STATE CLEARING HOUSE

DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CITY OF MOUNTAIN VIEW HOUSING ELEMENT – DATED JULY 2022 (STATE CLEARINGHOUSE NUMBER: 2022020129)

Dear Ms. Yau:

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report (EIR) for the City of Mountain View Housing Element (Project). The Lead Agency is receiving this notice from DTSC because the Project includes one or more of the following: groundbreaking activities, work in close proximity to a roadway, presence of site buildings that may require demolition or modifications, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site.

DTSC recommends that the following issues be evaluated in the Hazards and Hazardous Materials section of the EIR:

- A State of California environmental regulatory agency such as DTSC or Regional Water Quality Control Board (RWQCB), or a qualified local agency that meets the requirements of <u>Assembly Bill 304 (AB304)</u> should provide regulatory concurrence that any of the sites proposed for housing are safe for construction and the proposed use.
- 2. The EIR acknowledges that historic and future activities on or near the proposed housing sites have resulted in the release of hazardous wastes/substances and are documented on DTSC's Envirostor and the RWQCB's Geotracker databases.

Department of Toxic Substances Control

The EIR also identifies other past and future activities, including past agricultural practices and removal of existing structures, that could potentially result in the release of hazardous wastes/substances. In instances in which releases have occurred or may occur, at sites not already overseen by DTSC, RWQCB, or other AB304 approved agencies, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.

- 3. Refiners in the United States started adding lead compounds to gasoline in the 1920s in order to boost octane levels and improve engine performance. This practice did not officially end until 1992 when lead was banned as a fuel additive in California. Tailpipe emissions from automobiles using leaded gasoline contained lead and resulted in aerially deposited lead (ADL) being deposited in and along roadways throughout the state. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. Due to the potential for ADL-contaminated soil DTSC, recommends collecting soil samples for lead analysis prior to performing any intrusive activities for the project described in the EIR.
- 4. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition, and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with <u>DTSC's 2006</u> <u>Interim Guidance Evaluation of School Sites with Potential Contamination from</u> <u>Lead Based Paint, Termiticides, and Electrical Transformers</u>.
- If any projects initiated as part of the proposed project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to <u>DTSC's 2001 Information</u> <u>Advisory Clean Imported Fill Material</u>.
- 6. If any sites included as part of the proposed project have been used for agricultural, weed abatement or related activities, proper investigation for

Ms. Ellen Yau September 2, 2022 Page 3

organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 <u>Interim Guidance for Sampling Agricultural</u> <u>Properties (Third Revision)</u>.

DTSC appreciates the opportunity to comment on the EIR. Should you choose DTSC to provide oversight for any environmental investigations, please visit DTSC's <u>Site</u> <u>Mitigation and Restoration Program</u> page to apply for lead agency oversight. Additional information regarding voluntary agreements with DTSC can be found at <u>DTSC's</u> <u>Brownfield website</u>.

If you have any questions, please contact me at (916) 255-3710 or via email at <u>Gavin.McCreary@dtsc.ca.gov</u>.

Sincerely,

yanin Malanny
