**Subject: Waste Disposal Soil Profile Screening Report**

Westgate West – 24 Hour Fitness Pad  
5365 Prospect Road  
San Jose, California 95129  
Converse Project No. 16-42-194-11

Ms. Johnson:

Converse Consultants (Converse) has received and reviewed the analytical results of the soil samples collected in the vicinity of the future 24 Hour Fitness (Tenant) space at the Westgate West Shopping Center, located at 5365 Prospect Road, San Jose, California (Site). The location of the Site is indicated on Figure 1. The soil samples were collected in general accordance with our proposal, dated April 12, 2019. It is understood that excess soils are anticipated to be generated during the planned redevelopment of the Tenant space, and that these soils will likely need to be disposed of offsite. The majority of the soils are anticipated to be generated from the installation of a bioretention basin in the parking area north of the building. Excavation of soils from this area are anticipated to extend to depths of approximately 4 feet below ground surface (bgs). The objective of this assessment was to collect representative samples of the soils anticipated to be generated to be used in generating a soil profile for waste disposal purposes.

On April 15, 2019 Converse used direct-push drilling methods to advance three (3) borings (SP-1 through SP-3) at the Site to depths of 4 feet bgs. Locations of the soil profile borings are indicated on Figure 2. At each location the asphalt paving was observed to be approximately 2 to 3 inches thick. Soil samples were collected in acetate sleeves from depths of 2 and 4 feet bgs. Sub-samples were collected from the sleeves of the samples collected from boring SP-1 in accordance with Environmental Protection Agency (EPA) Method 5035 using Encore containers. The sample containers capped, labeled, and placed on ice in a cooler for transport to a laboratory for analysis. A portion of each soil sample was also screened in the field for volatile organic compounds (VOCs) using a photoionization detector (PID); all readings were below the detection limit of the PID.

The samples were transported to American Environmental Testing Laboratory (AETL) in Burbank under chain-of-custody documentation for analysis. The laboratory was

**Waste Disposal Soil Profile Screening Report**

Donahue Schriber Realty Group

Westgate West – 24 Hour fitness Pad

May 8, 2019

requested to prepare two (2) composite samples (identified as Comp SP-2 and Comp SP-4) using the three (3) discrete samples collected from each depth.

The composite samples prepared by the laboratory were requested to be analyzed for the following:

- EPA Method 6010B/7470A – Title 22 (CAM 17) Metals
- EPA Method 8015M – Total Petroleum Hydrocarbon (TPH) carbon chain analysis (gasoline, diesel and oil ranges)
- EPA Method 8081A – Organochlorine Pesticides (OCPs)
- EPA Method 8082 – Polychlorinated Biphenyls (PCBs)
- EPA Method 8270C – Semi-volatile Organic Compounds (SVOCs)

The composite samples collected in accordance with EPA Method 5035 were requested to be analyzed for the following:

- EPA Method 8260B – Volatile Organic Compounds (VOCs)

Analytical results of the samples have been compared to hazardous waste disposal threshold criteria, Department of Toxic Substance Control (DTSC) and/or EPA health-risk based screening levels, as well as hazardous waste disposal thresholds. The final laboratory analytical report for the samples is attached. A summary of the results is presented on Table 1 and as follows:

- Metals – A total of eight (8) metals were detected in both of the composite samples analyzed; barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. The other nine (9) metals reported, including arsenic, were not detected in any of the samples analyzed. The maximum concentrations of all detected metals are less than their respective health-risk based DTSC and/or EPA screening levels. All reported metals concentrations are also less than their respective hazardous waste disposal threshold values.
- Organochlorine Pesticides (OCPs) – One (1) OCP (DDD) was reported in one of the two composite samples analyzed. DDD was reported in sample Comp SP-4 at a concentration of 4.09 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ). This reported concentration is well below its health-risk based screening levels and hazardous waste disposal threshold values.
- TPH was not reported in either of the composite samples analyzed.
- PCBs were not reported in either of the composite samples analyzed.
- SVOCs were not reported in either of the composite samples analyzed.
- VOCs were not reported in either of the discrete samples analyzed.

**Waste Disposal Soil Profile Screening Report**

Donahue Schriber Realty Group

Westgate West – 24 Hour fitness Pad

May 8, 2019

Results of the sample analyses indicate that all reported constituents are below their respective health-risk based screening levels and hazardous waste disposal threshold values. The soil is considered to be non-hazardous waste for disposal purposes, and may be suitable for reuse onsite, or at other project sites. A copy of this report should be presented for acceptance to the location that will potentially be receiving these soils.

This report has been prepared for the exclusive use of Donahue Schriber Realty Group in accordance with the terms and conditions under which these services were provided. Any reliance on this report by third parties shall be at third party's sole risk. Our services have been performed in accordance with applicable state and local ordinances, and generally accepted practices in the geosciences. No other warranty, either expressed or implied, is made.

Converse is not responsible or liable for the accuracy or completeness of available information provided by others. Site exploration identifies actual conditions only at those points where samples are taken, when they are taken.

Data derived through sampling and analytical testing are extrapolated by geoscientists who then render an opinion about overall conditions. Actual conditions in the areas not sampled may differ from the predictions. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected in our investigation, is present beneath the property. In the event that changes to the property occur, or additional, relevant information about the property is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the recommendations of this report are modified in writing.

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact Michael Van Fleet at (626) 930-1267 or Laura Tanaka (626) 930-1261.

Sincerely,

**CONVERSE CONSULTANTS**

## Data Qualifiers and Descriptors

### ***Data Qualifier:***

- #: Recovery is not within acceptable control limits.
- \*: In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
- B: Analyte was present in the Method Blank.
- D: Result is from a diluted analysis.
- E: Result is beyond calibration limits and is estimated.
- H: Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
- J: Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
- M: Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
- MCL: Maximum Contaminant Level
- NS: No Standard Available
- S6: Surrogate recovery is outside control limits due to matrix interference.
- S8: The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
- X: Results represent LCS and LCSD data.

### ***Definition:***

- %Limi: Percent acceptable limits.
- %REC: Percent recovery.
- Con.L: Acceptable Control Limits
- Conce: Added concentration to the sample.
- LCS: Laboratory Control Sample
- MDL: Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

2834 NORTH NAOMI ST. BURBANK, CALIFORNIA 91504 DHS # 1541 LACSD# 10181

TEL (888) 288-AETL (818) 845-8200 FAX (818) 845-8840 [www.aetlab.com](http://www.aetlab.com)

### Data Qualifiers and Descriptors

MS: Matrix Spike

MS DU: Matrix Spike Duplicate

ND: Analyte was not detected in the sample at or above MDL.

PQL: Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.

Recov: Recovered concentration in the sample.

RPD: Relative Percent Difference
