

# Valley Oaks Intersection

Intersection of State Route 12 and  
the Valley Springs Shopping Center entrance/exit

10-CAL-12-9.9/10.3

10-1J820/1019000055

**Initial Study with Proposed Mitigated Negative Declaration**

**Volume 1 of 2**

Prepared by the  
State of California Department of Transportation

**March 2022**

## General Information About This Document

### ***What's in this document:***

The California Department of Transportation (Caltrans) has prepared this Initial Study, which examines the potential environmental impacts of alternatives being considered for the proposed project in Calaveras County in California. The document explains why the project is being proposed, the alternatives being considered for the project, the existing environment that could be affected by the project, potential impacts of each of the alternatives, and proposed avoidance, minimization, and/or mitigation measures.

### ***What you should do:***

- Please read the document. Additional copies of the document and the related technical studies are available for review at the Caltrans District 10 office at 1976 East Doctor Martin Luther King Junior Boulevard, Stockton, California 95205, Caltrans District 10 website at <https://dot.ca.gov/caltrans-near-me/district-10/district-10-current-projects>, and the Valley Springs Branch Library at 240 Pine Street, Valley Springs, California 95252.
- Tell us what you think. If you have any comments regarding the proposed project, please attend the public information meeting, and/or send your written comments to Caltrans by the deadline. Submit comments via U.S. mail to: C. Scott Guidi, District 10 Environmental Division, California Department of Transportation, 1976 East Doctor Martin Luther King Junior Boulevard, Stockton, California 95205. Submit comments via email to: [Scott.Guidi@dot.ca.gov](mailto:Scott.Guidi@dot.ca.gov).
- Submit comments by the deadline: June 20, 2022.

### ***What happens next:***

After comments are received from the public and the reviewing agencies, Caltrans may 1) give environmental approval to the proposed project, 2) do additional environmental studies, or 3) abandon the project. If the project is given environmental approval and funding is appropriated, Caltrans could design and construct all or part of the project.

Printing this document: To save paper, this document has been set up for two-sided printing (to print the front and back of a page). Blank pages occur where needed throughout the document to maintain proper layout of the chapters and appendices.

For individuals with sensory disabilities, this document can be made available in Braille, in large print, on audiocassette, or on computer disk. To obtain a copy in one of these alternate formats, please write to or call Caltrans, Attention: C. Scott Guidi, District 10 Environmental Division, 1976 East Doctor Martin Luther King Junior Boulevard, Stockton, California 95205; phone number (209) 479-1839 (Voice), or use the California Relay Service 1-800-735-2929 (Teletype to Voice), 1-800-735-2922 (Voice to Teletype), 1-800-855-3000 (Spanish Teletype to Voice and Voice to Teletype), 1-800-854-7784 (Spanish and English Speech-to-Speech), or 711.

Safety intersection improvements on State Route 12  
from post miles 9.9 to 10.3 in Calaveras County

**INITIAL STUDY**  
**with Proposed Mitigated Negative Declaration**

Submitted Pursuant to: (State) Division 13, California Public Resources Code

THE STATE OF CALIFORNIA  
Department of Transportation

Responsible Agency: California Transportation Commission

**DRAFT**  
**Proposed Mitigated Negative Declaration**

Pursuant to: Division 13, Public Resources Code

**State Clearinghouse Number:** pending

**District-County-Route-Post Mile:** 10-CAL-12-9.9/10.3

**EA/Project Number:** 10-1J820/1019000055

**Project Description**

The California Department of Transportation (Caltrans) proposes to improve the intersection at State Route 12 (from post miles 9.9 to 10.3) and entrance/exit of the Valley Oaks Shopping Center in Calaveras County. The project proposes to reduce the number and severity of broadside collisions at this location through intersection control improvements. The project would require additional right-of-way and utility relocation. Project work may include frontage roads, turn lanes, sidewalks, bus stops, bike lanes, and curb ramps.

**Determination**

An Initial Study has been prepared by Caltrans, District 10.

On the basis of this study, it is determined that the proposed action with the incorporation of the identified mitigation measures will not have a significant effect on the environment for the following reasons:

- *Compensatory Mitigation of Wetlands and Other Waters of the United States:* Permanent losses of Waters of the United States are proposed to be compensated by participation in the Nation Wildlife Federation's Sacramento District California In-Lieu Fee Program.

# **Chapter 1**      **Proposed Project**

---

## **1.1 Introduction**

The California Department of Transportation (Caltrans) is the lead agency under the California Environmental Quality Act (known as CEQA) and the National Environmental Policy Act (known as NEPA). The proposed project is a safety improvement project funded through the State Highway Operation and Protection Program and would receive both state and federal funding.

This safety project is within the census-designated place of Valley Springs in Calaveras County, at the intersection of State Route 12 and the entrance/exit of the Valley Oaks Shopping Center. Calaveras County lies southeast of Sacramento, on the eastern side of the Central Valley in California. Chapter 1 of this document discusses the project location, scope and alternatives for the project, and Chapter 2 discusses the potential environmental impacts from the project.

## **1.2 Purpose and Need**

### **1.2.1 Purpose**

The purpose of the project is to improve traffic safety by reducing the number and severity of collisions at the intersection of State Route 12 and the entrance/exit of the Valley Oaks Shopping Center.

### **1.2.2 Need**

The project is needed to address a pattern of broadside collisions occurring at the entrance/exit of the Valley Oaks Shopping Center along State Route 12, caused from motorists failing to yield at this intersection.

## **1.3 Project Description**

Caltrans proposes to improve the intersection, at post miles 9.9 to 10.3, on State Route 12 at the Valley Oaks Shopping Center entrance/exit in Calaveras County. The project proposes to reduce the number and severity of broadside collisions at this location by adding intersection control improvements. A build alternative and a no-build alternative are currently proposed. The project would require additional right-of-way and utility relocation. Project work may include frontage roads, turning lanes, sidewalks, bus stops, bike lanes, and curb ramps.

Figure 1-1 shows where the project lies in Calaveras County, in the unincorporated census-designated place of Valley Springs. Figure 1-2 shows the project location within Valley Springs in relation to local roads.

**Figure 1-1 Project Vicinity Map**

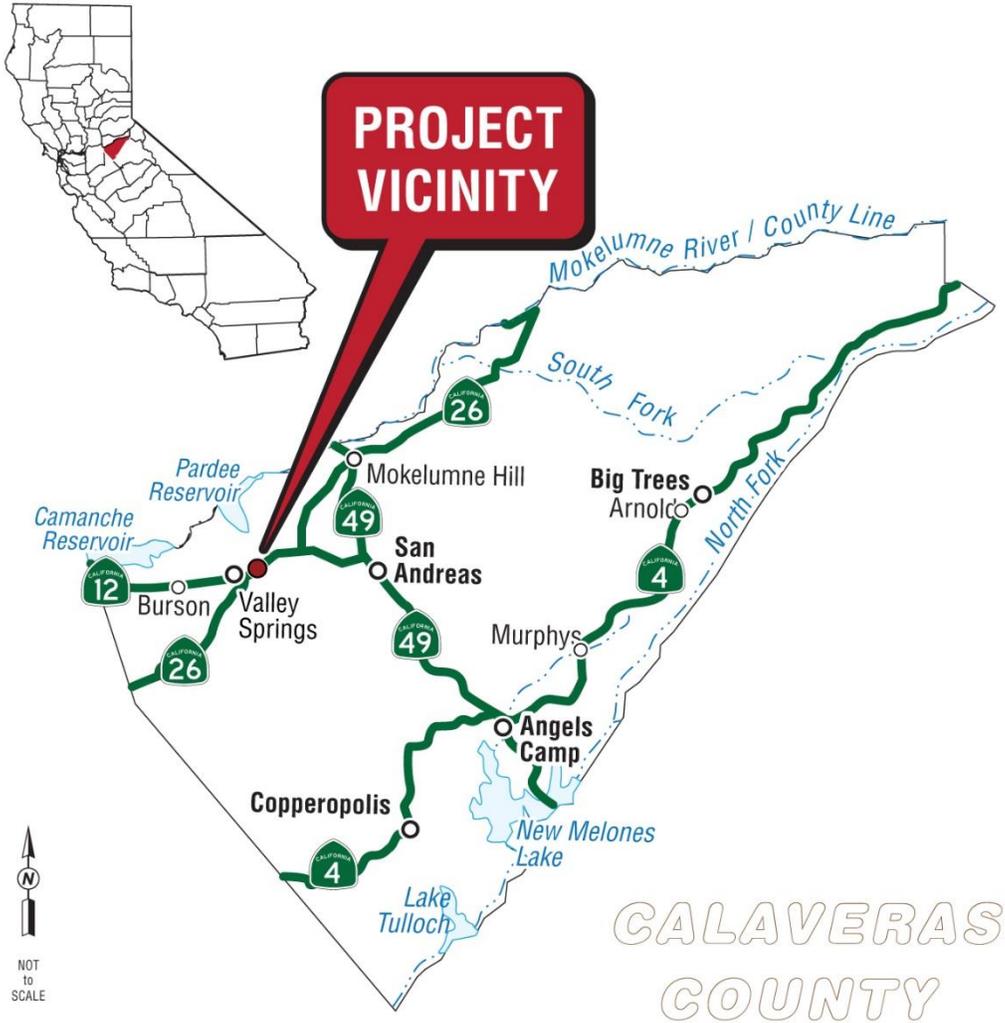

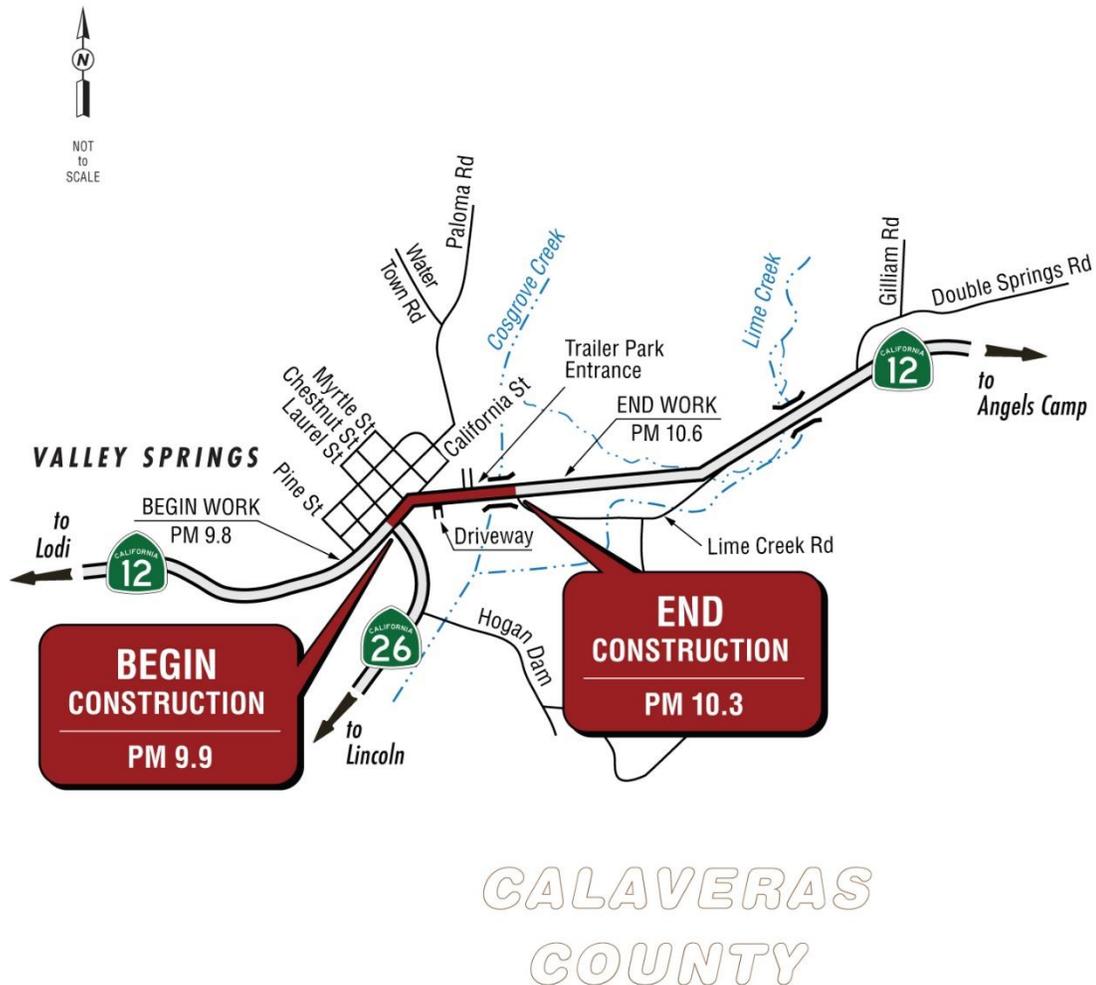

Figure 1-2 Project Location Map

The project limits stretch from post miles 9.9 to 10.3 on State Route 12, with the intersection improvement work to occur at the intersection of State Route 12 and the entrance/exit of the Valley Oaks Shopping Center. The project would require temporary partial-lane closures and one-way traffic control during the construction of the project. No full-lane closures or detours are anticipated at this time.

### 1.4 Project Alternatives

Initially under consideration were three build alternatives and a no-build alternative for intersection improvements at State Route 12 and the Valley Springs Shopping Center entrance/exit. One of the build alternatives was dropped from consideration before the Project Approval and Environmental

Document phase began. Another build alternative was subsequently also dropped.

Section 1.4.1 discusses the remaining build alternative and the no-build alternative, and Section 1.5 discusses the alternatives eliminated from further discussion. A preferred alternative will be identified after the draft environmental document is circulated, comments are addressed, and input is received from the project development team and public. The identified preferred alternative will be documented in the final environmental document.

### **1.4.1 Build Alternative**

The project development team considered three build alternatives (Alternatives 1, 2 and 3) and one no-build alternative. Two of the build alternatives (Alternatives 2 and 3) were considered but eliminated from further discussion before the draft environmental document was completed. The remaining build alternative (Alternative 1) and the no-build alternative are discussed below. See Section 1.5 for discussion of the eliminated alternatives.

This project contains several standardized project measures that are used on most, if not all, Caltrans projects and were not developed in response to any specific environmental impact resulting from the proposed project. These measures are listed later in this chapter under “Standard Measures and Best Management Practices Included in All Build Alternatives.”

#### *Alternative 1—Signal*

Alternative 1 would convert the intersection of State Route 12 and the Valley Oaks Shopping Center entrance/exit from a T-shaped three-legged intersection to a four-legged intersection, with signals for every direction.

- The driveway on the north side of the intersection would be converted to a signalized approach, with a frontage road to provide access for the businesses and fire station on that side.
- The southbound approach would be one shared through/left-turn lane.
- The northbound approach would be one dedicated free right-turn lane and one through/left-turn lane.
- A two-way left-turn lane is proposed at the State Route 12 and mobile home park driveway, providing a safe dedicated area for vehicles turning left into the mobile home park and allowing the main lane traffic to proceed without slowing.
- The State Route 12 eastbound approach would include a two-way left-turn lane, one through lane, and one dedicated right-turn lane to provide access to the shopping center. This new configuration would provide

drivers an opportunity to merge into the through lane before crossing the intersection.

- The State Route 12 westbound approach would be one through lane and one lane dedicated to left turns.

These intersection improvements would require roadway widening, and standard 8-foot shoulder widths are proposed to include striping for 4-foot-wide bike lanes. To encourage bicycle and pedestrian crossing, the project would add curb ramps that comply with the Americans with Disabilities Act (ADA) and blended transitions.

Local government officials have identified a need for a shared use path from the mobile home park east of this intersection to the State Route 12/State Route 26 Junction, which is referenced in an ongoing planning study called the “Valley Springs Town Center Connectivity Plan.” To meet Complete Street requirements, the project would incorporate the portion of the shared use path from the mobile home park to this intersection. The shared use path would improve mobility for the residents going to and from the shopping center. The sidewalk would be a 6-foot-wide, at-grade concrete or asphalt surface.

High-visibility crosswalks would be installed across all legs of the intersection. In addition, a Class Two bike path and 6-foot-wide sidewalks would be placed along the shoulder along the south side of State Route 12 from the intersection with State Route 26 to the shopping center entrance/exit. A bus stop is also being considered for the southeast corner of the proposed signal location.

#### **1.4.2 No-Build (No-Action) Alternative**

If no action is taken and the project is not built, the intersection would remain as is, and would not address intersection control issues.

### **1.5 Alternatives Considered but Eliminated from Further Discussion**

#### *Alternative 2—All-Way Stop Control*

Alternative 2 would install All-Way Stop Control at the intersection of State Route 12 and the Valley Oaks Shopping Center entrance/exit by using stop signs. A stop sign would be placed at the intersection for both the eastbound and westbound traffic on State Route 12. The existing stop sign for the vehicles exiting the Valley Oaks Shopping Center would remain in place. This alternative would not require any additional right-of-way or road widening.

In the Project Approval and Environmental Document phase of the project, the Project Development Team determined that Alternative 2 would be eliminated from further consideration because the alternative failed to meet

operational requirements for the design year, which is 20 years after the opening year of the project. The failure to meet future operational needs is documented in the Final Traffic Operation Analysis Report completed for this project in April 2021.

### *Alternative 3—Roundabout*

Alternative 3 would install a roundabout at the intersection of State Route 12 and the Valley Oaks Shopping Center entrance/exit. This alternative proposed a single-lane roundabout with a 130- to 150-foot diameter to accommodate Surface Transportation Assistance Act vehicles. The approach on either side would require widening for essential roundabout elements such as splitter islands, landscape buffers, curbs, and gutters. This alternative would require additional right-of-way from seven parcels and one full acquisition of a business, and anticipated utility relocation.

In the Project Initiation Document Phase of the project, the Project Development Team determined that Alternative 3 would be eliminated from further consideration because of the right-of-way impacts as well as concerns from the Calaveras Consolidation Fire Protection. Construction of the new approach would have impacted the nearby Burger King and Taco Bell restaurants and would have permanently closed two access points to the shopping center due to new curb and gutters along the approach. While Caltrans would have provided relocation assistance to these businesses, the loss of these businesses could have impacted the economy of the shopping center.

In addition, the roundabout would have impacted the fire station belonging to the Calaveras Consolidated Fire Protection; the Fire Chief expressed concerns about unnecessary liabilities and potential for collisions. These concerns included that the curbs and gutters of the roundabout would not provide a refuge area for vehicles when the fire trucks back into the station; there could be potential confusion with motorists not understanding the firefighters' intent when backing up the fire truck in the roundabout, and then potentially causing queuing and gridlock of the vehicles behind the fire truck. This was documented in the Intersection Control Evaluation-Prescreening Roundabout Alternative Memo in September 2019 and in the Project Initiation Report in December 2019.

## **1.6 Standard Measures and Best Management Practices Included in All Build Alternatives**

**BIO 1** – Environmentally Sensitive Area Designation.

**BIO 2** – Designated Biologist.

**BIO 3** – Containment Measures/Construction Site Best Management Practices.

**BIO 4** – Limited Operation Period – Stream Zone Construction Activities.

**BIO 5** – Worker Environmental Awareness Training for Construction.

**BIO 6** – Restore and Revegetate Temporarily Disturbed Areas Onsite.

**BIO 7** – Weed-Free Construction Equipment and Vehicles.

**BIO 8** – Weed Control During Construction.

**BIO 9** – Weed Erosion and Revegetation Treatments.

**BIO 10** – Nesting Bird Avoidance – Limited Operation Period.

**BIO 11** – Nesting Bird Avoidance – Pre-Construction Surveys During Nesting Season.

**BIO 12** – Nesting Bird Avoidance – Avoid Active Nests.

**BIO 13** – Sensitive Aquatic Species Avoidance – Pre-Construction Surveys.

**BIO 14** – Sensitive Aquatic Species Avoidance – Construction Monitoring.

**BIO 15** – Sensitive Aquatic Species Avoidance – Avoid Sensitive Aquatic Species.

**GHG 1** – Limit idling to 5 minutes for delivery and dump trucks and other diesel-powered equipment (with some exceptions).

**GHG 2** – Schedule truck trips outside of peak morning and evening commute hours.

**GHG 3** – Schedule longer-duration lane closures to reduce number of equipment mobilization efforts.

**GHG 4** – For improved fuel efficiency from construction equipment:

- Equipment will be maintained in proper tune and working condition.
- The contractor will use right-sized equipment for the job.
- The contractor will use equipment with new technologies to the extent feasible.

**GHG 5** – The project includes Complete Streets components (crosswalks, sidewalks, proposed bus area, etc.) that will make non-auto modes of transportation more attractive.

**HW 1** – Caltrans Standard Special Provision 14-11.12 would be added to the construction contract for a lead compliance plan to be prepared by a Certified Industrial Hygienist and the contractor shall manage the removed stripe and pavement markings as hazardous waste.

**NQ 1** – Caltrans Standard Specification Section 14-8 (Noise Control) for controlling noise and vibrations.

**NQ 2** – All equipment will have sound-control devices that are no less effective than those provided on the original equipment.

### 1.7 Discussion of the NEPA Categorical Exclusion

This document contains information regarding compliance with the California Environmental Quality Act (CEQA) and other state laws and regulations. Separate environmental documentation, supporting a Categorical Exclusion determination, will be prepared in accordance with the National Environmental Policy Act (NEPA). When needed for clarity, or as required by CEQA, this document may contain references to federal laws and/or regulations (CEQA, for example, requires consideration of adverse effects on species identified as a candidate, sensitive, or special-status species by the U.S. National Marine Fisheries Service and the U.S. Fish and Wildlife Service—that is, species protected by the Federal Endangered Species Act).

### 1.8 Permits and Approvals Needed

The following permits, licenses, agreements, and certifications are required for project construction:

Agency	Permit/Approval	Status
California Department of Fish and Wildlife	California Department of Fish and Wildlife Code Section 1600 agreement	The notification for the Section 1600 agreement would be submitted during the project's final design phase.
Central Valley Regional Water Quality Control Board	Clean Water Act Section 401 Water Quality Certification	The application for the Section 401 certification would be submitted during the project's final design phase.
U.S. Army Corps of Engineers	Clean Water Act Section 404 permit	The application for the Section 404 permit would be submitted during the project's final design phase.
U.S. Fish and Wildlife Service	Endangered Species Act Section 7: Inter-agency consultation	Informal consultation was initiated in December 2021.

# Chapter 2 CEQA Evaluation

---

## 2.1 CEQA Environmental Checklist

This checklist identifies physical, biological, social, and economic factors that might be affected by the proposed project. Potential impact determinations include Significant and Unavoidable Impact, Less Than Significant Impact with Mitigation Incorporated, Less Than Significant Impact, and No Impact. In many cases, background studies performed in connection with a project will indicate that there are no impacts to a particular resource. A “No Impact” answer reflects this determination. The questions in this checklist are intended to encourage the thoughtful assessment of impacts and do not represent thresholds of significance.

Project features, which can include both design elements of the project and standardized measures that are applied to all or most Caltrans projects such as Best Management Practices and measures included in the Standard Plans and Specifications or as Standard Special Provisions, are considered to be an integral part of the project and have been considered prior to any significance determinations documented below.

“No Impact” determinations in each section are based on the scope, description, and location of the proposed project as well as the appropriate technical report (bound separately in Volume 2), and no further discussion is included in this document.

### 2.1.1 Aesthetics

Considering the information in the Scenic Resource Evaluation dated October 18, 2021, the following significance determinations have been made:

Except as provided in Public Resources Code Section 21099:

<b>Question—Would the project:</b>	<b>CEQA Significance Determinations for Aesthetics</b>
a) Have a substantial adverse effect on a scenic vista?	<b>No Impact</b>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Aesthetics
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<b>No Impact</b>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<b>No Impact</b>

**2.1.2 Agriculture and Forest Resources**

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and the forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Considering the project location and scope of work, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Agriculture and Forest Resources
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Agriculture and Forest Resources
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<b>No Impact</b>
c) Conflict with existing zoning, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	<b>No Impact</b>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<b>No Impact</b>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use or conversion of forest land to non-forest use?	<b>No Impact</b>

### 2.1.3 Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations.

Considering the information in the Valley Oaks Intersection – Air Quality Memo dated September 6, 2021, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Air Quality
a) Conflict with or obstruct implementation of the applicable air quality plan?	<b>No Impact</b>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<b>No Impact</b>
c) Expose sensitive receptors to substantial pollutant concentrations?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Air Quality
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<b>No Impact</b>

### 2.1.4 Biological Resources

Considering the information in the Natural Environment Study dated September 14, 2021, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Biological Resources
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or National Oceanic Atmospheric Administration Fisheries?	<b>Less Than Significant Impact</b>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<b>Less Than Significant Impact with Mitigation Incorporated</b>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<b>Less Than Significant Impact with Mitigation Incorporated</b>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<b>No Impact</b>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Biological Resources
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<b>No Impact</b>

***Affected Environment***

The project is in an urbanized area of Valley Springs, with commercial businesses on both sides of State Route 12. East of the proposed intersection improvements is Cosgrove Creek, an intermittent stream tributary to the Calaveras River below the dam at New Hogan Reservoir.

Drainage systems occur on both sides of State Route 12 and flow east to discharge into Cosgrove Creek. The drainage systems consist of a series of broad steep-walled ditches, connecting underground culverts, curb overside drains, grated drop inlets, and irrigation ditches. Stormwater and landscape irrigation overflow into the ditch and culvert system on the south side of State Route 12, and eventually the drainage ditch discharges directly into Cosgrove Creek. East of the driveway to the Valley Oaks Shopping Center, portions of the drainage system open to the daylight and provide enough surface water to support vegetation.

The September 2021 Natural Environment Study found that several special-status wildlife species could occur within the project area: western pond turtle, California red-legged frog, foothill yellow-legged frog, tricolored blackbird, migratory birds, and raptors. Waters of the United States, Waters of the State of California, potential wetlands and riparian areas, and invasive plant species have also been identified within the project area. See the Natural Environment Study for maps and location specifics within the biological study area.

***Environmental Consequences***

The project involves various construction activities that could cause impacts to biological resources in the area. These activities include vegetation removal, excavation, road widening, paving, trenching, and fill material.

***Special-Status Plant Species***

The project would have “no effect” on these federally or state-listed special-status plant species, California “rare” plant species, or plant species protected by the California Native Plant Protection Act: Henderson’s bent grass, lone manzanita, big-scale balsamroot, Hoover’s calycadenia, Bisbee Peak rush-rose, lone buckwheat, Tuolumne button-celery, delta button-celery, Stanislaus monkeyflower, Parry’s horkelia, legenera, pincushion navarretia,

Patterson's navarretia, and prairie wedge grass. No avoidance and minimization measures are proposed for these species.

### *Invasive Plant Species*

Invasive plant species were found in the project area, and ground-disturbing activities such as road widening, ground vegetation removal, excavation for roadway base, roadway fill, trenching for electrical, and intelligent transportation systems elements work are anticipated. The project has the following potential to impact weed species:

- Moderate potential to spread terrestrial and/or aquatic weeds.
- Very low potential to alter terrestrial and/or aquatic habitats for weed infestation.
- Low potential to create new open areas for terrestrial weed species.
- Very low potential to alter aquatic habitat to favor growth of aquatic weed species.
- Moderate potential for terrestrial and aquatic weed vectors to temporarily increase during project implementation.
- Low potential to increase area infested by terrestrial weeds within the biological study area.
- Moderate potential to result in spread of terrestrial weeds outside the biological study area.
- Very low potential to result in an increased area infested by aquatic weeds within the biological study area.
- Low potential to result in the spread of aquatic weeds outside the biological study area.

Any potential impacts by invasive plant terrestrial or aquatic species would be avoided and minimized with the implementation of measures BIO 7 through BIO 9.

### *Wetlands, Riparian Areas, Waters of the United States and Waters of the State of California*

The project will have temporary and permanent impacts to wetlands, riparian areas and Waters of the United States and Waters of the State of California. Table 1 shows the estimated impacts to these items based on preliminary project design. The estimated impacts may change once the design of the project is finalized in the Plans, Specifications, and Estimates phase. A description of the impacted areas follows the table.

**Table 1: Estimated Impacts to Potential Jurisdictional Wetlands, Waters of the United States and Waters of the State of California**

<b>Location Name</b>	<b>Temporary Impacts (acres) Total Estimated Impact: 0.072</b>	<b>Permanent Impacts (acres) Total Estimated Impact: 0.42</b>
Ditch 3	0.06	0.38
Cosgrove Creek	0.01	0.03
Wetland VS-4	0.002	0.01
Non-Federal Waters	No impact	No impact

These impacts to wetlands, Waters of the United States, and Waters of the State of California would be avoided, minimized, and mitigated with measures BIO 1 through BIO 6 and BIO 16, as described in the next subsection (Avoidance, Minimization, and/or Mitigation Measures). In addition, a Clean Water Act Section 404 permit, a Clean Water Act Section 401 Water Quality Certification, and a California Fish and Game Code Section 1600 Agreement would be required.

The impact locations are described below using the location descriptions from the Natural Environment Study.

*Ditch 3 and Cosgrove Creek*

Ditch 3 (an existing ditch system on the south side of State Route 12) and Cosgrove Creek would require the placement of fill material to match the elevational profile of the adjacent roadway base to widen State Route 12 to the south. Ditch 3 discharges to Cosgrove Creek within the biological study area and qualifies as a potential wetland. An estimated 0.38 acre of Ditch 3 would be permanently impacted by the placement of roadway fill for widening. Construction activities at Ditch 3 would result in an estimated 0.06 acre of temporary impact of potential wetlands due to expected operation of construction equipment and crews approximately 25 feet beyond the proposed fill area. At the lower end of the Ditch 3, the placement of roadway for fill for roadway widening would go below the ordinary high-water mark of Cosgrove Creek, which would cause an estimated 0.03 acre of permanent impact to the stream. The construction of the project would result in an estimated 0.01 acre of temporary impact to Cosgrove Creek due to expected operation of construction equipment and crews approximately 25 feet beyond the proposed fill area.

*Wetland VS-4*

Wetland VS-4, a seasonally wet area in a very shallow depression extending into the roadway embankment ditch on the north side of State Route 12 (approximately 50 feet east of Trailer Park Road), was preliminarily identified as a wetland based on vegetation, soils, and wetland hydrology. This area would require the placement of fill to widen State Route 12 and would result in

an estimated 0.01 acre of permanent impact, and an estimated 0.002 acre of temporary impact due to construction activities adjacent to the roadway.

#### *Non-Federal Waters*

The area of non-federal waters is the area between the “top of bank” and the ordinary high-water mark of Cosgrove Creek. This area could potentially qualify as non-federal Waters of the State of California, and the project is not expected to have any temporary impacts to this area.

#### *Special-Status Wildlife Species*

The tricolored blackbird has been recorded roughly 1.3 miles southeast of the biological study area near Petersburg Road in Valley Springs in an area with cattails, blackberry, and willows. Some portions of the drainage system on the south side of State Route 12 are wet enough for small patches of cattails within the biological study area, which could provide habitat for the tricolored blackbird. Biological surveys of the area found no tricolored blackbirds in the area. With the implementation of avoidance measures BIO 10 through BIO 12, the project would not result in “take” (as defined by California Fish and Game Code Section 86) of tricolored blackbirds.

The project is within the current range of the western pond turtle. The nearest recorded occurrence is 12.2 miles west of the biological study area near Bear Creek at Cord Road in 2008, and the population is presumed to still exist. Cosgrove Creek may, on a seasonal basis, provide potential refuge, shelter, or foraging habitat for western pond turtles. The drainage system on the south side of State Route 12 is wet enough for small patches of cattails; the final stretch of the ditch discharges directly into Cosgrove Creek. Water was seen flowing or standing in the drainage ditches during all site visits and may have standing water during western pond turtle breeding season during at least some seasons. Drainage ditches may, on a seasonal basis, provide potential refuge, shelter, or foraging habitat for western pond turtles. In addition, the western pond turtle population could be present downstream in the New Hogan Reservoir and could access Cosgrove Creek; the turtles may then be able to enter drainage ditches on a seasonal basis. The artificial ponds from the water treatment facility next to Cosgrove Creek could also provide access to the project area.

The project is within the current range of the California red-legged frog. The nearest recorded occurrence is 2.8 miles northeast of the biological study area near Young’s Creek in Valley Springs and is presumed to still exist. This creek joins Cosgrove Creek roughly 2 miles northeast of the proposed project. Though this creek has potential for providing the California red-legged frog access to the project area, there are many obstacles (predators, long distance, intermittent streams, crossing roads, etc.) that would hinder that. Biological surveys performed in the project area found no California red-legged frogs. Like the western pond turtle, the California red-legged frog has,

on a seasonal basis, potential refuge, shelter, or foraging habitat from Cosgrove Creek and the drainage system on the south side of State Route 12.

The project is within the current range of the foothill yellow-legged frog. The nearest recorded occurrence is 12.7 miles northeast of the biological study area near Jesus Maria Creek and the population is presumed to still exist. Like the western pond turtle and California red-legged frog, the foothill yellow-legged frog has, on a seasonal basis, potential refuge, shelter, or foraging habitat from Cosgrove Creek and the drainage system on the south side of State Route 12.

The California red-legged frog and the foothill yellow-legged frog could also access the project area through the connection to New Hogan Reservoir. Although Cosgrove Creek and artificial ponds could provide access to the project area, they are likely to support bullfrogs and centrarchid fishes, which may discourage breeding or seasonal occupation by California red-legged frogs. So, California red-legged frogs and foothill yellow-legged frogs have some potential to be present within the biological study area on at least a seasonal basis, and for the purposes of this project, potential aquatic habitat for these frogs would be considered present in the area.

The area considered to be potential aquatic habitat for the western pond turtle, the California red-legged frog, and the foothill yellow-legged frog lies between the streambed and the “top of bank” of Cosgrove Creek and to the limits of wetland boundaries of the drainage ditches on the south side of State Route 12 within the biological project area.

Permanent and temporary impacts to potential western pond turtle, California red-legged frog, and foothill yellow-legged frog habitats are therefore the same as reported for potential Waters of the United States and Waters of the State of California. With the implementation of avoidance measures BIO 1 through BIO 6 and BIO 13 through BIO 15, the project would not result in “take” (as defined by California Fish and Game Code Section 86 and the Federal Endangered Species Act) of the western pond turtle, California red-legged frog, and foothill yellow-legged frog. No compensatory mitigation measures are anticipated for these impacts; avoidance measures for these species will be incorporated into the project. However, since the project “may affect” foothill yellow-legged frog (proposed Threatened) and California red-legged frog, consultation with the U.S. Fish and Wildlife Service was initiated in December 2021.

### *Migratory Birds and Raptors*

Migratory birds and raptors have potential habitat within the biological study area. Swallow nests were seen on the soffits of the existing Cosgrove Creek Bridge, and swallows may attempt to nest in these areas between February 1 and September 30 (nesting season). No construction activities are currently

proposed at this bridge that would affect nesting swallows. The trees, shrubs, and other ground vegetation could provide suitable nesting habitats for migratory birds and raptors during nesting season. With the implementation of avoidance measures BIO 10 through BIO 12, no “take” (as defined by the Migratory Bird Treaty Act) would occur for any migratory birds, raptors, and their nests.

All above impacts would be less than significant with the incorporation of avoidance, minimization, and/or mitigation measures BIO 1 through BIO 16.

### ***Avoidance, Minimization, and/or Mitigation Measures***

The following avoidance, minimization, and mitigation measures would be implemented to minimize the impacts on biological resources. Additional details on these measures and associated Best Management Practices can be found in Chapter 4 of the Natural Environment Study.

#### ***BIO 1 – Environmentally Sensitive Area Designation***

Additional direct and indirect impacts to sensitive biological resources throughout the project area would be avoided or minimized by designating “Environmentally Sensitive Areas.” All areas outside of the proposed construction footprint shall be considered as Environmentally Sensitive Areas, as well as any areas determined by a qualified biologist during project planning or during pre-construction surveys to qualify for Environmentally Sensitive Area designation.

Environmentally Sensitive Area information will be shown on contract plans and discussed in Section 14-1.02 of the Caltrans 2018 Standard Specifications or any Special Provisions in Section 14-1.02. Environmentally Sensitive Area provisions may include, but are not necessarily limited to, the use of temporary orange fencing or other high-visibility marking to identify the proposed limit of work in areas adjacent to sensitive resources or to locate and exclude sensitive resources from potential construction impacts. Contractor encroachment into Environmentally Sensitive Areas will be prohibited, and immediate work stoppage and notification to the Caltrans Resident Engineer is required if an Environmentally Sensitive Area is breached. Environmentally Sensitive Area provisions will be implemented as a first order of work and remain in place until all construction activities are complete.

#### ***BIO 2 – Designated Biologist***

A Designated Biologist or biologists shall be onsite during any activities that have the potential to affect sensitive biological resources. The Designated Biologist will monitor regulated species and habitats, ensure that construction activities do not result in the unintended take of regulated species or disturbances to regulated habitats, ensure that construction activities comply

with any permits, licenses, agreements, or contracts, immediately notify the Caltrans Resident Engineer of any take of regulated species, disturbances to regulated habitats, or breaches of Environmentally Sensitive Areas, and prepare, submit, and sign notifications and reports. A Designated Biologist who performs specialized activities must have demonstrated field experience working with the regulated species or performing the specialized task, and regulatory agency approval will be required prior to Caltrans' acceptance of the Designated Biologist.

The Designated Biologists for the project may be "Department-supplied" biologists (Caltrans biologists or consultant biologists under Task Order contracts to Caltrans) or may be "Contractor-Supplied Biologists." If Contractor-Supplied Biologists are used as Designated Biologists, Contractor-Supplied Biologists provisions would be discussed in Section 14-6.03D(1-3) of the Caltrans 2018 Standard Specifications or any Special Provisions in Section 14-6.03D(1-3) that will specify Contractor-Supplied Biologists' qualifications, responsibilities, and submittals. Regulatory agency approval will be required prior to Caltrans' acceptance of any Contractor-Supplied Biologists. Prior to project construction, the Contractor-Supplied Biologists would prepare a "Natural Resources Protection Program" within 7 days of contract approval as per Standard or Special Provisions under Section 14-6.03D(2) of the Caltrans 2018 Standard Specifications. The Natural Resources Protection Program would describe the measures and schedules for protecting biological resources and regulatory compliance and must be approved by Caltrans prior to the onset of construction activities.

***BIO 3 – Containment Measures/Construction Site Best Management Practices***

To contain construction-related material and prevent debris and pollutants from entering receiving waters and to reduce the potential for discharge to receiving waters, the Contractor shall follow all applicable guidelines and requirements in Section 13 of the Caltrans 2018 Standard Specifications or any Special Provisions in Section 13 regarding water pollution control and general specifications for preventing, controlling, and abating water pollution in streams, waterways, and other bodies of water.

The project design team may specify "Best Management Practices" to be used during construction in addition to, or in place of, other temporary measures selected by the Contractor. Project-specific Best Management Practices will address (among other things):

- Spill Prevention and Control
- Material Management

- Waste Management (Solid, Hazardous, Concrete, Sanitary/Septic Wastes, Contaminated Soils)
- Vehicle and Equipment Cleaning, Fueling, and Maintenance
- Material and Equipment Use Over Water
- Structure Removal Over or Adjacent to Water
- Paving, Sealing, Sawing, Grooving and Grinding Activities
- Concrete Curing and Finishing
- Temporary Soil Stabilization
- Temporary Sediment Control
- Temporary Tracking Control
- Temporary Concrete Washouts
- Illicit Connection/Illegal Discharge Detection and Reporting

Further water pollution control information and guidance for contractors is provided in the following Caltrans manuals:

- Stormwater Pollution Prevention Plan and Water Pollution Control Program Preparation Manual
- Construction Site Best Management Practices Manual
- Construction Site Monitoring Program Manual

Prior to construction, the Contractor would be required to submit either a Water Pollution Control Plan or a Stormwater Pollution Prevention Plan, as appropriate. Caltrans would review and approve the Water Pollution Control Plan or Stormwater Pollution Prevention Plan within 7 to 15 days of contract approval. A Spill Prevention and Control Plan would be developed by the Contractor as a component of the Water Pollution Control Plan or Stormwater Pollution Prevention Plan. Specific Best Management Practices options will be considered, evaluated, and dependent on factors such as field conditions, changes to construction strategies, and regulatory requirements in order to protect the beneficial uses of receiving waters. Best Management Practices options will be based on the best conventional and best available technology. Caltrans staff and the Contractor are required to perform routine inspections of the construction area to verify that field Best Management Practices are properly implemented, maintained, and operating effectively and as designed.

**BIO 4 – Limited Operation Period – Stream Zone Construction Activities**

It is proposed that construction activities occurring in aquatic habitat within the project construction footprint and Environmental Study Limits shall occur between May 1 and October 15 of any construction season, unless earlier or later dates for in-channel construction activities are approved by regulatory agencies. By requiring contractors to adhere to these dates for stream-zone construction, the project proponent will minimize project effects to receiving waters.

**BIO 5 – Worker Environmental Awareness Training for Construction**

Before any work occurs in the project area, a qualified designated biologist (Designated Biologist; familiar with the resources to be protected) will conduct a mandatory “Worker Environmental Awareness Training” for construction personnel. The awareness training will be provided to all construction personnel (contractors and subcontractors) to brief them on the need to avoid and minimize effects to sensitive biological resources (e.g., jurisdictional wetlands and other waters, threatened and endangered species, other special-status species, roosting bats, nesting birds, etc.) within and adjacent to construction areas and the penalties for not complying with applicable state and federal laws and permit requirements. The Designated Biologist will inform all construction personnel about the life history and habitat requirements of special-status habitats and species known to occur or with potential for occurrence onsite, the importance of maintaining habitat, and the terms and conditions of regulatory requirements.

The Worker Environmental Awareness Training will cover general restrictions and guidelines that must be followed by all construction personnel to reduce or avoid effects on sensitive biological resources during project construction. The training also will include identifying the Best Management Practices written into construction specifications for avoiding and minimizing the discharge of construction materials or other contaminants into jurisdictional waters.

Worker Environmental Awareness Training shall be required for any construction personnel intending to enter the construction zone for more than 15 minutes. Any Designated Biologists conducting Worker Environmental Awareness Training must meet the qualifications of regulatory agencies, and copies of training sign-in sheets for construction personnel will be provided to regulatory agencies upon their request.

If a Contractor-Supplied Biologist is used, then the Contractor-Supplied Biologist will prepare and submit copies of the Worker Environmental Awareness Training and any associated training materials for Caltrans’ review and approval prior to the onset of project construction activities as per Special Provisions of the Caltrans 2018 Standard Specifications under Section 14-

6.03(D) “Biological Resource Information Program.” A Biological Resources Information Program submittal will only be accepted by Caltrans if it complies with all regulatory provisions.

***BIO 6 – Restore and Revegetate Temporarily Disturbed Areas Onsite***

Disturbed areas within the construction limits will be graded to minimize surface erosion and siltation into receiving waters. Disturbed areas will be re-contoured to as close to pre-project condition as possible and will be stabilized as soon as feasible as (and no later than October 15 of each construction season) to avoid erosion during subsequent storms and runoff. Permanent erosion control seeding will be performed at all disturbed sites by hydro-seeding over the course of construction as each site is completed, with all sites seeded by the completion of construction activities.

***BIO 7 – Weed-Free Construction Equipment and Vehicles***

To minimize the potential for the transport of weed propagules to the Action Area from sources outside of the project area, construction equipment and vehicles are recommended to be cleaned and washed at the contractor’s facilities prior to arrival to the construction site. Any vehicle or equipment cleaning that occurs onsite during construction activities shall conform with Caltrans 2018 Standard Specifications or any Special Conditions under Section 13-4.03E(3) and Section NS-08 (Vehicle and Equipment Cleaning) of the Caltrans 2017 Construction Site Best Management Practices Manual, which require the contractor to contain and dispose of any waste resulting from vehicle or equipment cleaning.

***BIO 8 – Weed Control During Construction***

To minimize the potential for spreading weed propagules originating from within the project Environmental Study Limits during the course of construction activities, including initial vegetation clearing and at onsite revegetation areas, weed control would be accomplished in accordance with Caltrans 2018 Standard Specifications or Special Provisions under Section 20-1.03C(3). The use of herbicides for weed control activities would be discouraged but may be considered on a case-by-case basis depending upon the weed species, the extent of infestation, or any regulatory restrictions.

***BIO 9 – Weed-Free Erosion Control and Revegetation Treatments***

To minimize the risk of introducing weed propagules to the Action Area from sources outside of the project area, only locally adapted plant species appropriate for the project area will be used in any erosion control or revegetation seed mix or stock. The Caltrans Biologist will consult with the Caltrans Landscape Architect to develop appropriate seed and planting palettes for use in revegetation and/or erosion control applications. Any compost, mulch, tackifier, fiber, straw, duff, topsoil, erosion control products,

or seed must meet Caltrans 2018 Standard Specification or any Special Provisions under Section 21-2.02 for these materials. Any hydro-seed used for revegetation activities must also be certified weed-free as per Caltrans 2018 Standard Specifications Section 21-2.02F.

***BIO 10 – Nesting Bird Avoidance – Limited Operation Period***

Performing ground-disturbance, vegetation removal, or other construction activities within nesting bird habitat during the non-nesting season (between October 1 and January 31) would not require pre-construction surveys or nesting bird avoidance measures.

***BIO 11 – Nesting Bird Avoidance – Pre-Construction Surveys During Nesting Season***

If ground-disturbance, vegetation removal, or other construction activities are scheduled during the nesting season of protected raptors and migratory birds (February 1 to September 30), a focused survey for active nests of such birds shall be conducted by a qualified biologist within 15 days prior to the beginning to project-related activities. If a lapse in project-related work of 15 days or longer occurs, another survey and, if required, consultation with the United States Fish and Wildlife Service and California Department of Fish and Wildlife will be required before the work can be reinitiated. Pre-construction surveys for nesting migratory birds and raptors shall be specified under Caltrans 2018 Standard Specification and/or Standard Special Provision 14-6.03A (Species Protection) and/or 14-6.03(B) (Bird Protection).

***BIO 12 – Nesting Bird Avoidance – Avoid Active Nests***

If active nests are found, a protective no-work buffer will be established (Table 18) and Caltrans shall consult with the United States Fish and Wildlife Service regarding appropriate action to comply with the Migratory Bird Treaty Act of 1918 and with California Department of Fish and Wildlife to comply with provisions of the Fish and Game Code of California.

If nesting migratory birds or nesting raptors are detected by the Designated Biologist during the pre-construction survey, the appropriate no-work buffer will need be established around the nest. No work will commence within the buffer until authorization is received from the Resident Engineer. Appropriate no-work buffer distances for specific bird species are listed below (Stop all work within a radius of any active migratory bird nest as noted in Table 2).

**Table 2: Recommended Protective Buffer Radii for Migratory Bird Species Nests**

Species	Protective Radius (feet)
Raptors	300
Other Migratory Birds (Including Tricolored Blackbirds)	100

Protective buffer radii for nesting migratory birds and raptors shall be specified under Caltrans 2018 Standard Specification and/or Standard Special Provision 14-6.03A (Species Protection) and/or 14-6.03(B) (Bird Protection).

If construction or other project-related activities that may potentially cause nest destruction, nest abandonment or forced fledging of migratory birds are necessary, monitoring of the nest site by a qualified biologist will be required to ensure that protective radii are maintained.

**BIO 13 – Sensitive Aquatic Species Avoidance – Pre-Construction Surveys**

A focused survey for sensitive aquatic species shall be conducted by a qualified biologist within 1 day prior to the beginning of project-related activities. If a lapse in project-related work of 1 day or longer occurs, another survey and, if required, consultation with the United States Fish and Wildlife Service and California Department of Fish and Wildlife will be required before the work can be reinitiated. Pre-construction surveys for sensitive aquatic species shall be specified under Caltrans 2018 Standard Specification and/or Standard Special Provision 14-6.03A (Species Protection).

**BIO 14 – Sensitive Aquatic Species Avoidance – Construction Monitoring**

A qualified Designated Biologist will be present during all construction-related activities that may affect sensitive aquatic species or their habitat. The Designated Biologist will have the authority to halt work through coordination with the Resident Engineer or onsite project manager if a sensitive aquatic species is observed on the project footprint. The Resident Engineer or onsite project manager will ensure construction activities remain suspended in any area where the biologist has determined that take of sensitive aquatic species could potentially occur. Work will resume once the animal leaves the site of its own volition, or once it is determined that the species is not being harassed by or in danger due to construction activities.

To prevent inadvertent entrapment of sensitive aquatic species during construction, all excavated, steep-walled holes or trenches more than 6 inches deep will be covered at the end of each working day with plywood or similar material. At the beginning of each working day and before such holes or trenches are filled, they will be thoroughly inspected for trapped animals. If at any time a trapped native amphibian or reptile is discovered in these

situations, the qualified Designated Biologist will have the authority to halt activities in these locations through coordination with the Resident Engineer or onsite project manager and will immediately place escape ramps or other appropriate structures to allow the animal to escape. Work will resume once the animal leaves the site of its own volition, or once it is determined that the species is not being harassed by or in danger due to construction activities.

**BIO 15 – Sensitive Aquatic Species Avoidance – Avoid Sensitive Aquatic Species**

If sensitive aquatic species are found, a protective no-work buffer of 100 feet will be established and Caltrans shall consult with the United States Fish Wildlife Service and/or the California Department of Fish and Wildlife. No work will commence within the buffer until authorization is received from the Resident Engineer.

**BIO 16 – Compensatory Mitigation – Wetlands and Other Waters of the United States**

Permanent losses of waters of the United States are proposed to be compensated by participation in the Nation Wildlife Federation’s Sacramento District California In-Lieu Fee Program.

**2.1.5 Cultural Resources**

Considering the information in the Historic Property Survey Report dated January 14, 2021 and the Supplemental Historic Property Survey Report dated December 15, 2021, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Cultural Resources
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<b>No Impact</b>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<b>No Impact</b>
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<b>No Impact</b>

### 2.1.6 Energy

Considering the project’s scope and anticipated duration, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Energy
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?	<b>No Impact</b>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<b>No Impact</b>

### 2.1.7 Geology and Soils

Considering the information in the Paleontology memo dated January 27, 2022 and the California Department of Conservation Regulatory portal, and based on the proposed project location and scope, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Geology and Soils
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: <ul style="list-style-type: none"> <li>i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.</li> </ul>	<b>No Impact</b>
ii) Strong seismic ground shaking?	<b>No Impact</b>
iii) Seismic-related ground failure, including liquefaction?	<b>No Impact</b>
iv) Landslides?	<b>No Impact</b>
b) Result in substantial soil erosion or the loss of topsoil?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Geology and Soils
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?	<b>No Impact</b>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<b>No Impact</b>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<b>No Impact</b>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<b>No Impact</b>

**2.1.8 Greenhouse Gas Emissions**

Considering the information in the Climate Change/Greenhouse Gas Analysis dated January 5, 2022, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Greenhouse Gas Emissions
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<b>Less Than Significant Impact</b>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<b>Less Than Significant Impact</b>

***Affected Environment***

The project is in an urban area of Calaveras County with a well-developed road and street network. State Route 12 through this area is a two-lane highway that connects with State Route 26 to the north of the proposed intersection improvement. The project area is mainly commercial, with some light industrial and residential buildings, including a mobile home park northeast of the intersection and a fire station to the northwest. Traffic congestion during peak hours is not uncommon in the project area. A

Regional Transportation Plan (RTP)/Sustainable Community Strategy (SCS) by Calaveras Council of Governments Regional Transportation Planning Agency guides transportation development in the project area. The Calaveras County General Plan Sustainability element addresses greenhouse gases in the project area.

### ***Environmental Consequences***

The purpose of the project is to improve traffic safety by reducing the number and severity of collisions at the Valley Oaks Shopping Center and State Route 12 intersection. The project will not increase the vehicle capacity of the roadway. This type of project generally causes minimal or no increase in operational greenhouse gas emissions. Because the project would not increase the number of travel lanes on State Route 12, no increase in vehicle miles traveled (also known as VMT) would occur as a result of the project. While some greenhouse gas emissions during the construction period would be unavoidable, no increase in operational greenhouse gas emissions is expected.

Greenhouse gas emissions are anticipated from construction activities during the 150 working days anticipated for the project's construction. Using the Caltrans Construction Emissions Tool (CAL-CET 2021 version 1.0), it is estimated that 154 tons of construction-related carbon dioxide emissions would be generated throughout the project construction period.

While the project will result in greenhouse gas emissions during construction, it is anticipated that the project will not result in any increase in operational greenhouse gas emissions. The project does not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. With implementation of construction greenhouse gas-reduction measures, the impact would be less than significant.

### ***Avoidance, Minimization, and/or Mitigation Measures***

No avoidance, minimization, or mitigation measures are required at this time. The project would include best management practices, standard specifications, and project-level greenhouse gas reduction strategies to meet statewide and agency goals. Implementation of these efforts would ensure construction-related impacts are less than significant. The following greenhouse gas reduction strategies will be implemented:

**GHG 1**—Limit idling to 5 minutes for delivery and dump trucks and other diesel-powered equipment (with some exceptions).

**GHG 2**—Schedule truck trips outside of peak morning and evening commute hours.

**GHG 3**—Schedule longer-duration lane closures to reduce the number of equipment mobilization efforts.

**GHG 4**—For improved fuel efficiency from construction equipment:

- Equipment will be maintained in proper tune and working condition.
- The contractor will use right-sized equipment for the job.
- The contractor will use equipment with new technologies to the extent feasible.

**GHG 5**—The project includes Complete Streets components (crosswalks, sidewalks, proposed bus area, etc.) that will make non-auto modes of transportation more attractive.

**2.1.9 Hazards and Hazardous Materials**

Considering the information in the Hazardous Waste Initial Site Assessment (ISA), Valley Oaks Intersection dated August 19, 2021, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Hazards and Hazardous Materials
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<b>No Impact</b>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<b>No Impact</b>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<b>Less Than Significant Impact</b>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<b>Less Than Significant Impact</b>

Question—Would the project:	CEQA Significance Determinations for Hazards and Hazardous Materials
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	No Impact
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	No Impact
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	No Impact

**Affected Environment**

The project is in an urban area of Calaveras County with a well-developed road and street network. State Route 12 through this area is a two-lane highway that connects with State Route 26 to the north of the proposed intersection improvement. The project area is mainly commercial, with some light industrial and residential buildings. State Route 12 has several commercial businesses on the north side, with a fire station adjacent to the northwest side of the intersection, and a mobile home park to the northeast. The Valley Oaks Shopping Center is on the south side of State Route 12 throughout the entire project area. The site contains commercial buildings, parking and drainage.

**Environmental Consequences**

*Cortese List: Section 65962.5(a)*

Five closed leaking underground storage tank sites are adjacent to the project area. Though all sites are remediated and received No Further Action Required (also known as NFAR) letters from the Central Valley Regional Water Quality Control Board, there is still potential to encounter residual contamination in the area. A Preliminary Site Investigation for Total Petroleum Hydrocarbons (the mixture of chemicals found in crude oil) was completed in March 2021. The results indicated that Total Petroleum Hydrocarbons are present in low levels, with none of the samples showing levels above regional commercial or industrial screening limits. The project is not expected to have excess soil, and the soil can be reused onsite without restriction.

### *Aerially Deposited Lead*

There is potential for aerially deposited lead to occur in the unpaved areas adjacent to highways. The results of the soil survey conducted in March 2021 indicated that the soil within the project area would qualify as either Type COM or be unregulated depending on the excavation scenario. The excavation scenario would be determined in the Plans, Specifications, and Estimates phase after a preferred alternative is selected. The District hazardous waste technical specialist will work with Design staff to determine the most likely excavation scenario and ensure the appropriate Caltrans Standard Special Provisions are selected and included in the construction contract.

### *Striping*

Yellow-painted striping and pavement markings are present in the project area and may contain concentrations of lead. The proposed work may require removal of the striping and pavement markings. With avoidance and minimization measures, there would be no impact on hazardous materials.

### *Treated Wood Waste, Naturally Occurring Asbestos, and Lead-Based Paint*

Treated wood waste is not anticipated for the project, and there is minimal potential to encounter asbestos-containing material and lead-based paint. Due to the project location, it is unlikely to encounter naturally occurring asbestos.

With the inclusion of Caltrans Standard Special Provisions and Caltrans Standard Specifications to avoid and minimize any potential impacts, there would be a less than significant impact on hazardous materials.

### ***Avoidance, Minimization, and/or Mitigation Measures***

The following avoidance and minimization measure would be implemented to minimize hazardous waste impacts to less than significant. Additional details on this measure can be found in the Initial Site Assessment. Additional measures may be added after discussion with Design and the district hazardous waste technical specialist on excavation scenarios, completed in the Project, Specifications, and Estimates phase.

**HW 1**—Caltrans Standard Special Provision 14-11.12 would be added to the construction contract for a lead compliance plan to be prepared by a Certified Industrial Hygienist, and the contractor shall manage the removed stripe and pavement markings as hazardous waste.

## **2.1.10 Hydrology and Water Quality**

Considering the information in the Location Hydraulic Study dated November 3, 2021, the Hydraulics Recommendations dated October 14, 2021, the

Water Compliance Memorandum for the Valley Oaks Intersection Project dated July 19, 2021, and the Climate Change/Greenhouse Gas Analysis dated January 5, 2022, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Hydrology and Water Quality
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality?	<b>No Impact</b>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<b>No Impact</b>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:  (i) result in substantial erosion or siltation onsite or offsite;	<b>No Impact</b>
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding onsite or offsite;	<b>No Impact</b>
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	<b>No Impact</b>
(iv) impede or redirect flood flows?	<b>No Impact</b>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<b>No Impact</b>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<b>No Impact</b>

**2.1.11 Land Use and Planning**

Considering the information in the Community Impact Assessment Memo dated January 28, 2022, and based on the proposed project scope and description, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Land Use and Planning
a) Physically divide an established community?	<b>No Impact</b>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<b>No Impact</b>

**2.1.12 Mineral Resources**

Considering the information in the Calaveras County General Plan adopted November 12, 2019 and the California Department of Conservation Geological survey information, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Mineral Resources
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<b>No Impact</b>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<b>No Impact</b>

**2.1.13 Noise**

Considering the information in the Noise Compliance Study dated March 1, 2021, the following significance determinations have been made:

Question—Would the project result in:	CEQA Significance Determinations for Noise
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<b>No Impact</b>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<b>No Impact</b>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<b>No Impact</b>

### 2.1.14 Population and Housing

Considering the information in the Community Impact Assessment Memo dated January 28, 2022, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Population and Housing
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<b>No Impact</b>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<b>No Impact</b>

### 2.1.15 Public Services

Considering the information in the Community Impact Assessment Memo dated January 28, 2022 and Section 4(f) No Use Memo dated April 21, 2021, the following significance determinations have been made:

Question:	CEQA Significance Determinations for Public Services
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire protection?	<b>No Impact</b>
Police protection?	<b>No Impact</b>
Schools?	<b>No Impact</b>
Parks?	<b>No Impact</b>
Other public facilities?	<b>No Impact</b>

**2.1.16 Recreation**

Considering the information in the Section 4(f) No Use Memo dated April 21, 2021, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Recreation
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<b>No Impact</b>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<b>No Impact</b>

**2.1.17 Transportation**

Considering the information in the Traffic Operations Analysis Memo dated April 26, 2021 and Community Impact Assessment Memo dated January 28, 2022, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Transportation
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<b>No Impact</b>
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	<b>No Impact</b>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<b>No Impact</b>
d) Result in inadequate emergency access?	<b>No Impact</b>

**2.1.18 Tribal Cultural Resources**

Considering the information in the Historic Property Survey Report dated January 14, 2021 and Supplemental Historic Property Survey Report dated December 15, 2021, the following significance determinations have been made:

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

Question:	CEQA Significance Determinations for Tribal Cultural Resources
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	<b>No Impact</b>

Question:	CEQA Significance Determinations for Tribal Cultural Resources
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<b>No Impact</b>

**2.1.19 Utilities and Service Systems**

Considering the information in the project scope, location, and preliminary design, the following significance determinations have been made:

Question—Would the project:	CEQA Significance Determinations for Utilities and Service Systems
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<b>No Impact</b>
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<b>No Impact</b>
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?	<b>No Impact</b>
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<b>No Impact</b>

Question—Would the project:	CEQA Significance Determinations for Utilities and Service Systems
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<b>No Impact</b>

### 2.1.20 Wildfire

Considering the information in the Climate Change/Greenhouse Gas Memo dated January 5, 2022, the following significance determinations have been made:

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones:

Question—Would the project:	CEQA Significance Determinations for Wildfire
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<b>No Impact</b>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<b>No Impact</b>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<b>No Impact</b>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<b>No Impact</b>

**2.1.21 Mandatory Findings of Significance**

Question:	CEQA Significance Determinations for Mandatory Findings of Significance
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<b>Less Than Significant Impact With Mitigation Incorporated</b>
.b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	<b>No Impact</b>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<b>No Impact</b>

***Affected Environment***

The project would affect environmental resources in the vicinity of State Route 12 in Calaveras County between post miles 9.9 and 10.3. However, the scope of work is limited. Project work consists of intersection improvements through installation of intersection control, roadway widening, and addition of Complete Street elements such as sidewalks, curb ramps, and proposed bus stop areas. Other work would be performed in a limited footprint around existing facilities.

***Environmental Consequences***

The project may impact greenhouse gas emissions and hazardous waste, but with the implementation of avoidance and minimization measures as discussed earlier in Chapter 2, the effects would be less than significant.

The project may also impact biological resources, but with the implementation of avoidance, minimization, and mitigation measures as discussed in Chapter 2 Section 2.1.4, the effects would be less than significant with mitigation incorporated.

***Avoidance, Minimization, and/or Mitigation Measures***

With the implementation of avoidance, minimization, and mitigation measures, the project would have a less than significant impact on the environment. All other impacts would be minimized through the implementation of Caltrans Best Management Practices, Standard Specifications, and Standard Special Provisions. Therefore, the project would not have a significant impact on species, habitat, or any other natural or historical resource.

### NON-DISCRIMINATION POLICY STATEMENT

The California Department of Transportation, under Title VI of the Civil Rights Act of 1964, ensures *"No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance."*

Caltrans will make every effort to ensure nondiscrimination in all of its services, programs and activities, whether they are federally funded or not, and that services and benefits are fairly distributed to all people, regardless of race, color, or national origin. In addition, Caltrans will facilitate meaningful participation in the transportation planning process in a nondiscriminatory manner.

Related federal statutes, remedies, and state law further those protections to include sex, disability, religion, sexual orientation, and age.

For information or guidance on how to file a complaint, or obtain more information regarding Title VI, please contact the Title VI Branch Manager at (916) 324-8379 or visit the following web page:  
<https://dot.ca.gov/programs/civil-rights/title-vi>.

To obtain this information in an alternate format such as Braille or in a language other than English, please contact the California Department of Transportation, Office of Civil Rights, at 1823 14<sup>th</sup> Street, MS-79, Sacramento, CA 95811; PO Box 942874, MS-79, Sacramento, CA 94274-0001; (916) 324-8379 (TTY 711); or at [Title.VI@dot.ca.gov](mailto:Title.VI@dot.ca.gov).
