## TOWN OF APPLE VALLEY

### NOTICE OF PREPARATION

#### PROJECT TITLE: VILLAGE SPECIFIC PLAN

**CONTACT PERSON:** Daniel Alcayaga, Planning Manager  
Email: [dalcayaga@applevalley.org](mailto:dalcayaga@applevalley.org) Phone: (760) 240-7000 x7200

#### PROJECT LOCATION:

The planning area includes 651± acres north and south of the State Highway 18 corridor generally between Navajo Road and Central Road. The planning area is in the east central portion of Apple Valley in southwestern San Bernardino County.

**PROJECT DESCRIPTION:** The Town of Apple Valley (Town) will be the Lead Agency and will prepare an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) Guidelines (14 California Code of Regulations Section 15060 and 15063) for the proposed Project. The Project guides the long-term development and redevelopment of a 1.5±-mile segment of Highway 18, including the Village commercial area, and parcels generally bounded by Arapahoe and Esaws Avenues on the north and Ottawa Road on the south. It revises land use designations and sets forth development guidelines in the context of five (5) planning Districts to enhance the Village's identity as a downtown retail destination, guide future development of vacant parcels and redevelopment of underutilized parcels, and protect and expand residential neighborhoods with guidelines that scale down development at the periphery of the Village. Proposed circulation improvements to Highway 18 and Yucca Loma Road/Navajo Road are intended to minimize traffic conflicts, integrate multimodal facilities, and improve access and safety throughout the area.

**FINDINGS/DETERMINATION:** The Town has reviewed and considered the proposed Village Specific Plan and has determined that potentially significant impacts could result from the proposed Project. Therefore, an Environmental Impact Report should be prepared. Based on the location and characteristics of the proposed Project, the EIR will include analysis of potentially significant effects on the environment related to the following topics: Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, and Utilities/Service Systems.

**PUBLIC REVIEW PERIOD:** A 30-day public review period for the Notice of Preparation will commence on November 19, 2021 and end on December 20, 2021 for interested individuals and public agencies to submit written comments on the document. A virtual scoping meeting will be held on December 2, 2021 at 4:00 p.m. via Zoom to provide an opportunity to learn more about this proposed Project and provide comments on the possible environmental effects the Town should study in the Environmental Impact Report. Please register for the virtual scoping meeting at the following link, <https://applevalley.zoom.us/j/89545321327?pwd=REtIRlNKZ0ZyUW9jQ25ldFdxZzYvUT09>. Any written comments on the Notice of Preparation must be received at the Town address (14955 Dale Evans Parkway) or via email to Daniel Alcayaga at [dalcayaga@applevalley.org](mailto:dalcayaga@applevalley.org) within the public review period. Copies of the Notice of Preparation and Initial Study are available for review on the Town's website at [Apple Valley Village | Town of Apple Valley](#).

## TOWN OF APPLE VALLEY

### NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT VILLAGE SPECIFIC PLAN

<b>Lead Agency:</b>	Town of Apple Valley 14955 Dale Evans Parkway Apple Valley, California 92307 Phone: (760) 240-7000
<b>Contact Person:</b>	Daniel Alcayaga, Planning Manager Email: dalcayaga@applevalley.org Phone: (760) 240-7000 Ext. 7200
<b>Project Title:</b>	Village Specific Plan
<b>Town Project No.:</b>	<b>Village Specific Plan Case No. 2021-001, General Plan Amendment Case No. 2021-001, Zone Change Case No. 2021-001</b>
<b>Project Location:</b>	The 651± acre Planning Area is in the east central portion of the Town of Apple Valley in southwest San Bernardino County. It extends along a 1.5± mile segment of State Highway 18 and is generally bounded by Arapahoe and Esaws Avenues on the north, Ottawa Road on the south, Central Road on the east, and the realigned Yucca Loma and Navajo Road on the west. It includes additional contiguous parcels on the east and west (see attached CEQA Initial Study).
<b>Findings/Determination:</b>	The Town has reviewed and considered the proposed Village Specific Plan ("Project") and has determined that potentially significant impacts could result from the Project. Therefore, an Environmental Impact Report should be prepared. The Town has prepared the attached Initial Study and this Notice of Preparation.
<b>NOP Comment Period:</b>	This 30-day public review period will commence on November 19, 2021 and end on December 20, 2021. A virtual scoping meeting will be held on December 2, 2021 at 4:00 p.m. via Zoom at the following link <a href="https://applevalley.zoom.us/j/89545321327?pwd=REtIRlNkZ0ZyUW9jQ25ldFdxZzYvUT09">https://applevalley.zoom.us/j/89545321327?pwd=REtIRlNkZ0ZyUW9jQ25ldFdxZzYvUT09</a> to provide an opportunity to provide comments on the possible environmental effects the Town should study in the Environmental Impact Report. Written comments on the NOP must be received at the Town within the public review period. You may email comments to Daniel Alcayaga, Planning Manager, at the following address: dalcayaga@applevalley.org. Copies of the Notice of Preparation are available for review at the above address and at the Newton T. Bass Apple Valley Branch Library at 14901 Dale Evans Parkway, Apple Valley, CA 92307.

## **A. Introduction**

Apple Valley's historic Village commercial district is optimally located along State Highway 18, the region's principal arterial, and serves both the local and regional passerby markets. Surrounding lands include service commercial, light industrial, and residential development, as well as public community facilities and vacant and underutilized parcels. The Village can benefit from an enhanced cohesive, recognizable identity as a distinct retail, dining, and gathering destination that celebrates the Town's history. The existing configuration of Highway 18 between Central and Navajo Roads, with two frontage roads that separate high-speed through traffic from local traffic accessing businesses, has resulted in traffic efficiencies and access challenges for businesses along this highway segment. Incomplete or absent sidewalks, ramps, and other connectors and amenities for pedestrians and bicyclists also present access and safety concerns. Beyond the Highway 18 corridor, the Village Planning Area contains a mix of commercial, service and quasi-industrial uses and vacant lands. Non-motorized access within the Planning Area is negatively affected by discontinuous sidewalks, incomplete street improvements, and limited access to transit. The entire Planning Area is inconsistent in its implementation of architectural standards, landscape treatment and limited public space. The purpose of the Apple Valley Village Specific Plan is to guide the future development and redevelopment of lands within the Village, and improve the character of the area for the long term economic health of land and business owners, and the visitor experience.

## **B. Project Description**

The Village Specific Plan (proposed Project) will guide the long-term development and redevelopment of the Planning Area. It revises the current land use plan in the context of five (5) planning districts and establishes development guidelines tailored to each district. The Project is intended to enhance the Village's identity as a unique downtown shopping and dining destination, guide future development of vacant parcels and redevelopment of underutilized parcels, and protect and expand residential neighborhoods with guidelines that scale down development at the periphery of the Village. Its transportation concept improves the functioning of Highway 18 and Yucca Loma/Navajo Roads in the Planning Area by minimizing traffic conflicts, integrating multimodal facilities and amenities, and improving access through a more efficient and safer circulation system.

## **C. Environmental Setting and Surrounding Land Uses**

The Project Planning Area is on the relatively flat desert floor of Apple Valley. The Mojave River is 3.5± miles to the west and the nearest hills and mountains are 2 to 5± miles to the north, east, and south.

The Planning Area is in the Town's urban core, and approximately 58% of the Planning Area is developed. Most structures in the Village were built in the post-World War II era, and some are vacant or appear to have been abandoned. Newer fast food and inline retail development on the Highway 18 frontage is in the westerly Planning Area. Development beyond the Highway 18 corridor consists of service commercial and light industrial uses, such as tool and machinery workshops, auto salvage yards, and self-storage units, as well as three (3) mobile home parks and a mix of single- and multi-family dwelling units. It also includes several community facilities: a large park, community center, gymnasium, animal shelter, post office, and municipal corporate yard. The northeasterly Planning Area contains newer public and quasi-public facilities, including a fire station, water agency offices, and a County public services building. The Planning Area includes 274± acres of vacant land, with the largest undeveloped parcels in the northeast portion of the Planning Area.

Surrounding the Planning Area is residential, commercial, and institutional development. Large parcels of undeveloped land are to the south and northeast.

Highway 18 provides connections to Victorville and other high desert communities to the northwest, and Lucerne Valley and the Morongo Basin to the southeast. East-west access on the north side of the Highway in the Planning Area is limited; on the south side, east-west access is provided by Powhattan and Ottawa Roads; and north-south

access occurs about every ¼ mile, at (from west to east) Navajo Road, Pawnee Road, Quinnault Road and Central Road. These roadways are signalized at Highway 18. North of the Highway, north-south access is also provided by Valley Drive. Two new intersections at the Highway are proposed as part of the Specific Plan: the realigned Yucca Loma Road on the west boundary of the Planning Area; and Headquarters/Hitt Road at the eastern end of the Planning Area.

## **D. Areas of Potential Environmental Concern**

### **Introduction**

The attached Initial Study has been prepared for the proposed Specific Plan in accordance with the California Environmental Quality Act (CEQA). Implementation of the proposed Project may have impacts on important environmental resources and may be affected by potential environmental hazards. These areas of potential environmental concern have been identified and are briefly described below and in the Initial Study. A more in-depth analysis of each of these areas of concern will be provided in the EIR being prepared for the Project.

### **Aesthetic Resources**

Apple Valley consists of a high elevation desert valley with the Mojave River to the west, Ord Mountains to the south, Bell Mountain to the north, and Fairview Mountain to the northeast. From the Planning Area, views of the mountains are distant as they are several miles away. The Specific Plan proposes new and revised land uses, design guidelines, and circulation concept that could impact scenic views in some locations. Future development could have a potentially significant impact on light or glare levels and should be considered in project design and analyzed in the EIR.

### **Air Quality**

In general, air quality in Apple Valley is good. However, continued regional urbanization in the past few decades has contributed to the degradation of the air quality due to population growth, increased traffic, construction activities, and other site disturbances. Ozone, PM10, and PM2.5 are pollutants of concern in Apple Valley. The Mojave Desert Air Basin (MDAB) has a history of exceeding regulatory ozone standards and is designated as a non-attainment area for PM10, a non-attainment area for the state PM2.5 standard, and an attainment/unclassifiable area for the national PM2.5 standard. The Planning Area is in a region identified in the Apple Valley General Plan as susceptible to wind erosion, conditions which can contribute to elevated PM10 and PM2.5 levels.

### **Biological Resources**

The proposed Project would facilitate development of undeveloped lands that may harbor bird species protected under the Migratory Bird Treaty Act (MBTA) or other sensitive species. The Planning Area is within the boundaries of the Apple Valley Multispecies Habitat Conservation Plan/Natural Community Conservation Plan (MSHCP/NCCP) which has been drafted and for which a Notice of Preparation of an Environmental Impact Report (EIR) was issued in April 2021. Upon approval, the MSHCP/NCCP will guide the Town's conservation efforts and streamline the environmental permitting process. The Project area is also within the boundaries of the West Mojave Plan, a habitat conservation plan that currently applies only to federal land. The forthcoming EIR will determine whether and to what extent buildout of the Specific Plan will conflict with the MSHCP/NCCP and West Mojave Plan, and further evaluate the potential for development facilitated by the Specific Plan to adversely affect sensitive biological resources.

### **Cultural Resources**

The prehistory of the Mojave Desert extends back to 8,000 B.C. or earlier. Local archaeological sites typically occupy sheltered areas on or near hills, terraces, and ridges near reliable sources of water. Historic-era buildings and resources associated with permanent settlement of the area also occur in the area, including post-World War II structures in the Village. The proposed Specific Plan facilitates future development and improvements that could result in disturbance to or destruction of sensitive cultural resources or sites in the Planning Area. Potential Project-related impacts will be part of the EIR analysis.

### **Energy**

Buildout of the Specific Plan will increase the consumption of electricity, natural gas, and fossil fuels associated with vehicle use. However, the Specific Plan will incorporate and promote sustainable building and landscape design, synergistic land use planning, and multimodal circulation improvements that reduce energy consumption. The Project is not expected to result in significant impacts resulting from wasteful, inefficient, or unnecessary consumption of energy resources. Nonetheless, the EIR will evaluate potential Project-related impacts and incorporate appropriate mitigation measures, as necessary.

### **Geology/Soils**

The Planning Area is in a seismically active region. The nearest faults are the Helendale (South Lockhart) and North Frontal (West) faults, which are capable of generating moment magnitude 7.3 and 7.2 earthquakes, respectively. The Planning Area would be exposed to strong ground shaking during a major quake on nearby faults, with associated potential for ground failure during such events. Local soils are also highly susceptible to wind and water erosion. The forthcoming EIR will evaluate the geotechnical conditions in the Planning Area and potential impacts resulting from buildout of the proposed Specific Plan.

### **Greenhouse Gas Emissions**

Air quality emissions include greenhouse gases (GHG) that contribute to climate change and global warming. Buildout of the proposed Project will increase GHG emissions, but is also expected to promote more energy efficient buildings, HVAC systems, and renewable, non-polluting energy systems in the form of solar photovoltaic systems. Air quality constraints and potential adverse (and beneficial) impacts of Project implementation on air quality, including those associated with GHGs, will be further assessed in the EIR.

### **Hazards and Hazardous Materials**

Existing development in the Project Planning Area includes commercial enterprises, gasoline service stations, auto yards, wood and metal workshops, restaurants, and other potential generators of hazardous materials. Comparable development and additional residential development would be facilitated by the proposed Project. The Specific Plan land use plan allows residential, commercial, and other development that can be expected to use and store limited quantities and types of potentially hazardous materials, such as cleaning chemicals, solvents, gasoline, and oils. Individual developments may be required to implement appropriate avoidance, minimization, and mitigation measures to address potential impacts. Potential impacts should be further evaluated in the EIR.

### **Hydrology and Water Quality**

Drainage in the Planning Area flows from southwest to northeast, generally, and currently is captured in and incomplete drainage system. The proposed Project will facilitate development and redevelopment projects that will result in grading, excavation, construction, paving, and other modifications to the ground surface. Such activities could affect erosion, siltation, surface runoff, and flood flows within and adjacent to the Planning Area. Appropriate best management practices and stormwater treatment during construction and in the post-construction period must be demonstrated for future development and will be further analyzed in the forthcoming EIR.

### **Land Use and Planning**

The proposed Specific Plan generally maintains the basic land use distribution envisioned in the General Plan but revises some land use acreages and development and redevelopment opportunities. The Specific Plan will require a General Plan Amendment to change all current General Plan land use designations to “Village Specific Plan.” It will require a Zone Change to change current zoning designations in the Planning Area to proposed Districts 1 through 5 (see attached CEQA Initial Study). It will supersede certain provisions or regulations of the Town’s Development Code as applied to the Planning Area but is also designed to be compatible with surrounding existing and planned land uses. Conflicts between the Specific Plan and other land use plans and policies could cause environmental impacts, and therefore, should be evaluated in the forthcoming EIR.

### **Noise**

Long-term operation of projects facilitated by the Specific Plan could result in permanent increases in ambient noise levels in the Planning Area and surrounding area. However, proposed land uses are consistent with the existing urban commercial and residential environment, and noise sources and levels are expected to be similar to those already experienced in the Planning Area, which are governed by the Town's noise ordinance. Future development projects may require site-specific noise monitoring and modeling for both construction and post-construction periods conducted at locations surrounding project sites, including in proximity to sensitive receptors. Impacts may be less than significant with appropriate mitigation. The forthcoming EIR will further evaluate potential noise impacts associated with the proposed Project.

### **Population and Housing**

The Apple Valley population is estimated to be 74,350 in 2021, and SCAG projects it will grow to 101,400 by 2045. There are currently approximately 289 dwelling units and 850 residents in the Specific Plan Planning Area. The proposed Project will facilitate new planned residential development in the Planning Area that would directly result in population growth, and new commercial development with job opportunities that could attract additional residents to the area. The Planning Area is well-served by existing roads and water infrastructure, although parcel-scale extensions and improvements may be required as development occurs. Existing sewer infrastructure reaches much of the Planning Area, but future extensions will be required to serve the entire area. The Project facilitates the redevelopment of underutilized parcels in the Planning Area that could result in demolition of existing housing, the loss of which is anticipated to be made up with new residential development in the Planning Area. The EIR will estimate the buildout population in the Planning Area and compare it to projections to further evaluate potential population growth impacts.

### **Public Services and Facilities**

Buildout of the proposed Specific Plan would increase the need for fire, police, school and other public services, although the potential increase in demand for these services is not expected to exceed capabilities or capacities or require new or physically altered facilities that could cause significant environmental impacts. Nonetheless, the need for augmented public services and facilities will be further evaluated, and the impacts will be addressed in the EIR.

### **Recreation**

Buildout of the proposed Specific Plan will result in population growth in the Planning Area that could increase the use of existing parks and recreational facilities. However, this potential increase is not expected to result in substantial physical deterioration of these facilities. The Specific Plan provides opportunities for future residential developments to include parks and/or recreational facilities, such as swimming pools, gyms, and sports fields. The EIR will further evaluate potential Project-related impacts.

### **Transportation**

The proposed Specific Plan includes new transportation concepts for Highway 18 and Yucca Loma/Navajo Roads in the Planning Area, including the reconfiguration of Highway 18 frontage roads, potential for installation of new roundabouts and parking spaces, and incorporation of a complete multimodal network of walkways and connectors. Proposed land use designations and densities could also impact traffic volumes and intersection operations. Proposed improvements are anticipated to have net positive impacts on circulation efficiency, access, and safety. The extent to which these may conflict with (or enhance) a program, plan, ordinance, or policy is currently unknown. A traffic impact analysis will be prepared to further analyze the potential effects of the proposed Specific Plan on local circulation plans, as well as transit and other alternative modes of travel. Potential impacts and the need for mitigation measures will be further analyzed in the EIR.

### **Tribal Cultural Resources**

Implementation of the proposed Project will facilitate grading, excavation, and other ground disturbing activities that could impact tribal cultural resources if they occur on a project site. The proposed Project involves a General Plan Amendment and adoption of a Specific Plan. Therefore, consistent with AB 52 and SB 18, the Town will solicit input from the California Native American Heritage Commission and initiate consultation with appropriate tribes, notifying them of the Project. Site-specific cultural resource studies may be required for future development projects facilitated by the Project. The EIR will analyze potential Project-related impacts and provide mitigation measures, as appropriate.

### **Utilities and Service Systems**

The Planning Area is well-served by water and energy transmission lines, although parcel-scale extensions and/or upgrades may be required to serve future development. Sewer lines are available to much of the Planning Area; future development in proximity to sewer infrastructure will connect and increase the demand for wastewater treatment services. Future development not in proximity of sewer infrastructure will rely on septic systems, with the potential for future sewer connection. Buildout of the Specific Plan will increase water consumption and solid waste generation, but the extent to which these impacts will affect utility and service systems is currently unknown. Potential Project-related impacts will be analyzed in the EIR and mitigation measures will be provided, as appropriate.

## PROJECT DESCRIPTION

The Village Specific Plan Planning Area includes 651± acres north and south of the State Highway 18 corridor in the east central portion of the Town of Apple Valley (Exhibits 1 through 3). It includes the historic Village corridor and surrounding lands. The historic Village corridor generally extends along Highway 18 between Navajo and Central Roads; it was once the Town’s primary commercial center and is developed with locally owned retail, service, and restaurant establishments. Surrounding lands include service commercial and residential development and community facilities.

The Village Specific Plan (proposed Project) guides the long-term development and redevelopment of the Planning Area. It revises the current land use plan by establishing five (5) planning districts, each with its own land uses, development standards, and guidelines that are tailored to the district’s existing uses, development potential, and community vision. The Specific Plan is intended to enhance the Village’s identity as a downtown shopping and dining destination, guide future development of vacant parcels and redevelopment of underutilized parcels, and protect and expand residential neighborhoods with guidelines that scale down development at the periphery of the Village. It expands the mix of land uses to serve local and sub-regional markets while also preserving small-scale and locally owned businesses. It coordinates various aspects of infrastructure planning, infill development, and lot consolidation, where appropriate. Its transportation concept improves the functioning of Highway 18 in the Planning Area by minimizing traffic conflicts, integrating multimodal features, and improving access to provide an efficient and safe circulation system. Its vision and development standards and guidelines are consistent with General Plan goals and policies.

Table 1 summarizes changes to the Planning Area resulting from Specific Plan buildout. As shown, buildout of the Specific Plan would result in a total of 971 dwelling units and 7,890,903 square feet of commercial, service, office, and public facility development.

**Table 1**  
**Summary of Specific Plan Buildout**

	Residential (dwelling units)	Commercial/Service/ Office/Public Facility (square feet)	Population <sup>1</sup>
Existing	289	1,823,380	850
Potential new facilitated by Specific Plan	682	6,067,523	2,005
Total at Specific Plan Buildout	971	7,890,903	2,855

<sup>1</sup> Based on 2.94 persons per household, California Department of Finance Table E-5, January 1, 2021.

### Districts

For planning purposes, the Specific Plan divides the Planning Area into five (5) districts, described below and shown in Exhibit 4. Table 3 describes proposed land uses and buildout estimates by district. Buildout estimates assume that underutilized acreage will be redeveloped to maximize its development potential.

#### *District 1: Village Core*

District 1 is the heart of downtown and plays a significant role in establishing the Village identity. This centralized District is anchored by Highway 18 and totals 183.55 acres, of which 59.64 acres are developed, 16.33 acres are underutilized, and 107.58 acres are vacant and developable. District 1 is envisioned as the primary commercial and entertainment district, with development primarily oriented towards Highway 18 to support the corridor’s function as a downtown “main street.” The development of District 1 is intended to create

a vibrant pedestrian environment through outdoor dining, interesting store displays, architectural detailing, public art, gathering spaces, and other pedestrian-oriented features. The flexibility of development standards in this District also promotes both vertical and horizontal mixed-use developments within walking distance of the downtown.

#### *District 2: Village Services South*

Located south of District 1, District 2 is the largest of the five districts totaling 210.98 acres, of which 95.78 acres are developed, 23.78 acres are underutilized, and 91.42 acres are vacant and developable. This District is one of two commercial service districts in the Planning Area that supports a mix of commercial retail, office/professional, and commercial services. Compared to the northern commercial service district (District 3), District 2 is further removed from residential uses which increases opportunities for quasi-industrial uses that may require a large production area or storage yards. District 2 also includes Powhattan Road which is intended to serve as a secondary thoroughfare to Highway 18 and will be improved with landscaping and pedestrian infrastructure that provides safe connection to District 1 from southern businesses and residential areas.

#### *District 3: Village Services North*

District 3 is the second commercial service district and encompasses 88.24 acres north of District 1, of which 28.87 acres are developed, 11.06 acres are underutilized, and 48.31 acres are vacant and developable. Similar to District 2, this District supports a mix of retail, office/professional and commercial services with immediate access to the Village core. However, this District is bounded on the north and west by single family residential neighborhoods that may be sensitive to certain types of non-residential land uses due to noise, odor, and visual impacts. Development of this District will demonstrate how to properly transition non-residential uses to residential uses through thoughtful design and development standards.

#### *District 4: Residential and Recreation*

District 4 is in the southwest corner of the Planning Area totaling 50.28 acres, of which 40.10 acres are developed, 7.20 acres are underutilized, and 2.98 acres are vacant and developable. Development of this District demonstrates how to enhance the connections between existing residential uses and public parks and other services. This District also provides examples of redevelopment opportunities that increase residential densities through lot consolidation, and bring residents closer to jobs and shopping opportunities in District 1 and District 2.

#### *District 5: Residential*

District 5 totals 23.28 acres and is the only District that is entirely vacant. Uses surrounding this District include single family residential to the north, vacant lands to the east, and District 3 to the south and west. This District is intended for higher density residential and supporting public services, such as parks and schools. In consideration of surrounding uses, District 5 development standards are designed to create a buffer between low density residential to non-residential uses by smoothly transition from lower densities to the north to higher densities to the south and east. Types of residential uses envisioned for this District includes townhomes, condominiums, and low-rise apartments.

### Circulation Improvements

The Specific Plan proposes the following circulation improvement concepts (Exhibit 5).

#### *Highway 18 (Central Road to Navajo Road)*

The Highway 18 corridor between Central and Navajo Roads currently consists of a 4-lane highway with two (2) two-way frontage roads that separate high-speed through traffic from local traffic accessing commercial sites. Multimodal facilities (sidewalks, ramps, bike lanes, pedestrian amenities) are incomplete or absent. This configuration has resulted in inefficient intersection movements, access challenges, and safety concerns. The Specific Plan circulation concept reconfigures the frontage roads to single-directional single-lane roadways and

provides angled parking along most of the highway frontage. Two new intersections are proposed, at Yucca Loma and Highway 18, and at Headquarters/Hitt Road and Highway 18. The circulation concept includes two options: it either results in roundabouts at the intersections of Highway 18 and Central Road, Hitt Road/Headquarters Drive, Quinnault Road, Pawnee Road, and Navajo Road; or the continuation of signalized intersections at these locations, with improved crosswalks and access, to the extent possible. It provides a complete sidewalk network and buffered bike lanes. Where Quinnault Road is offset at Highway 18, a dogleg option is proposed on the north side of the Highway.

#### *Realignment of Yucca Loma Road and Navajo Road*

The existing intersection of Yucca Loma and Navajo Roads is immediately south of the signalized intersection of Navajo Road and Highway 18, which can lead to confusing and dangerous turning maneuvers. Under the proposed Specific Plan concept, Yucca Loma intersects with Highway 18 at a new intersection (whether roundabout or signalized) west of Navajo Road, and terminates at Navajo Road north of Highway 18. Between Navajo Road and Algonquin Road, land currently required for Yucca Loma will be available for development, and for a multi-use trail which will connect to the existing multi-use trail to the west of the Planning Area.

#### *Complete Street Improvements*

The Specific Plan also promotes the concept of “complete streets” throughout the Planning Area, by designating a hierarchy of non-vehicular improvements, ranging from off-street bike lanes to sidewalks and public spaces. The vision of the Specific Plan is to allow all types of movement through the area, not only the current vehicle-focused transportation system currently in place, by assuring the completion of sidewalks, trails and alleys that allow safe non-vehicular access for pedestrians, bikes and other alternative transportation.

#### General Plan Amendment

Specific Plan approval will require a General Plan Amendment (GPA). Current General Plan land use designations in the Planning Area include General Commercial (C-G), Service Commercial (C-S), Mobile Home Park (MHP), Medium Density Residential (R-M), Estate Residential (R-E), Public Facilities (P-F), and Open Space (O-S). The proposed GPA will change all General Plan designations in the Planning Area to “Village Specific Plan.”

#### Zoning Change

Specific Plan approval will require a Zone Change. Table 2 summarizes existing land uses by current zoning designation. Current zoning designations include General Commercial (C-G), Service Commercial (C-S), Village Commercial (C-V), Mobile Home Park (MHP 5-15 du/ac), Multi-Family Residential (R-M 4-20 du/ac), Estate Residential (R-E 1 du/1 to 2.5 gross ac), Public Facilities (P-F), and Open Space-Recreation (OS-R). The Zone Change will change current zoning designations in the Planning Area to Districts 1 through 5 (described above and shown in Exhibit 4).

#### **Current Conditions**

Highway 18 connects the Village with Victorville and Interstate-15 on the west and Lucerne Valley, the Big Bear area, and the Morongo Basin on the east. In the Specific Plan area, Highway 18 (Happy Trails Highway) consists of a 4-lane divided arterial with two 2-way frontage roads known as Outer Highway 18- North and Outer Highway 18-South. The frontage roads separate high-speed through traffic from local traffic accessing businesses and other land uses, but they create complex intersections and long intersection crossing distances that present safety and maneuverability challenges for vehicles, pedestrians, and bicyclists. The Specific Plan area is served by transit but lacks complete, connected sidewalks and other multimodal facilities.

The Highway 18 frontage is one of the Town’s principal commercial corridors. Commercial land uses include restaurant, retail, and service establishments, such as gas stations, furniture and antique stores, auto parts stores, pharmacies, banks, and dental and real estate practices. Commercial development is more extensive on the north

side of the highway than the south side, in part due to deeper lot configurations. Buildings are generally single-story, free-standing units built in the post-World War II era. Most parcels have their own driveway and parking lot, although newer fast food and inline retail development with large, shared parking lots are in the western Planning Area. Some buildings are vacant or appear to have been abandoned. The Apple Valley Mobile Home Lodge is on the south side of Highway 18, east of Hitt Road.

The area north of the Highway 18 commercial core is partially developed. Pioneer Road includes light industrial warehouses, wood shops, and self-storage units, as well as the Pioneer Mobile Home Park and Casa Colina, a long-term residential treatment facility. The south side of Arapahoe Avenue is developed with multi-family and a few single-family dwelling units. The vicinity of Central Road and Headquarters Drive is developed with newer public and quasi-public facilities, including the Mojave Water Agency, Fire Station No. 1, and B.E.S.T Opportunities, Inc. which provides support services for individuals with developmental disabilities.

South of the Highway 18 commercial core is a mix of service commercial, residential, and community facilities. Service commercial warehouse-style buildings contain tool and machinery workshops, auto salvage, and vehicle storage yards. Residential development includes multi-family and a few single-family dwelling units along Navajo and Powhatan Roads. Apple Valley Ranchos Mobile Home Park is on Ottawa Road, and the Apple Valley Mobile Home Lodge extends south of Highway 18. Community facilities include a large municipal park, community center, gymnasium, animal shelter, post office, and the Town's corporate yard and Household Hazardous Waste facility. Liberty Utilities offices and vehicle yard are in the southwest corner of the Planning Area.

The Specific Plan area includes 274± acres of vacant land. Vacant parcels are scattered throughout, with the largest parcels generally north of Highway 18 and east of Valley Drive.

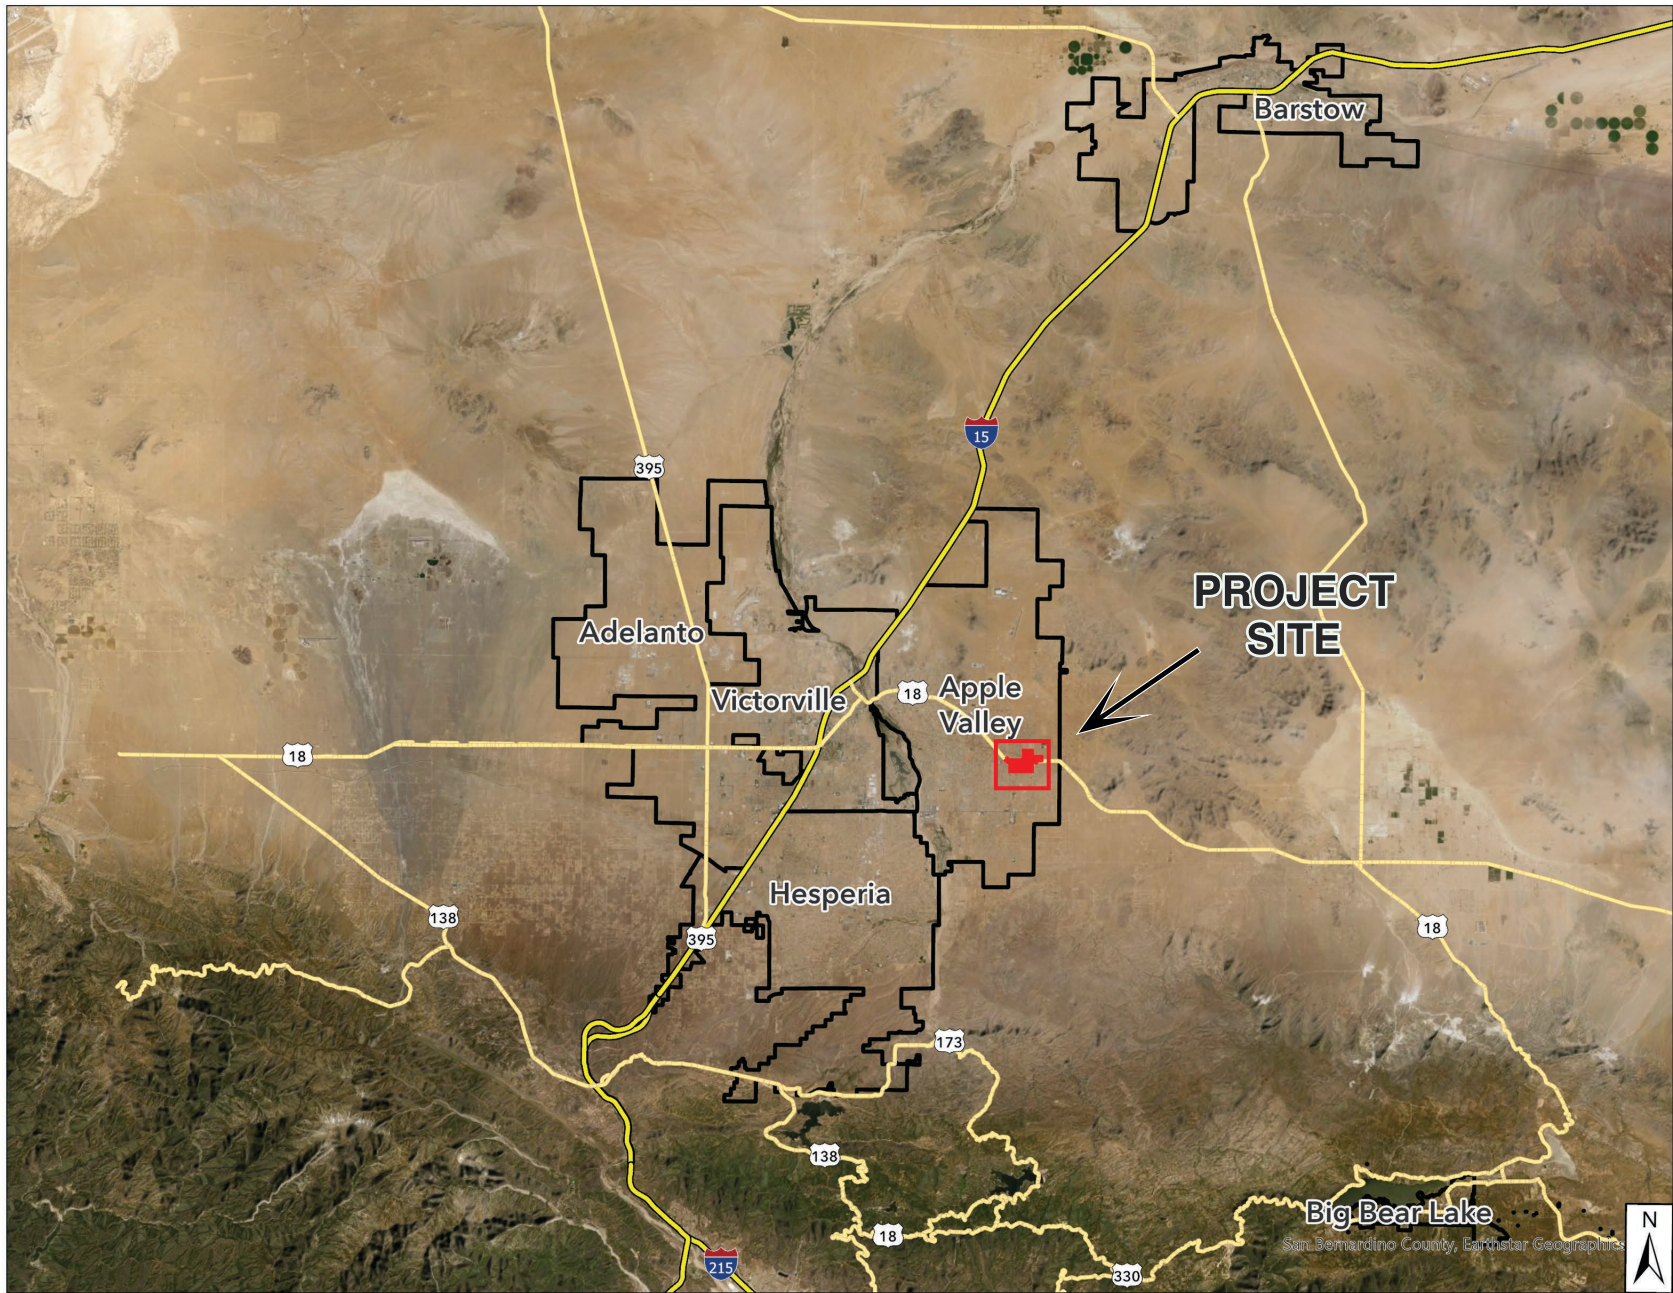

### **Project Location and Limits**

The Planning Area is in the east central portion of the Town of Apple Valley in San Bernardino County, in portions of Sections 21, 22, 23, 26, 27, and 28, Township 5 North, Range 3 West, SBB&M (see USGS Apple Valley North and Apple Valley South 7.5-minute quadrangle maps). It extends north and south along a 1.5± mile segment of State Highway 18 and is generally bounded by Arapahoe and Esaws Avenues on the north, Ottawa Road on the south, Central Road on the east, and the realigned Yucca Loma and Navajo Road on the west. It includes additional contiguous parcels on the east and west. Location maps are provided on Exhibits 1, 2, and 3.

### **Surrounding Land Uses**

West: single- and multi-family residential and commercial development, State Highway 18  
North: single- and multi-family residential development, undeveloped parcels  
South: single- and multi-family residential development, mobile home park, church, undeveloped parcels  
East: single-family development, undeveloped parcels, State Highway 18

Land Use Total Acres:	224.40	58.36	282.76	273.57	556.33	---	---	---	---	---	---	---	---
Street ROW Total Acres:	94.82	0	94.82	0	94.82	---	---	---	---	---	---	---	---
<b>Grand Total:</b>	<b>319.22</b>	<b>58.36</b>	<b>377.58</b>	<b>273.57</b>	<b>651.16</b>	<b>289</b>	<b>186</b>	<b>705</b>	<b>971</b>	<b>1,823,380</b>	<b>1,068,821</b>	<b>5,190,416</b>	<b>7,890,903</b>

Estimates based on a number of sources, including Google Earth, ESRI, San Bernardino County Assessor, and Town housing data.

Potential uses for vacant and/or underutilized acres assumes District 1 is mixed use residential and commercial/service uses (see footnote 1), Districts 2 and 3 are all commercial/service uses, and Districts 4 and 5 are residential uses.

<sup>1</sup> For District 1, assumes the west end signature project (Franklin, 5 parcels, approx. 8.38 acres categorized as “underutilized”) will develop 25% residential (2.095 acres) and 75% commercial (6.285 acres), the east end signature project (60 acres, all vacant land) will develop 15% residential (9 acres) and 85% commercial (51 acres), and remaining underutilized acreage will develop as commercial. Combined, the west and east end signature projects are 11.09 acres residential and 57.29 acres commercial.

<sup>2</sup> Future residential development potential assumes maximum density of 20 DU/AC.

<sup>3</sup> Commercial development potential assumes existing development has occurred at maximum allowed Floor Area Ratio (FAR) of 0.5 (acres x 43,560 sf x 50%).

<sup>4</sup> Underutilized acres currently have either commercial/retail/service square feet or residential units on site. Redevelopment of underutilized sites assumes all existing square feet or units would be removed from that site. For scenarios where underutilized acres are redeveloped, the total square feet or residential units is the sum of existing + underutilized + vacant – existing underutilized square feet or units.

<sup>5</sup> Existing mobile home parks are planned to be redeveloped as either commercial space or multi-family units. No new MHP are proposed.

<sup>6</sup> District 4 Residential. 2.51 acres of underutilized lands contain 15 dwelling units, and 7.76 acres of developed lands contain 42 dwelling units. 15 units were manually removed from the "Total Units w/ Underut. Redeveloped" column.

## EVALUATION OF ENVIRONMENTAL IMPACTS:

### ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

Top of Form

<input checked="" type="checkbox"/>	Aesthetics	<input type="checkbox"/>	Agriculture and Forestry Resources	<input checked="" type="checkbox"/>	Air Quality
<input type="checkbox"/>	Biological Resources	<input type="checkbox"/>	Cultural Resources	<input type="checkbox"/>	Energy
<input type="checkbox"/>	Geology /Soils	<input checked="" type="checkbox"/>	Greenhouse Gas Emissions	<input type="checkbox"/>	Hazards & Hazardous Materials
<input type="checkbox"/>	Hydrology / Water Quality	<input checked="" type="checkbox"/>	Land Use / Planning	<input type="checkbox"/>	Mineral Resources
<input type="checkbox"/>	Noise	<input type="checkbox"/>	Population / Housing	<input type="checkbox"/>	Public Services
<input type="checkbox"/>	Recreation	<input checked="" type="checkbox"/>	Transportation	<input type="checkbox"/>	Tribal Cultural Resources
<input type="checkbox"/>	Utilities / Service Systems	<input type="checkbox"/>	Wildfires	<input checked="" type="checkbox"/>	Mandatory Findings of Significance

**DETERMINATION:** (To be completed by the Lead Agency)  
On the basis of this initial evaluation:

<input type="checkbox"/>	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
<input type="checkbox"/>	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
<input checked="" type="checkbox"/>	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
<input type="checkbox"/>	I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
<input type="checkbox"/>	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

 Signature: Daniel Alcayaga, Planning Manager Town of Apple Valley	11/17/21 Date:
---	-------------------

1. AESTHETICS – Except as provided in Public Resource Code Section 21099, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Apple Valley Development Code, as amended; California State Scenic Highway System Map and List, Caltrans.

### Background

The topography of Apple Valley is characterized by a gently sloping desert floor with mountains, peaks, hillsides, and knolls primarily to the north, south, and east. The most scenic vistas are of the Ord Mountains to the south, the summit of Bell Mountain (3,852 feet above sea level) to the north, and the summit of Fairview Mountain (4,288 feet above sea level) to the northeast. Mountainous areas are comprised of a variety of rock formations and a diversity of vegetation that contribute to the scenic value of the region. In some areas, the Mojave River is surrounded by mountains, hillsides, and riparian areas that are considered scenic resources.

- a) **Less Than Significant Impact with Mitigation.** The Specific Plan Planning Area is more than two miles from the nearest mountains and four miles from the Mojave River and, therefore, scenic vistas are at a distance. The proposed Specific Plan will include new and revised land use designations and design guidelines addressing landscaping, architecture, circulation, and other elements of the built environment. Development in accordance with the Specific Plan could potentially impact scenic views in some locations. The EIR will evaluate the potential impacts of the proposed Project on scenic vistas. Mitigation measures may be necessary, as determined in the EIR analysis.
- b) **No Impact.** State Highway 18 in the Specific Plan Planning Area is not designated as a state scenic highway, and there are no notable rock outcroppings, trees, or other scenic resources in the Planning Area. Therefore, no impact will occur, and no further discussion of this issue is required in the EIR.
- c) **Less Than Significant Impact.** The Project Planning Area is largely urbanized but includes some large undeveloped parcels. The Specific Plan will include development standards and guidelines pertaining to visual and scenic resources that are specifically tailored to development in the Planning Area, and they will vary from those in the Development Code. However, they will be consistent with the Town's vision for protecting and enhancing visual resources, as set forth in the Apple Valley General Plan, and are expected to have a net positive impact on the visual quality of the Planning Area. The potential effects of the Specific Plan will be further analyzed in the EIR.

- d) **Potentially Significant Impact.** It is uncertain whether or to what extent the proposed Project may result in substantial and potentially adverse impacts associated with light or glare. The potential effects of the Specific Plan and the potential need for mitigation measures will be further analyzed in the EIR.

<b>2. AGRICULTURE AND FORESTRY RESOURCES</b> -- In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Apple Valley Development Code, as amended; California Department of Conservation, Farmland Mapping & Monitoring Program, 2016.

### Background

The Town of Apple Valley contains no forest lands. Land historically used for agricultural purposes has trended toward animal keeping and equestrian activities. The Residential Agriculture (R-A, 1 du/2.5 gross acres) zoning designation allows the continued operation of agricultural uses in areas previously zoned for agriculture by the County in the Deep Creek area.

- a-e) **No Impact.** The Specific Plan Planning Area is largely urbanized but includes some undeveloped parcels. There are no forest lands in the Planning Area. There are no farmlands as designated by the General Plan Land Use Map and Zoning Map. There is no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as designated by the Farmland Mapping and Monitoring Program of the California Department of Conservation. The Planning Area is not covered by a Williamson Act contract. The Specific Plan will not affect forest lands or convert agricultural or forest lands to non-agricultural or non-forest uses. Therefore, it will have no impact on agricultural or forest resources.

3. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Sources: MDAQMD Rule Book; Apple Valley General Plan 2009.

### Background

The Town of Apple Valley is in the Mojave Desert Air Basin, for which air quality is regulated by the Mojave Desert Air Quality Management District. The proposed Specific Plan will establish development standards and guidelines that could result in building demolition and redevelopment, site grading, and new development that has the potential to impact air quality, including the emissions of particulates (PM<sub>10</sub>), ozone precursors, and other criteria pollutants.

- a) **Less Than Significant Impact with Mitigation.** The Town of Apple Valley is in the Mojave Desert Air Basin (MDAB) and subject to the rules and regulations imposed by the Mojave Desert Air Quality Management District (MDAQMD), including the MDAQMD Rule Book which describes the District's plan to achieve federal and State air quality standards set forth in federal and State Clean Air Acts. The proposed Specific Plan will be consistent with the goals and policies of the Apple Valley General Plan. Additionally, the proposed Specific Plan Planning Area can, with mitigation, be developed in such a manner that does not conflict with or obstruct implementation of the MDAQMD Rule Book. Nonetheless, this potential will be further analyzed in the forthcoming EIR.
- b, c) **Potentially Significant Impact.** An impact is considered potentially significant if concentrations of emissions exceed the State or Federal Ambient Air Quality Standards. The two primary pollutants of concern in the Mojave Desert Air Basin, including Apple Valley, are ozone (O<sub>3</sub>) and particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>).

Ozone (O<sub>3</sub>) is formed when byproducts of combustion react in the presence of ultraviolet sunlight. This process occurs in the atmosphere where oxides of nitrogen combine with reactive organic gases, such as hydrocarbons, in the presence of sunlight. Ozone is a pungent, colorless, toxic gas, and a common component of photochemical smog. Although ozone is produced within the MDAB, ozone pollutants are also transported by coastal air masses from the South Coast Air Basin, which contributes to occasionally high ozone concentrations in the MDAB. The air basin has a history of exceeding regulatory ozone standards.

Particulate Matter (PM<sub>10</sub> and PM<sub>2.5</sub>) consists of fine suspended particles of ten microns or smaller in diameter, and is the byproduct of road dust, sand, diesel soot, windstorms, and the abrasion of tires and brakes. The elderly, children, and adults with pre-existing respiratory or cardiovascular disease are most susceptible to the effects of PM. Elevated PM<sub>10</sub> and PM<sub>2.5</sub> levels are also associated with an increase in mortality rates, respiratory infections, occurrences and severity of asthma attacks, and hospital admissions. The MDAB is designated as a non-attainment area for PM<sub>10</sub>, a non-attainment area for the state PM<sub>2.5</sub> standard, and an attainment/unclassifiable area for the national PM<sub>2.5</sub> standard.

At this time, it is not known whether or to what extent development and improvements facilitated by the proposed Project will impact non-attainment criteria pollutants, or whether they will expose sensitive receptors to substantial pollutant emissions. An air quality analysis should be prepared to further evaluate the potential for significant levels of air pollutants related to the Specific Plan. Potential air quality impacts will be assessed in an air quality analysis and further documented in the forthcoming EIR.

- d) **Less Than Significant Impact with Mitigation.** Development and improvements facilitated by the proposed Project have the potential to result in short-term odors associated with operation of heavy equipment during grading, excavation, and other construction activities. However, construction-related odors would be temporary and quickly dispersed below detectable levels as distance from the construction area increases. During operation, development facilitated by the proposed Specific Plan may include restaurants and other uses that could emit odors. Impacts will be evaluated in the forthcoming EIR.

4. BIOLOGICAL RESOURCES -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Notice of Preparation of Environmental Impact Report (EIR) for the Apple Valley MSHCP/NCCP, Town of Apple Valley, April 2021.

### Background

Apple Valley is in the southwestern portion of the Mojave Desert and supports a range of natural vegetation communities and biological species, including endangered, threatened, and special status species. Development and improvements facilitated by the Specific Plan could result in building demolition, site grading, and new development that have the potential to impact biological resources in the Planning Area.

- a) **Less Than Significant with Mitigation.** Much of the Planning Area is developed and does not contain habitat suitable for special status species. However, vacant parcels may offer nesting sites for birds protected by the international Migratory Bird Treaty Act (MBTA) and/or habitat for other sensitive species. The potential for development and other improvements facilitated by the Specific Plan to directly or indirectly impact special status species, and the need for mitigation, will vary on a site-specific basis. With the implementation of species-sensitive development schedules and/or conducting pre-construction species surveys, as appropriate, future development facilitated by the Specific Plan is not expected to have a substantial effect on sensitive plant or wildlife species, federally listed species, or state species of concern, or their habitats. The proposed Project will not conflict with any local or regional plans, policies, or regulations, including those of the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS). Potential impacts to special status species will be evaluated further in the EIR.

- b) **Less Than Significant Impact.** There is no known riparian habitat or other sensitive natural community within the Planning Area. However, vacant land subject to runoff could potentially contain riparian habitat. Future development of these lands, as facilitated by the Specific Plan, could potentially impact such resources. Impacts to biological resources resulting from the proposed Project are expected to be less than significant. Nonetheless, this potential will be further assessed in the EIR.
- c) **Less Than Significant Impact.** Potential U.S. Army Corps of Engineers (USACE) and California Department of Fish and Wildlife (CDFW) jurisdictional waters and wetlands within the Town are typically limited to drainages of the Mojave River and Bell Mountain Wash. The Specific Plan Planning Area does not contain natural channel drainages or floodways such that future development facilitated by the Specific Plan could result in removal, fill, or interruption of these resources. However, potential impacts should be further evaluated in an EIR.
- d) **Less Than Significant Impact.** Much of the Specific Plan Planning Area is developed or surrounded by development and not used or suitable for a wildlife corridor, and it is not located within or adjacent to a known wildlife corridor. Undeveloped portions of the Planning Area, particularly larger parcels in the northeast, may be utilized as migratory corridors for the movement of wildlife, particularly migratory bird species protected under the MBTA, as discussed above in 4.a, above. However, wildlife movement between these areas may be prevented by existing development and barriers, including roads. The forthcoming EIR will further evaluate potential impacts and the need for mitigation.
- e, f) **Less Than Significant Impact.** The Apple Valley Multispecies Habitat Conservation Plan/Natural Community Conservation Plan (MSHCP/NCCP) has been drafted, and a Notice of Preparation of an Environmental Impact Report (EIR) was issued in April 2021. Upon approval, the MSHCP/NCCP will guide the Town's conservation efforts and streamline the environmental permitting process. The entire Town, including the Specific Plan Planning Area, is within the boundaries of the MSHCP/NCCP.

The Town, including the Specific Plan Planning Area, is also within the boundaries of the West Mojave Plan. The habitat conservation plan conserves and protects approximately one hundred (100) sensitive species and the natural communities of which they are a part and streamlines the environmental permitting process. Currently, the Plan applies only to federal land.

Future development and redevelopment facilitated by the proposed Project has the potential to adversely impact sensitive habitat in the area. The EIR will determine whether and to what extent buildout of the Specific Plan will conflict with applicable HCPs and Town policies protecting sensitive biological resources.

5. CULTURAL RESOURCES -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Historical/Archaeological Resources Sensitivity Assessment, The Village Specific Plan and EIR, Town of Apple Valley, California, CRM TECH, December 31, 2020.

### Background

The prehistory of the Mojave Desert extends back to 8,000 B.C. or earlier, and present-day Apple Valley is located near the boundary between the traditional territories of the Serrano and Vanyume peoples. Archaeological sites in the region are typically related to subsistence activities and contain fragments of metates, scrapers, and projectile points. The first permanent settlement in Apple Valley was a cattle ranch established in 1870. Sustained growth began in the post-World War II era with marketing campaigns that sold thousands of residential and commercial properties. The historic Village area, within the Specific Plan Planning Area, was one of the principal commercial districts in Town.

- a) **Less Than Significant Impact with Mitigation.** A historical and archaeological resources assessment was prepared for the Specific Plan Planning Area in 2020. It determined that the Specific Plan Planning Area contains two (2) sites that have been recorded in the California Historical Resources Information System. One has been demolished, and neither was determined to be eligible for the National Register of Historic Places of California Register of Historic Resources. Three (3) sites in the Planning Area have been designated as Historical Points of Interest by the Town. While potential impacts of the proposed Project on historical resources should be mitigatable, this potential should be further analyzed in the Project EIR.
- b) **Less Than Significant Impact with Mitigation.** Prehistoric sites in the Victor Valley typically occupy sheltered areas on or near hills, terraces, and ridges near reliable sources of water. Given the location of the Specific Plan Planning Area on the desert floor and its distance from the Mojave River, it is not likely to contain significant archaeological resources. No records of prehistoric or early historic resources in the Planning Area were found at the South Central Coastal Information Center, the cultural resource records repository for San Bernardino County. A search of the Sacred Lands File by the Native American Heritage Commission found the presence of unspecified Native American cultural resources in the Specific Plan vicinity; however, the nature and location of the resources were not disclosed. Future development in these areas, as facilitated by the proposed Project, could have the potential to uncover archaeological resources. Potential impacts will be analyzed and mitigation measures included in the EIR, as appropriate, to avoid or reduce potential impacts to sensitive archaeological resources.
- c) **Less Than Significant Impact with Mitigation.** The Planning Area is not known to contain cemeteries or other burial sites. However, the Planning Area contains undeveloped parcels, and the disturbance of soils for future development and improvements facilitated by the Specific Plan could lead to the discovery of human remains. The EIR will evaluate this potential and cite appropriate mitigation measures, including compliance with State law.

6. ENERGY -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Source: Apple Valley General Plan 2009; Apple Valley Climate Action Plan, 2019 Update.

### Background

Primary energy sources include non-renewable fossil fuels (oil, coal and natural gas), nuclear, and renewable sources such as wind, solar, geothermal, and hydropower. In addition to utility-provided electrical power, many homes and businesses are installing rooftop solar and storage, and new construction and renovation is required to conform to the State's strict green building code, which further ensures that energy resources are used economically and wisely. Both the regulatory environment and the economy have moved aggressively toward greater energy efficiency and reliance on non-polluting renewable resources.

The Apple Valley Choice Energy (AVCE) program, implemented in 2017, allows Town residents to receive energy with a higher renewable content than is currently provided by the franchised utility (Southern California Edison). The minimum renewable energy content for AVCE customers is 35%, and an alternate selection of 50% renewable energy content is available. The Town also promotes Net Energy Metering (NEM) for customers with rooftop solar by offering a premium buy-back rate that is nearly double the SCE rate.

- a) **Less Than Significant Impact.** The Specific Plan Planning Area is within the service boundaries of Southern California Edison (electric power) and Southwest Gas (natural gas) and is well-served by both providers. The region also receives high rates of solar insolation which is optimal for on-site solar-generated electricity. The proposed Project will incorporate and promote sustainable building design, including energy efficient buildings and structures that could potentially accommodate solar electric systems, as well as sustainable landscape design, synergistic land use planning, and multimodal circulation improvements that reduce energy consumption. The forthcoming EIR should analyze anticipated energy consumption by future development facilitated by the proposed Project and evaluate the effects of renewable systems where proposed.
- b) **No Impact.** The Specific Plan encourages and facilitates greater energy efficiency and the use of renewable energy resources. It will not obstruct implementation of a state or local plan for renewable energy or energy efficiency. No impact will occur, and no further discussion of this issue is required in the EIR.

7. GEOLOGY AND SOILS -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Apple Valley Village Corridor Enhancement Plan Drainage Study, David Evans and Associates, July 23, 2019; Apple Valley Local Hazard Mitigation Plan, 2017 Plan Update, Figures 4-5, 4-6.

### Background

The geologic structure of Apple Valley consists of gently sloping alluvial fans bounded by mountains on the north, east, and south. The wide floodplain of the Mojave River generally defines the western boundary. These features have been shaped by large active fault systems, including the North Frontal, Helendale, and San Andreas faults and fault zones. Some parts of the community are susceptible to seismically induced hazards, including liquefaction and slope instability, and other geologic hazards such as wind erosion.

- a) i. **No Impact.** No Alquist-Priolo Earthquake Fault Zones are mapped in the Town of Apple Valley or the Specific Plan Planning Area. Therefore, the Project will have no impact on risks associated with ground rupture due to an earthquake on an underlying fault, and no further discussion of this issue is required in the EIR.

- ii. **Less Than Significant Impact with Mitigation.** The Town of Apple Valley is in a seismically active region. The nearest faults are the Helendale (South Lockhart) and North Frontal (West) faults, which are capable of generating moment magnitude 7.3 and 7.2 earthquakes, respectively. Numerous other faults in the region, including the San Andreas (Whole Southern) and Lenwood-Lockhart-Old Woman Springs faults, also have the potential to produce strong ground shaking in Apple Valley. The Specific Plan Planning Area would be exposed to strong ground shaking during a major quake on nearby faults and could expose people and structures to risks associated with strong seismic ground shaking. The forthcoming EIR should consider site and building design and engineering that mitigates the ground shaking threat in the area.
  - iii. **Less Than Significant Impact With Mitigation.** Ground failure can take the form of liquefaction, landsliding (see 7.a.iv, below), and lateral spreading (see 7.c, below). Seismically induced liquefaction is possible where near-surface alluvial sediments become saturated from persistent seasonal precipitation or excessive irrigation and are subjected to strong ground shaking. The Apple Valley General Plan (Exhibit IV-2) shows the Specific Plan Planning Area is not susceptible to liquefaction. Nonetheless, development facilitated by the Specific Plan could alter the exposure of people to risks associated with other forms of ground failure. The forthcoming EIR should assess this risk and may require mitigation measures to reduce risks to less than significant levels.
  - iv. **No Impact.** The Apple Valley General Plan (Exhibit IV-2) indicates that the Specific Plan Planning Area is not susceptible to landslide or slope instability. The Planning Area is relatively flat and slopes gently with an average slope of 0.4% from southwest to northeast (“Apple Valley Village Corridor Enhancement Plan Drainage Study,” David Evans and Associates, July 23, 2019). The nearest hillsides and slopes are approximately two (2) miles to the west and east. Therefore, the proposed Project will not expose people to landslide or slope instability risks. No impact will occur, and no further discussion is required in the EIR.
- b) **Less Than Significant Impact with Mitigation.** According to the General Plan, Apple Valley and the Specific Planning Area are susceptible to wind erosion. Future development and improvements facilitated by the Specific Plan will involve ground disturbance, which has the potential to increase soil erosion. Contractors will be required to implement project-specific dust control management plans as part of the grading permit process to minimize potential impacts caused by blowing dust and sand during construction. At buildout, the Planning Area will include new structures, paved roads and parking areas, new landscaping, and otherwise stabilized surfaces, which will help resist erosion. Potential impacts of the Specific Plan and mitigation measures, where appropriate, will be set forth in the EIR.
- c) **Less Than Significant Impact with Mitigation.** The Specific Plan Planning Area is not susceptible to liquefaction or landslide (see 7.iii and 7.iv, above). However, development and improvements facilitated by the Project could increase other hazards associated with unstable soils. According to the General Plan, subsidence studies determined that no ground subsidence has been detected in Apple Valley. Collapsible soils typically occur when recently deposited soils, such as alluvial and aeolian sand and silt, are saturated by flooding, irrigation, or a rise in the groundwater table. The risk of collapsible soils and settlement in the Planning Area can depend on site-specific characteristics. These potential hazards should be evaluated on a site-specific basis as part of geotechnical studies for future development. Mitigation can be accomplished through a variety of design, engineering, and construction methods. Building and seismic code requirements assure that the potential impact associated with unstable soils is reduced to less than significant levels through thoughtful site planning, and conventional site preparation techniques such as over-excavation, hydroconsolidation, and compaction. Potential risks should be further evaluated in the EIR.

- 
- d) **Less Than Significant Impact with Mitigation.** The Specific Plan Planning Area is underlain by young alluvial deposits (General Plan Exhibits IV-1 and IV-1A) comprised of granular materials that typically have a low expansion potential, although pockets of fine-grained expansive soils can occur. As a result, the potential for expansive soils is generally low. Nonetheless, potential impacts of the Specific Plan and specific mitigation measures, where appropriate, will be set forth in the EIR.
- e) **Less Than Significant Impact.** The sewer system is relatively new and does not cover the entire Planning Area. Some parcels may be developed before sewer extensions are available and will require installation of septic systems instead. The EIR will evaluate local soil characteristics and their suitability for supporting septic tanks or other alternative wastewater disposal systems.
- f) **No Impact.** The Planning Area is located on the valley floor where soils to depth are largely comprised of recently deposited aeolian and alluvial sediments that typically do not harbor paleontological resources. The Planning Area is not located in proximity to either a wash outflow or bedrock that could harbor such resources, and is not of lacustrine origin. Therefore, potentially sensitive paleontological resources are not expected to occur on site and there will be no Project-related impact and no further discussion of this issue in the EIR.

8. GREENHOUSE GAS EMISSIONS -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Apple Valley Climate Action Plan, 2019 Update.

### Background

Greenhouse gases (GHG), including carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), and fluorinated gases (hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride), are released into the atmosphere through natural processes and human activities. They are called “greenhouse gases” due to their shared characteristic of trapping heat, and they are believed to be responsible for global increases in surface temperatures observed in the 20<sup>th</sup> and 21<sup>st</sup> centuries. Sources of GHGs include burning of fossil fuels, emission of volatile gases including and especially natural gas, and other chemical compounds.

The Apple Valley Climate Action Plan Update (2019) evaluates Town-wide GHG emissions, determines reduction targets and forecasts, and establishes reduction measures for community development, municipal operations, and new development.

- a, b) **Potentially Significant Impact.** Demolition and construction activities facilitated by the Specific Plan will generate short-term GHG emissions during demolition, grading, excavation, new building construction, and paving. Construction and operational activities of future development are expected to generate carbon dioxide equivalents (CO<sub>2</sub>e). Construction-related GHG emissions will be temporary and end once projects are completed, and they are not expected to interfere with meeting the objectives of AB 32. Potential greenhouse gases generated from construction and Specific Plan related project operations, including motor vehicle travel, will be quantified and mitigated, as necessary, in the forthcoming EIR. Because of the scope of the Project, and the potential for substantial development in the Planning Area, impacts associated with long term GHG emissions could be significant, and must be quantified in the EIR

The EIR will also evaluate the Project’s consistency with the Apple Valley Climate Action Plan 2019 Update and other applicable policies and plans.

<b>9. HAZARDS AND HAZARDOUS MATERIALS --</b> Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; California Department of Toxic Substances Control “EnviroStor” Database; Fire Hazard Severity Zones in State Responsibility Area (SRA) map, CAL FIRE, 2007; Very High Fire Hazard Severity Zones in Local Responsibility Areas (LRA) map, CAL FIRE, 2008; Apple Valley Local Hazard Mitigation Plan, 2017 Plan Update.

## Background

A hazardous material is any substance that, because of its quantity, concentration, or physical or chemical properties, may pose a hazard to human health and the environment. Under Title 22 of the California Code of Regulations (CCR), the term “hazardous substance” refers to both hazardous materials and hazardous wastes. They are classified according to four properties: (1) ignitability; (2) corrosivity; (3) reactivity; and (4) toxicity. A hazardous material is defined as a substance or combination of substances which may either (1) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness; or (2) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of or otherwise managed.

Existing development in the Project Planning Area includes large and small commercial enterprises, such as auto storage and maintenance facilities, metal and wood workshops, gasoline service stations, restaurants, and other potential generators of hazardous materials. Comparable development would be facilitated by the proposed Specific Plan.

- a-b) **Less Than Significant Impact.** Hazardous materials are transported through Apple Valley along Highway 18 and other designated truck routes and local roads in the Planning Area. Demolition and construction activities facilitated by the Specific Plan will involve the use of heavy equipment which could require minor maintenance and re-fueling on location and could lead to fuel and oil spills if not properly managed. Contractors will be required to identify staging areas for storing materials and equipment and implement best management practices to assure that impacts are minimized and that any minor spills are immediately and properly remediated. The Specific Plan land use plan allows residential, commercial, and other development that can be expected to use and store limited quantities and types of potentially hazardous materials, such as cleaning chemicals, solvents, gasoline, and oils. However, heavy industrial facilities, waste and landfill operations, and other generators and handlers of hazardous materials are not proposed in the Planning Area. Individual developments may be required to conduct Phase I Initial Site Assessments to evaluate site-specific conditions and/or implement appropriate avoidance, minimization, and mitigation measures to address potential impacts. Given the types of land uses that would be developed in the Planning Area and implementation of site-specific mitigation measures where necessary, the risks of accidental release or upset are expected to be less than significant; however, potential impacts should be further evaluated in the EIR.
- c) **Less Than Significant Impact.** The Smart Starts Academy preschool is located at 21482 Yucca Loma Road on the westernmost parcel of the Planning Area. Two schools are within ¼ mile of the Planning Area: 1) Yucca Loma Elementary School on Yucca Loma Road approximately 250 feet west of the Planning Area, and 2) Granite Hills High School on Esaws Avenue approximately ¼-mile east of the Planning Area. However, as described in responses 9.a and 9.b. above, Project-related impacts associated with hazardous materials in the Planning Area are expected to be less than significant. Nonetheless, potential impacts should be further evaluated in the EIR.
- d) **No Impact.** According to the California Department of Toxic Substances Control EnviroStor Database, the Planning Area does not contain any parcels included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Therefore, the proposed Specific Plan would not create a significant hazard to the public or the environment. No impact is anticipated, and no further discussion of this issue will be undertaken in the EIR.
- e) **No Impact.** The Planning Area is not located within an airport land use plan or within two (2) miles of a private airstrip. The Planning Area is 4.5± miles from the nearest airport (Apple Valley Airport). Therefore, the Specific Plan will not result in a safety hazard or excessive noise for people in the Planning Area. No impact will occur, and no further discussion of this issue will be required in the EIR.
- f) **Less Than Significant Impact.** The Apple Valley Local Hazard Mitigation Plan (2017) is the Town's plan for reducing and/or eliminating natural disaster risks. It evaluates and prioritizes hazards associated with flooding, wildfire, earthquake/geologic conditions, extreme heat, and climate change. The Town's Emergency Operations Plan (EOP) (2014) guides its response to large-scale emergencies and disasters.

The proposed Specific Plan Planning Area includes several critical facilities, as designated in the EOP, including Fire Station #1, James A. Woody Community Center, the animal shelter, and Public Works facility. The proposed Specific Plan will facilitate physical changes in the Planning Area, such as development projects which may require temporary lane closures, detours, or re-routing. However, Construction Traffic Control Plans may be prepared for Specific Plan projects, and emergency/secondary access would be established and preserved during all construction activities. At Project buildout, improved roadway capacity and access to properties may enhance access for emergency vehicles. The Project is anticipated to be consistent with all aspects of the Local Hazard Mitigation Plan and Emergency Operations Plan. Nonetheless, potential impacts will be further addressed in the EIR.

- g) **Less Than Significant Impact.** The wildfire threat in Apple Valley is most significant in the Mojave riverbed (4± miles from the Specific Plan Planning Area) and the southern foothills area known as the Marianas (5± miles away). According to CAL FIRE Fire Hazard Severity Zone mapping, the Specific Plan Planning Area is in a Local Responsibility Area (LRA). The westerly and southwesterly portions of the Planning Area are designated “Urban Unzoned.” The easterly and northeasterly portions have a “Moderate” wildfire designation. There are no “High” or “Very High” wildfire designations in or around the Planning Area.

The Specific Plan will facilitate development and redevelopment in the Planning Area; however, it is not expected to exacerbate wildfire risks because all structures and improvements will be required to adhere to applicable fire codes and will be subject to review by the Fire Department. Impacts are expected to be less than significant but will nonetheless be further analyzed in the EIR.

10. HYDROLOGY AND WATER QUALITY -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
i) Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Source:** Apple Valley General Plan 2009; Apple Valley Village Corridor Enhancement Plan Drainage Study, David Evans and Associates, July 23, 2019; Flood Insurance Rate Maps No. 06071C5840H, 06071C5845H, 06071C6505J, and 06071C6510H, Federal Emergency Management Agency; Apple Valley Emergency Operations Plan (Appendix 7), November 1, 2014.

## Background

Drainage from many of the hills and mountains surrounding Apple Valley generally terminates in desert playas (dry lakes), although drainages along the western side of the Town discharge into the Mojave River. Designated flood zones are largely limited to the Mojave River, Desert Knolls Wash, and Apple Valley Dry Lake. Three types of storm events have the potential to cause flooding in Apple Valley: winter storms, summer tropical storms, and local thunderstorms. Several historic storms have resulted in flooding, mud flows, and erosion.

- a) **Less Than Significant Impact.** The proposed Specific Plan will facilitate future demolition and construction, grading, paving, and other activities that disturb ground surfaces. Future development will use existing drainage facilities and may require additional on-site improvements, including temporary stormwater retention basins. Town and Regional Water Quality Control Board review will ensure that construction and operational best management practices (BMPs) satisfy local, state, and federal standards. In addition, the Town would require preparation of a Storm Water Pollution Prevention Plan (SWPPP) in conformance with the National Pollutant Discharge Elimination System (NPDES) prior to the issuance of grading permits. Where sewer lines are available, new construction will be required to connect to the sewer system in compliance with applicable standards that minimize impacts to regional groundwater quality. Where sewer is not available, septic system operation and maintenance will be required to comply with

applicable regulations until such time as sewer connection becomes available. Impacts are expected to be less than significant; however potential impacts should be further discussed in the forthcoming EIR.

- b) **Less Than Significant Impact with Mitigation.** Regional domestic water is supplied by groundwater. It is uncertain at this time what the water demand from new development facilitated by the Specific Plan could be. The forthcoming EIR should analyze existing water supply compared to demand at Project buildout. The Specific Plan promotes drought-tolerant landscaping and water-efficient buildings, structures, and appliances. New construction will be required to comply with Title 24 provisions, which will limit water demand. Water consumed during construction should be minimal and temporary, while post-development water demand could be greater than current demand. Buildout of the Planning Area in accordance with the Specific Plan is not expected to substantially deplete local groundwater supplies or have a significant impact on groundwater supplies or recharge. Nevertheless, the forthcoming EIR should further evaluate water demand and opportunities for conservation, and may require mitigation measures to assure that impacts to water supplies are less than significant.
- c.i) **Less Than Significant Impact with Mitigation.** The Specific Plan will facilitate development projects that will result in grading, excavation, and other modifications to the ground surface, and have the potential to result in erosion and/or siltation on- and off-site. However, the Town requires projects to implement effective erosion control measures. Development in accordance with the proposed Project is not expected to alter the existing drainage pattern in a manner that would cause substantial erosion or siltation on- or off-site. Nevertheless, the forthcoming EIR should evaluate this potential and provide mitigation measures, as appropriate.
- c.ii) **Less Than Significant Impact with Mitigation.** Development and improvement projects facilitated by the Specific Plan could increase the rate and/or amount of surface runoff in the Planning Area. The Specific Plan also proposes changes to the existing drainage system. With the provision of on-site stormwater retention and implementation of required Best Management Practices (BMPs), no significant or substantially increased rate or amount of runoff is anticipated for individual projects. Nonetheless, the management of stormwater runoff through the Planning Area must be further evaluated in the EIR.
- c.iii) **Less Than Significant Impact with Mitigation.** Implementation of the proposed Project will result in new and/or modified development and improvements that could increase stormwater runoff; however, the Town requires the retention of stormwater onsite. Changes in the regional storm water management system proposed in the Specific Plan could result in increased runoff and must consider whether the capacity of existing and planned stormwater drainage systems would provide substantial additional sources of polluted runoff. The forthcoming EIR will further address issues of surface and groundwater pollution.
- c.iv) **Less Than Significant Impact with Mitigation.** Implementation of the proposed Project will result in grading, excavation, construction, and other modifications to the ground surface, and changes in the regional flood control system that could redirect flood flows. Although the Town requires stormwater management plans that retain runoff onsite, effectively direct flood flows, and include other improvements, the EIR must analyze whether proposed improvements will be sufficient to accommodate all flows through and in the Planning Area. The EIR should further evaluate potential impacts and the need for mitigation measures.
- d) **Less Than Significant Impact.** The Specific Plan Planning Area is designated Zone D on Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM). Zone D identifies areas of potential but undetermined flood hazards, as no analysis of flood hazards has been conducted. Therefore, the extent to which the Specific Plan Planning Area is at risk of flooding is unknown. There is no risk of inundation resulting from dam failure as the Planning Area is outside of dam inundation areas. The Cedar Springs and Mojave Dams in the San Bernardino National Forest southwest of Apple Valley have

performed well during seismic events, and neither has experienced failure. Any potential release of floodwaters from the dams is expected to be confined to the Mojave Riverbed (4± miles west of the Planning Area). There is no risk of inundation resulting from seiche because no above-ground water reservoirs or other large bodies of water are in or near the Planning Area. There is no risk of inundation from tsunami because the Planning Area is inland and well outside of any tsunami zones.

The proposed Project will facilitate the development of new buildings and improvements that could use, store, or otherwise be involved with potentially hazardous materials. These facilities would be required to comply with applicable safety regulations and best practices to minimize the release of pollutants during potential flood events. Adherence to development standards in the proposed Specific Plan and other regulatory requirements would ensure that no significant impact regarding release of pollutants due to inundation would occur. Nonetheless, potential impacts should be further analyzed in the EIR.

- e) **No Impact.** Future development and improvements according to the proposed Specific Plan will be required to conform to applicable water quality regulations and Water Quality Management Plans. The proposed Specific Plan will not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, no impact will occur, and no further discussion of this issue will be required in the EIR.

11. LAND USE AND PLANNING - Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Apple Valley Development Code.

### Background

Much of the urbanization in Apple Valley has occurred in the vicinity of Highway 18 and the Mojave River. Outlying areas are undeveloped or characterized by low or very low density residential development and ranchos. The area's natural assets, including mountains, desert open space, and warm climate, have become progressively important to the local economy and environment, and contribute to the region's character and desirability.

- a) **Less Than Significant Impact.** Implementation of the proposed Project will not result in the physical division of an established community. Instead, the Specific Plan will set forth a cohesive set of development standards and guidelines that enhance established commercial areas and neighborhoods along and near the Highway 18 corridor and facilitate a unified sense of place through architectural, landscaping, signage, and lighting programs. The Specific Plan encourages the enhancement of the existing community through infill development and development of compatible uses in the Planning Area. Impacts are expected to be less than significant but should be further analyzed in the EIR.
- b) **Potentially Significant Impact.** The proposed Project generally maintains the basic land use distribution envisioned in the General Plan but revises some acreages and development and redevelopment opportunities. The Project will require a General Plan Amendment (GPA) to change all current General Plan land use designations in the Planning Area to "Village Specific Plan." It will also require a Zone Change to change all current zoning designations in the Planning Area to proposed Districts 1 through 5. The Project is designed to be compatible with surrounding existing and planned land uses. However, conflicts between it and other land use plans and policies could cause environmental impacts, and therefore, should be evaluated in the EIR.

12. MINERAL RESOURCES -- Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Sources:** Apple Valley General Plan 2009.

### Background

In Apple Valley, mineral resources are largely limited to aggregates, such as sand, gravel, and crushed stone. These are major components of concrete, plaster, stucco, road base, and fill, which are essential to the construction industry. There are important deposits of these materials that occur within the region that are being actively developed.

- a, b) **No Impact.** The Planning Area is located within Mineral Resource Zone (MRZ) 3-a, defined as areas containing known mineral deposits of undetermined significance. Further exploration work within these areas could result in the reclassification of specific localities. However, the Planning Area does not contain known mineral resources or mineral recovery sites and is not designated, zoned, or planned for such uses. The proposed Specific Plan would result in no impacts to mineral resources. No further discussion of this issue will be required in the EIR.

13. NOISE -- Would the project result in:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Source: Apple Valley General Plan 2009; Apple Valley Development Code.

### Background

Excessive and/or sustained noise can contribute to both temporary and permanent physical impairments, such as hearing loss and increased fatigue, as well as stress, annoyance, anxiety, and other psychological reactions in humans. The evaluation and mitigation of noise in a community is essential to protecting the health and welfare of the public, and preserving the inherent value of recreation, open space, and conservation lands. It can also determine the need for additional remedial measures that mitigate noise problems. Major noise sources in Apple Valley include vehicular traffic on highways and arterials, as well as aircraft, trains, and industrial operations.

- a) **Less Than Significant Impact with Mitigation.** The primary source of noise in the Specific Plan Planning Area is traffic on Highway 18 and other Planning Area roadways, which includes trucks and buses. Commercial land uses, particularly warehouse and light industrial sites, can also generate high noise levels from mechanical equipment, truck deliveries, loading and unloading, and trash compactors.

Buildout of the Planning Area in accordance with the proposed Project will result in site preparation, demolition, grading, excavation, construction, paving, and related activities that will result in localized and temporary increases in ambient noise levels and may impact sensitive receptors. The Town Development Code Section 9.73.060.F recognizes that construction and demolition noise is difficult to control. It restricts allowable hours to between 7:00 a.m. and 7:00 p.m. and establishes noise restriction guidance where construction and demolition occur near residential areas. These restrictions, muffling of construction equipment, and other measures will reduce, to some extent, construction noise impacts on surrounding land uses. Impacts will be temporary and will end once construction is complete.

Long-term operation of projects facilitated by the proposed Project will result in permanent increases in ambient noise levels in the Planning Area. However, proposed land uses are consistent with the existing urban commercial and residential environment, and noise sources are expected to be similar to those already occurring in the Planning Area. Noise sources are expected to include vehicle traffic, mechanical equipment

such as heating, ventilation, and air conditioning (HVAC) units, loading and unloading operations, and parking lot activity.

Future development projects may require site-specific noise monitoring and modeling for both construction and post-construction periods conducted at locations surrounding the project site, including in proximity to sensitive receptors. Impacts are expected to be less than significant with appropriate mitigation. The forthcoming EIR will further evaluate potential noise impacts associated with Project implementation.

- b) **Less Than Significant Impact with Mitigation.** Development facilitated by the proposed Specific Plan is not expected to result in permanent excessive groundborne vibration or noise. Short-term increases in this type of vibration and noise would be limited to demolition and construction phases, including foundation and pad removals, and the use of heavy grading, hauling, and compacting equipment. Impacts would be short-term in nature and would occur during the less sensitive daytime hours. The Town Development Code Section 9.73.060.G describes vibration restrictions. With adherence to these requirements and other mitigation measures, as appropriate, Project-related impacts are expected to be less than significant. Impacts will be further evaluated in the EIR.
- c) **No Impact.** The Planning Area is not located within an airport land use plan or two (2) miles of an airport. The Apple Valley Airport is approximately 4.5± miles to the north. No impact would occur and no further discussion of this issue is required in the EIR.

<b>14. POPULATION AND HOUSING –</b> Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; U.S. Census, 2000 and 2010; Table E-5: City/County Population and Housing Estimates, California Department of Finance, January 1, 2021; 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy, Demographics & Growth Forecast Technical Report, Southern California Association of Governments.

### Background

According to the U.S. Census, the Apple Valley population was 54,239 in 2000 and 69,135 in 2010. The latest (2021) population estimate provided by the California Department of Finance is 74,350. SCAG projects the Town's population will grow to 101,400 by 2045. Local housing products include a mix of single- and multi-family units and mobile homes.

- a) **Less Than Significant Impact.** There are currently approximately 289 dwelling units and 850 residents in the Specific Plan Planning Area.<sup>1</sup> The proposed Specific Plan will facilitate new residential development that will directly induce population growth and new commercial uses that will indirectly induce population growth by bringing new employment opportunities to the area. The Planning Area is well-served by existing roads and water infrastructure, although parcel-scale extensions and improvements will be required as development occurs. The existing sewer system is available to much of the Planning Area, but future sewer extensions will be required to serve the entire area. The EIR should further analyze potential Project-related growth and compare it to anticipated and planned growth projections.
- b) **Less Than Significant Impact.** The proposed Project will facilitate redevelopment of underutilized parcels that could result in demolition of existing housing, the loss of which would be made up with new residential development elsewhere in the Planning Area. The Project is not expected to displace substantial numbers of existing people or housing or necessitate the construction of replacement housing elsewhere. However, potential impacts should be further evaluated in the EIR.

<sup>1</sup> Housing estimate based on Google Earth survey. Population estimate based on 2.94 persons per household, as provided by Table E-5: City/County Population and Housing Estimates, California Department of Finance, January 1, 2021.

15. PUBLIC SERVICES –	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Source: Apple Valley General Plan 2009.

### Background

Fire protection services are provided to the Town of Apple Valley by the Apple Valley Fire Protection District, and police protection is provided on a service contract basis by the San Bernardino County Sheriff's Department. Public educational services are provided by the Apple Valley Unified School District (AVUSD).

#### a) Less Than Significant.

##### Fire

The Apple Valley Fire Protection District (AVFPD) provides fire protection services to the Project Planning Area. Fire Station #1 is located on Headquarters Drive in the northeastern Planning Area. Additional structures and population facilitated by the Project will increase demand for fire services. Emergency and secondary roadway access may be temporarily affected during construction. However, project-specific construction traffic control plans implemented during construction will assure that impacts to mobility and accessibility in the area will be less than significant. The Project includes a transportation concept for Highway 18 and Yucca Loma/Navajo Roads that is expected to result in enhanced site access, shorter response times, and improved traffic and pedestrian safety in the Planning Area. Potential impacts will be further evaluated in the EIR.

##### Police

The San Bernardino County Sheriff's Department provides police protection services to the Planning Area. The nearest police station is at 14931 Dale Evans Parkway, approximately two (2) miles northwest of the Planning Area. Buildout of the proposed Project will result in additional demand for police protection services. Potential impacts will be further analyzed in the EIR.

### Schools

The Smart Starts Academy preschool is located at 21482 Yucca Loma Road on the westernmost parcel of the Planning Area. Two schools are within ¼ mile of the Planning Area: 1) Yucca Loma Elementary School, on Yucca Loma Road approximately 250 feet west of the Planning Area, and 2) Granite Hills High School, on Esaws Avenue approximately ¼-mile east of the Planning Area.

Future population growth facilitated by Project buildout is expected to increase student enrollment. However, the increase is not expected to result in significant impacts to educational services or require new or physically altered facilities that could cause significant environmental impacts. New development will be required to pay mandated school impact fees, which will reduce potential impacts. The impact to schools will be evaluated in the EIR.

### Parks

The James A. Woody Park is in the southwest Planning Area on Powhatan Road. Population growth resulting from Project buildout will increase the demand for parks; however, the demand is not expected to require new or physically altered facilities that could cause significant environmental impacts. New residential development will be required to pay Quimby fees in accordance with Development Code Section 9.71.055, which will reduce potential impacts. Project-related impacts will be further analyzed in the EIR.

### Other Public Facilities

Additional public facilities in the Planning Area include: James A. Woody Community Center on Navajo Road; Michael H. Martin Gymnasium on Navajo Road; U.S. Post Office on Highway 18; Apple Valley Municipal Animal Shelter on Powhatan Road; Apple Valley Corporate Yard on Nomwaket Road; Household Hazardous Waste Facility on Nomwaket Road; and San Bernardino County Transitional Assistance Department on Central Road. Project buildout will increase the population of the Planning Area and may increase the demand for some services provided at these and other community facilities. However, the demand is not expected to require new or physically altered facilities that could cause significant environmental impacts. Potential impacts will be analyzed in the EIR.

16. RECREATION –	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Source:** Apple Valley General Plan 2009.

### Background

The Town of Apple Valley offers a wide variety of recreational opportunities, including golf courses, bikeways, and parkland. The Town is also near thousands of acres of national, state, and regional park and wilderness lands, within which are miles of hiking, biking and equestrian trails.

- a) **Less Than Significant Impact.** Parks and recreational resources in the Planning Area and immediate vicinity include James A. Woody Park and Community Center, Michael H. Martin Gymnasium, Yucca Loma Park, bicycle lanes and paths, multi-use Lifeline Trails, and Bridle Easements/Trails for equestrian use. Buildout of the proposed Specific Plan will increase the local population and use of these and other parks and recreational facilities. However, the additional population is not expected to accelerate or result in substantial physical deterioration of these facilities. New residential development will be required to pay mandated Quimby fees to mitigate impacts. New residential developments may include private parks and/or recreation facilities, such as swimming pools, gyms, or sports fields, the use of which could reduce the demand for existing facilities. While Project-related impacts are expected to be less than significant, the EIR will provide further analysis.
- b) **Less Than Significant Impact.** The Specific Plan does not identify standalone parks but provides opportunities for future residential developments to incorporate parks and/or recreation facilities, such as swimming pools, gyms, and community open spaces. Sports fields are allowed in Districts 4 and 5, which are residential districts. Construction of such facilities would be subject to applicable building codes and other regulations that would minimize any potential adverse physical effects on the environment. While Project impacts to existing parks and open space amenities are expected to be less than significant, potential impacts resulting from the proposed Project will be further analyzed in the EIR.

17. TRANSPORTATION – Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; The Village State Route-18 Corridor Enhancement Plan, Town of Apple Valley, September 2019; Village Specific Plan Existing Conditions Report – Circulation and Parking, David Evans and Associates, April 12, 2021; Village Specific Plan Existing Conditions Analysis – Infrastructure Plan, David Evans and Associates, April 12, 2021.

### Background

Regional connectivity is provided by Interstate 15 (I-15) and State Highway 18. I-15 extends along the west side of Town in a northeast-southwesterly direction and connects the region to the San Bernardino metropolitan area to the southwest, and Barstow and Las Vegas to the northeast. Highway 18 is one of Apple Valley's principal commercial corridors. It extends in an east-west direction and connects the region to Victorville and other high desert communities on the west, and Lucerne Valley and the Morongo Basin to the east.

- a) **Potentially Significant Impact.** The proposed Project includes new transportation concepts for Highway 18 and Yucca Loma/Navajo Roads that are anticipated to improve traffic maneuvers and efficiency, improve safety, and incorporate a multimodal network of walkways and other connectors. Proposed Specific Plan land use designations, densities, and development standards and guidelines could also impact traffic volumes and intersection operations.

The extent to which the Specific Plan may conflict with (or enhance) a program, plan, ordinance, or policy is currently unknown. A traffic impact analysis will be prepared to further analyze the potential effects of the Specific Plan on circulation plans and policies, including transit and other alternative modes of travel. Potential impacts and the need for mitigation measures will be further analyzed in the EIR.

- b) **Less Than Significant Impact with Mitigation.** The proposed Specific Plan is not expected to conflict with or be inconsistent with Section 15064.3(b) of the CEQA Guidelines. The Highway 18 corridor is well-served by Victor Valley Transit Agency's bus lines with multiple bus stops, and most development in the Planning Area is expected to be within one-half mile of an existing transit stop. The Specific Plan will address multi-modal access improvements and other design elements intended to reduce potential trips and vehicle miles traveled (VMTs). The extent to which these may conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) is currently unknown. The potential for VMTs resulting from Specific Plan implementation to exceed an applicable threshold of significance should be further evaluated in the EIR and traffic impact analysis.

- c) **Less Than Significant Impact.** The proposed Project includes reconfiguration of Highway 18 between Navajo and Central Roads, and will facilitate the realignment of Yucca Loma Road, for the purpose of eliminating or minimizing existing traffic hazards and inefficiencies. These improvements are expected to

have a net positive impact on vehicle, pedestrian, and bicycle safety in the Planning Area, and will not substantially increase hazards due to a geometric feature or incompatible uses. Proposed land uses (residential, commercial, public facility) are largely consistent with existing uses, and the future vehicle mix will be comparable to the existing mix. Nonetheless, potential impacts will be further evaluated in the EIR.

- d) **Less Than Significant Impact.** Construction and operational activities resulting from the proposed Project will not significantly impact the ability of emergency service providers, including police and fire personnel, to provide services to the Planning Area. Site-specific traffic control plans will be prepared, as needed, to maintain safe traffic flow during construction to assure that emergency service access is not interrupted during construction. Roadway improvements proposed by the Specific Plan are expected to improve traffic efficiency and have a net positive benefit on emergency access. Impacts to emergency services are expected to be beneficial; nonetheless, potential impacts will be further analyzed in the EIR.

<b>18. TRIBAL CULTURAL RESOURCES –</b> Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Source:** Apple Valley General Plan 2009; Historical/Archaeological Resources Sensitivity Assessment, The Village Specific Plan and EIR, Town of Apple Valley, California, CRM TECH, December 31, 2020.

### Background

The prehistory of the Mojave Desert extends back to 8,000 B.C. or earlier. Apple Valley is located near the boundary between the traditional territories of the Serrano and Vanyume peoples. The Vanyume disappeared before 1900. The Serrano primarily settled on elevated hills and ridges where water emerged from the mountains, but between the 1810s and 1834, most of the Serrano people were removed to nearby missions. The remaining Serrano died or were displaced during punitive expeditions in 1866-1870. Today, many Serrano descendants are affiliated with the San Manuel Band of Mission Indians, Morongo Band of Mission Indians, or Serrano Nation of Indians.

- i, ii) **Less Than Significant Impact with Mitigation.** As discussed in 5.b above, no records of prehistoric or early historic resources in the Project Planning Area were found at the South Central Coastal Information Center, the cultural resource records repository for San Bernardino County. A search of the Sacred Lands File by the Native American Heritage Commission found the presence of unspecified Native American cultural resources in the Specific Plan vicinity; however, the nature and location of the resources were not disclosed. Implementation of the proposed Specific Plan will facilitate demolition, grading, excavation, and new development that has the potential to impact tribal cultural resources if they occur on a project site. Consistent with AB 52 and SB 18, the Town will solicit input from the California Native American Heritage Commission and initiate consultation with the appropriate tribes, notifying them of the proposed Specific Plan and its proposed land use plan. Site-specific cultural resources studies may be required for future development projects facilitated by the proposed Project, and mitigation measures may be required. Potential impacts will be further analyzed in the EIR.

19. UTILITIES AND SERVICE SYSTEMS – Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the projects projected demand in addition to the providers existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Source: Apple Valley General Plan 2009.

### Background

The Specific Plan Planning Area is served by the following utility providers.

Utility	Service Provider(s)
Electricity	Apple Valley Choice Energy (AVCE) Southern California Edison (SCE)
Natural gas	Southwest Gas Company
Water	Liberty Utilities
Wastewater	Most parcels: Town of Apple Valley sewer and Victor Valley Wastewater Reclamation Authority Some parcels: septic systems
Solid waste	AVCO Disposal
Telecommunications	Frontier, Charter Spectrum

- a) **Less Than Significant Impact.** Much of the Planning Area has been developed for many decades and is well-served by utility providers and infrastructure. Large-scale water and energy transmission lines are already in place, although future development facilitated by the Project will require site-specific, parcel-scale utility extensions and/or upgrades, such as water laterals. Sewer lines are available in much of the Planning Area, but parcels that are not in proximity to existing sewer lines will be required to install septic tanks, with the potential to connect to future sewer extensions over the long term. Potential impacts will be further analyzed in the EIR.

- b) **Less Than Significant Impact.** Domestic water in the Project Planning Area is provided by Liberty Utilities, which extracts groundwater from the Mojave River Basin. As a member of the Mojave Water Agency, Liberty Utilities also purchases imported water from the State Water Project (SWP) to replenish pumped groundwater, and it implements water conservation and other programs to assure that water supplies are sufficient to serve existing and future customers. Buildout of the Specific Plan will increase water consumption in the Planning Area. However, the extent to which the additional demand will impact water supplies is unknown. Potential changes in domestic water generation associated with implementation of the proposed Specific Plan will be evaluated in the forthcoming EIR.
- c) **Less Than Significant Impact.** The municipal sewer system is relatively new and does not connect to the entire Planning Area. Some parcels rely on septic systems. Others are connected to the sewer system which conveys wastewater to the Victorville wastewater treatment facility in Victorville. The plant is operated by the Victor Valley Wastewater Reclamation Authority (VWVRA), a joint powers authority that includes the Town of Apple Valley. It currently treats approximately 10.7 million gallons per day (mgd) and has a design capacity of 18 mgd, with planned future expansions. Therefore, it has available capacity to manage additional wastewater. Buildout of the proposed Project will increase the demand for wastewater treatment services. The extent to which the additional demand will impact the treatment facility is unknown. Potential changes in wastewater generation and collection and treatment capacities will be evaluated in the forthcoming EIR.
- d) **Less Than Significant Impact.** The Town contracts with AVCO Disposal for provision of solid waste management and disposal services. Solid waste generated is disposed of at the Victorville Landfill on Stoddard Wells Road west of I-15. Recyclable materials are sorted at the Victor Valley Materials Recovery Facility (MRF) on Abbey Lane south of the landfill. Buildout of the Planning Area in accordance with the Specific Plan will increase solid waste generation, including concrete, asphalt, a variety of construction materials, paper and food waste, and other trash disposed of during long-term operation. Implementation of recycling programs, in accordance with State and local regulations, will reduce solid waste quantities. Whether landfill capacity will be adequate to serve buildout of the Specific Plan will be analyzed in the forthcoming EIR.
- e) **No Impact.** The Town and AVCO Disposal operate in compliance with federal, state, and local statutes regulating solid waste. Buildout of the proposed Project will not conflict with federal, state, and local statutes regulating the disposal of solid waste. There will be no impacts, and no further discussion of this issue is required in the EIR.

<b>20. WILDFIRE</b> – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Sources:** Apple Valley General Plan 2009; Fire Hazard Severity Zones in State Responsibility Area (SRA) map, CAL FIRE, 2007; Very High Fire Hazard Severity Zones in Local Responsibility Areas (LRA) map, CAL FIRE, 2008; Town of Apple Valley Local Hazard Mitigation Plan, 2017 Update.

### Background

The Town of Apple Valley is designated as a Local Responsibility Area (LRA) by CAL FIRE. No land in the Town is designated as a Very High Fire Hazard Severity Zone. The local areas with the most significant wildfire threats are the Marianas in the southern foothills and the Mojave Riverbed.

- a-d) **No Impact.** The Specific Plan Planning Area is not located in or near a State Responsibility Area (SRA) or Very High Fire Hazard Severity Zone (VHFHSZ). The nearest SRA to the Planning Area is 6± miles to the south in the Ord Mountains. The nearest VHFHSZ is 10± miles to the southeast.

The Apple Valley Fire Protection District provides fire protection to the Specific Plan Planning Area and maintains mutual aid agreements with Victorville, San Bernardino County Fire Department, and the Bureau of Land Management. The Town maintains a Local Hazard Mitigation Plan that addresses the planned response to extraordinary emergency situations, including wildfires. The proposed Project would not impair the adopted emergency response plan and is not expected to exacerbate wildfire risks. No impact would occur and no further discussion of this issue is required in the EIR.

21. MANDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant with Mitigation Incorporation	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- a) **Less Than Significant with Mitigation.** As discussed in Sections 4 (Biological Resources) and 5 (Cultural Resources), implementation of the proposed Project is expected to have less than significant impacts to biological and cultural resources with implementation of mitigation measures. The EIR will evaluate these topics in greater detail to determine whether the Project would generate significant environmental impacts and provide mitigation measures, where necessary.
- b) **Potentially Significant.** Impacts of the proposed Project are not expected to be cumulatively considerable for most issue areas described above, because its proposed land use plan, standards, and guidelines are largely consistent with those of the General Plan and Development Code already in place. Impacts associated with air quality and GHG emissions, as well as transportation, however, may be cumulatively significant when considered with other projects. The EIR will evaluate these topics in greater detail to determine whether the Project would generate cumulative considerable impacts.
- c) **Potentially Significant.** The proposed Project could cause direct and indirect potentially significant adverse effects on humans, specifically as it relates to air quality, land use, and transportation. The significance of these impacts will be evaluated in the EIR.

**RE: CEQA –NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT  
VILLAGE SPECIFIC PLAN**

Dear Mr. Alcayaga:

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. **We received this request on November 24, 2021** and pursuant to our review, we have the following comments:

#### **Flood Control Planning & Water Resources Division (Michael Fam, Chief, 909-387-8120):**

1. We are aware there may be storm drains in and around the site that may be affected by the proposed Project. When planning for or altering existing or future storm drains, be advised that the Project is subject to the Apple Valley MPD, dated November, 1989. It is to be used as a guideline for drainage in the area and is available in the County's Flood Control District offices. Any revision to the drainage should be reviewed and approved by the Town of Apple Valley. Should construction of new, or alterations to existing storm drains be necessary as part of the Proposed Project, their impacts and any required mitigation should be discussed within the IS/MND before the document is adopted by the Lead Agency.

#### **Permits/Operations Support Division (Sameh Basta, Chief, 909-387-7995):**

1. Portions of the Project are adjacent to the San Bernardino County Flood Control District (SBCFCD) right-of-way and facility. Any encroachments on the District's right-of-way or facilities, including but not limited to access, fencing and grading, utility crossings, landscaping, new and/or alteration to drainage connections will require a permit from the SBCFCD prior to start of construction. The necessity for permits, and any impacts associated with them, should be addressed in the IS/MND prior to adoption and certification. If you have any questions regarding this process, please contact the FCD Permit Section at (909) 387-1863

#### **BOARD OF SUPERVISORS**

**COL. PAUL COOK (RET.)**  
First District

**JANICE RUTHERFORD**  
Second District

**DAWN ROWE**  
Vice Chair, Third District

**CURT HAGMAN**  
Chairman, Fourth District

**JOE BACA, JR.**  
Fifth District

**Leonard X. Hernandez**  
Chief Executive Officer

We respectfully request to be included on the circulation list for all project notices, public reviews, or public hearings. In closing, I would like to thank you again for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. Should you have any questions or need additional clarification, please contact the individuals who provided the specific comment, as listed above.

Sincerely,

A handwritten signature in black ink that reads "Michael Perry". The script is cursive and fluid.

**RE: Notice of Preparation of an Environmental Impact Report for the  
Village Specific Plan (SCH#: 2021110271).**

Dear Daniel Alcayaga,

On behalf of the Southwest Regional Council of Carpenters (“**SWRCC**” or “**Southwest Carpenters**”), my Office is submitting these comments on the Apple Valley (“**City**” or “**Lead Agency**”) Notice of Preparation of an Environmental Impact Report (“**NOP**”) (SCH No. 2021110271) for the Village Specific Plan (“**Project**”).

The Southwest Carpenters is a labor union representing more than 50,000 union carpenters in six states, including California, and has a strong interest in well-ordered land use planning, addressing the environmental impacts of development projects and equitable economic development.

Individual members of the Southwest live, work and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC incorporates by reference all comments raising issues regarding the environmental impact report (“**EIR**”) submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected to the Project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, SWRCC requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”), Cal Public Resources Code (“**PRC**”) § 21000 *et seq*, and the California Planning and Zoning Law (“**Planning and Zoning Law**”), Cal. Gov’t Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The City should require the Applicant to provide additional community benefits such as requiring local hire and use of a skilled and trained workforce to build the Project. The City should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

. . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Recently, on May 7, 2021, the South Coast Air Quality Management District found that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.<sup>2</sup>

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to “promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”<sup>3</sup>

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City “[c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential

<sup>2</sup> South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>

<sup>3</sup> City of Hayward (2014) Hayward 2040 General Plan Policy Document at p. 3-99, *available at* [https://www.hayward-ca.gov/sites/default/files/documents/General\\_Plan\\_FINAL.pdf](https://www.hayward-ca.gov/sites/default/files/documents/General_Plan_FINAL.pdf).

developments to require contractors to utilize apprentices from state-approved, joint labor-management training programs, . . .”<sup>4</sup> In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”<sup>5</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>6</sup>

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to those held by local residents.<sup>7</sup> Some municipalities have tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than

3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The City should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

Also, the City should require the Project to be built to standards exceeding the current 2019 California Green Building Code and 2020 County of Los Angeles Green Building Standards Code to mitigate the Project’s environmental impacts and to advance progress towards the State of California’s environmental goals.

## I. **THE CALIFORNIA ENVIRONMENTAL QUALITY ACT**

### A. Background Concerning the California Environmental Quality Act

CEQA has two basic purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations (“**CCR**” or “**CEQA Guidelines**”) § 15002(a)(1).<sup>8</sup> “Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR ‘protects not only the environment but also informed self-government.’ [Citation.]” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564. The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm’rs.* (2001) 91 Cal. App. 4th 1344, 1354 (“*Berkeley Jets*”); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures. CEQA Guidelines § 15002(a)(2) and (3). *See also, Berkeley Jets*, 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta*

---

<sup>8</sup> The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 150000 et seq, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

*Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553; *Laurel Heights Improvement Ass’n v. Regents of the University of California* (1988) 47 Cal. 3d 376, 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines § 15002(a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in CEQA section 21081. CEQA Guidelines § 15092(b)(2)(A–B).

While the courts review an EIR using an “abuse of discretion” standard, “the reviewing court is not to ‘uncritically rely on every study or analysis presented by a project proponent in support of its position.’ A ‘clearly inadequate or unsupported study is entitled to no judicial deference.’” *Berkeley Jets*, 91 Cal. App. 4th 1344, 1355 (emphasis added) (quoting *Laurel Heights*, 47 Cal. 3d at 391, 409 fn. 12). Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. (*Sierra Club v. Cnty. of Fresno* (2018) 6 Cal. 5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal. App. 4th 48, 102, 131.) As the court stated in *Berkeley Jets*, 91 Cal. App. 4th at 1355:

A prejudicial abuse of discretion occurs “if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 449–450).

B. Due to the COVID-19 Crisis, the City Must Adopt a Mandatory Finding of Significance that the Project May Cause a Substantial Adverse Effect on Human Beings and Mitigate COVID-19 Impacts

CEQA requires that an agency make a finding of significance when a Project may cause a significant adverse effect on human beings. PRC § 21083(b)(3); CEQA Guidelines § 15065(a)(4).

Public health risks related to construction work requires a mandatory finding of significance under CEQA. Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.<sup>9</sup>

SWRCC recommends that the Lead Agency adopt additional CEQA mitigation measures to mitigate public health risks from the Project's construction activities. SWRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon SWRCC's experience with safe construction site work practices, SWRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

**Construction Site Design:**

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.

---

<sup>9</sup> Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, available at <https://publichealth.sccgov.org/news/news-release/covid-19-cases-construction-sites-highlight-need-continued-vigilance-sectors-have>.

- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

**Testing Procedures:**

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.

- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

### **Planning**

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.<sup>10</sup>

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

SWRCC has also developed a rigorous Infection Control Risk Assessment (“ICRA”) training program to ensure it delivers a workforce that understands how to identify and

---

<sup>10</sup> See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, *available at* [https://www.cpwr.com/sites/default/files/NABTU\\_CPWR\\_Standards\\_COVID-19.pdf](https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf); Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* [https://dpw.lacounty.gov/building-and-safety/docs/pw\\_guidelines-construction-sites.pdf](https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf).

control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.<sup>11</sup>

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

If the City has any questions or concerns, feel free to contact my Office.

Sincerely,

Mitchell M. Tsai  
Attorneys for Southwest Regional  
Council of Carpenters

**Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling**

---

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

### Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."<sup>1</sup> CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.<sup>2</sup>

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>3</sup>

---

<sup>1</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>2</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>3</sup> "CalEEMod User's Guide." CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.<sup>4</sup>

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

$n$  = Number of land uses being modeled.”<sup>5</sup>

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$  = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$  = emission factor for running emissions.”<sup>6</sup>

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

## Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>7</sup> In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.<sup>8</sup> The default number of construction-related worker trips is calculated by multiplying the

<sup>8</sup> CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.<sup>9</sup> Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”<sup>10</sup> Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.<sup>11</sup> The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).<sup>12</sup>

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).<sup>13</sup>

<b>Worker Trip Length by Air Basin</b>

<sup>13</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

### Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.<sup>14</sup> In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
<b>Without Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,623
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	120.77
<b>With Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,024
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	100.80
<b>% Decrease in Construction-related GHG Emissions</b>	<b>17%</b>

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

## **EXHIBIT B**

---

## ***Paul Rosenfeld, Ph.D.***

*Principal Environmental Chemist*

**Chemical Fate and Transport & Air Dispersion Modeling**

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

## **Professional History:**

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner  
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)  
UCLA School of Public Health; 2003 to 2006; Adjunct Professor  
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator  
UCLA Institute of the Environment, 2001-2002; Research Associate  
Komex H<sub>2</sub>O Science, 2001 to 2003; Senior Remediation Scientist  
National Groundwater Association, 2002-2004; Lecturer  
San Diego State University, 1999-2001; Adjunct Professor  
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager  
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager  
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor  
King County, Seattle, 1996 – 1999; Scientist  
James River Corp., Washington, 1995-96; Scientist  
Big Creek Lumber, Davenport, California, 1995; Scientist  
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist  
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”  
*Defendant*.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112<sup>th</sup> Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish  
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants  
Case No.: No. 13-2-03987-5  
Rosenfeld Deposition, February 2017  
Trial, March 2017

In The Superior Court of the State of California, County of Alameda  
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants  
Case No.: RG14711115  
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County  
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants  
Case No.: LALA002187  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia  
Robert Andrews, et al. v. Antero, et al.  
Civil Action NO. 14-C-30000  
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico  
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward  
DeRuyter, Defendants  
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County  
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant  
Case No 4980  
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17<sup>th</sup> Judicial Circuit, in and For Broward County, Florida  
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.  
Case Number CACE07030358 (26)  
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma  
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City  
Landfill, et al. Defendants.  
Case No. 5:12-cv-01152-C  
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

**Geologic and Hydrogeologic Characterization  
Industrial Stormwater Compliance  
Investigation and Remediation Strategies  
Litigation Support and Testifying Expert  
CEQA Review**

**Education:**

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

**Professional Certifications:**

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

### **Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

### **Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

### **Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### **Geology:**

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### **Teaching:**

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Daniel Alcayaga, Planning Manager

Town of Apple Valley

14955 Dale Evans Parkway

Apple Valley, CA 92307

**Project: Apple Valley - Village Specific Plan**

Dear Mr. Alcayaga:

The Mojave Desert Air Quality Management District (District) has received a request for comments on the Notice of Availability of a Draft Environmental Impact Report for the proposed Apple Valley Village. The planning area includes 651± acres north and south of the State Highway 18 corridor generally between Navajo Road and Central Road. The planning area is in the east central portion of Apple Valley in southwestern San Bernardino County.

We have reviewed the project and, based on the information available to us at this time, the District agrees with the findings of the Draft EIR. However, the District notes that the DEIR references MDAQMD Rule 403.2, which has been rescinded. The provisions of that Rule have consolidated into District Rule 403 – *Fugitive Dust Control*. Dust control for the Village Specific Plan will be assessed at the project level, and any individual projects over 5 acres will be required to submit a Dust Control Plan (DCP) to the District. Additionally, the District would like to note that any land use changes that have the potential to increase emissions as a result of this plan should also be assessed for potential impacts on air quality.

Thank you for the opportunity to review this planning document. If you have any questions regarding this letter, please contact me at (760) 245-1661, extension 6726, or Bertrand Gaschot at extension 4020.

Sincerely,

**Alan J. De Salvio**

Deputy Director – Mojave Desert Operations

AJD/bg

Apple Valley Village Specific Plan

Subject: Draft Environmental Impact Report  
Village Specific Plan  
State Clearinghouse No. 2021110271

Dear Mr. Alcayaga,

The California Department of Fish and Wildlife (CDFW) received a Draft Environmental Impact Report (DEIR) from the Town of Apple Valley (Town) for the Village Specific Plan (Plan/Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.<sup>1</sup>

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Plan that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Plan that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

## **CDFW ROLE**

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. CDFW is also submitting comments as a **Responsible Agency** under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As

---

<sup>1</sup> CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 2 of 21

proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the project proponent may seek related take authorization as provided by the Fish and Game Code.

## **ASSEMBLY BILL (AB) 819**

Assembly Bill (AB) 819 was signed into law by Governor Gavin Newsom on July 16, 2021 and became effective January 1, 2022. AB 819 requires lead agencies to submit certain environmental documents and notices electronically to the State Clearing House (SCH) at Office of Planning and Research (OPR). Thus, as of January 1, 2022, lead agencies must take the following actions to comply with CEQA:

- File on CEQAnet – Draft Environmental Impact Reports (DEIR), proposed Negative Declarations (ND), proposed Mitigated Negative Declarations (MND) must be filed electronically on CEQAnet ( <https://ceqanet.opr.ca.gov/>) – as opposed to submitting hard copies.
- Post on Agency website – Draft, proposed, and final environmental documents – including DEIRs, EIRs, NDs, MNDs – as well as any Notice of Preparation (NOP), Notice of Determination (NOD), Notice of Completion, or Notice of Scoping Meetings must be posted on the lead agency's website if it has one. Also, Notices of Availability (NOAs) and hearings related to the DEIR or ND are required to be posted on the lead agency's website, in addition to prior methods of giving notice.
- File and Post with County – NODs must be filed electronically with the county clerk if electronic filings are offered by the county. There is an option to post NODs either in the county clerk's office or on the county clerk's website for a period of 30 days. Additionally, NOPs and NOAs will need to be posted on the county clerk's website and physically, by hard copy, in the county clerk's office.
- Option to email NOPs – If an EIR is required, any NOP may be emailed, rather than mailed, to each entity requiring personal notice – the responsible agency, any public agency with jurisdiction over natural resources affected by the project, and OPR.
- State Agency Filings – State lead agencies are required to file NODs and NOEs electronically on CEQAnet and no longer need to submit hard copies. The filed notice must be available for public inspection on the OPR website for not less than 12 months.
- Public Agency Notice of Completion – Public agencies must file notices of completion on CEQAnet, rather than mailing a paper copy.

Daniel Alcayaga, Planning Manager  
Town of Apple Valley

## PROJECT DESCRIPTION SUMMARY

The Plan guides the long-term development and redevelopment of an approximately 651-acre area in the town of Apple Valley in San Bernadino County, California. The Plan addresses the development and redevelopment along Highway 18 between Navajo Road and Central Road and surrounding lands (Plan Area) and proposes the addition of 682 dwelling units, 6,067,523 square feet of commercial/service/office/public facility development, and 2,005 residents within the Plan Area. Upon completion, the Plan will result in a total of 971 dwelling units, 7,890,903 square feet of commercial/retail/office/public facility development, and 2,855 residents in the Plan Area.

**Timeframe:** Unavailable

## COMMENTS AND RECOMMENDATIONS

Herein CDFW offers biological (BIO) mitigation measures (MM) along with comments and recommendations to assist the Town in adequately mitigating the Plan's potentially significant impacts on western Joshua tree (*Yucca brevifolia*), desert tortoise (*Gopherus agassizii*), Mohave ground squirrel (*Xerospermophilus mohavensis*), nesting birds, burrowing owl (*Athene cunicularia*), special-status plants, and Fish and Game Code section 1602 resources.

The DEIR and MM BIO-1 references the Apple Valley Multi Species Habitat Conservation Plan (MSHCP) and the Natural Community Conservation Plan (NCCP). MM BIO-1 states that prior to development, projects on vacant parcels or as deemed necessary by the Town shall conduct site-specific biological studies in compliance with standard survey methodologies and the Apple Valley MSHCP/NCCP. However, CDFW is aware that the Apple Valley MSHCP/NCCP has been in development for years and is not yet complete. Further, the Town should deem surveys necessary upon recommendation from a qualified biologist in consultation with CDFW.

CDFW recognizes the Plan is within the range of desert tortoise and Mohave ground squirrel and is aware of the presence of burrowing owl within the Plan Area, as confirmed by CDFW's California Natural Diversity Database (CNDDB). Meanwhile the DEIR states that "Conservation of lands for specifically covered species, like the Desert Tortoise, Mojave Ground Squirrel, Le Conte's Thrasher, Burrowing Owl, etc.," is a mandate of the Plan. Notwithstanding, the DEIR only proposes MM BIO-1, and MM BIO-2, which provides mitigation for nesting birds. In the Biological Mitigation Measures section below, CDFW proposes revisions to MM BIO-1 (see 1. Pre-construction Surveys below) to require species-specific pre-construction surveys according to CDFW-accepted protocols through implementation of MM BIO-3 (Burrowing Owl), MM BIO-4 (Desert Tortoise), and MM BIO-5 (Mohave Ground Squirrel).

Daniel Alcayaga, Planning Manager  
 Town of Apple Valley  
 May 4, 2022  
 Page 4 of 21

CDFW appreciates the incorporation of MM BIO-2, requiring nesting bird surveys. CDFW recommends revisions to MM BIO-2 below (see. 2. Nesting Birds) to help the Town avoid impacts to nesting birds that may nest outside of the peak nesting season (generally peak nesting season is February 1 to August 31); for example, some species of raptors (e.g. owls, hawks, etc.) may commence nesting activities in January and hummingbirds may nest year-round.

Absent botanical field surveys, CDFW determined based on aerial imagery the presence of at least three (3) western Joshua tree (WJT) within the Plan Area. As a Candidate for Threatened California Endangered Species Act (CESA)-listed species, CDFW is concerned that the Plan does not consider potential impacts to WJT. A pre-construction special-status plant survey, as suggested in MM BIO-6 below (see 6. Special-status Plants) should confirm the presence of WJT along with any other special-status species present. Additionally, CDFW recommends the Town adopt MM BIO-7 below (see 7. Western Joshua Tree) to avoid impacts to WJT.

The MND acknowledges the presence of a drainage onsite and states, “there is one non-jurisdictional water mapped within the Planning Area, in the southeastern corner near Central Road. Given the nature of ephemeral desert washes and drainages, the drainage may have moved, been modified due to surrounding development, or gone extinct. No riparian habitats or sensitive natural communities are known to occur in the Planning Area. However, future development projects facilitated by Alternatives 1 and 2 could potentially disturb these resources”. CDFW is concerned with the Plan’s potential impacts to Fish and Game Code section 1602 resources. Based on review of aerial photography from the California State Water Resources Control Board, an ephemeral stream runs along Assessor’s Parcel Number (APN) 3087-392-29-0000 and APN 3087-392-01-0000, located north of Ottawa road in between Central Road and Malaki Road before Eyota Road. The ephemeral stream continues south of Ottawa Road into adjacent vacant lands. Considering the potential for Fish and Game Code section 1602 resources within the Plan Area, CDFW recommends the Town adopt MM BIO-8 below (see 8. Lake and Streambed Alteration Notification).

CDFW requests that the Town adopts in a final EIR (termed hereafter as ‘final EIR’) the mitigation measures listed below and also found in Attachment 1 (Mitigation Monitoring and Reporting Program):

### **Biological Mitigation Measures**

1. Pre-construction Surveys. CDFW recommends MM BIO-1 be revised as follows (edits are in ~~strikethrough~~ and **bold**):

MM BIO-1

Prior to **grading or any other ground-disturbing activity, including vegetation removal** ~~development actions, development projects proposed on vacant parcels, or as~~

Daniel Alcayaga, Planning Manager  
 Town of Apple Valley  
 May 4, 2022  
 Page 5 of 21

~~deemed necessary by the Town, pre-construction surveys for burrowing owl, desert tortoise, and Mohave ground squirrel shall be conducted according to MM BIO-3, MM BIO-4, and MM BIO-5, respectively. shall be required to conduct site-specific biological studies in compliance with standard survey methodologies and the Apple Valley MSHCP/NCCP. Species-specific and/or resource-specific surveys may be required and shall comply with applicable protocols of CDFW, USFWS, and/or other appropriate regulatory agencies. If biological resources are present that would be significantly impacted by a project, mitigation measures shall be implemented to reduce impacts on sensitive species/habitat to less than significant levels.~~

2. Nesting Birds. CDFW offers the following revisions to MM BIO-2 (edits are in ~~strikethrough~~ and **bold**):

MM BIO-2

**All Plan activities shall be conducted outside of the nesting bird season (non-nesting season is typically from September 16 through December 31) to the maximum extent feasible. If Plan activities begin during the non-nesting season, a pre-construction survey shall be performed by a qualified biologist to verify the absence of nesting birds. A qualified biologist shall conduct the pre-activity survey within the Plan areas (including access routes) and a 300- foot buffer surrounding the Plan areas, no more than two hours prior to initiating Plan activities.**

For any **Plan activity** ~~grading or other site disturbance or tree or vegetation removal~~ occurring during the nesting season, **typically between February January 1 through September 15 for raptors in southern California and February 1 through August 31<sup>st</sup> September 1 for passerine birds**, a qualified biologist shall conduct at least one nesting bird survey, and more if deemed necessary by the consulting **qualified** biologist, ~~immediately~~ **within three (3) days** prior to initiation of Plan-related ground disturbing activities. If **active nests containing eggs or young** ~~nesting birds~~ are present, no work shall be permitted near the nest until the young birds have fledged **or the nest is no longer active. The qualified biologist shall establish an appropriate nest avoidance buffer to be marked on the ground.** ~~While there is no established protocol for nest avoidance, when consulted, the CDFW generally recommends~~ **Nest** avoidance buffers **are species specific and shall be** about 500 feet for birds-of-prey, and 300 feet for songbirds. **A smaller or larger buffer may be determined by the qualified biologist familiar with the nesting phenology of the nesting species and based on nest and buffer monitoring results. Established buffers shall remain on site until a qualified biologist determines the young have fledged or the nest is no longer active. Active nests and adequacy of the established buffer distance shall be monitored daily by the qualified biologist until the qualified biologist has determined the young have fledged or the Plan activity has been completed. The qualified biologist has the authority to stop work if nesting pairs exhibit signs of disturbance.**

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 6 of 21

3. Burrowing Owl (*Athene cunicularia*). The Plan Area has the potential to provide suitable foraging and/or nesting habitat for burrowing owl. Take of individual burrowing owls and their nests is defined by Fish and Game Code section 86, and prohibited by sections 3503, 3503.5 and 3513. Take is defined in Fish and Game Code section 86 as “hunt, pursue, catch, capture or kill, or attempt to hunt, pursue, catch, capture or kill.” CDFW recommends that the Town follow the recommendations and guidelines provided in the *Staff Report on Burrowing Owl Mitigation* (Department of Fish and Game, March 2012); available for download from CDFW’s website: [Microsoft Word - BUOW Staff Report final 030712 REV 1.doc \(ca.gov\)](#). The Staff Report on Burrowing Owl Mitigation, specifies three steps for project impact evaluations:

- a. A habitat assessment;
- b. Surveys; and
- c. An impact assessment

As stated in the Staff Report on Burrowing Owl Mitigation, the three progressive steps are effective in evaluating whether a project will result in impacts to burrowing owls, and the information gained from the steps will inform any subsequent avoidance, minimization, and mitigation measures. Habitat assessments are conducted to evaluate the likelihood that a site supports burrowing owl. Burrowing owl surveys provide information needed to determine the potential effects of proposed projects and activities on burrowing owls, and to avoid take in accordance with Fish and Game Code sections 86, 3503, and 3503.5. Impact assessments evaluate the extent to which burrowing owls and their habitat may be impacted, directly or indirectly, on and within a reasonable distance of a proposed CEQA project activity or non-CEQA project.

Thus, considering the aforementioned, CDFW recommends the adoption of MM BIO-3 below to address potential impacts to burrowing owl:

#### **MM BIO-3**

**Prior to grading or any other ground-disturbing activity, a qualified biologist shall conduct a habitat assessment for burrowing owls to determine if suitable burrowing owl habitat is present in and adjacent to the Plan site. Surveys shall be conducted consistent with the procedures outlined in the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation (California Department of Fish and Wildlife, 2012).**

**If there is suitable habitat for burrowing owl, then focused breeding season surveys as described in the Staff Report on Burrowing Owl Mitigation shall be conducted by a qualified biologist. If presence of burrowing owl is determined, the applicant shall contact CDFW and conduct an impact assessment in accordance with Staff Report on Burrowing Owl Mitigation prior to commencing**

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 7 of 21

**Plan activities to determine appropriate mitigation, including the acquisition and conservation of occupied replacement habitat at no less than a 2:1 ratio.**

**No less than 14 days prior to ground-disturbing activities, a qualified biologist shall conduct pre-construction surveys. If no burrowing owl(s) are observed on-site during the pre-construction clearance survey, a letter shall be prepared by the qualified biologist documenting the results of the survey. The letter shall be submitted to CDFW prior to issuance of any grading permits, and no further action is required. If burrowing owl(s) are observed on-site during the pre-construction clearance survey, areas occupied by burrowing owls shall be avoided. No ground-disturbing activities shall be permitted within 500 meters of an occupied burrow. A smaller buffer may be established if the qualified biologist determines a reduced buffer would not adversely affect the burrowing owl(s).**

**If burrowing owls cannot be avoided by the Plan activity, then a qualified biologist shall prepare and submit a passive relocation program in accordance with Appendix E (i.e., Example Components for Burrowing Owl Artificial Burrow and Exclusion Plans) of the 2012 Staff Report on Burrowing Owl Mitigation to CDFW for review/approval prior to the commencement of Plan activities. Burrow exclusion involves the installation of one-way doors in burrow openings during the non-breeding season to temporarily or permanently exclude burrowing owls and to close burrows after verifying through site monitoring and scoping that the burrows are empty. Existing or artificial burrows situated less than 75 meters from the Plan site are the ideal scenario for successful passive relocation. Additional factors for successful passive relocation are included in the CDFW 2012 Staff Report on Burrowing Owl Mitigation. Prior to passive relocation, suitable replacement burrows site(s) shall be provided at a minimum ratio of 2:1 and permanent conservation and management of burrowing owl habitat such that the habitat acreage, number of burrows and burrowing owl impacts are replaced consistent with the Staff Report on Burrowing Owl Mitigation including its Appendix A within designated adjacent conserved lands identified through coordination with CDFW. A qualified biologist shall confirm the natural or artificial burrows on the conservation lands are suitable for use by the owls. Monitoring and management of the replacement burrow site(s) shall be conducted, and a reporting plan shall be prepared for CDFW review and approval. The objective shall be to manage the replacement burrow sites for the benefit of burrowing owls (e.g., minimizing weed cover), with the specific goal of maintaining the functionality of the burrows for a minimum of 2 years. When a qualified biologist determines that burrowing owls are no longer occupying the Plan site and passive relocation is complete, Plan activities may begin. A final letter report shall be prepared by the qualified biologist documenting the results of the passive relocation. The letter shall be submitted to CDFW prior to the start of Plan activities.**

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 8 of 21

4. Desert Tortoise (*Gopherus agassizii*). To address potential impacts to desert tortoise, CDFW recommends the adoption of MM BIO-4 below:

#### **MM BIO-4**

During the desert tortoise active season (April to May or September to October) pre-construction surveys for desert tortoise shall be conducted by a California Department of Fish and Wildlife (CDFW)-approved biologist no more than 48 hours prior to initiation of Plan activities and after any pause in Plan activities lasting 30 days or more. Desert tortoise pre-construction surveys shall be conducted in accordance with the U.S. Fish and Wildlife Service 2019 desert tortoise survey methodology. The survey shall utilize perpendicular survey routes and 100-percent visual coverage for desert tortoise and their sign. Results of the survey shall be submitted to CDFW prior to start of Plan activities. If the survey confirms desert tortoise absence, the CDFW-approved biologist shall ensure desert tortoise do not enter the Plan area. If the survey confirms presence of desert tortoise, the project proponent shall submit to CDFW for review and approval a desert tortoise specific avoidance plan detailing the protective avoidance measures to be implemented to ensure complete avoidance of take (California Fish and Game Code Section 86 defines “take” as “hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill”) to desert tortoise. If complete avoidance of desert tortoise cannot be achieved, CDFW recommends the project proponent not undertake Plan activities and Plan activities be postponed until appropriate authorization (i.e., California Endangered Species Act (CESA) Incidental Take Permit (ITP) under Fish and Game Code section 2081) is obtained.

5. Mohave Ground Squirrel (*Xerospermophilus mohavensis*). CDFW has concerns that the Plan is within the range of the CESA threatened Mohave ground squirrel and recommends the adoption of MM BIO-5 below:

#### **MM BIO-5**

Pre-construction surveys following the *Mohave Ground Squirrel Survey Guidelines* (CDFG 2010), or most recent version shall be performed by a qualified biologist authorized by a Memorandum of Understanding issued by the California Department of Fish and Wildlife (CDFW). The pre-construction surveys shall cover the Plan site and a 50- foot buffer zone. Should Mohave ground squirrel presence be confirmed during the survey, the Town should obtain an Incidental Take Permit (ITP) for Mohave ground squirrel prior to the start of Plan activities. CDFW shall be notified if Mohave ground squirrel presence is confirmed during the pre-construction survey. If a Mohave ground squirrel is observed during Plan activities, and the Town does not have an ITP, all work shall immediately stop, and the observation shall be immediately reported to CDFW.

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 9 of 21

6. Special-status Plants. CDFW recommends MM BIO-6 below be added to the final EIR to fully avoid and otherwise protect sensitive plant communities from the Plan-related direct and indirect impacts:

#### **MM BIO-6**

**Prior to Plan implementation, and during the appropriate season, the Town shall conduct botanical field surveys within the Plan Area following protocols set forth in the California Department of Fish and Wildlife's (CDFW) 2018 Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018). The surveys shall be conducted by a CDFW-approved botanist(s) experienced in conducting floristic botanical field surveys, knowledgeable of plant taxonomy and plant community ecology and classification, familiar with the plants of the area, including special status and locally significant plants, and familiar with the appropriate state and federal statutes related to plants and plant collecting. The botanical field surveys shall be conducted at the appropriate time of year when plants will both be evident and identifiable (usually, during flowering or fruiting) and, in a manner, which maximizes the likelihood of locating special-status plants and sensitive natural communities that may be present. Botanical field surveys shall be conducted floristic in nature, meaning that every plant taxon that occurs in the project area is identified to the taxonomic level necessary to determine rarity and listing status. If any special-status plants are identified, the Town shall either avoid the plant(s), with an appropriate buffer (i.e., fencing or flagging), or mitigate the loss of the plant(s) through the purchase of mitigation credits from a CDFW-approved bank or land acquisition and conservation at a minimum 3:1 (replacement-to impact) ratio. Note that a higher ratio may be warranted if the proposed mitigation lands are located far away from the Plan site (i.e., within a separate watershed) or is not occupied by or available to special-status species.**

**If the Plan has the potential to impact a state-listed species, the Town should apply for a California Endangered Species Act (CESA) Incidental Take Permit (ITP) with CDFW.**

7. Western Joshua Tree. As a Candidate for Threatened California Endangered Species Act (CESA)-listed species, CDFW is concerned with the Plan's potential impacts to at least 3 WJT identified by CDFW through aerial imagery. CDFW recommends that the Town conduct an impact analysis for WJT. When analyzing impacts to WJT, the entire population on the project site should be considered to properly calculate demographics and estimate the quality of WJT habitat on-site. CDFW recommends the final EIR quantify WJT presence on the entirety of the Plan Area through focused surveys. The WJT survey results should be included in the final EIR and should identify and provide: a) the GPS coordinates and accompanying map of each WJT within the Plan Area; b) the age class of each WJT; c) the number of clonal WJT associated with each parent plant and the methodology used to make this determination; d) a unique numbering

Daniel Alcayaga, Planning Manager  
 Town of Apple Valley  
 May 4, 2022  
 Page 10 of 21

system for each WJT, and e) geo-referenced, representative photos of parent trees, clones, and general distribution of WJT across the Plan site.

Furthermore, the final EIR should include: 1) an impact analysis assessing potential Plan impacts to WJT within a 186-foot buffer zone of WJT (Vander Wall et al. 2006), 2) implementing a 300-foot buffer around WJT not scheduled for removal to avoid impacts to WJT, and 3) a mitigation strategy for Plan impacts to WJT individuals, WJT seedbank, and indirect impacts to WJT. Indirect impacts to WJT include destruction of WJT's obligate pollinating moth (yucca moth; *Tegeticula synthetica*), while it is dormant in the soil or while it is in its flight phase, which would impact the ability of WJT to sexually recruit new individuals (Sweet et al. 2019). Destruction or modification of WJT habitat in the Plan Area could also disrupt the seed dispersal behavior of rodents, which is the primary way that WJT seeds are buried at a soil depth suitable for successful germination (Waitman et al. 2012). Destruction or modification of WJT habitat in the Plan area could also eliminate nurse plants that are critical for WJT seedling survival (Brittingham and Walker 2000).

CDFW requests the final EIR 1) adequately identify and disclose the Plan impacts (i.e., direct, indirect, and cumulative) to WJT as noted above, 2) propose mitigation to offset those impacts to WJT, and 3) demonstrate that impacts to WJT are less than significant and, for the purposes of CESA permitting, are fully mitigated. Further, CDFW recommends the adoption of MM BIO- 7 below:

#### **MM BIO-7**

**CDFW recommends that a California Endangered Species Act (CESA) Incidental Take Permit (ITP) be obtained if the Plan has the potential to result in "take" (California Fish and Game Code Section 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") of western Joshua tree, a Candidate for Threatened CESA-listed species. Take of any CESA-listed species is prohibited except as authorized by state law (Fish and Game Code, §§ 2080 & 2085). Permanent protection and perpetual management of compensatory habitat is necessary and required pursuant to CESA to fully mitigate project-related impacts of the taking of CESA-listed species. CDFW recommends permanent protection through the establishment of a conservation easement, development of a long-term management plan, and securing funding sufficient to implement management plan tasks in perpetuity. These tasks should be completed or financial security must be provided before starting any Plan activities. In order to execute an ITP, CDFW requires documentation of CEQA compliance. CDFW requires the CEQA document have a State Clearing House number, show proof of filing fees, and proof the document has been circulated.**

8. Lake and Streambed Alteration Notification. CDFW recommends the County adopt MM BIO-8 below prior to finalizing the EIR to avoid potential impacts to Fish and Game Code section 1602:

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 11 of 21

## **MM BIO-8**

**Prior to construction and issuance of any grading permit, the Town should obtain written correspondence from the California Department of Fish and Wildlife (CDFW) stating that notification under section 1602 of the Fish and Game Code is not required for the Plan, or the Town should obtain a CDFW-executed Lake and Streambed Alteration Agreement, authorizing impacts to Fish and Game Code section 1602 resources associated with the Plan.**

## **ENVIRONMENTAL DATA**

CEQA requires that information developed in Environmental Impact Reports and Negative Declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).). Accordingly, please report any special-status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). The CNDDDB field survey form can be found at the following link: [http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDDB\\_FieldSurveyForm.pdf](http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDDB_FieldSurveyForm.pdf). The completed form can be mailed electronically to CNDDDB at the following email address: [CNDDDB@wildlife.ca.gov](mailto:CNDDDB@wildlife.ca.gov). The types of information reported to CNDDDB can be found at the following link: [http://www.dfg.ca.gov/biogeodata/cnddb/plants\\_and\\_animals.asp](http://www.dfg.ca.gov/biogeodata/cnddb/plants_and_animals.asp).

## **FILING FEES**

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying Project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

## **CONCLUSION**

CDFW requests that the Town of Apple Valley include in the final EIR the suggested mitigation measures (Attachment 1) offered by CDFW to avoid, minimize, and mitigate Plan impacts on California fish and wildlife resources.

CDFW appreciates the opportunity to comment on the DEIR for the Village Specific Plan (SCH No. 2021110271) and hopes our comments will assist the Town in identifying, avoiding, minimizing, and mitigating Plan impacts on fish and wildlife resources.

If you should have any questions pertaining to the comments provided in this letter, please contact Corina Jimenez, Environmental Scientist at [Corina.Jimenez@wildlife.ca.gov](mailto:Corina.Jimenez@wildlife.ca.gov).

## **ATTACHMENT 1: MITIGATION MONITORING AND REPORTING PROGRAM (MMRP)**

### **PURPOSE OF THE MMRP**

The purpose of the MMRP is to ensure compliance with mitigation measures during project implementation. Mitigation measures must be implemented within the time periods indicated in the table below.

### **TABLE OF MITIGATION MEASURES**

The following items are identified for each mitigation measure: Mitigation Measure, Implementation Schedule, and Responsible Party. The Mitigation Measure column summarizes the mitigation requirements. The Implementation Schedule column shows the date or phase when each mitigation measure will be implemented. The Responsible Party column identifies the person or agency that is primarily responsible for implementing the mitigation measure.

<b>Biological (BIO) Mitigation Measure (MM)</b>	<b>Implementation Schedule</b>	<b>Responsible Party</b>
<b>MM BIO-1</b>  Prior to grading or any other ground-disturbing activity, including vegetation removal, pre-construction surveys for burrowing owl, desert tortoise, and Mohave ground squirrel shall be conducted according to MM BIO-3, MM BIO-4, and MM BIO-5, respectively.	Prior to commencing ground- or vegetation disturbing activities	Project Proponent
<b>MM BIO-2</b>  All Plan activities shall be conducted outside of the nesting bird season (non-nesting season is typically from September 16 through December 31) to the maximum extent feasible. If Plan activities begin during the non-nesting season, a pre-construction survey shall be performed by a qualified biologist to verify the absence of nesting birds. A qualified biologist shall conduct the pre-activity survey within the	Prior to commencing ground- or vegetation disturbing activities	Project Proponent

 Page 15 of 21

<p>Plan areas (including access routes) and a 300- foot buffer surrounding the Plan areas, no more than two hours prior to initiating Plan activities.</p> <p>For any Plan activity occurring during the nesting season, typically between January 1 through September 15 for raptors in southern California and February 1 through September 1 for passerine birds, a qualified biologist shall conduct at least one nesting bird survey, and more if deemed necessary by the qualified biologist, within three (3) days prior to initiation of Plan-related activities. If active nests containing eggs or young are present, no work shall be permitted near the nest until the young birds have fledged or the nest is no longer active. The qualified biologist shall establish an appropriate nest avoidance buffer to be marked on the ground. Nest avoidance buffers are species specific and shall be about 500 feet for birds-of-prey, and 300 feet for songbirds. A smaller or larger buffer may be determined by the qualified biologist familiar with the nesting phenology of the nesting species and based on nest and buffer monitoring results. Established buffers shall remain on site until a qualified biologist determines the young have fledged or the nest is no longer active. Active nests and adequacy of the established buffer distance shall be monitored daily by the qualified biologist until the qualified biologist has determined the young have fledged or the Plan activity has been completed. The qualified biologist has the authority to stop work if nesting pairs exhibit signs of disturbance.</p>		
<p>MM BIO-3</p> <p>Prior to grading or any other ground-disturbing activity, a qualified biologist shall conduct a habitat assessment for burrowing</p>	<p>Prior to commencing ground- or vegetation</p>	<p>Project Proponent</p>

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022

<p>owls to determine if suitable burrowing owl habitat is present in and adjacent to the Plan site. Surveys shall be conducted consistent with the procedures outlined in the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation (California Department of Fish and Wildlife, 2012).</p> <p>If there is suitable habitat for burrowing owl, then focused breeding season surveys as described in the Staff Report on Burrowing Owl Mitigation shall be conducted by a qualified biologist. If presence of burrowing owl is determined, the applicant shall contact CDFW and conduct an impact assessment in accordance with Staff Report on Burrowing Owl Mitigation prior to commencing Plan activities to determine appropriate mitigation, including the acquisition and conservation of occupied replacement habitat at no less than a 2:1 ratio.</p> <p>No less than 14 days prior to ground-disturbing activities, a qualified biologist shall conduct pre-construction surveys. If no burrowing owl(s) are observed on-site during the pre-construction clearance survey, a letter shall be prepared by the qualified biologist documenting the results of the survey. The letter shall be submitted to CDFW prior to issuance of any grading permits, and no further action is required. If burrowing owl(s) are observed on-site during the pre-construction clearance survey, areas occupied by burrowing owls shall be avoided. No ground-disturbing activities shall be permitted within 500 meters of an occupied burrow. A smaller buffer may be established if the qualified biologist determines a reduced buffer would not adversely affect the burrowing owl(s).</p>	disturbing activities	
---	-----------------------	--

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 17 of 21

<p>If burrowing owls cannot be avoided by the Plan activity, then a qualified biologist shall prepare and submit a passive relocation program in accordance with Appendix E (i.e., Example Components for Burrowing Owl Artificial Burrow and Exclusion Plans) of the 2012 Staff Report on Burrowing Owl Mitigation to CDFW for review/approval prior to the commencement of Plan activities. Burrow exclusion involves the installation of one-way doors in burrow openings during the non-breeding season to temporarily or permanently exclude burrowing owls and to close burrows after verifying through site monitoring and scoping that the burrows are empty. Existing or artificial burrows situated less than 75 meters from the Plan site are the ideal scenario for successful passive relocation. Additional factors for successful passive relocation are included in the CDFW 2012 Staff Report on Burrowing Owl Mitigation. Prior to passive relocation, suitable replacement burrows site(s) shall be provided at a minimum ratio of 2:1 and permanent conservation and management of burrowing owl habitat such that the habitat acreage, number of burrows and burrowing owl impacts are replaced consistent with the Staff Report on Burrowing Owl Mitigation including its Appendix A within designated adjacent conserved lands identified through coordination with CDFW. A qualified biologist shall confirm the natural or artificial burrows on the conservation lands are suitable for use by the owls. Monitoring and management of the replacement burrow site(s) shall be conducted, and a reporting plan shall be prepared for CDFW review and approval. The objective shall be to manage the replacement burrow sites for the benefit of burrowing owls (e.g., minimizing weed cover), with the specific goal of maintaining the functionality of the burrows for a minimum of 2 years. When a</p>

Daniel Alcayaga, Planning Manager  
Town of Apple Valley  
May 4, 2022  
Page 18 of 21

qualified biologist determines that burrowing owls are no longer occupying the Plan site and passive relocation is complete, Plan activities may begin. A final letter report shall be prepared by the qualified biologist documenting the results of the passive relocation. The letter shall be submitted to CDFW prior to the start of Plan activities.		
<p><b>MM BIO-4</b></p> <p>During the desert tortoise active season (April to May or September to October) pre-construction surveys for desert tortoise shall be conducted by a California Department of Fish and Wildlife (CDFW)-approved biologist no more than 48 hours prior to initiation of Plan activities and after any pause in Plan activities lasting 30 days or more. Desert tortoise pre-construction surveys shall be conducted in accordance with the U.S. Fish and Wildlife Service 2019 desert tortoise survey methodology. The survey shall utilize perpendicular survey routes and 100-percent visual coverage for desert tortoise and their sign. Results of the survey shall be submitted to CDFW prior to start of Plan activities. If the survey confirms desert tortoise absence, the CDFW-approved biologist shall ensure desert tortoise do not enter the Plan area. If the survey confirms presence of desert tortoise, the project proponent shall submit to CDFW for review and approval a desert tortoise specific avoidance plan detailing the protective avoidance measures to be implemented to ensure complete avoidance of take (California Fish and Game Code Section 86 defines “take” as “hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill”) to desert tortoise. If complete avoidance of desert tortoise cannot be achieved, CDFW recommends the project proponent not undertake Plan activities and Plan activities</p>	Prior to commencing ground- or vegetation disturbing activities	Project Proponent

<p>be postponed until appropriate authorization (i.e., California Endangered Species Act (CESA) Incidental Take Permit (ITP) under Fish and Game Code section 2081) is obtained.</p>		
<p>MM BIO-5</p> <p>Pre-construction surveys following the <i>Mohave Ground Squirrel Survey Guidelines</i> (CDFG 2010), or most recent version shall be performed by a qualified biologist authorized by a Memorandum of Understanding issued by the California Department of Fish and Wildlife (CDFW). The pre-construction surveys shall cover the Plan site and a 50- foot buffer zone. Should Mohave ground squirrel presence be confirmed during the survey, the Town should obtain an Incidental Take Permit (ITP) for Mohave ground squirrel prior to the start of Plan activities. CDFW shall be notified if Mohave ground squirrel presence is confirmed during the pre-construction survey. If a Mohave ground squirrel is observed during Plan activities, and the Town does not have an ITP, all work shall immediately stop, and the observation shall be immediately reported to CDFW.</p>	<p>Prior to commencing ground- or vegetation disturbing activities</p>	<p>Project Proponent</p>
<p>MM BIO-6</p> <p>Prior to Plan implementation, and during the appropriate season, the Town shall conduct botanical field surveys within the Plan Area following protocols set forth in the California Department of Fish and Wildlife's (CDFW) 2018 Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018). The surveys shall be conducted by a CDFW-approved botanist(s) experienced in conducting floristic botanical field surveys, knowledgeable of plant taxonomy and plant</p>	<p>Prior to commencing ground- or vegetation disturbing activities</p>	<p>Project Proponent</p>

**RE: Town of Apple Valley's Planning Commission for Village Specific  
Plan Project**

Dear Daniel Alcayaga,

On behalf of the Southwest Regional Council of Carpenters (“**Southwest Carpenter**” or “**SWRCC**”), my Office is submitting these comments for the Town of Apple Valley’s (“**Town**”) May 18, 2022, Planning Commission meeting for Village Specific Plan Project (“**Project**”).

The Southwest Carpenters is a labor union representing 50,000 union carpenters in six states, including California, and has a strong interest in well ordered land use planning and addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work and recreate in the Town and surrounding communities and would be directly affected by the Project’s environmental impacts.

SWRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC incorporates by reference all comments raising issues regarding the EIR submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected

to the Project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, SWRCC requests that the Town provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”), Cal Public Resources Code (“**PRC**”) § 21000 *et seq*, and the California Planning and Zoning Law (“**Planning and Zoning Law**”), Cal. Gov’t Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The Town should require the use of a local skilled and trained workforce to benefit the community’s economic development and environment. The Town should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

. . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Local skilled and trained workforce requirements and policies have significant environmental benefits since they improve an area’s jobs-housing balance, decreasing the amount of and length of job commutes and their associated greenhouse gas emissions. Recently, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.<sup>2</sup>

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to “promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”<sup>3</sup>

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City “[c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential

<sup>2</sup> South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

<sup>3</sup> City of Hayward (2014) Hayward 2040 General Plan Policy Document at p. 3-99, *available at* [https://www.hayward-ca.gov/sites/default/files/documents/General\\_Plan\\_FINAL.pdf](https://www.hayward-ca.gov/sites/default/files/documents/General_Plan_FINAL.pdf).

developments to require contractors to utilize apprentices from state-approved, joint labor-management training programs, . . .”<sup>4</sup> In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”<sup>5</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>6</sup>

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to those held by local residents.<sup>7</sup> Some municipalities have tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When

needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The Town should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

Sincerely,

A handwritten signature in black ink, appearing to read "Mitchell M. Tsai", is written over a solid black horizontal line.
