INTRODUCTION

The purpose of this report is to verify the capacity of the existing public sewer main serving the proposed project and to determine the average and peak flows with the addition of the sewage generated by the proposed project into the existing public system. This report will show that the existing public sewer mains will have the capacity to convey the sewage generated from the proposed site and existing tributary areas to the public sewer system as it flows from the 8" VCP sewer in 190TH Street North to 178th street prior to entering the 57" RCP Los Angeles County sewer in 178th Street.

The project is located on approximately 5.28 acres of land located at the Northwest corner of the intersection of 190th Street and Western Avenue. Portions of the property have easements to various agencies limiting the developable area to approximately 4.82 acres. Currently the proposed project includes the demolition of an existing restaurant (vacant) and construction of five commercial buildings with pavement, curbs, gutters, sidewalks, and landscaping. Additional improvements will include on-site water, sewer and storm drain facilities.

Sewage generated on-site will be conveyed to existing public facilities by two proposed 6" private sewer laterals. The proposed private laterals will connect to the existing 8" public sewer main located in 190th Street (constructed per SS-214). The 8" sewer line will collect sewerage from the proposed project and continue east to the 8" VCP located in Western Avenue. From Western Avenue, the sewer flows north continuing to 178th Street. The 8" Western Ave. line confluences with an 8" line (SS-28) and is conveyed to the existing 57" RCP LACSD joint outfall running east near the intersection of Western Avenue and 178th Street.

1. PROPOSED SEWER DEMAND OF PROJECT

In order to determine the proposed site discharge, the Los Angeles County Sanitation District Will Serve Table 1 (included in Appendix B) Loadings for each class of land use was used. The proposed site is a commercial center and prospective tenants have not been identified. From Table 1 the most conservative type use would be loading based on Restaurant occupancies.

From the Sewer Generation Factor:

Restaurants = 1,000 GPD per 1,000 SF building

The following guidelines from the City of Torrance were used:

1. Manning's coefficient, "n" = 0.013
2. Maximum allowable capacity for all sewer pipes 12" diameter and under = 50%
3. Maximum allowable capacity for all sewer pipes over 12" diameter = 75%
4. Recommended minimum design velocity = 2 ft/sec

1. Sewer Flow generation 1,000 gpd per 1,000 SF from LA Co. Sanitation District Will Serve Table 1

2. 2.65 Peak factor

The proposed project discharge peak flow is expected to add 0.097 cfs to the system.

2. EXISTING FLOW IN THE PUBLIC SYSTEM

The proposed development site is at the upstream terminus of the 8" VCP sewer line and the interim tributary areas to the Western Avenue sewer appear to be fully developed. Existing sewer flows are based on Monitoring Data conducted by USCubed (see Appendix C.) Flow monitoring was conducted over the course of two weeks (Nov. 21 to Dec. 9, 2019) at three manhole locations provided by the City of Torrance. Data was recorded at 15-minute intervals during monitoring. In the current condition the proposed site is vacant and assumed to contribute no flows to the monitoring data. Therefore, the below table does not reflect any flow in the approximately 1640 LF of 8" sewer from 190th Street to the monitored manhole near the intersection of Western and 186nd Street. The monitoring data maximum flow (mgd) was utilized for conversion to cubic feet per second for further evaluation:

MH	Size	Flow Depth Max. (in)	D/d	SWR Flow Max. (mgd)	SWR Flow Max (cfs)
4+06	8	2.88	36.00%	0.1370	0.2120
17+06	8	2.64	33.00%	0.1170	0.1810
27+82	8	2.28	28.50%	0.0820	0.1269

Pipe slope of 0.4% was used to model the existing 8" VCP pipe from 186 Street north to manhole 4+06 at the LACSD connection at 178th Street.

The software used in determining pipe capacity and velocity in the sewer mains is Bentley Flowmaster, v8i. Output from the program is included in Appendix D Calculations. Available record drawings are included in Appendix E.

3. RESULTS AND CONCLUSIONS

The results of the existing sewer flows were combined with the expected site peak flows. Note- per city review comments City of Torrance has recently approved construction of a 46-unit apartment building at 18021 Western Avenue (PM 78228, DIV 18-00012.) This development will share same city sewer mainlines as this proposed development. The proposed peak flows from the apartments is expected to be 0.028 cfs tied in at sta. 4+06. This additional proposed flow has been incorporated into the model to determine the new expected flow depth for calculation of D/d ratio:

MH	Size	Ex. SWR Flow Max. (cfs)	Pr. SWR Flow Max (cfs)	SWR Flow Peaked (MGD)	Flow Depth Max. (in)	D/d	Velocity (ft/s)
4+06	8	0.2120	0.3372	0.2180	3.72	46.50%	2.12
17+06	8	0.1810	0.2783	0.1799	3.36	42.00%	2.02
27+82	8	0.1269	0.2241	0.1449	3	37.50%	1.90
190TH	8	0	0.0972	0.0629	2.0	25.00%	1.39

For the 1640 LF of 8" VCP from 190th to the connection at manhole 27+82 a pipe slope of 0.32% was used, this reflects the indicated slope of pipe in 190th.

Normal self cleaning velocity is 2 ft/sec. This will be met on all segments of city sewer in Western Ave. North of 186h Street. The portion of city sewer south of 186th street will not achieve desired self-cleaning velocity. Based on the expected project peak flow combined with known existing flows the existing public sewer main has been shown to have sufficient capacity to convey the additional project sewer flows. City mainline will remain below design guideline D/d ratio of 0.5. Therefore, the proposed project will not require any mitigation measures.

Notes

No laterals; monitored the downstream line as it provided the best hydraulics.

Traffic Safety

No formal TCP required; used cones & signs per site-specific CA MUTCD TC requirements.

Notes

Two inlets from west & south; monitored downstream line to get total flow.

Traffic Safety

No formal TCP required; used cones & signs per site-specific CA MUTCD TC requirements.
