Atlas View II Vineyard
Hydrology Analysis**
Prepared by Napa Valley Vineyard Engineering, Inc
December 6, 2018
Revised October 17, 2019

INTRODUCTION

This project is the development of approximately 20.1 gross acres of new vineyard within APN 032-120-015 located at 4300 Atlas Peak Road, Napa.

This hydrology study is to determine the anticipated affect the proposed vineyard development project will have on local hydrology and runoff patterns. Hydrologic modeling of existing and proposed conditions was performed using HydroCad software with the CA-1 rainfall distribution curve. Following is a summary of the data used to complete the hydrologic analysis and the results of this analysis.

RAINFALL DATA

Rainfall depths for the project site were obtained from the National Oceanic and Atmospheric Administration (NOAA) Atlas 14, Volume 6, Version 2, Precipitation Frequency Data for California, which uses the latitude and longitude of a site to determine rainfall depths. The latitude and longitude of this project are estimated to be 38.4354° N, 122.2373° W, based on information obtained from All Topo V7 USGS mapping software.

The following rainfall data from the NOAA website was used in the analysis:

2 year, 24 hour	4.50 inches
5 year, 24 hour	5.79 inches
10 year, 24 hour	6.84 inches
25 year, 24 hour	8.41 inches
50 year, 24 hour	9.60 inches
100 year, 24 hour	10.90 inches

WATERSHED AREAS

The project site is located within seven watersheds as shown on the Drainage Area Maps in the Appendix. The watersheds are modeled separately, except for Watershed 3, which is broken into two subareas, both draining to a common point of interest (POI). The POIs all occur on the subject property except that the POI for Watershed 5 is approximately 600 ft. downstream from the property line. The location of POI 5 was selected in order to encompass the proposed development area within the watershed. There are three existing roadway culverts within the watersheds, and pre and post

project modeling was performed at each one. The watershed above each POI was determined based on Napa County contour mapping (2002).

PRE-PROJECT WATERSHED CONDITIONS

Soil Types

The United States Department of Agriculture Soil Conservation Service Soils Map for Napa County, August 1978, maps the following soil types within the watersheds:

SCS #100/102, Aiken loam (Hydrologic Soil Group(HSG) C)

SCS #139/140, Forward gravelly loam (HSG C)

Land Use

Land use within each watershed was analyzed based on the 2011 aerial photograph obtained from the Napa County GIS website. All watersheds are composed largely of tree canopy with pockets of brush and open grassland. There is existing vineyard in Watersheds 1 and 2, which is assumed to be tilled and sprayed, and is considered a “fair” hydrologic condition. A large part of the watersheds used in this analysis were burned in the October 2017 fires. The current ground cover in the grassland and brush areas is approximately 75 to 80%, which is considered a “good” hydrologic condition. Because of the impact of the fire, the tree canopy is considered a “fair” hydrologic condition. A detailed breakdown of land uses by area and hydrologic soil group is included in the HydroCad reports in the Appendix, and is shown on the Drainage Area Maps.

Time of Concentration

The time of concentration represents the time it takes for rainfall in the most hydraulically remote portion of the watershed to reach the POI. The time of concentration is estimated assuming sheet flow up to 100 feet in the uppermost reaches of each watershed. A shallow concentrated flow regime is used to model the runoff down to a channel if one exists, or to the POI. Channel flow data was determined using a typical cross section of each channel. A detailed breakdown of the time of concentration parameters is included in the HydroCad reports, and is shown on the Drainage Area Maps.

POST-PROJECT WATERSHED CONDITIONS

Soil Types

Land preparation for the proposed vineyard development does not alter the permeability of the mapped soil types. The post-project HSG remains the same as pre-project HSG.

Land Use

The proposed project area covers 20.1 acres of open grassland with small pockets of brush or tree canopy, to vineyard. All other areas within the subject watersheds remain unchanged. The project proposes a no-till cover crop with spot spray or mechanical cultivation around the base of each vine only, which is considered a "good" hydrologic condition. Vineyard avenues/turnspaces will be maintained in no-till cover and are modeled as part of the vineyard. Access drives are existing. A detailed breakdown of land uses by area and hydrologic soil group is included in the Appendix.

Time of Concentration

Vineyard development will not alter the flow paths used in this analysis, except in Watersheds 1b and 3 where attenuation basins are proposed. Time of concentration under post-project conditions are considered the same as pre-project conditions in all other watersheds. A detailed breakdown of time of concentration parameters is included in the Appendix.

CALCULATED RUNOFF RATE

Using the rainfall data, watershed area, land use and time of concentration parameters described above and included in the Appendix, the following runoff rates were calculated:

HydroCad Calculated Peak Runoff Rate (cfs)

24 hr. storm event	2 yr.		5 yr.		10 yr.		25 yr.		50 yr.		100 yr.	
Project Condition	pre	post	pre	post	pre	post	pre	post	pre	post	pre	post
Watershed 1a	3.09	3.09	4.77	4.75	6.18	6.17	8.34	8.33	10.00	9.98	11.82	11.79
Watershed 1b	16.89	16.83	25.77	25.73	33.27	33.21	44.70	44.58	53.44	53.26	63.01	62.76
Watershed 2	6.73	6.73	10.37	10.37	13.46	13.46	18.17	18.17	21.78	21.78	25.75	25.75
Watershed 3	1.75	1.61	2.70	2.51	3.50	3.22	4.73	4.28	5.67	5.08	6.69	5.95
Watershed 4	10.19	10.19	15.69	15.69	20.36	20.36	27.49	27.49	32.95	32.95	38.94	38.94
Watershed 5	1.97	1.97	3.04	3.04	3.94	3.94	5.32	5.32	6.38	6.38	7.53	7.53
Watershed 6	1.07	1.07	1.67	1.67	2.18	2.18	2.96	2.96	3.56	3.56	4.21	4.21
Culvert 1b	12.89	12.89	19.68	19.68	25.40	25.40	34.14	34.13	40.80	40.80	48.11	48.11
Culvert 2	1.39	1.39	2.14	2.14	2.77	2.77	3.74	3.74	4.49	4.49	5.30	5.30
Culvert 4	4.26	4.26	6.56	6.56	8.51	8.51	11.49	11.49	13.77	13.77	16.28	16.28

CONCLUSION

The hydrologic analysis presented above, and supporting information in the Appendix, demonstrate that the proposed vineyard development with the construction of basins in Watershed 1b and 3 will not increase the peak runoff rate in the affected watersheds.

Summary for Subcatchment 1S: WS 6 pre

Runoff = 1.07 cfs @ 12.13 hrs, Volume= 0.402 af, Depth> 1.46"

Runoff by SCS TR-20 method, UH=SCS, Weighted-CN, Time Span= 5.00-20.00 hrs, dt= 0.05 hrs
 CA-1 2 yr Rainfall=4.50"

Area (ac)	CN	Description
0.270	74	Pasture/grassland/range, Good, HSG C
3.030	73	Woods, Fair, HSG C
3.300	73	Weighted Average
3.300		100.00% Pervious Area

Tc (min)	Length (feet)	Slope (ft/ft)	Velocity (ft/sec)	Capacity (cfs)	Description
5.2	100	0.4500	0.32		Sheet Flow, Woods: Light underbrush n= 0.400 P2= 4.50"
0.2	127	0.4100	10.31		Shallow Concentrated Flow, Unpaved Kv= 16.1 fps
0.6	160	0.0900	4.83		Shallow Concentrated Flow, Unpaved Kv= 16.1 fps
0.3	213	0.4000	10.18		Shallow Concentrated Flow, Unpaved Kv= 16.1 fps
6.3	600	Total
