drilled at the center of the former tank location to a depth of 5.5 feet in order to confirm its absence. Evidence of this tank was not found. The data collected during this investigation show that this tank has been removed.

A detailed geophysical survey was also conducted immediately west and north of the paint storage building in an attempt to locate the groundwater wells formerly established in this area. Some possible magnetic anomalies were identified in this area. Excavations of these areas, however, revealed no possible well lids or well boxes. Based on the data collected from this area, the wells have been removed from this portion of the site.

4.2 STOCKPILE TESTING

The soil within the stockpile located in the site's northern portion was tested in 2009 for the possible presence of contaminants (BRG, 2009). This soil was tested for petroleum hydrocarbons, volatile organic compounds, pesticides, and Title 22 metals. Relatively low petroleum hydrocarbon concentrations (9.0 to 9.6 milligrams per kilogram (mg/kg)) were reported in the soil. These concentrations were less than the cleanup level of 1,000 mg/kg. Volatile organic compounds were not detected in any of the collected

soil samples. Two pesticide compounds (DDD and DDE) were detected at relatively low concentrations (less than 0.043 mg/kg). The reported levels were less than DDD's screening level of 2.3 mg/kg and DDE's screening level of 1.6 mg/kg.

Nine to ten metals were detected in the soil collected from the stockpile. Each metal concentration was reported below anticipated background levels. With the exception of arsenic, the metal concentrations were less than their respective human health screening levels. The reported arsenic concentrations (1.45 to 1.66 mg/kg) exceeded arsenic's screening level of 0.11 mg/kg for residential or school settings. These arsenic concentrations were, however, below the upper-bound background level of 12.0 mg/kg. This background level was established by the Department of Toxic Substances Control for Southern California (DTSC, 2005). Elevated arsenic concentrations (greater than background levels) were not reported within the soil stockpile.

Based on a review of the onsite stockpile and results of the chemical analyses, elevated contaminant concentrations were not present within its soil. Further sampling and chemical analyses of this stockpiled soil was not considered warranted. From an environmental standpoint, the soil within the stockpile was considered suitable as fill materials at other school or residential properties.

4.3 SUBSURFACE ENVIRONMENTAL INVESTIGATION DESCRIPTION

A subsurface soil and groundwater investigation was conducted at the site on September 13, 2017. Soil samples were collected from five locations (Borings B-1 through B-5) during this investigation. These sampling locations are shown on Figure 3. As noted on this figure, Boring B-1 was placed next to the former underground waste oil storage tank. Borings B-2 and B-3 were placed next to hydraulic lifts within the vehicle service facility. Borings B-4 and B-5 were placed adjacent to wastewater clarifiers.

Soil samples were collected from Boring B-1, B-2, and B-3 at depths of 5 and 10 feet. Soil samples were collected from the clarifier borings (B-4 and B-5) at depths of 2.5, 5, and 10 feet.

The soil samples collected during the subsurface investigation were analyzed for the following potential contaminants:

- Petroleum hydrocarbons using EPA Method 8015B;
- Volatile organic compounds using EPA Method 8260B; and/or
- Title 22 metals using EPA Methods 6020 and 7471A.

Groundwater samples were collected from each of the five soil borings (B-1 through B-5; Figure 3). The groundwater was collected at depths between 10 and 14 feet, below the soil sampling intervals. The collected groundwater samples were analyzed for the following potential contaminants:

- Petroleum hydrocarbons using EPA Method 8015B; and/or
- Volatile organic compounds using EPA Method 8260B.

4.4 SUBSURFACE ENVIRONMENTAL INVESTIGATION CONCLUSIONS

4.4.1 SOIL

- Petroleum hydrocarbons were detected in five of the ten soil samples collected during the soil investigation (BRG, 2017). The petroleum hydrocarbons were primarily reported in the oil range (carbon range of C23 to C40). The hydrocarbon concentrations in this range were reported

between 7.1 and 150 milligrams per kilogram (mg/kg). These levels are below the screening level of 1,000 mg/kg.

- The petroleum hydrocarbon concentrations in the lighter range (carbon range between C13 and C22) ranged between 3.1 and 82 mg/kg. These levels are below the screening level of 100 mg/kg. Based on the data collected during this investigation, the soils beneath the site do not contain petroleum hydrocarbon concentrations that exceed screening levels.
- One volatile organic compound (methylene chloride) was detected in the collected soil samples. Methylene chloride was reported in two samples at concentrations of 5.5 and 6.1 micrograms per kilogram (µg/kg). The screening level for methylene chloride in soil is 57 µg/kg, which is greater than that reported in the onsite soils. Please note that methylene chloride is a common laboratory contaminant, and may not actually be present within the soils underlying the site. Based on the data collected during this investigation, the soils beneath the site have not been impacted with volatile organic compounds.
- Up to 14 metals were detected in the soils underlying the clarifiers. The metals were reported at concentrations similar to, or less than, background levels. Based on the data collected during this investigation, the soils beneath the site have not been impacted with metal solutions released by the clarifiers.

4.4.2 GROUNDWATER

- Petroleum hydrocarbons were detected in four of the five groundwater samples collected during this investigation. The petroleum hydrocarbons were primarily reported in the oil range. The hydrocarbon concentrations in this range were reported between 0.14 and 58 milligrams per liter (mg/l). These levels are below the screening level of 100 mg/l.
- The petroleum hydrocarbon concentrations in the lighter range ranged between 0.17 and 32 mg/l. These levels are also below the screening level of 100 mg/l. Based on the data collected during this investigation, the groundwater beneath the site does not contain petroleum hydrocarbon concentrations that exceed screening levels.
- One volatile organic compound (methyl tertiary butyl ether [MTBE]) was detected in two of the collected groundwater samples. MTBE, a former additive to gasoline, was reported at concentrations of 0.72 and 0.90 micrograms per liter (µg/l). The screening level for MTBE is 13 µg/l, which is greater than that reported in the groundwater collected from the site. Based on the data collected during this investigation, the groundwater beneath the site does not contain volatile organic compounds at concentrations that exceed regulatory levels.

4.5 INVESTIGATION RECOMMENDATIONS

Based on the data collected during the field investigation and presented in the analytical report, further investigations at the site were not considered warranted. There were no known or suspected onsite conditions that would warrant regulatory involvement regarding such studies, including actions leading to additional environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation

5.0 FINDINGS

5.1 BUILDING CONSTRUCTION MATERIALS

Asbestos- and lead-containing building materials are suspected within the onsite buildings constructed before 1980. Asbestos-containing building materials and lead-based paint were phased out in the mid- to late 1970s. Asbestos and lead surveys were not conducted as part of this assessment.

5.2 ONSITE HAZARDOUS MATERIAL USE

Pesticides - The site appeared as part of a relatively large agricultural field in the 1950s. Prior to and after the 1950s, the site was not in agricultural use. Due to the limited time in which the site was in agricultural use, and the absence of orchards and row crops, elevated pesticide concentrations (concentrations that exceed regulatory limits) are not anticipated in the surficial soils covering the site.

Chemical/Petroleum Hydrocarbon Materials - Potentially hazardous materials used or generated in significant quantities within the site have included gasoline, waste oil, and hydraulic oil. Smaller quantities of other potentially hazardous materials used at the site include solvents, and general cleaners. With the exception of gasoline, documentation pertaining to the release of these materials was not encountered during this assessment.

Potential Hazardous Materials Storage Structures - Potentially hazardous materials storage structures encountered or documented within the site include three underground storage tanks, two wastewater clarifiers, and a hydraulic lift system. An underground gasoline storage tank and a waste oil storage tank were removed in 1994. A second waste oil storage tank was removed between 1994 and 2017. A wastewater clarifier remains located immediately adjacent to this tank. A second wastewater clarifier is located adjacent to the vehicle wash area, immediately east of the vehicle maintenance building. A hydraulic lift system comprised of two relatively large lifts is located within the western portion of the maintenance building.

Regulatory Actions - There are currently no regulatory actions known or suspected of having been issued for the subject site. The only known past regulatory action pertained to the investigation and cleanup of gasoline-impacted soil and groundwater formerly located in the site's central portion. This action took place between 1994 and 2002. This case was closed in January 2003, after the site representatives provided sufficient documentation that impacted soil and groundwater were no longer present within the site. Agency records and a closure letter are provided in Appendix D.

5.3 SUBJECT SITE VICINITY

Landfills - There are no known landfills within 1 mile of the site.

Regional or Adjacent Hazardous Material Releases - National Priority List (NPL) sites, which are reported with relatively large hazardous materials releases, are not reported within 1 mile of the site. In addition, there are no reported releases within 1 mile of the site that are considered as having a potential to impact the soil and/or groundwater underlying the site.

Radon - Radon levels are reported to average 0.763 picocuries in first-floor levels in basement levels for properties within zip code 90630. The U.S. Environmental Protection Agency's (EPA's) maximum

allowable radon level is 4 picocuries. Radon concentrations above EPA's allowable level are not expected at the site.

Asbestos - Sources for asbestos-containing rock are not located within 50 miles of the site (CDOGGR, 2000).

Potable Water Source - The site and adjoining areas are provided water by the Golden State Water Company (GSWC). The drinking water provided by the GSWC is a blend of groundwater pumped from the Orange County Groundwater Basin, and imported water from the Colorado River Aqueduct and the State Water Project (imported and distributed by the Metropolitan Water District of Southern California). The 2019 water quality report for the city of Cypress (within the Los Alamitos Customer Service Area) can be obtained online at: https://www.gswater.com/annual-water-quality-reports.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 CONCLUSIONS

6.1.1 SITE BACKGROUND

Based on data collected during this assessment, the site was in an undeveloped and vacant state between at least the 1920s and the 1940s. The site was part of a relatively large agricultural field in the early 1950s. The site has been in use by the Cypress School District since the 1960s. Four of the onsite buildings (the district office building, educational center, warehouse, and maintenance offices / vehicle maintenance building) were constructed in the site's western and southern portions between 1964 and 1968. The maintenance shop, six storage buildings, and a portable office building were constructed within the site's east-central portion between 1968 and 1990. One of these buildings was removed in earlier 2020. A second portable office building was constructed within this portion of the site between 1994 and 2002. A third portable office building was constructed in this area between 2009 and 2011.

6.1.2 ONSITE HAZARDOUS MATERIAL SOURCES AND RELEASES

One underground 5,000-gallon gasoline storage tank and an adjoining underground 550-gallon waste oil storage tank were installed north of the maintenance building in approximately 1982. These tanks were removed from the site in January 1994. Approximately 348 tons of gasoline-impacted soil was removed from this location in October 1994. Following the removal of soil, two groundwater wells were installed within the immediate vicinity of the former gasoline tank. Gasoline-related contaminants were either not detected in the collected groundwater samples or were reported at concentrations that were less than maximum contaminant levels. In December 2002, soil and groundwater samples were collected from the immediate vicinity of the former gasoline tank in order to assess the residual contaminant concentrations in this area. The collected soil and groundwater samples were reported with no detectable gasoline-related contaminants. Based on these findings, the Orange County Health Care Agency (OCHCA) closed this case.

A second underground waste oil storage tank was formerly located immediately north of the vehicle maintenance building. This tank and its contents were removed. A wastewater clarifier is located

immediately adjacent to this former tank. A second wastewater clarifier associated with a vehicle washing area is located immediately east of the vehicle maintenance building.

The soil and/or groundwater beneath the former tanks, clarifiers, and two relatively large lifts within the western portion of the vehicle maintenance building were tested in 2017. All of the collected soil and groundwater samples were reported with either no detectable contaminant concentrations or trace concentrations (well below agency screening levels).

6.1.3 REGIONAL HAZARDOUS MATERIAL RELEASES

Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low potential that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

6.1.4 RECOGNIZED ENVIRONMENTAL CONDITIONS

RECs were not identified within the site during this assessment.

One historical REC was identified at the site. Historical RECs refer to a past release that has been remediated to below residential-cleanup standards, and given regulatory closure with no use restrictions. This historic REC, as noted above, is the fuel release from a former underground storage tank. The impacted soil formerly located adjacent to this tank was removed. The remaining soil and groundwater were tested during two separate sampling events and reported with very low to no detectable contaminant concentrations.

With the exception of asbestos-containing materials, no Other Environmental Conditions (OECs) were encountered within the site. OECs are features or issues that, while being judged to have a relatively low probability of resulting in significant contaminant impact to the site, should be considered in project planning and risk management. It is considered likely that asbestos-containing materials were used within the buildings constructed before 1980. Asbestos-containing building materials and lead-based paint were phased out in the mid- to late 1970s. Asbestos and lead surveys were not conducted as part of this assessment.

6.2 RECOMMENDATIONS

Based on the findings of this assessment, there are no known or suspected onsite conditions that would warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Additional environmental studies are not recommended for the site.

7.0 LIMITATIONS

The information provided in this report is based on the scope of work authorized by the client, information obtained during the investigation, ASTM Standard E1527-13, current regulatory guidelines and laws, state-of-the-industry practices, and the professional judgment of Black Rock Geosciences personnel.

This Phase I environmental site assessment, conducted in November 2020, is based on information made available during the course of this assessment. Black Rock Geosciences relied on the information collected

during our investigation, presented in the former report(s), and/or provided by the client or others to conduct our investigation and arrive at our conclusions. Black Rock Geosciences assumes that information provided by others is accurate to the extent used by Black Rock Geosciences.

The information obtained during this assessment, at a minimum, complies with criteria specified in Standard Practice for Environmental Site Assessments: Phase I, ASTM Standard E1527-13. Data gaps to this standard for this report include the following:

- Interviews with representatives of the site and adjoining properties,
- A review of the site's title report, and
- An assessment of the site's purchase price and the fair market value.

Services performed by Black Rock Geosciences were conducted in a manner consistent with state-of-the-industry practices, recognizing that even the most comprehensive investigation may not detect all hazardous materials/waste at the site. Therefore, Black Rock Geosciences cannot act as an insurer or certify that the site is free of hazardous materials/waste. Except as expressly set forth herein, no representation or warranty is included in our report.

The report is the property of the client for whom it was prepared. Its distribution to others is at client's discretion.

8.0 PROFESSIONAL STATEMENT

This Phase I environmental site assessment report was prepared by Mr. Quin Kinnebrew, an Environmental Professional who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of hazardous material releases or threatened releases on, at, in, or to a property. He is sufficiently qualified to meet the objectives and performance of this assessment. Mr. Kinnebrew holds a current Professional Geologist's license (PG# 5696) in California and has more than 28 years of full-time relevant experience. He obtained his Master's degree from an accredited institution (Texas A&M University) in the discipline of engineering geology. Mr. Kinnebrew has continued to build on his environmental-related knowledge through participation in continuing education and work-related experience.

Environmental Professional Statement - I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Quin Kinnebrew, PG

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GREEN WORLD CLEANERS EPA ID:: CAR000013086	***4941 ORANGE AVE***	***WSW 0 - 1/8 (0.072 mi.)***	***C21***	***67***

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/27/2020 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 11 LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 07/27/2020 has revealed that there is 1 SCH

site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Violations:

Site ID:	23535
Site Name:	Cypress School District - District Offices
Violation Date:	7/31/2019
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 07/31/2019. OBSERVATION: Hazardous waste label on 55-gal drum of waste oil did not have the hazardous property, accumulation start date and physical state. 30-gal drum of waste antireeze drum did not have a hazardous waste label. All hazardous waste containers must be labeled with the following: the words 'hazardous waste', name and address of generator, accumulation start date, physical state, hazardous property and content. CORRECTIVE ACTION: Labeling issues were addressed at the time of inspection.

Eval Notes:	On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with maintenance manager on duty from Cypress School District. Consent was provided to enter and conduct inspection activities. Cypress School District has submitted the HMBEP into the California Environmental Reporting System (CERS) database and was not accepted. The following were verified: - Chemical Disclosure was incorrect (see violation I169 above). - Contingency plan/BEP, and; - Training program (See violation I442 above). Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Name: GREEN WORLD CLEANERS
Violation Date: 3/25/2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: OBSERVATION: Observed a 55-gal drum of waste aliphatic hydrocarbons dated 5/12/16. Hazardous waste must be hauled off within 6 months after 27 gal is generated on site. CORRECTIVE ACTION: Have waste hauled off by a registered hazardous waste hauler and provide a copy of the manifest to this Agency within 30 days.

Eval Notes:	On site for routine Hazardous Materials Business Plan (HMBP) inspection. Observed the following hazardous materials on site in reportable quantities (all sizes are approximate): - 1 x 55 gal of waste aliphatic hydrocarbons Per California Health & Safety Code Ch. 6.95, businesses that store and handle hazardous materials at or over reportable quantities (55 gal of a liquid, 500 lbs of a solid, 200 cubic ft of a compressed gas) must prepare and implement an HMBP. The HMBP must include the following elements: - Business Activities - Owner/Operator Information - Chemical Inventory - Site Map - Emergency Response Plan/Training Plan The HMBP must be submitted online through the California Environmental Reporting System (CERS) by March 1st of every year. The facility is responsible for identifying all hazardous materials, including hazardous wastes, which are at or above disclosure thresholds. If there is a change in the type of amount of chemicals that are [Truncated]

Eval Notes:	Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify

Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with Vivian Chen, store clerk, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - (1) 55-gallon drum containing waste dry cleaning solvent (hydrocarbon). The container was properly labeled, but it was not properly closed. The 55-gallon waste drum was missing a drum ring to make it a closed container (See violation I617 above). Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available, but was not filled out. During the inspection, the label was filled out.

Eval Notes:	On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with Manager Hoang Lee. Consent was provided to enter and conduct inspection activities. Green World Cleaners has submitted the HMBEP into the ESubmit database. The last submittal was in March 2016. The submittal has been reviewed and accepted. Disclosable chemicals verified include: - Waste dry cleaning solvent The contingency plan and training program was verified during this inspection. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LUST:
Name: HYATT DIE CAST AND ENGINEERING
Address: 4656 LINCOLN
City,State,Zip: CYPRESS, CA 90630
Lead Agency: SANTA ANA RWQCB (REGION 8)
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0605901566
Global Id: T0605901566
Latitude: 33.829333
Longitude: -118.051322
Status: Open - Site Assessment
Status Date: 06/26/2006
Case Worker: MAO
RB Case Number: 083002126T
Local Agency: Not reported
File Location: Regional Board
Local Case Number: 92UT068
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Orange County HealthCare Agency transferred regulatory oversight to RWQCB office in April 2006 owed to vinyl chloride contamination which they have no authority to oversee or direct. Although a considerably portion of the remediation has been undertaken by the immediate past consultant, much work still needs to be done. Analysis of vinyl chloride which was the main reason why the case was transferred to this office was not conducted or reported since 2009. Further review

HYATT DIE CAST AND ENGINEERING (Continued) **S101299499**

shows that a total of approximately 57,872 lbs pounds of VOCs have been removed from the site as vapor. Vapor concentrations have been decreased from an average of 2,367.8 ppmv in 2009 to 424.8 ppmv during the September 2010 monitoring period. A total of 116,447 gallons of groundwater have been removed from the subsurface and discharged to the storm drain following NPDES permitting requirements since system startup.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-22-2001
Violations Found:	Yes
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	On February 22, 2001, Regional Water Board Staff inspected the above mentioned facility. Contact was made with Garry Stale the Purchasing Manager. All aspects of the SWPPP were present and nothing was noted. The following observations were made during the facility's inspection: White residue was observed on the ground in the middle of the

HYATT DIE CAST AND ENGINEERING (Continued) **S101299499**

facility. Improved general housekeeping is needed throughout the facility.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-19-2002
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Inspection notes too long (see attachment).
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-29-2004
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On June 28, 2004, Regional Water Board staff conducted a routine inspection at the above mentioned site. Contact was made with Mark Miller and Garry Slate. The SWPPP was reviewed on site. It took site personnel about 30 minutes to locate the document. Upon inspection for the facility the following observations were noted. The facility was clean overall and site personnel seemed knowledgeable of the program. No major violations were noted.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-12-2011
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: warm and sunny. Site has numerous final products and machinery parts stored outside. Products are stored outside temporarily; moved inside to protect against moisture. Many machinery parts are from another closed plant and are in the process of being disposed of. Contact relies on tarps to cover exposed items when it rains. I expressed skepticism that that many parts could be covered timely; Contact reassured me that he has the staff and tarps needed to be responsive. A small work area was found littered with refractory powder; Contact reports that this was the result of a recent rebuild job on the reverbratory furnace and will be cleaned shortly. Found a hose next to a covered outdoor break area; Contact believes hose is used to wash off tables onto the bare ground. I explained that this was not objectionable so long as the water infiltrates.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Met with purchasing manager Garry Slate, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - Waste oily water, waste hydraulic fluid, non RCRA hazardous waste solids, waste oxidizing solids, waste flammable liquids, corrosive liquids (acidic and basic), and universal wastes including alkaline batteries and fluorescent light tubes. All containers were labeled and properly closed. In addition, aluminum, copper, and beryllium cuttings are stored for recycling. Hazardous waste manifests for all hazardous waste streams were available for review. Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available in the hazardous materials business emergency plan.

Eval Notes:	On site to conduct a routine Hazardous Waste inspection. The facility has a hazardous waste storage area consisting of a metal bin, 55 gallon drums (2), and several 5 gallon buckets. Waste stored here is a slurry generated from ceramic material buffing of aluminum castings. The waste metal bin and the buckets were observed open and overfilling without proper labeling, photographs were taken. Please note, solidified hazardous waste must be kept covered and liquid hazardous waste must be kept closed with a tight fitting lid to prevent a release. All containers of hazardous must be labeled as hazardous waste with the following information: generator name, address, city, state, zip, EPA ID number, accumulation start date, contents of the waste, physical state, and hazardous properties.

Eval Notes:	On site to conduct a routine Hazardous Materials Disclosure & Business Emergency Plan (HMBP) inspection. The facility had several hazardous materials disclosed on their HMBP through California Environmental Reporting System (CERS), which were not observed on site, or were observed in quantities that do not meet disclosure thresholds. Please note the disclosure thresholds for hazardous materials are as follows: 55 gallons of liquids, 500 pounds of solids, 200 cubic feet of compressed gases with hazards other than simple asphyxiation, or 1,000 cubic feet of compressed gases where the only hazard is simple asphyxiation. Also, please edit locations of hazardous materials on your site maps as necessary. Resubmit your HMBP through CERS by March 1, 2018.

Eval Notes: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is prepopulated on the E-Submit Portal is still [Truncated]

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 07/13/2017. The hazardous waste label on the waste oil tank was illegible. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. A hazardous waste label was completed and posted on the waste oil tank during this inspection. This violation was corrected today.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-13-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Consent to inspect the facility was provided by Jin June . As per the owner Mr. June, the hot wash tank hasn't been used and the Stoddard Solvent unit has a recycling process that generates a small amount of waste oil which is added to the main waste oil tank for disposal. The Hazardous waste label on the waste oil tank was illegible (see violation). The labels were completed and posted during this inspection. Violation I400 is corrected. The drained used oil filters have been stored on site since 6-5-14 (see violation) Ensure that the drained used oil filters are disposed of properly and a copy of the disposal record and a complete Certificate of return to compliance is forwarded to this agency with-in 30 days. Municipal dumpster area does not contain any hazardous waste. The perimeter of the facility was also inspected; no signs of releases were noted. Emergency Response Informational Sticker was [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type:	Site Screening
Completed Date:	10/27/1994
Comments:	Site screening/file search indicates NFA for DTSC.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	02/08/1991
Comments:	PA Report was reviewed by Region 4 staff. Site is located in a populated area of Cypress, Orange County. Presently property is used as a self storage miniwarehousing area. Area is fenced and paved. Past operations at the site were construction equipment renovation and rental. 5 underground tanks for deisel and gas were removed and 16 cy of soil were removed before the area was paved over and became a self storage facility. Staff recommends PEARL.

Eval Notes:	On site to conduct a routine Hazardous Materials Disclosure Business Emergency Plan (HMBEP) inspection. Met with Tom Tomlin of Anaheim Union High School District. Consent was provided to enter and conduct inspection activities. Cypress High school has submitted the HMBEP into the Esubmit database and was accepted. The following were verified: - Chemical Disclosure: - Contingency plan/BEP, and; - Training program. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

APPENDIX D1

AGENCY FILES
(ORANGE COUNTY HEALTH CARE AGENCY)

Case Closure Summary
Leaking Underground Fuel Tank Program

I. Agency Information

Date: **January 10, 2003**

Agency Name: **Orange County Health Care Agency**	Address: **2009 East Edinger Avenue**
City/State/Zip: **Santa Ana, CA 92705**	Phone: **(714) 667-3713**
Responsible staff person: **Arghavan Rashidi-Fard**	Title: **Hazardous Waste Specialist**

II. Case Information

Site Facility Name: **Cypress School District**		
Site Facility Address: **9470 Moody Street, Cypress, CA 90630**		
RB LUSTIS Case No.: **083002524T**	Local Case No.: **94UT6**	LOP Case No.:
URF Filing Date:	SWEEPS No.	
Responsible Party	Address	Phone Number
John Ikerd **Cypress School District**	**9470 Moody Street** **Cypress, CA 90630**	**(714) 220-6951**

Tank No	Size in Gal.	Contents	Closed in-Place/Removed?	Date
1	**5000**	**Gasoline**	**Removed**	**1-18-94**
2	**500**	**Waste oil**	**Removed**	**1-18-94**

III. Release and Site Characterization Information

Cause and type of release: **Not known**		
Site characterization complete? **Yes**	Date approved by oversight agency: **12-11-97**	
Monitoring wells installed? **Yes**	Number: **2**	Proper screened interval? **Yes**
Highest GW depth BGS: **4'**	Lowest depth: **8'**	Flow direction: **NA**
Most sensitive current use: **Domestic and Municipal Supply**		
Are drinking water wells affected? **No**	Aquifer name:	
Is surface water affected? **No**	Nearest/affected SW name:	
Off-site beneficial use impacts (addresses/locations): **None**

Case Closure Summary

Leaking Underground Fuel Storage Tank Program

Case#: 94UT6

Date: January 21, 2003

III. Release and Site Characterization Information (Continued)

Maximum Documented Contaminant Concentrations - - Before and After Cleanup

Contaminant	Soil (ppm)		Water (ppm)		Geoprobe Verification Soil & GW	Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After			Before	After	Before	After (Geoprobe)
TPH (gas)	68.5	.700	NA	.070	ND	TRPH	271	same	ND	NA
TPH (diesel)	NA	NA	ND	ND	NA	MTBE	NA	ND*	ND	ND
Benzene	.069	.065	ND	.001	ND	TBA	NA	ND*	NA	ND
Toluene	.630	.005	.0014	.003	ND	DIPE	NA	ND*	NA	ND
Ethylbenzene	.650	.042	.0021	.0005	ND	TAME	NA	ND*	NA	ND
Xylenes	2.195	.115	.0041	.003	ND	ETBE	NA	ND*	NA	ND

*** Soil samples collected during geoprobe verification activities**

Comments (Depth of Remediation, etc.): **Soil contamination was detected in the two soil samples collected from beneath the gasoline tank. A site assessment consisting of four borings around the former gasoline tank area was conducted in May 1994. Soil samples were collected from 5, 10 and 20' feet below grade (fbg) in all borings except one that had an additional sample collected at 25 fbg. All results for TPH and BTEX were non-detect. Due to the limited extent of soil contamination and presence of shallow groundwater, the former gasoline tank area was over-excavated in October 1994. Six soil verification samples were collected from the sidewalls. However, soil samples were not collected from the bottom of the excavation due to collection of groundwater and water from a broken water pipe at the bottom. All results were non-detect except for sample SW2 at 6 fbg collected from the western end of the south wall. Soil contaminant concentrations detected in SW2 (listed in the table above under the "soil- after" column) are low and indicate that the toluene, ethylbenzene and xylenes will not impact the groundwater at levels above the MCLs. The benzene concentration detected in SW2 sample should not impact the groundwater at levels exceeding the Santa Ana Regional Water Quality Control Board's "low risk" levels.**

Following the completion of excavation of the contaminated soil into the capillary fringe, wells were installed at the site. Due to problems with the consultant, the traditional well (MW-2) was installed to the northeast of the former tank area and a direct push well (MW-1) was installed in SW2 area. Soil samples were not collected from the borings. Between April 1997 and March 2000, MW-1 was sampled three times with non-detect or below MCL concentrations for BTEX. MTBE analysis by EPA Method 8021B was included in the last groundwater sample collected from MW-1. MTBE was non-detect. Well MW-2 was only sampled twice with non-detect results for BTEX.

Since soil samples were not collected from the bottom of the excavation and the wells could not be found, soil and groundwater verification sampling using direct push technology was conducted in December 2002. Three borings extending to 13 fbg were drilled in the former tank area. Due to the presence of utility lines, borings could not be drilled in the former tank excavation. Two borings (B1 and B2) were drilled at each end of the former tank and one (B3) in SW-2 area. Soil samples were collected at 8 fbg in all borings and 13 fbg in borings B1 and B3. A 13 foot sample was not collected from B2 due to refusal. Groundwater samples were also collected from all three boreholes at 13 fbg. All soil and groundwater samples were non-detect for TPH, BTEX, MTBE and all fuel oxygenates

No further work is recommended for this site with the following considerations:

- **Source removal was conducted at site by excavating contaminated soil.**
- **The extremely limited amount of soil contamination left in place has not impacted the groundwater and does not appear to be a threat.**

Case Closure Summary

Leaking Underground Fuel Storage Tank Program

Case#: **94UT6**

Date: **January 10, 2003**

IV. Closure

Does completed corrective action protect *existing* beneficial uses per the Regional Board Basin Plan? **Yes**		
Does completed corrective action protect *potential* beneficial uses per the Regional Board Basin Plan? **Yes**		
Does corrective action protect public health for current land use? **Yes**		
Site management requirements: **None**		
Should corrective action be reviewed if land use changes? **No**		
Monitoring wells decommissioned: **No**	Number decommissioned:	Number Retained:
List enforcement actions taken:		
List enforcement actions rescinded:

Subject: **Remedial Action Completion Certification**

Re: Underground Storage Tank (UST) Case
Cypress School District
9470 Moody Street
Cypress, CA 90630
OCHCA Case #94UT6

Dear Mr. Ikerd:

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this Agency was accurate and representative of site conditions, this Agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code.

Please contact Arghavan Rashidi-Fard of our office at (714) 667-3713 if you have any questions regarding this matter.

Sincerely,

Steven K. Wong, REHS, MPH, Director
Environmental Health Division

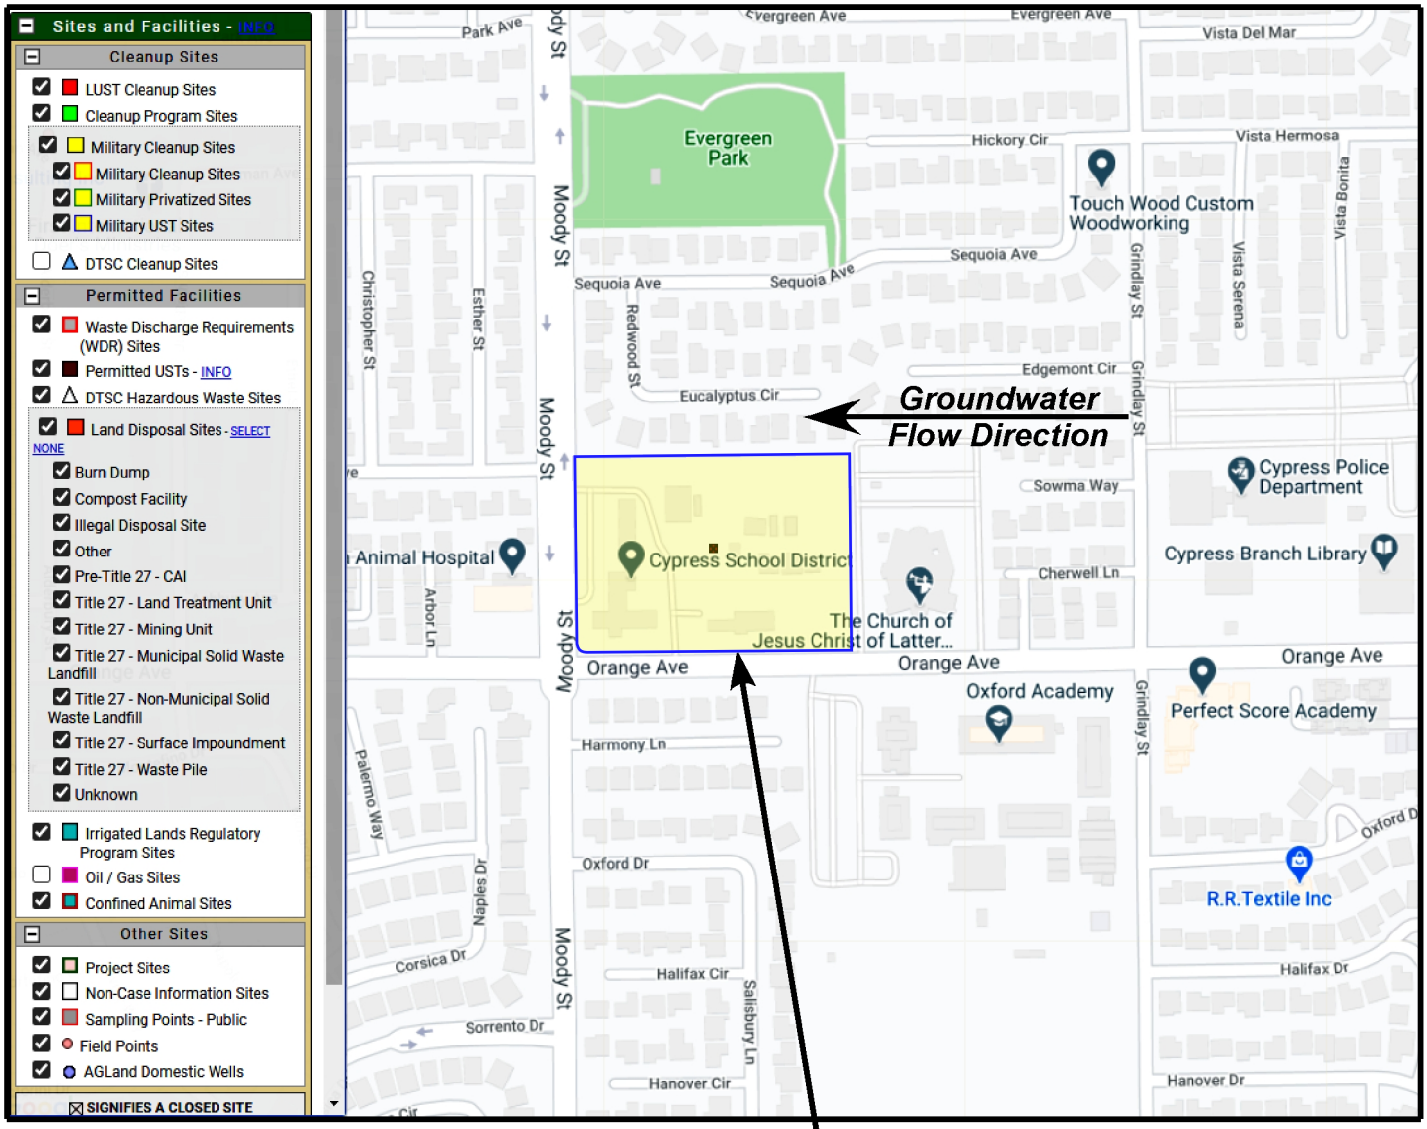
APPENDIX D2

AGENCY FILES
(REGIONAL WATER QUALITY CONTROL BOARD &
DEPARTMENT OF TOXIC SUBSTANCES CONTROL)

RWQCB- & DTSC-REGULATED PROPERTIES IN SITE VICINITY
(None Shown within 1/4 Mile & Up-Gradient of Site)



SUBJECT SITE

- Listed as having had a leaking gasoline tank that impacted soil and groundwater, which have since been remediated.
- This case was closed in 2003.
- No listed properties up-gradient & within 1/4 mile of site.

Approx. Scale:
0 225 450 feet
