## **Section I Introduction**

This conceptual hydrology study has been prepared for Kornerstone Park LLC. The project site is located at 2205 E. Palmyra Avenue and 290 S. Yorba Street on the northwest corner of Palmyra Avenue and Tracy Lane. It is bounded by Santiago Creek on the west, Palmyra Avenue and a residential development on the south, Orange Unified School District Child Development Center on the east, and City of Orange's Yorba Park and Orange Dog Park on the north.

A total of approximately 4.3 acres will be disturbed as a result of the development. The proposed development includes the removal of the existing paved parking area and the construction of a new paved parking area, sidewalk, landscaped areas, and cemetery plots.

### Reference

Appendix A: Vicinity Map

## **Section II Project Description**

### Existing Site Conditions:

The site was part of a former landfill known as the “La Veta Refuse Disposal Station” (Appendix B). The county operated the landfill from at least 1946 to 1956. As part of the closure of the landfill, a layer of soil, 3' to 15' thick, was placed over the landfill debris as a landfill cover.

By 1972, the existing YMCA building and parking area were constructed on the site. The YMCA facility was close in 2019 and the site is currently vacant.

Santiago Creek flows northeast to southwest through the northwest corner of the site. The area south of the existing building generally drains toward the existing parking lot and to Palmyra Avenue. The area north of the existing building, however, does not have definitive drainage directions with the existing Santiago Trail acting as a ridge:

- The area west of the trail drains directly into Santiago Creek.
- The area east of the trail drains in arbitrary directions and eventually, drain to the existing parking lot and to Palmyra Avenue.

There is no existing storm drain inlet in the vicinity of the site for Palmyra Avenue to drain into. According to Orange County Flood Control District, Base Map of Drainage Facilities (Appendix C), the closest inlet is located at the intersection of Tracy Lane and Debora Lane. There is an existing 24" RCP storm drain under the site, from Palmyra Avenue to Santiago Creek. The upstream of the 24" RCP is connected to an 18" storm drain from the adjacent OUSD Child Development Center (Appendix D).

The hydrology map for the existing condition in Appendix H shows the delineation of the drainage area boundaries in the existing site condition.

Appendix B: La Veta Landfill Site Survey Location Map

Appendix C: Orange County Flood Control District, Base Map of Drainage Facilities

Appendix D: City of Orange S.P. # 1362

Appendix H: Hydrology Map – Existing condition

### Proposed Site Conditions:

Per Landfill Cover Investigation by Ardent (May 22, 2020):

*A human health risk assessment completed in 2009 did not indicate a significant health risk to the YMCA workers or children as a result of exposure to the landfill cover soil, and indoor air samples collected within the on-site building showed no evidence of vapor intrusion. Based on the owner's initial discussions with the DTSC, site redevelopment as a cemetery may be acceptable, pending on further assessment of the landfill cover.*

In the proposed development, the existing building will be renovated for use as a reception room; the rest of facilities will be demolished. New parking area, drive aisles, walkways, landscape and gravesites will be constructed. Retaining walls and screen walls are proposed along the perimeter. The grave plots will be concrete encased with 4 inches of gravel on top.

The proposed construction will take place in the area east of the existing Santiago Trail; no disturbance is proposed in the area west of the trail. The area to be under construction is in Zone X in FEMA FIRMette.

The site is divided into 3 drainage areas in the proposed condition:

- The area west of Santiago Trail will remain the same as the existing condition and will drain into Santiago Creek
- The area south of the retaining/screen walls along Palmyra Avenue will drain into Palmyra Avenue; it will be infeasible to collect and convey the stormwater from this area to the proposed detention system
- The stormwater from the proposed construction area will be collected by the proposed inlets. The inlets will drain into the proposed storm drain systems and to the proposed underground detention system. A proposed vortex separator unit will be the pre-treatment for the stormwater in the storm drains before the water enters the detention system.

The underground detention system will outlet to a pipe connected to a proposed diversion manhole. The diversion manhole has been designed for 2 functions:

- The low flow will be discharged to a proposed pump, where the flow will be treated by a Modular Wetland unit
- The high flows will be controlled so that the sum of discharge from the site in the proposed condition will not exceed the flow rate from the existing condition.

The low flow and the high flow will confluence on the south side of the Modular Wetland unit; the pipe with the combined flow will be connected to the existing 24" RCP. See Appendix H for the proposed hydrology map.

The following table lists the peak discharge rates from the existing and the proposed conditions:

Peak Discharge (cfs)				
	Storm Frequency	10-Year	25-Year	100-Year
Existing Peak Discharge (cfs)	DA A	6.29	7.77	10.27
	DA B	4.47	5.41	7.07
	DA C	2.05	2.49	3.27
	Total	12.81	15.67	20.61
<hr/>				
Proposed Peak Discharge (cfs)	DA A	12.70	15.29	19.82
	DA B	4.69	5.65	7.37
	DA C	0.54	0.65	0.84
	Total	17.93	21.59	28.03
<hr/>				
Mitigated Discharge (cfs)	DA A	4.81	5.38	6.44
Proposed Peak Discharge (cfs)	DA B	4.69	5.65	7.37
	DA C	0.54	0.65	0.84
	Total	10.04	11.68	14.65

Appendix H: Hydrology Map – Proposed condition

## **Section III Methodology**

According to the County's soil map, the soil on-site is type A.

AES HydroWIN v.2015 Rational Method is used to calculate the time of concentration for hydrology analysis and the peak flow rates to be conveyed in the proposed storm drain pipes.

AES HydroWIN v.2015 CH1 Small Area Unit Hydrograph is used to calculate the unit hydrographs for the peak flow rates and runoff volumes.

Hydraflow Hydrographs Extension for AutoCAD Civil 3D 2016 is used for the hydrograph routing for the detention system analysis.

## **Section IV Detention System Design**

In a letter from Arden, March 25, 2021, (Appendix B):

..... *The site has historically been used as a landfill, and as a result, elevated metals potentially exceeding*

*hazardous waste criteria have been detected in samples collected within the landfill waster. Based on this information, the installation of a stormwater infiltration system is not recommended at the site as it may enhance the potential for the migration of contaminants to groundwater.*

Due to the concern for potential contamination, infiltration will not be utilized for the proposed storm drain system. The proposed underground detention system will be solid wall 72" corrugated metal pipes.

The unit hydrographs for DA C, the detention system data and the routing calculations are included in Appendix G.

La Veta Landfill Site Survey Location Map

Letter from Arden, March 25, 2021 (Re: Infiltration)

Survey Location Map  
La Veta Landfill Site -- Orange, California

↑N

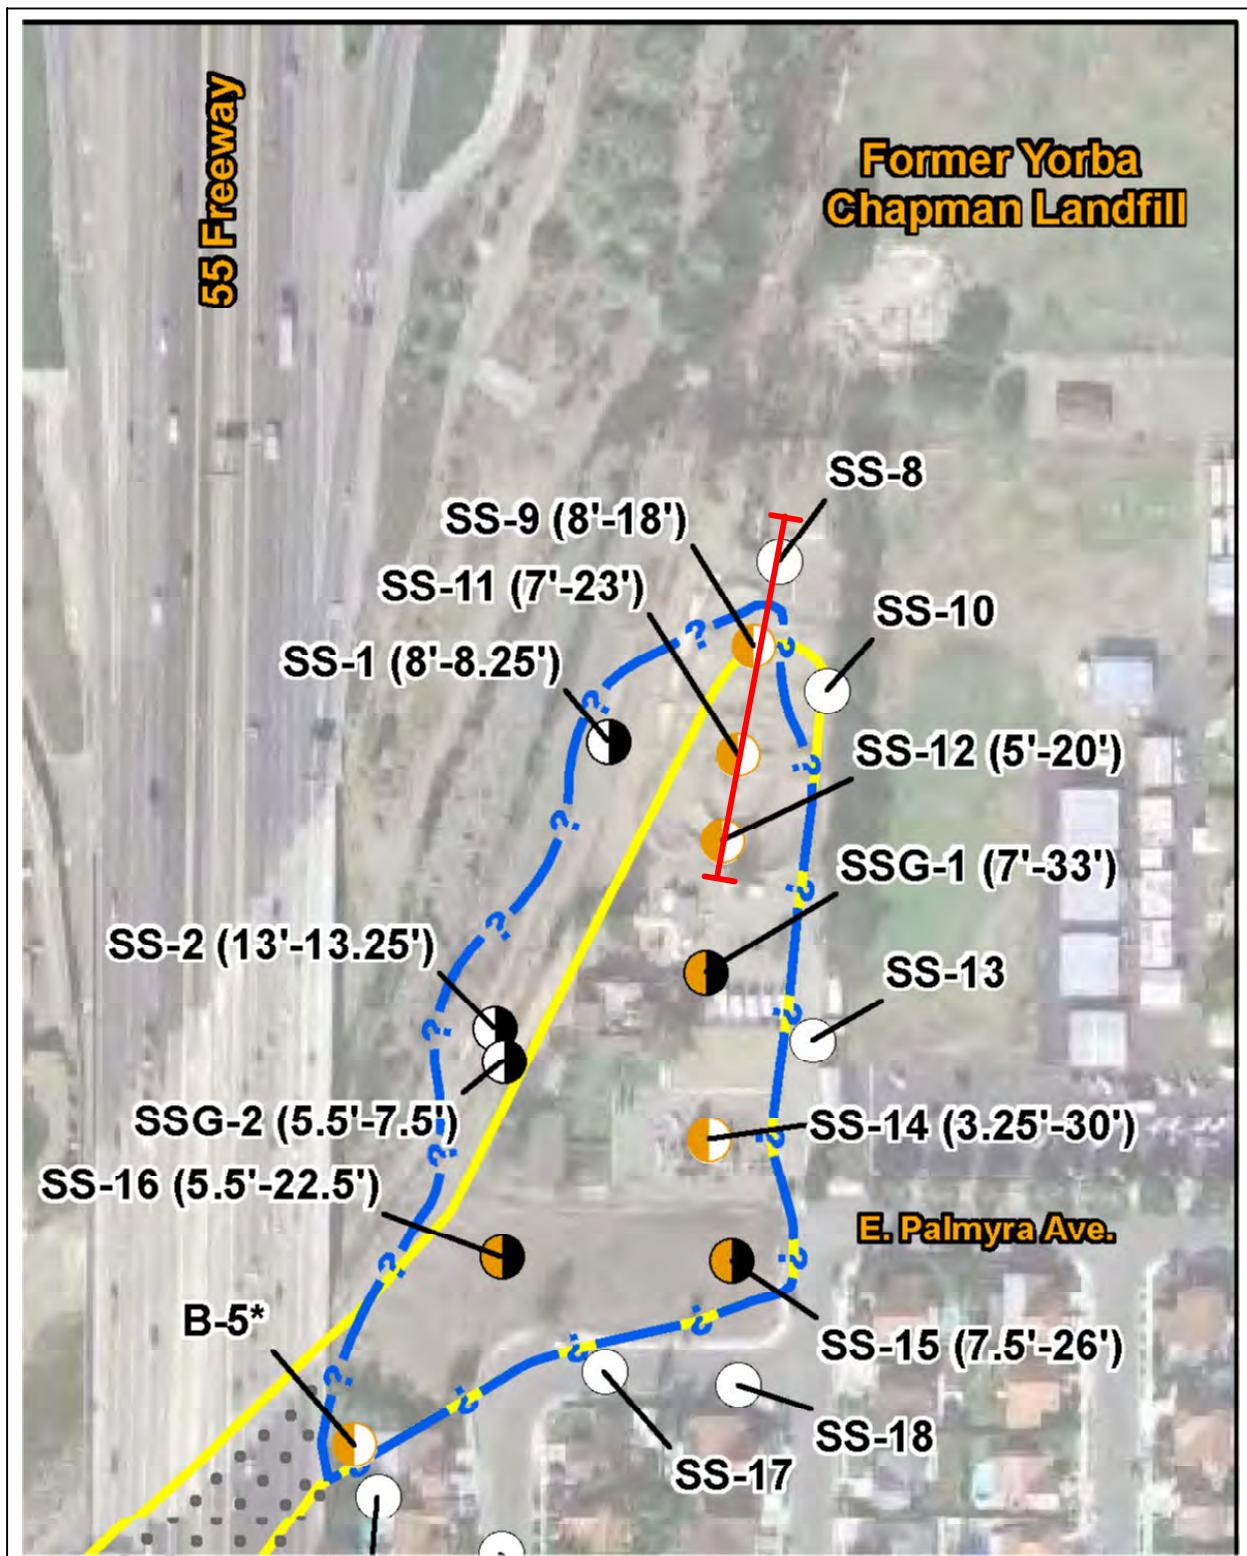

Figure 1

March 25, 2021  
Project No. 10122805

Mr. Abdul Saquib  
Kornerstone Park LLC  
2500 East Ball Road, Suite 260  
Anaheim, CA 92806

**Subject:** Stormwater Infiltration System  
Proposed Korner Stone Park  
2205 East Palmyra Avenue  
Orange, California

Dear Mr. Saquib:

It is our understanding that the feasibility of a stormwater infiltration system is being evaluated as one of several approaches to stormwater management at 2205 East Palmyra Avenue, Orange California (site). The site has historically been used as a landfill, and as a result, elevated metals potentially exceeding hazardous waste criteria have been detected in samples collected within the landfill waste. Based on this information, the installation of a stormwater infiltration system is not recommended at the site as it may enhance the potential for the migration of contaminants to groundwater.

If there are any questions, please feel free to call the undersigned at your convenience.

Sincerely,

Problem Descriptions:

19-124  
PROPOSED CONDITION DA A  
10-YEAR

---

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA(ACRES) = 4.44  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.040  
LOW LOSS FRACTION = 0.062  
TIME OF CONCENTRATION(MIN.) = 6.66  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
ORANGE COUNTY "VALLEY" RAINFALL VALUES ARE USED  
RETURN FREQUENCY(YEARS) = 10  
5-MINUTE POINT RAINFALL VALUE(INCHES) = 0.34  
30-MINUTE POINT RAINFALL VALUE(INCHES) = 0.72  
1-HOUR POINT RAINFALL VALUE(INCHES) = 0.95  
3-HOUR POINT RAINFALL VALUE(INCHES) = 1.59  
6-HOUR POINT RAINFALL VALUE(INCHES) = 2.20  
24-HOUR POINT RAINFALL VALUE(INCHES) = 3.68

---

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.15  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.21

---

---

-----  
Problem Descriptions:

19-124  
PROPOSED CONDITION DA A  
100-YEAR

---

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
TOTAL CATCHMENT AREA(ACRES) = 4.44  
SOIL-LOSS RATE, Fm, (INCH/HR) = 0.040  
LOW LOSS FRACTION = 0.041  
TIME OF CONCENTRATION(MIN.) = 6.51  
SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
ORANGE COUNTY "VALLEY" RAINFALL VALUES ARE USED  
RETURN FREQUENCY(YEARS) = 100  
5-MINUTE POINT RAINFALL VALUE(INCHES) = 0.52  
30-MINUTE POINT RAINFALL VALUE(INCHES) = 1.09  
1-HOUR POINT RAINFALL VALUE(INCHES) = 1.45  
3-HOUR POINT RAINFALL VALUE(INCHES) = 2.43  
6-HOUR POINT RAINFALL VALUE(INCHES) = 3.36  
24-HOUR POINT RAINFALL VALUE(INCHES) = 5.63

---

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.79  
TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.29

---

# Pond Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.5

Tuesday, 05 / 18 / 2021

## Pond No. 1 - detention

### Pond Data

UG Chambers -Invert elev. = 235.30 ft, Rise x Span = 6.00 x 6.00 ft, Barrel Len = 380.00 ft, No. Barrels = 1, Slope = 0.00%, Headers = No

### Stage / Storage Table

Stage (ft)	Elevation (ft)	Contour area (sqft)	Incr. Storage (cuft)	Total storage (cuft)
0.00	235.30	n/a	0	0
0.60	235.90	n/a	561	561
1.20	236.50	n/a	970	1,531
1.80	237.10	n/a	1,182	2,713
2.40	237.70	n/a	1,302	4,014
3.00	238.30	n/a	1,360	5,374
3.60	238.90	n/a	1,360	6,734
4.20	239.50	n/a	1,301	8,036
4.80	240.10	n/a	1,181	9,217
5.40	240.70	n/a	971	10,188
6.00	241.30	n/a	559	10,746

### Culvert / Orifice Structures

### Weir Structures

	[A]	[B]	[C]	[PrfRsr]		[A]	[B]	[C]	[D]
Rise (in)	= 24.00	10.00	0.00	0.00	Crest Len (ft)	= 3.00	0.00	0.00	0.00
Span (in)	= 24.00	10.00	0.00	0.00	Crest El. (ft)	= 240.30	0.00	0.00	0.00

# Hydrograph Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.5

Tuesday, 05 / 18 / 2021

## Hyd. No. 13

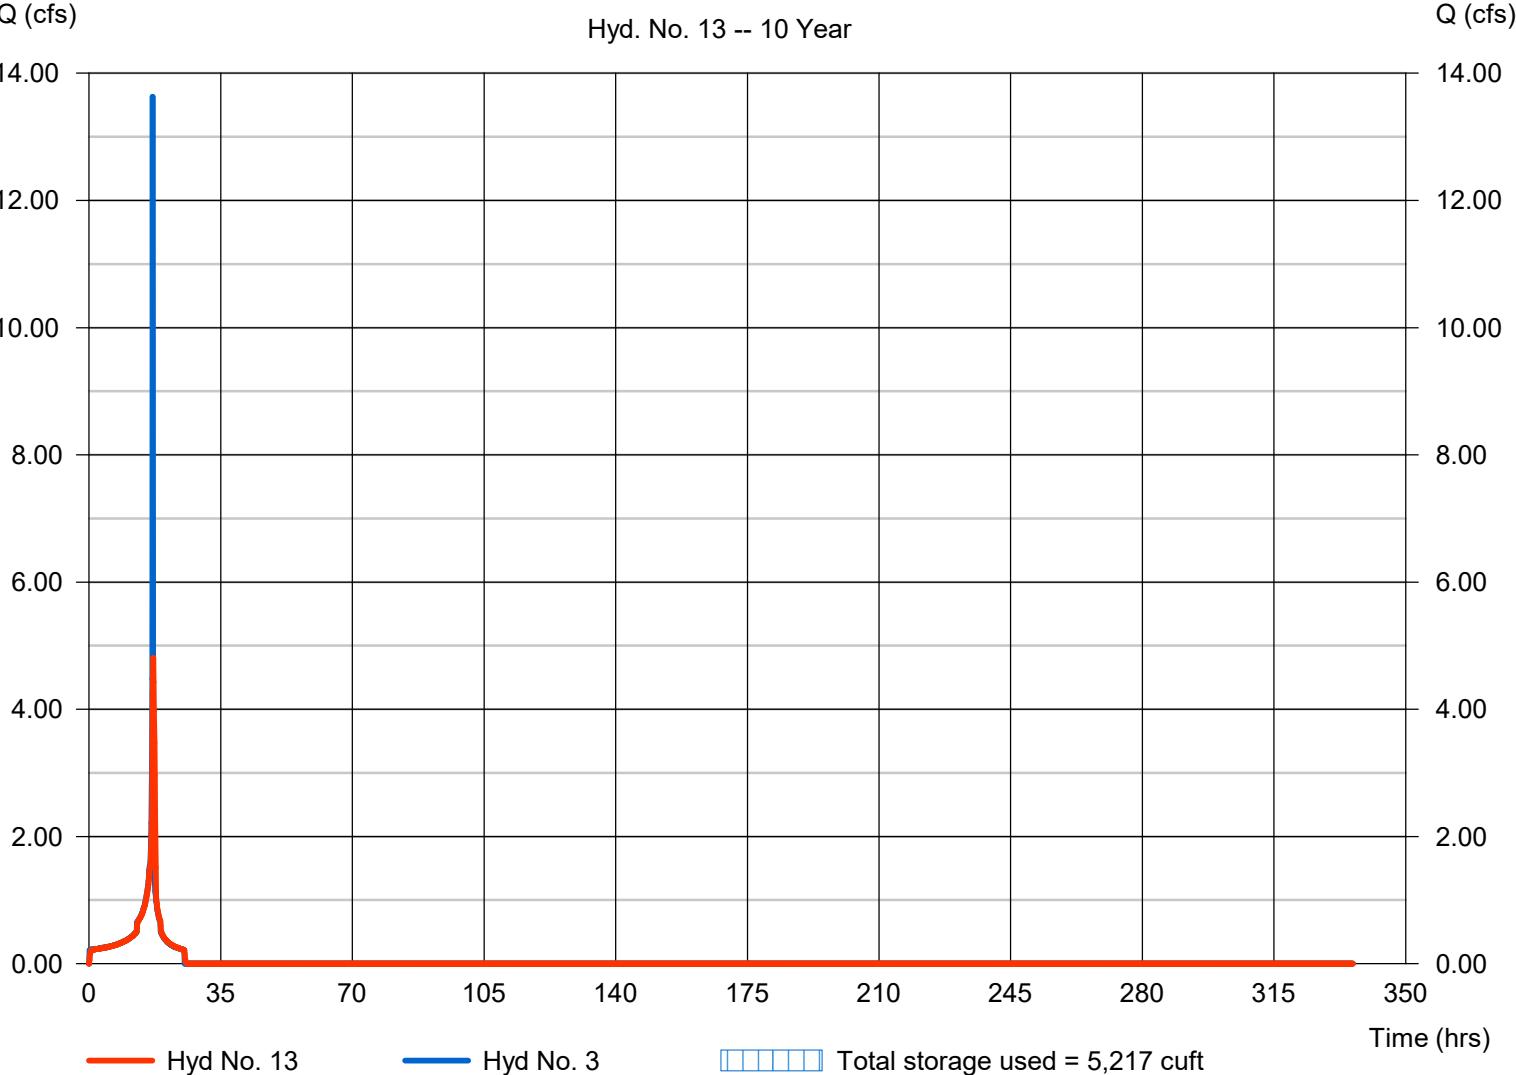

### 10-YR ROUTING

Hydrograph type	= Reservoir	Peak discharge	= 4.809 cfs
Storm frequency	= 10 yrs	Time to peak	= 17.03 hrs
Time interval	= 7 min	Hyd. volume	= 52,584 cuft
Inflow hyd. No.	= 3 - 10-YR	Max. Elevation	= 238.43 ft
Reservoir name	= detention	Max. Storage	= 5,217 cuft

Storage Indication method used.

### 10-YR ROUTING

Hyd. No. 13 -- 10 Year

# Hydrograph Report

## Hyd. No. 15

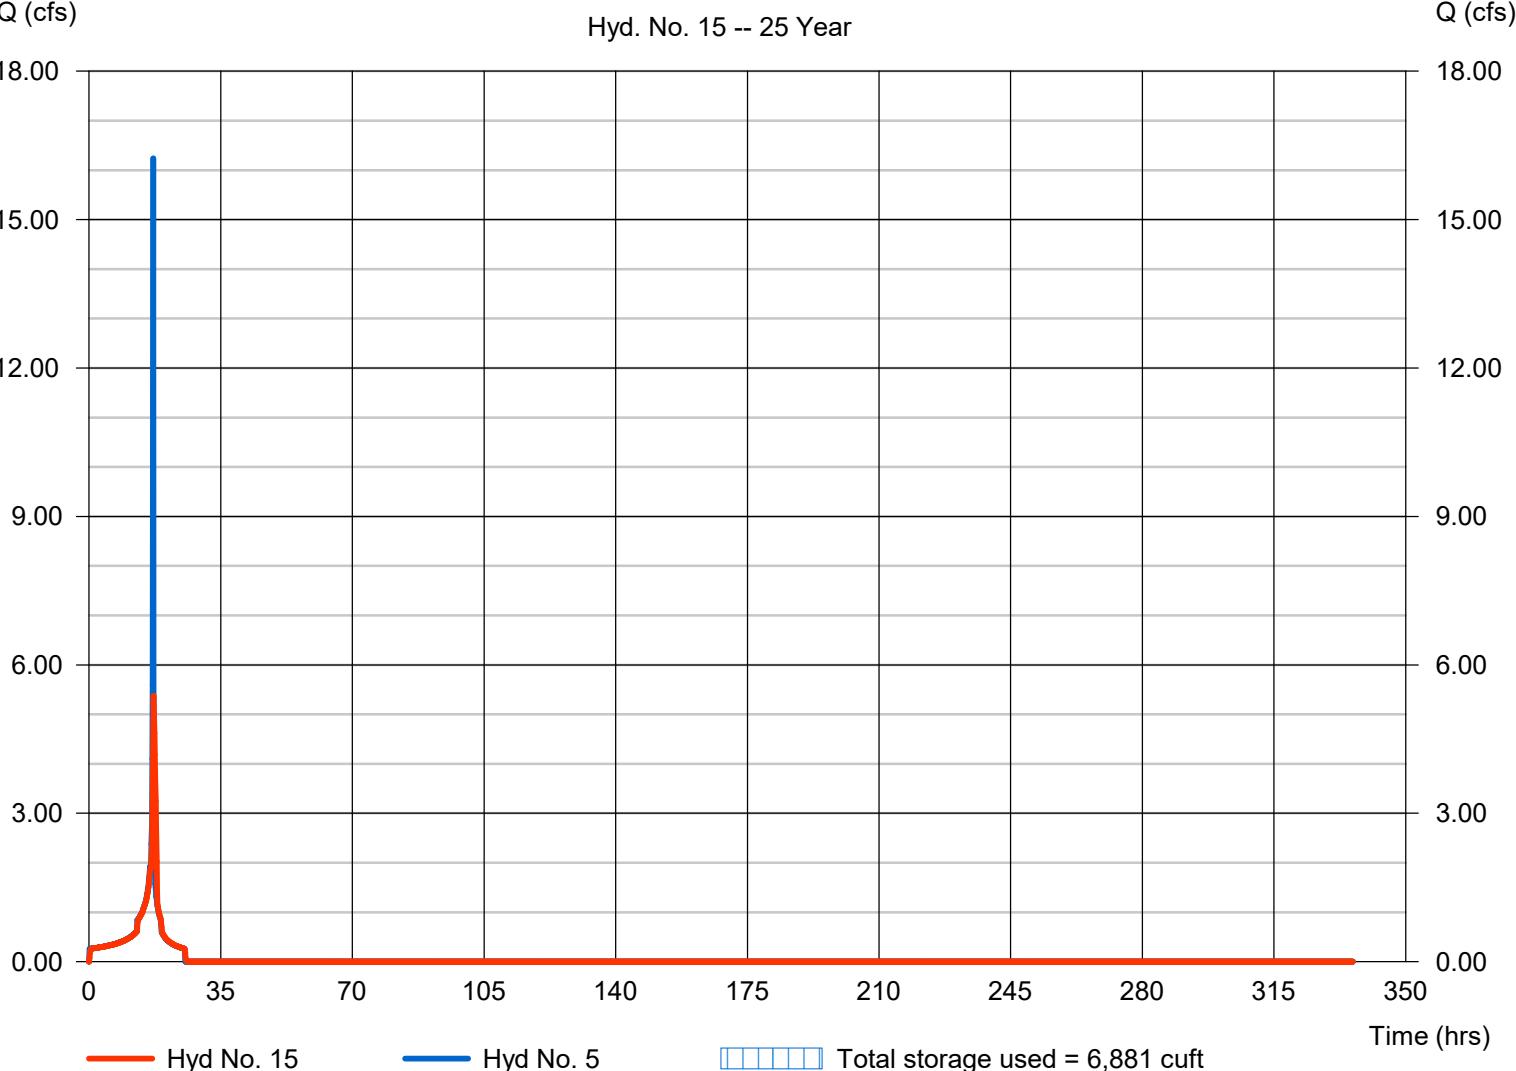

### 25-YR ROUTING

Hydrograph type	= Reservoir	Peak discharge	= 5.376 cfs
Storm frequency	= 25 yrs	Time to peak	= 17.15 hrs
Time interval	= 7 min	Hyd. volume	= 65,482 cuft
Inflow hyd. No.	= 5 - 25-YR	Max. Elevation	= 239.16 ft
Reservoir name	= detention	Max. Storage	= 6,881 cuft

Storage Indication method used.

### 25-YR ROUTING

Hyd. No. 15 -- 25 Year

# Hydrograph Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.5

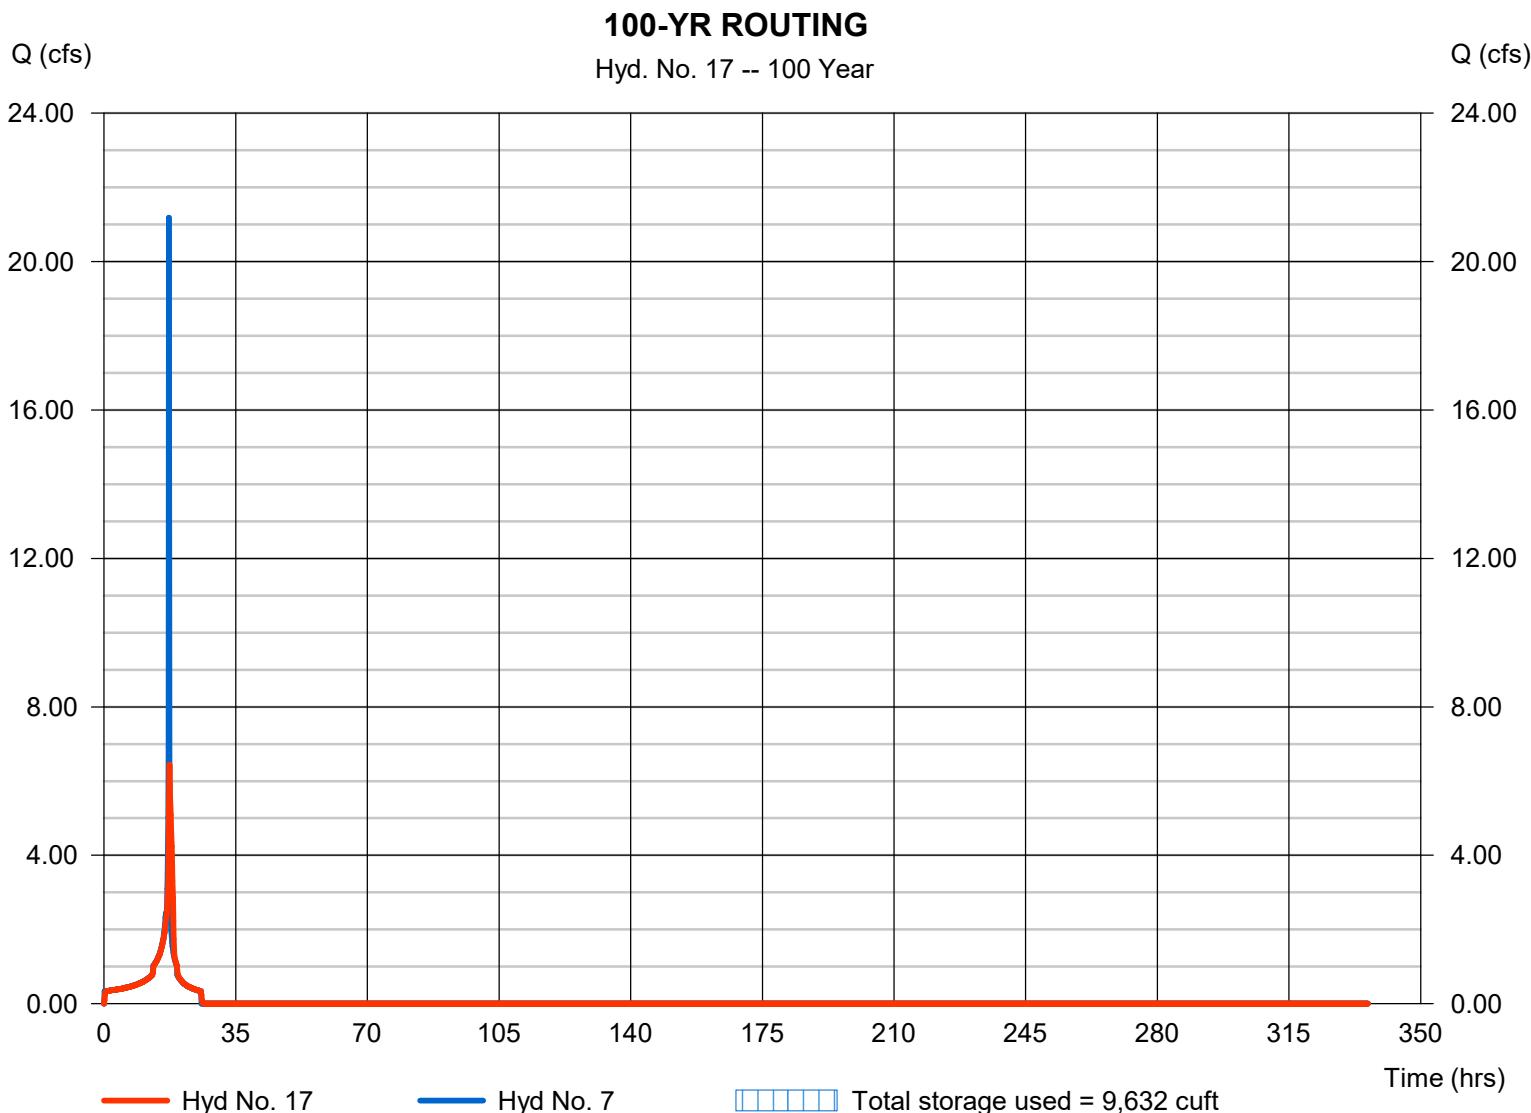

Tuesday, 05 / 18 / 2021

## Hyd. No. 17

### 100-YR ROUTING

Hydrograph type	= Reservoir	Peak discharge	= 6.443 cfs
Storm frequency	= 100 yrs	Time to peak	= 17.38 hrs
Time interval	= 7 min	Hyd. volume	= 83,802 cuft
Inflow hyd. No.	= 7 - 100-YR	Max. Elevation	= 240.66 ft
Reservoir name	= detention	Max. Storage	= 9,632 cuft

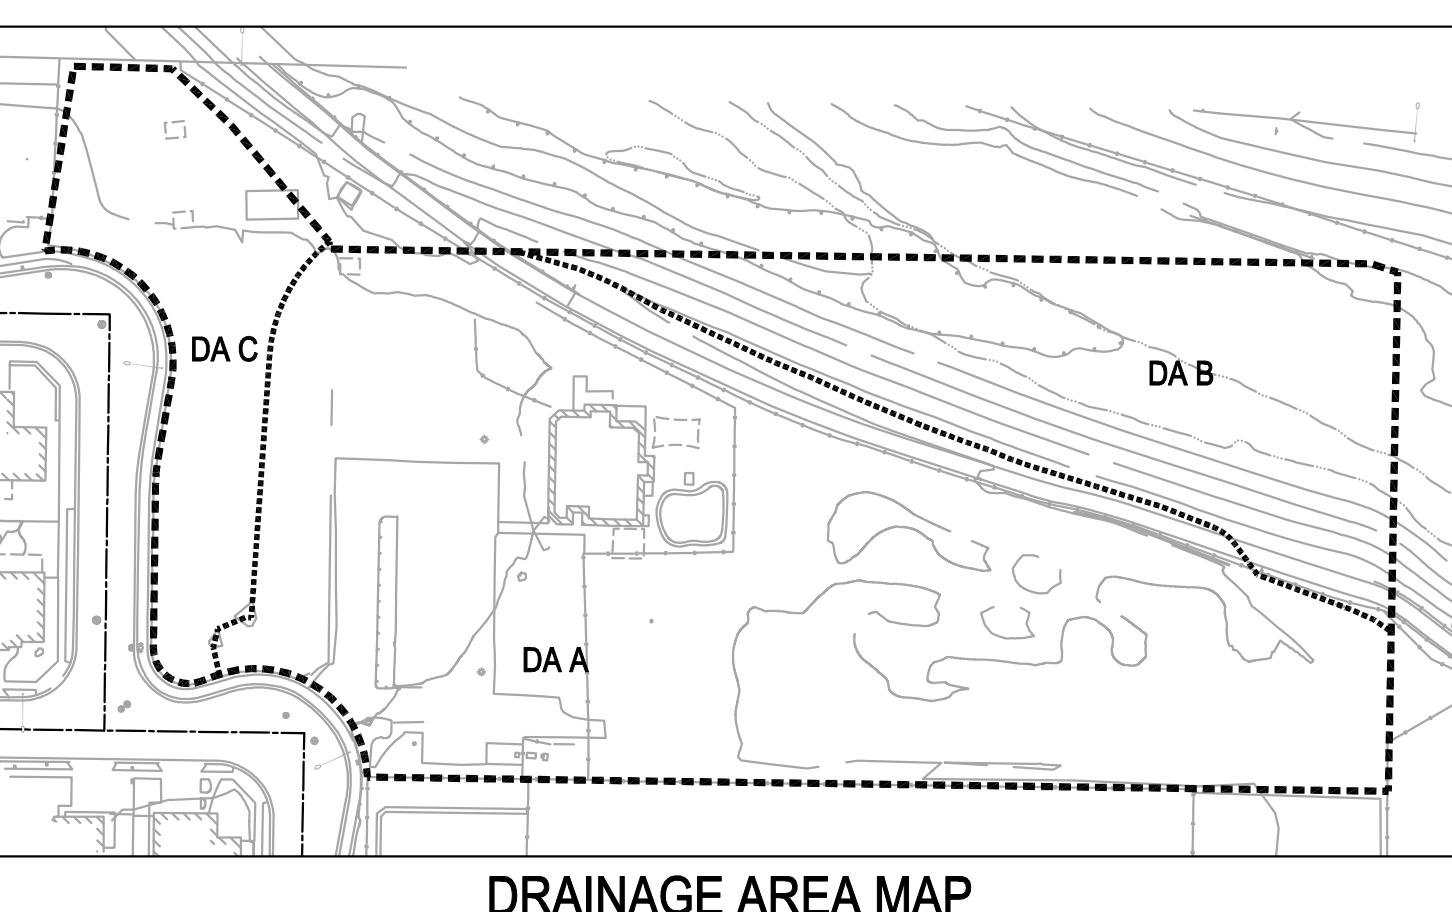

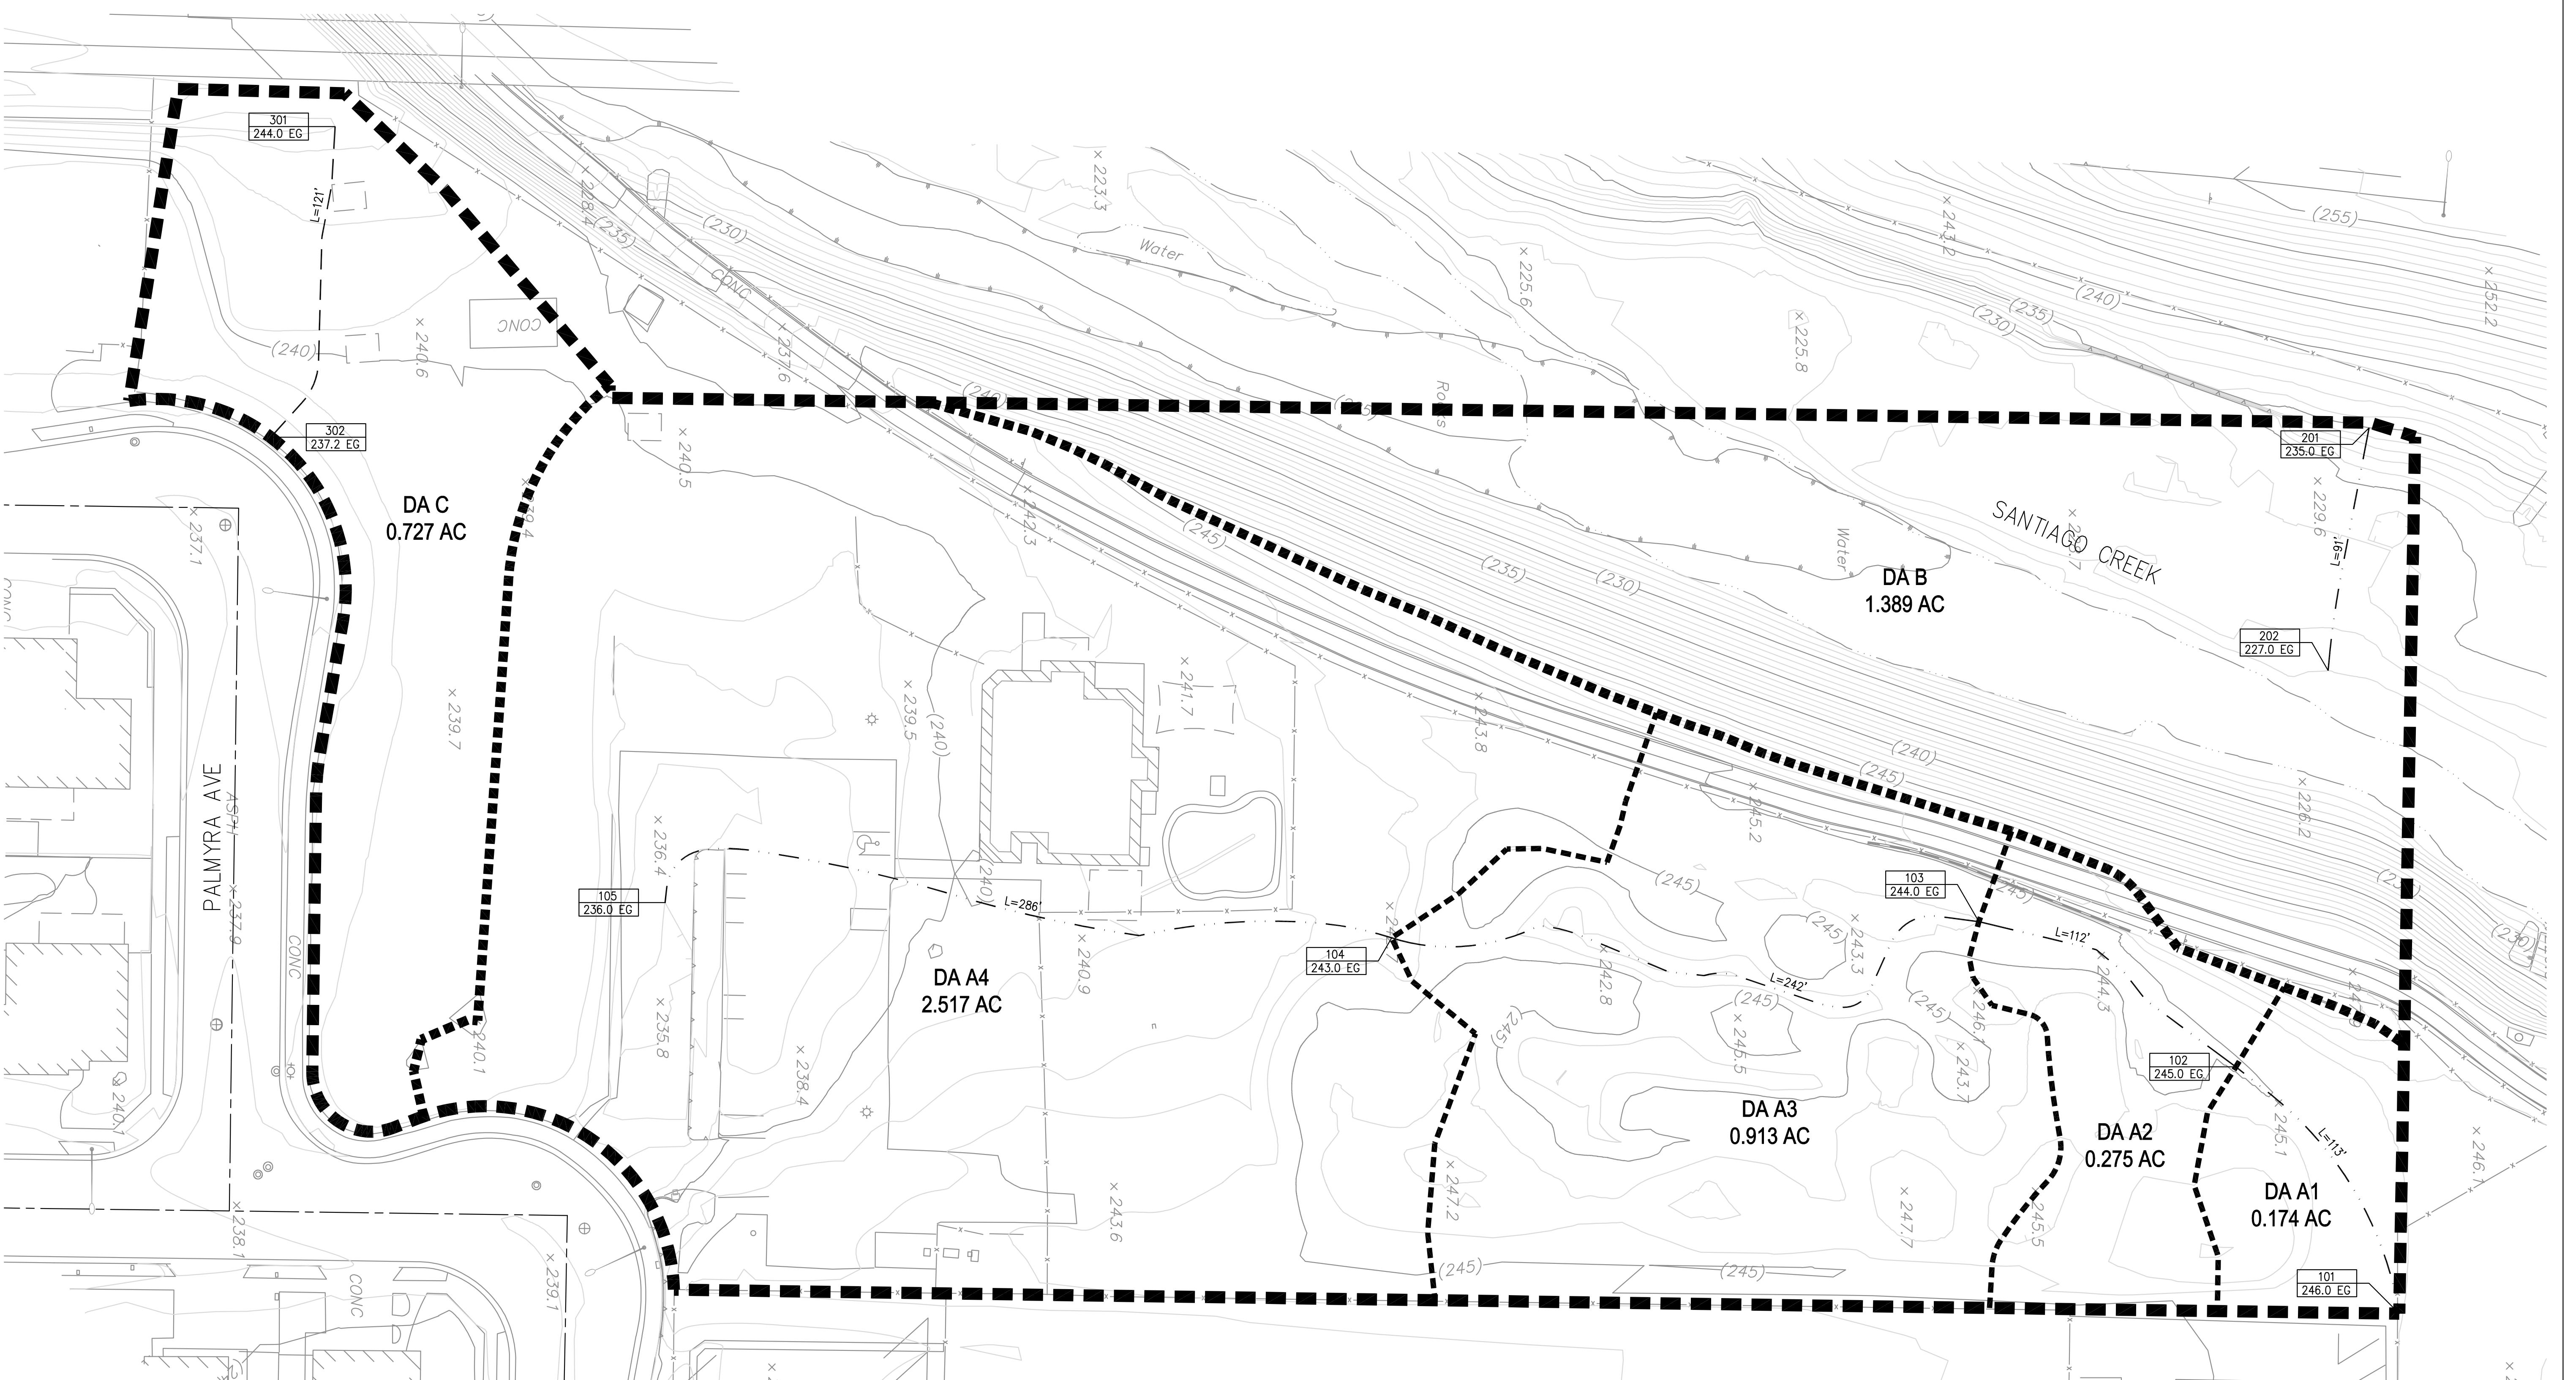

Storage Indication method used.

## **APPENDIX H**

Existing Hydrology Map

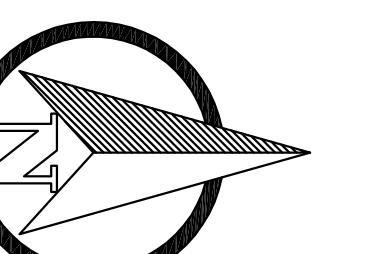

Proposed Hydrology Map

Q@NODE				
NODE No.	SUBAREA Q <sub>10</sub> (CFS)	CONFLUENCE Q <sub>10</sub> (CFS)	SUBAREA Q <sub>100</sub> (CFS)	CONFLUENCE Q <sub>100</sub> (CFS)
102	0.39		0.63
