1 SUMMARY OF FINDINGS

This report presents the results of the traffic analysis (TA) for the proposed Murrieta Residential (“Project”), which is located at the southeast corner of Whitewood Road and Clinton Keith Road in the City of Murrieta. The Project’s location in relation to the surrounding area is shown on Exhibit 1-1.

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This TA has been prepared in accordance with the City of Murrieta’s Traffic Impact Analysis Preparation Guidelines (May2020). (1) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

1.1 SUMMARY OF FINDINGS

The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to install a stop control on the westbound approach (Project Driveway) and construct a westbound right turn lane at Whitewood Road and Murrieta High School Driveway/Driveway 1. Driveway to be restricted to right-in/right-out access only. Project to restripe the school driveway on Whitewood Road to provide an eastbound right turn only (restricted by the installation of a raised median along Whitewood Road). Project to construct a northbound shared through-right turn lane.
- Project to install a stop control on the northbound approach (Project Driveway) and construct a northbound right turn lane and eastbound right turn lane at Arendt Lane/Driveway 2 and Clinton Keith Road. Driveway to be restricted to right-in/right-out access only.
 - Project Alternative: Project to install a traffic signal and construct a northbound shared left-through-right turn lane, eastbound right turn lane at Arendt Lane/Driveway 2 and Clinton Keith Road, and westbound left turn lane. Driveway will allow for full access (no left turn restrictions).
- Project to construct a 2nd northbound left turn lane and 2nd southbound left turn lane at Whitewood Road & Clinton Keith Road.
- Project to construct Whitewood Road at its ultimate half-width as a Major Highway (100-foot right-of-way) from Clinton Keith Road to the southern Project boundary consistent with the City’s standards. Project to construct a raised median along Whitewood Road along the Project’s frontage.
- Clinton Keith Road is currently constructed to its ultimate half-section width along the Project’s frontage from Whitewood Road to the eastern Project boundary. However, the Project should improve the curb and gutter, sidewalk, and landscaping as needed to accommodate site access.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations* of this report.

EXHIBIT 1-1: LOCATION MAP

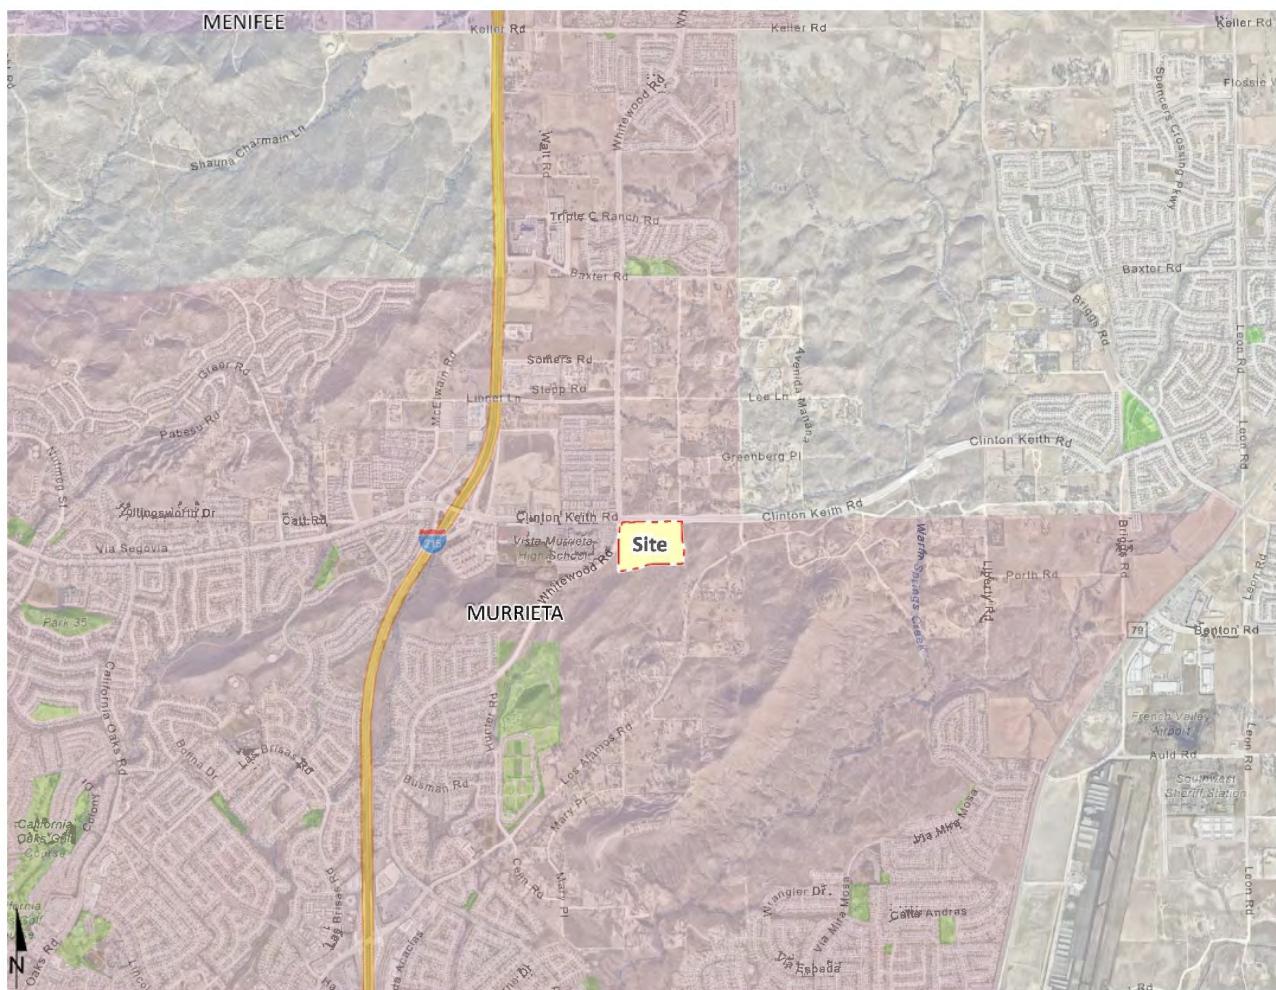

TABLE 1-1: SUMMARY OF IMPROVEMENTS AND ROUGH ORDER OF MAGNITUDE COSTS

#	Intersection Location	Jurisdiction	Analysis Scenarios Opening Year Cumulative (2023) With Project	Improvements included in Fee Program? ¹	Project Responsibility ²	Fair Share % ³
2	California Oaks Rd. & Clinton Keith Rd.	Murrieta	Modify the traffic signal to implement overlap phasing for the NB right turn lane	No	Fair Share	8.9%
6	Whitewood Rd. & Clinton Keith Rd.	Murrieta	Add 2nd NB left turn lane (restripe to increase pocket storage to 400-feet) and NB right turn lane Restripe to accommodate 2nd SB left turn lane, SB through, and SB shared through-right turn lane Modify the median on Clinton Keith Road to accommodate a 340-feet of EB left turn storage Modify the median on Clinton Keith Road to accommodate a 240-feet of WB left turn storage	No	Fair Share	13.5%
6	Whitewood Rd. & Clinton Keith Rd. (Alternative)	Murrieta	Add 2nd NB left turn lane (restripe to increase pocket storage to 340-feet) and NB right turn lane Restripe to accommodate 2nd SB left turn lane, SB through, and SB shared through-right turn lane Modify the median on Clinton Keith Road to accommodate a 340-feet of EB left turn storage Modify the median on Clinton Keith Road to accommodate a 175-feet of WB left turn storage	No	Fair Share	12.7%
#	Roadway Segment	Jurisdiction	Analysis Scenarios Opening Year Cumulative (2023) With Project	Improvements included in Fee Program? ¹	Project Responsibility ²	Fair Share % ³
2	Clinton Keith Road between Warm Springs & Whitewood	Murrieta	Restripe to accommodate a 3rd EB through lane thereby completing the 6-lane ultimate cross-section	Yes	TUMF	16.5%

¹ Improvements included in the City of Murrieta DIF program or WRCOG TUMF program.

² Identifies the Project's responsibility to construct an improvement or contribute fair share or fee payment towards the implementation of the improvements shown.

³ Program improvements constructed may be eligible for fee credit, at discretion of City. See Table 6-1 for Fair Share Calculations.

The Project Applicant's responsibility for the Project's contributions towards off-site intersection deficiencies is fulfilled through construction, payment of fair share, and/or participation in the pre-existing fee programs that would be assigned to construction of the identified recommended improvements (see Table 1-1). The Project Applicant would be required to pay requisite fair share contributions and fee payments consistent with the City's requirements (see Section 8 *Local and Regional Funding Mechanisms*).

1.2 PROJECT OVERVIEW

Exhibit 1-2 illustrates the preliminary Project site plan. The Project is proposed to consist of 153 multifamily (low-rise) housing units (condo) and 330 multifamily (mid-rise) housing units (apartments). It is anticipated that the Project would be developed in a single phase with an anticipated Opening Year of 2023. For the purpose of this analysis, the following driveways will be assumed to provide access to the Project site:

- Driveway 1 on Whitewood Road – Right-in/Right-out Only Access
- Driveway 2 on Clinton Keith Road – Right-in/Right-out Only Access

Regional access to the Project site will be provided by the I-215 Freeway via Clinton Keith Road.

EXHIBIT 1-2: PRELIMINARY SITE PLAN

In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017) for the following land use codes (2):

- Multifamily Housing (Low-Rise) (ITE Land Use Code 220)
- Multifamily Housing (Mid-Rise) (ITE Land Use Code 221)

The proposed Project is anticipated to generate 2,916 two-way trips per day, with 189 AM peak hour trips and 232 PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

1.3 ANALYSIS SCENARIOS

For the purposes of this TA, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2021)
- Opening Year Cumulative (2023) Without Project Conditions
- Opening Year Cumulative (2023) With Project Conditions

1.3.1 EXISTING (2021) CONDITIONS

Information for Existing (2021) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. Due to the currently ongoing COVID-19 pandemic, schools and businesses within the study area were closed or operating at less than full capacity at the time this study was prepared. As such, historic 2018 and 2019 traffic counts were utilized in conjunction with a 2% per year growth rate (compounded annually) to reflect 2021 conditions.

1.3.2 OPENING YEAR CUMULATIVE (2023) CONDITIONS

The Opening Year Cumulative (OYC) conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth from Existing (2021) conditions of 4.04% is included for Opening Year Cumulative (2023) traffic. This list of cumulative development projects was compiled from information provided by the City of Murrieta and is consistent with other recent studies in the study area.

1.4 STUDY AREA

To ensure that this TA satisfies the City of Murrieta's requirements, Urban Crossroads, Inc. prepared a TA scoping package for review by City staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

1.4.1 INTERSECTIONS

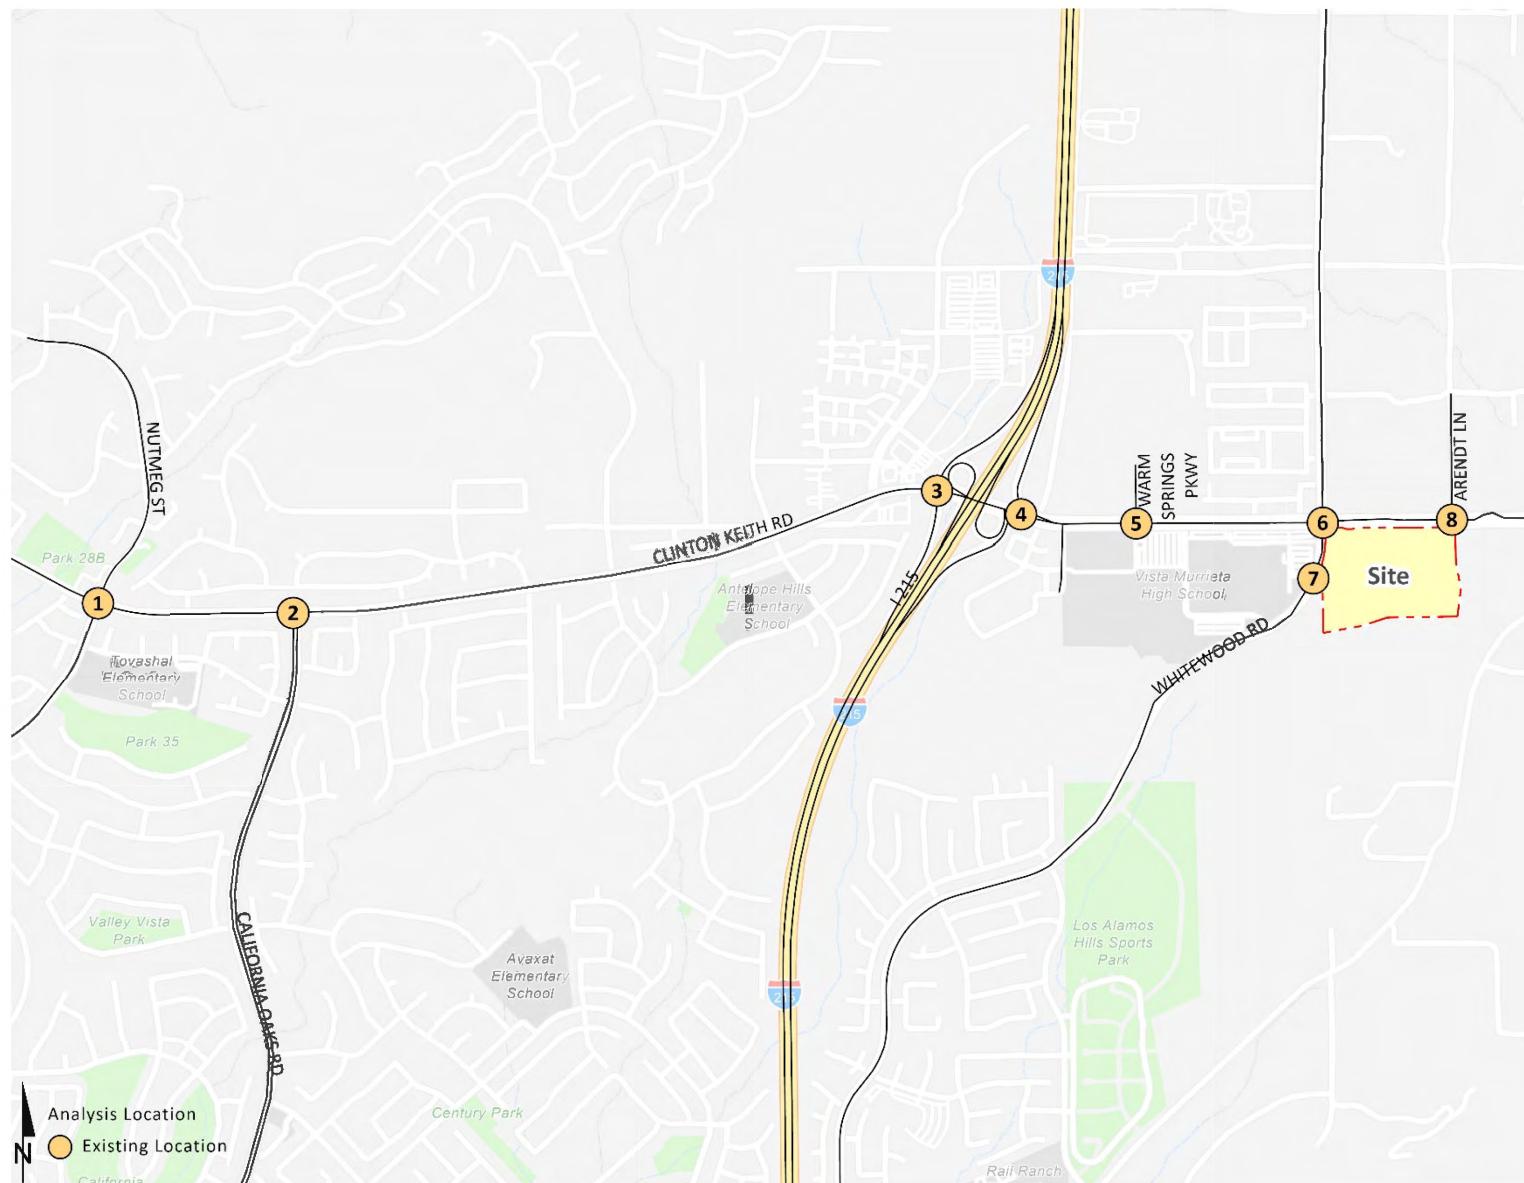

The following 8 study area intersections shown on Exhibit 1-2 and listed on Table 1-1 were selected for this TA based on consultation with City of Murrieta staff. The "50 peak hour trip" criterion generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area).

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection	Jurisdiction	CMP?
1	Nutmeg St. & Clinton Keith Rd.	Murrieta	No
2	California Oaks Rd. & Clinton Keith Rd.	Murrieta	No
3	I-215 SB Ramps & Clinton Keith Rd.	Murrieta, Caltrans	No
4	I-215 NB Ramps & Clinton Keith Rd.	Murrieta, Caltrans	No
5	Whitewood Rd. & Clinton Keith Rd.	Murrieta	No
6	Whitewood Rd. & Murrieta High School Driveway/Driveway 1	Murrieta	No
7	Warm Springs Pkwy. & Clinton Keith Rd.	Murrieta	No
8	Whitewood Rd. & Arendt Ln./Driveway 2	Murrieta	No

The intent of the Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. There are no study area intersections identified as a County of Riverside CMP location.

EXHIBIT 1-3: STUDY AREA

1.4.2 ROADWAY SEGMENTS

The following 3 study area roadway segments listed in Table 1-2 were selected for this TA at the request of City of Murrieta staff during the scoping process.

TABLE 1-2: ROADWAY SEGMENT ANALYSIS LOCATIONS

ID	Roadway	Segment Limits
1	Whitewood Rd.	Clinton Keith Rd. to Driveway 1
2	Clinton Keith Rd.	Warm Springs Pkwy. to Whitewood Rd.
3	Clinton Keith Rd.	Whitewood Rd. to Arendt Ln.

1.5 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 3 *Area Conditions* and Section 5 *Opening Year Cumulative (2023) Traffic Conditions* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Table 1-3.

TABLE 1-3: SUMMARY OF INTERSECTION LEVEL OF SERVICE BY ANALYSIS SCENARIO

#	Intersection	Existing (2021) AM	Existing (2021) PM	OYC (2023) NP AM	OYC (2023) NP PM	OYC (2023) WP AM	OYC (2023) WP PM

● = A - D ● = E ● = F

1.5.1 EXISTING (2021) CONDITIONS

Intersections

The study area intersections currently operate at an acceptable LOS under Existing (2021) traffic conditions.

Roadway Segments

The study area roadway segments currently operate at an acceptable LOS under Existing (2021) traffic conditions based on the City's planning level daily roadway capacity thresholds and minimum LOS criteria.

Queues

The following movements currently experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Existing (2021) traffic conditions:

- Whitewood Road & Clinton Keith Road (#6) EBL – PM peak hour only
- Whitewood Road & Clinton Keith Road (#6) SBL – AM and PM peak hours

1.5.2 OPENING YEAR CUMULATIVE (2023) CONDITIONS

Intersections

The following study area intersections are anticipated to operate at an unacceptable LOS during one or more peak hours under Opening Year Cumulative (2023) Without Project traffic conditions:

- California Oaks Road & Clinton Keith Road (#2) – LOS E AM peak hour; LOS F PM peak hour
- Whitewood Road & Clinton Keith Road (#6) – LOS F AM and PM peak hours

There are no additional study area intersections anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2023) With Project traffic conditions.

Roadway Segments

The study area roadway segments are anticipated to operate at an acceptable LOS under Opening Year Cumulative (2023) Without Project and With Project traffic conditions based on the City's planning level daily roadway capacity thresholds and minimum LOS criteria.

Queues

The following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for OYC (2023) NP traffic conditions:

- Whitewood Road & Clinton Keith Road (#6) EBL – AM and PM peak hours
- Whitewood Road & Clinton Keith Road (#6) NBL – AM and PM peak hours
- Whitewood Road & Clinton Keith Road (#6) SBL – AM and PM peak hours

1.6 RECOMMENDATIONS

1.6.1 RIGHT TURN LANE / DECELERATION LANE ASSESSMENT

Per the City's traffic study guidelines, right-turn/deceleration lanes shall be installed at any intersection or driveway where the following conditions exist:

- Per Municipal Code Section 16.10.030.B.3.b, developments with more than 200 parking stalls, that are located on an Arterial or larger street shall provide deceleration lanes adjacent to their major entry per City standards.

Based on these guidelines, the Project shall install an eastbound right turn pocket at Driveway 2 with a minimum of 100-feet of storage. The storage length has been determined based on a peak

hour queuing analysis of the Project driveways. Since Whitewood Road is classified as a Major roadway it is exempt from this requirement and a right turn pocket has not been recommended.

1.6.2 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS

The following recommendations are based on the improvements needed to accommodate site access. The site adjacent recommendations are shown on Exhibit 1-4. The site adjacent queuing analysis results for the site adjacent study area intersections are provided in Appendix 1.3.

Recommendation 1 – Whitewood Road & Clinton Keith Road (#6) – The following improvements are necessary to accommodate site access:

- Project to construct a 2nd northbound left turn lane with a minimum of 400-feet of storage.
- Project to construct a 2nd southbound left turn lane with a minimum of 230-feet of storage.

Recommendation 2 – Whitewood Road & Murrieta High School Driveway/Driveway 1 (#7) – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the westbound approach (Project Driveway) and construct a westbound right turn lane. Driveway to be restricted to right-in/right-out access only.
- Project to construct a northbound shared through-right turn lane.
- Project to construct a raised median along Whitewood Road along the Project's frontage.
- Project to restripe the eastbound approach to provide a right turn lane. The school driveway to be restricted to right-in/right-out access only (restricted by the installation of a raised median along Whitewood Road). Project to coordinate with the Murrieta Valley Unified School District regarding the restricted access. It should be noted, the northbound left turn lane will remain.

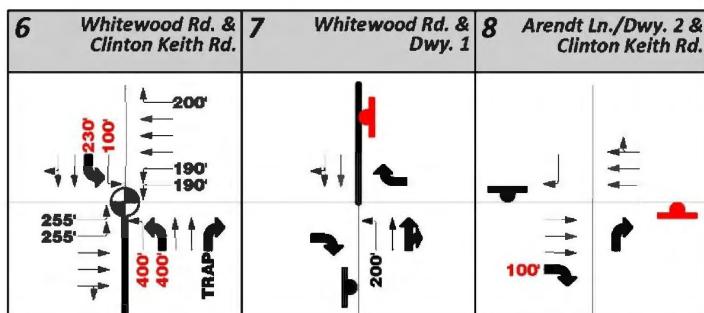

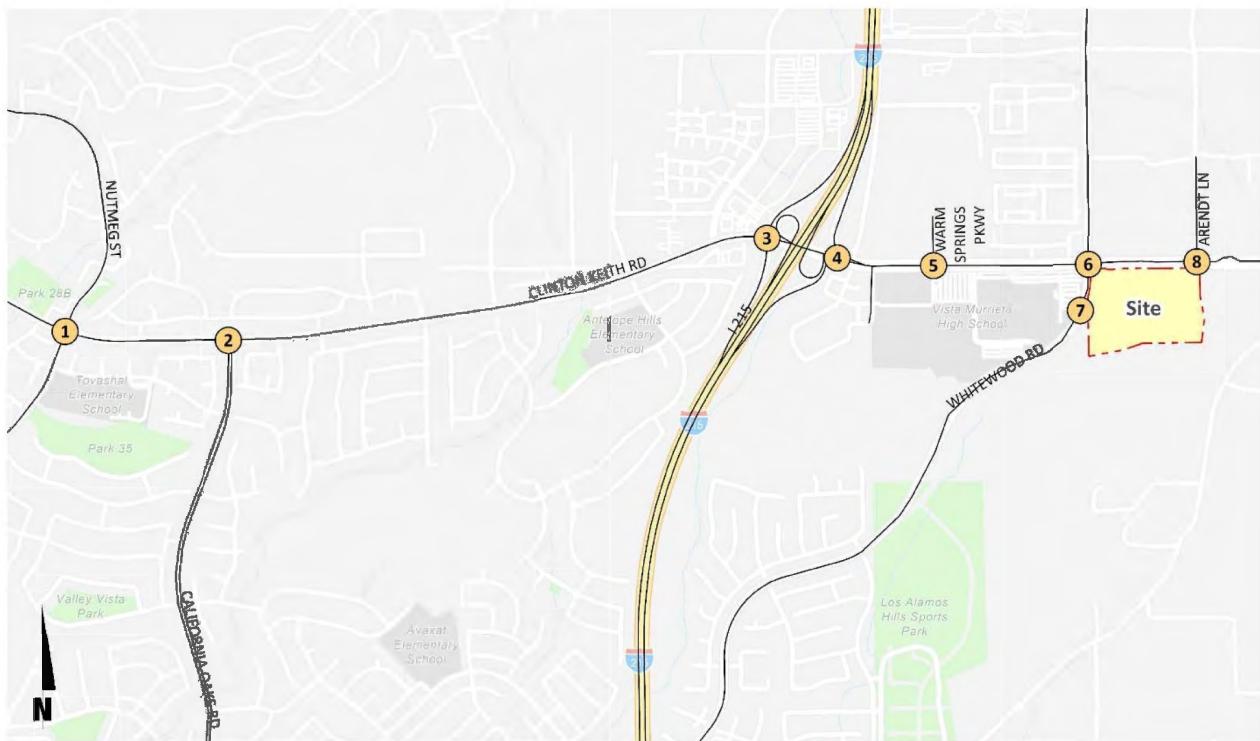

Recommendation 3 – Clinton Keith Road & Arendt Lane/Driveway 2 (#8) – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach (Project Driveway) and construct a northbound right turn lane. Driveway to be restricted to right-in/right-out access only.
- Project to construct an eastbound right turn lane with a minimum of 100-feet of storage.

Recommendation 3 (Alternative) – Clinton Keith Road & Arendt Lane/Driveway 2 (#8) – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal and construct a northbound shared left-through-right turn lane. Driveway will allow for full access (no left turn restrictions).
- Project to construct an eastbound right turn lane with a minimum of 150-feet of storage.
- Project to construct a westbound left turn lane with a minimum of 150-feet of storage.

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS

- = Traffic Signal
- = New Traffic Signal
- = Stop Sign
- = Stop Sign Improvement
- ← = Existing Lane
- ↔ = Lane Improvement

TABLE 1-4: PEAK HOUR QUEUING SUMMARY FOR OPENING YEAR CUMULATIVE (2023) WITH PROJECT CONDITIONS

Intersection	Movement	Available Stacking Distance (Feet) ²	2023 With Project			
			95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM
Whitewood Rd. & Driveway 1	WBR	<u>100</u>	56	52	Yes	Yes
Arendt Ln. / Driveway 2 & Clinton Keith Rd.	EBR	<u>100</u>	0	0	Yes	Yes
	NBR	<u>120</u>	55	42	Yes	Yes
Alternative:						
Whitewood Rd. & Driveway 1	WBR	<u>100</u>	48	40	Yes	Yes
Arendt Ln. / Driveway 2 & Clinton Keith Rd.	EBR	<u>150</u>	111	154	Yes	Yes
	WBL	<u>100</u>	33	83	Yes	Yes
	NBL/T/R	<u>120</u>	85	59	Yes	Yes

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance

² 100 =Improvement

Recommendation 4 – Whitewood Road is a north-south oriented roadway located on the Project’s western boundary. Project to construct Whitewood Road at its ultimate half-width as a Major Highway (100-foot right-of-way) from Clinton Keith Road to the southern Project boundary consistent with the City’s standards. Project to construct a raised median along Whitewood Road along the Project’s frontage.

Clinton Keith Road is currently constructed to its ultimate half-section width along the Project’s frontage from Whitewood Road to the eastern Project boundary. However, the Project should improve the curb and gutter, sidewalk, and landscaping as needed to accommodate site access.

Appendix 1.2 includes peak hour queuing analysis at the Project driveways for both the right-in/right-out and full access alternative at Driveway 2. The queuing analysis results are summarized on Table 1-4.

1.6.3 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies are summarized in Table 1-5. For those improvements listed in Table 1-5 and not constructed as part of the Project, the Project Applicant’s responsibility for the Project’s contributions towards deficient intersections is fulfilled through payment of fees or fair share that would be assigned to construction of the identified recommended improvements. As noted, the Project should also contribute its fair share toward improvements such as restriping, median modifications, and restriping for the roadway segment improvement (see Table 1-5 for details).

TABLE 1-5: SUMMARY OF IMPROVEMENTS AND ROUGH ORDER OF MAGNITUDE COSTS

#	Intersection Location	Jurisdiction	Analysis Scenarios Opening Year Cumulative (2023) With Project	Improvements included in Fee Program? ¹	Project Responsibility ²	Fair Share % ³
2	California Oaks Rd. & Clinton Keith Rd.	Murrieta	Modify the traffic signal to implement overlap phasing for the NB right turn lane	No	Construct	--
6	Whitewood Rd. & Clinton Keith Rd.	Murrieta	Add 2nd NB left turn lane (restripe to increase pocket storage to 400-feet) and NB right turn lane Restripe to accommodate 2nd SB left turn lane, SB through, and SB shared through-right turn lane Modify the median on Clinton Keith Road to accommodate a 365-feet of EB left turn storage Restripe the WB left turn turn pocket to accommodate a 200-feet of storage	No	Construct	--
6	Whitewood Rd. & Clinton Keith Rd. (Alternative)	Murrieta	Add 2nd NB left turn lane (restripe to increase pocket storage to 300-feet) and NB right turn lane Restripe to accommodate 2nd SB left turn lane, SB through, and SB shared through-right turn lane Modify the median on Clinton Keith Road to accommodate a 340-feet of EB left turn storage	No	Construct	--
#	Roadway Segment	Jurisdiction	Analysis Scenarios Opening Year Cumulative (2023) With Project	Improvements included in Fee Program? ¹	Project Responsibility ²	Fair Share % ³
2	Clinton Keith Road between Warm Springs & Whitewood	Murrieta	Restripe to accommodate a 3rd EB through lane thereby completing the 6-lane ultimate cross-section	No	Fair Share	16.5%

¹ Improvements included in the City of Murrieta DIF program or WRCOG TUMF program.² Identifies the Project's responsibility to construct an improvement or contribute fair share or fee payment towards the implementation of the improvements shown.³ Program improvements constructed may be eligible for fee credit, at discretion of City. See Table 6-1 for Fair Share Calculations.

This Page Intentionally Left Blank

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Murrieta's Traffic Study Guidelines.

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (3) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

The City of Murrieta requires signalized intersection operations analysis based on the methodology described in the HCM. (3) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described on Table 2-1. Consistent with City of Murrieta traffic study guidelines, a saturation flow rate of 1900 in vehicles per hour green per lane (vphgpl) has been utilized in the traffic analysis for signalized intersections.

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6th Edition)

The traffic modeling and signal timing optimization software package Synchro (Version 11) has been utilized to analyze signalized intersections within the City of Murrieta. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (3)

California Department of Transportation (Caltrans)

The traffic modeling and signal timing optimization software package Synchro (Version 11) has also been utilized to analyze signalized intersections under Caltrans' jurisdiction, which include interchange to arterial ramps (i.e., I-215 Freeway ramps at Clinton Keith Road). Signal timing for the freeway arterial-to-ramp intersections has been obtained from Caltrans. It should be noted that for the purposes of this analysis, no optimization of signal timing has been performed for the LOS analysis unless noted otherwise (for improvements).

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Murrieta require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (3) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6th Edition)

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop-controlled intersections, LOS is computed for the intersection as a whole. For two-way stop-controlled intersections, the delay is reported for the worst single movement/lane (typically occurs on the side street).

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (4)

Driveway 1 on Whitewood Road and Driveway 2 on Clinton Keith Road are both proposed for restricted access (i.e., right-in/right-out access only). As such, traffic signal warrant analysis has not been performed for these unsignalized study area intersections since it is unlikely a traffic signal would be installed at these locations. Traffic signal warrant analysis has been performed for Driveway 2 on Clinton Keith Road only for the full access alternative.

2.4 ROADWAY SEGMENT CAPACITY ANALYSIS

Roadway segment operations have been evaluated using the City of Murrieta Roadway Capacity Thresholds provided in the City's Traffic Study Guidelines. (1) Per the City's Traffic Study Guidelines, roadway segments within the study area should maintain LOS C capacities along roadways. As an exception, LOS D may be allowed in the North Murrieta Business Corridor, Clinton Keith/Mitchell, Golden Triangle North (Central Murrieta), South Murrieta Business Corridor, or other Focus Areas, or other employment centers. These roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. In other words, while using average daily traffic (ADT) for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity.

Any roadway segment that operates unacceptably in the Without Project scenario where the project is anticipated to add traffic in excess of 5% of he roadway capacity (e.g., a volume-to-capacity increase of more than 0.05) should identify improvements to add capacity to the segment.

2.5 QUEUING ANALYSIS

A queuing analysis has been performed for the I-215 Freeway & Clinton Keith Road interchange and the study area intersection of Whitewood Road & Clinton Keith Road. The 95th percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the intersection and the interchange identified above. Specifically, the queuing analysis is utilized to identify any potential queuing and "spill back" onto the I-215 Freeway mainline from the off-ramps or out of the turn pockets.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95th percentile queue resulting from the Synchro progression analysis. There are two footnotes which appear on the Synchro outputs. One footnote indicates if the 95th percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95th percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95th percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The other footnote indicates whether or not the volume for the 95th percentile queue is metered by an upstream signal. If the upstream intersection is at or near capacity, the 50th percentile queue represents the maximum queue experienced.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. The 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes during the peak hour and is derived from the average (50th percentile) queue plus 1.65 standard deviations. The queue length reported is for the lane with the highest queue in the lane group. The 95th percentile queue is not necessarily ever observed it is simply based on statistical calculations.

2.6 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

2.6.1 CITY OF MURRIETA

Per the City of Murrieta General Plan, the City of Murrieta's current LOS standard for intersections is LOS D for peak hour intersection operations, and LOS E at freeway interchanges.

2.6.2 CALTRANS

Senate Bill 743 (SB 743), approved in 2013, endeavors to change the way transportation impacts will be determined according to the California Environmental Quality Act (CEQA). The Office of Planning and Research (OPR) has recommended the use of vehicle miles traveled (VMT) as the replacement for automobile delay-based LOS. Caltrans acknowledges automobile delay will no longer be considered a CEQA impact for development projects and will use VMT as the metric for determining impacts on the State Highway System (SHS). However, LOS D has been utilized as the target LOS for Caltrans facilities, consistent with other recent studies in the City of Murrieta.

2.6.3 RIVERSIDE COUNTY CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, for the purposes of this analysis, LOS D has been utilized for all study area intersections.

2.7 DEFICIENCY CRITERIA

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies. Consistent with the City's TIA Guidelines, the following criteria will be applied for the traffic analysis.

SIGNALIZED INTERSECTION OPERATING REQUIREMENTS

- Any signalized study intersection operating at an acceptable LOS D or better without project traffic in which the addition of project traffic causes the intersection to degrade to a LOS E or F shall identify improvements to improve operations to LOS D or better.
- Any signalized study intersection that is operating at LOS E or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

UNSIGNALED INTERSECTION GENERAL PLAN CONSISTENCY REQUIREMENTS

An operational improvement would be required if the study determines that either section a) or both sections b) and c) occur:

- a) The addition of project related traffic causes the intersection to degrade from an acceptable LOS D or better to LOS E or F.
OR
- b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at a LOS E or F,
AND
- c) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

If the conditions above are satisfied, improvements should be identified that achieve the following:

- LOS D or better for case a) above or to pre-project LOS and delay for case b) above.

ROADWAY SEGMENT GENERAL PLAN CONSISTENCY REQUIREMENTS

Consistent with the acceptable LOS for the City, the following roadway segment requirements should be considered, and improvements recommended if the project exceeds the noted operational goals:

- Any study roadway segment operating at a LOS C or better without project traffic in which the addition of project traffic causes the segment to degrade to an LOS E or F should identify improvements to achieve LOS C.
- As an exception, LOS “D” may be allowed in the North Murrieta Business Corridor, Clinton Keith/Mitchell, Golden Triangle North (Central Murrieta), South Murrieta Business Corridor, or other Focus Areas, or other employment centers
- Any roadway segment that operates unacceptably in the no project scenario where the project adds traffic in excess of 5% of the roadway capacity (e.g., a volume-to-capacity ratio increase of 0.05) should identify improvements to add capacity to the segment.

QUEUEING ANALYSIS REQUIREMENTS

Consistent with the City's Guidelines:

A queuing deficiency is identified in the Without Project condition if the calculated 95th percentile queue length exceeds the storage length by more than 25 feet (the average storage length for one additional vehicle) since the bay taper can typically store at least one vehicle. A significant queuing impact is determined if the Project causes the calculated 95th percentile queue length to exceed the existing or planned storage capacity at a signalized intersection by more than 25 feet. If storage lanes that are already deficient without the Project, a significant queuing impact is determined if the Project increases the calculated 95th percentile queue length by at least 25 feet. Where left-turn lanes connect to two-way left-turn lanes, although the calculated queue may exceed the length of the painted left-turn pocket, the presence of the two-way left-turn lane provides additional storage and allows the queue to avoid spilling into through lanes. Therefore,

queues exceeding the painted storage length in these situations are not highlighted as existing deficiencies because they do not contribute to operational problems.

2.8 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new future traffic, and new future traffic is project traffic plus future development traffic:

$$\text{Project Fair Share \%} = \text{Project AM/PM Traffic} / (\text{Project AM/PM Traffic} + \text{Future Development Traffic})$$

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 6 *Local and Regional Funding Mechanisms* of this TA.

This Page Intentionally Left Blank

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Murrieta General Plan Circulation Network, and a review of existing peak hour intersection operations and queuing analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Murrieta staff (Appendix 1.1), the study area includes a total of 8 existing and future intersections as shown previously on Exhibit 1-3. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 CITY OF MURRIETA GENERAL PLAN CIRCULATION ELEMENT

Exhibit 3-2 shows the City of Murrieta General Plan Circulation Element and Exhibit 3-3 illustrates the City of Murrieta General Plan roadway cross-sections.

3.3 TRUCK ROUTES

The City of Murrieta's truck routes are shown on Exhibit 3-4. There are no identified truck routs in the study area.

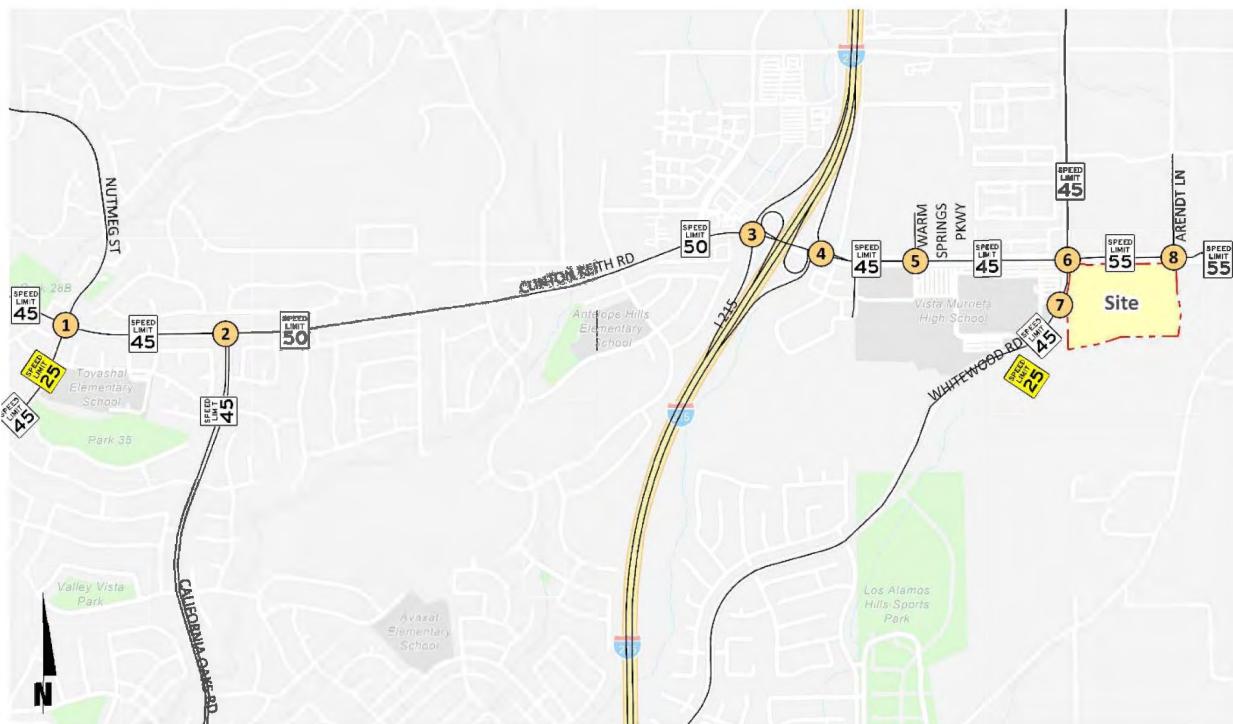

3.4 TRANSIT SERVICE

The study area is currently served by Riverside Transit Agency (RTA) with bus service along Clinton Keith Road west of the I-215 Freeway to Whitewood Road, south of Clinton Keith Road. RTA Route 61 runs along Whitewood Road to the west of the Project. The existing transit routes within the study area are shown on Exhibit 3-5. RTA Route 61 could potentially serve the Project. An existing bus stop exists along Clinton Keith Road in front of Murrieta High School. Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate.

3.5 BICYCLE & PEDESTRIAN FACILITIES

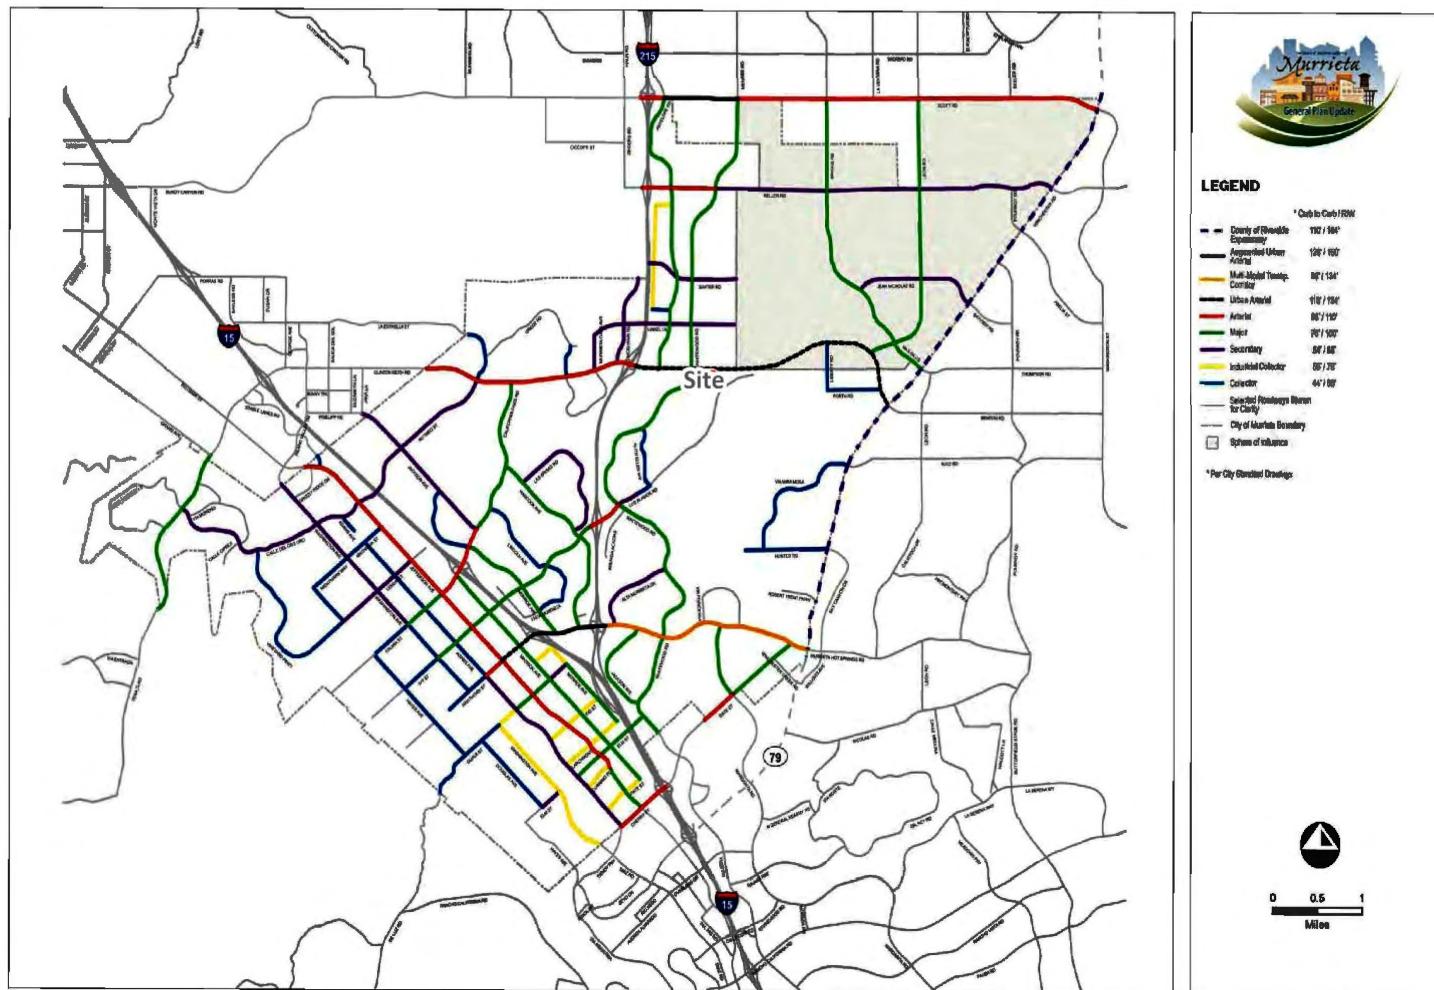

The City of Murrieta's bicycle facilities are shown on Exhibit 3-6. There are Class II (striped, on-road) bike lanes along Clinton Keith Road and Whitewood Road is proposed to be striped with Class II bike lanes in the future along the Project's frontage. Based on Exhibit 3-6, there is also a proposed multipurpose trail located along the Project's frontage on Clinton Keith Road and Whitewood Road. As shown on Exhibit 3-7, pedestrian facilities are built out around intersections along Clinton Keith Road. Field observations indicate nominal pedestrian and bicycle activity within the study area.

3.6 EXISTING (2021) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in April and May of 2021. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

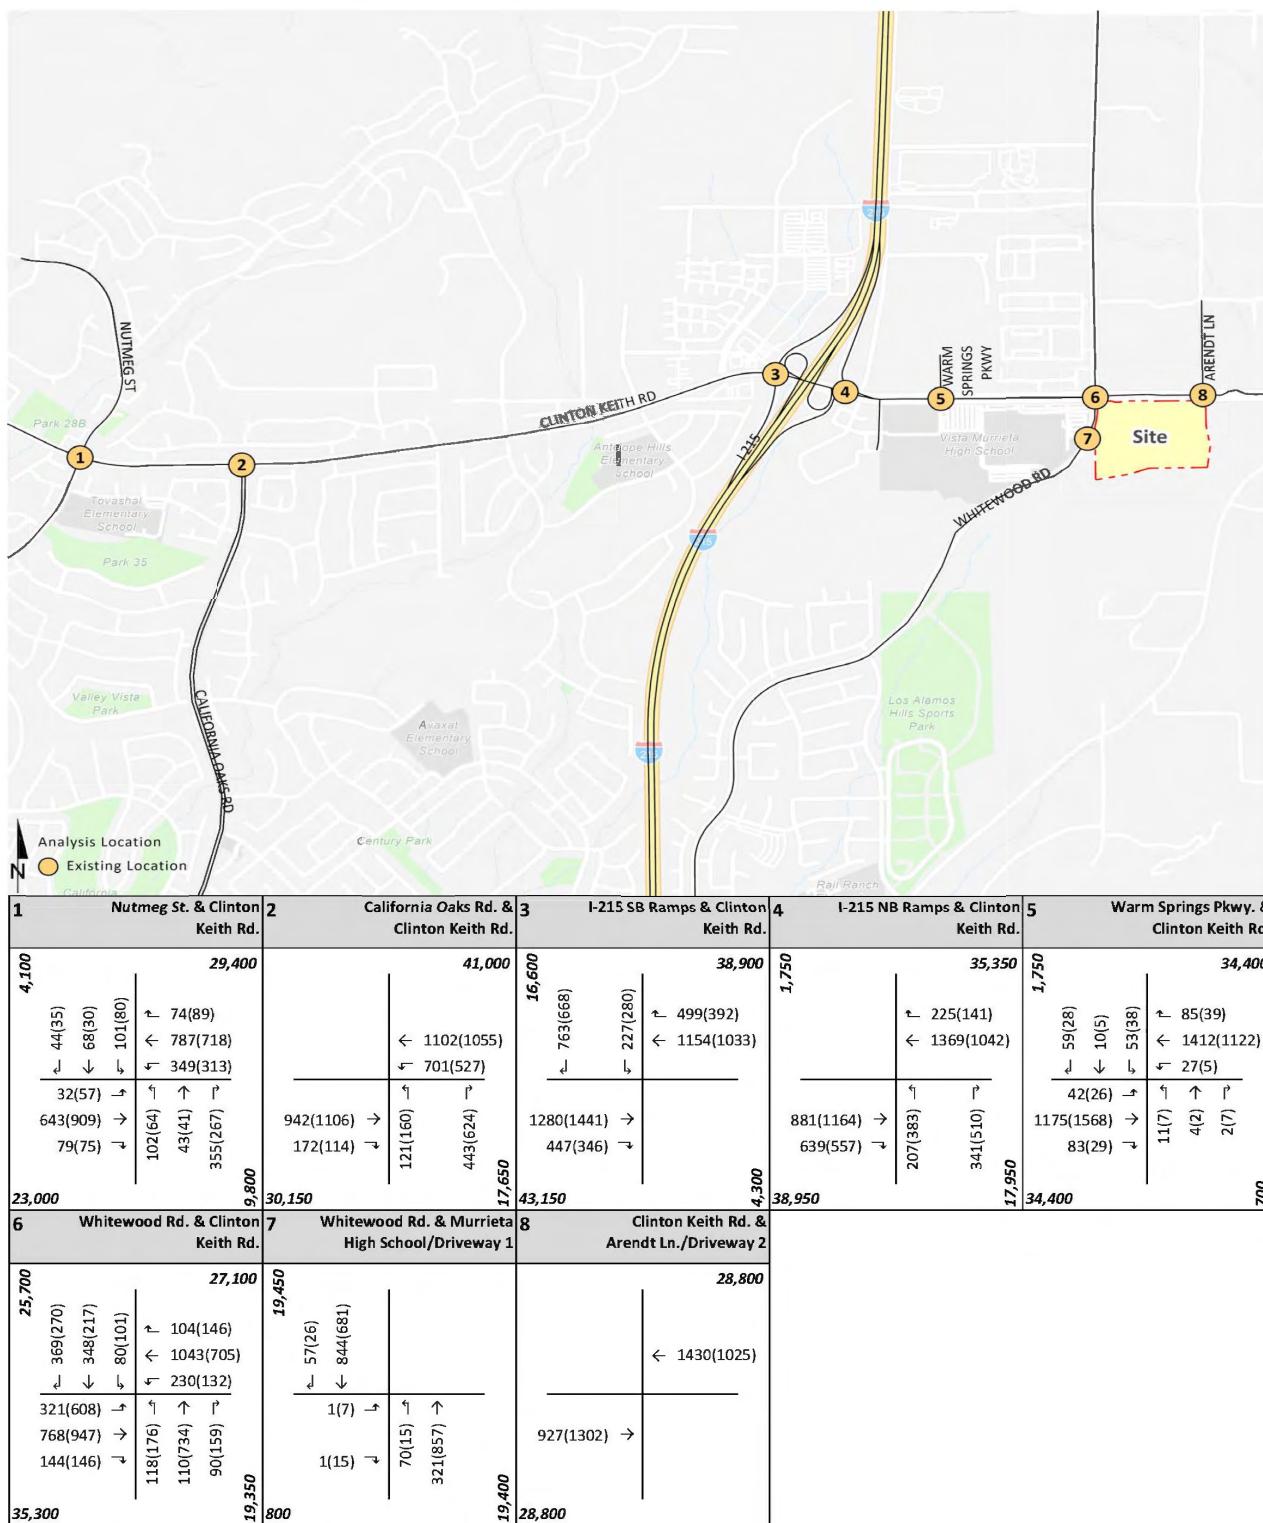

Due to the currently ongoing COVID-19 pandemic, schools and businesses within the study area were closed or operating at less than full capacity at the time this study was prepared. As such, historic 2018 and 2019 traffic counts were utilized in conjunction with a 2% per year growth rate (compounded annually) to reflect 2021 conditions. The 2018 and 2019 weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules.

Existing weekday ADT volumes are shown on Exhibit 3-8. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.37 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 8.08 percent. As such, the above equation utilizing a factor of 12.37 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 8.08 percent (i.e., $1/0.0808 = 12.37$) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes are also shown on Exhibit 3-8.

EXHIBIT 3-8: EXISTING (2021) TRAFFIC VOLUMES

##(##) AM(PM) Peak Hour Intersection Volumes

Average Daily Trips

3.7 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized on Table 3-1, which indicates that the existing study area intersections are currently operating at an acceptable LOS during the peak hours. The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

TABLE 3-1: INTERSECTION ANALYSIS FOR EXISTING (2021) CONDITIONS

#	Intersection	Traffic Control ²	Delay ¹ (secs.)		Level of Service	
			AM	PM	AM	PM
1	Nutmeg St. & Clinton Keith Rd.	TS	15.9	16.5	B	B
2	California Oaks Rd. & Clinton Keith Rd.	TS	31.6	46.4	C	D
3	I-215 SB Ramps & Clinton Keith Rd.	TS	16.3	17.0	B	B
4	I-215 NB Ramps & Clinton Keith Rd.	TS	8.9	25.7	A	C
5	Warm Springs Pkwy. & Clinton Keith Rd.	TS	3.9	2.5	A	A
6	Whitewood Rd. & Clinton Keith Rd.	TS	36.7	42.0	D	D
7	Whitewood Rd. & Murrieta High School/Driveway 1	CSS	18.7	14.7	C	B
8	Clinton Keith Rd. & Arendt Ln.	CSS	0.0	0.0	A	A

* **BOLD** = Unacceptable LOS

¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

² CSS = Cross-street Stop; TS = Traffic Signal

3.8 ROADWAY SEGMENT CAPACITY ANALYSIS

The City of Murrieta Traffic Study Guidelines provide roadway volume capacity values. These roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2021) conditions roadway segment capacity analysis based on the City of Murrieta Roadway Capacity Thresholds. As shown in Table 3-2, all study area roadway segments currently operate at an acceptable LOS based on the City's planning level daily roadway capacity thresholds and minimum LOS criteria.

TABLE 3-2: ROADWAY SEGMENT ANALYSIS FOR EXISTING (2021) CONDITIONS

#	Roadway	Segment Limits	GP Classification	Roadway Section	LOS E Capacity ^{1,4}	Existing 2021	V/C ²	LOS ³
1	Whitewood Rd.	Clinton Keith Rd. to Driveway 1	Major Arterial	3D	25,575	19,435	0.76	C
2	Clinton Keith Rd.	Warm Springs Pkwy. to Whitewood Rd.	Urban Arterial	5D	44,917	35,285	0.79	C
3		Whitewood Rd. to Arendt Ln.	Urban Arterial	6D	53,900	28,789	0.53	A

¹ These maximum roadway capacities have been extracted from the following source: City of Murrieta General Plan 2035 Update (Table 4.2-2)

² V/C = Volume to Capacity Ratio

³ LOS = Level of Service

⁴ There is no roadway capacity for a 5-lane divided urban arterial. As such, capacity has been estimated by using 83.3% of the capacity for a 6-lane Urban Arterial.

3.9 QUEUING ANALYSIS

Queuing analysis findings are presented on Table 3-3. It is important to note that available staking lengths are consistent with the measured distance between the intersection and the freeway mainline or the intersection turn pockets. As shown on Table 3-3, the following movements currently experience queuing issues during the weekday PM peak 95th percentile traffic flows:

- Whitewood Road & Clinton Keith Road (#5) EBL – PM peak hour only
- Whitewood Road & Clinton Keith Road (#5) SBL – PM peak hour only

Worksheets for Existing traffic conditions queuing analysis are provided in Appendix 3.4.

TABLE 3-3: PEAK HOUR QUEUING SUMMARY FOR EXISTING (2021) CONDITIONS

Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak	PM Peak	AM	PM
I-215 SB Ramps & Clinton Keith Rd.	SBL/T	960	169	234	Yes	Yes
	SBR	1,185	314	266	Yes	Yes
I-215 NB Ramps & Clinton Keith Rd.	NBL	960	258	377	Yes	Yes
	NBR	1,525	194	358	Yes	Yes
Whitewood Rd. & Clinton Keith Rd.	EBL	255	190 ²	366 ²	Yes	No
	WBL	190	142 ²	80	Yes	Yes
	WBR	195	42	48	Yes	Yes
	NBL	295	170 ²	270 ²	Yes	Yes
	SBL	100	112	151 ²	Yes	No

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. The Project is proposed to consist of the development of 153 condominiums and 330 apartments. It is anticipated that the Project would be developed in a single phase with an anticipated Opening Year of 2023. Access to the Project site will be provided to Whitewood Road and Clinton Keith Road via two proposed driveways. Regional access to the Project site will be provided by the I-215 Freeway via Clinton Keith Road.

4.1 PROJECT TRIP GENERATION

4.1.1 PROPOSED PROJECT

In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the ITE Trip Generation Manual (10th Edition, 2017) for the following land use codes (2):

- Multifamily Housing (Low-Rise) (ITE Land Use Code 220)
- Multifamily Housing (Mid-Rise) (ITE Land Use Code 221)

As shown in Table 4-1, the proposed Project is anticipated to generate 2,916 two-way trips per day, with 189 AM peak hour trips and 232 PM peak hour trips.

TABLE 4-1: PROJECT TRIP GENERATION RATES

Land Use¹	ITE LU Code	Units²	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Multifamily Housing (Low-Rise)	220	DU	0.11	0.35	0.46	0.35	0.21	0.56	7.32
Multifamily Housing (Mid-Rise)	221	DU	0.09	0.27	0.36	0.27	0.17	0.44	5.44

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

² DU = Dwelling Units

Land Use	Quantity Units¹	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total	
Multifamily Housing (Low-Rise)	153 DU	16	54	70	54	32	86	1,120
Multifamily Housing (Mid-Rise)	330 DU	31	88	119	89	57	146	1,796
Total		47	142	189	143	89	232	2,916

¹ DU = Dwelling Units

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the route where the Project traffic would distribute. Distribution patterns are based on existing and planned land uses in the area along with the planned circulation system. Exhibit 4-1 illustrates the trip distribution patterns for the Project. Note that the Project's on-site circulation has been designed in such a way that Project traffic can access different components of the Project from both Whitewood Road and Clinton Keith Road.

As an alternative, Project Driveway 2 has also been evaluated assuming full access (no left turn restrictions) to determine the improvement needs that might be required with full access. Trip distribution patterns with full access at Driveway 2 is shown on Exhibit 4-2.

4.3 MODAL SPLIT

The potential for Project trips to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes (non-truck trips only).

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-3. Project ADT and peak hour intersection volumes for the full access alternative at Driveway 2 is shown on Exhibit 4-4 (for the affected intersections only as all other locations are consistent with Exhibit 4-3).

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon background (ambient) growth at 2.0% per year, compounded annually. The total ambient growth is 4.04% for 2023 traffic. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies. The traffic generated by the proposed Project is manually added to the base volume to determine Opening Year Cumulative forecasts.

EXHIBIT 4-4: PROJECT ONLY TRAFFIC VOLUMES (ALTERNATIVE)

The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2023) Without Project
 - Adjusted Existing 2021 volumes
 - Ambient growth traffic (4.04%)
 - Cumulative Development traffic
- Opening Year Cumulative (2023) With Project
 - Adjusted Existing 2021 volumes
 - Ambient growth traffic (4.04%)
 - Cumulative Development traffic
 - Project Traffic

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Murrieta. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Exhibit 4-5 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown on Table 4-2. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative (2023) forecasts to ensure that traffic generated by the listed cumulative development projects on Table 4-2 is reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5 *Background Traffic*. Cumulative ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-6 for near-term traffic conditions. Appendix 4.1 includes the trip generation summary for the cumulative projects.

4.7 NEAR-TERM CONDITIONS

The “buildup” approach has been utilized which combines existing traffic counts with a background ambient growth factor to forecast the Opening Year Cumulative (2023) traffic conditions. An ambient growth factor of 4.04% accounts for background (area-wide) traffic increases that occur over time up to the year 2023 from the year 2021 (2 percent over a 2-year period). Project traffic is added to assess Opening Year Cumulative (2023) With Project traffic conditions. Traffic volumes generated by cumulative development projects are included to assess the Opening Year Cumulative (2023) Without Project and With Project traffic conditions. The 2023 roadway networks are similar to the existing conditions roadway network with the exception of future intersections and driveways proposed to be developed by the Project.

5 OPENING YEAR CUMULATIVE (2023) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Opening Year Cumulative traffic conditions and the resulting intersection operations and queuing analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for OYC (2023) With Project conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways). Note that Driveway 2 on Clinton Keith Road has been evaluated with right-in/right-out access and full access (alternative).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the cumulative developments' frontages).

5.2 TRAFFIC VOLUME FORECASTS

5.2.1 OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT

This scenario includes Existing traffic volumes plus an ambient growth factor of 4.04% and the addition of cumulative development traffic. The weekday ADT, weekday AM, and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) Without Project traffic conditions are shown on Exhibit 5-1.

5.2.2 OPENING YEAR CUMULATIVE (2023) WITH PROJECT

This scenario includes Existing traffic volumes plus an ambient growth factor of 4.04%, the addition of cumulative development traffic, and the addition of Project traffic. The weekday ADT, weekday AM, and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) With Project traffic conditions are shown on Exhibit 5-2. Exhibit 5-3 shows the weekday ADT, weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) With Project traffic conditions with the proposed full access at Driveway 2 on Clinton Keith Road.

EXHIBIT 5-1: OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT TRAFFIC VOLUMES

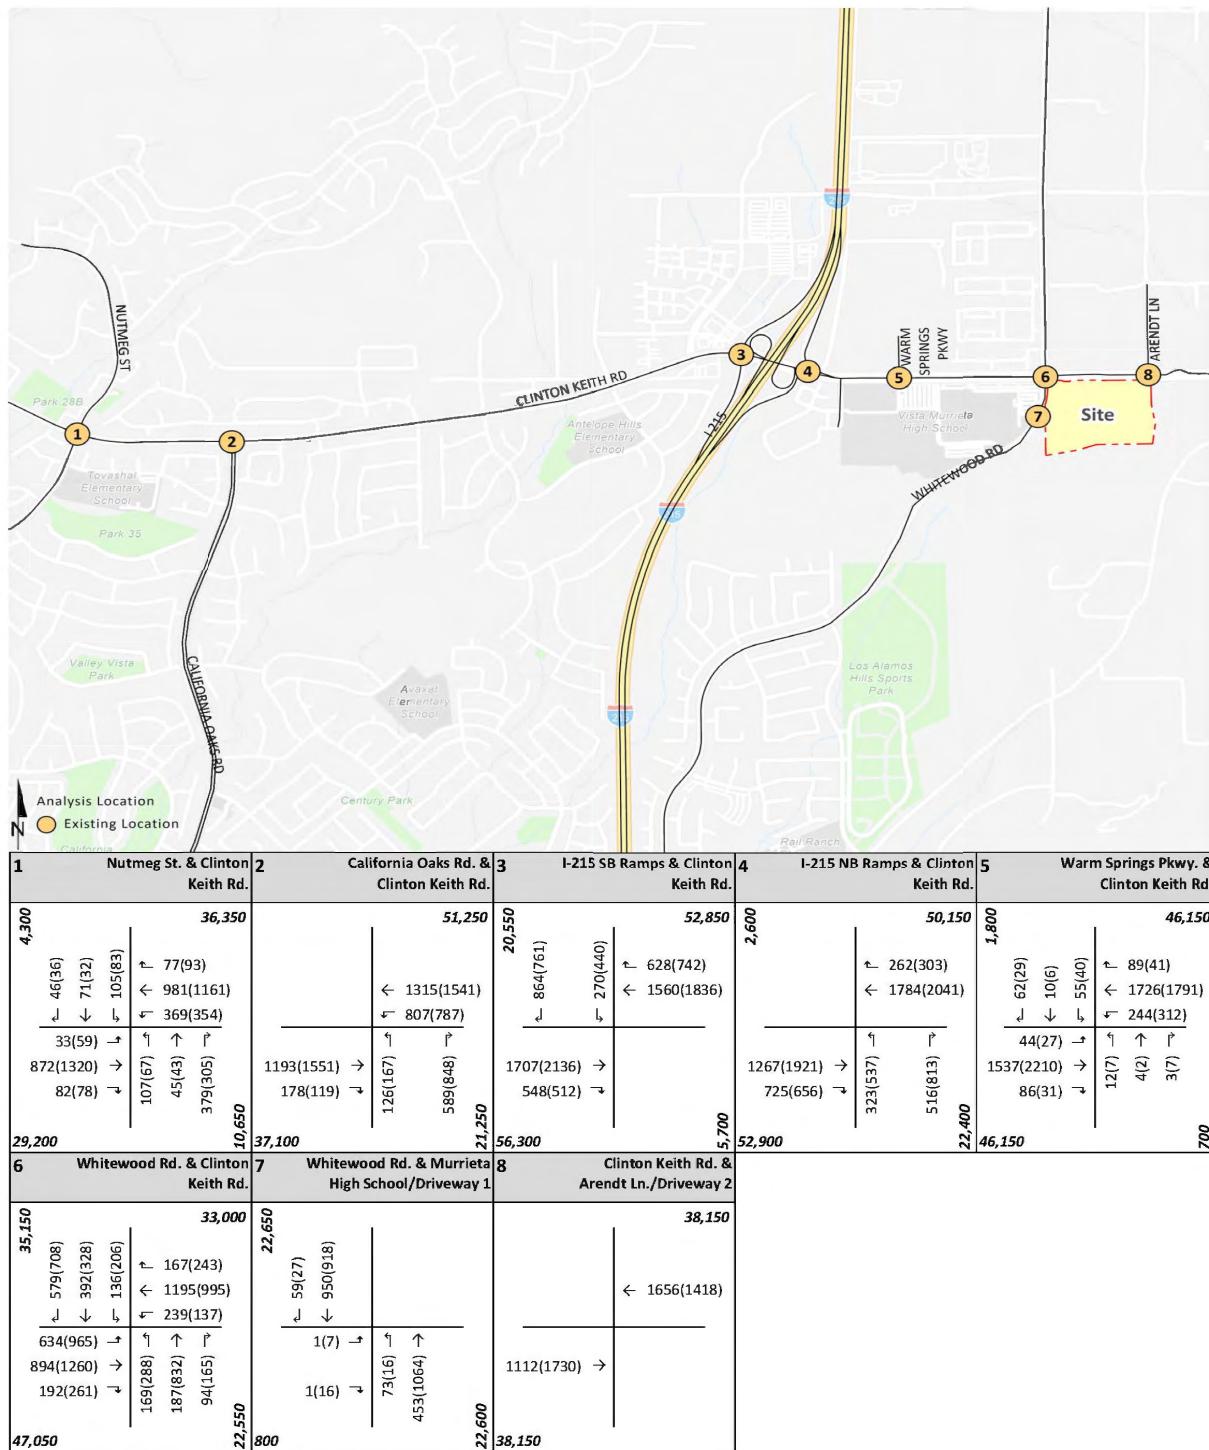

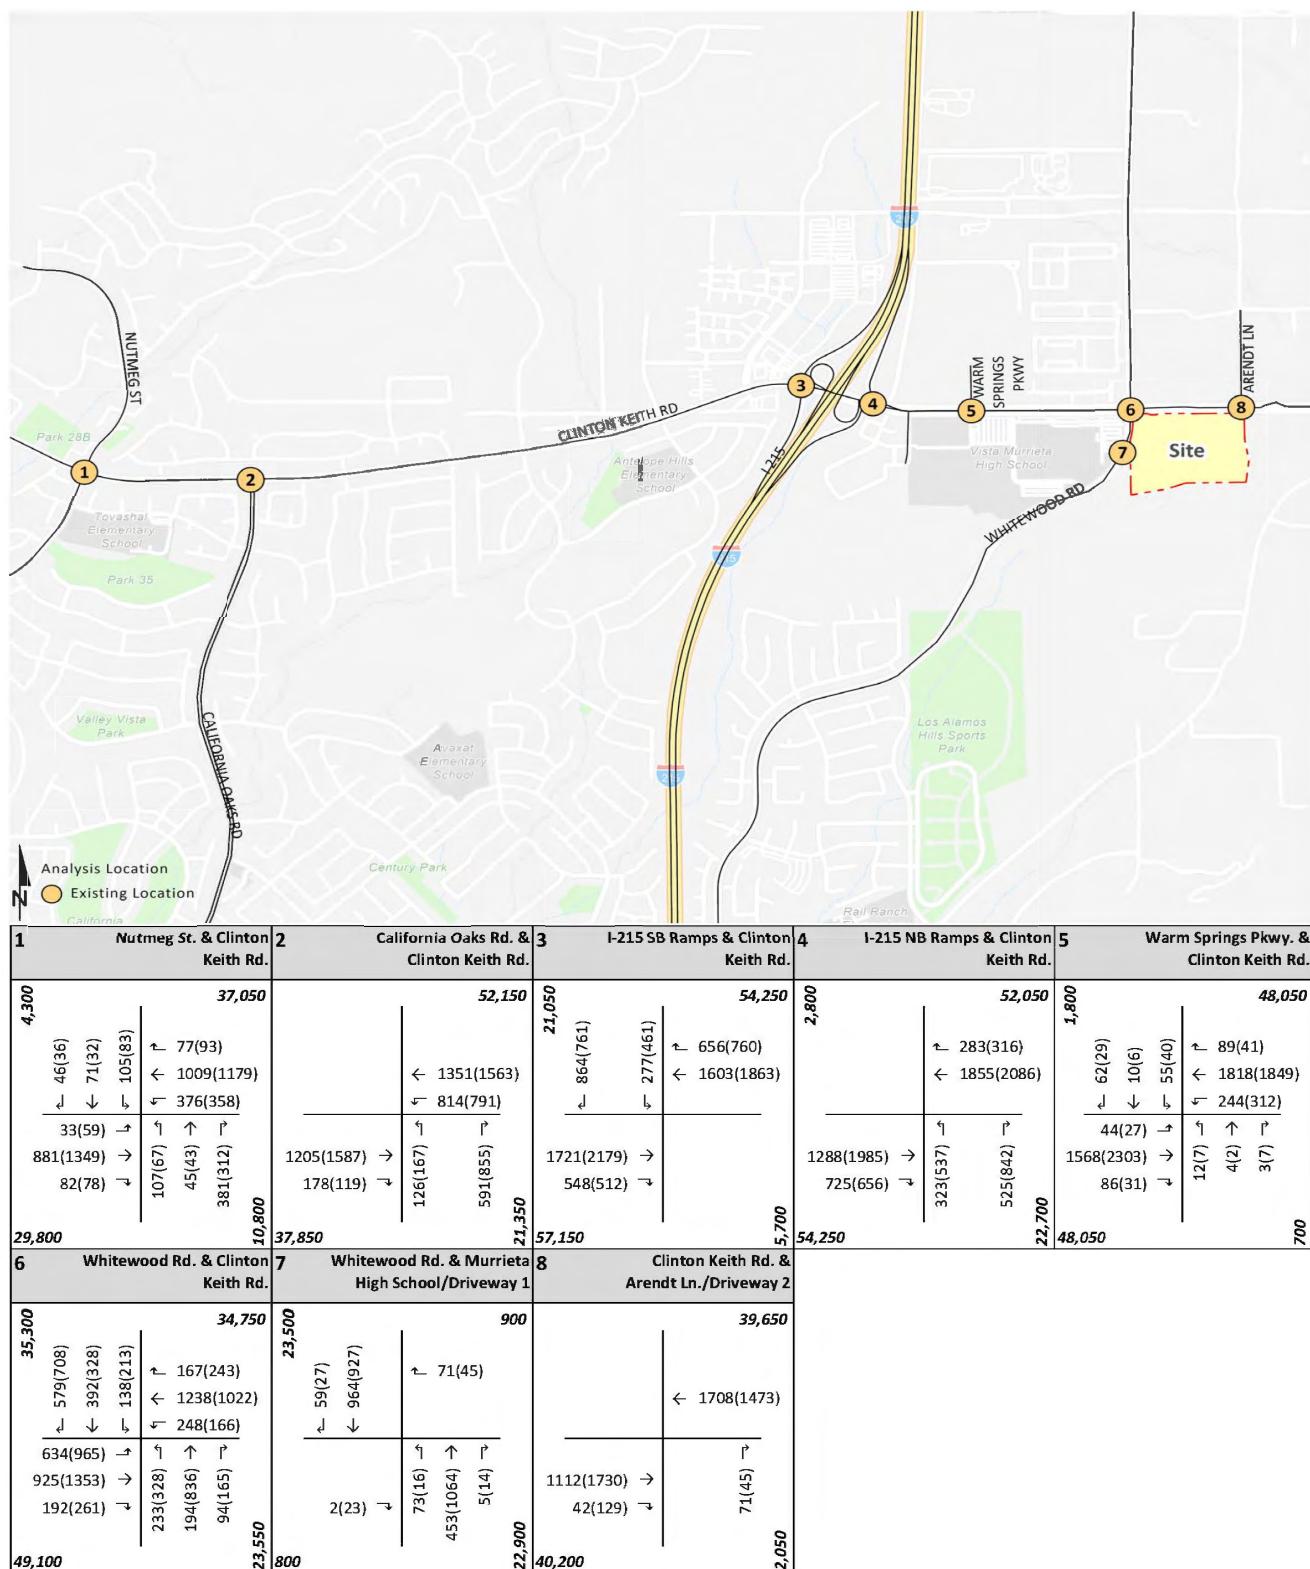

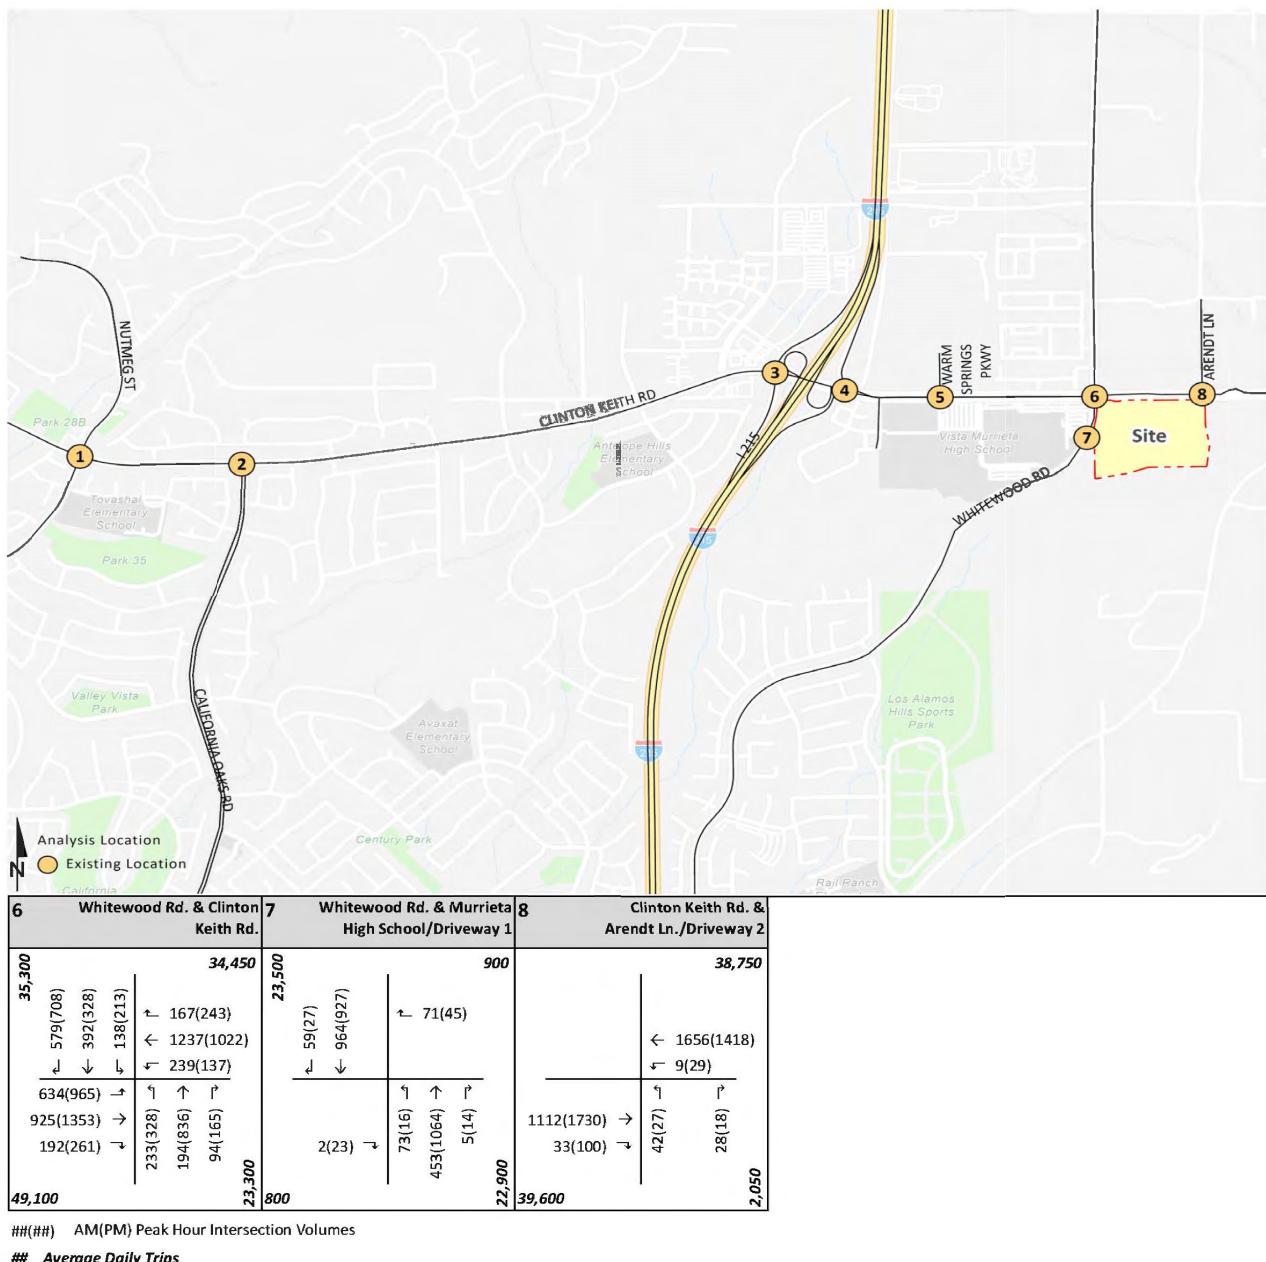

EXHIBIT 5-2: OPENING YEAR CUMULATIVE (2023) WITH PROJECT TRAFFIC VOLUMES

##(##) AM(PM) Peak Hour Intersection Volumes

Average Daily Trips

EXHIBIT 5-3: OPENING YEAR CUMULATIVE (2023) WITH PROJECT TRAFFIC VOLUMES (ALTERNATIVE)

5.3 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2023) traffic conditions with roadway and intersection geometrics consistent with Section 5.1 *Roadway Improvements*. The intersection analysis results are summarized on Table 5-1 for Opening Year Cumulative (2023) Without Project traffic conditions, which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS during one or more peak hours:

- California Oaks Road & Clinton Keith Road (#2) – LOS E AM peak hour; LOS F PM peak hour
- Whitewood Road & Clinton Keith Road (#6) – LOS F AM and PM peak hours

With the addition of Project traffic, there are no additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2023) With Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2023) Without Project and With Project traffic conditions are included in Appendices 5.1 and 5.2, respectively.

TABLE 5-1: INTERSECTION ANALYSIS FOR OPENING YEAR CUMULATIVE (2023) CONDITIONS

#	Intersection	Traffic Control ²	2023 Without Project				2023 With Project				Difference in Delay ³	
			Delay ¹ (secs.)		Level of Service		Delay ¹ (secs.)		Level of Service		AM	
			AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
1	Nutmeg St. & Clinton Keith Rd.	TS	18.8	22.4	B	C	19.0	24.0	B	C	--	--
2	California Oaks Rd. & Clinton Keith Rd.	TS	66.0	179.3	E	F	67.9	186.3	E	F	1.9	7.0

		TS	Not Applicable				7.5	9.3	A	A	--	--

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a

² CSS = Cross-street Stop; TS = Traffic Signal; **TS** = Improvement

³ Per the City of Murrieta traffic study guidelines, increase in delay is only calculated for intersections operating at a deficient LOS under pre-project conditions.

5.4 ROADWAY SEGMENT CAPACITY ANALYSIS

The City of Murrieta Traffic Study Guidelines provide roadway volume capacity values. These roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 5-2 provides a summary of the Opening Year Cumulative (2023) Without Project conditions roadway segment capacity analysis based on the City of Murrieta Roadway Capacity Thresholds. As shown on Table 5-2, Warm Springs Parkway to Whitewood Road is expected to operate at an unacceptable LOS. However, the addition of Project traffic is anticipated to increase the v/c by less than 0.05.

TABLE 5-2: ROADWAY SEGMENT ANALYSIS FOR OPENING YEAR CUMULATIVE (2023) CONDITIONS

#	Roadway	Segment Limits	GP Classification	Roadway Section ⁴	LOS E Capacity ^{1,5}	2023 Without Project	V/C ²	LOS ³	2023 With Project	V/C ²	LOS ³	Increase in V/C ⁶
1	Whitewood Rd.	Clinton Keith Rd. to Driveway 1	Major Arterial	3D/4D	25,575/ 34,100	22,630	0.88	D	23,505	0.69	B	--
2	Clinton Keith Rd.	Warm Springs Pkwy. to Whitewood Rd.	Urban Arterial	5D	44,917	47,073	1.05	F	49,114	1.09	F	0.045
3		Whitewood Rd. to Arendt Ln.	Urban Arterial	6D	53,900	38,168	0.71	C	40,209	0.75	C	--

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ These maximum roadway capacities have been extracted from the following source: City of Murrieta General Plan 2035 Update (Table 4.2-2)

² V/C = Volume to Capacity Ratio

³ LOS = Level of Service

⁴ **4D** = Improvement. There is no roadway capacity for a 5-lane divided urban arterial. As such, capacity has been estimated by using 83.3% of the capacity for a 6-lane Urban Arterial.

⁵ **34,100** = Improvement

⁶ Per the City of Murrieta traffic study guidelines, Project deficiency is to occur if the addition of traffic increases v/c by more than 0.05.

5.5 QUEUING ANALYSIS

Queuing analysis findings for Opening Year Cumulative (2023) Without Project are presented on Table 5-3. As shown on Table 5-3, the following movements are anticipated to experience queuing issues during the weekday PM peak 95th percentile traffic flows:

- Whitewood Road & Clinton Keith Road (#6) EBL – AM and PM peak hours
- Whitewood Road & Clinton Keith Road (#6) NBL – AM and PM peak hours
- Whitewood Road & Clinton Keith Road (#6) SBL – AM and PM peak hours

Although there are no new movements that are anticipated to exceed peak hour queues, the NBL turn movement is anticipated to exceed the 95th percentile queues in the AM peak hour as well with the addition of Project traffic. Worksheets for Opening Year Cumulative (2023) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 5.3 and 5.4, respectively.

TABLE 5-3: PEAK HOUR QUEUING SUMMARY FOR OPENING YEAR CUMULATIVE (2023) CONDITIONS

Intersection	Movement	Available Stacking Distance (Feet)	2023 Without Project				2023 With Project			
			95th Percentile Queue (Feet)		Acceptable? ¹		95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 SB Ramps & Clinton Keith Rd.	SBL/T	1,185	211	436 ²	Yes	Yes	211	436 ²	Yes	Yes
	SBR	960	386	363	Yes	Yes	386	363	Yes	Yes
I-215 NB Ramps & Clinton Keith Rd.	NBL	960	380	794 ²	Yes	Yes	380	794 ²	Yes	Yes
	NBR	1,525	368	797 ²	Yes	Yes	368	797 ²	Yes	Yes
Whitewood Rd. & Clinton Keith Rd.	EBL	255	438 ²	527 ^{2,3}	No	No	438 ²	527 ^{2,3}	No	No
	WBL	190	160 ²	118 ²	Yes	Yes	144 ²	85 ²	Yes	Yes
	WBR	195	55	81	Yes	Yes	87	130	Yes	Yes
	NBL	295	405 ²	537 ²	No	No	405 ²	537 ²	No	No
	SBL	100	244 ²	340 ²	No	No	244 ²	340 ²	No	No

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Volume for 95th percentile queue is metered by upstream signal.

5.6 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no unsignalized study area intersections that exist without the Project. As such, no traffic signal warrant analyses have been performed for Opening Year Cumulative (2023) Without Project traffic conditions. A traffic signal warrant analysis has been conducted for the intersection of Driveway 2 and Clinton Keith Road for Opening Year Cumulative (2023) With Project traffic conditions for the full access alternative only (see Appendix 5.5). The intersection is anticipated to meet Condition B for the planning level, daily volume-based traffic signal warrant.

5.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

5.7.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2023) traffic deficiencies are presented on Table 5-4. Worksheets for Opening Year Cumulative (2023) With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 5.6. Improvements to the intersection of Whitewood Road at Clinton Keith Road include median modifications to accommodate additional turn pockets and restriping (of the southbound approach), which the Project will construct. The same improvements are needed at Whitewood Road and Clinton Keith Road for both access alternatives at Driveway 2.

TABLE 5-4: INTERSECTION ANALYSIS FOR OYC (2023) CONDITIONS WITH IMPROVEMENTS

# Intersection	Traffic Control ³	Intersection Approach Lanes ¹								Delay ² (secs.)		Level of Service		
		Northbound			Southbound			Eastbound		Westbound			AM	PM
		L	T	R	L	T	R	L	T	R	L	T	R	
2 California Oaks Rd. & Clinton Keith Rd. - Pre-Project - Without Improvements - With Improvements	TS	2	0	1	0	0	0	0	2	1	1	2	0	
		2	0	1	0	0	0	0	2	1	1	2	0	
		2	0	<u>1></u>	0	0	0	0	2	1	1	2	0	
6 Whitewood Rd. & Clinton Keith Rd. - Pre-Project - Without Improvements - With Improvements	TS	1	2	0	1	2	0	2	2	1	2	3	1	
		1	2	0	1	2	0	2	2	1	2	3	1	
		<u>2</u>	2	<u>1</u>	<u>2</u>	2	0	2	2	1	2	3	1	
6 Whitewood Rd. & Clinton Keith Rd. (Alternative) - Pre-Project - Without Improvements - With Improvements	TS	1	2	0	1	2	0	2	2	1	2	3	1	
		1	2	0	1	2	0	2	2	1	2	3	1	
		<u>2</u>	2	<u>1</u>	<u>2</u>	2	0	2	2	1	2	3	1	

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1 = Improvement

² Per the Highway Capacity Manual 6th Edition, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ TS = Traffic Signal

5.7.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

Although the segment of Clinton Keith Road, from Warm Springs Parkway to Whitewood Road, is anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2023) traffic conditions, the addition of Project is anticipated to increase the v/c ratio by less than 0.05. It should also be noted that the roadway segment LOS will improve with the completion of the widening/striping to accommodate the ultimate cross-section of Clinton Keith Road. As such, improvements have not been identified for the study area roadway segment as the more detailed peak hour intersection operations analysis does not identify the need to widen the segment. However, the Project should contribute its fair share towards the future restriping the segment to its ultimate General Plan roadway classification. The Project's fair share is 16.5% (see Table 6-1).

5.7.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES FOR QUEUES

Table 5-5 shows the peak hour queuing summary, assuming the intersection improvements identified in Table 5-4. The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2023) With Project 95th percentile queue deficiencies are presented on Table 5-5. Improvements accounted for in Table 5-5 include restriping and modifications to turn pocket widths. Worksheets for Opening Year Cumulative (2023) With Project traffic conditions, with improvements, queuing analysis are provided in Appendix 5.7. As shown on Table 5-5, the Project shall contribute its fair share towards the left-turn storage improvements, including but not limited to median modifications and restriping. Exhibit 5-4 illustrates the potential lane improvements for the southbound approach on Whitewood Road.

TABLE 5-5: PEAK HOUR QUEUING SUMMARY WITH IMPROVEMENTS

Intersection	Movement ³	Available Stacking Distance (Feet) ³	2023 With Project			
			95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM
Whitewood Rd. & Clinton Keith Rd.	EBL	<u>365</u>	322	366	Yes	Yes
	WBL	190	169	184	Yes	Yes
	WBR	<u>275</u>	264	155	Yes	Yes
	NBL	<u>400</u>	143	392	Yes	Yes
	SBL	<u>100</u>	95	141 ⁴	Yes	Yes
	SBL	<u>280</u>	189	197	Yes	Yes
Alternative:						
Whitewood Rd. & Clinton Keith Rd.	EBL	<u>365</u>	333	365	Yes	Yes
	WBL	<u>250</u>	252	98	Yes	Yes
	WBR	<u>275</u>	276	158	Yes	Yes
	NBL	<u>300</u>	164	297	Yes	Yes
	SBL	<u>100</u>	82	154 ⁴	Yes	Yes
	SBL	<u>280</u>	191	195	Yes	Yes

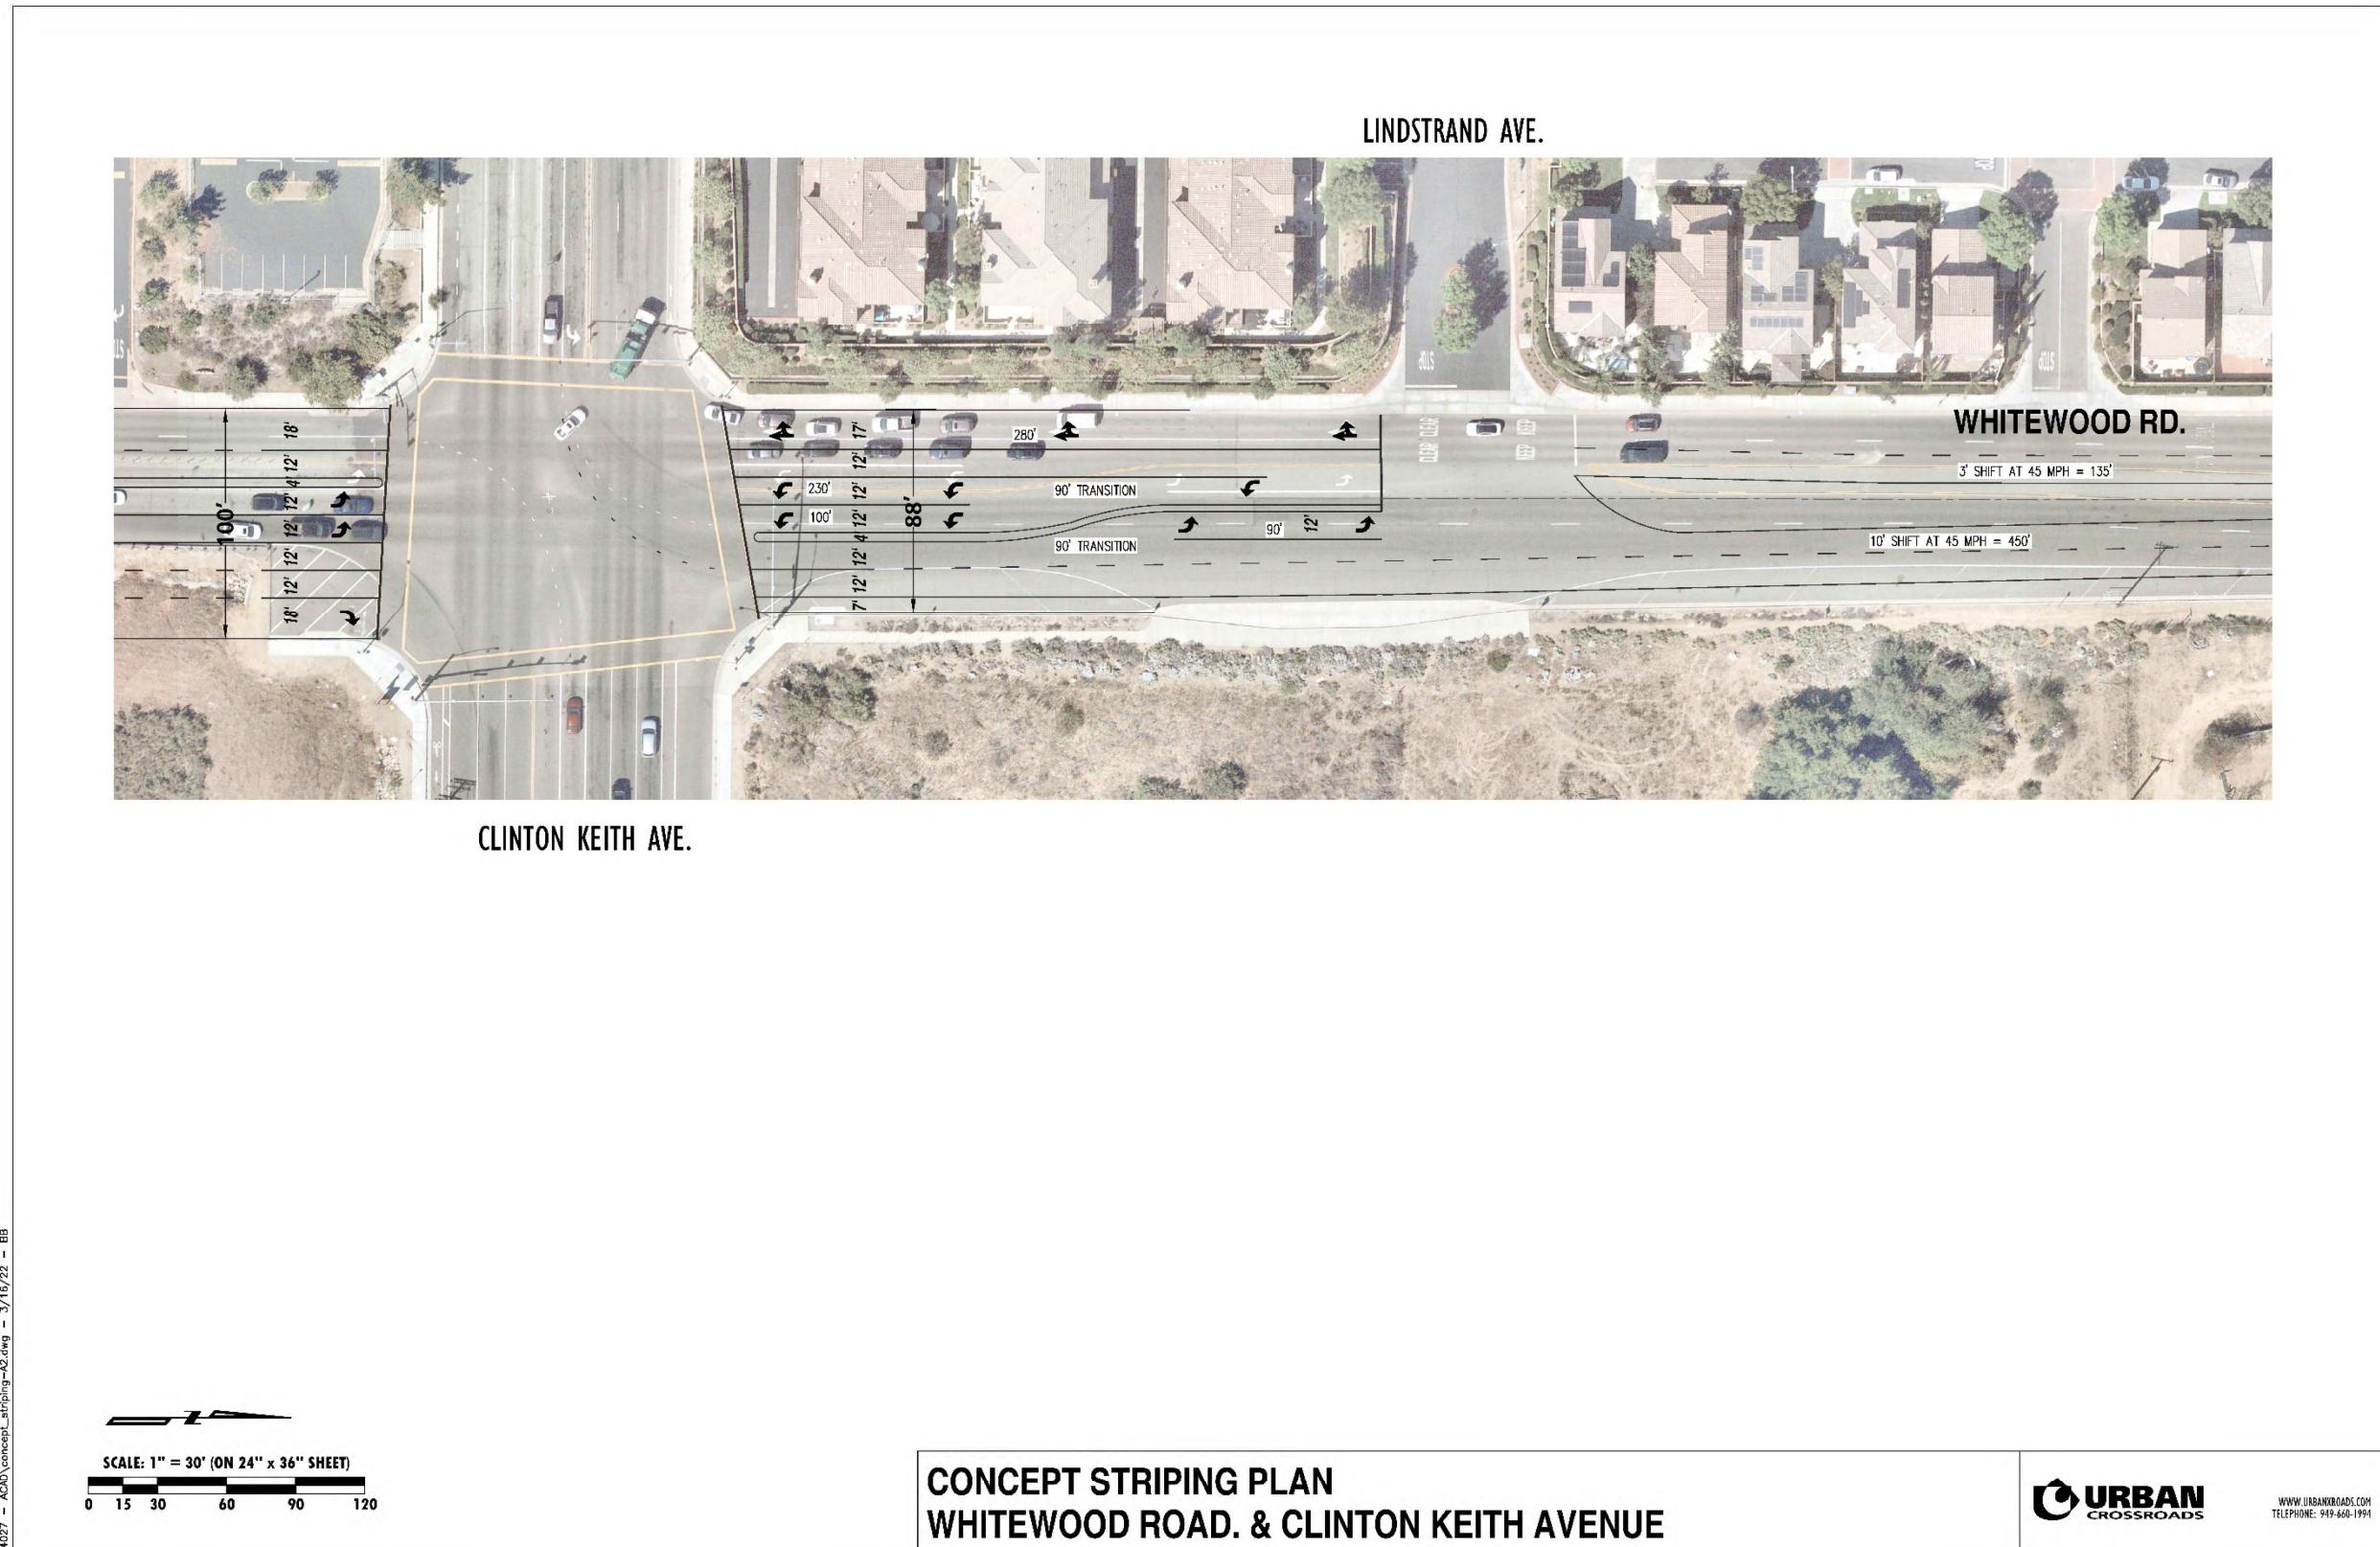

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ 365 = Improvement

⁴ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent left turn lane has sufficient storage to accommodate any spillover without spilling back and affecting the through southbound traffic on Whitewood Road.

EXHIBIT 5-4: CONCEPTUAL LAYOUT FOR WHITEWOOD ROAD & CLINTON KEITH ROAD

This Page Intentionally Left Blank

6 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Murrieta are funded through a combination of direct project mitigation, development impact fee programs or fair share contributions, such as the City of Murrieta Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

6.1 CITY OF MURRIETA DEVELOPMENT IMPACT FEE PROGRAM

In 2006, the City of Murrieta adopted their DIF program incorporating the regional component of Measure I. The fee schedule was updated in June 2020. Fees from new residential, commercial, and industrial development are collected to fund Measure I compliant regional facilities. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

After the City's DIF fees are collected, they are placed in a separate interest-bearing account pursuant to the requirements of Government Code sections 66000 *et seq.* The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of the improvements listed in its facilities list.

6.2 MEASURE "I" FUNDS

In 2004, the voters of Riverside County approved the 30-year extension of Measure "I", a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by the RCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure "I" funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by RCTA, it bears discussion here because the funds raised through Measure "I" have funded in the past and will continue to fund new transportation facilities in Riverside County.

6.3 FAIR SHARE CONTRIBUTION

Project improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations have been provided on Table 6-1 for the applicable identified improvements.

TABLE 6-1: PROJECT FAIR SHARE CALCULATIONS

#	Roadway Segment	Project	Cumulative	Project % of New Traffic ¹
2	Clinton Keith Rd., Warm Springs Rd. to Whitewood Rd. (Restripe to accommodate a 3rd EB through lane)	ADT: 2,041	10,362	16.5%

¹ New Traffic is Project + Cumulative traffic only.

Murrieta, CA 92562

SUBJECT: MURRIETA RESIDENTIAL FOCUSED TRAFFIC IMPACT ANALYSIS SCOPING AGREEMENT

Dear Mr. Brian Stephenson:

Urban Crossroads, Inc. is pleased to submit this scoping letter to City of Murrieta regarding the Focused Traffic Impact Analysis for the proposed Murrieta Residential development (**Project**), which is located on the southeast corner of Whitewood Road and Clinton Keith Road in the City of Murrieta (see Exhibit 1 for Location Map). The Project is to consist of 150 multifamily (low-rise) housing units (condo) and 324 multifamily (mid-rise) housing units (apartments). The following scope of work has been prepared in accordance with the City's Traffic Impact Analysis Preparation Guidelines (dated May 2020, City's TIA Guidelines).

A site plan for the proposed Project is shown on Exhibit 2. For purposes of the traffic impact analysis the Project's opening year is anticipated to be 2023. Access to the Project site will be provided via a right-in/right-out access driveway along Whitewood Road and a right-in/right-out access driveway along Clinton Keith Road.

ANALYSIS SCENARIOS

Consistent with the City's TIA Guidelines, intersection analysis will be provided for the following scenarios:

- Existing (2021) Conditions
- Opening Year Cumulative (2023) Without Project Conditions
- Opening Year Cumulative (2023) With Project Conditions

STUDY AREA INTERSECTIONS

Based on the Project's anticipated travel patterns and trip generation characteristics, the following study area intersection locations shown on Exhibit 3 and listed below were selected for analysis:

Mr. Brian Stephenson
City of Murrieta
May 24, 2021
Page 2 of 6

#	Intersection
1	Nutmeg St. & Clinton Keith Rd.
2	California Oaks Rd. & Clinton Keith Rd.
3	I-215 SB Ramps & Clinton Keith Rd.
4	I-215 NB Ramps & Clinton Keith Rd.
5	Whitewood Rd. & Clinton Keith Rd.
6	Whitewood Rd. & Murrieta High School Driveway/Driveway 1
7	Warm Springs Pkwy. & Clinton Keith Rd.
8	Whitewood Rd. & Arendt Ln./Driveway 2

STUDY AREA ROADWAY SEGMENTS

The following study area roadway segments listed below were selected for analysis:

- Whitewood Road, south of Clinton Keith Road
- Clinton Keith Road, east of Whitewood Road
- Clinton Keith Road, west of Whitewood Road

EXISTING COUNT DATA

Due to the currently ongoing COVID-19 pandemic, new traffic counts will be collected at the study area intersections and an adjustment factor will be applied to reflect non-COVID conditions. In order to develop an adjustment factor, the historic traffic counts will be compared to the current traffic count collected at the same location. The historic count will first be adjusted to 2021 traffic conditions through the application of a 2% per year growth rate. The calculated average growth for the overall intersection (all turning movements) between the current and adjusted historic count will be applied to other existing traffic counts collected in order to reflect and evaluate pre-COVID traffic conditions.

TRIP GENERATION

In order to estimate the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017) were used for the proposed land uses. Multifamily Housing (Low-Rise, 2 floors) (ITE Land Use Code 220) and Multifamily Housing (Mid-Rise, 3-10 floors) (ITE Land Use Code 221) have been used for the purposes of estimating the Project's trip generation. Table 1 presents the trip generation rates and resulting trips generated by the proposed Project. As shown in Table 2, the proposed Project is anticipated to generate a total of 2,862 two-way vehicle trips per day, with 185 AM peak hour trips and 227 PM peak hour trips.

TABLE 1: TRIP GENERATION RATES

Land Use ¹	ITE LU Code	Units ²	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Multifamily Housing (Low-Rise)	220	DU	0.11	0.35	0.46	0.35	0.21	0.56	7.32
Multifamily Housing (Mid-Rise)	221	DU	0.09	0.27	0.36	0.27	0.17	0.44	5.44

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

² DU = Dwelling Units

TABLE 2: PROJECT TRIP GENERATION SUMMARY

Land Use	Quantity Units ¹	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total	
Multifamily Housing (Low-Rise)	153 DU	16	54	70	54	32	86	1,120
Multifamily Housing (Mid-Rise)	330 DU	31	88	119	89	57	146	1,796
Total		47	142	189	143	89	232	2,916

¹ DU = Dwelling Units

TRIP DISTRIBUTION

Exhibit 4 illustrates the Project trip distribution patterns.

GENERAL PLAN CONSISTENCY REQUIREMENTS

Consistent with the City's TIA Guidelines, the following criteria will be applied for the traffic analysis.

SIGNALIZED INTERSECTION OPERATING REQUIREMENTS

- Any signalized study intersection operating at an acceptable LOS D or better without project traffic in which the addition of project traffic causes the intersection to degrade to a LOS E or F shall identify improvements to improve operations to LOS D or better.
- Any signalized study intersection that is operating at LOS E or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

UN SIGNALIZED INTERSECTION GENERAL PLAN CONSISTENCY REQUIREMENTS

An operational improvement would be required if the study determines that either section a) or both sections b) and c) occur:

- a) The addition of project related traffic causes the intersection to degrade from an acceptable LOS D or better to LOS E or F.

OR

- b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at a LOS E or F,
- AND
- c) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

If the conditions above are satisfied, improvements should be identified that achieve the following:

- LOS D or better for case a) above or to pre-project LOS and delay for case b) above.

ROADWAY SEGMENT GENERAL PLAN CONSISTENCY REQUIREMENTS

Consistent with the acceptable LOS for the City, the following roadway segment requirements should be considered and improvements recommended if the project exceeds the noted operational goals:

- Any study roadway segment operating at a LOS C or better without project traffic in which the addition of project traffic causes the segment to degrade to an LOS E or F should identify improvements to achieve LOS C.
- As an exception, LOS “D” may be allowed in the North Murrieta Business Corridor, Clinton Keith/Mitchell, Golden Triangle North (Central Murrieta), South Murrieta Business Corridor, or other Focus Areas, or other employment centers
- Any roadway segment that operates unacceptably in the no project scenario where the project adds traffic in excess of 5% of the roadway capacity (e.g. a volume-to-capacity ratio increase of 0.05) should identify improvements to add capacity to the segment.

AMBIENT GROWTH

Consistent with other studies performed in the area, an ambient growth rate of 2.0% per year is proposed for the study area intersections to approximate background traffic growth not identified by nearby cumulative development projects. The rate will be compounded over a two-year period (i.e., $1.02^{2\text{years}} = 1.0404$ or 4.04% for 2023).

SPECIAL ISSUES

The following special issues will also be addressed as part of the focused traffic assessment:

- Conduct traffic signal warrant analysis for all existing and future unsignalized study area intersections.
- Provide a queuing analysis for Project driveways and the site adjacent intersection of Whitewood Road & Clinton Keith Road.

Mr. Brian Stephenson
City of Murrieta
May 24, 2021
Page 5 of 6

- Driveway 1 on Whitewood Avenue will be restricted to right-in/right-out access only.
- Driveway 2 on Clinton Keith Road will be restricted to right-in/right-out access only.
- Right-turn lane analysis will be evaluated for both driveways based on the City's guidelines to determine whether dedicated lanes are necessary.

CUMULATIVE DEVELOPMENT PROJECTS

The cumulative projects are listed on Table 3 and are shown graphically on Exhibit 5. It is requested that the City provide an updated list of cumulative development projects for inclusion in the traffic study.

SIGNAL TIMING

It is requested that the City provide any signal timing that should be considered for signalized study area intersections within the City.

If you have any questions, please contact me directly at (949) 861-0177.

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So, PE

Associate Principal
