

## **Appendix A. Notice of Preparation and Initial Study**

*This page intentionally left blank.*

**NOTICE OF PUBLIC HEARING ON PROPOSED  
NOTICE OF PREPARATION (NOP)**

NOTICE IS HEREBY GIVEN that a Public Hearing will be held before the Planning Commission of the City of Victorville at its special meeting on Wednesday, October 20, 2021 at 5:00 p.m., or as soon thereafter as the matter may be heard, for the purpose of considering applications for the following:

Notice of Preparation (NOP) – Draft Program Environmental Impact Report  
(PEIR) for the Victorville General Plan Update

**NOTICE OF PREPARATION (NOP)  
Draft Program Environmental Impact Report (PEIR)  
Victorville General Plan Update**

**DATE:** October 6, 2021

**TO:** Agencies, Organizations, and Interested Parties

**SUBJECT:** Notice of Preparation (NOP) – Draft Program Environmental Impact Report (PEIR)  
for the Victorville General Plan Update

**PROJECT APPLICANT:** City of Victorville

**LEAD AGENCY:** City of Victorville  
Contact: Michael Szarzynski  
(760) 955-5135  
mszarzynski@victorvilleca.gov

The City of Victorville (City or Victorville), as the lead agency under the California Environmental Quality Act (CEQA), determined that it will prepare a Program Environmental Impact Report (PEIR) for the Victorville General Plan Update. The City will prepare the PEIR in accordance with CEQA, implementing CEQA Guidelines and City procedures. The purpose of this notice is (1) to serve as the Notice of Preparation (NOP) to potential responsible agencies as required by Section 15082 of the CEQA Guidelines and (2) to advise and solicit comments and suggestions regarding the preparation of the PEIR, environmental issues to be addressed in the PEIR, and any related issues from interested parties other than potential responsible agencies, including interested or affected members of the public. The City requests that any responsible or trustee agency responding to this NOP do so in a manner consistent with CEQA Guidelines, Section 15082(b). The City requests that your agency review and submit written comments on the scope and content of the environmental information provided in this NOP as relevant to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the PEIR when considering any permits or other approvals for the project.

This NOP is available for review at the City of Victorville Development Department (Planning Division), located at 14343 Civic Drive, Victorville, California, and can be accessed online at <https://www.victorvilleca.gov/government/citydepartments/development/planning/environmental-review-notice>.

**30-DAY NOP PUBLIC REVIEW:** In accordance with CEQA and City procedures, your agency is requested to provide a written response to this NOP within the 30-day NOP review period between October 8, 2021 and November 8, 2021. The City will incorporate relevant issues and information into the Draft PEIR as identified in the NOP responses and throughout the PEIR process. Please note that the content and timeliness of your NOP comments may limit your ability

to challenge the PEIR. Please indicate a contact person for your agency in your response and send your response to the following:

Mr. Mike Szarzynski  
City of Victorville  
Development Department  
14343 Civic Drive  
Victorville, California 92392  
mszarzynski@victorvilleca.gov

**PUBLIC SCOPING MEETING:** A scoping meeting will be held on October 20, 2021 consisting of a brief project overview and discussion of environmental issues. The meeting will be held at Victorville City Hall, Council Chambers, 14343 Civic Drive, Victorville, California. Participating and viewing the meeting via Zoom or YouTube is also available at [www.victorvilleca.gov/government/agendas](http://www.victorvilleca.gov/government/agendas). Any agencies or interested members of the public may attend to gain a better understanding of the project and to identify environmental issues of concern.

#### **ADDITIONAL INFORMATION**

**PROJECT LOCATION:** The City is in the southwestern portion of the County of San Bernardino in the geographic sub-region of the southwestern Mojave Desert (known as Victor Valley or the High Desert) (see Figure 1, Regional Location, and Figure 2, Project Location). The City and its sphere of influence are accessible via Interstate 15, U.S. Route 395, State Route 18, and historic U.S. Route 66. Cities surrounding Victorville include the City of Adelanto to the northwest, Town of Apple Valley to the east, City of Hesperia to the south, and unincorporated County of San Bernardino to the southwest and north. The community of Mountain View Acres is an unincorporated area within City boundaries. The Mojave River runs through the City toward the Mojave Desert.

**PROJECT DESCRIPTION:** The City is updating the Land Use Element and Safety Element and creating a new Environmental Justice Element of its General Plan, which was last updated in 2008.

#### ***Land Use Element Update***

The Land Use Element provides long-term goals and policies that guide future land use and development. The Land Use Element is being updated to guide and accommodate future growth in Victorville in a manner that achieves the community's vision, enhances the community's quality of life, and provides a mix of land uses that promote sustainability and economic vitality. The proposed Land Use Element Update would provide a clear guide for the future growth identified in the Housing Element Update, which the City is currently preparing in a separate, independent process from this General Plan Update. The Land Use Element Update would ensure opportunities for a variety of housing types and affordability levels in the City.

#### ***Safety Element Update***

The City is updating its Safety Element, which identifies and, when possible, reduces the impact of natural and human-made hazards that may threaten the health, safety, and property of the residents living and working in the planning area. The Safety Element Update would emphasize hazard reduction, accident prevention, responses for human-made hazards and will follow The City's update to its Local Hazard Mitigation Plan (LHMP). In addition, it would highlight the importance of risk reduction, disaster prevention, and preparedness and conform to new legislation that requires the inclusion of climate change adaptation and resilience in Safety Elements.

### ***New Environmental Justice Element***

The City is preparing a new Environmental Justice Element to include as a chapter in the Victorville General Plan. Environmental Justice Elements are a new state requirement for jurisdictions with disadvantaged communities and represent an opportunity to develop goals and policies that reduce the unique or compounded health risks in a community. While state requirements specify the topic areas that must be included in the Environmental Justice Element, the specific policies would be customized to the City. The Environmental Justice Element would focus on protecting the community from poor health, promoting equity, and increasing civic engagement in the public decision-making process. The Environmental Justice Element would include objectives and policies that aim to reduce pollution exposure, improve access to public facilities, promote food access, promote safe and sanitary housing, promote physical activity, promote civic engagement, and prioritize improvements and programs to address the needs of disadvantaged communities.

**POTENTIAL ENVIRONMENTAL EFFECTS:** Based on a preliminary site assessment, the project could potentially affect the following environmental factors, each of which will be addressed in the PEIR:

- Air Quality
- Biological Resources
- Cultural and Tribal Cultural Resources
- Greenhouse Gas Emissions
- Noise
- Transportation

Signature

Date

### **IN PERSON AND ELECTRONIC PARTICIPATION**

The Public Hearing will be held before the Planning Commission on October 20, 2021, City Hall Council Chambers, 14343 Civic Drive, Victorville, California at 5:00 p.m. Participating and viewing the meeting via Zoom or YouTube is also available at [www.victorvilleca.gov/government/agendas](http://www.victorvilleca.gov/government/agendas). Comments may be made during the meeting by following the directions on the posted agenda for the October 20, 2021 meeting, which is posted on the same website the Friday before the meeting. If you do not wish to attend the Planning Commission hearing, comments may be made no later than October 20, 2021 by 3 p.m. via email to [planning@victorvilleca.gov](mailto:planning@victorvilleca.gov).

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the Planning Division at (760) 955-5135 no later than 72 hours prior to the meeting.

These proceedings have been initiated for the above-described property pursuant to Chapter 16-2.05.060 of the Victorville Municipal Code and Sections 65091 of the Government Code, State of California.

Any persons wishing to challenge the decision on the above item in court may be limited to raising only those issues they or someone else raised at the public hearing described

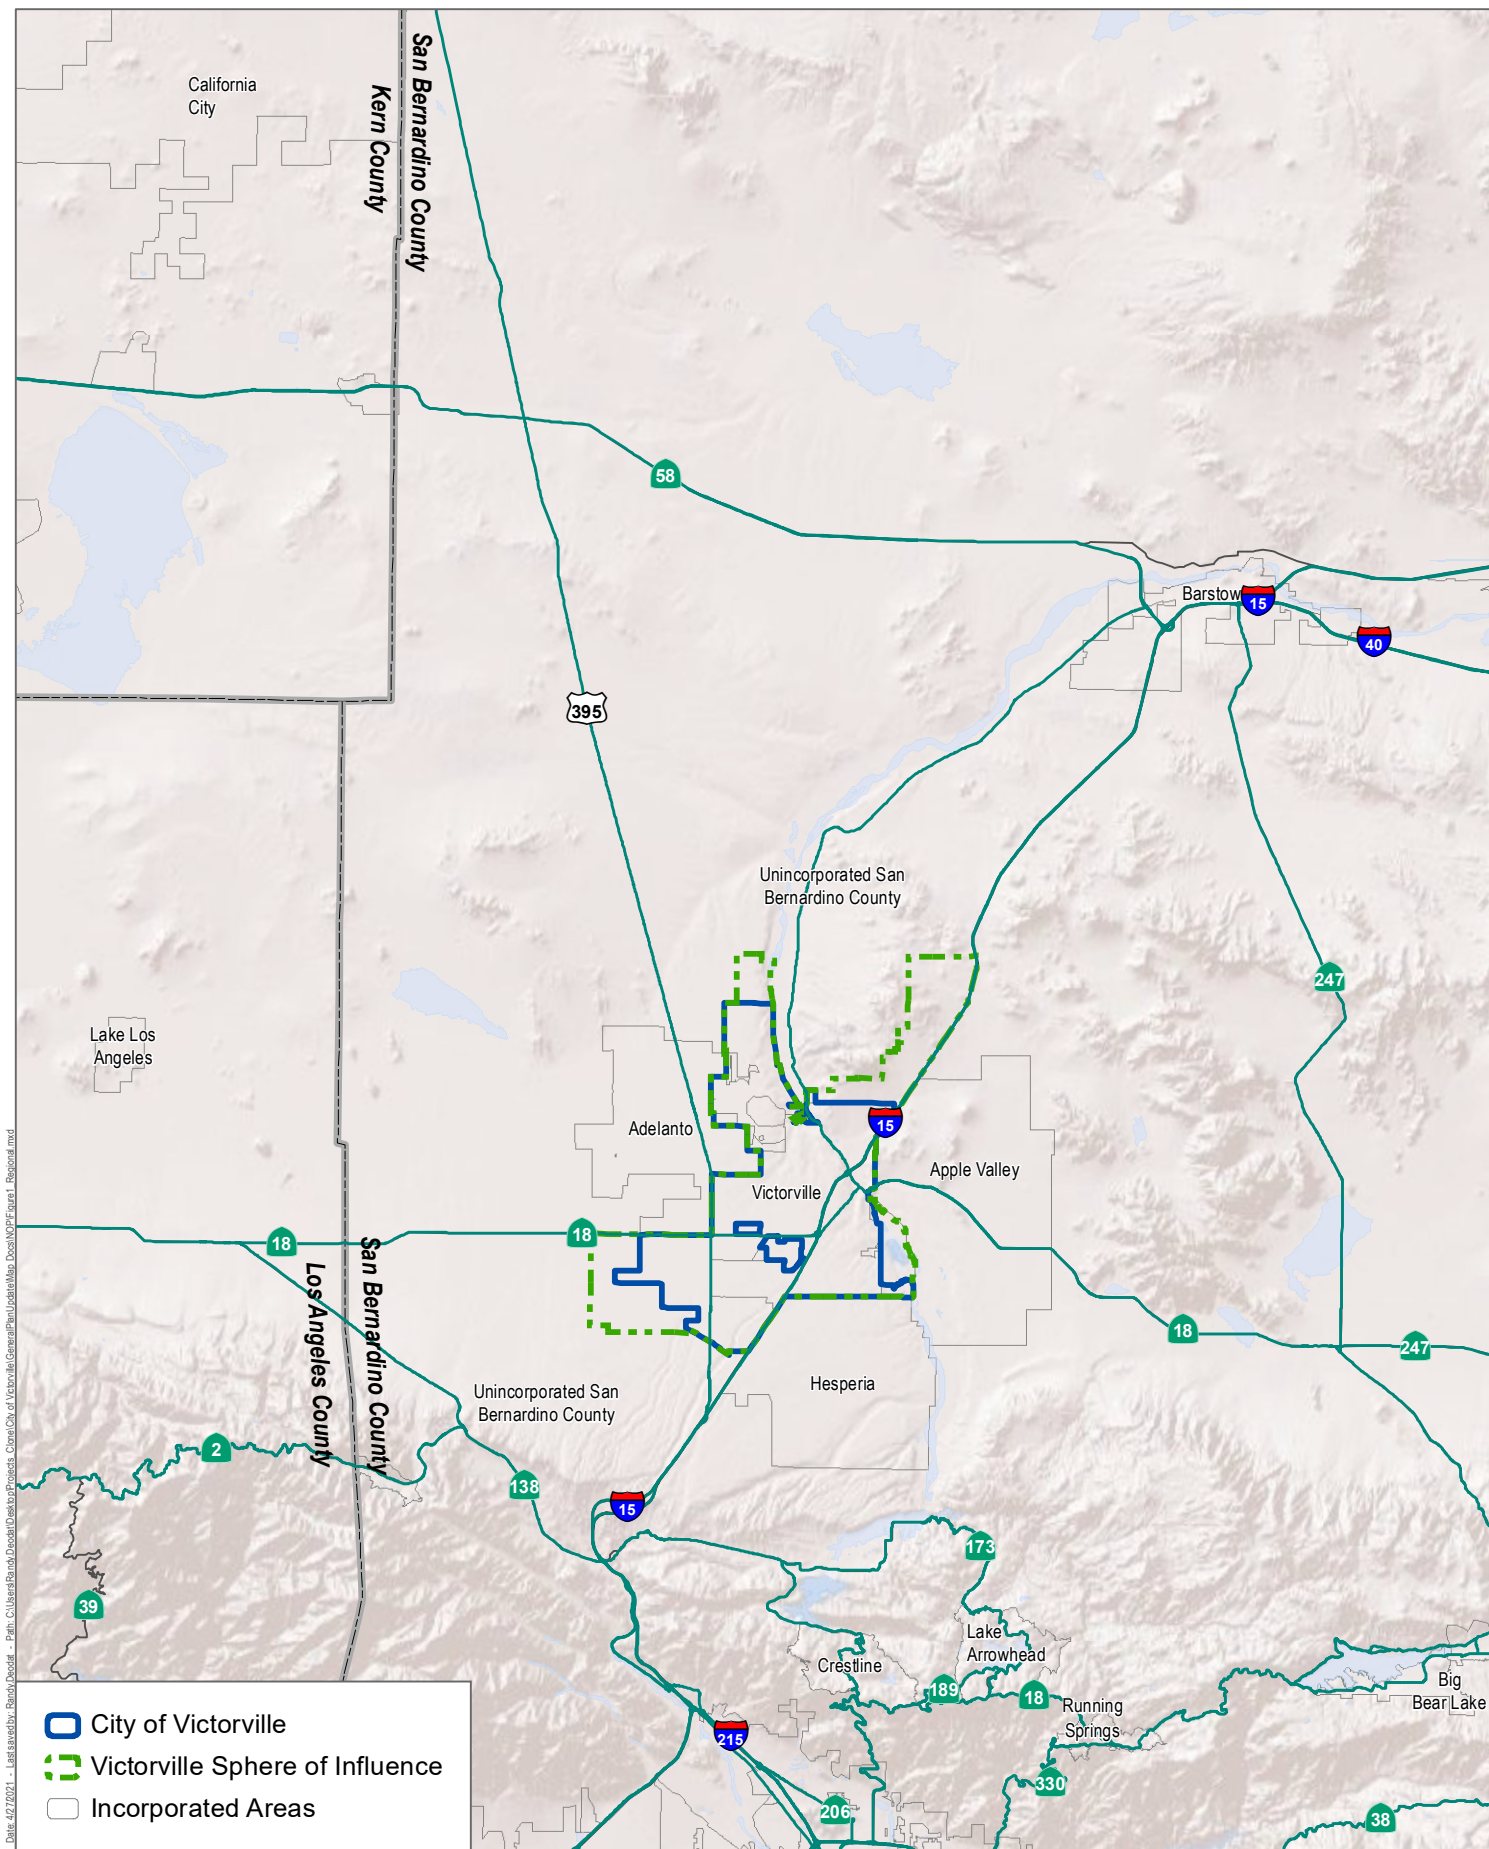

in this notice, or in written correspondence delivered to the City of Victorville at, or prior to, the public hearing.

Dated: October 6, 2021

RE: Agenda Item No. 4, Public Scoping Meeting for the PEIR for the  
Victorville General Plan Update

Dear Chairperson Rob Kurth and Honorable Commissioners,

On behalf of the Southwest Regional Council of Carpenters (“**Southwest Carpenters**” or “**SWRCC**”), my Office is submitting these comments on Agenda Item No. 4 regarding the City of Victorville’s (“**City**”) Public Scoping Meeting for the City’s Program Environmental Impact Report relating to the City’s General Plan Update (“**Project**”). SWRCC is specifically interested in the City’s 6<sup>th</sup> RHNA Cycle Housing Element Update as it relates to General Plan Update.

The Southwest Carpenters is a labor union representing more than 50,000 union carpenters in six states and has a strong interest in well ordered land use planning and addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

SWRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC incorporates by reference all comments raising issues regarding the EIR submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected to the Project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, SWRCC requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”), Cal Public Resources Code (“**PRC**”) § 21000 *et seq*, and the California Planning and Zoning Law (“**Planning and Zoning Law**”), Cal. Gov’t Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The City should require the use of a local skilled and trained workforce to benefit the community’s economic development and environment. The City should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

. . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Local skilled and trained workforce requirements and policies have significant environmental benefits since they improve an area’s jobs-housing balance, decreasing the amount of and length of job commutes and their associated greenhouse gas emissions. Recently, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.<sup>2</sup>

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to “promote local hiring . . . to

---

<sup>1</sup> California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>

<sup>2</sup> South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>

help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”<sup>3</sup>

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City “c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential developments to require contractors to utilize apprentices from state-approved, joint labor-management training programs, . . .”<sup>4</sup> In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”<sup>5</sup>

Locating jobs closer to residential areas can have significant environmental benefits. . . As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>6</sup>

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to those held by local residents.<sup>7</sup> Some municipalities have tied local hire and skilled and

<sup>7</sup> Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The City should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

Sincerely,

Mitchell M. Tsai

**Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling**

---

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

### Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."<sup>1</sup> CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.<sup>2</sup>

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>3</sup>

---

<sup>1</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>2</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>3</sup> "CalEEMod User's Guide." CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.<sup>4</sup>

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

$n$  = Number of land uses being modeled.”<sup>5</sup>

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$  = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$  = emission factor for running emissions.”<sup>6</sup>

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

## Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>7</sup> In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.<sup>8</sup> The default number of construction-related worker trips is calculated by multiplying the

<sup>5</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 23.

<sup>6</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 15.

<sup>7</sup> “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

<sup>8</sup> CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.<sup>9</sup> Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”<sup>10</sup> Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.<sup>11</sup> The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).<sup>12</sup>

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).<sup>13</sup>

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8

<sup>11</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 14.

<sup>12</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 21.

<sup>13</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

### Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.<sup>14</sup> In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
<b>Without Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,623
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	120.77
<b>With Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,024
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	100.80
<b>% Decrease in Construction-related GHG Emissions</b>	<b>17%</b>

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

## Disclaimer

SWAPE has received limited discovery. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Sincerely,

A handwritten signature in blue ink, appearing to read "M Hagemann".

Matt Hagemann, P.G., C.Hg.

A handwritten signature in blue ink, appearing to read "Paul Rosenfeld".

Paul E. Rosenfeld, Ph.D.

## **EXHIBIT B**

---

## ***Paul Rosenfeld, Ph.D.***

*Principal Environmental Chemist*

**Chemical Fate and Transport & Air Dispersion Modeling**

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

## **Professional History:**

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner  
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)  
UCLA School of Public Health; 2003 to 2006; Adjunct Professor  
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator  
UCLA Institute of the Environment, 2001-2002; Research Associate  
Komex H<sub>2</sub>O Science, 2001 to 2003; Senior Remediation Scientist  
National Groundwater Association, 2002-2004; Lecturer  
San Diego State University, 1999-2001; Adjunct Professor  
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager  
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager  
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor  
King County, Seattle, 1996 – 1999; Scientist  
James River Corp., Washington, 1995-96; Scientist  
Big Creek Lumber, Davenport, California, 1995; Scientist  
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist  
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”  
*Defendant*.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish  
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants  
Case No.: No. 13-2-03987-5  
Rosenfeld Deposition, February 2017  
Trial, March 2017

In The Superior Court of the State of California, County of Alameda  
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants  
Case No.: RG14711115  
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County  
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants  
Case No.: LALA002187  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia  
Robert Andrews, et al. v. Antero, et al.  
Civil Action NO. 14-C-30000  
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico  
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward  
DeRuyter, Defendants  
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County  
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant  
Case No 4980  
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17<sup>th</sup> Judicial Circuit, in and For Broward County, Florida  
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.  
Case Number CACE07030358 (26)  
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma  
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City  
Landfill, et al. Defendants.  
Case No. 5:12-cv-01152-C  
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

**Matthew F. Hagemann, P.G., C.Hg., QSD, QSP**

**Geologic and Hydrogeologic Characterization  
Industrial Stormwater Compliance  
Investigation and Remediation Strategies  
Litigation Support and Testifying Expert  
CEQA Review**

**Education:**

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

**Professional Certifications:**

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

### **Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

### **Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

### **Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### **Geology:**

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### **Teaching:**

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

**VIA E-MAIL**

November 15, 2021

Michael Szarzynski, Senior Planner  
City of Victorville  
14343 Civic Drive  
Victorville, CA 92393  
Em: [mszarzynski@victorvilleca.gov](mailto:mszarzynski@victorvilleca.gov)

RE: Notice of Preparation of a Draft Program Environmental Impact Report  
for the Victorville General Plan Update. (SCH No. 2021100136)

Dear Michael Szarzynski

On behalf of the Southwest Regional Council of Carpenters (“**SWRCC**” or “**Southwest Carpenters**”), my Office is submitting these comments on the City of Victorville (“**City**” or “**Lead Agency**”) Notice of Preparation of a Draft Program Environmental Impact Report (“**NOP**”) for the Victorville General Plan Update (“**Project**”) (SCH No. 2021100136.)

The Southwest Carpenters is a labor union representing more than 50,000 union carpenters in six states, including California, and has a strong interest in well-ordered land use planning, addressing the environmental impacts of development projects and equitable economic development.

Individual members of the Southwest live, work and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC incorporates by reference all comments raising issues regarding the environmental impact report (“**EIR**”) submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected to the Project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, SWRCC requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”), Cal Public Resources Code (“**PRC**”) § 21000 *et seq*, and the California Planning and Zoning Law (“**Planning and Zoning Law**”), Cal. Gov’t Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The City should require the Applicant to provide additional community benefits such as requiring local hire and use of a skilled and trained workforce to build the Project. The City should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

. . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Recently, on May 7, 2021, the South Coast Air Quality Management District found that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.<sup>2</sup>

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to “promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”<sup>3</sup>

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City “[c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential developments to require contractors to utilize apprentices from state-approved, joint

labor-management training programs, . . .”<sup>4</sup> In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”<sup>5</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>6</sup>

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to those held by local residents.<sup>7</sup> Some municipalities have tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When

<sup>5</sup> City of Hayward Municipal Code, Chapter 10, § 28.5.3.020(C).

<sup>6</sup> California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cprroundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

<sup>7</sup> Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The City should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

Also, the City should require the Project to be built to standards exceeding the current 2019 California Green Building Code and 2020 County of Los Angeles Green Building Standards Code to mitigate the Project's environmental impacts and to advance progress towards the State of California's environmental goals.

## I. **THE CALIFORNIA ENVIRONMENTAL QUALITY ACT**

### A. Background Concerning the California Environmental Quality Act

CEQA has two basic purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations (“**CCR**” or “**CEQA Guidelines**”) § 15002(a)(1).<sup>8</sup> “Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR ‘protects not only the environment but also informed self-government.’ [Citation.]” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564. The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm’rs.* (2001) 91 Cal. App. 4th 1344, 1354 (“*Berkeley Jets*”); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures. CEQA Guidelines § 15002(a)(2) and (3). *See also, Berkeley Jets*, 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553; *Laurel Heights Improvement Ass’n v.*

---

<sup>8</sup> The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 150000 et seq, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

*Regents of the University of California* (1988) 47 Cal. 3d 376, 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines § 15002(a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in CEQA section 21081. CEQA Guidelines § 15092(b)(2)(A–B).

While the courts review an EIR using an “abuse of discretion” standard, “the reviewing court is not to ‘uncritically rely on every study or analysis presented by a project proponent in support of its position.’ A ‘clearly inadequate or unsupported study is entitled to no judicial deference.’” *Berkeley Jets*, 91 Cal. App. 4th 1344, 1355 (emphasis added) (quoting *Laurel Heights*, 47 Cal. 3d at 391, 409 fn. 12). Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. (*Sierra Club v. Cnty. of Fresno* (2018) 6 Cal. 5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal. App. 4th 48, 102, 131.) As the court stated in *Berkeley Jets*, 91 Cal. App. 4th at 1355:

A prejudicial abuse of discretion occurs “if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 449–450).

B. Due to the COVID-19 Crisis, the City Must Adopt a Mandatory Finding of Significance that the Project May Cause a Substantial Adverse Effect on Human Beings and Mitigate COVID-19 Impacts

CEQA requires that an agency make a finding of significance when a Project may cause a significant adverse effect on human beings. PRC § 21083(b)(3); CEQA Guidelines § 15065(a)(4).

Public health risks related to construction work requires a mandatory finding of significance under CEQA. Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.<sup>9</sup>

SWRCC recommends that the Lead Agency adopt additional CEQA mitigation measures to mitigate public health risks from the Project's construction activities. SWRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon SWRCC's experience with safe construction site work practices, SWRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

**Construction Site Design:**

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.

---

<sup>9</sup> Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, available at <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

**Testing Procedures:**

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.

- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

### **Planning**

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.<sup>10</sup>

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

SWRCC has also developed a rigorous Infection Control Risk Assessment (“ICRA”) training program to ensure it delivers a workforce that understands how to identify and

---

<sup>10</sup> See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, *available at* [https://www.cpwr.com/sites/default/files/NABTU\\_CPWR\\_Standards\\_COVID-19.pdf](https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf); Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* [https://dpw.lacounty.gov/building-and-safety/docs/pw\\_guidelines-construction-sites.pdf](https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf).

control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.<sup>11</sup>

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

If the City has any questions or concerns, feel free to contact my Office.

Sincerely,

**Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling**

---

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

### Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."<sup>1</sup> CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.<sup>2</sup>

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>3</sup>

---

<sup>1</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>2</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>3</sup> "CalEEMod User's Guide." CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.<sup>4</sup>

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

$n$  = Number of land uses being modeled.”<sup>5</sup>

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$  = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$  = emission factor for running emissions.”<sup>6</sup>

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

## Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>7</sup> In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.<sup>8</sup> The default number of construction-related worker trips is calculated by multiplying the

<sup>5</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 23.

<sup>6</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 15.

<sup>7</sup> “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

<sup>8</sup> CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.<sup>9</sup> Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”<sup>10</sup> Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.<sup>11</sup> The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).<sup>12</sup>

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).<sup>13</sup>

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
<b>Average</b>	<b>16.47</b>	<b>11.17</b>
<b>Minimum</b>	<b>10.80</b>	<b>10.80</b>
<b>Maximum</b>	<b>19.80</b>	<b>14.70</b>
<b>Range</b>	<b>9.00</b>	<b>3.90</b>

<sup>9</sup> “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

<sup>10</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 15.

<sup>11</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 14.

<sup>12</sup> “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf?sfvrsn=6](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6), p. 21.

<sup>13</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

### Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.<sup>14</sup> In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
<b>Without Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,623
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	120.77
<b>With Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,024
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	100.80
<b>% Decrease in Construction-related GHG Emissions</b>	<b>17%</b>

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

<sup>14</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-85.

## **EXHIBIT B**

---

## ***Paul Rosenfeld, Ph.D.***

*Principal Environmental Chemist*

**Chemical Fate and Transport & Air Dispersion Modeling**

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”  
*Defendant*.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112<sup>th</sup> Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish  
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants  
Case No.: No. 13-2-03987-5  
Rosenfeld Deposition, February 2017  
Trial, March 2017

In The Superior Court of the State of California, County of Alameda  
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants  
Case No.: RG14711115  
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County  
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants  
Case No.: LALA002187  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia  
Robert Andrews, et al. v. Antero, et al.  
Civil Action NO. 14-C-30000  
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico  
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward  
DeRuyter, Defendants  
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County  
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant  
Case No 4980  
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17<sup>th</sup> Judicial Circuit, in and For Broward County, Florida  
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.  
Case Number CACE07030358 (26)  
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma  
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City  
Landfill, et al. Defendants.  
Case No. 5:12-cv-01152-C  
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

**Geologic and Hydrogeologic Characterization  
Industrial Stormwater Compliance  
Investigation and Remediation Strategies  
Litigation Support and Testifying Expert  
CEQA Review**

**Education:**

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

**Professional Certifications:**

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

### **Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

### **Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

### **Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### **Geology:**

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### **Teaching:**

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

## NATIVE AMERICAN HERITAGE COMMISSION

October 12, 2021

Michael Szarzynski  
City of Victorville  
14343 Civic Center Drive PO Box 5001  
Victorville, CA 92393

**Re: 2021100136, City of Victorville General Plan Update Project, San Bernardino County**

Dear Mr. Szarzynski:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

**Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

**1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project:**

Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- a. A brief description of the project.
- b. The lead agency contact information.
- c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

**2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report:**

A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

**3. Mandatory Topics of Consultation If Requested by a Tribe:** The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- a. Alternatives to the project.
- b. Recommended mitigation measures.
- c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

**4. Discretionary Topics of Consultation:** The following topics are discretionary topics of consultation:

- a. Type of environmental review necessary.
- b. Significance of the tribal cultural resources.
- c. Significance of the project's impacts on tribal cultural resources.
- d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

**5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process:** With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

**6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document:** If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
- b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

- 7. Conclusion of Consultation:** Consultation with a tribe shall be considered concluded when either of the following occurs:
- a.** The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
  - b.** A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).
- 8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document:** Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).
- 9. Required Consideration of Feasible Mitigation:** If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).
- 10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**
- a.** Avoidance and preservation of the resources in place, including, but not limited to:
    - i.** Planning and construction to avoid the resources and protect the cultural and natural context.
    - ii.** Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
  - b.** Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
    - i.** Protecting the cultural character and integrity of the resource.
    - ii.** Protecting the traditional use of the resource.
    - iii.** Protecting the confidentiality of the resource.
  - c.** Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
  - d.** Protecting the resource. (Pub. Resource Code §21084.3 (b)).
  - e.** Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
  - f.** Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).
- 11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource:** An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
  - b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
  - c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: [http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation\\_CalEPAPDF.pdf](http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf)

## SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: [https://www.opr.ca.gov/docs/09\\_14\\_05\\_Updated\\_Guidelines\\_922.pdf](https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf).

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
  - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
  - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>.

## NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center ([http://ohp.parks.ca.gov/?page\\_id=1068](http://ohp.parks.ca.gov/?page_id=1068)) for an archaeological records search. The records search will determine:
  - a. If part or all of the APE has been previously surveyed for cultural resources.
  - b. If any known cultural resources have already been recorded on or adjacent to the APE.
  - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
  - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
  - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
  - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
  - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
  - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
  - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, § 15064.5(f) (CEQA Guidelines § 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
  - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
  - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code § 7050.5, Public Resources Code § 5097.98, and Cal. Code Regs., tit. 14, § 15064.5, subdivisions (d) and (e) (CEQA Guidelines § 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address:

## ***Acronyms and Abbreviations***

---

°F	degrees Fahrenheit
BMP	best management practices
CBC	California Building Code
CEQA	California Environmental Quality Act
City or Victorville	City of Victorville
CWA	Clean Water Act
DOC	Department of Conservation
IS	Initial Study
OES	Office of Emergency Services
PEIR	Program Environmental Impact Report
project	City of Victorville General Plan Update
RWQCB	Regional Water Quality Control Board
SBCFD	San Bernardino County Fire Department
SCLA	Southern California Logistics Airport
SOI	sphere of influence
SWPPP	Stormwater Pollution Prevention Plan
VVWRA	Victor Valley Wastewater Reclamation Authority
VWD	Victorville Water District

*This page intentionally left blank.*

## ***Document Overview***

---

This Initial Study (IS) has been prepared in accordance with California Environmental Quality Act (CEQA) and the CEQA Guidelines for the proposed City of Victorville General Plan Update (project). The primary intent of this document is to (1) determine whether project implementation would result in potentially significant impacts to the environment, and (2) incorporate mitigation measures into the project design, as necessary, to eliminate or reduce the project's potentially significant impacts to a less than significant level.

*This page intentionally left blank.*

## **Section 1    Project Description**

---

### **1.1    Project Overview**

The City is updating the Land Use Element and Safety Element and creating a new Environmental Justice Element of its General Plan, which was last updated in 2008. Refer to Section 2.1, Project Information, for a full description of the proposed project.

*This page intentionally left blank.*

## Section 2 Initial Study Checklist

---

The following discussion of potential environmental effects was completed in accordance with Section 15063 of the CEQA Guidelines to determine if the proposed project may have a significant effect on the environment.

### 2.1 Project Information

1. **Project title:** General Plan Update- Land Use Element Update, Safety Element Update, and New Environmental Justice Element
2. **Lead agency name and address:** City of Victorville  
Department of Planning  
14343 Civic Drive  
Victorville, California 92392
3. **Contact person name, address, and phone number:** Scott Webb  
City of Victorville  
Department of Planning  
14343 Civic Drive  
Victorville, California 92392  
(760) 955-5135/swebb@victorvilleca.gov
4. **Project location:** City of Victorville and Sphere of Influence
5. **Project sponsor's name and address:** City of Victorville  
Department of Planning  
14343 Civic Drive  
Victorville, California 92392
6. **General plan designation:** Citywide – varies
7. **Zoning:** Citywide – varies
8. **Description of project:** See Section 2.1.
9. **Surrounding land uses and setting:** The City of Victorville (Victorville or City) is in the southwestern portion of the County of San Bernardino in the geographic sub-region of the southwestern Mojave Desert (known as Victor Valley or the High Desert), within the Inland Empire area. The City is considered the largest

metropolitan area in the Mojave Desert. Victorville is approximately 90 miles northeast of the City of Los Angeles and 35 miles northeast of the City of San Bernardino, and north of the San Bernardino Mountains at the edge of the Mojave Desert. The Mojave River runs through the City toward the Mojave Desert. Areas surrounding the City’s Planning Area are largely undeveloped and contained within the unincorporated County of San Bernardino boundaries.

The City is within Victor Valley, often referred to as the “High Desert” due to its approximate elevation of 2,900 feet above sea level. The Victor Valley is separated from other urbanized areas in Southern California by the San Bernardino and San Gabriel mountains. The City and its sphere of influence are accessible via Interstate 15, U.S. Route 395, State Route 18, and historic U.S. Route 66.

The City shares boundaries with the City of Adelanto to the northwest, the Town of Apple Valley and the unincorporated community of Spring Valley lake to the east, the City of Hesperia to the south, and unincorporated San Bernardino County to the southwest and to the north. There are also portions of unincorporated San Bernardino County nested within the City of Victorville. The community of Mountain View Acres is an unincorporated area within City boundaries. During the 60 years that Victorville has been a City, it has grown from an area of 9.7 square miles to an area of 74.16 square miles.

**10. Other public agencies whose approval is required:**

None.

**11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

Refer to Section 2.4.18, Tribal Cultural Resources, of this IS for details.

## 2.2 Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by the project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- |                                                          |                                                              |                                                                        |
|----------------------------------------------------------|--------------------------------------------------------------|------------------------------------------------------------------------|
| <input type="checkbox"/> Aesthetics                      | <input type="checkbox"/> Agriculture and Forestry Resources  | <input checked="" type="checkbox"/> Air Quality                        |
| <input checked="" type="checkbox"/> Biological Resources | <input checked="" type="checkbox"/> Cultural Resources       | <input type="checkbox"/> Energy                                        |
| <input type="checkbox"/> Geology and Soils               | <input checked="" type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Hazards and Hazardous Materials               |
| <input type="checkbox"/> Hydrology and Water Quality     | <input type="checkbox"/> Land Use and Planning               | <input type="checkbox"/> Mineral Resources                             |
| <input checked="" type="checkbox"/> Noise                | <input type="checkbox"/> Population and Housing              | <input type="checkbox"/> Public Services                               |
| <input type="checkbox"/> Recreation                      | <input checked="" type="checkbox"/> Transportation           | <input checked="" type="checkbox"/> Tribal Cultural Resources          |
| <input type="checkbox"/> Utilities and Service Systems   | <input type="checkbox"/> Wildfire                            | <input checked="" type="checkbox"/> Mandatory Findings of Significance |

## 2.3 Lead Agency Determination

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent (state), including implementation of the mitigation measures identified herein. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

---

Scott Webb  
City Planner, City of Victorville

---

Date

## 2.4 Evaluation of Environmental Impacts

This section documents the screening process used to identify and focus on environmental impacts that could result from the project. The checklist portion of the IS begins below and includes explanations of each CEQA issue topic. CEQA requires that an explanation of all answers be provided along with this checklist, including a discussion of ways to mitigate any significant effects identified. The following terminology is used to describe the potential level of significance of impacts:

- **No Impact.** The analysis concludes that the project would not affect the particular resource in any way.
- **Less than Significant Impact.** The analysis concludes that the project would not cause substantial adverse change to the environment without the incorporation of mitigation.
- **Less than Significant with Mitigation Incorporated.** The analysis concludes that it would not cause substantial adverse change to the environment with the inclusion of mitigation agreed upon by the applicant.
- **Potentially Significant Impact.** The analysis concludes that the project could result a substantial adverse effect or significant effect on the environment, even if mitigation is incorporated. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.

### 2.4.1 Aesthetics

Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The City is primarily on the broad surface of a large alluvial fan referred to as the Cajon Fan (or Victorville Fan). Areas of high visual sensitivity within/adjacent to the City include the Mojave River, the rocky bluffs of the Mojave Narrows, and the Mojave Narrows Regional Park.

The Mojave River runs along the fan's eastern margin and is the City's most notable topographic feature. The Mojave River crosses the City from the southeast to the northwest conveying runoff out of the San Gabriel and San Bernardino Mountains. The river is a perennial desert river containing a variety of vegetation and irregular rocky bluffs and terraces in some areas. The river channel is heavily wooded in the northern portion, while grasses and smaller trees dominate the floodplain areas.

At Mojave Narrows, the terrain becomes steep and predominately rocky, and the river encounters an impenetrable layer of bedrock that forces water to the surface even during dry periods. The Mojave Narrows is a unique topographic and visual point of interest that separates the City of Victorville from the Town of Apple Valley to the east.

Mojave Narrows Regional Park, on the City's southeastern border, supports extensive native riparian woodlands dominated by Fremont cottonwood (*Populus fremontii*), black willow (*Salix nigra*), and honey mesquite (*Prosopis glandulosa*). Other native tree species found locally include sandbar willow (*Salix exigua*), white alder (*Alnus rhombifolia*), and California sycamore (*Platanus racemosa*). Desert willow (*Chilopsis linearis*) grows along the river's drier ephemeral reaches.

Another notable feature of the area are Joshua trees (*Yucca brevifolia*), which can grow to 12 meters tall. These trees are distributed on gentle slopes and on valley floors of upper bajadas and sandy areas. The trees are also protected by the state as candidate for listing as endangered species.

## Impact Analysis

- a. **Less Than Significant Impact.** The City's General Plan does not designate scenic vistas within the City. However, the City does contain areas of high visual sensitivity including the Mojave River, the rocky bluffs of the Mojave Narrows, and the Mojave Narrows Regional Park. Development within the City has the potential to impact these areas of high visual sensitivity. Development within a viewer's line of sight of scenic areas may interfere with a scenic resource, either by physically blocking or screening the vista from view, or by impeding or blocking access to a formerly available viewing position. Those viewers may see the scenic areas prior to development but would have those views blocked post development. Future development under the General Plan Update would comply with the design recommendations set forth by the City through the development review process, which ensures development projects adhere to the City's design principles. Therefore, the proposed project would not result in an adverse effect on a scenic vista, and no further discussion is warranted in the Program Environmental Impact Report (PEIR).
- b. **No Impact.** There are no existing or proposed state scenic highways within the City of Victorville. Consequently, future development consistent with the General Plan Update would have no potential to adversely affect, directly and indirectly, scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway. Therefore, no impact associated with the obstructed views from a scenic highway would occur from the General Plan Update, and no further discussion is warranted in the PEIR.
- c. **Less Than Significant Impact.** CEQA Section 21071 defines an "urbanized area" as "(a) an incorporated city that meets either of the following criteria: (1) Has a population of at least 100,000 persons, or (2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons." In 2022, the City's population was 136,561. Therefore, the Planning Area is considered an urbanized area per CEQA, and the first question of this threshold does not apply to the project because it is directed at non-urbanized areas.

Future development in accordance with the General Plan Update would allow for new development of currently undeveloped parcels and intensification of already developed areas of the City. Although new development would alter the visual appearance of the City it would conflict with applicable zoning and other regulations governing scenic quality. The Land Use Element Update includes a goal to create an aesthetically pleasing community. The goal is supported by two objectives to 1) promote a distinctive identity and image for Victorville with high-quality design of the built environment to increase its desirability as an attractive place to live, work and

play (LU Objective N) and 2) protect existing development from intrusion by new incompatible land uses (LU Objective O) and several implementing policies. In addition, the City's Development Code also includes several articles designed to regulate scenic quality in the City. Future residential development consistent with the General Plan Update would be required to comply with these policies and, therefore, would not conflict with applicable zoning or regulations designed to protect scenic quality. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- d. **Less Than Significant Impact.** Future development consistent with the General Plan Update may increase the amount of light and glare in the area. However, development of new residential units facilitated by the General Plan Update would result in new sources of light and glare but would be consistent with the ambient light levels from nearby sources. In addition, residential development projects are subject to City's Development Code, which include operational and development standards that would reduce light or glare impacts. Impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.2 Agriculture and Forestry Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The California Department of Conservation (DOC) Farmland Mapping and Monitoring Program designates the majority of the City as Urban (not Important Farmland) (DOC 2022). Several areas of the City are designated as Prime Farmland, scattered along and adjacent to the Mojave River corridor in the vicinity of Highway 18 (City of Victorville 2008a). No Farmlands of Statewide Importance, Unique Farmlands, or Farmlands of Local Importance occur within the City. According to the existing County of San Bernardino Office of the Assessor Victorville District Office, the 148-acre Kemper-Campbell Ranch site is the only property within a Williamson Act contract (City of Victorville 2008a).

## Impact Analysis

- a. **Less Than Significant Impact.** Future development consistent with the General Plan Update would be in areas with limited classified farmland and would allow for land use district developments on vacant and developed sites that are zoned within the City and its Sphere of Influence. According to the Farmland Mapping and Monitoring Program of the California Resources Agency, the City is mostly on Urban and Built-Up Land and the only Prime Farmland area is the Mojave Narrows Regional Park. Additionally, the General Plan Update does not identify any new land that is subject to urbanization or rezoning from agricultural use to residential use. Consequently, future land use development would not result in the conversion of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance, and Grazing to non-agricultural use. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- b. **No Impact.** According to the existing County of San Bernardino Office of the Assessor Victorville District Office, the 148-acre Kemper-Campbell Ranch site is the only property within a Williamson Act contract (City of Victorville 2008a). The General Plan Update does not propose any future development or land use change that would restrict current agricultural uses on this property. Therefore, the General Plan Update would not conflict with existing zoning for agricultural use or a Williamson Act contract, and no impact would occur. No further discussion is warranted in the PEIR.
- c. **No Impact.** There are no state forests or lands currently used for timber production or management in the Planning Area. Additionally, there is no zoning designation for timberland or forest resources within the Planning Area. Therefore, future development facilitated by the General Plan Update would not conflict with existing zoning nor would it cause rezoning of forest land, or timberland, or timberland zoned Timberland Production. Therefore, no impact would occur and no further discussion is warranted in the PEIR.
- d. **No Impact.** Other than the Mojave Narrows Regional Park, the boundaries of the General Plan Update do not include other forest lands or areas categorized as Prime Farmland. Developments facilitated by the General Plan Update will not affect the Prime Farmland Area but only the area categorized as Urban and Built-Up land. Therefore, the General Plan Update would not result in the loss of forest land or conversion of forest land to non-forest use. No impact would occur. No further discussion is warranted in the PEIR.
- e. **Less Than Significant Impact.** The General Plan Update does not propose any specific development. The General Plan Update would not result in a zoning change for existing agricultural properties and would not restrict current agricultural uses on these properties. Future land use development projects would be in areas with limited classified farmland and would be developed on sites that are consistent with the zoning of the General Plan. Adoption of the General Plan Update does not involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use. Impacts would be less than significant. No further discussion is warranted in the PEIR.

### 2.4.3 Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Impact Analysis

**a–d. Potentially Significant Impact.** The proposed project has the potential to impact air quality due to the project’s potential to cause a cumulative increase of criteria pollutants. Refer to Section 3.1, Air Quality, of the PEIR.

#### 2.4.4 Biological Resources

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. Conflict with any applicable policies protecting biological resources?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other applicable habitat conservation plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

### Impact Analysis

**a–f. Potentially Significant Impact.** The proposed project has the potential to impact biological resources due to the proposed project’s potential to impact candidate, sensitive, or special-status species; sensitive natural communities; and aquatic resources. Refer to Section 3.2, Biological Resources, of the PEIR.

## 2.4.5 Cultural Resources

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Disturb any human remains, including those interred outside of dedicated cemeteries?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Impact Analysis

**a–c. Potentially Significant Impact.** The proposed project has the potential to impact cultural resources due to its potential to cause a substantial adverse change in significance on historical resources, archaeological resources, and human remains. Refer to Section 3.3, Cultural Resources and Tribal Cultural Resources, of the PEIR.

## 2.4.6 Energy

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The California Building Code (CBC) contains standards that regulate the method of use, properties, performance, or types of materials used in the construction, alteration, improvement, repair, or rehabilitation of a building or other improvement to real property. The CBC includes mandatory green building standards (CALGreen) for residential and nonresidential structures, the most recent version includes the 2019 Building Energy Efficiency Standards. These standards focus on four key areas: smart residential photovoltaic systems, updated thermal envelope standards (preventing heat transfer from the interior to the exterior and vice versa), residential and nonresidential ventilation requirements, and nonresidential lighting requirements. The City has adopted the 2019 Building Codes, including CALGreen and is included as the Title 16, Chapter 5, Article 10, of the City's Municipal Code.

## Impact Analysis

- a. **Less Than Significant Impact.** Construction of future development put forth through implementation of the General Plan Update would result in temporary energy consumption and one-time energy costs associated with construction of structures, utilities, and roadways. Energy consumption as a result of construction of future projects would primarily consist of the consumption of fossil fuels as a result of use of off-road construction equipment, movement of soil, and use of on-road vehicles for worker commuting and vendors. Operation of future projects under the General Plan Update would require energy resources, including electricity, natural gas, and petroleum. Future projects under the General Plan Update would be required to be consistent with the CBC, CALGreen, and any other requirements included as part of the City's Municipal Code and General Plan to minimize wasteful, inefficient, or unnecessary consumption of energy resources during future project construction and operation. The City adopted conservation programs such as its Senior Home Repair and Neighborhood Stabilization to improve and fund grants for energy conservation. Policy 7.2.1 from the City's General Plan 2030 states that building design and development for new residential, commercial, and industrial projects must support energy conservation through sustainable measures. Thus, impacts to energy resources would be less than significant, and no further discussion is warranted in the PEIR.

- b. Less Than Significant Impact.** The City's General Plan is the applicable plan for energy efficiency in the City. The Resource Element includes Goal 7 to promote energy sustainability by development of alternative power supplies and reducing energy use. Resource Element Policy 7.2.1 strives to minimize energy use of new residential, commercial, and industrial projects by requiring high efficiency heating, lighting, and other appliances, such as cooking equipment, refrigerators, furnaces, overhead and area lighting, and low NO<sub>x</sub> water heaters. Future development under the General Plan Update would be required to comply with the State of California's Title 24 Building Standards and CALGreen requirements for energy efficiency. As such, the proposed project would be consistent with the energy efficiency and transportation goals established within the City's Circulation Element, Housing Element, and Resource Element of the General Plan 2030. Therefore, the General Plan Update would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency and impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.7 Geology and Soils

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii. Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The Planning Area is in seismically active Southern California, a region that has experienced numerous earthquakes in the past. The Alquist-Priolo Special Studies Zones Act specifies that an area termed an Earthquake Fault Zone is to be delineated if surrounding faults that are deemed sufficiently active or well defined after a review of seismic records and geological studies. The City is not within any Alquist-Priolo Special Studies Zones.

According to the General Plan there are five fault systems that affect the Victorville area including the San Andreas, Helendale, North Frontal, Landers, and San Jacinto faults. The San Andreas Fault is approximately 24 miles to the south and is considered most likely to produce a major earthquake.

Portions of the Victorville Planning Area, especially those areas along the Mojave River, may be susceptible to liquefaction.

The topography of the Victorville Planning Area varies considerably from gently sloping topography occasionally dissected by an intermittent stream channel, to nearly vertical slopes adjacent to the Mojave River.

Paleontological resources within the City include nine ancient lake bed deposits estimated to date back to the Pleistocene Epoch (10,000 to 900,000 years ago). These lake beds contain numerous mammalian fossils, including teeth, limb fragments, phalanges and metacarpal from horses, camels and other large animals. The fossil bearing rock layers are essentially level due to their formation from an ancient lake bed. According to the General Plan, the entire Planning Area is considered to be sensitive regarding paleontological resources due to the existence of recovery sites throughout.

## Impact Analysis

**a(i). No Impact.** There are no known or suspected fault traces within the City. Additionally, the City is not subject to the provisions of the Alquist-Priolo Fault Zoning Act. No impact would occur.

**a(ii). Less Than Significant Impact.** Ground shaking is responsible for the majority of damage from earthquakes and can damage or destroy buildings. The intensity of shaking depends on the type of fault, distance to the epicenter, magnitude of the earthquake, and subsurface geology. The closest fault systems could produce earthquakes that cause substantial ground motion that could result in serious injuries or deaths, as well as significant property damage, due to the seismic activity of the region. However, the General Plan Update does not propose any specific development. Future projects proposed as a result of the General Plan Update would require subsequent CEQA review. Future development facilitated by the General Plan Update would be required to comply with the CBC and Chapter 15.38 of the Victorville Municipal Code would reduce exposure of people or structures to potential substantial adverse effects from seismic ground shaking. In addition, any proposed construction would require the adoption of appropriate engineering design in conformance with the recommended geotechnical standards for construction. Impacts would be less than significant. No further discussion is warranted in the PEIR.

**a(iii). Less Than Significant Impact.** Liquefaction results when water-saturated, sandy, unstable soils are subject to intense shaking, such as that caused by an earthquake. These soils lose cohesiveness causing unreinforced structures to fail. Portions of the Planning Area are within a liquefaction hazard area. Future development facilitated by the General Plan Update, may have the potential to expose people or structures to substantial adverse effects from liquefaction. The General Plan Update does not propose any specific development. Future projects proposed as a result of the General Plan Update would require subsequent CEQA review. In addition, Goal 1 of the Safety Element Update is to protect the community against natural and human-made hazards.

Specifically, implementing measure 1.2.1.1 requires complete geologic/geotechnical investigations as a standard procedure in the land use and project-level planning process. This applies to all projects subject to CEQA and other projects in areas where the City's Building Official determines there is a possible threat of liquefaction, subsidence, expansive soils, landslides, or mudslides. In addition, all future development facilitated by the General Plan Update would be required to comply with all relevant federal and state regulations and building standards including the preparation of a project-specific Geotechnical Investigation Report. Future projects would require the adoption of appropriate engineering design in conformance with the recommended geotechnical standards for construction. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- a(iv). Less Than Significant Impact.** Several earthquake faults exist in the vicinity of the City. The nearest, the North Frontal fault zone of the San Bernardino Mountains is approximately 5.5 miles southeast of the Planning Area along the base of the Ord Mountains. An earthquake large enough to result in moderate ground shaking is possible. Seismic risks are significantly higher in areas closer to the region's major faults, and a moderate or major earthquake could result in potentially damaging ground shaking. Development on the hillside areas where steep slopes are present can exacerbate landslide hazards. The General Plan Update does not propose any specific development. Future projects proposed as a result of the General Plan Update would require subsequent CEQA review in accordance with the Safety Element Update and would be required to comply with the CBC and the recommendations of the project-specific geotechnical report, including engineered site preparation and adequate structural design, which would reduce potential adverse impacts from landslides. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- b. Less Than Significant Impact.** The General Plan Update does not propose specific plans for new land use developments at this time. Therefore, project components such as amount of grading, excavation, vegetation removal, etc. for future development units are unknown. If a project proposes to disturb more than one acre of soils, it is required by the state to prepare a Stormwater Pollution Prevention Plan (SWPPP), which includes best management practices (BMP) for erosion and sedimentation control. BMP examples generally include an effective combination of erosion and sediment controls, which include barriers such as silt fences, hay bales, drain inlet protection, gravel bags, etc. Existing vegetation should be preserved as much as possible. Future land use development that is facilitated by adoption of the General Plan Update would be subject to these conditions for a construction permit and therefore impacts would be less than significant. No further discussion is warranted in the PEIR.
- c. Less Than Significant Impact.** Development on hillside areas when steep slopes are present can increase rates of erosion and exacerbate landslide hazards, lateral spreading, liquefaction, or collapse, which may threaten structures. Portions of the City have areas where slopes exceed 15

percent. The development on slopes with this degree of inclination is difficult and should be avoided if possible to prevent property damage resulting from slope failure. The General Plan Update does not propose any specific development. Future projects proposed as a result of the General Plan Update would require subsequent CEQA review. Any future development consistent with the General Plan Update would be required to adhere to the CBC and other standards and regulations for building designs. In addition, the Victorville Zoning Ordinance contains a Slope Protection District, which regulates the maintenance and protection of sloped areas in excess of 5 feet in vertical height. Impacts resulting from unstable geologic unit or soil would be reduced through compliance with the General Plan Update, Zoning Ordinance, existing codes, and adherence with the recommendations of the project-specific geotechnical report, including engineered site preparation and adequate structural design. Any proposed construction would require the adoption of appropriate engineering design in conformance with the recommended geotechnical standards for construction and therefore impacts would be less than significant. No further discussion is warranted in the PEIR.

- d. **Less Than Significant Impact.** Certain types of clay soils expand when they are saturated and shrink when dried. These are called expansive soils and can pose a threat to the integrity of structures built on them without proper engineering. Expansion and contraction of soils in response to changes in moisture content could lead to differential and cyclical movements that could cause damage or distress to structures and equipment. Thus, they are less suitable for development than non-expansive soils.

Future development consistent with the General Plan Update would have the potential to be adversely impacted by expansive soils; however, the General Plan Update does not propose any specific development. Future projects proposed in the Planning Area would require subsequent CEQA review. Any future land use development that is fostered by the General Plan Update would be required to adhere to the CBC, the City's Development Code, other standards and regulations for building designs. Impacts resulting from expansive soils would be reduced through compliance with existing codes and adherence with the recommendations of the project-specific geotechnical report, including engineered site preparation and adequate structural design. Any proposed construction would require the adoption of appropriate engineering design in conformance with the recommended geotechnical standards for construction and therefore impacts would be less than significant. No further discussion is warranted in the PEIR.

- e. **Less Than Significant Impact.** According to the General Plan 2030 EIR (2008b), there are several areas within the City and its sphere of influence (SOI) where wastewater is treated with on-site septic systems. However, the Victor Valley Wastewater Reclamation Authority (VWVRA) estimates in their Sewage Facilities Plan Update Year 2005 Amendment that 97 percent of Victorville's population is currently connected to the City's sewer system. The General Plan 2030 would allow septic tanks in certain large lot areas in the southwestern portion of the City.

Future development within the City's Planning Area, may include septic tanks for wastewater disposal. Soils incapable of supporting septic tanks or alternative wastewater disposal systems are subject to provisions of the Municipal Code, Sections 17.88.010–17.88.050, which require soils engineering investigations including soil bearing capacity and soil expansion. Therefore, with compliance with the Municipal Code and General Plan 2030 policies, impacts would be less than significant. No further discussion is warranted in the PEIR.

- f. **Less Than Significant Impact.** According to the General Plan 2030, the entire City is considered to be sensitive regarding paleontological resources. Future development projects facilitated within the City's Planning Area have the potential to directly or indirectly destroy a unique paleontological resource or site. However, the General Plan Update does not propose any specific development. Future projects proposed as a result of the General Plan Update would require subsequent CEQA review. The General Plan Resource Element Goal 5 is designed to protect paleontological resources. Specifically, Implementation Measure 5.1.2.3 requires paleontological monitoring of land alteration projects involving excavation into native geologic materials known to have a high sensitivity for the presence of paleontological resources. In addition, the Municipal Code, Title 16, Article 5 Grading Regulations includes specific criteria that address the discovery of paleontological resources during construction excavation. Development that is proposed on known sites requires a reconnaissance survey to determine the likelihood of discovering resources during construction. If resources are encountered on an unknown site, the Municipal Code requires that grading cease until the resource can be evaluated. Future projects facilitated by the General Plan Update, would be required to comply with applicable policies to protect paleontological resources. Therefore, impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.8 Greenhouse Gas Emissions

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Impact Analysis

**a & b. Potentially Significant Impact.** The proposed project has the potential to impact greenhouse gas emissions due to the project's potential to generate greenhouse gas emissions. Refer to Section 3.4, Greenhouse Gas Emissions, of the PEIR.

## 2.4.9 Hazards and Hazardous Materials

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. For a project located within an airport land-use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

A hazardous material is defined as “any material that because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment.” Thus, the term hazardous material is a broad term for all substances that may be hazardous, specifically including hazardous substances and hazardous waste. Substances that are flammable, corrosive, reactive, oxidizers, radioactive, combustible, or toxic are considered hazardous.

## Impact Analysis

**a & b. Less Than Significant Impact.** The proposed project is a General Plan Update, which involves changes in land use designations for various parcels throughout the City. When future projects consistent with the General Plan Update are brought forward, construction would likely involve

small amounts of hazardous materials such as fuels, lubricants, solvents, and architectural coating materials. During operation, hazardous materials may be used for cleaning and maintenance, as well as manufacturing activities. Hazardous materials and wastes would be managed and used in accordance with all applicable federal, state, and local laws and regulations. This includes handling of any soils with potential for asbestos-containing materials and lead-based paint contamination in accordance with California Occupational Safety and Health Administration requirements. These regulations are intended to address proper transport of hazardous materials, as well as methods to address accidental spills to avoid impacts to people and the environment. In addition, the proposed Safety Element Update includes measures to prevent and promptly abate accidental and potentially dangerous releases of hazardous materials and wastes. Specifically, implementation measure 1.3.1.1 encourages continued Fire Department operation as the local Certified Unified Program Agency with respect to hazardous materials concerns, throughout the Planning Area. This shall include a responsibility to comment on all proposed industrial, medical, research and development or other types of land uses that involve the generation, storage, use, transportation, disposal, or recycling of hazardous materials and/or hazardous wastes. In addition, implementation measure 1.3.1.2 encourages continued cooperation with state and federal agencies and the railroads, to ensure hazardous materials transported through the City do not present additional threats to life and property. With regulatory compliance, hazardous material impacts to the public and the environment would be less than significant, and no further discussion is warranted in the PEIR.

- c. **Less Than Significant Impact.** The Victor Elementary School District operates 18 kindergarten and elementary schools within the City while the Victor Valley Union High School District oversees 10 middle and high schools in the City. The eventual buildout of the General Plan would require additional schools, one or more of which may be in the vicinity of a use which may handle or emit hazardous materials. In addition, school sites themselves contain hazardous materials of various types (such as pesticides, paints, cleaners and other commonly used substances). The use of such materials is governed by the schools and various regulations. According to the California Education Code, Section 17213, school districts shall not be near or built upon hazardous waste sites identified by the Department of Toxic Substances Control. Implementation of California Education Code regulations and General Plan policies would ensure that future development consistent with the General Plan Update would have less than significant hazardous material impacts on schools, and no further discussion is warranted in the PEIR.
- d. **Less Than Significant Impact.** The General Plan Update is a policy document and does not propose any specific development. However, future development facilitated as a result of the General Plan Update could locate development projects on a hazardous materials site. The proposed Safety Element Update includes policies and measures to prevent and promptly abate accidental and potentially dangerous releases of hazardous materials and wastes. Specifically, policy 1.3.1 restricts and/or prohibits the siting of land uses that store, use, transport, dispose of, or generate

significant quantities of hazardous materials and wastes, through land use element policies, zoning and subdivision regulations, and site plan review procedures. Furthermore, through the City's environmental review process, it would be determined if a potential development site is on or within the immediate vicinity of any known hazardous material site. If applicable, projects may be required to prepare a Phase I environmental site assessment which would include a database search for existing hazardous materials sites, identify potential violations under federal and/or applicable state and local environmental laws, and provide recommendations for correcting deficiencies or problems. Where appropriate, mitigation measures would be required for specific projects to reduce potential hazards to the public. Therefore, impacts related to hazardous waste sites would be less than significant. No further discussion is warranted in the PEIR.

- e. **Less Than Significant Impact.** The City contains one airport, the Southern California Logistics Airport (SCLA), in the northwest portion of the City. SCLA is a 2,500-acre world-class aviation and air cargo facility serving international and domestic needs (SCLA 2022). Currently, the majority of the operations at SCLA are categorized as General Aviation with a portion of the operations being related to military training missions. The smallest portions of the annual operations are categorized as air carrier and air taxi. There are no regularly scheduled commercial flights at SCLA; however, there is regularly scheduled air taxi service (City of Victorville 2008a).

To minimize the risk and reduce the severity of aviation accidents, six safety zones have been established for the SCLA based on the California Airport Land Use Planning Handbook guidelines. To ensure that community land uses are outside areas where aviation accidents are most likely to occur, three SCLA Safety Review Areas are identified with policies formulated to address the specific safety concerns of those areas. Future development facilitated as a result of the General Plan Update would be required to comply with the SCLA safety guidelines to ensure development is not within a safety hazard zone. Through the City's environmental review process, future development projects would be evaluated for compatibility with the SCLA to ensure a project would not result in a safety hazard of excessive noise for people residing or working in the Planning Area. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- f. **Less Than Significant Impact.** The City has prepared their own Emergency Plan in compliance with State Office of Emergency Services (OES) and the City Municipal Code, and it identifies responses and actions depending on the nature and scope of the disaster. In addition, the General Plan 2030 Safety Element Update includes emergency preparedness planning consisting of three main components: (1) hazard identification and risk assessment; (2) hazard prevention and abatement; and (3) emergency response and action. The Safety Element Update identifies hazards present in the City, and briefly focuses on assessing the scope of risk associated with the hazards and emergency preparedness procedures, and fire, police, and medical facilities and/or staffing.

Construction activities associated with future development associated with the General Plan Update would have the potential to interfere with emergency plans and procedures if authorities are not properly notified, or multiple projects are constructed during the same time and multiple roadways used for emergency routes are concurrently blocked. Future projects facilitated within the City's Planning Area would be consistent with the current General Plan land use designations and therefore, no changes in the City's existing circulation network are proposed or required under the General Plan Update. However, future projects would be subject to site-specific review and would be subject to City regulations regarding street design, site access, and internal emergency access. Compliance would prevent multiple roadways used for emergency routes from being concurrently blocked. Therefore, impacts associated with the physical interference of an emergency evacuation plan would be less than significant. No further discussion is warranted in the PEIR.

- g. Less Than Significant Impact.** According to CAL FIRE's Fire Hazard Severity Zone Map Viewer (2022), the City is designated a moderate and unzoned local responsibility area. There are no designated very high fire hazard severity zones within the City (CAL FIRE 2022). Development of future projects consistent with the General Plan Update in a moderate fire hazard severity zone could result in a potentially significant impact from the exposure of people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residents are intermixed with wildlands. Through the City's environmental review process, future development projects associated with the City's Planning Area would be required to abide by the CBC, which contains measures to reduce fire hazards in structures including use of materials, fire separation walls, building separation, and fire sprinklers. In addition, the City has adopted a Fire Hazard Abatement Ordinance (Chapter 8.09, Victorville Municipal Code) which requires the abatement of weeds in excess of 3 inches above the grade in the area of growth on such portion of the lot or premises within 100 feet of any structure. Adherence to this ordinance reduces the likelihood of fires on undeveloped lands and on vacant lots in the developed portions of the City. Prior to approval of a development project or issuance of a building permit, the City of Victorville Water District verifies that the peak load water supply requirement is not negatively affected in the case of a fire. Compliance with existing regulations and General Plan Update policies would reduce impacts to a level below significant. Impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.10 Hydrology and Water Quality

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv. Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The City is within the Mojave River Watershed, which encompasses approximately 4,700 square miles and is entirely within San Bernardino County. The primary geographic and surface hydrologic feature of the watershed is the Mojave River. The City exhibits typical California and Nevada High Desert meteorological conditions. Typical of these conditions are annual rainfall of less than 8 inches. While summers may produce an occasional thunderstorm, the wettest season tends to be from January to March.

A major portion of the City is on top of a gently sloping large alluvial fan situated to the northeast of the San Bernardino Mountains and referred to as the Cajon Fan (or Victorville Fan). The Mojave River runs along the fan's eastern margin and is the City's most notable topographic feature. This river is very unusual in that it flows from south to north, conveying runoff out of the San Gabriel and San Bernardino Mountains for about 80 miles, until it empties at Soda Lake.

## Impact Analysis

- a. **Less Than Significant Impact.** Future development facilitated by the General Plan Update would be required to comply with all applicable water quality standards. Any future development within the project Planning Area would be subject to the federal and state Clean Water Act, which is established through compliance with the requirements of the National Pollutant Discharge Elimination System General Permit. In the City, the Lahontan Region issues and approves NPDES permits per the federal Clean Water Act. General Permits require projects to develop and implement a SWPPP, which must list the BMPs the Applicant will employ to “prevent all construction pollutants from contacting stormwater,” and BMPs must be developed “with the intent of keeping all products of erosion from moving off site into receiving water channels.” The SWPPP must also include a visual monitoring program and a chemical monitoring program for non-visible pollutants.

NPDES also requires local governments to obtain an NPDES Permit for stormwater induced water pollutants in their jurisdiction. Victorville is a co-permittee of the Mojave Watershed Group of Small Communities enrolled under statewide Phase II Municipal Stormwater NPDES General Permit No. CAS000004, for Municipal Separate Storm Sewer Systems (MS4s), effective 2005. The permit establishes a region-wide Stormwater Management Plan (SWMP) to control discharges of sanitary wastewater, septic tank effluent, car wash wastewaters, improper oil disposal, radiator flushing, laundry wastewater, spills from roadway accidents, and improper disposal of toxic materials. Pollutant control measures in the SWMP include specific focus on failing septic tanks, industrial/business connections, recreational sewage and illegal dumping. Developers are required to implement appropriate BMPs on construction sites to control erosion and sediment.

In addition, future development projects would be required to comply with the City’s Municipal Ordinance, which contains extensive requirements for water conservation and recycling measures. The General Plan 2030, Resource Element Policy 1.3.1 requires development projects to prepare and implement water quality management plans that incorporate BMPs which reinforces the NPDES regulatory requirements. Compliance with federal, state and City regulations, would reduce impacts to less than significant. No further discussion is warranted in the PEIR.

- b. **Less Than Significant Impact.** Future development projects in the City would be consistent with land use designations contained in the current General Plan. Water service in the Planning Area is currently provided by the Victorville Water District (VWD). The City draws all of its water supply from the Alto (or Upper Mojave) sub-basin of the Mojave River Groundwater Basin.

Future development facilitated by the General Plan Update would be required to incorporate features that would reduce impervious area, as feasible, and promote water infiltration. Treatment control and hydromodification management facilities would promote retention and infiltration of stormwater. Redevelopment of developed sites requires compliance with water quality standards

intended to reduce runoff, increase infiltration, and improve water quality. In addition, the current General Plan includes policies that protect groundwater resources within the Resource Element. Specifically, Water Resources Policy 1.3.1 requires new development and major public and private redevelopment projects, to prepare and implement water quality management plans that incorporate a variety of structural and nonstructural BMPs to minimize, control and filter construction site runoff and various forms of developed site urban runoff, prior to discharge to receiving waters. Implementing Measure 1.3.1.2 requires future projects to assess and mitigate impacts on surface and groundwater quality as a routine aspect of the City's CEQA implementation procedures. Compliance with federal, state and City regulations, would reduce impacts to less than significant. No further discussion is warranted in the PEIR.

**c(i-iv). Less Than Significant Impact.** A major portion of the City is on top of a gently sloping large alluvial fan situated to the northeast of the San Bernardino Mountains and referred to as the Cajon Fan (or Victorville Fan) with the Mojave River running along the fan's eastern margin. The majority of the City is characterized by gently sloping topography of less than 9 percent grade.

Future development within the City could result in the alteration of drainage patterns, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, during and after construction activities. Stormwater drainage and system modifications and improvements associated with future development would be required to comply with all applicable regulations, including discharge rate controls, and be designed for a 100-year storm event.

In addition, future development projects facilitated by the General Plan Update would be required to adhere to all federal, state, and local requirements for avoiding construction and operations impacts that could substantially alter the existing drainage pattern or alter the course of a stream or river, including NPDES permitting and the Construction General Permit, compliance with the City Municipal Code, and General Plan 2030 Resource Element goals and policies for implementing water quality plans and incorporating BMPs. Considering these requirements, future development facilitated by the General Plan Update would not substantially alter the existing drainage pattern of the site or area. This includes no alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff, or impede or redirect flood flows. Therefore, impacts would be less than significant. No further discussion is warranted in the PEIR.

**d. Less Than Significant Impact.** A tsunami is a very large ocean wave caused by an underwater earthquake or volcanic eruption. Tsunamis can cause flooding to coastlines and inland areas less than 50 feet above sea level and within one mile of the shoreline. The entire project is more than

approximately 70 miles inland from the Pacific Ocean and would not be susceptible to inundation or flooding due to a tsunami.

Seiches are defined as wave-like oscillatory movements in enclosed or semi-enclosed bodies of water, such as lakes or reservoirs, and are most typically associated with seismic activity. The City is not subject to inundation by seiche. The majority of the City is characterized by gently sloping topography of less than 9 percent grade. In areas dissected by an intermittent stream channel the terrain can vary with nearly vertical slopes adjacent to the Mojave River. The Municipal Code contains provisions to protect against mudflow in Chapter 15.20 of the Municipal Code, Flood Damage Prevention.

The principal flood hazard to the developed portions of the City is from the Mojave River. In the event of a 100-year flood, flood water would be confined to the river's floodplain. In addition, several intermittent streams that drain the City and empty into the Mojave River include the Ossom Wash, West Fork Ossom Wash, Bell Mountain Wash, and Oro Grande Wash. There is a potential for flooding from these streams in the event of a 100-year flood. Project developments within the City would be subject to flooding, damage and public safety issues if located in the 100-year flood zone.

Construction activity would be subject to the NPDES Construction General Permit which requires the development and implementation of a SWPPP, which specifies BMPs that will reduce or prevent construction pollutants from leaving the site in stormwater runoff and will also minimize erosion caused by flooding associated with the construction project. The Municipal Code contains provisions to safeguard the public and structures from flood hazards including restrictions on uses which are dangerous to health, safety and property, controls on alterations of natural floodplains, stream channels, and natural flood barriers, and prohibiting development in 100- year flood zone areas as identified by the Federal Emergency Management Agency Flood Insurance Rate Maps and on City Land Use and Zoning maps. Chapter 15.20 of the Municipal Code, Flood Damage Prevention, contains methods of preventing and reducing flood hazards, and Title 18, Zoning, Chapter 18.46 of the Municipal Code – Flood Plain (FP) Conservancy and Flood Plain District, provides zoning to assure safety in FP zoned areas. The Safety Element includes policies and measures designed to restrict land uses in areas identified as susceptible to natural and human-made hazards including developing and maintaining strategies to restrict development in areas susceptible to flooding hazards. The objectives and policies reinforce the Municipal Code by providing that development be located outside flood hazard areas, that maps be updated to reflect the 100-year flood hazards, and that those areas be designated for Open Space-Natural Hazards on the Land Use Policy Map and on the Conservation/Open Space Map. With implementation of the General Plan Update goals and policies, Municipal Code, and the NPDES, impacts would be less than significant. No further discussion is warranted in the PEIR.

- e. **Less Than Significant Impact.** As discussed previously, the City is under the jurisdiction of the Lahontan RWQCB. Water quality standards and control measures for surface and ground waters of the Lahontan Region are contained in the Water Quality Control Plan for the Lahontan Region. The plan designates beneficial uses for water bodies and establishes water quality objectives, waste discharge prohibitions, and other implementation measures to protect those beneficial uses.

Future projects associated with the General Plan Update would comply with the requirements under the NPDES Permit program, the Phase II Small MS4 General Permit in the Mojave River Watershed, the City-approved Water Quality Management Plan, and the implementation of associated BMPs and other requirements of SWPPP as well as a City-approved drainage plan which will ensure stormwater discharges associated with construction and use of future development projects comply with regulatory requirements in the City and would not conflict with a water quality control plan or groundwater management plan. Compliance with state, and local requirements for avoiding and minimizing construction and operations impacts to prevent conflicts with or obstruction of implementation of a water quality control plan or sustainable groundwater management plan, including the Water Quality Control Plan for the Lahontan Regional Water Quality Control District and with federal, state, and City regulations would reduce impacts to less than significant. No further discussion is warranted in the PEIR.

## 2.4.11 Land Use and Planning

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

Physical development in the City of Victorville is currently governed by the City's existing General Plan 2030 adopted in October 2008. The General Plan 2030 disaggregates the City and its SOI according to land use designations, with residential being the predominant existing land use.

## Impact Analysis

- a. **Less Than Significant Impact.** Implementation of the General Plan Update would not disrupt or physically divide an established community. The primary focus of Land Use Element Update is to guide and accommodate future growth in Victorville in a manner that achieves the community's vision, enhances the community's quality of life, and provides a mix of land uses that promote sustainability and economic vitality.

Projects that divide an established community can involve large scale linear infrastructure, such as freeways, highways, and drainage facilities that bisect an established community or create barriers to movement within that community. "Locally undesirable land uses" such as prisons or landfills sited within economically depressed areas can also divide an established community. The General Plan Update does not propose any development. Future development within the Planning Area would be subject to discretionary permits and would occur as market conditions allow and at the discretion of the individual property owners. Future development would occur in areas currently zoned for development use; therefore, an increase in development projects would be a consistent land use that would not physically divide the community. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- b. **Less Than Significant Impact.** The proposed project includes an update to the City's General Plan including updates to the Land Use Element and Safety Element, and the creation of an Environmental Justice Element. The proposed General Plan Update includes long-term goals and policies that guide future land use and development. The proposed General Plan Update would be required to be consistent with several adopted land use plans for the region, including the City's Zoning Code, Specific Plans, Subdivision Ordinance, and the City's Redevelopment Plans. In

addition, the project would be in compliance with the City's Air Quality Standards from the Mojave Desert Air Quality Management District and traffic regulations from the City's Traffic Division of Engineering Department. The proposed Land Use Element would be required to be consistent with other elements such as the Circulation Element, Noise Element, and Resource Element, as the Land Use Element functions as a guide to the ultimate pattern of development for the City. Therefore, the General Plan Update would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation, and impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.12 Mineral Resources

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

Naturally occurring mineral resources within the City include sand, gravel or stone deposits that are suitable as sources of concrete aggregate, primarily along the Mojave River. The General Plan recognizes the potential for occurrence of mineral resources along the Mojave River corridor, and designates these areas “MRZ-2b.” The MRZ-2b mineral resource zone designation represents areas underlain by mineral deposits where geologic information indicates that significant resources are present or are inferred. Within the City, the only areas designated MRZ-2b occur along the Mojave River corridor.

According to the General Plan, the predominance of the City is designated as a “MRZ-3a” mineral resource zone. The MRZ-3a zone is defined by the General Plan Resource Element as “areas containing known mineral occurrences of undetermined mineral resource significance.”

## Impact Analysis

- a. **Less Than Significant Impact.** Future development within the Planning Area would be consistent with General Plan land use designations and would not substantially limit the future availability of known mineral resources. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- b. **Less Than Significant Impact.** According to the General Plan EIR, an active cement mining operation continues to be located on the northwest side of State Route 18 (City of Victorville 2008b). The sand and gravel mining used in these operations meet the definition of a mineral resource as any form of natural rock materials that have commercial value. However, these sand and gravel deposits are not classified by the Division of Mines and Geology as important mineral resources. In addition, future development would occur in areas currently zoned for residential and commercial use which is not compatible with mining operations. Impacts would be less than significant. No further discussion is warranted in the PEIR.

### 2.4.13 Noise

Would the project result in:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

### Impact Analysis

**a–c. Potentially Significant Impact.** The proposed project has the potential to impact noise due to its potential to generate substantial temporary and permanent increases in ambient noise levels and groundborne vibration. Refer to Section 3.5, Noise, of the PEIR.

## 2.4.14 Population and Housing

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Environmental Setting

The City has experienced population growth over the last several decades and is anticipated to continue to experience population growth over the next several decades. The City's growth projections indicate that Victorville will grow in population from approximately 136,561 residents in 2022 to approximately 339,613 residents by 2040 (SCAG 2020)

## Impact Analysis

- a. **Less Than Significant Impact.** The City of Victorville General Plan Update is the City's long-term planning document that provides guidance for development in the City and its SOI over the next 20 years. Buildout of land in the City and SOI consistent with the General Plan Update would result in approximately 73,808 dwelling units to house approximately 339,613 residents and would support 42,393,038 nonresidential square feet. The Planning Area population would increase by 203,052 residents by 2045. However, the proposed project is accommodating for continued growth expected in the region and is not necessarily inducing said growth. The project identifies where development may occur and is a plan to accommodate future projected growth and development in the City. While the project will provide for accommodating future growth projections, it does not, in and of itself, serve to induce future growth in the City beyond what is currently projected.

Furthermore, the potential growth in the City under the project consists of infill development and intensification of existing uses in the City and would not result in the urbanization of land in a remote location.

The implementation of the General Plan Update would not result in the extension of roads or other infrastructure. Developed areas of the City are served by an extensive network of electricity, water, sewer, storm drain, roadways, and other infrastructure sized to accommodate or allow for existing and planned growth. No new major roads or highways have been proposed to provide new access to the City. Therefore, the project would not induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for

example, through extension of roads or other infrastructure). Impacts would be less than significant. No further discussion is warranted in the PEIR.

- b. **No Impact.** The General Plan Update does not propose specific development plans. No displacement of housing or demolition is anticipated during the planning period. No impact would occur. No further discussion is warranted in the PEIR.

## 2.4.15 Public Services

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

Public services for fire protection, police protection, schools, parks, and other facilities, are described below.

## Impact Analysis

### a. Fire protection?

**Less Than Significant Impact.** Fire protection and emergency medical services for the City of Victorville are provided by the City of Victorville Fire Department. Within the City limits, five fire stations are staffed the City of Victorville Fire Department. A fifth station is at SCLA. In addition, three County of San Bernardino fire stations are within the City's existing SOI that provide fire protection services to the City and adjacent unincorporated areas. Each station is equipped with at least one fire engine and three firefighters, with 10 staff on call if needed. Paramedics are provided at every fire station.

The General Plan Update does not propose any development. Future development facilitated within the City would be subject to discretionary permits and would occur as market conditions allow and at the discretion of the individual property owners. Future development facilitated within the City would generate planned population growth, which could incrementally increase the demand for fire protection services.

Future development facilitated by the City would be required to comply with the CBC standards, which include site access requirements and fire safety standards. Future development would also

be subject to Victorville Fire Department review through the site plan review process, to ensure adequate emergency access and fire safety features are provided as part of the project. Additionally, future development would be required to comply with Municipal Code 16-5.01.080, Development Impact Fee, which offsets impacts of new development on the City of Victorville Fire Department resources. With incorporation of development fees and adherence to local and state regulations, impacts would be less than significant. No further discussion is warranted in the PEIR.

#### **Police protection?**

**Less Than Significant Impact.** Police protection for the City is provided by the Victorville Police Department, which is contracted with the San Bernardino County Sheriff. The Police Department is located at 14200 Amargosa Road.

The General Plan Update does not propose any development. Future development facilitated by the City would be subject to discretionary permits and would occur as market conditions allow and at the discretion of the individual property owners. Future development facilitated by the City would generate planned population growth, which could incrementally increase the demand for police services. In addition, the proposed Safety Element Update, includes policies and implementing measures to ensure that new private or public development has sufficient police services available and developments shall not strain capabilities to a level where service standards could not be met. Therefore, impacts would be less than significant. No further discussion is warranted in the PEIR.

#### **Schools?**

**Less Than Significant Impact.** The City of Victorville is served by the Victor Elementary School District, Adelanto School District, Hesperia Unified School District, Snowline Joint Unified School District, and the Victor Valley Union High School District. The General Plan Update does not propose any development. The student population growth from future development facilitated by the City is anticipated to incrementally increase the demand for school facilities/services. However, future development facilitated by the City would be subject to the requirements of AB 2926 and SB 50, which allows school districts to collect development impact fees to minimize potential impacts to school districts as a result of new development. Thus, upon payment of development fees consistent with existing state requirements, impacts would be less than significant. No further discussion is warranted in the PEIR.

#### **Parks?**

**Less Than Significant Impact.** Outdoor recreation resources in the City include public parks, public golf courses, public access lakes, bicycle paths and pedestrian trails, and ground-level linkages between recreation areas and urbanized places. According to the Victorville General Plan 2030, the City currently maintains 198.4 acres of parkland. The City also maintains paseo systems

within Specific Plan communities that link neighborhoods to local parks and to other neighborhoods.

The General Plan Update does not propose any development. However, the creation of new development consistent with the proposed project could increase the volume of residents that may use public parks. Future development would be required to comply with Victorville Municipal Code, Section 16-5.01.080, Development Impact Fee, which would offset impacts of new development on the City's parks and recreation facilities. Impacts would be less than significant. No further discussion is warranted in the PEIR.

#### **Other public facilities?**

**Less Than Significant Impact.** The General Plan Update does not propose any specific development. However, the creation of new development as facilitated by the City could increase the volume of residents that may use other public facilities including the Civic Center Planning Area and Victorville City Library. As part of the General Plan EIR (City of Victorville 2008b) starting in 2010, the City began updating its planning for libraries and community centers at least once every 5 years. The plans are based on the most current City population and total dwelling unit projections and consider the spatial need for libraries and community centers throughout the City. The plans are incorporated into the City capital improvement program process. In addition, each future development would be subject to CEQA review and evaluation of potential impacts on public facilities. Therefore, impacts would be less than significant. No further discussion is warranted in the PEIR.

#### 2.4.16 Recreation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### Environmental Setting

Outdoor recreation resources within the City include public parks, public golf courses, public access lakes, bicycle paths and pedestrian trails, and ground-level linkages between recreation areas and urbanized places. Per the City's General Plan, the City currently maintains 198.4 acres of parkland including two public golf courses.

### Impact Analysis

- a. **Less Than Significant Impact.** Increases in population and development would result in an increased use of recreational facilities, which would have the potential to result in the deterioration of existing facilities. However, the City's Municipal Code, Section 16-5.01.080, requires that all new development pay a Development Impact Fee to ensure that parkland and recreational facility standards established by the City are met with respect to the additional needs created by such development. Future development would be required to pay the fee prior to the issuance of building permits. In addition, the Resource Element of the General Plan discuss that the City will provide at least 3 acres of parkland for every 1,000 residents (Objective 2.1). In addition, the Land Use Element includes a new Greenway/Utility Corridor (GUC) and Health and Wellness Overlay (HWO). The new GUC is along the City's key public utility corridors to promote creation of continuous trails and multiple public access points. The new HWO is intended to promote health and wellness for all segments of the community. The HWO applies to existing and proposed hospitals/medical facilities, allows a full range of medical uses and specialized care facilities, allows complementary uses such as restaurants, grocery stores, support retail, gyms/fitness studios, recreation/trails, allows a range of housing integrated into the development, and functions as a sustainability hub, promoting active transportation, green infrastructure, open space, and electric vehicle charging stations. Therefore, the project would not result in an increase in the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- b. Less Than Significant Impact.** As previously identified, an increase in demand for existing recreational resources may be anticipated with any development facilitated by the City. The General Plan Update does not specifically include any proposals for future construction or expansion of recreational facilities. A proposed recreational facility would be subject to CEQA review of any adverse physical effects on the environment. Impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.17 Transportation

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Impact Analysis

**a–d. Potentially Significant Impact.** The proposed project has the potential to impact transportation due to its potential to cause an increase in vehicle miles traveled. Refer to Section 3.6, Transportation, of the PEIR.

## 2.4.18 Tribal Cultural Resources

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Impact Analysis

**a(i–ii). Potentially Significant Impact.** The proposed project has the potential to impact tribal cultural resources due to its potential to cause a substantial adverse change in the significance of tribal cultural resources. Refer to Section 3.3, Cultural Resources and Tribal Cultural Resources, of the PEIR.

## 2.4.19 Utilities and Service Systems

Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

The source of drinking water supply for the VWD is groundwater. The VWD supplies this water by drilling into the ground and withdrawing it using pumps. The water is pumped into tanks above the ground. The water tanks store the water until there is a demand for it and then it is gravity fed through using water mains/pipes.

The City through its Public Works Department provides sewer service to residents and businesses within the City limits. The City owns, operates, and maintains a sanitary sewer collection system including approximately 411 miles of sewers. The City operates a 2 1/2 million gallon per day wastewater treatment plant. This plant is located at the former George Air Force Base, now known as the SCLA. This plant treats industrial waste from a Dr. Pepper/7Up bottling plant along with domestic waste from the SCLA and the northwestern area of the City of Victorville. High-quality recycled water is produced from the plant that is used for irrigation at the SCLA and cooling water for a power generation plant. The remainder of wastewater from the City of Victorville flows through the VVWRA wastewater treatment plant.

City owned storm drainage systems include drain pipes, catch basins, and drainage channels. Curb and gutter, drainage channels, dirt roads and dirt shoulders, lead to a catch basin with drain pipes crossing roads that flows toward the Mojave River.

## Impact Analysis

- a. **Less Than Significant Impact.** The General Plan Update does not propose any development. Future development facilitated by the City would be expected to connect to the existing domestic water supply system, wastewater infrastructure, and existing stormwater infrastructure. Overall, future development construction and operation would result in increased water, wastewater treatment, electric power, natural gas, and telecommunications demands, and wastewater and solid waste generation which would require the expansion or construction of utility infrastructure. Specific projects are unknown and speculative at this time and would require future CEQA review of any adverse effects on the environment. Therefore, impacts would be less than significant. No further discussion is warranted in the PEIR.
- b. **Less Than Significant Impact.** The VWD would provide water service to future development anticipated by the General Plan Update. Future development within the City relies on existing General Plan land use designations. According to the City's 2020 Urban Water Management Plan, the City is projected to have an adequate supply of water to meet the increase in demand. In addition, the City is projected to have enough water to meet demand during a single dry year and multiple dry year scenario (City of Victorville 2015).

No specific development is proposed as part of the General Plan Update. New development would be required to undergo separate environmental review, including analysis of water supply impacts. All new development is required to comply with applicable state and local laws and regulations governing conservation of water supply resources such as the City's Municipal Code 10.05.070. Municipal Code 10.05.040 discusses how the City practices water conservation measures by urging the public to voluntarily conserve the consumption of water use even when there is no water supply shortage to ensure adequate water supply for future growth. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- c. **Less Than Significant Impact.** The City operates a 2.5 million gallon per day wastewater treatment plant. The remainder of wastewater from the City of Victorville flows through the VVWRA wastewater treatment plant. Based on the 2016 Sewer Master Plan, the City's wastewater treatment facility has adequate capacity to serve additional units as part of the City's anticipated General Plan buildout population. Development facilitated by the City would be consistent with the adopted General Plan and land use designations. Impacts would be less than significant. No further discussion is warranted in the PEIR.

- d. **Less Than Significant Impact.** According to the General Plan, non-hazardous solid and liquid waste generated in the City is currently deposited in the Victorville Landfill, which is northeast of the City at 17080 Stoddard Wells Road. Based on information provided by CalRecycle, Victorville Landfill has a maximum daily throughput of 3,000 tons per day and a remaining capacity of 79,400,000 cubic yards (CalRecycle 2022). It is anticipated that this landfill would have sufficient permitted capacity to service solid waste generated by future development facilitated by the City. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- e. **Less Than Significant Impact.** The General Plan Update does not propose any specific development. However, construction activities for future development would be subject to conformance with relevant federal, state, and local requirements related to solid waste disposal. Specifically, future projects would be required to demonstrate compliance with the California Integrated Waste Management Act of 1989 (AB 939), which requires all California cities to “reduce, recycle, and reuse solid waste generated in the state to the maximum extent feasible.” AB 939 requires that at least 50 percent of waste produced is recycled, reduced, or composted. Local jurisdictions, including the City of Victorville, are monitored by the state (CalRecycle) to verify if waste disposal rates set by CalRecycle are being met that comply with the intent of AB 939. Future projects would also be required to demonstrate compliance with CALGreen, which includes design and construction measures that act to reduce construction-related waste through material conservation measures and other construction-related efficiency measures. Compliance would be verified by the City through review of project plans and specifications. Lastly, the future projects would be subject to compliance with all applicable solid waste handling, processing, and disposal requirements stipulated under Chapter 6.36 of the Victorville Municipal Code.

Therefore, future projects would be required to comply with the City’s efforts in reducing solid waste, as well as solid waste regulations at the state level. As such, impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.20 Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Environmental Setting

According to California Department of Forestry and Fire Protection (CAL FIRE) Fire Hazard Severity Zone Maps, the City is within a local responsibility area, and not within an area classified as a Very High Fire Hazard Severity Zone.

## Impact Analysis

- a. **Less Than Significant Impact.** As discussed in Section 2.4.9, Hazards and Hazardous Materials, the City has prepared its own Emergency Plan in compliance with the State OES and the Victorville Municipal Code, and it identifies responses and actions depending on the nature and scope of the disaster. In addition, the Victorville General Plan 2030 Safety Element includes emergency preparedness.

Construction activities associated with future development associated with the General Plan Update would have the potential to interfere with emergency plans and procedures if authorities are not properly notified or multiple projects are constructed during the same time and multiple roadways used for emergency routes are concurrently blocked. Future development facilitated within the City would increase the amount of activity in the City, which could result in development in areas of the City adjacent to or in fire hazard areas. In the case of a wildfire evacuation, an increase in development would incrementally increase vehicular traffic on evacuation routes. No changes in the City's existing circulation network are proposed or required under the General Plan Update. However, future projects would be subject to site-specific review

and would be subject to City regulations regarding street design, site access, and internal emergency access. Compliance would prevent multiple roadways used for emergency routes from being concurrently blocked. Therefore, impacts associated with the physical interference of an Emergency Evacuation Plan would be less than significant. No further discussion is warranted in the PEIR.

- b. Less Than Significant Impact.** The General Plan Update would not propose any specific development. However, future development on candidate sites in Moderate Fire Hazard Severity Zone areas are subject to higher wildfire hazards due to slope and prevailing winds based on the location, which would consequently result in higher fire-related risks to people and structures. To minimize risk from wildfire, future development on the candidate project sites would be required to comply with the 2019 California Fire Code and the CBC to ensure safety and to not create risk toward humans or structures. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- c. Less Than Significant Impact.** No specific development is currently proposed. However, future development consistent with the General Plan Update may require the installation of new water, emergency water, wastewater, stormwater, and natural gas infrastructure and connections to City infrastructure. Any new infrastructure components would be required to comply with applicable CBC and California Fire Code regulations. Therefore, implementation of the General Plan Update would not exacerbate fire risk or result in temporary or ongoing impacts to the environment. Impacts would be less than significant. No further discussion is warranted in the PEIR.
- d. Less Than Significant Impact.** According to CAL FIRE Fire Hazard Severity Zone Maps, the City is not within or near a State Responsibility Area or within an area classified as a Very High Fire Hazard Severity Zone (CAL FIRE 2022). Any future development that is fostered by the City would be required to adhere to the CBC and other standards and regulations for building designs, which would minimize any potential risks associated with landslides. In addition, future development would be subject to City and state drainage and stormwater quality requirements that are designed to reduce stormwater runoff from projects sites by promoting infiltrating, minimizing impervious surfaces, and requiring a no net increase in flow. Therefore, the future development would not expose people or structures to significant risk associated with post-fire landslides, mudflows, and flooding. Impacts would be less than significant. No further discussion is warranted in the PEIR.

## 2.4.21 Mandatory Findings of Significance

Does the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Note:** Authority cited: Sections 21083 and 21083.05, Public Resources Code. Reference: Section 65088.4, Gov. Code; Sections 21080(c), 21080.1, 21080.3, 21083, 21083.05, 21083.3, 21093, 21094, 21095, and 21151, Public Resources Code; Sundstrom v. County of Mendocino, (1988) 202 Cal.App.3d 296; Leonoff v. Monterey Board of Supervisors, (1990) 222 Cal.App.3d 1337; Eureka Citizens for Responsible Govt. v. City of Eureka (2007) 147 Cal.App.4th 357; Protect the Historic Amador Waterways v. Amador Water Agency (2004) 116 Cal.App.4th at 1109; San Franciscans Upholding the Downtown Plan v. City and County of San Francisco (2002) 102 Cal.App.4th 656.

## Impact Analysis

- a. Potentially Significant Impact.** As determined by this IS, the proposed project would have the potential to impact biological resources, cultural and tribal cultural resources. Refer to Section 3.2, Biological Resources, and Section 3.3, Cultural Resources and Tribal Cultural Resources, of the PEIR.
- b. Potentially Significant Impact.** CEQA Guidelines, Section 15130, requires a discussion of the cumulative impacts of a project when the project's incremental effect is "cumulatively considerable," meaning that the project's incremental effects are considerable when viewed in connection with the effects of past, current, and probable future projects. The cumulative impacts discussion does not need to provide as much detail as is provided in the analysis of project-specific impacts and should be guided by the standards of practicality and reasonableness.

As determined by this IS, there may be potentially significant effects related to air quality, biological resources, cultural resources, GHG emissions, noise, transportation, and tribal cultural resources. Therefore, the project's potential contribution to cumulative impacts related to these resources is discussed in the PEIR. Because the project would have less than significant or no

impact on aesthetics, agriculture and forestry resources, energy, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, public services, recreation, utilities and service systems, or wildfire, it was determined that the proposed project would have no potential to result in cumulative impacts related to these resource areas. Further discussion of the cumulative effect on these resource areas is not warranted in the PEIR.

- c. **Potentially Significant Impact.** Based on the analysis above, the proposed project has the potential to result in significant impacts on air quality, biological resources, cultural resources, GHG emissions, noise, transportation, and tribal cultural resources. As such, the project has the potential to result in environmental impacts that could cause substantial adverse effects on human beings, either directly or indirectly. Therefore, further discussion is included in the PEIR.

## **Section 3    List of Preparers**

---

### **3.1    Lead Agency**

City of Victorville  
14343 Civic Drive, PO Box 5001  
Victorville, California, California 92393

Scott Webb, City Planner

### **3.2    Consultants**

Harris & Associates  
600 B Street, Suite 2000  
San Diego, California 92101

Ryan Binns, PMP, ENV SP, Project Director/Technical Reviewer  
Kristin Blackson, Project Manager  
Esther Daigneault, Senior Environmental Analyst  
Kelsey Hawkins, Associate/Deputy Project Manager  
Lindsey Messner, Technical Editor
