Ms. Nicole Morse T&B Planning Inc. 3200 El Camino Real, Suite 100 Irvine, CA 92602

SUBJECT: FIRST MARCH LOGISTICS VEHICLE MILES TRAVELED (VMT) ANALYSIS

Dear Ms. Nicole Morse:

The following Vehicle Miles Traveled (VMT) Analysis has been prepared for the proposed First March Logistics (**Project**), which is located north of Nandina Avenue and west of Natwar Lane, in the City of Perris<sup>1</sup>.

### **PROJECT OVERVIEW**

It is our understanding that the Project is to consist of a single 419,034 square foot (sf) warehouse building (Building 1) and a second 139,971 sf warehouse building (Building 2) (See Attachment A).

#### **BACKGROUND**

Changes to the Guidelines for Implementation of the California Environmental Quality Act (CEQA) were adopted in December 2018, which requires all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the new measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a <u>Technical Advisory on Evaluating Transportation Impacts in CEQA</u> (December 2018) (**Technical Advisory**) (1). Based on OPR's Technical Advisory, the City of Perris adopted their <u>Transportation Impact Analysis Guidelines for CEQA</u> (May 2020) (**City Guidelines**) (2). The adopted City Guidelines have been utilized to prepare this VMT analysis.

### VMT SCREENING ASSESSMENT

As the City Guidelines describe, the first step in evaluating a land use project's VMT impact is to perform an initial screening assessment utilizing the <u>City of Perris VMT Scoping Form for Land Use Projects</u> (**Scoping Form**). The Scoping Form provides an easy to use tool for streamlining the VMT analysis process.

<sup>&</sup>lt;sup>1</sup> It should be noted the Project is located within the *Perris Valley Commerce Center Specific Plan* (PVCC SP).

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 2 of 8

City's Guidelines list standardized screening methods for project level VMT analysis that can be used to identify when a proposed land use development project is anticipated to result in a less than significant impact thereby eliminating the need to conduct additional VMT analysis. City of Perris VMT screening methods, as described within the City Guidelines, are listed below:

- Affordable Housing
- High Quality Transit Areas (HQTA) Screening
- Local-Serving Land Use
- Low VMT Area
- Net Daily Trips Less than 500 ADT

As stated by the City Guidelines, projects need only meet one of the above screening criteria to result in a less than significant impact.

## **AFFORDABLE HOUSING**

The City Guidelines state, if a project consists of 100% affordable housing, then the presumption can be made that it will have a less than significant impact on VMT. The Project does not include any residential uses.

Affordable Housing screening criteria not met.

# **HIGH QUALITY TRANSIT AREAS (HQTA) SCREENING**

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor" may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate or high-income residential units.

<sup>&</sup>lt;sup>2</sup> Pub. Resources Code, § 21064.3 ("Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

<sup>&</sup>lt;sup>3</sup> Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 3 of 8

Based on the Western Riverside Councils of Governments (WRCOG) Screening Tool results presented in Attachment B, the Project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

**HQTA** screening criteria is not met.

## **LOCAL-SERVING LAND USE**

As identified in the City Guidelines, local serving land uses provide more opportunities for residents and employees to shop, dine, and obtain services closer to home and work. Local serving uses can also include community resources that may otherwise be located outside of the city or local area. By improving destination proximity, local serving uses lead to shortened trip lengths and reduced VMT. The City Guidelines provides a list of applicable local serving retail categories below 50,000 square feet. The project does not intend to develop any local serving land uses.

Local-Serving Land Use screening criteria is not met.

### LOW VMT AREA SCREENING

The City Guidelines states, "Projects that locate in areas with low VMT, and that incorporate similar features (i.e., land use type, access to the circulation network, etc.), will tend to exhibit similarly low VMT." It is our understanding that the City of Perris utilizes its own VMT scoping form to identify areas of low VMT. The scoping form uses the sub-regional Riverside County Transportation Analysis Model (RIVTAM) to measure VMT performance within individual traffic analysis zones (TAZ's) within the Western Riverside Councils of Governments (WRCOG) region. The Project's physical location based on the WRCOG web-based screening tool is used to determine the TAZ in which the Project resides. The TAZ identification number is then selected within the scoping form. Finally, the VMT generated by the existing TAZ as compared to the City's impact threshold of "VMT per employee that is less than or equal to the Citywide average." The TAZ containing the proposed Project was selected and the scoping form identified VMT per employee. Based on the scoping form results, the Project located in TAZ 3754 and the VMT per employee is 12.19. Whereas the City of Perris citywide VMT average is 11.62. Therefore, the Project does not reside within a low VMT generating zone (See Attachment C).

Low VMT Area screening criteria is not met.

#### **NET DAILY TRIPS LESS THAN 500 ADT**

The City Guidelines identify projects that generate less than 500 average daily trips (ADT) would not cause a substantial increase in the total citywide or regional VMT and are therefore presumed to have a less than significant impact on VMT. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) <u>Trip Generation Manual</u>, 10<sup>th</sup> Edition, 2017 (3). The Project is anticipated to generate 1,390 daily vehicle trip-

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 4 of 8

ends per day. Therefore, the Project generate daily vehicle trips exceeding the 500 daily vehicle trip threshold (See Attachment D).

### Net Daily Trips Less than 500 ADT screening criteria is not met.

Based on a more detailed review of the applicable VMT screening methods, it is determined that the Project is not eligible for screening and further VMT Analysis is required.

#### **VMT A**NALYSIS

As noted in the City Guidelines, Projects that do not meet screening criteria and are below 2,500 daily vehicle trips are to utilize the City's scoping form to perform a VMT analysis and subsequent VMT mitigation (if required) to reduce the Project's VMT impact below the City's adopted thresholds. The City's scoping form contains base year data obtained from the RIVTAM base year 2012 traffic model. The RIVTAM base year traffic model was also used to derive the City's impact thresholds.

As previously discussed in the low area VMT screening criteria, the Project resides in TAZ 3754 and the VMT per employee for TAZ 3754 is 12.19. Whereas the City of Perris' threshold of citywide average is 11.62 VMT per employee. The Project's VMT impact is potentially significant. The scoping form results in a mitigation requirement of 4.68% reduction to adequately mitigate the VMT impacts of the Project's TAZ to below the City's impact threshold.

TABLE 1: PROJECT VMT PER EMPLOYEE COMPARISON

	Baseline
City of Perris VMT per Employee	11.62
Project TAZ 3767 VMT per Employee	12.19
% Difference	4.68%
Potentially Significant?	Yes

#### **VMT MITIGATION**

Mitigation may be provided in the form transportation demand management (TDM) measures or participation in a VMT fee program, which is not yet available. Therefore, VMT reduction measures focused on reducing commute VMT and the anticipated reduction in VMT associated with these measures have been estimated based on the research contained in the <u>Quantifying Greenhouse Gas Mitigation Measures</u> (CAPCOA, 2010) and are presented below.

## Mitigation Measure 1 – Provide Pedestrian Network Improvements SDT-1

The Project would reduce its VMT impact through the implementation of pedestrian network improvements that would provide a pedestrian access network to link areas of the Project site that would encourage people to walk instead of drive. This mode shift results in people driving less and thus

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 5 of 8

a reduction in VMT. The project will provide a pedestrian access network that internally links all uses and connects to existing pedestrian facilities contiguous with the project site. The project will minimize barriers to pedestrian access and interconnectivity. There is existing sidewalk on east side along Natwar Lane. The Project would provide pedestrian connections on-site that would connect to the existing sidewalk along Natwar Lane. Notably a sidewalk would be provided along the west side of Natwar Lane adjacent to the Project site. As noted by CAPCOA, this measure could potentially provide a maximum reduction in VMT of 2%<sup>4</sup> based on the Project providing pedestrian accommodations within the project site and connecting to off-site pedestrian facilities. Table 2 describes key factors when determining the estimated VMT reductions.

**TABLE 2: SDT-1 CAPCOA MITIGATION METHOD** 

Estimated VMT Reduction	Extent of Pedestrian Accommodations	Context
2%	Within Project Site and Connecting off Site	Urban/Suburban
1%	Within Project site	Urban/Suburban
<1%	Within and Connecting Off-Site	Rural

#### Mitigation Measure 2 – Implement Commute Trip Reduction Program TRT-1

The Project would further reduce its VMT impact through the implementation of a voluntary commute trip reduction (CTR) program that would discourage single-occupancy vehicle trips and encourage alternative modes of transportation such as carpooling, transit usage, walking and biking. The CTR program will provide employees assistance in using alternative modes of travel and provide incentives to encourage employee usage. CTR program would be a multi-strategy program that could include the following individual measures:

- Carpooling encouragement
- Ride-matching assistance
- Preferential carpool parking
- Flexible work schedules for carpools
- Half-time transportation coordinator
- New employee orientation of trip reduction and alternative travel mode options
- Vanpool assistance
- Bicycle end-trip facilities (parking and lockers)

Related to this measure, the <u>Air Quality Impact Analysis</u> (Urban Crossroads, 2022) performed for the Project includes MM AQ-7<sup>5</sup> to reduce operational air quality emissions from the Project. MM AQ-7 states that the Project will comply with SCAQMD Rule 2202, On-Road Vehicle Mitigation Options. Rule 2202 applies to employers with 250 or more employees, and the purpose of the Rule is to provide employees with a menu of options to reduce employee commute vehicle emissions. Rule 2202 requires annual

<sup>&</sup>lt;sup>4</sup> CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p.186)

<sup>&</sup>lt;sup>5</sup> Air Quality Impact Analysis; Page 9-10

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 6 of 8

registration with SCAQMD. The program established per Rule 2202 will include the individual trip reduction measures outlined in TRT-1. The anticipated reduction in VMT associated with this measure has been estimated based on the research contained in the Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010). The range of effectiveness in terms of commute VMT reduction is estimated to be between 1.0-6.2% as noted by CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p. 218). CAPCOA identifies the following formulas to calculate the percentage reduction in commute VMT based on the implementation of a CTR program. For projects located within a suburban context, CAPCOA identifies the potential maximum percent reduction in commute VMT to be 5.4%.

 $%VMT\ Reduction = A \times B$ 

Where:

A = Location Context

Low Density Suburb: 5.4% Suburban Center: 5.6%

Urban: 6.2%

B = % employees eligible

For the Project we conservatively estimated that the Project's eligible employees to the CTR program will be 52%<sup>7</sup> and for a suburban context the product would result in a 2.8% reduction in VMT.

$$2.8\% = 5.4\% \times 52\%$$

As noted on the scoping form, project generated VMT exceeds the City's baseline VMT threshold by 4.68%. The effectiveness of pedestrian network improvements and a voluntary CTR program measures listed above in reducing the Project VMT are dependent on yet unknown building tenant(s) and their future operations. Therefore, VMT reductions from various measures cannot be guaranteed. Other regional transportation measures that may reduce VMT include but are not limited to improving/increasing access to transit, increasing access to common goods and service, or orientating land uses towards alternative transportation. These regional transportation measures may be infeasible at the project level but will generally be implemented as the surrounding communities develop. There is no means, however, to quantify any VMT reductions that could result.

#### **CONCLUSION**

In summary, our review of applicable VMT screening criteria as presented in the City Guidelines, the proposed Project did not meet any of the available screening criteria and VMT mitigation measures were disclosed. While the mitigation measures identified above would reduce VMT, the actual amount of VMT

<sup>&</sup>lt;sup>6</sup> CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p.219)

<sup>&</sup>lt;sup>7</sup> Ineligible employees are employees that have a night schedule or drive as part of their job.

Ms. Nicole Morse T&B Planning Inc. June 27, 2022 Page 7 of 8

reduction from these measures cannot be guaranteed. Therefore, the Project is found to have a significant and unavoidable VMT impact.

If you have any questions, please contact me directly at aso@urbanxroads.com.

III. VMT Screening	Summary						
	ed to have a le	a less than significant impact on VMT? ss than significant impact on VMT if the Proje T screening criteria.	ect	Potentially Significant			
<del>-</del>	not satisfy at le	ast one (1) of the VMT screening criteria, the ne Project's impact on VMT.	en	Mitigati	on Required		
C. Is additional VMT :	modeling requ	ired to evaluate Project impacts?	YES		NO X		
•		ge and/or General Plan Amendment AND ge e project generates less than 2,500 net daily					
IV. MITIGATION							
A. Citywide Average	VMT Rate (Thr	eshold of Significance) for Mitigation Purpo	ses:	11.62	VMT/Employee		
B. Unmitigated Proje	ct TAZ VMT Ra	ite:		12.19	VMT/Employee		
C. Percentage Reduct	tion Required t	to Achieve the Citywide Average VMT:		4	.68%		
D. VMT Reduction Mi	itigation Meas	ures:					
	Source of V	MT Reduction Estimates: CAPCOA					
	Project Loca	Suburba	n				
		VMT Reduction Mitigation	Measure:		Estimated VMT Reduction (%)		
	1.	SDT-1 Pedestrian Network Improvements			2.00%		
	2.	TRT-1 Voluntary Commute Trip Reduction	Programs		2.80%		
	3.				0.00%		
	4.				0.00%		
	5.				0.00%		
	6.				0.00%		
	7.				0.00%		
	9.				0.00%		
	10.				0.00%		
		Reduction (%)			4.80%		
	(Attach add	itional pages, if necessary, and a copy of all r	nitigation calculations.)				
E. Mitigated Project 1	TAZ VMT Rate:			11.60	VMT/Employee		
F. Is the project press	sumed to have	a less than significant impact with mitigation	n?	Impact Adeq	juately Mitigated		
additional VMT modelir	ng may be requi	ow the Citywide Average Rate, then the Project is red and a potentially significant and unavoidable Development review and processing fees should be	impact may occur. All miti	igation measur	res identified in Section IV.D. are	subject to become
