EXECUTIVE SUMMARY

DPIF3 CA 30 Enterprise Ave, LLC retained RPS Group, Inc. (RPS) to conduct a Phase I Environmental Site Assessment (ESA) of the KFAX and KTRB Transmitter Site located at 3636 Enterprise Avenue in Hayward, Alameda County, California (the site). The site is owned and operated by Salem Media Group (Salem). RPS conducted the Phase I ESA to identify Recognized Environmental Conditions (RECs), as defined by the ASTM International (ASTM) Standard Practice for Environmental Site Assessments – E 1527-13 (ASTM-13). RPS performed the Phase I ESA to constitute all appropriate inquiry consistent with good commercial and customary practice.

Information obtained through the Alameda County Assessor's Office and confirmed by site representatives indicated that the site consists of two contiguous parcels that are owned by Salem Broadcasting Company (affiliated with Salem Media Group).

Salem operates a radio broadcasting station at the site, which consists of four radio towers and a radio transmitter building. The radio towers broadcast the signals for the following radio stations: KFAX 1100 AM and KTRB 860 AM. The towers and radio transmitter building are generally unmanned and Salem staff conduct maintenance activities as needed.

The 11.3-acre site is developed with an approximately 800-square-foot radio transmitter building. The building interior includes various radio transmission equipment, electrical equipment, maintenance storage, and a restroom. The structure has electrical and water service; however, the sewer service was recently capped by the City of Hayward due to backflow issues and the on-site restroom is currently not in service.

The exterior portions of the site include four radio towers, including one located next to the radio transmitter building. The radio towers are spread across the site and are connected by unpaved roads. According to the site representatives, underground wires (approximately 1-2 feet below ground surface) connect each of the towers to the radio transmitter building. Each of the radio towers are connected to control panels and other electrical equipment situated on concrete pads, all of which is surrounded by wooden fencing. Next to the radio transmitter building are pad-mounted radio equipment and air conditioning units. Approximately 100 feet southeast of the southernmost radio tower is a groundwater monitoring well (identified in prior investigations as K-MW) within a two-foot aboveground metal casing. It is unclear if the well is still intact and no prior sampling information was available for review. A pole-mounted electrical transformer is located to the north of the radio transmitter building. Between the four towers, the radio transmitter building, and the main entrance to the site on Enterprise Avenue are unpaved and gravel-lined roads. The remainder of the site is overgrown vegetation with varying topography.

The site consisted of undeveloped land from at least 1928 through 1960. Circa 1966, a small structure of unclear use was located along the western edge of the site. In 1969, the current radio towers and radio transmitter building were constructed. By 1982, the structure along the western edge of the site was no longer present. The site has served as a radio transmission station for KFAX 1100 AM since 1969 and KTRB 860 AM since 2016. Former and current owners/occupants of the site include Argonaut Broadcasting (1969), Salem Broadcasting Company (1984-current), and Pappas Radio of California (2014-2017). No current or historical site operations with a potential to impact the site were identified.

The surrounding area was undeveloped land from at least 1928 through the 1940s. Since 1952, the north-adjacent property has operated as the City of Hayward Water Pollution Control Facility with various structures, tanks, and ponds constructed from the 1960s through the 2000s. From 1966 through 2006, the east-adjacent property (known as the Runnels Property) has operated as a metal finishing and coating business; this property would be subsequently used as equipment staging for the construction of a nearby power plant from 2011-2013 and has been vacant since 2014. Circa 1990, the west-adjacent property was redeveloped into the current commercial/industrial business park. Former investigations and remedial activities at the Runnels Property are further discussed below.

Findings

Environmental and other conditions associated with the site are characterized as RECs, Controlled RECs (CRECs), Historical RECs (HRECs), de minimis conditions, noteworthy conditions, or other considerations as defined in Section 1.1 of this report. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report if not identified below.

This assessment revealed evidence of the following REC in connection with the site:

- **Impacts from Runnels Property:** The Runnels Property was located adjacent to the east of the site from at least 1966 through 2006. According to regulatory agency records, this facility's operations primarily consisted of the application of surface coatings on prefabricated metal materials. This included sandblasting with silicon, nickel slag, or glass beads followed by steam cleaning or chemical treatment. Surface coatings, including paints and high performance coating such as zinc epoxy urethane, were then sprayed onto the prepared materials. There were various interior and exterior chemical storage areas at this facility where paints, solvents, lubricating oils, hydraulic fluids, and fuels were stored. This facility also operated three underground storage tanks (USTs), including a 1,000-gallon methyl ethyl ketone UST, a 1,000-gallon diesel UST, and a 500-gallon gasoline UST, which were removed in 1993, as well as an oil-water separator (OWS), which was removed in 2009. In the late-1960s to early-1970s, the Runnels Property operations appeared to extend onto the southeastern portion of the site; it was later determined that waste dumping of sand blast grit was occurring throughout the southeastern portion of the site.

Since 1996, the Runnels property has undergone various soil and groundwater investigations, including the installation of five groundwater monitoring wells at this property. Groundwater was determined to have been impacted with metals, trichloroethylene (TCE), tetrachloroethene (PCE), and 1,1-dichloroethylene (1,1-DCE). In 1998, nine test holes (TH-1 to TH-9) were advanced in an area along the eastern portion of the site that was downgradient of a former diesel-powered air compressor and equipment wash down area on the Runnels Property. Analysis of the soil samples from these test holes revealed total petroleum hydrocarbon as diesel (TPHd) concentrations as high as 640 milligrams per kilogram (mg/kg).

In 2003, three surface soil samples (K-B1, K-B2, and K-B3) were collected from different areas on the site. These locations were selected based on a visual survey of the site for blast grit on surface soils throughout the site. Soil sample K-B2, which was located on the southeastern portion of the site, contained elevated concentrations of arsenic, chromium, and copper. Soil sample K-B3, which was collected along the eastern fence line, contained elevated concentrations of TPHd, TPH as oil, chromium, and zinc.

In 2010, a Corrective Action Plan was submitted and approved by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB). The remedial activities would eventually include abandonment of the remaining groundwater wells; soil sampling throughout the Runnels Property, the site, and the south-adjointing railroad spur; and soil excavation and removal. The soil sampling determined that the areas to be excavated on the site included a large portion of the southeastern corner (identified as KF-A) and a small area on the south-central portion where sandblast grit was observed (identified as KF-B). The target chemicals of concern for the soil removal included TPHd and TPH as motor oil, arsenic, lead, zinc, and polycyclic aromatic hydrocarbons (PAHs). Soil excavation was conducted from May to September 2010 to a depth of 1 to 1.5 feet below ground surface (bgs) in areas KF-A and KF-B. Soil was continuously excavated until confirmation samples met the pre-established cleanup goals for the above chemicals of concern (COCs). A total of 1,960 cubic yards of soil was excavated and removed from the site and the Runnels Property. The excavations were backfilled with imported fill.

The *Covenant and Environmental Restriction on Property* was placed only on the Runnels Property (filed with Alameda County Recorder on November 29, 2010), which restricts land use to industrial, commercial or office space, and prohibits the drilling of water supply wells at this property. The Covenant also required the implementation of a Soil Management Plan (SMP), which was submitted and approved by the SFBRWQCB. Based on the completion of the soil removal action, filing of the land use covenant, and submittal of the SMP, the SFBRWQCB issued a No Further Action letter for the Runnels Property on April 15, 2011.

Although cleanup goals were achieved for the KF-A and KF-B excavations, residual concentrations of TPH, metals and PAHs remain in on-site soils. It should be noted that groundwater beneath the site (expected to be 5-8 feet bgs) was not assessed for potential impacts; no groundwater monitoring data was available for

the on-site monitoring well (K-MW). In addition, concentrations of TCE, PCE, and 1,1-DCE were detected in soil and groundwater beneath the Runnels Property, but these chemicals (along with other volatile organic compounds [VOCs]) were not assessed as part of the prior site investigations. Therefore, additional subsurface impacts to the site originating from the Runnels Property may still exist.

This assessment revealed evidence of the following HREC in connection with the site:

- **Abandoned Waste Oil Drums:** Hayward Fire Department (HFD) records include reports and correspondences regarding drums found at the site in 1994. The drums, which contained used oil, were determined to be from a nearby auto repair facility. According to site representatives, the HFD removed the drums and conducted the cleanup of the site, although they were not aware of the specific location that the drums were found. The records mention that soil samples were collected; however, the analytical results were not provided. Nonetheless, the cleanup appeared to be conducted to the satisfaction of the HFD; therefore, no additional assessment appears to be warranted at this time.

This assessment identified the following other considerations in connection with the site:

- **Asbestos-Containing Materials (ACMs):** Because the site building was constructed before 1981, and due to the presence of vinyl flooring in the radio transmitter building, the OSHA regulations regarding management of presumed ACM (PACM) in building materials applies. Salem does not have a management program in place to address these regulations. In the event of demolition or renovation, National Emissions Standards for Hazardous Air Pollutants (NESHAPs) requirements for the management of suspect ACMs will apply. The User intends to demolish the on-site structures and redevelop the site.

1 INTRODUCTION

1.1 Purpose

DPIF3 CA 30 Enterprise Ave, LLC retained RPS Group, Inc. (RPS) to conduct a Phase I Environmental Site Assessment (ESA) of the KFAX and KTRB Transmitter Site located at 3636 Enterprise Avenue in Hayward, Alameda County, California (the site). The Phase I ESA was conducted to identify Recognized Environmental Conditions (RECs), as defined by the ASTM International (ASTM) Standard Practice for Environmental Site Assessments – E 1527-13 (ASTM-13). RPS performed the Phase I ESA to constitute all appropriate inquiry consistent with good commercial and customary practice.

Based on the Environmental Professional's (EP's) evaluation of available information, findings of this report are classified and defined as follows:

- **REC:** the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment;
- **Controlled REC (CREC):** a REC that resulted from a past release that has been addressed to the satisfaction of the applicable regulatory authority, with contamination allowed to remain in place subject to the implementation of required controls;
- **Historical REC (HREC):** a past release that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls;
- **De minimis condition:** a condition that could otherwise be considered a REC but in the EP's opinion does not appear to represent a threat to human health or the environment and/or would not likely be the subject of an enforcement action if brought to the attention of appropriate governmental agencies;
- **Noteworthy condition:** a contingent site risk that does not clearly fall within the ASTM definition of a REC, HREC, or de minimis condition and/or a risk that can have a material environmental or environmentally-driven impact on the business and;
- **Other consideration:** an environmental issue or condition (e.g. asbestos, radon, or mold) at a property that falls outside of the scope of the ASTM-13 practice.

1.2 Scope of Work

RPS performed the Phase I ESA site inspection on November 23, 2020. The following site representatives provided information regarding the site and accompanied RPS during the site inspection:

- Mr. Craig Roberts, Director of Engineering for Salem, associated with the site for 25 years; and
- Mr. Mike Russell, Engineer for Salem, associated with the site for 16 years.

RPS conducted the Phase I ESA in overall accordance with industry standards, including the requirements of ASTM-13 and the federal All Appropriate Inquiries (AAI) standard. The Phase I ESA included the following activities, subject to any limitations noted in this report:

1. Interviews with site owner(s), key site manager(s), and/or major occupant(s) and a review of site records with regard to current and former site operations that may have impacted the site.
2. A comprehensive site inspection to identify and evaluate potential sources of environmental impact, including but not limited to waste and chemical storage areas, underground storage tanks (USTs), aboveground storage tanks (ASTs), equipment containing polychlorinated biphenyls (PCBs), wastewater and stormwater discharges, and air emissions. The inspection included observations for evidence of chemical spills, releases, or on-site waste disposal. A Site Location Map and a Site Layout and Area Map are included in Appendix A. Photographs of the site are included in Appendix B.

3. A review of historical information for potential on- or off-site sources of impact to the site. To the extent feasible under the conditions of the assessment, the historical information obtained included: verbal information and records from site and/or local agency representatives; previous reports; construction plans; building permits; property record cards; topographic maps; fire insurance maps; historical city directories; and aerial photographs. Copies of relevant historical documentation are included in Appendix C.
4. A visual survey of the properties in the vicinity of the site as observed from the site boundaries and public rights-of-way to evaluate the potential for impact to the site from these properties. A Site Layout and Area Map is included in Appendix A.
5. A review of tribal, state, and federal environmental database information, provided by Environmental Risk Information Systems (ERIS) supplemented by agency interviews and record review, where appropriate. The database search was conducted using ASTM designated search parameters; for parameters requiring a search of the site and adjacent properties only, the search radii were extended to ensure that ASTM-required search distances from the property boundary were met. Facilities listed in the database report as “unplottable” were reviewed to evaluate whether any are located in the immediate vicinity of the site, based on field observations. The database search report is included as Appendix D.
6. Supplemental research (potentially including the review of agency files, interviews with agency representatives, or others familiar with surrounding properties) conducted related to adjacent and/or nearby properties, as deemed necessary and beneficial in determining the environmental risk associated with these properties is discussed in relevant sections of this report.
7. Review of public health records and records of institutional and engineering controls pertaining to the site, as available through state listings provided by subscription database providers and, recorded on the current deed, or readily available in land title records.
8. A review of vapor migration associated with on and off-site sources of known and/or potential environmental impact.

RPS also performed the following activity in addition to those activities that comprise the ASTM scope of work:

- A limited visual survey to identify typically suspect asbestos-containing materials (ACMs). No sampling was conducted.

1.3 Project-Specific Limitations

No known project-specific limitations were identified that constitute a data gap or appear likely to affect the ability of the EP to form a conclusion regarding the site.

2 SITE CHARACTERISTICS

2.1 Site Location

The site is located at 3636 Enterprise Avenue in Hayward, Alameda County, California. The site is located on the southern side of Enterprise Avenue approximately 300 feet west of Whitesell Street.

2.2 Site Description

a) Site Ownership

Information obtained through the Alameda County Assessor's Office and confirmed by site representatives indicated that the site consists of two contiguous parcels (Alameda County Assessor Parcel Numbers 439-99-35 and 439-99-36-2) that are owned by Salem Broadcasting Company (affiliated with Salem Media Group). Copies of grant deeds for both of the site parcels were provided by the User – Salem Broadcasting Company was granted the site from various private parties in 1984-1985. No activity and use limitations (AULs) or environmental liens were attached to the deeds. The User also provided a title commitment (dated October 9, 2020), which did not identify any AULs or environmental liens. No AULs were identified in the U.S. Engineering Controls, U.S. Institutional Controls or state AULs databases searched by ERIS.

b) Current Use of the Site

Salem operates a radio broadcasting station at the site, which consists of four radio towers and a radio transmitter building. The radio towers broadcast the signals for the following radio stations: KFAX 1100 AM and KTRB 860 AM. The towers and radio transmitter building are generally unmanned and Salem staff conduct maintenance activities as needed. The remainder of the site is vacant land with overgrown vegetation with unpaved and gravel-lined roads in between the four towers, the radio transmitter building, and the main entrance to the site on Enterprise Avenue.

c) Structures, Improvements, and Other Features

The 11.3-acre site is developed with an approximately 800-square-foot radio transmitter building. The building interior includes various radio transmission equipment, electrical equipment, maintenance storage, and a restroom. The structure has electrical and water service; however, the sewer service was recently capped by the City of Hayward due to backflow issues and the on-site restroom is currently not in service.

The exterior portions of the site include four radio towers, including one located next to the radio transmitter building. The radio towers are spread across the site and are connected by unpaved roads. According to the site representatives, underground wires (approximately 1-2 feet below ground surface) connect each of the towers to the radio transmitter building. Each of the radio towers are connected to control panels and other electrical equipment situated on concrete pads, all of which is surrounded by wooden fencing. Next to the radio transmitter building are pad-mounted radio equipment and air conditioning units. Approximately 100 feet southeast of the southernmost radio tower is a groundwater monitoring well (identified in prior investigations as K-MW) within a two-foot aboveground metal casing. It is unclear if the well is still intact and no prior sampling information was available for review. Site representatives were not aware of the existence of this groundwater monitoring well. A pole-mounted electrical transformer is located to the north of the radio transmitter building. Between the four towers, the radio transmitter building, and the main entrance to the site on Enterprise Avenue are unpaved and gravel-lined roads. The remainder of the site is overgrown vegetation with varying topography. No pits, mounds, or other obvious terrain anomalies were identified. No areas of staining or distressed vegetation were identified.

The building is heated and cooled electrically. Water and sewer services (when not capped) are municipally provided.

2.3 Environmental Setting

a) Topography and Drainage

The 7.5-minute topographic map of the area (Hayward, California quadrangle, 2015) indicates that the site is located at an approximate elevation of nine (9) feet above mean sea level. The site is located in an area characterized by flat terrain. According to the site representatives, during heavy rain events, stormwater pools on the northwestern and southern portions of the site. The surrounding properties are located on a western-facing slope that drains to the west toward the San Francisco Bay.

b) Soils, Geology, and Hydrogeology

According to information provided in the ERIS Physical Setting Report, the soils in the site area consist primarily of drained Reyes clay. Soils in this group have high runoff potential when thoroughly wet, and water movement through the soil is restricted or very restricted. The near-surface geology in the site area is comprised of Quaternary alluvium and marine deposits. Depth to bedrock information for the site area was not readily available. Based on groundwater data from subsurface investigations of the north and east adjacent properties (3700 Enterprise Avenue and 3590 Enterprise Avenue, respectively), shallow groundwater is expected to be present in the site area between approximately 4 and 9 feet bgs and is expected to flow in a westerly direction.

c) Water Resources

Potable water is supplied to the site and surrounding properties by the San Francisco Public Utilities Commission (SFPUC) via the City of Hayward. 85% of the SFPUC's potable water from the Hetch Hetchy watershed; the remaining 15% is from the Alameda watershed. The site has been connected to municipal water services since development. Based on information provided in the ERIS Physical Setting Report, no active municipal and/or private water wells were identified within a 1-mile radius of the site, suggesting that groundwater in the site area is not used as a potable resource. A groundwater monitoring well (K-MW) is located on the southern portion of the site as previously discussed. According to James Yoo, Alameda County Public Works Agency, there are no records or drilling permit on file for this groundwater monitoring well.

3 SITE HISTORY

3.1 Overview of Site History

The site consisted of undeveloped land from at least 1928 through 1960. Circa 1966, a small structure of unclear use was located along the western edge of the site. In 1969, the current radio towers and radio transmitter building were constructed. By 1982, the structure along the western edge of the site was no longer present. The site has served as a radio transmission station for KFOX 1100 AM since 1969 and KTRB 860 AM since 2016. Former and current owners/occupants of the site include Argonaut Broadcasting (1969), Salem Broadcasting Company (1984-current), and Pappas Radio of California (2014-2017).

No current or historical site operations with a potential to impact the site were identified.

3.2 Historical Photographs and Maps

RPS reviewed available historical aerial photographs and topographic maps from the sources listed in Section 8. According to ERIS, no Sanborn fire insurance maps were available for the site area. The information from these sources is summarized below.

Period	Description
1928 Aerial	The site is undeveloped land.
1939 Aerial	
1946 Aerial	
1948 Topo	
1956 Topo	
1958 Aerial	
1960 Topo	
1961 Topo	
1966 Aerial	Along the western edge of the site is a small structure, which appears to be surrounded by a rectangular road. The southeastern corner of the site appears to be used for exterior storage by the east-adjacent property.
1968 Aerial	
1969 Topo	The site is developed with the four radio towers, the radio transmitter building, and the road leading up to the structure.
1974 Aerial	
1974 Topo	
1980 Aerial	
1980 Topo	
1982 Aerial	The structure on the western edge of the site no longer is visible. The site appears as currently configured.
1987 Aerial	
1993 Aerial	
2002-2020 Aerials	Circa 2010, the southeastern corner of the site was partially carved out from the remainder of the site as this portion of the site was excavated during remediation activities (discussed in Section 4.0 below).

3.3 Interviews and Agency Records

a) Information Provided by Site Representatives, Site Owner, and Report User

Site Owner/Site Representatives

The site representatives indicated the site was first occupied by Salem in the 1960s and developed with the current radio towers and radio transmitter building. Operations have remained consistent since this time with occasional equipment upgrades. The site representatives were not aware of current or historical environmental

impacts at the site with the exception of the previous remedial activities on the southeastern portion of the site, which are discussed in Section 4.0.

User

RPS provided a written questionnaire consistent with Appendix X3 of ASTM-13 to DPIF3 CA 30 Enterprise Ave, LLC to be completed as the User of the report. The questionnaire was completed by Mr. Scott Strine, Senior Vice President for DPIF3 CA 30 Enterprise Ave, LLC, and indicates that User representatives are not aware of any environmental cleanup liens filed or recorded against the site; any AULs in place at the site; any specialized knowledge of the site or adjoining properties; any conditions that would affect the fair market value of the site; or any other commonly known or reasonably ascertainable information regarding the environmental condition of the site. Mr. Strine is aware of the past environmental cleanups at the site, which are discussed in relevant sections of this report.

b) Agency Interviews and File Review

RPS contacted or filed Freedom of Information Act (FOIA) requests with various agencies to obtain environmentally relevant information regarding the site. A listing of the various agencies contacted is provided in Section 8. At the time this report was issued, the following agency had not responded to the FOIA requests:

- San Francisco Bay Regional Water Quality Control Board

Information from these agencies is summarized as follows:

- **Alameda County Assessor's Office:** The Alameda County Assessor's Office provided ownership information for the site, as discussed in Section 2.1. According to the Alameda County Assessor Property Search database, the site is approximately 11.3 acres in size.
- **Alameda County Clerk-Recorder:** Due to COVID-19 restrictions, deed information could not be obtained from the Alameda County Clerk-Recorder office at the issuance of this report. Deed information was provided by the site owner, as discussed in Section 2.1.
- **Department of Toxic Substances Control (DTSC):** According to a response from the DTSC, no records are available for the site. Additionally, no records were available for the site from the DTSC's EnviroStor database.
- **State Water Resources Control Board (SWRCB)/San Francisco Bay Regional Water Quality Control Board (SFBRWQCB):** A response is pending at this time from the SFBRWQCB. No records were available for the site from the SWRCB's GeoTracker database. GeoTracker records for the east-adjointing site (3590 Enterprise Avenue) included prior assessments discussing soil sampling and excavation along the eastern and southeastern portions of the site. These prior assessments are further discussed in Section 4.4.
- **Hayward Fire Department:** Records from the Hayward Fire Department (HFD) include a 1988 correspondence from Salem identifying radio transmitter equipment that contained polychlorinated biphenyls (PCBs). According to the site representatives, this equipment was removed and replaced approximately 10 years ago. HFD records also include reports and correspondences regarding drums found at the site in 1994. The drums, which contained used oil, were determined to be from a nearby auto repair facility. According to site representatives, the HFD removed the drums and conducted the cleanup of the site, although they were not aware of the specific location that the drums were found. The records mention that soil samples were collected; however, the analytical results were not provided. Nonetheless, the cleanup appeared to be conducted to the satisfaction of the HFD; therefore, no additional assessment appears to be warranted at this time.
- **Hayward Building Department:** Records from the Hayward Building Department include the following:
 - 11/29/1961 – Permit cards to construct a radio transmitter building and four radio towers for K.F.A.X. Argonaut Broadcasting Co.
 - 10/7/1969 – Permit to construct a building for radio transmitter (for Argonaut Broadcasting); also a permit to erect four radio towers for broadcasting station KFAX

- 10/9/1969 – Certificate of occupancy issued to Argonaut Broadcasting for radio transmission building and four towers
- 3/21/1996– Mechanical permit for Salem Broadcasting Company
- 4/1/1996 – Electrical permit for Salem Broadcasting Company
- **Alameda County Department of Environmental Health (ACDEH):** According to a response from the ACDEH, no records are available for the site.
- **Bay Area Air Quality Management District (BAAQMD):** Records provided by the BAAQMD for the site address include a plant status record for the Russell City Energy Center, which is currently located approximately 2,000 feet northwest of the site. The record identifies that an application was submitted for the new facility/power plant in 2001 and was approved in 2003. It is unclear why the site address is associated with the Russell City Energy Center; however, it should be noted that the east adjacent property (3590 Enterprise Avenue) was acquired by Russell City Energy Company LLC and utilized as equipment staging for the construction of the power plant in the 2000s. Therefore, it is unlikely that the records provided by BAAQMD pertain to the site.

c) Database Search Report

RPS reviewed a report of federal and state environmental databases in attempt to identify whether the site is listed on databases suggestive of a potential for impact (Appendix D). Detailed descriptions of the databases searched and definitions of acronyms are included within the Database Descriptions appendix of the database report. Pertinent listings for the site are discussed below:

- The site address was identified in the ICIS database under the name Russell City Energy Center. No specific information for the site was available. As discussed in Section 3.3(b), the Russell City Energy Center is located approximately 2,000 feet northwest of the site. Therefore, it is unlikely that this listing refers to the site.

3.4 Prior Environmental Reports

The following prior environmental reports for the site was provided for RPS's review. Additional environmental reports for the east-adjacent property are discussed in Section 4.4. Site representatives were not aware of other prior environmental reports issued for the site.

- Phase I Environmental Site Assessment, 3590 and 3636 Enterprise Avenue, Hayward, California, prepared by Foster Wheeler Environmental Corporation for Calpine Beditel Joint Development, dated April 2001 (the 2001 ESA).

The 2001 ESA was prepared looking at both the Runnels property and the KFAX and KTRB Transmitter Site for a future natural gas fired power plant. At the time of the 2001 ESA, the KFAX and KTRB Transmitter Site was similar to the current configuration. The 2001 ESA noted a steam cleaning area on the Runnels property and surface runoff from this area onto the KFAX and KTRB Transmitter Site. Additionally, 2001 ESA noted observed soil staining along the shared property line between the Runnels property and the KFAX and KTRB Transmitter Site. The observed stained soil encompassed an area of approximately 3 feet by 6 feet. The cleanup investigation for the Runnels property is discussed in Section 4.4

- Phase I Environmental Site Assessment, 3636 Enterprise Avenue, Hayward, California, prepared by Engeo Incorporated. (Engeo) for Salem Broadcasting Company, dated June 24, 2020 (the 2020 ESA).

At the time of the 2020 ESA, the site was similar to the current configuration. Engeo reviewed cleanup reports for the east-adjacent Runnels Property (3590 Enterprise Avenue), which included soil excavation and removal along the southeastern portion of the site. There was no mention of the existing onsite groundwater monitoring well (K-MW). Given the regulatory closure for the Runnels Property, Engeo considered the residual impacts as a historical recognized environmental condition (HREC). The cleanup investigation for the Runnels Property is discussed in Section 4.4.

3.5 City Directories and Other Historical Sources

a) City Directories

RPS reviewed historical city directory data provided by ERIS that included information between 1969 and 2018 at approximately five year intervals. The site address was identified in the 2013 and 2018 city directories under Pappas Radio of California. According to online resources, Pappas Radio of California previously operated the radio station KTRB 860 AM, which was acquired by Salem Media Group in 2016. The site listings identified do not appear to suggest a potential for environmental impact to the site.

b) Other Historical Sources

No additional historical resources were identified or reviewed for the site.

4 SURROUNDING PROPERTIES

4.1 Surrounding Property Overview

The surrounding area was undeveloped land from at least 1928 through the 1940s. Since 1952, the north-adjacent property has operated as the City of Hayward Water Pollution Control Facility with various structures, tanks, and ponds constructed from the 1960s through the 2000s. From 1966 through 2006, the east-adjacent property (known as the Runnels Property) has operated as a metal finishing and coating business; this property would be subsequently used as equipment staging for the construction of a nearby power plant from 2011-2013 and has been vacant since 2014. Circa 1990, the west-adjacent property was redeveloped into the current commercial/industrial business park.

Former investigations and remedial activities at the Runnels Property are further discussed in Section 4.4.

4.2 Area Observations

The use of the properties surrounding the site is summarized below.

<i>North:</i>	The site is bordered to the north by Enterprise Avenue, followed by the City of Hayward Water Pollution Control Facility
<i>East:</i>	The site is bordered to the east by vacant land (formerly the Runnels Property)
<i>South:</i>	The site is bordered to the south by undeveloped marshland, a railroad spur, and a flood control channel, followed by a commercial/industrial structure.
<i>West:</i>	The site is bordered to the west by the Enterprise Distribution Center (multi-tenant commercial/industrial park)

The neighboring properties generally appear well-maintained. Several of the surrounding facilities were identified in the environmental database report reviewed, as discussed further in Section 4.4.

4.3 Historical Photographs and Maps

RPS reviewed readily available historical topographic maps and aerial photographs obtained from the sources listed in Section 8. According to ERIS, no Sanborn fire insurance maps were available for the site area. The information from these sources is summarized below.

Period	Description
1928 Aerial	The surrounding areas are largely undeveloped.
1939 Aerial	
1946 Aerial	
1948 Topo	
1956 Topo	North of the site are several tanks, ponds, and associated structures (part of the current Hayward Water pollution Control Facility).
1958 Aerial	
1960 Topo	
1961 Topo	
1966 Aerial	
1966 Topo	
1968 Aerial	The east-adjacent property is developed with several structures and has exterior storage that extends onto the southeastern portion of the site. Southeast of the site is what appears to be a railroad spur.
1974 Aerial	The west-adjacent property appears to be soil stockpiles. North and east of the site are several additional structures. Farther north and east of the site is commercial/industrial development.
1974 Topo	
1980 Aerial	

1980 Topo
1982 Aerial
1987 Aerial

1993 Aerial 2002-2009 Aerials	The west-adjacent business park is constructed. Enterprise Avenue was constructed to the north of the site.
2010 Aerial	The previous structures on the east-adjacent property have been demolished; this property appears to be soil stockpiles.
2011-2013 Aerials	The east adjacent property is utilized as exterior storage – this property was used as construction staging for a new power plant located farther northwest of the site. In 2012-2013, a temporary canopy structure was located on the east-adjacent property.
2014-2020 Aerials	The east adjacent property is vacant land. The surrounding properties appear as they do in the present day.

4.4 Environmental Database Review

RPS reviewed the database search report discussed in Section 3.3 to evaluate the potential for surrounding properties to impact the site. This evaluation also included an assessment of vapor migration using available historical, subsurface, and regulatory information, as well as published regulatory guidance, industry standards (including critical screening distances) and professional experience.

Detailed descriptions of the databases that were searched and definitions of database acronyms are included within the Executive Summary Section and the Government Records Section of the database search report included as Appendix D. Relevant listings for surrounding properties are discussed below. Note that groundwater gradient discussions presented in this section are based on information described in Section 2.3.

- City of Hayward Water Pollution Control Facility (3700 Enterprise Avenue) was identified on the LUST database and is located north of the site beyond Enterprise Avenue (hydrologically cross-gradient). A gasoline release impacting local groundwater was first discovered in 1989 during the removal of a 1,000-gallon gasoline UST near the center of this facility. Records for this release case were available on the SWRCB GeoTracker database. Remedial activities include annual groundwater monitoring. According to the most recent groundwater results (from 2020) from the closest groundwater well to the site (MW-3, approximately 275 feet north of the site), concentrations of total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether (MTBE) were below groundwater maximum contamination levels and relevant commercial SFBWQCB environmental screening levels (ESLs). The groundwater investigation for this facility remains open; however, based on the assumed groundwater gradient and the latest groundwater results from the nearest monitoring well to the site, the potential for impact to the site appears low.
- Runnels Industries Inc. / Russell City Energy Center LLC (3590 Enterprise Avenue) was identified on the RCRA LQG, FINDS/FRS, CLEANUP SITES, DEED, HHSS, HAZNET, ECHO, ALAMEDA LOP, EMISSIONS, HIST TANK databases and was located adjacent to the east of the site from at least 1966 through 2006. According to records from the GeoTracker database, this facility's operations primarily consisted of the application of surface coatings on prefabricated metal materials. This included sandblasting with silicon, nickel slag, or glass beads followed by steam cleaning or chemical treatment. Surface coatings, including paints and high performance coating such as zinc epoxy urethane, were then sprayed onto the prepared materials. There were various interior and exterior chemical storage areas at this facility where paints, solvents, lubricating oils, hydraulic fluids, and fuels were stored. This facility also operated three underground storage tanks (USTs), including a 1,000-gallon methyl ethyl ketone UST, a 1,000-gallon diesel UST, and a 500-gallon gasoline UST, which were removed in 1993, as well as an oil-water separator (OWS), which was removed in 2009. In the late-1960s to early-1970s, the Runnels Property operations appeared to extend onto the southeastern portion of the site; it was later determined that waste dumping of sand blast grit was occurring throughout the southeastern portion of the site.

Since 1996, this property has undergone various soil and groundwater investigations, including the installation of five groundwater monitoring wells at this property. Groundwater was determined to have been

impacted with metals, TCE, PCE, and 1,1-dichloroethylene (1,1-DCE). In 1998, nine test holes (TH-1 to TH-9) were advanced in an area along the eastern portion of the site that was downgradient of a former diesel-powered air compressor and equipment wash down area) on the Runnels Property – analysis of the soil samples from these test holes revealed total petroleum hydrocarbon as diesel (TPHd) concentrations as high as 640 milligrams per kilogram (mg/kg).

In 2003, three surface soil samples (K-B1, K-B2, and K-B3) were collected from different areas through the site. These locations were selected based on a visual survey of the site for blast grit on surface soils throughout the site. Soil sample K-B2, which was located on the southeastern portion of the site, contained elevated concentrations of arsenic, chromium, and copper. Soil sample K-B3, which was collected along the eastern fence line, contained elevated concentrations of TPHd, TPH as oil, chromium, and zinc.

In 2010, a Corrective Action Plan was submitted and approved by the SFBRWQCB. The remedial activities would eventually include abandonment of the remaining groundwater wells; soil sampling throughout the Runnels Property, the site, and the south-adjointing railroad spur; and soil excavation and removal. The soil sampling determined that the areas to be excavated on the site included a large portion of the southeastern corner (identified as KF-A) and a small area on the south-central portion where sandblast grit was observed (identified as KF-B). The target chemicals of concern for the soil removal included TPHd and TPH as motor oil, arsenic, lead, zinc, and polycyclic aromatic hydrocarbons (PAHs). Soil excavation was conducted from May to September 2010 to a depth of 1 to 1.5 feet below ground surface (bgs) in areas KF-A and KF-B. Soil was continuously excavated until confirmation samples met the pre-established cleanup goals for the above chemicals of concern (COCs). A total of 1,960 cubic yards of soil was excavated and removed from the site and the Runnels Property. The excavations were backfilled with imported fill.

The *Covenant and Environmental Restriction on Property* was placed only on the Runnels Property (filed with Alameda County Recorder on November 29, 2010), which restricts land use to industrial, commercial or office space, and prohibits the drilling of water supply wells at this property. The Covenant also required the implementation of a Soil Management Plan (SMP), which was submitted and approved by the SFBRWQCB. Based on the completion of the soil removal action, filing of the land use covenant, and submittal of the SMP, the SFBRWQCB issued a No Further Action letter for the Runnels Property on April 15, 2011.

Although cleanup goals were achieved for the KF-A and KF-B excavations, residual concentrations of TPH, metals and PAHs remain in on-site soils. It should be noted that groundwater beneath the site (expected to be 5-8 feet bgs) was not assessed for potential impacts; no groundwater monitoring data was readily available for the on-site monitoring well (K-MW). In addition, concentrations of TCE and 1,1-DCE were detected in soil and groundwater beneath the Runnels Property, but these chemicals (along with other volatile organic compounds [VOCs]) were not assessed as part of the prior site investigations. Therefore, additional subsurface impacts to the site originating from the Runnels Property may still exist.

Although other facilities were identified in the database search report, due to gradient, status, distance and/or the type of the listing, no additional properties of potential environmental significance were identified. Details regarding these facilities are presented in the database search report.

4.5 Other Environmental and Historical Sources

a) Information from Site Representatives

Site representatives were not aware of potential or known environmental impacts associated with the neighboring properties.

b) City Directories

In the city directory review discussed in Section 3.5, Enterprise Avenue was first identified on the 1969 city directory with various commercial and industrial listings. The east-adjacent property (3590 Enterprise Avenue) has been occupied by the following metal finishing and coating companies: CE Freeman Co. (1969-1976) and

Runnels industries (1981-2001). The north adjacent property has been occupied by Hayward Water Pollution since at least 1996. Regulatory database listings for both of these properties are discussed in Section 4.4.

c) Other Sources

Based on RPS's review, no database listings that warrant additional scrutiny (such as the review of agency documentation) were identified in connection with neighboring properties other than those discussed in Section 4.4.

5 SITE INSPECTION

5.1 Materials Use and Storage

Based on information provided by site representatives and RPS's field observations, the primary materials used and stored include retail-sized quantities of various paints, cleaning chemicals, and maintenance products within the site building. Chemical storage areas were well-maintained and in good condition.

RPS did not observe obvious visual indications of spills or releases. However, as discussed in Sections 3.3 and 4.4, past releases have occurred at the site.

5.2 Storage Tanks

a) Underground Storage Tanks (USTs)

Site representatives were not aware of current or historical USTs associated with the site. No evidence of historical USTs was identified through RPS's review of available historical information or during the site inspection.

b) Aboveground Storage Tanks (ASTs)

Site representatives were not aware of current or historical ASTs associated with the site. No evidence of historical ASTs was identified through RPS's review of available historical information or during the site inspection.

5.3 Waste Generation

No wastes are generated at this time as the site is unmanned. RPS did not identify evidence of on-site waste disposal.

Based on RPS's observations and information from site representatives, Salem does not currently generate hazardous waste. The site representatives were not aware of historical hazardous waste generation by Salem.

5.4 Wastewater Discharges

Sanitary wastewater from the site previously discharged into the municipal sewer system. However, according to site representatives, the municipal sewer connection to the site is currently capped due to a backflow issue and the on-site restroom is currently not in service. No other wastewater discharges are generated by Salem.

5.5 Stormwater Discharges

Stormwater runoff from the paved surfaces at the site drains into the nearby vegetation. No stained or distressed vegetation was observed.

5.6 Air Emissions

RPS did not identify obvious air emission sources with a potential to physically impact the site.

5.7 Polychlorinated Biphenyls (PCBs)

One pole-mounted electrical transformer was observed to the north of the radio transmitter building. According to site representatives, the transformer is owned by Pacific Gas & Electric. The transformer appeared in good condition with no evidence of leaks or spills. RPS did not observe other equipment likely to contain PCBs.

According to Hayward Fire Department, Salem conducted a survey in 1988 to check whether the on-site electrical equipment (capacitors and transformers) contained PCBs. Salem identified four capacitors at the site that contained PCBs. According to the site representatives, this equipment was removed and replaced approximately ten years ago. The site representatives were not aware of other equipment likely to contain PCBs.

5.8 Asbestos-Containing Materials (ACMs)

Site representatives were not aware of asbestos surveys for the site and none were identified in available site records. RPS identified suspect ACMs in the form of drywall and associated joint compound, and vinyl floor tile and associated mastic in the radio transmitter building. The suspect ACMs that were observed were in good condition. The building was constructed before asbestos stopped being commonly used in the construction industry. It should be noted that additional suspect ACMs may be present in inaccessible areas of the site structure, such as above fixed ceilings, behind walls or in roofing systems, and were therefore not observed during the site reconnaissance.

Because the building was constructed before 1981, and due to the presence of vinyl flooring in the radio transmitter building, the OSHA regulations regarding management of presumed ACM (PACM) in building materials applies. Salem does not have a management program in place to address these regulations. In the event of demolition or renovation, National Emissions Standards for Hazardous Air Pollutants (NESHAPs) requirements for the management of suspect ACMs will apply. The User intends to demolish the on-site structures and redevelop the site.

6 FINDINGS AND CONCLUSIONS

Environmental and other conditions associated with the site are characterized as RECs, CRECs, HRECs, de minimis conditions, noteworthy conditions, or other considerations as defined in Section 1.1 of this report. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report if not identified below.

This assessment revealed evidence of the following REC in connection with the site:

- **Impacts from Runnels Property:** The Runnels Property was located adjacent to the east of the site from at least 1966 through 2006. According to regulatory agency records, this facility's operations primarily consisted of the application of surface coatings on prefabricated metal materials. This included sandblasting with silicon, nickel slag, or glass beads followed by steam cleaning or chemical treatment. Surface coatings, including paints and high performance coating such as zinc epoxy urethane, were then sprayed onto the prepared materials. There were various interior and exterior chemical storage areas at this facility where paints, solvents, lubricating oils, hydraulic fluids, and fuels were stored. This facility also operated three USTs, including a 1,000-gallon methyl ethyl ketone UST, a 1,000-gallon diesel UST, and a 500-gallon gasoline UST, which were removed in 1993, as well as an oil-water separator (OWS), which was removed in 2009. In the late-1960s to early-1970s, the Runnels Property operations appeared to extend onto the southeastern portion of the site; it was later determined that waste dumping of sand blast grit was occurring throughout the southeastern portion of the site.

Since 1996, the Runnels property has undergone various soil and groundwater investigations, including the installation of five groundwater monitoring wells at this property. Groundwater was determined to have been impacted with metals, TCE, PCE, and 1,1-DCE. In 1998, nine test holes (TH-1 to TH-9) were advanced in an area along the eastern portion of the site that was downgradient of a former diesel-powered air compressor and equipment wash down area on the Runnels Property. Analysis of the soil samples from these test holes revealed TPHd concentrations as high as 640 mg/kg.

In 2003, three surface soil samples (K-B1, K-B2, and K-B3) were collected from different areas on the site. These locations were selected based on a visual survey of the site for blast grit on surface soils throughout the site. Soil sample K-B2, which was located on the southeastern portion of the site, contained elevated concentrations of arsenic, chromium, and copper. Soil sample K-B3, which was collected along the eastern fence line, contained elevated concentrations of TPHd, TPH as oil, chromium, and zinc.

In 2010, a Corrective Action Plan was submitted and approved by the SFBRWQCB. The remedial activities would eventually include abandonment of the remaining groundwater wells; soil sampling throughout the Runnels Property, the site, and the south-adjointing railroad spur; and soil excavation and removal. The soil sampling determined that the areas to be excavated on the site included a large portion of the southeastern corner (identified as KF-A) and a small area on the south-central portion where sandblast grit was observed (identified as KF-B). The target chemicals of concern for the soil removal included TPHd and TPH as motor oil, arsenic, lead, zinc, and PAHs. Soil excavation was conducted from May to September 2010 to a depth of 1 to 1.5 feet below ground surface (bgs) in areas KF-A and KF-B. Soil was continuously excavated until confirmation samples met the pre-established cleanup goals for the above COCs. A total of 1,960 cubic yards of soil was excavated and removed from the site and the Runnels Property. The excavations were backfilled with imported fill.

The *Covenant and Environmental Restriction on Property* was placed only on the Runnels Property (filed with Alameda County Recorder on November 29, 2010), which restricts land use to industrial, commercial or office space, and prohibits the drilling of water supply wells at this property. The Covenant also required the implementation of a SMP, which was submitted and approved by the SFBRWQCB. Based on the completion of the soil removal action, filing of the land use covenant, and submittal of the SMP, the SFBRWQCB issued a No Further Action letter for the Runnels Property on April 15, 2011.

Although cleanup goals were achieved for the KF-A and KF-B excavations, residual concentrations of TPH, metals and PAHs remain in on-site soils. It should be noted that groundwater beneath the site (expected to be 5-8 feet bgs) was not assessed for potential impacts; no groundwater monitoring data was available for the on-site monitoring well (K-MW). In addition, concentrations of TCE, PCE, and 1,1-DCE were detected in

soil and groundwater beneath the Runnels Property, but these chemicals (along with other volatile organic compounds [VOCs]) were not assessed as part of the prior site investigations. Therefore, additional subsurface impacts to the site originating from the Runnels Property may still exist.

This assessment revealed evidence of the following HREC in connection with the site:

- **Abandoned Waste Oil Drums:** HFD records include reports and correspondences regarding drums found at the site in 1994. The drums, which contained used oil, were determined to be from a nearby auto repair facility. According to site representatives, the HFD removed the drums and conducted the cleanup of the site, although they were not aware of the specific location that the drums were found. The records mention that soil samples were collected; however, the analytical results were not provided. Nonetheless, the cleanup appeared to be conducted to the satisfaction of the HFD; therefore, no additional assessment appears to be warranted at this time.

This assessment identified the following other considerations in connection with the site:

- **Asbestos-Containing Materials (ACMs):** Because the site building was constructed before 1981, and due to the presence of vinyl flooring in the radio transmitter building, the OSHA regulations regarding management of PACM in building materials applies. Salem does not have a management program in place to address these regulations. In the event of demolition or renovation, NESHAPs requirements for the management of suspect ACMs will apply. The User intends to demolish the on-site structures and redevelop the site.

7 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared by:

Noli Valera
Senior Consultant
Environmental Professional

Technical Review and Concurrence by

Alonzo Granados
Vice President
Environmental Professional

9 LIMITATIONS, EXCEPTIONS, AND SIGNIFICANT ASSUMPTIONS

RPS performed this Phase I ESA on behalf of and exclusively for DPIF3 CA 30 Enterprise Ave, LLC. This report and the findings shall not be relied upon, in whole or in part, by any other party, except by or with the express consent of RPS and an authorized representative of DPIF3 CA 30 Enterprise Ave, LLC.

This assessment is subject to the stated limitations of ASTM-13 or the federal AAI standard, as applicable, and other qualifications as described within the report. Any reliance upon this report by third parties without RPS's written authorization shall be at such parties' sole risk. In the event reliance on this report is extended to additional parties, those parties may become "users" as defined by ASTM-13 and should independently confirm that they have addressed the User requirements outlined in ASTM-13 and that their use of the report is consistent with the purposes for which it was prepared.

This review was based on the time frame, budget and scope of the project. The review was intended to identify issues of relevance to the contemplated transaction that this report was prepared to support.

This assessment was conducted by or under the supervision of an individual(s) meeting the definition of an Environmental Professional under ASTM-13 and the federal AAI standard. Tasks not performed by an Environmental Professional were performed by individuals qualified based on education, training and experience to conduct such tasks for a property of the nature, history and setting of the site.

ASTM defines "data gaps" as an inability to obtain information required for the review despite good faith efforts (such as the lack of historical information back to 1940 or to the first developed use of the property [whichever is earlier]) or as an incompleteness in any of the activities required for the review (such as limited site accessibility or the inability to interview a key site representative). Unless otherwise described in the body of this report, if any one or more of the standard sources under ASTM-13 was not reviewed, this was due to information from the source not being readily available or a determination by the Environmental Professional that the standard source was not likely to be useful. Similarly, unless otherwise noted in this report, an incompleteness in connection with the review was determined not to affect the Environmental Professional's ability to form conclusions regarding the site.

Unless otherwise indicated herein, RPS was not made aware of any specialized knowledge of the landowner or client, any relationship of the purchase price to the fair market value of the site that may be indicative of an environmental concern, or any environmental liens or other activity and use limitations known by the client or user of the report. In the absence of this information, RPS is not able to form conclusions about the environmental condition of the site that may otherwise have been evident had any such information been made available. Unless otherwise indicated herein, the reason for performing this Phase I ESA is assumed to be (at least in part) to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser liability defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

It should be noted that past agricultural use is considered a developed use under ASTM; any past use of the site for agricultural purposes suggests a potential for residual agricultural chemicals. Unless otherwise stated in this report, no evidence or reports of chemical spills or misuses of agricultural chemicals were identified.

During this Phase I ESA, RPS relied upon the information provided by site representatives, regulatory officials, and other informed individuals and reports and documents generated by other consultants. RPS has assumed, where reasonable, that the information reviewed is true and accurate but assumes no responsibility or liability for its accuracy or completeness.

RPS's site observations are of the conditions observed at the time of the assessment. RPS did not observe areas of the site or features of the site where that inspection would have interfered with operations. Additionally, RPS did not enter confined spaces. Pits, trenches or other subsurface features were inspected as thoroughly as possible from access points, vault openings, and through grated drains/lids. RPS did not test the integrity or engineering adequacy of subsurface pits, trenches, sewers, or containment features, aboveground containment

systems or tanks. RPS's observation of such equipment/systems is limited to visual evidence of releases or significant deterioration.

RPS reviewed an environmental database search report. RPS's conclusions based on the search report are limited to the accuracy of that report. To the extent practicable, RPS's field observations were used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the site, consistent with the federal AAI standard.

RPS evaluates environmental database listings and the potential for additional documentation maintained by regulatory agencies to materially alter the Environmental Professional's opinion with regard to the environmental condition of the site. Except where otherwise described in this report, the pursuit of additional documentation either through regulatory agency file reviews or requests for additional information from the site operator, site owner or the owners/operators of nearby properties, was determined to be unnecessary as it would not be expected to alter the findings of the assessment.

Conclusions provided with regard to subsurface soil and groundwater impacts are limited to those that can be formed based on a non-intrusive investigation. RPS has considered all the information collected during this assessment to ascertain the potential presence of a release or threatened release of hazardous substances at the property. Based on the totality of information, RPS has assessed whether or not an obvious conclusion may be drawn that there are conditions indicative of a release or threatened release, and considered whether the parties should be able to detect the release by conducting a subsurface investigation. Where RPS concludes that the potential for impact is present, it should be understood that such impact can only be identified or ruled out through subsurface investigation. The absence of environmental hazards in the subsurface cannot be guaranteed based on conditions observed on the surface. The scope of this project did not include subsurface soil or groundwater sampling.

RPS evaluates the potential for the presence or likely presence of contaminant of concern (COC) vapors in the subsurface of the site using our professional judgment and evaluation of the available information and may use portions of ASTM E2600-15 as a guide. Note that this evaluation is not a full Vapor Encroachment Screen (VES) pursuant to ASTM E2600-15. The vapor evaluation is not exhaustive and cannot wholly eliminate uncertainty regarding the presence or potential presence of COC vapors in the subsurface of the site.

The estimated groundwater gradients (flow directions) referenced throughout this report are based on field observations of the topography of the area, review of topographic map(s), information in the database search report, and other information as available. It should be noted that groundwater flow directions can be highly variable in neighboring areas, and can be influenced by factors such as water production wells or re-grading or development in the area.

The review of available wetlands information, if performed, was intended for purposes of evaluating risks associated with potential on-site impacts and does not represent a jurisdictional wetlands delineation. A certified wetlands delineation may be necessary prior to further site development.

If conducted as part of this review, the visual inspection for potential ACM included materials that have historically been shown to have a potential to contain asbestos. Unless otherwise noted in this report, RPS's review of ACM is limited to interior building materials. The limited visual survey for potential ACM is intended to provide an indication of the potential for significant environmental issues associated with ACM and should not be regarded as a comprehensive survey for demolition or other purposes. Testing should generally be conducted to identify regulated ACM prior to remodeling or demolition of the site structures.

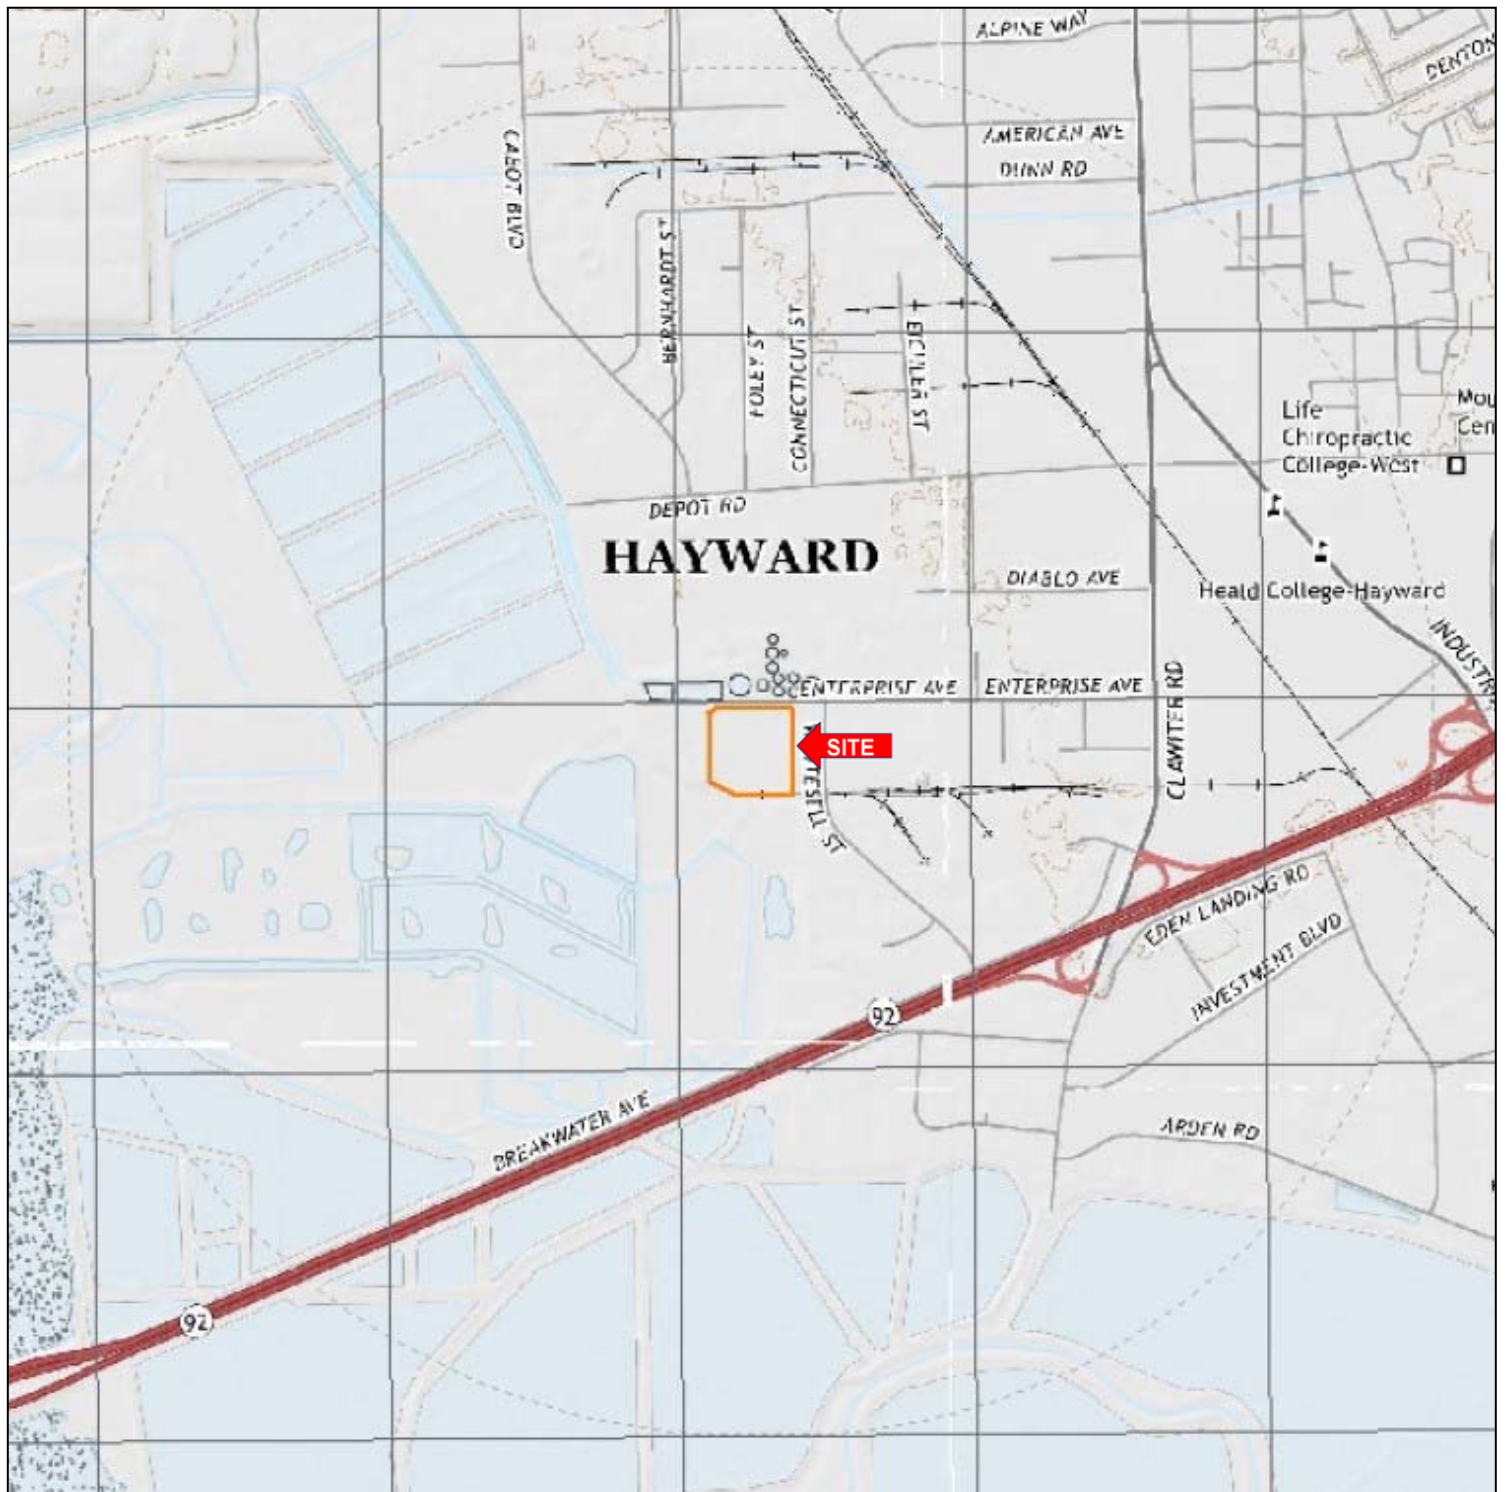

The scope of this report is limited to matters expressly covered. Implementation or use of the recommendations, findings or conclusions of this report does not preclude the potential for present or future environmental liability or ensure the fulfillment of a property owner's obligation to provide full environmental disclosure in accordance with any local, state or federal laws.

RE: CITY DIRECTORY RESEARCH
3636 Enterprise Avenue, Hayward, CA
3636 Enterprise Avenue Hayward, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

All of Enterprise

All of Whitesell

Subject: 3636 Enterprise Avenue
Hayward, California

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Council:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in the City of Hayward, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Standard Testing Method (ASTM) Practice E1527-13. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-13.

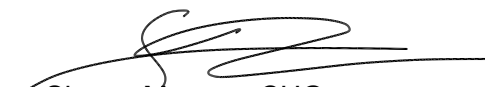

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

Jerry Chen

EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the property located at 3636 Enterprise Avenue, Hayward, California (Property). The Property is approximately 11 acres in area and is identified by Assessor's Parcel Numbers (APNs) 439-0099-036-02 and 439-0099-035. The subject Property is also referred to as the "KFOX" property in this report.

The Property is open land and consists of four radio towers, four small transmitter units, and one steel control unit structure. Review of historical records indicates that the Property has been occupied by the radio towers and control units since approximately 1974.

The adjacent 3.5-acre site to the east was previously occupied by Runnels Industries (Runnels), a metal finishing and coating company. Soil and groundwater investigations were conducted between 1996 and 2003. The results of the investigation identified total petroleum hydrocarbons (TPH) as diesel and motor oil, metals, and polycyclic aromatic hydrocarbons (PAHs) in shallow soil. Low levels of TPH, metals, and volatile organic compounds (VOCs) were detected in groundwater beneath the site. *"Investigation results, in conjunction with visual observation, confirmed that operations at Runnels Industries had impacted the KFOX property, an 11-acre grass-covered open area with the address of 3636 Enterprise Avenue located immediately west of the site. No impact to surface water body had been detected."*

In early 2010, a Corrective Action Plan was prepared for the Runnels site that was reviewed and approved by the San Francisco Bay California Regional Water Quality Control Board (RWQCB) and implemented later in 2010. Approximately 2,878 cubic yards of soil was excavated and disposed off-site with depths between 1 and 3.5 feet below ground surface (bgs). Confirmation samples collected from the sidewalls and bottoms of the excavation confirmed the removal activities met the cleanup goals. It should be noted that two soil samples within the subject KFOX Property, KF-A-S-B7-0-1' and KF-A-S-B9-0-1' reported lead concentrations of 1,200 and 2,700 mg/kg, respectively and were not excavated, due to site 95 percent UCL cleanup goal being achieved. The completion report was submitted to RWQCB who then issued a No Further Action (NFA) letter dated April 15, 2011.

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was conducted to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials and interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property, with the exception of the Runnels Property to the east. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property, with the exception of the Runnels Property to the east.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs), one historical REC, and no controlled RECs were identified for the Property. The following is identified as an HREC:

- The adjacent Runnels Industries property to the east has impacted the subject Property. The RWQCB provided oversight of a Corrective Action Plan in 2010 that included excavation, confirmation sampling, and off-site disposal. Residual impacts exist on the subject Property. The case received No Further Action from RWQCB in 2011.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

A data gap was identified during this process related to limited City of Hayward agency responses, due to COVID-19 restrictions. Files were available from other agencies, including remedial work associated with the Runnels and KFAX properties that confirmed RECs at the Property.

This assessment has revealed one evidence of a Historic Recognized Environmental Condition in connection with the Property as a result of impact from the adjacent Runnels property. The Property is suitable for commercial and industrial development. It would be prudent to consider preparation of a Site Management Plan to assist with future redevelopment activities. No further environmental studies are recommended at this time.

1.0 INTRODUCTION

1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of Salem Broadcasting Company for the purpose of environmental due diligence. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-13, an REC is “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following:

- A review of previous environmental reports prepared for the Property.
- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Written interviews with owners/occupants.
- Preparation of this report with our findings, opinions, and conclusions.

1.3 SITE LOCATION AND DESCRIPTION

ENGEO conducted a phase I environmental site assessment for the Property located at 3636 Enterprise Avenue, Hayward, California (Figures 1 and 2). The approximately 11-acre Property is identified as APNs 439-0099-036-02 and 439-0099-035 (Figure 4) and is currently occupied by four radio towers and transmitter units, and one main control unit.

1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The subject Property is currently in use as a broadcasting station. The main control unit contains electrical equipment to control and monitor the functionality of the four radio towers located across the parcels.

At the time of our site reconnaissance, the area east of the Property was unoccupied and undeveloped. The area to the west appeared to be utilized as a warehouse or trucking stop, occupied by two large single-story structures. The City of Hayward Wastewater Treatment Plant is located to the north. The area to the south is bounded by a railroad track and undeveloped land.

1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the Property ranges in elevation from approximately 1 foot above mean sea level (msl) in the south to approximately 5 feet above msl to the north. Review of the 2006 USGS Quaternary Geologic Map by Witter et al. found that the Property is underlain by Holocene-age alluvial fan deposits.

Geocheck – Physical Setting Source Summary of the Environmental Data Resources, Inc. (EDR) report (Appendix A) indicated six Federal United States Geological Survey (USGS) and eight State wells located within 1 mile of the Property. Well Number USGS40000184204 is mapped approximately ½ mile south-southeast of the Property and one groundwater level measurement is reported for this well. Groundwater in the vicinity of Property was observed between 2 feet and 20 feet below the ground surface. The Physical Setting Source Summary also provided hydrogeologic information for use as an indicator of groundwater flow direction in the immediate area. This section indicated two wells approximately ½ mile east-southeast of the Property. Information gathered from this site indicates the groundwater flow direction was observed to the west to southwest and the depth to groundwater is approximately 14 feet.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the Property. The website did not identify any wells within 1 mile of the Property.

We reviewed EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for nearby facilities with records that include depth to groundwater measurements. The following information was obtained regarding local groundwater conditions.

TABLE 1.5-1: Local Groundwater Conditions

PROXIMITY TO PROPERTY	REPORTED DEPTH TO GROUNDWATER	REPORTED GROUNDWATER FLOW DIRECTION
Adjacent to East	5 to 8 Feet	West
800 Feet East	6 to 8 Feet	West-Southwest

The site-specific depth to groundwater and direction of groundwater flow was not determined as part of this assessment. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), formerly the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), website and map database to determine if any historic oil and/or gas wells were located within the Property. No wells were mapped within 1 mile of the Property.

2.0 PREVIOUS ENVIRONMENTAL REPORTS

California Regional Water Quality Control Board, No Further Action, Former Runnels Property, 2590 Enterprise Avenue, Hayward, Alameda County, April 15, 2011

The California Regional Water Quality Control Board (RWQCB) issued a No Further Action letter associated with the remedial action completed at the Runnels Industries site that included a portion of the subject Property.

The Runnels site is located along the eastern boundary of the subject Property and is approximately 3.5 acres in area. The site was formerly occupied by Runnels Industries, a metal finishing and coating company, with activities that included steam cleaning, sandblasting, and coating applications. The facility involved the use and storage of various materials including sandblasting grits, paints, solvents, oils and diesel fuel. Runnels Industries vacated the property in 2002 and the site remained unoccupied until 2009 when the Russel City Energy Company demolished and removed the structures.

Soil and groundwater investigations were conducted between 1996 and 2003. The results of the investigation identified total petroleum hydrocarbons (TPH) as diesel and motor oil, metals, and polycyclic aromatic hydrocarbons (PAHs) in shallow soil. Low levels of TPH, metals, and volatile organic compounds (VOCs) were detected in groundwater beneath the site. *“Investigation results, in conjunction with visual observation, confirmed that operations at Runnels Industries had impacted the KFAX property (subject Property), an 11-acre grass-covered open area with the address of 3636 Enterprise Avenue located immediately west of the site. No impact to surface water body had been detected.”*

Three underground storage tanks (USTs) and one oil-water separator were removed from the Runnels property in 1993 and 2009, respectively. Between May and September 2010, approximately 2,878 cubic yards of soil was excavated and disposed off-site with depths between 1 and 3.5 feet below ground surface (bgs). Confirmation samples collected from the sidewalls and bottoms of the excavation confirmed the removal activities met the cleanup goals. The completion report was submitted to RWQCB for review who then issued a No Further Action (NFA) letter dated April 15, 2011.

A land use convenient (LUC) is recorded for the Runnels property. However, the LUC does not include the subject Property.

ARCADIS, Soil Removal Action Completion Report, Runnels Site, 3590 and 3636 Enterprise Avenue, Hayward, California, September 29, 2010

ARCADIS US., Inc. (ARCADIS) prepared a Soil Removal Action Completion Report on behalf of Russell City Energy Company, LLC. The report summarizes Runnels past activities and describes the remedial actions that occurred, including sampling, excavation, and off-site disposal. Cleanup goals were established for TPH-motor oil, TPH-diesel, arsenic, lead, and PAHs. The criteria to continue excavation was based on the 95 percent UCL of the confirmatory sampling met industrial cleanup goals for each contaminant of concern, and no individual contaminant concentration exceeded the ceiling value of 10 times the industrial cleanup goal. It should be noted that the while the statistical cleanup goals were achieved, two soil samples within the subject KFAX Property, KF-A-S-B7-0-1' and KF-A-S-B9-0-1' reported lead concentrations of 1,200 and 2,700 mg/kg, respectively.

ARCADIS acknowledged that some residual impacted material could remain and the Land Use Covenant (LUC) for the Runnels property includes a provision to prepare a soil management plan so soil can be handled appropriately. ARCADIS concluded, *“the soil cleanup goals for the Site have been achieved. No further action is recommended for the Site.”*

This completion report was submitted to RWQCB and a No Further Action letter was issued dated April 15, 2011.

3.0 RECORDS REVIEW

3.1 PROPERTY RECORDS

3.1.1 Title Report/Ownership

A Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources.

A Preliminary Title Report for the Property, prepared by North American Title Company and dated May 11, 2020, was provided for our review. The Property title is vested in Salem Broadcasting Company, a California General Partnership. No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix B.

3.1.2 Environmental Liens and Activity Use Limitations

Environmental liens and activity use limitations records, if any, were not provided for our review prior to the publication of this report.

3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

3.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps, aerial photographs, and Sanborn Fire insurance maps were searched and reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices C, D, and E. The subject Property is not covered within Sanborn Maps.

TABLE 3.2.1-1: Historical Review Summary

HISTORIC MAP/ PHOTOGRAPH	YEARS
Topographic Maps	1899, 1915, 1947, 1948, 1950, 1959, 1968, 1973, 1980, 1996, 2012
Aerial Photographs	1939, 1946, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2012, 2016
Sanborn Maps	N/A

Based on the review of the above mentioned maps and photographs, the Property appears to have been undeveloped and unoccupied until at least the year 1974, where the presently existing improvements were first observed.

In the 1968 photograph, it is apparent the Runnels property to the east is being developed and a portion of the adjacent activities encroaches onto the subject KFXA Property.

3.2.2 City Directory

City Directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F. Runnels Industries was listed at 3590 Enterprise Avenue from 2002 to 1976. Prior to 1976, Freeman CECO was listed between 1975 and 1970.

TABLE 3.2.2-1: City Directory

YEAR	LISTINGS
2017, 2014	Pappas Radio of California was identified by Cole Information Services

3.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

3.3.1 Environmental Records

3.3.1.1 Subject Property

The Property is listed on the following Environmental Record source databases as a result of being associated with the Runnels property cleanup.

- ENF – Notice of violations listing associated with Runnels Property listed at 3590-3636 Enterprise Avenue. This appears to be associated with a site investigation work plan prior to soil remediation.
- CIWQS – California Integrated Water Quality System Project associated with Russell City Energy listed at 3636 Enterprise Avenue. Appears to be related to the stormwater permit during excavation of soil remediation.

3.3.1.2 Other Properties

The following databases include facilities listed within the appropriate ASTM search distances of the Property on Environmental Records sources. Number of listings in parentheses.

SWF/LF (1)	DEED (4)
Cortese (1)	AST (5)
ENF (1)	CERS TANKS (5)
MWMP (1)	CA FID UST (6)
PROC (1)	HIST UST (7)
CIWQS (1)	SWEEPS UST (8)
SEMS-ARCHIVE (2)	Alameda County CS (10)
RCRA-LQG (2)	CERS HAZ WASTE (11)
UST (2)	ENVIROSTOR (13)
HWT (2)	RCRA NonGen / NLR (13)
RCRA-SQG (3)	HIST CORTESE (16)
BROWNFIELDS (3)	CPS-SLIC (17)
Notify 65 (3)	LUST (25)

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. Properties that are on the “Orphan Summary” list appear to be located beyond the ASTM recommended radius search criteria.

3.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

TABLE 3.4-1: Regulatory Agency Records

NAME OF AGENCY	RECORDS REVIEWED
City of Hayward Building and Planning Departments	We contacted the City of Hayward Building and Planning Departments. Staff representation reviewed their files and no relevant files were provided for our review.
Hayward Fire Department	Hugh Murphy with Hayward Fire Department confirmed they do have files for the Property, but the City is not scheduling file reviews due to COVID-19 restrictions. City confirmed electronic files were not available.
Alameda County Department of Environmental Health	Alameda County Department of Environmental Health does not have jurisdiction and referred us to City of Hayward Fire Department.
Alameda County Fire Department	County representation confirmed they do not have any files for the Property and directed us to City of Hayward Fire Department.
Alameda County Assessor’s Office	A County representative confirmed the Property APNs, addresses, and acreage.
California State Water Resources Control Board	We reviewed the online GeoTracker database. The Property was not listed in the database. Runnels Industry was identified, as discussed in section 2.0.
Department of Toxic Substances Control	We reviewed the Envirostor database. The Property was not listed in the database. Runnels Industry was identified, as discussed in section 2.0.

3.5 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 454 tests were conducted within the Property zip code, with 14 tests exceeding the current EPA action level of 4 picocuries per liter {pCi/L}¹).

In accordance with ASTM E2600-15 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); There do not appear to be potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property or volatile organic compound (VOCs) sources within 1/3 mile of the Property that would be expected to impact the subject Property. The former Runnels facility is a potential source of groundwater impact.

¹ California Department of Public Health – Radon Program–
(<https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf>).

4.0 SITE RECONNAISSANCE

4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on June 2, 2020. The reconnaissance was performed by Jerry Chen, a Staff Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 5.

Due to safety concerns, we were unable to enter the small fenced areas surrounding each radio tower; however, we were able to observe from behind fences and did not observe any environmental concerns during our reconnaissance.

4.2 EXTERIOR OBSERVATIONS

The following table summarizes our observations during the reconnaissance:

TABLE 4.2-1: Exterior Site Observations

FEATURE TYPE	OBSERVATIONS
Structures	One steel control unit structure, four radio towers, and four steel transmitter units were observed on the Property at the time of reconnaissance.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	No hazardous substances or petroleum products were observed within the Property during the site reconnaissance.
Storage Tanks (underground and above-ground)	No above-ground storage tanks or evidence of existing underground storage tanks was observed during the site reconnaissance.
Odors	No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.
Pools of Potentially Hazardous Liquid	No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.
Drums	No drums were observed on the Property at the time of the reconnaissance.
Polychlorinated Biphenyls (PCBs) Containing Equipment	One pole-mounted transformer was observed near northern portion of the site. However, no evidence of staining or leaking was observed.
Hazardous Substances and Petroleum Product Containers	No hazardous substance or petroleum product containers were observed on the Property at the time of our reconnaissance.
Pits, Ponds, and Lagoons	No pits, ponds or lagoons were observed within the Property at the time of our reconnaissance.
Stained Soil/Pavement	No stained soil or pavement was observed within the Property at the time of our reconnaissance.
Stressed Vegetation	No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.
Solid Waste/Debris	No disposal of solid waste was observed at the subject Property.
Stockpiles/Fill Material	Some fill was observed on the western end of the Property.

FEATURE TYPE	OBSERVATIONS
Wastewater	No wastewater conveyance systems were observed at the Property during the reconnaissance.
Wells	No wells were found within the Property during our site reconnaissance.
Septic Systems	No septic systems were found within the Property during our site reconnaissance. The Property owner representative confirmed a former restroom was located on-site that was serviced by the sanitary sewer but the restroom has since been removed.

4.3 INTERIOR OBSERVATIONS

The interior of the main control unit was observed. No obvious indications of hazardous material related issues were observed during our reconnaissance.

4.4 ASBESTOS, LEAD, AND PCB-CONTAINING MATERIALS

An asbestos, lead, and PCB-containing building material survey was not conducted as part of this assessment. Given the age of the existing structures, it is conceivable that asbestos, lead, and/or PCB-containing materials may exist within the structures.

5.0 INTERVIEWS

Mr. Edward G. Atsinger III, representative of Property owner, completed an environmental site questionnaire pertaining to user-related applicable environmental information regarding the Property. In the questionnaire, Mr. Atsinger acknowledged the adjacent Runnels property had impacted the subject Property. The questionnaire is presented in its entirety in Appendix G. A summary is provided below.

Mr. Atsinger is unaware of commonly known, reasonably ascertainable, or specialized knowledge indicative of releases or threatened releases that is material to the potential presence of Recognized Environmental Conditions. Mr. Hugh Murphy with the City of Hayward Fire Department recalls the remediation at the Runnels property, as well as the KFOX property. He also confirmed the Fire Department has files for the Property, but is not scheduling file reviews at the time of publication due to COVID-19 restrictions.

6.0 FINDINGS AND CONCLUSIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was conducted to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials and interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did not find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property, with the exception of the Runnels Property to the east. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within

the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property, with the exception of the Runnels Property to the east.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs), one historical REC, and no controlled RECs were identified for the Property. The following is identified as an HREC.

- The adjacent Runnels Industries property to the east has impacted the subject Property. The RWQCB provided oversight of a Corrective Action Plan in 2010 that included excavation, confirmation sampling, and off-site disposal. Residual impacts exist on the subject Property. The case received No Further Action from RWQCB in 2011.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

A data gap was identified during this process related to limited City of Hayward agency responses, due to COVID-19 restrictions. Files were available from other agencies, including remedial work associated with the Runnels and KFAX properties that confirmed RECs at the Property.

This assessment has revealed one evidence of a Historic Recognized Environmental Condition in connection with the Property as a result of impact from the adjacent Runnels property. The Property is suitable for commercial and industrial development. It would be prudent to consider preparation of a Site Management Plan to assist with future redevelopment activities. No further environmental studies are recommended at this time.

7.0 LIMITATIONS

7.1 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

Due to COVID-19 restrictions, the City of Hayward Fire Department was unable to schedule a file review to review Property files. However, we were able to review site remediation files available from the Regional Water Quality Control Board database. This is not considered a significant data gap.

7.2 OPINIONS AND DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The data gaps identified during this process are a low risk to affect the conclusions as to the presence or lack of presence of RECs at the Property. Files were available from other agencies, including remedial work associated with the Runnels and KFAX properties that confirmed RECs at the Property.

- Due to safety concerns, unable to view interior of radio unit during site reconnaissance.
- City of Hayward Fire Department was not scheduling file reviews due to COVID-19 restrictions.

7.3 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for one year after completion of the report. Updates of portions of the assessment may be necessary after a period of 180 days after completion.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

7.4 SPECIAL TERMS AND CONDITIONS

ENGEO has prepared this report for the exclusive use of our client, Salem Broadcasting Company. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

Laboratory testing of soil, soil gas, or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, that occurred subsequent to the reconnaissance conducted by ENGEO personnel.

Certificate of Occupancy

CITY OF HAYWARD, CALIFORNIA

BUILDING INSPECTION DIVISION

No. 5683

THIS IS TO CERTIFY that a final inspection and examination has been made by the Building Department of that certain building located at 3636 Enterprise

Lot _____ Block _____ Tract _____ in the City of Hayward, County of Alameda, State of California, and has been found to substantially comply with the provisions of the building and zoning ordinances of the City of Hayward and/or the California State Housing Act and MAY BE OCCUPIED in accordance with the relevant provisions of said ordinances as State Housing Act.

The permission hereby granted to occupy said building is based on the premise that the building and the land upon which it is situate will be constantly maintained in accordance with all the ordinances of the City of Hayward and laws of the State of California regulating the use and occupancy of buildings of a similar class and lands situate in a similar district as the building and lands hereinbefore referred to. This permit may be revoked for any violation of said ordinances and/or State Laws.

Dated this 9th day of October 19 69

NOTE: The granting of a Building Permit does not grant any right or privilege to (1) erect any building and/or structure on any portion thereof, upon any street, alley, or other public place or portion thereof; or (2) use any building and/or structure on any portion thereof, for any purpose that is, or may be prohibited by ordinances of the City of Hayward.

The granting of a Building Permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such Permit.

I hereby certify and agree, if a permit is issued, that all the provisions of the BUILDING LAW, THE BUILDING ZONE ORDINANCES, SET-BACK LINE REQUIREMENTS AND THE FIRE ORDINANCES OF THE CITY OF HAYWARD and the STATE HOUSING ACT OF CALIFORNIA will be complied with whether herein specified or not; and I hereby agree to save, indemnify and keep harmless the City of Hayward against all liabilities, judgments, costs and expenses which may in any wise accrue against said city in consequence of the granting of this permit, or from the use or occupancy of any sidewalk, street or sub-sidewalk placed by virtue thereof, and will in all things strictly comply with the conditions of this permit.

I have read the above application and know the contents thereof; the same is true and correct. I further state that I am familiar with the laws governing building within the City of Hayward, and State of California and amendments thereto, and that the above building and or structure will be built in conformity therewith.

Re: 3635 Enterprise
Hayward

Dear Mr. Harris:

This will confirm the available short circuit current from PG&E's electric system at the above location.

The available short circuit current (SCI) to the main electrical panel termination lugs will not exceed 22,000 amps RMS symmetrical. This is based on the 400 amp main electrical panel being served at 277/480 volts, four wire, three phase service.

Any change in the voltage, main switch size or length of service conductor will negate the calculated SCI.

The SCI is based on the ultimate size of transformer required to serve the full-rated capacity of the main electrical panel.

If you have any questions, please call me at 510/784-3300.

Sincerely,

Karen Worthen
New Business Representative

☒ I hereby affirm that I am licensed under the provisions of Chapter 9 (Code, among with Sections 7000 of Division 1 of the Business and Professions Code, and my license is in full force and effect.

☒ I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5 of Business and Professions Code): Any city or county which requires a permit for construction, other than for the erection or removal of any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed or exempt to the project line of the Contractor's License Law (Chapter 9 commencing with Section 7000 of Division 1 of the Business and Professions Code) for that is a full exemption and the basis for the alleged exemption. Any violation of Section 7031.5 by an applicant for a permit subjects the applicant to a fine penalty of not more than five hundred dollars (\$500).

☒ I, as owner of the property, do my employees with me are in their sole compensation, to do the work, and the structure is not a tenant or contractor. License Law does not apply as an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. However, the building or improvement is sold within one year of completion, the owner-builder will be at the burden of proving that he did not build or improve for the purpose of sale.

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 Business and Professions Code). The Contractor's License Law does not apply to an owner of property who builds or improves the work and who contracts for each project with a contractor (by license) reviewed to the Contractor's License Law.

☒ I am exempt on the basis of _____ D & P.C. for this reason _____

☒ I hereby affirm that I have a Certificate of Consent to Sell and Lease, or a Certificate of Workers' Compensation Insurance, or a Certified Copy thereof (Sec. 3600 Labor Code).

RECEIVED BY
FIRE PREVENTION OFFICE

JAN 16 2004

Date: January 14, 2004
File No. 01S0564 (RDB) HAYWARD FIRE DEPARTMENT

Calpine Corporation
ATTN: Ms. Barbara McBride
4160 Dublin Boulevard
Dublin, CA 94568

SUBJECT: Conditional Approval of Technical Report *Additional Site Characterization Investigation Report*, and Request for Technical Report, 3590 and 3636 Enterprise Avenue, Hayward, Alameda County

Dear Ms. McBride:

This letter responds to your December 30, 2003, *Additional Site Characterization Investigation Report* for the properties located at 3590 and 3636 Enterprise Avenue in Hayward. I approve this report on the condition that potential environmental concerns identified at the site are summarized in a screening level environmental risk assessment. **A report that presents the results of the risk assessment must be submitted to my office no later than March 19, 2004.**

Background

The site is located along a light industrial thoroughfare in Hayward. The 3590 Enterprise Avenue property was developed in 1966 and until recently was used for metal painting. The adjacent property, 3636 Enterprise Avenue, is occupied by a radio tower but is otherwise undeveloped. Environmental investigations have been carried out at the site since 1996. Soils are impacted with sand blast wastes, metals and petroleum. Groundwater is impacted with low levels of chlorinated solvents and petroleum. The December 30, 2003, investigation report further delineated the extent of soil and groundwater impacts at the site.

Condition For Approval

A screening level environmental risk assessment must be prepared for the site. The report should summarize all data collected at the site (in text and on maps that clearly denote impacted areas), identify potential environmental concerns and make initial recommendations for additional actions. One source of screening levels and information on preliminary risk assessments is our office's document *Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater* (July 2003). An outline of the information that must be included in the risk assessment is provided in that document. **A report that summarizes the screening level risk assessment must be submitted to my office for review no later than March 19, 2004.**

CAPT. SMAKER, ASSIST

3642 REPLACED BY 3652 ON DISPATCH. 3642 CANCELED.

3651 04/27/1994
ABC MONTEVAGO, HAZ MAT

CHIEF 3651 RESPONDED TO A LEVEL I HAZ MAT RESPONSE. ON ARRIVAL I FOUND THIS TO BE A SINGLE WASTE OIL DRUM LEAKING WITH SEVERAL SURROUNDING 55 GAL DRUMS. DANNY GALANG , HAZ MAT INVESTIGATOR WAS ON THE SCENE. I ASSIGNED 3652 TO STOP THE LEAK AND DANNY GALANG TO FOLLOWUP WITH THE CLEANUP. APPARENTLY THE 55 GALLON DRUMS WERE LEFT ON THIS VACANT PARCEL OF LAND BY AN UNKNOWN PERSON(S). HPD WAS CALLED TO THE SCENE. OFFICER J. LUTZINGER #373 TOOK THE REPORT. C- 3651 THEN TERMINATED THE ASSIGNMENT.

3652 04/27/1994
CAPT. SHIRLEY, ASSIST

DISPATCHED TO A LEVEL 1 HAZ MAT CALL. ON ARRIVAL ABC MONTEVAGO WAS ON THE SCENE. HE INFORMED US THAT SOME DISCARDED 55 GAL. DRUMS HAD BEEN DUMPED ON THE VACANT LOT AND ONE OF THE DRUMS WAS LEAKING OIL. WE FOUND THAT ONE OF THE DRUMS WAS ON IT'S SIDE AND STOPPED THE LEAK BY RIGHTING THE DRUM. WE WERE RELEASED FROM THE SCENE AT THIS TIME BY CHIEF 3611.

May 2, 1994

Mr. Paul Smith
Supervising Hazardous Materials Specialist
Division of Hazardous Materials
Department of Environmental Health
Alameda County Health Agency
80 Swan Way, Room 200
Oakland, CA 94621

Dear Mr. Smith:

We write to ask for your help in pursuing a lead on a "dumping" in Hayward. A label on one of the drums points to a San Leandro Auto Repair Shop which might have gone out of business.

On Thursday, April 28, 1994, we responded to a call about some drums found in a private property in the industrial section of Hayward. Several 55-gallon drums and smaller cans were dumped on a vacant lot. Most of the drums were empty but one contained waste oil which has spilled onto the ground. The property owner has agreed to have discharge cleaned up and the drums and waste oil properly disposed of.

One drum had a small label on it, the size of a business card. It contained the following information:

Top of the Hill Tune-up & Auto Repair
Specializing in Toyota, Honda and Nissan
JOSE (CHEO) ORTIZ
2120 Altamont Road
San Leandro, CA 94578
(510) 895-5852

The telephone listed "has been disconnected." Neither the business nor the person named on the label is a currently-listed telephone subscriber.

We were wondering if you would have anything in your files on this person or his business. Is the address given above a regulated facility? A hazardous waste generator?

Thank you for your help in this matter. If you can provide us with further information, call us at 293-8695.

Sincerely,

A handwritten signature in dark ink, appearing to read "Danilo M. Galang".

PHONE LOG

RE: 3636 ENTERPRISE AVENUE, K F A X RADIO

CONTACT: LEN HARRIS, (510) 713-1100

TELEPHONE CONVERSATION ON MAY 18, 1994 AT 8:20 A.M. WITH -

**ROBERT WESTON
ALAMEDA COUNTY DEPT. OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS SECTION
TEL. (510) 271-4323**

PAUL SMITH, Senior Hazardous Materials Specialist with the Alameda County Department of Environmental Health, asked ROBERT WESTON to contact me. I referred the matter of hazardous waste dumping at 3636 Enterprise Ave. to SMITH and he came out to look at the drums on site, and collected soil samples on May 9, 1994. He told me then that he would refer the matter to WESTON, an inspector who got involved with Top of the Hill Auto Repair in San Leandro.

A label on one of the drums found on site had the name and number of Top of the Hill. The number written "has been disconnected."

WESTON said that he first went to Top of the Hill in San Leandro "less than a year ago" in response to a complaint from neighbors. The shop was in a residential neighborhood in unincorporated San Leandro. It was "grandfathered" into zoning laws and was allowed to operate as an auto repair shop in the residential area.

During that first visit, WESTON was told that the shop was closing down and he observed little work being done. He informed the shop employees he met then that they would have to dispose of their hazardous waste properly.

In a follow up visit a "couple of weeks later," WESTON noticed that the auto repair operations "was pretty much out of the building" and was winding down.

Reports are filed in the Alameda County Health Department on WESTON's inspections, but none of these were signed by facility representatives. WESTON said that he does not have any names of owners or employees. In response to a question, WESTON said that he did not inspect any disposal documents for the hazardous waste found at the site earlier. "It was a casual inspection."

WESTON also said that he could not recognize any of the drums in the pictures I took of the dumping at 3636 Enterprise Ave. He also said it might be difficult to prove that the drums found in Hayward came from the San Leandro shop. Asked about the label found on one of the drums, WESTON agreed it was a "good piece of evidence." He added that if KFAX would pursue the case, the DA might be interested.

December 2, 1988

Mr. Steve Faelz
Hayward Fire Department
22300 Foothill Blvd. suite 606
Hayward, CA. 94541

Dear Mr. Faelz:

As a follow-up to our telephone conversation, I'm enclosing a copy of our PCB list from the KFAF transmitter site at 3636-Enterprise Ave., Hayward.

I made a thorough check of all capacitors and transformers in the building, and the only unit where PCB's were found was in our 10KW auxiliary transmitter. There has been no leakage, and naturally, if leakage is discovered in routine checks, I will make arrangements for proper disposal.

I have ordered PCB labels and will place them on the components, in front of the transmitter and as you recommended, on the front door to the building. Our transmitter site is restricted for use by only authorized personnel.

As I mentioned, I will be on vacation for one week and will be back at KFAF December 12th. If you have any further questions, please call me.

Cordially,

Leonard Harris
Chief Engineer

enc.

1. Introduction

ARCADIS U.S., Inc. (ARCADIS) has prepared this Soil Removal Action Completion Report on behalf of Russell City Energy Company, LLC (RCEC), a joint venture of an indirect wholly-owned subsidiary of Calpine Corporation and another unrelated entity for the Russell City Energy Center site in Hayward, Alameda County, California. The two properties that are the subject of this report are the former Runnels Industries, Incorporated ("Runnels") property located at 3590 Enterprise Avenue, and the adjacent KFOX radio transmission facility property located at 3636 Enterprise Avenue (collectively "the Site"; Figure 1) in Hayward, California. RCEC plans to use the Runnels property as a construction laydown area to support the construction of the Russell City Energy Center in Hayward, California.

Soil sampling and analyses was performed at the Site as part of environmental site assessment (ESA) activities performed in 1996 and 2003. As part of site closure activities, additional soil sampling was conducted as part of this scope of work both at the Site and just outside the site boundary; samples were collected to evaluate the need for excavation beside the Union Pacific Railroad (UPRR) spur located along the southern boundary of the Runnels and KFOX properties.

The removal action was conducted in accordance with the "Corrective Action Plan, Russell City Energy Center, Hayward, California," prepared by CH2M HILL and dated February 2010 ("the CAP"). The CAP was approved by the San Francisco Regional Water Quality Control Board (RWQCB) in a letter dated March 22, 2010.

The overall purpose of the CAP is to identify and evaluate remedial alternatives for effectively and appropriately addressing contamination at the Runnels and KFOX properties and to provide a recommendation regarding corrective action at the Site. The CAP identified soil excavation with the goal of industrial reuse as the recommended alternative for soil, and institutional controls as the recommended remedial alternative for groundwater.

As identified in the CAP, and based on the analytical results of the additional soil samples collected in support of the implementation of the CAP, a total of eight individual areas were excavated (Figure 2). This report documents the implementation of the CAP and includes a description of the completed field activities, drawings indicating the final limits of excavation and post-excavation sampling locations, information on soil disposal, information on imported soil, tabulated analytical data, and copies of the laboratory-certified analytical reports and chain-of-custody

documentation. In addition, this report contains information on the land use covenant (LUC) that the City of Hayward (current owner) and RCEC have entered, or will enter, into with the RWQCB, to both restrict the future land use and prohibit the use of shallow groundwater at the Runnels property.

Based on the following information, a recommendation of No Further Action for the Site is being proposed.

2. Background

The following sections present background information on the Site and the planned removal action presented in the CAP.

2.1 Site Description

The Site is located in the City of Hayward, south of the City's Water Pollution Control Facility, bordered by Enterprise Avenue to the north and Whitesell Drive to the east in the East Hayward industrial area. The Site is bordered to the south by an Alameda County flood control channel and a UPRR spur. The Site is approximately 1 mile east of the eastern shoreline of South San Francisco Bay. The Site has a total area of approximately 14.5 acres, comprising the Runnels property (3590 Enterprise Avenue) and the KFAX property (3636 Enterprise Avenue).

The two parcels comprising the Site are illustrated on Figure 1. RCEC has transferred the Runnels property to the City of Hayward to be used for industrial or commercial purposes. In addition, the City of Hayward and RCEC will enter into a LUC to the deed, with the RWQCB, to restrict the use of the Runnels property. The LUC was submitted to the RWQCB for signature on September 28, 2010. The LUC restricts land uses to industrial, commercial, or office space and restricts the drilling of water supply wells on the property. The LUC affects the Runnels property only. RCEC has never owned or operated the KFAX property, and therefore will not enter into a covenant for this property. A copy of the proposed LUC is presented in Appendix A.

In the short term, the Runnels property will be used as construction laydown area in support of the construction of the Russell City Energy Center in Hayward, California. Redevelopment activities implemented to date at the Runnels property include demolishing existing structures, removing and properly disposing of potentially affected soil, and performing other site development activities. The demolition project was implemented in late 2009 and included the removal of existing structures, including

several facilities formerly utilized for metal finishing activities by the previous owner of the property, Runnels.

2.1.1 Summary of Previous Environmental Investigations

2.1.1.1 1993 Underground Storage Tank (UST) Removal

Three USTs were removed in 1993 by DECON Environmental Services, Incorporated. The three tanks had previously been used for storage of diesel fuel, methyl ethyl ketone (MEK), and gasoline. Samples collected at the time of the tank removal indicated total petroleum hydrocarbons (TPH) as diesel (TPHD) was present at concentrations up to 20 milligrams per kilogram (mg/kg) beneath the tanks. One sample collected near the MEK tank contained concentrations of chromium up to 2,400 mg/kg and nickel up to 1,600 mg/kg.

2.1.1.2 1996 and 2001 Phase I ESAs

Phase I ESAs were conducted for 3590 and 3636 Enterprise Avenue by Blymer Engineering ("Blymer") and Foster Wheeler Environmental Corporation ("Foster Wheeler") in 1996 and 2001, respectively. Results from these investigations are presented in Blymer's "Phase I Environmental Site Assessment. Prepared for: Runnels Industries, 3590 Enterprise Avenue, Hayward, California" and Foster Wheeler's "Phase I Environmental Site Assessment of 3590 and 3636 Enterprise Avenue, Hayward, California." The Phase I ESAs identified the following environmental concerns, which were further evaluated in subsequent Phase II work. The results of the Phase II work on each of the parcels is summarized in Section 2.1.1.3.

Runnels Property

This property was historically owned and used by Runnels for application of surface coatings on prefabricated metal materials. Preparation of the metal materials included sandblasting with silicon, nickel slag, or glass beads followed by steam cleaning or chemical treatment. Surface coatings, including paints and high performance coating such as zinc epoxy urethane, were then sprayed onto the prepared materials. Several interior and exterior chemical storage areas were observed where paints, solvents, petroleum-based lubricating oils, hydraulic fluids, and diesel fuel were stored. Storage areas for virgin and used solvents, waste oils, and diesel fuel were equipped with secondary containment. Surface staining was observed in some areas where chemicals were stored. No evidence of existing USTs was found in the 1996 Phase I ESA.

The property was equipped with a steam cleaning area and four-stage clarifier system to collect wastewater. An uncovered exterior water tank connected to the steam cleaning system was observed near the west Runnels property fence. Surface runoff from this area was observed flowing onto the KFAX property during the Phase I inspection performed by Foster Wheeler (Foster Wheeler 2001).

The environmental conditions of concern stated in the 1996 Phase I ESA performed by Blymer included overspray from outdoor painting, solvent spills documented by the City of Hayward Fire Department, use of blasting sand to fill low areas of the Runnels parcel, use of lead-based paints, and diesel staining in the area of the former aboveground storage tank (AST). Soil samples collected by Blymer indicated TPH-contaminated areas (Blymer 1996a). The Phase I ESA completed by Foster Wheeler advised further investigation of areas where TPH contamination was reported, wastewater runoff areas, selected outdoor operational areas based on observed surface staining, and the former UST area (Foster Wheeler 2001).

KFAX Property

The KFAX property is currently occupied by four KFAX radio transmission towers and a transmission building. No evidence of USTs, ASTs, or chemical storage was observed on the property. Evidence of waste dumping was found along the perimeter fence between the KFAX and Runnels properties. Soil staining was observed in this area as well. Foster Wheeler recommended investigation of areas where surface staining was noted and in the location where wastewater runoff from the Runnels property flows onto the KFAX property (Foster Wheeler 2001).

2.1.1.3 1996 Phase II ESA

A Phase II ESA was performed at the Runnels property by Blymer in 1996. The results of this investigation are presented in Blymer's "Phase II Environmental Site Assessment, Runnels Industries, 3590 Enterprise Avenue, Hayward, California" (Blymer 1996b). Table 1 includes analytical results for contaminants of concern (COCs) detected in soil samples collected during the Phase II investigation and during confirmation sampling performed after remediation activities. The Phase II investigation results are discussed below. Figure 3 presents the Phase II soil sampling locations for the Runnels property.

The analytical results for soil samples collected during the Phase II investigation were compared to the Environmental Screening Levels (ESLs) established by the RWQCB and the preliminary remediation goals (PRGs) for industrial/commercial sites established by the U.S. Environmental Protection Agency (EPA), or, for metals, both the revised ESLs and the background levels. The soil exceedances indicate that the following compounds are the COCs for the Site:

- Hydrocarbons: TPHd and TPH as motor oil (TPHmo)
- Metals: arsenic, lead, and zinc
- polycyclic aromatic hydrocarbons (PAHs)

The COCs were generally confined to the surface soils (approximately 1 foot or less below ground surface [bgs]), indicating that the likely source of the COCs is localized surface releases. However, PAHs were detected in samples collected at 2.5 to 3 feet bgs near the former UST area in the northwestern portion of the Runnels property (Blymer 1996b).

2.1.1.4 2003 Additional Site Characterization

An additional site characterization (ASC) investigation was performed by Tetra Tech FW, Incorporated (TTFW) in 2003. The investigation included the Runnels and KFOX properties, including the railroad right-of-way along the southern side of the properties. Several locations were identified where blast grit was observed on the soil surface. The blast grit was assumed to contain contaminants, mainly metals, at levels that exceed the cleanup goals. Soil sampling results indicated exceedances of PAH limits in TPH-affected soils and exceedances of metals limits in both the Runnels property and the southeastern portion of the KFOX property. The soil sample collected to the north of the railway indicated a slightly elevated arsenic concentration (location R-B1). With the exception of the former UST area, metals were not detected below 1 foot bgs. One sample collected on the KFOX property west of the paint storage area contained concentrations above screening levels for TPHmo, TPHd, and metals (location K-B3). Blast grit was observed near the blast shed in the southern portion of the Runnels property and in the southeastern portion of the KFOX property. Findings from this investigation are presented in TTFW's "Additional Site Characterization Investigation Report, 3590 and 3636 Enterprise Avenue, Hayward, California" (TTFW 2003).

2.1.1.5 2009 Oil-Water Separator Removal

During the demolition of aboveground structures and site features at the Runnels property on or around September 28, 2009, an oil-water separator (OWS) was discovered to be present below grade. The OWS contained an oily liquid. A sample of the oily liquid collected by the demolition contractor indicated that the material was predominantly comprised of oil and contained elevated concentrations of TPHd, TPHmo, chromium, lead, zinc, and volatile organic compounds (VOCs; LFR Inc. [LFR] 2009b). As a result, LFR (now ARCADIS) prepared a Confirmation Soil Sampling Plan that was submitted to the RWQCB on October 7, 2009 (LFR 2009a). The Confirmation Soil Sampling Plan described the procedures that would be followed during and after the removal of the OWS.

Before the OWS was removed, the oily material from inside the OWS was pumped out and disposed of at an appropriate disposal facility. The OWS was removed under the direction of Granite Construction Inc. ("Granite"), a California-licensed contractor. As specified in the Confirmation Soil Sampling Plan, soil samples were collected from the vicinity of the OWS after it was removed. One soil sample from each excavation sidewall and one sample from the excavation floor were collected and submitted to a state-certified analytical laboratory for analyses of VOCs, California Assessment Manual-17 (CAM-17) metals, TPHmo, and TPHd. The results of the analyses were compared to the ESLs for shallow soil for commercial/industrial land use where groundwater is not a current or potential drinking water resource. No ESLs were exceeded for CAM-17 metals, and arsenic concentrations were below local background concentrations. TPHmo, TPHd, and VOCs were not detected above the respective ESLs (LFR 2009).

The analytical results were presented by LFR in its "Summary Letter Report for Confirmation Soil Sampling from Beneath the Oil Water Separator at 3590 Enterprise Avenue in Hayward, California ("the Former Runnels Property")," and are summarized in Table 1 of this report.

2.1.1.6 2010 Corrective Action Plan

The CAP prepared by CH2M HILL addresses remedial alternatives for the Runnels and KFAX properties. Although the KFAX property is not owned by RCEC, the property is included in the CAP due to the potential impact from contaminated materials that migrated from the adjacent Runnels property (CH2M HILL 2010).

As identified in the CAP, the three primary sources of potential contamination at the Runnels property include former USTs, sand blasting activities, and solvent and paint usage. The COCs at the Runnels property include TPHd and TPHmo, metals (arsenic, lead, and zinc), and PAHs (anthracene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(a)pyrene). Areas identified as requiring excavation or additional investigation of soils were identified on Figure 4-1 of the CAP. The target areas encompass all areas where analytical data from previous site investigations exceed cleanup goals and those areas visually identified as containing blast grit. The CAP assumed that the blast grit would contain contaminants, primarily metals, at concentrations exceeding the cleanup goals presented in the CAP. As discussed in Section 5.2.1, this assumption was overly conservative because samples of blast grit materials collected during the implementation of the CAP were below cleanup goals. The target area also accounts for the topography of the Site and includes areas that are likely to have been impacted by surface-water transport of contaminants (for example, low-lying areas).

2.2 Soil Cleanup Goals

The cleanup goals established for the Site in the CAP are derived from the least of the human health direct exposure value, gross contamination ceiling value, or groundwater protection (soil leaching) value in Table B-2 of the RWQCB's 2008 "Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater" with the following modifications for arsenic and PAHs. The cleanup goals for PAHs were modified after the start of excavation activities because the in-place, post-removal PAH data appeared to represent ambient conditions. An evaluation of ambient concentrations of benzo(a)pyrene and other PAHs at the Site is included in Section 5.2.2.5 and Appendix B. The initial ESL-derived cleanup goals for arsenic and benzo(a)pyrene were less than background; therefore, the 95 percent upper confidence limit (95% UCL) of background (15.5 mg/kg for arsenic and the 95th percentile of 0.9 mg/kg for benzo(a)pyrene expressed as total benzo(a)pyrene toxicity equivalents [TEQs]) was used as the industrial cleanup goal. The cleanup goals for the project were as follows:

TPH

- TPHmo: 2,500 mg/kg
- TPHd: 180 mg/kg

Metals

- arsenic: 15.5 mg/kg (site-specific background level)
- lead: 750 mg/kg
- zinc: 2,500 mg/kg

PAHs

- anthracene: 2.8 mg/kg
- benzo(a)anthracene: 1.3 mg/kg
- benzo(b)fluoranthene: 1.3 mg/kg
- benzo(k)fluoranthene: 1.3 mg/kg
- benzo(a)pyrene: 0.13 mg/kg (modified goal, not to exceed ceiling value of 1.3 only)
- chrysene: 23 mg/kg
- dibenzo(a,h)anthracene: 0.21 mg/kg
- indeno(1,2,3-cd)pyrene: 2.1 mg/kg
- total benzo(a)pyrene TEQs: 0.9 mg/kg (as 95th percentile value, Northern California industrial site background levels)

Chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were not identified as COCs in the CAP. The concentrations of these analytes found in soil samples are necessary for the calculation of benzo(a)pyrene equivalents; therefore, analytical results for these constituents have been included in this report.

2.3 Planned Site Cleanup Plan Actions

As described in the CAP, to reduce the human health risks and/or the potential for human exposure to site soils, two remedial alternatives were evaluated with consideration for the planned redevelopment of the Runnels property and the continued operation of the KFOX facility. The selected remedial alternative is excavation and off-site disposal of affected soils, and land use restrictions. This

alternative is deemed the most effective and results in the greatest reduction of long-term health risks at the Site, provided short-term risks of exposure to workers and the public are managed appropriately. This alternative involves the excavation of soils in targeted areas, which exceed the preliminary cleanup goals, and off-site placement/disposal. Because this removal action allows soil containing concentrations to remain on site above levels that allow for unlimited use and unrestricted exposure (i.e., above residential land use levels), this alternative also includes establishing a LUC pursuant to California Civil Code section 1471 and Health and Safety Code section 25355.5 to limit the future use of the property to industrial/commercial only and to prohibit the use of groundwater (CH2M HILL 2010). RCEC has prepared the LUC for signature by the City of Hayward and the RWQCB. A copy of the proposed LUC is included as Appendix A.

The final extent of each excavation was determined by a combination of site representative concentration (95% UCL of the confirmatory data set) and a “ceiling” or not-to-exceed concentration defined as 10 times the industrial cleanup goal. Additional confirmation samples were also collected from areas that were formerly underneath buildings or other structures that have not been sampled and from areas where potential contamination is visually identified. The results of the additional sampling are presented in Section 4.

To implement the selected removal action, the expected total volume of known affected soil to be excavated, following the evaluation of the additional pre-excavation soil sampling, was approximately 2,500 in-place cubic yards (CY).

The following tasks were completed to support the implementation of the CAP:

- Obtaining necessary permits from the City of Hayward and coverage under the construction general permit (“State Water Resources Control Board Order No. 99-08-DWQ, National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002 Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction Activity”).
- Obtaining Right-of-Entry with adjacent property owners to provide access to the Site.
- Preparing and implementing a Stormwater Pollution Prevention Plan to comply with the construction general permit.

- Preparing a site-specific health and safety plan (HASP). Each contractor (ARCADIS and Granite) prepared its own HASP.
- Mobilizing and establishing temporary facilities and main staging areas at the Site.
- Using site access and control measures to minimize the risk of exposure to affected soil materials and/or physical construction hazards, and to provide a safe working environment for personnel.
- Installing barricades and fencing to protect infrastructure during remedial activities.
- Obtaining permits necessary for the destruction of two wells on the Runnels property from the Alameda County Public Works Agency-Water Resources division (ACPW). Coordinating inspection of the abandoned wells by Alameda County personnel. Performing well abandonment activities and documenting that the wells were destroyed in accordance with the local regulations.
- Performing additional soil sampling activities, including 19 soil borings on the Runnels property, four hand auger borings on the KFAQ property, and 10 hand auger borings adjacent to the UPRR spur, where affected soil was suspected and/or in areas that were previously not characterized.
- Conducting air monitoring in accordance with the HASP.
- Placing excavated soil in temporary stockpiles for waste characterization sampling.
- Conducting additional soil sampling to better define the extent of affected soils.
- Conducting confirmation soil sampling following excavation to confirm that the cleanup goals had been achieved.
- Transporting and disposing of the excavated soil and blast grit.

Descriptions of the implementation of the excavation tasks listed above are provided in Sections 3 (Well Abandonment), 4 (Additional Soil Sampling), and 5 (Soil Removal Activities) of this report.

3. Well Abandonment

Two existing wells were identified at the Site during pre-mobilization activities. The locations of the two wells are shown on Figure 3. Three shallow (less than approximately 20 feet deep) groundwater wells were suspected to be located at the Site according to historical records. Attempts to locate the suspected wells were made using geophysical techniques (including ground-penetrating radar); however, the shallow wells were not located and are presumed to be abandoned or destroyed. The two existing wells were abandoned prior to the start of excavation activities). The wells were former groundwater monitoring wells that were completed at depths of approximately 12 feet bgs. Before the wells were abandoned, the appropriate permits were obtained from, and fees were paid to, the ACPW. Copies of the permits and Department of Water Resources (DWR) well abandonment forms are included in Appendix C of this report.

The groundwater monitoring wells were abandoned by overdrilling. Well abandonment activities were performed under the field oversight of an ACPW inspector. The wells were abandoned by pumping a cement grout mixture consisting of one 94-pound sack of cement for every 10 gallons of water into each well casing. The grout was pumped into the bottom of the well through a tremie pipe until the grout reached the top of the well casing.

DWR well abandonment completion reports are included in Appendix C.

4. Additional Soil Sampling Activities In Support of the CAP

Additional soil sampling in support of the CAP was performed throughout the Runnels property, the KFAQ property, and the UPRR spur located along the southern boundary of the Runnels and KFAQ properties. In accordance with the CAP, this sampling was performed to assess suspect areas that were previously uncharacterized and to identify the extent of the excavation that would be required to meet the remedial action objectives. Samples collected in close proximity to the railway were obtained with a hand auger, while all other samples were collected using a drilling rig. Details of the three sampling events are provided below. Soil results are included in Table 1. Sampling locations are shown on Figure 3. The analytical results of the soil samples were compared to the cleanup goals presented in Section 2.2.

4.1 Runnels Property

Nineteen additional soil borings were advanced and sampled throughout the Runnels property in potentially affected areas prior to the start of soil removal activities. On April 27, 2010, ARCADIS conducted the additional soil sampling activities. Under the observation of an ARCADIS geologist, Precision Sampling of Stockton, California, advanced a total of 19 soil borings using a Geoprobe rig. Soil borings were advanced to maximum depths of approximately 5 feet bgs, with one boring extending to 10 feet bgs. Samples from 11 borings were collected for analysis at depths of approximately 1 foot bgs and 3 feet bgs from each boring (the sample collected from 3 feet bgs was placed on hold pending the results from the shallower sample). Samples were also collected for lithologic description from each boring and lithologically logged, using the Unified Soil Classification System. The borings were logged for the visual presence of sand blast grit and field screened for hydrocarbons using a photoionization detector (PID). Hydrocarbons and/or sand blast grit were not observed in eight of the borings; therefore, samples for those eight borings were not retained for chemical analyses.

The soil samples were delivered under chain-of-custody protocol and analyzed by a California-certified laboratory on a normal seven-day turnaround time for priority pollutant metals using EPA Method 6010B, for PAHs using EPA Method 8270C, and for TPHd and TPHmo using EPA Method 8015M. Some soil samples were analyzed on an expedited one- to two-day turnaround. Laboratory analytical results are summarized in Table 1, and complete analytical reports are included in Appendix E.

TPHmo and arsenic were not detected above the cleanup goals in the 11 soil samples collected as part of the additional soil investigation. TPHd, lead, and zinc were detected above the cleanup goals in four of the 11 additional samples at locations as follows:

- Location D-5 (north of the former assembly room): zinc was detected at 2,700 mg/kg. This result is slightly above the cleanup goal of 2,500 mg/kg. The other COCs were below the cleanup goals.
- Location D-7 (southeast of the former blast room): zinc was detected at a concentration of 7,000 mg/kg. This result is above the cleanup goal of 2,500 mg/kg. The other COCs were below the cleanup goals.
- Location D-8 (south-central portion of the property): TPHd was detected at a concentration of 1,100 mg/kg. This result is above the cleanup goal of 180 mg/kg. The other COCs were below the cleanup goals.

- Location D-9 (southwestern portion of the property): TPHd and zinc were detected at a concentration of 230 mg/kg and 7,500 mg/kg, respectively. These results are above their respective cleanup goals of 180 mg/kg for TPHd and 2,500 mg/kg for zinc.

4.2 KFAQ Property

On June 21, 2010, four soil samples were collected from the area north of the main excavation area to evaluate the need for additional excavation on the KFAQ property. The samples were collected using a hand auger at a depth of 1 foot bgs.

The soil samples were analyzed by a California-certified laboratory on an expedited one-day turnaround for TPHd and TPHmo by EPA Method 8015B and PAHs by EPA Method 8270C. Laboratory analytical results are summarized in Table 1 and complete analytical reports are included in Appendix E. TPHd and TPHmo were not detected above the cleanup goals in any of the four samples. No PAHs were detected above the cleanup goals or above the benzo(a)pyrene ceiling limit.

4.3 Railroad Spur Area

On September 20, 2010, 10 samples were collected beside the UPRR spur located along the southern boundary of the Runnels and KFAQ properties. The sampling activity along the railroad was conducted by personnel with appropriate railway safety certifications and was performed in the presence of a UPRR representative. The samples were collected using a hand auger at a depth of 0.5 to 1 foot bgs.

The soil samples were analyzed by a California-certified laboratory on an expedited one-day turnaround for arsenic, lead, and zinc using EPA Method 6010B. Laboratory analytical results are summarized in Table 1, and complete analytical reports are included in Appendix E. Results from one sample (RR-5-0.5-1.0) contained concentrations of arsenic (17 mg/kg) and zinc (6,200 mg/kg) above the cleanup goals. No samples resulted in exceedances of the cleanup goal for lead. Arsenic, lead, and zinc were not detected in any of the 10 samples at concentrations above the ceiling limits.

5. Soil Removal Activities

This section describes the pre-excavation and excavation activities implemented by RCEC's contractors from May through September 2010. The excavation contractor

mobilized to perform the excavation, off-site disposal, and site restoration activities on May 11, 2010 and completed excavation activities on September 13, 2010. Completion of these removal action tasks is described in the sections that follow. All regulated (non-Resource Conservation and Recovery Act [RCRA] Hazardous) soil has been removed from the Site.

5.1 Preparatory Activities

Prior to initiating the fieldwork, RCEC selected an excavation contractor through a bidding-proposal process. Based on its review of the proposals, RCEC retained Granite to provide labor and equipment to conduct the removal action.

In support of the implementation of the CAP, the preparatory activities, including pre-excavation sampling, permitting and notifications, and well abandonment, were completed prior to the excavation activities.

5.1.1 Health and Safety

All field activities were conducted in accordance with the site-specific HASPs prepared by ARCADIS and Granite. Each HASP addressed the health and safety hazards and included requirements and procedures for employee protection during work involving affected soil. The HASPs included the required elements per the Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response Standard (HAZWOPER) as set forth in Title 29, Code of Federal Regulations, Part 1910.120. A copy of each contractor's HASP was kept on site during work performed by that contractor.

5.1.2 Notifications, Approvals

Granite reportedly obtained a grading permit from, and paid permit fees to, the City of Hayward Department of Public Works and obtained coverage under the construction general permit ("State Water Resources Control Board Order No. 99-08-DWQ, NPDES No. CAS000002 Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction Activity").

5.1.3 Site Preparation, Access, and Controls

Granite mobilized to the Site on May 11, 2010 and established temporary facilities (including sanitary facilities, refuse collection bins, and decontamination facilities) and

main staging areas, and installed temporary construction fencing and signage around the excavation areas to inhibit unauthorized access at the Site.

Prior to commencing excavation activities, the areas to be excavated were located and marked with spray paint and wood stakes by representatives of ARCADIS based on visible presence of sandblast grit and/or analytical results (and locations) of previous soil samples. Representatives of RCEC and Granite were also on site to assist and discuss the locations of the areas of excavation.

5.2 Excavation Activities

As identified in the CAP and based on the analytical results of the additional soil samples collected in support of the CAP, the following eight individual areas were excavated (see Figure 2).

- Sump-like feature filled with sandblast grit at the northeastern corner of the former office in the northwestern portion of the Runnels property (RN-A)
- Former UST area in the northern portion of the Runnels property (RN-B)
- Area to the east of the former assembly room, sandblast room, and blast room along the eastern edge of the Runnels property (RN-C)
- Area to the west of the former painting overhang/solvent storage facility and sandblasting building along the western edge of the Runnels property (RN-D)
- Southwestern-most corner of the Runnels property (RN-E)
- Small portion of the elevated area in the southwestern portion of the Runnels property (RN-F)
- Large area in the southeastern corner of the KFAX property extending to the Runnels/KFAX property line (KF-A)
- Sandblast grit area in the south-central portion of the KFAX property (KF-B)

Granite used conventional equipment such as excavators, backhoes, and loaders to complete the excavation. Visible blast grit on asphalt surfaces was swept up from the Runnels property and collected in two 55-gallon drums. Excavation was completed

between May 13, 2010 and September 13, 2010 at the locations and depths indicated on Figure 2. The final depth of excavation in most areas was approximately 1 to 2 feet bgs depending on the confirmation sample results. The two exceptions to this were RN-A (sump feature filled with blast grit to 3 feet bgs), excavated to 3.5 feet bgs, and RN-B (former UST area), excavated to 3 feet bgs.

In accordance with the CAP, excavation proceeded until the 95% UCL of the confirmatory data set was at or below the industrial cleanup goal for each COC, and no individual contaminant concentration exceeded the ceiling value of 10 times the industrial cleanup goal. The 95% UCL of the distribution mean was used as the representative concentration for screening purposes, and represents the exposure point concentration. The EPA software ProUCL 4.00.05 was used to calculate both the statistical distribution and the associated 95% UCL for the distribution and the 95th percentile for the total benzo(a)pyrene TEQ evaluation. Reporting limits were used as a proxy concentration for non-detections. Statistical distributions and 95% UCLs are presented in Section 5.2.2.4.

To meet the remediation objectives, excavations RN-C, RN-D, and RN-F were extended laterally or vertically (i.e., over-excavated) based on results in the initial set of confirmation samples from those excavations. The vertical extent was extended at 6-inch to 1-foot increments. In some cases, excavations extended to the underlying native clay soil layer (evident by the visual difference in the soil types/color). Confirmation samples were collected from the over-excavations at the same frequency as the initial confirmation sampling. Consequently, most of the excavation extended to approximately 1 foot bgs, with the maximum depth of excavation to approximately 3.5 feet bgs. Shoring was not required because of the shallow depth, and groundwater was not encountered. Initially, the total estimated volume of soil to be excavated was approximately 2,500 CY. The CAP estimated that the volume of the target area was 4,300 CY; however, this volume was reduced to approximately 2,500 CY through additional sampling. The final in-place volume of excavated soil was approximately 2,900 CY. The final areas of excavation are shown on Figure 2.

5.2.1 Excavation Sampling and Analytical Testing

Confirmation sampling following excavation was used to evaluate whether the cleanup goals had been achieved. The samples were collected as discreet soil samples from the base of the excavation sidewalls with a spacing of approximately 50 linear feet, and from the bottom of the excavations at a frequency of one sample for every 2,500 square feet excavated, as specified in Section 6.1.2 of the CAP. Due to the larger size,

excavation KF-A was sampled using a systematic square grid layout. As discussed in Section 4, additional sampling was performed in areas previously obstructed by buildings or structures, or where sand blast grit was visible.

Sampling equipment was decontaminated with Alconox and deionized water between sample collection to minimize cross-contamination. The collected samples were placed in 8-ounce jars provided by the analytical laboratory. The samples were delivered to TestAmerica Laboratories, Inc., a California-certified analytical laboratory in Pleasanton, California, for chemical analysis under chain-of-custody protocol in ice chests for temperature preservation at 4±2 degrees Celsius (°C).

As specified in the CAP, confirmation samples were analyzed for appropriate COCs. Confirmation samples at the RN-A (sump feature backfilled with sandblast grit) and KF-B (blast grit area on KFAX property) excavations were analyzed for arsenic, lead, and zinc. Samples collected from excavations RN-B (former UST area) and RN-C (eastern edge of Runnels property) were analyzed for TPHmo, TPHd, arsenic, lead, zinc, and PAHs. Samples collected from excavation RN-D (western edge of Runnels property) were analyzed for arsenic, lead, and zinc. Four of the 16 samples from excavation RN-D were also analyzed for TPHmo, TPHd, and PAHs due to their close proximity to the former UST area. Three of the four sampling locations at excavation RN-E (southwestern corner of Runnels property) were sampled for TPHmo, TPHd, arsenic, lead, zinc, and PAHs. One sample along the western wall of excavation RN-E was analyzed for only arsenic, lead, and zinc. All confirmation samples collected from excavation RN-F (elevated area) were analyzed for TPHd, TPHmo, arsenic, lead, zinc, and PAHs. Confirmation samples collected from excavation KF-A were all analyzed for arsenic, lead, zinc, and PAHs. Five samples collected from the northern portion of excavation KF-A were also analyzed for TPHmo and TPHd due to the close proximity of the former painting overhang/solvent storage area on the Runnels property. Two samples from the northwestern corner of excavation KF-A were analyzed for TPHmo and TPHd due to the presence of PAHs above cleanup goals in previous samples collected from these locations.

In areas where over-excavation was performed, new confirmation samples were collected from sidewalls and bottoms at the same frequency as stated above. These confirmation samples were analyzed for the COCs that resulted in exceedances of the ceiling levels in the original confirmation sample analyses. The new confirmation samples were analyzed for all COCs applicable to the specific excavation location.

Metals analyses were performed using EPA Method 6010B. EPA Method 8015 Modified (with no silica gel cleanup) was used for analyses for TPHd and TPHmo. EPA Method 8270C was used for analyses for PAHs. The complete laboratory analytical reports are included in Appendix E.

In addition to confirmation samples, samples were collected from two areas where visual anomalies were observed during soil removal activities. Samples were collected and analyzed in the same manner as described in Section 4. Soil containing a greenish-colored sand was found during excavation at RN-E and KF-A. Two soil samples from these areas were collected and analyzed for arsenic, lead, and zinc. Laboratory results for the sample collected from the northeastern wall of RN-E indicated a lead concentration slightly over the cleanup goals. All results for the sample collected from the northeastern portion of the KF-A area were below the cleanup goals. Analytical results for these two samples are included in Table 1, and analytical reports are included in Appendix E.

After soil removal activities were completed at the KF-A area, a tar-like substance was observed in the southeastern corner of the excavation. Samples were collected and analyzed, which confirmed that the material was tar. Visible traces of tar were removed from the floor of the excavation to the extent possible prior to backfill of the area. Laboratory analytical reports containing results of these analyses are included in Appendix E.

5.2.2 Confirmation Sample Laboratory Results

As discussed in this section, over-excavation was performed until confirmation samples met the required 95% UCL and ceiling values.

5.2.2.1 TPH Analytical Results

TPHmo was detected above the cleanup goal of 2,500 mg/kg in three of the 30 pre-excavation samples collected and analyzed. Samples R-B10-0'-1, R-B12-0'-1, and K-B3-0'-1 contained TPHmo concentrations of 3,000 mg/kg, 3,200 mg/kg, and 2,600 mg/kg, respectively, exceeding the cleanup goal (Table 1). In the 29 confirmation samples collected and analyzed for TPHmo after the initial excavation, three samples had detections of TPHmo exceeding the cleanup goal: RN-F-B-1.0'-1.5' at 2,600 mg/kg, RN-F-S-N-0.0'-1.0' at 3,100 mg/kg, and RN-F-S-S-0.0'-1.0' at 3,700 mg/kg. The sidewalls where these samples were collected were over-excavated. Subsequent

confirmation samples for the second excavation confirmed compliance with the cleanup goal of 2,500 mg/kg.

TPHd exceeded the cleanup goal of 180 mg/kg in 10 of the 43 pre-excavation samples collected and analyzed. The concentrations above the cleanup goal range from 230 mg/kg (at location D-9 D0.5') to 5,400 mg/kg (at location K-B3-0'-1'). After the initial excavation, TPHd was detected at levels above the cleanup goal in five of the 29 confirmation samples analyzed. Samples RN-D-S-N-0.0'-1.0' (240 mg/kg), RN-D-S-E1-0.0'-1.0' (440 mg/kg), RN-F-B-1.0'-1.5' (320 mg/kg), RN-F-S-N-0.0'-1.0' (320 mg/kg), and RN-F-S-S-0.0'-1.0' (830 mg/kg) exceeded the cleanup goal. These areas were over-excavated, and the new set of confirmation samples were below the cleanup goals, with the exception of RN-C-S-E4A-0.0'-1.0' where 430 mg/kg of TPHd was detected and remained on site. The 95% UCL of the TPHd samples is 142.6 mg/kg for the former Runnels property and 28.6 mg/kg for the KFAX property, which is below the cleanup goal of 230 mg/kg.

Therefore, as discussed in detail in Section 5.2.2.4, TPHd concentrations in the final confirmation samples are below the required TPHd levels.

5.2.2.2 Metals Analytical Results

Arsenic was detected above the site-specific background level of 15.5 mg/kg at two of the 51 pre-excavation sampling locations: 15.9 mg/kg at R-B1 and 31 mg/kg at R-B6-0'-1', where R-B6-0'-1' was excavated. Fifteen out of the 90 confirmation samples had concentrations greater than the cleanup goal, ranging from 16 mg/kg to 99 mg/kg (RN-C-S-E2-0.0'-1.0'). The sidewalls associated with eight of the 15 samples were over-excavated (RN-C-S-W1-0.0'-1.0', RN-C-S-W2-0.0'-1.0', RN-C-S-W3-0.0'-1.0', RN-C-S-W4-0.0'-1.0', RN-C-S-E2-0.0'-1.0', RN-C-S-E3-0.0'-1.0', RN-F-S-W-0.0'-1.0', and RN-F-S-E-0.0'-1.0'). After the excavation, only four confirmation samples exceeded the cleanup goal, ranging from 16 mg/kg to 52 mg/kg (RN-C-S-W1A-0.0'-1.0'). The 95% UCL for the in-place arsenic samples is 13.8 mg/kg for the former Runnels property and 8.4 mg/kg for the KFAX property, which is below the cleanup goal of 15.5 mg/kg.

Lead was detected above the cleanup goal of 750 mg/kg in one of the 57 pre-excavation samples. After the first round of excavation, five of the confirmation samples exceeded the cleanup goal: ranging from 760 mg/kg in sample RN-D-S-E1-0.0'-1.0' to 2,700 mg/kg in sample KF-A-S-B9-0.0'-1.0'. Three of the samples were later removed by over-excavation, leaving in place KF-A-S-B7-0.0'-1.0' (1,200 mg/kg) and KF-A-S-B9-0.0'-1.0' (2,700 mg/kg). After the excavations, only one confirmation sample

exceeded the cleanup goal: RN-C-S-W1A-0.0'-1.0' at 1,600 mg/kg. In addition to the confirmation samples mentioned above, one additional soil sample collected where green sand was observed (GREEN-SAND_RN-E-S-NE-0.5'-1.0') also exceeded the cleanup goal at 1,600 mg/kg. The 95% UCL of all samples is 298.7 mg/kg for the former Runnels property and 421.3 mg/kg for the KFAX property, which is below the cleanup goal of 750 mg/kg.

Zinc was detected above the cleanup goal of 2,500 mg/kg in 11 of the 57 pre-excavation samples. The concentrations above the cleanup goal ranged from 2,610 mg/kg (at location R-B3-0'-1') to 22,000 mg/kg (at location R-B4-0'-1'). After the initial excavation was completed, 20 of the 90 confirmation samples were above the cleanup goal where four of the samples exceeded the ceiling concentration of 25,000 mg/kg (up to 75,000 mg/kg at location RN-D-S-E1-0.0'-1.0'). All of the sample locations mentioned above were consequently excavated, with the exception of four locations where the cleanup goal was only exceeded slightly (3,000 mg/kg at RN-D-S-S-0.0'-1.0', 4,700 mg/kg at KF-A-B-K2-1.0'-1.5', 3,700 mg/kg at KF-A-S-K1-0.0'-1.0', and 2,600 mg/kg at KF-A-S-K14-0.0'-1.0'). After the second excavation event, four confirmation samples exceeded the cleanup goal where one of the samples exceeded the ceiling limit (30,000 mg/kg at location RN-D-S-N1-0.0'-1.0'). This location was later over-excavated; the post-excavation confirmation sample had concentrations below the cleanup goal. The 95% UCL of all samples is 1,991 mg/kg for the former Runnels property and 1,300 mg/kg for the KFAX property, which is below the cleanup goal of 2,500 mg/kg.

Therefore, as discussed in Section 5.2.2.4, metals concentrations in the final confirmation samples are below their respective cleanup goals.

5.2.2.3 PAH Analytical Results

5.2.2.3.1 Anthracene

Anthracene was detected above the cleanup goal of 2.8 mg/kg at one of the nine pre-excavation sampling locations: R-B12-2.5'-3' at 4.5 mg/kg, which was later excavated. The results of the 80 confirmation samples collected and analyzed for anthracene after the excavations were completed indicated that the cleanup goal for anthracene was achieved (Table 1).

5.2.2.3.2 Benzo(a)anthracene

Benzo(a)anthracene was detected above the cleanup goal of 1.3 mg/kg at one of the nine pre-excavation sampling locations: R-B12-2.5'-3' at 3.2 mg/kg. The results of the

68 confirmation samples collected and analyzed for benzo(a)anthracene after the initial excavation indicated that four samples exceeded the cleanup goal, ranging from 1.5 mg/kg at RN-D-S-E1-0.0'-1.0' to 5.2 mg/kg at KF-A-S-J5-0.0'-1.0'. Three of the four locations were over-excavated, with the exception of KF-A-S-J5-0.0'-1.0'. The results of the 12 confirmation samples collected and analyzed for benzo(a)anthracene after the second excavations were completed indicated that the cleanup goal for benzo(a)anthracene was achieved (Table 1).

5.2.2.3.3 Benzo(b)fluoranthene

Benzo(b)fluoranthene was detected above the cleanup goal of 1.3 mg/kg at one of the nine pre-excavation sampling locations: R-B12-2.5'-3' at 1.5 mg/kg, which was removed during the subsequent excavation event. The results of the 68 confirmation samples collected and analyzed for benzo(b)fluoranthene after the initial excavation indicated that four samples exceeded the cleanup goal, ranging from 1.6 mg/kg at RN-D-S-E1-0.0'-1.0' to 2.9 mg/kg at RN-F-S-N-0.0'-1.0'. Three of the four locations were over-excavated, with the exception of KF-A-S-J5-0.0'-1.0' (1.9 mg/kg). The results of the 12 confirmation samples collected and analyzed for benzo(b)fluoranthene after the second excavation was completed indicated that the cleanup goal for benzo(b)fluoranthene was achieved (Table 1).

5.2.2.3.4 Benzo(k)fluoranthene

Benzo(k)fluoranthene was detected above the cleanup goal of 1.3 mg/kg at one of the nine pre-excavation sampling locations: R-B12-2.5'-3' at 1.7 mg/kg, which was removed during the subsequent excavation event. The results of the 68 confirmation samples collected and analyzed for benzo(k)fluoranthene after the initial excavation indicated that four samples exceeded the cleanup goal, ranging from 1.5 mg/kg at RN-D-S-E1-0.0'-1.0' to 5.2 mg/kg at KF-A-S-J5-0.0'-1.0'. Three of the four locations were over-excavated, with the exception of KF-A-S-J5-0.0'-1.0'. The results of the 12 confirmation samples collected and analyzed for benzo(k)fluoranthene after the second excavations were completed indicated that the cleanup goal for benzo(k)fluoranthene was achieved (Table 1).

5.2.2.3.5 Benzo(a)pyrene

Benzo(a)pyrene was detected above the initial cleanup goal of 0.13 mg/kg at two of the nine pre-excavation sampling locations: 0.21 mg/kg at R-B9-0'-1' and 1.8 mg/kg at R-B12-2.5'-3'. The area of R-B12-2.5'-3' was removed during the first excavation event. The results of the 68 confirmation samples collected and analyzed for benzo(a)pyrene after the initial excavation indicated that 24 samples exceeded the initial cleanup goal, ranging from 0.15 mg/kg at KF-A-S-C13-0.0'-1.0' to 2.5 mg/kg at

KF-A-S-J5-0.0'-1.0'). Seven of the above locations were over excavated (RN-D-S-N-0.0'-1.0, RN-D-S-E1-0.0'-1.0', RN-F-B-1.0'-1.5', RN-F-S-N-0.0'-1.0', RN-F-S-W-0.0'-1.0', RN-F-S-S-0.0'-1.0', and RN-F-S-E-0.0'-1.0'). The results of the 12 confirmation samples collected and analyzed for benzo(a)pyrene after the second excavations were completed indicated that seven exceeded the initial cleanup goal for benzo(a)pyrene (Table 1). In addition to the confirmation samples, two of the samples from the additional sampling locations had concentrations greater than the initial cleanup goal (0.19 mg/kg at KB-4-0.0'-1.0' and 0.17 mg/kg at KB-6-0.0'-1.0'). Benzo(a)pyrene was not detected above the ceiling level of 1.3 mg/kg in any of the pre-excavation and confirmation sampling locations, except for a detection of 2.5 mg/kg in sample KF-A-S-J5-0.0'-1.0. However, a duplicate soil sample was collected at that location and the result was 0.026 mg/kg.

PAH concentrations were less than the required cleanup levels, as further described below in Section 5.2.2.5, further discussion on benzo(a)pyrene equivalents calculation.

5.2.2.3.6 Other PAHs

Laboratory results for chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene are shown in Table 1. These chemicals are not regarded as COCs at the Site because they are below their respective screening levels, though they were used for the calculation of PAH equivalents. See Section 5.2.2.5 for a detailed discussion.

5.2.2.3.6.1 Chrysene

Chrysene was not detected above the cleanup goal of 23 mg/kg at the pre-excavation and confirmation sampling locations.

5.2.2.3.6.2 Dibenzo(a,h)anthracene

Dibenzo(a,h)anthracene was not detected above the cleanup goal of 0.21 mg/kg at any of the nine pre-excavation sampling locations. The results of the 68 confirmation samples collected and analyzed for dibenzo(a,h)anthracene after the initial excavation indicated that four samples exceeded the cleanup goal, ranging from 0.21 mg/kg at RN-D-S-E1-0.0'-1.0' to 0.56 mg/kg at RN-F-S-N-0.0'-1.0', three of which were over-excavated. KF-A-S-J5-0.0'-1.0' (0.52 mg/kg) was left in place. Confirmation samples collected and analyzed following the second excavation event indicated that the cleanup goal for dibenzo(a,h)anthracene was achieved. In addition to the confirmation samples, one of the samples from the additional sampling locations had a concentration greater than the cleanup goal (0.027 mg/kg at KB-4-0.0'-1.0').

5.2.2.3.6.3 *Indeno(1,2,3-cd)pyrene*

Indeno(1,2,3-cd)pyrene was not detected above the cleanup goal of 2.1 mg/kg at any of the pre-excavation and confirmation sampling locations.

5.2.2.4 *Confirmation Sample 95% UCLs and Residual Concentrations*

As discussed in Section 5.2, 95% UCLs were used to calculate representative concentrations for the post-excavation residual chemicals in soil. The representative concentrations were screened against the established criteria. The ESLs for shallow soil (less than 3 meters bgs) for commercial and industrial properties where the groundwater is not a potential source of drinking water (Table B-2, RWQCB 2008) were adopted as the soil cleanup goals for most COCs identified for the Site, with background concentration used as cleanup goals for arsenic and urban ambient levels for PAHs. These cleanup goals are very conservative given that limited complete exposure pathways will exist after site redevelopment.

The results and the screening criteria are presented in the following table. Calculations of the 95% UCLs are included in Appendix D.

Summary of Post-Excavation Representative Concentrations Screen

Compound	Distribution		Representative Concentration (mg/kg)		Screening Value (mg/kg)
	Runnels	KFAX	Runnels	KFAX	
TPHmo	Gamma	Normal	436	87	2,500
TPHd	NP	Normal	143	29	180
Arsenic	NP	Normal	13.8	8.4	15.5
Lead	NP	NP	299	421	750
Zinc	NP	NP	1,991	1,300	2,500
Anthracene	NP	NP	0.07	0.29	2.8
Benzo(a)anthracene	Gamma	NP	0.15	0.67	1.3
Benzo(b)fluoranthene	Gamma	Gamma	0.23	0.23	1.3
Benzo(k)fluoranthene	NP	NP	0.17	0.37	1.3
Benzo(a)pyrene	Gamma	NP	0.17	0.38	0.13/1.3 (a)
Chrysene	Gamma	NP	0.19	0.74	23
Dibenzo(a,h)anthracene	NP	NP	0.07	0.09	0.21
Indeno(1,2,3-cd)pyrene	Gamma	NP	0.12	0.19	21
Total Benzo(a)pyrene Equivalents	NP	NP	0.31	0.57	0.9 (b)

Notes:

Screened values tabulated using additional 2010 soil samples and remaining post-excavation confirmation samples.

NP = non-parametric

a. Not to exceed ceiling x 10 ceiling value of 1.3 mg/Kg; see Section 5.2.2.5.

b. Not to exceed 95th percentile ambient level of 0.9 mg/Kg; see Section 5.2.2.5.

The representative concentrations for TPH compounds, metals, and PAHs are below their respective screening criteria. The screening criteria are based on protection of human health, or, for arsenic, benzo(a)pyrene, and PAHs, ambient concentrations. The analytical results and subsequent screen demonstrates that, for these compounds, potential human health risks have been successfully mitigated. The post-excavation compounds are below concentrations associated with negative health effects. The residual concentrations are below concentrations that pose an unacceptable human health risk.

5.2.2.5 Discussion of Ambient PAH Concentrations

On September 2, 2010, representatives from RCEC and ARCADIS met with representatives of the RWQCB to discuss the apparent ambient levels of PAHs and proposed revisions to the cleanup goal for benzo(a)pyrene for the Site.

The PAH data and data evaluation process were discussed in detail. Specifically, the discussion focused on how the in-place, post-removal PAH data appeared to represent ambient conditions. Ambient conditions were defined by the California Department of Toxic Substance Control in its document "Use of Polynuclear Aromatic Hydrocarbon (PAH) Studies in the Manufactured Gas Plant Cleanup Process," dated July 2009. Based on the information presented in the meeting, the RWQCB concluded that residual PAH concentrations at the Site were likely ambient. The RWQCB then agreed that the ambient PAH concentration of 0.9 mg/kg would be the revised cleanup goal. However, the RWQCB also stated that the ceiling value of 10 times the previous cleanup goal would still apply to the individual PAHs.

The RWQCB requested that the data summary and PAH evaluation be presented as an appendix in this Closure Report. Per the RWQCB request, a memorandum documenting the evaluations performed to assess PAHs is included as Appendix B. In summary, PAH laboratory results from confirmation samples taken within excavation areas were compared to the Northern California ambient data set. The comparison indicates that the residual total benzo(a)pyrene TEQ values at the Site are similar to ambient conditions.

5.2.3 Soil Staging and Disposal

The excavated soil from the Runnels and KFAX properties was staged on the Runnels property in stockpiles pending characterization for disposal: one containing soil from KF-A and KF-B combined, and one each for soil from excavations RN-A, RN-B, RN-C, RN-D, and RN-E. Soils excavated from the initial excavation at RN-F and from the extended excavation areas at RN-C, RN-D, and RN-F were direct loaded and hauled off site. All stockpiles were located on the Runnels property pending characterization. Granite placed the stockpiles over a plastic liner to inhibit impacting native ground, and covered the soil at the end of the workday with secured plastic to prevent windblown dispersion. Daily maintenance of the stockpiles was implemented from the evaluation period through the characterization and soil loading activities for all of the stockpiles. All stockpiles have been characterized and hauled off site for disposal. Two 55-gallon

drums of blast grit collected from the soil surface remain on the Runnels property pending characterization and disposal.

The excavated soil was sampled for waste characterization prior to landfill disposal at a rate of approximately one four-point composite sample approximately every 500 CY. The samples were analyzed for hazardous waste constituents as designated by the disposal facilities. Copies of the waste manifests are included in Appendix F.

The result for the composite sample collected from the RN-A stockpile, totaling approximately 5 CY in place, was below the total threshold limits concentration (TTLC), soluble threshold limit concentration (STLC), and toxicity characteristic leaching procedure (TCLP) limits and therefore was characterized as non-hazardous soil. The soil from this excavation was hauled to a Class II disposal facility.

Sample results from the RN-B, RN-C, RN-D, RN-E, and RN-F stockpiles indicated levels above the STLC for lead and/or zinc, resulting in their classification as non-RCRA solid hazardous waste. Stockpiles from these excavations, totaling approximately 589 CY in place, were handled as non-RCRA hazardous waste. Due to similar soil characteristics with soil excavated at RN-D, soil from the RN-F excavation was handled as non-RCRA hazardous waste and directly loaded for haul-off at the time of excavation. Excavated soil from areas KF-A and KF-B were combined. Soil from these areas was held in five stockpiles on the Runnels site. Three of the five stockpiles, totaling approximately 1,371 CY in place, were characterized as non-RCRA hazardous waste due to elevated lead concentrations and were handled as non-RCRA hazardous waste. Two of the stockpiles, totaling approximately 914 CY in place, were deemed non-hazardous and were hauled to a Class II disposal facility. From June 21 through September 8, 2010, all soil characterized as non-RCRA hazardous waste from the excavations at the Runnels and KFAX properties, totaling approximately 1,960 CY in place, was loaded and transported via truck, and truck and rail for disposal at the East Carbon Development Company Landfill in East Carbon, Utah.

5.2.4 Excavation Backfill

Excavations RN-A, RN-B, RN-C, RN-D, RN-F, KF-A, and KF-B were backfilled on September 8 through September 13, 2010. Soil fill was imported to the Site on June 10, 2010. Imported fill was screened for constituents to ensure that concentrations were less than the final ESLs for shallow soil (less than 3 meters bgs) for commercial and industrial properties where the groundwater is not a potential source of drinking water (Table B-2 of RWQCB 2008), with the exception of arsenic. Arsenic

concentrations were required to be less than the site-specific background concentration of 15.5 mg/kg. The fill import material was pre-sampled at the source and, after review of the site history and characterization data, was approved by the RWQCB in an e-mail from Ms. Marcia Liao dated June 9, 2010.

5.2.5 Dust Control and Air Monitoring

Dust control measures were implemented to limit dust migration from the work areas. Temporary excavated soil stockpiles were covered with plastic sheeting at the end of the workday. Water mist/spray application was employed during the excavation and soil handling activities including loading onto trucks and backfilling. The water application rate was regulated to avoid over-wetting and generating sediment-laden runoff. Vehicle/equipment haul routes were also sprayed periodically to minimize dust generation. Mud/dirt from the work areas, which accumulated on the adjacent streets, was removed at least daily.

Air monitoring programs were included in the HASPs. The objectives of the air monitoring plans were to collect scientifically valid data using standard industrial hygiene practices to provide information on particulate emissions resulting from the removal activities, and to provide real-time data that could be used to modify work practices, as necessary. These data were used to evaluate whether the dust control programs performed effectively and, if necessary, to provide a basis for modifying work practices (e.g., increase frequency of dust control measures). The total dust action limit of 2.5 milligrams per cubic meter (mg/m^3) was established using one half the California OSHA permissible exposure limit for respirable dust. Real-time total dust data collected are retained in the project files.

Action levels for real-time worker air monitoring were based on OSHA permissible exposure limits/National Institute for Occupational Safety and Health (NIOSH) recommended exposure limits and maximum soil concentrations of arsenic and lead identified at the site.

6. Summary

In accordance with the CAP, institutional controls are a component of the implemented remedial alternative because some residual impacted material would be left in place following excavation. In addition, soil and other materials to be removed from the Site during future Site redevelopment activities should be sampled to ensure proper disposal. The LUC for the Runnels property includes a provision to prepare a soil

management plan (SMP) in the future to ensure that the soil with COCs above their respective cleanup goals remains in place, that soil excavated in the future is tested and handled appropriately, and that the health and safety of future site occupants is protected.

Between May 13, 2010 and September 13, 2010, soil excavation activities were completed at the Runnels property and the adjacent KFOX property in Hayward, California. A total of approximately 2,878 CY of soil was excavated in a total of eight areas to final depths between 1 and 3.5 feet bgs. To ensure that the removal activities successfully met the cleanup goals, the 95% UCL of the confirmation soil sample data was calculated for each COC and compared with the respective cleanup goal.

Based on the analytical results of confirmation samples collected following the soil excavation, ARCADIS concludes that the soil cleanup goals for the Site have been achieved. No further action is recommended for the Site.

Notes:

Only results for VOCs detected in at least one site sample are shown.

All other VOCs were non-detect in all site samples.

- = not analyzed

Results in **bold** exceed cleanup goal.

Results in **bold and underlined** exceed ten times the cleanup goal

PAH = polycyclic aromatic hydrocarbon by EPA Method 8270 - Selective Ion Measurement (SIM)

TPH-D = total petroleum hydrocarbons (extractable) quantified as diesel fuel by EPA Method 8015M

TPH-MO = total petroleum hydrocarbons (extractable) quantified as motor oil by EPA Method 8015M

95% UCL (method 1): Calculated using Excel confidence formula; Pro UCL used for final evaluation

95% UCL (method 2): Calculated using the Central Limit Theorem (Adjusted); OSWER 9285.6-10 December 2002 available at <http://www.epa.gov/oswer/riskassessment/pdf/ucl.pdf>; Pro UCL used for final evaluation

Shaded cells indicate samples taken at locations that have been excavated.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

LUST Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No: 01-1650
Local Case No: 01-1650
Begin Date: 3/5/1990
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Local Agency: HAYWARD, CITY OF
CUF Case: NO

Potential COC: Gasoline
How Discovered: Tank Closure
Stop Method:
Stop Description:
Case Worker: KEB
File Location: Local Agency

Potential Media of Concern: Other Groundwater (uses other than drinking water)
How Discovered Description:
Calwater Watershed Name: South Bay - East Bay Cities (204.20)
DWR GW Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:
Site History:

Transfer of oversight from the Hayward Fire Department to the Regional Board on 12/30/2013. The site is located in the center of the Waste Water Treatment Plant located at 3700 Enterprise Avenue, Hayward, California, just south of the Maintenance Building. The Waste Water Treatment Plant is currently active. On December 12, 1989, WD Construction removed one 1000‐gallon unleaded gasoline underground storage tank (UST), one fuel dispenser, and associated product piping. WaterWorks observed the UST removal activities and conducted confirmatory soil sampling. No visible holes were noted during UST removal activities. However, WaterWorks noted moderate odor emanating from the UST pit. Additionally, a concrete slab was noted beneath the UST. Groundwater was not encountered during UST removal activities. (Additional Site Characterization Report, December 31, 2009)

Hayward Fire Department

AA/CUPA,DFG-OSPR,DTSC,RWQCB,US EPA,USFWS,EB PARKS,Co/E-Hlth

3700 Enterprise Avenue

A transfer line between the USD Treatment Plant and the Hayward Marsh developed a leak. RP advises no public impacted, the release soaked into soil. The release was discovered on the 19th, but the Sanitary Dist received the notification e-mail on the 21st at 0200, the release and was isolated by 0800. The release occurred on City of Hayward Treatment Plant property.

Site History:			

The site historically operated as an industrial metal-pipe refinisher, and included sandblasting and painting operations. The site was operated by various companies for the past several decades, most recently as Runnels Industries, Inc. Sandblasting grit containing various metals, including zinc, copper, and chromium was used at the site. The site also formerly contained three underground storage tanks (USTs) containing gasoline, diesel, and methyl ethyl ketone, and a single aboveground storage tank (AST) for diesel. In April 2001, Anacapa Land Company, LLC, purchased the property for redevelopment. Runnels Industries vacated the property in January of 2002.

Potential COC:	METALS/HEAVY METALS, PETROLEUM - DIESEL FUELS		
Potential Media of Concern:	OTHER GROUNDWATER (USES OTHER THAN DRINKING WATER), SOIL, UNDER INVESTIGATION		
GW Monitoring Freq:			
DWR GW Sub Basin:	Santa Clara Valley - East Bay Plain (2-009.04)		
Calwater Watershed Name:	South Bay - East Bay Cities (204.20)		
Post Closure Site Management:			
Future Land Use:			
Cleanup Oversight Agencies:	SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 01S0564		
Site History:			

The site historically operated as an industrial metal-pipe refinisher, and included sandblasting and painting operations. The site was operated by various companies for the past several decades, most recently as Runnels Industries, Inc. Sandblasting grit containing various metals, including zinc, copper, and chromium was used at the site. The site also formerly contained three underground storage tanks (USTs) containing gasoline, diesel, and methyl ethyl ketone, and a single aboveground storage tank (AST) for diesel. In April 2001, Anacapa Land Company, LLC, purchased the property for redevelopment. Runnels Industries vacated the property in January of 2002.

Site History:

The Les McDonald Construction Company (LMCC) was located at 3500 Enterprise Avenue in Hayward, California during the 1980's. LMC later moved its operations to 150 Sloan Court in Tracy, California in January 1994. The property is currently owned by Joe and Dennis Vandera and is occupied by MAG Trucking (MAG), which uses the facility for truck maintenance. In 1988, a site screening completed for LMCC revealed that site soils were contaminated with diesel which probably resulted from an isolated incident involving a broken fuel hose on a piece of heavy equipment. Sampling indicated the presence of diesel in concentrations from 540 ppm to 1500 ppm and subsequent remediaton took place under HFD oversight. The Hayward Fire Department's (HFD) file also indicates that LMCC had two underground storage tanks (USTs) in 1986. One of the tanks containing waste oil, was abandoned in place in 1988, under HFD oversight. Soil sampling during the UST abandonment indicated the absence of leakage, based on non-detectable sample results. According to LMCC's Hazardous Management Business Plan, hazardous materials used or stored on-site included hydrocarbon solvents, oxygen, acetylene and enamel thinner. MAG, the site's current occupant, has a hazardous materials storage permit on file with HFD.

Site History:			

A permit application for a UST was submitted in August 1988, records appear to indicate that this was not acted on resulting in the requirement for the removal of a UST. Subsequently two bores were installed and laboratory results detected in Borehole 2. A work plan for three wells was requested; further work is uncertain. In February 1997 an oil spill (also identified as 30 to 75 gallons of diesel) was noted on soil near the office trailer. A

---------	-------------------	-----------	------------------	----------------	------	----

concentration up to 96,000 mg/kg TOG was detected. Remedial efforts were undertaken. Case was transferred to Regional Water Board when a property transaction was conducted in 2007. Investigation and remediation activities began under Regional Water Board's oversight in 2007 and the case was subsequently closed in December 2010 with a Land Use Covenant. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Site History:						

The Site is located northwest of the City of Hayward's Water Pollution Control Facility, adjacent to and south of Depot Road in the East Hayward industrial area. Cabot Road has its southern terminus at Depot Road across from the northeastern corner of the project's new location. Enterprise Avenue lies to the south of the new site boundary. The Site comprises the following four parcels: 3810, 3862, and 3878 Depot Road, and a portion of 3700 Enterprise Avenue. Historical (and current) uses of these four properties/parcels include an automobile wrecking and recycling facility, a metal recycling facility, and a biosolids drying area (associated with the City of Hayward's water treatment facility). A number of surface-contaminated (oil stained) areas have been observed throughout the Site. These surface oil stains occurred presumably from vehicles that were parked and/or serviced at the Site, and the storage of various drums, piping, storage containers, and other miscellaneous materials. There was reportedly one underground storage tank (UST) at the Site, but it is believed to have been removed.

Cleanup Oversight Agencies: SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 01S0679
HAYWARD, CITY OF
CASEWORKER: HUGH MURPHY

Site History:

The Site is located northwest of the City of Hayward's Water Pollution Control Facility, adjacent to and south of Depot Road in the East Hayward industrial area. Cabot Road has its southern terminus at Depot Road across from the northeastern corner of the project's new location. Enterprise Avenue lies to the south of the new site boundary. The Site comprises the following four parcels: 3810, 3862, and 3878 Depot Road, and a portion of 3700 Enterprise Avenue.

Historical (and current) uses of these four properties/parcels include an automobile wrecking and recycling facility, a metal recycling facility, and a biosolids drying area (associated with the City of Hayward's water treatment facility). A number of surface-contaminated (oil stained) areas have been observed throughout the Site. These surface oil stains occurred presumably from vehicles that were parked and/or serviced at the Site, and the storage of various drums, piping, storage containers, and other miscellaneous materials. There was reportedly one underground storage tank (UST) at the Site, but it is believed to have been removed.

Sites from GeoTracker Search - Cleanup Action Report (as of Feb 24, 2020)

Action Type: EXCAVATION
Phase: Soil
Description:
Contaminant Mass Removed:

Begin Date: 5/13/2010
End Date: 6/28/2010

Cleanup Oversight Agencies:		DTSC - LEAD AGENCY				
School District:						
Past Use that Caused Contam:		NONE SPECIFIED				
Potential Media Affected:		NONE SPECIFIED				
Site History:						

Big Al's Waste Hauling, a chemical waste storage and transfer facility, occupied the 3-acre site in the early 1980s, storing wastes included inks, glues, solvents, oil, and ink wastewater. Following an inspection, the Regional Water Quality Control Board requested a cleanup and in December 1980 issued a cleanup and abatement order. DTSC (then DHS) found contaminated soil on site in August 1981. In January 1981, Alameda County District Attorney filed suit against the facility to have the contaminated soil removed. On March 8, 1984, DTSC prepared a letter stating that the cleanup was adequate except for two areas with elevated lead levels that would be acceptable for industrial activities only.

Potential Contamin of Concern:

CONTAMINATED SOIL, HYDROCARBON SOLVENTS

Status:	INACTIVE - NEEDS EVALUATION

LUST Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No:	01-2091	Potential COC:	Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Local Case No:	RO0000161	How Discovered:	* SA
Begin Date:	5/11/1992	Stop Method:	Close and Remove Tank
Lead Agency:	ALAMEDA COUNTY LOP	Stop Description:	
Local Agency:	ALAMEDA COUNTY LOP	Case Worker:	PK
CUF Case:	NO	File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media of Concern:		Other Groundwater (uses other than drinking water)	
How Discovered Description:			
Calwater Watershed Name:		South Bay - East Bay Cities (204.20)	
DWR GW Subbasin Name:		Santa Clara Valley - East Bay Plain (2-009.04)	
Disadvantaged Community:			
Site History:			

The subject site utilized two underground storage tanks (UST) at the property. In this case, one 1,000-gallon capacity UST utilized to store gasoline, located in the northern portion of the site, and one 200-gallon capacity UST utilized to store waste oil, located in the southern portion of the site, were removed from the site in 1992. In 1995, two borings were hand-augered approximately 5 feet from the perimeter of the former waste oil UST. Soil sample analytical results detected elevated concentrations of total recoverable petroleum hydrocarbons (TRPH). In February 2004, a subsurface investigation consisting of three borings in the vicinity of the waste oil UST were installed at the site, which detected free product at the site. To verify free product and elevated concentrations, an additional subsurface investigation was conducted which also yielded elevated petroleum hydrocarbons in soil and free product in groundwater. The site is currently under petition. The SWRCB closed this case on 9/27/2010. This case was resolved through the UST Program's Closure Petition Process.

Disadvantaged Community:			
Site History:			

The site is located in a commercial/light industrial area of Hayward and consists of two parcels currently developed as an office/warehouse which produces organic hummus and other similar types of dips and spreads. A railroad spur is located on APN 439-100-5-1 in the southern portion of the property. The warehouse is located on APN 439-100-5-2 with asphalt and concrete parking areas with modest landscaping located to the north and east, respectively. Historical records indicate the property remained structurally undeveloped until the late 1970s. Subsequent to site development, operations at the site included a trade school, printing company, and golf club manufacturing. Building improvements including the installation of new piping and utilities was completed by the current property owner after the site was purchased from the golf manufacturing company in 2008. Two Phase I environmental site assessments (ESAs) were prepared for the site during May 2008 and September 2016, respectively. Based on discussions with ACDEH, the 2008 Phase I was performed prior to the property transaction between Orlimar Golf Company (Orlimar), a gold club manufacturing company and the current owner. Results of the first 2008 ESA indicated Orlimar was documented under the resource conservation and recovery act (RCRA) hazardous waste generator database. However, conclusions presented in the ESA indicated that recognized environmental concerns (REC) were not identified for soil and groundwater and additional subsurface investigations were not warranted. Results of the second 2016 ESA indicated Orlimar occupied the site from the early 1980s through the late 1990s and conducted operations which included the use and storage of hazardous materials (i.e. petroleum, lacquer thinner, and halogenated solvents), the operation of a degreaser, and the generation of hazardous waste. Additionally, inspection records from between the 1980s and 1990s indicated hazardous materials were stored inside and outside of the site without secondary containment. Two subsurface investigations have been conducted at the site without regulatory oversight during Q4 2016 and Q1 2017, respectively. The first 2016 investigation included the collection of soil, grab groundwater, and soil vapor samples. Soil results indicated low concentrations of Total Petroleum Hydrocarbons as diesel (TPH-d) and TPH as motor oil (TPH-mo), up to 1.7 milligrams per kilogram [mg/kg] TPH-d and 30 mg/kg TPH-mo. Grab groundwater samples indicated TPH-d was reported up to 150 micrograms per liter (ug/l) and TPH-mo up to 3,100 ug/l. Silica Gel Cleanup (SGC) does not appear to have been conducted on the extractable hydrocarbon analysis. A concentration of 64 ug/l of Trichloroethene (TCE) was also detected in grab groundwater sample located in proximity to the former hazardous materials storage compound location. TCE was also detected in one soil vapor sample at a very low concentration of 3.1 micrograms per cubic meter (ug/m3) near the southern edge of the parcel, a substantial distance from TCE reported in groundwater. The second subsurface investigation included the collection of soil, groundwater, and soil vapor samples. One groundwater monitoring well was installed at the reported location of the former hazardous material compound. Results indicated indoor air samples

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

were all below applicable Environmental Screening Levels (ESLs) for commercial indoor air "Direct Exposure Human Health Risk Levels" as promulgated by the San Francisco Bay Regional Water Quality Control Board (RWQCB), but were above the residential "Direct Exposure Human Health Risk Levels" ESLs. Soil samples collected during the installation of the monitoring well detected up to 1,336 mg/kg TPH-mo at a depth of two feet below grade surface (bgs). Groundwater concentrations up to 44.9 ug/l TCE and 11.4 ug/l of cis-1,2-Dichloroethene (cis 1,2 DCE) were detected. Both concentrations are below applicable commercial "Groundwater Vapor Intrusion Human Health Risk Levels" ESLs; however, only one monitoring event has occurred. Subsequent investigation activities have been requested by ACDEH to evaluate subsurface soil gas conditions under the building footprint and evaluate human health risk from vapor intrusion to indoor air.

Site History:

The site is located in a commercial/light industrial area of Hayward and consists of two parcels currently developed as an office/warehouse which produces organic hummus and other similar types of dips and spreads. A railroad spur is located on APN 439-100-5-1 in the southern portion of the property. The warehouse is located on APN 439-100-5-2 with asphalt and concrete parking areas with modest landscaping located to the north and east, respectively. Historical records indicate the property remained structurally undeveloped until the late 1970s. Subsequent to site development, operations at the site included a trade school, printing company, and golf club manufacturing. Building improvements including the installation of new piping and utilities was completed by the current property owner after the site was purchased from the golf manufacturing company in 2008.

Two Phase I environmental site assessments (ESAs) were prepared for the site during May 2008 and September 2016, respectively. Based on discussions with ACDEH, the 2008 Phase I was performed prior to the property transaction between Orlimar Golf Company (Orlimar), a gold club manufacturing company and the current owner. Results of the first 2008 ESA indicated Orlimar was documented under the resource conservation and recovery act (RCRA) hazardous waste generator database. However, conclusions presented in the ESA indicated that recognized environmental concerns (REC) were not identified for soil and groundwater and additional subsurface investigations were not warranted. Results of the second 2016 ESA indicated Orlimar occupied the site from the early 1980s through the late 1990s and conducted operations which included the use and storage of hazardous materials (i.e. petroleum, lacquer thinner, and halogenated solvents), the operation of a degreaser, and the generation of hazardous waste. Additionally, inspection records from between the 1980s and 1990s indicated hazardous materials were stored inside and outside of the site without secondary containment.

Two subsurface investigations have been conducted at the site without regulatory oversight during Q4 2016 and Q1 2017, respectively. The first 2016 investigation included the collection of soil, grab groundwater, and soil vapor samples. Soil results indicated low concentrations of Total Petroleum Hydrocarbons as diesel (TPH-d) and TPH as motor oil (TPH-mo), up to 1.7 milligrams per kilogram [mg/kg] TPH-d and 30 mg/kg TPH-mo. Grab groundwater samples indicated TPH-d was reported up to 150 micrograms per liter (ug/l) and TPH-mo up to 3,100 ug/l. Silica Gel Cleanup (SGC) does not appear to have been conducted on the extractable hydrocarbon analysis. A concentration of 64 ug/l of Trichloroethene (TCE) was also detected in grab groundwater sample located in proximity to the former hazardous materials storage compound location. TCE was also detected in one soil vapor sample at a very low concentration of 3.1 micrograms per cubic meter (ug/m3) near the southern edge of the parcel, a substantial distance from TCE reported in groundwater.

The second subsurface investigation included the collection of soil, groundwater, and soil vapor samples. One groundwater monitoring well was installed at the reported location of the former hazardous material compound. Results indicated indoor air samples were all below applicable Environmental Screening Levels (ESLs) for commercial indoor air "Direct Exposure Human Health Risk Levels" as promulgated by the San Francisco Bay Regional Water Quality Control Board (RWQCB), but were above the residential "Direct Exposure Human Health Risk Levels" ESLs. Soil samples collected during the installation of the monitoring well detected up to 1,336 mg/kg TPH-mo at a depth of two feet below grade surface (bgs). Groundwater concentrations up to 44.9 ug/l TCE and 11.4 ug/l of cis-1,2-Dichloroethene (cis 1,2 DCE) were detected. Both concentrations are below applicable commercial "Groundwater Vapor Intrusion Human Health Risk Levels" ESLs; however, only one monitoring event has occurred.

Subsequent investigation activities have been requested by ACDEH to evaluate subsurface soil gas conditions under the building footprint and evaluate human health risk from vapor intrusion to indoor air.

Site History:

Electro Forming Co. Hayward (Site) is located at 3435 Enterprise Avenue, Hayward, California. The Site parcel size is approximately 18,600 square feet (sq. ft.) A concrete tilt-up type building (approximately 8,900 sq. ft.) occupies the east side of the parcel. The former exterior storage and parking areas occupy the west side of the parcel. The surrounding area consists of industrial and commercial facilities occupying a light industrial-zoned area that lies approximately 2 miles west of Interstate 880 and 1 mile east of San Francisco Bay.

Metal plating operations were conducted at the Site from approximately 1978 to 2001. The metal plating building contained a plating area, chemical storage area, wastewater treatment units, a polishing room, and shipping and office areas. The former exterior parking and the storage yard were used to store surplus equipment and materials.

Soils beneath the Site consist of low-permeability clays to a depth of approximately 8 ft. below ground surface (bgs), below which groundwater occurs within a thin (1 to 4 ft.) sand lens. The sand lens appears to be continuous across the Site and is underlain by a second clay that extends to the total depth of the investigated soil profile (15 ft. bgs).

Soil impacts are limited to localized detections of cadmium with concentrations above DTSC recommended screening level for commercial/industrial

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

soil. Cadmium exceedances occurred beneath the building's concrete foundation. Potential exposure to cadmium in soils is likely limited to future construction workers.

Groundwater impacts are limited to trichloroethene (TCE), which occurred at a relatively uniform concentration (7 to 9 micrograms per liter [µg/L]) across the Site, slightly exceeding the California maximum contaminant level of 5 µg /L.

San Francisco Bay Regional Water Quality Control Board has designated the shallow groundwater at the immediate vicinity of the Site as non-potable due to poor ambient water quality and low yield. DTSC considers that the groundwater beneath the Site presents an unacceptable threat to present and future human health or safety or the environment

Sol vapor impacts are limited to TCE and tetrachloroethene (PCE). The highest measured TCE concentration in soil vapor was 6,600 micrograms per cubic (µg /m3) while the highest measured PCE concentration was 1,300 µg /m3. If a default attenuation factor of 0.001 is considered, these concentrations lay within the risk management range of 1x 10-4 to 1 x 10-6. When site-specific conditions are considered, including soil properties and onsite building dimensions, estimates of commercial/industrial exposure health risk lay beyond the departure point of 1 x 10-6.

A land use covenant (LUC) is required as part of the site remediation because hazardous wastes or constituents including cadmium, remain in soil above unrestricted cleanup goals at depths of one (1) ft. or more below the surface of the Site; and TCE remains in groundwater in and under portions of the Site. LUC recommended remediation includes maintaining a cover ("Cap") over most of the Property.

No activities that will disturb the soil at or below the Cap (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed on the Site without a Soil Management Plan approved by the DTSC in advance.

Over time, the Cap as described in the Covenant (concrete, asphalt, and compacted base material) deteriorated losing its effectiveness to prevent dermal contact of impacted soils or restricting surface water percolation. The Cap was restored in April 2019 to meet Covenant requirements. The Cap was reconditioned with the placement of 6-inch thick steel-reinforced concrete. Additionally, all uncovered soil in the external area of the Property was also covered with the placement of 6-inch thick steel-reinforced concrete.

An annual inspection conducted at the Site on February 12, 2020. The purpose of the LUC annual inspection is to verify compliance with the Covenant to Restrict Use of the Property, executed on April 09, 2014, and recorded with Alameda County. According to the annual inspection report, the Site complies with the restrictions and requirements of the LUC.

Document Type:					Land Use Restriction - Site Inspection/Visit	
Date Completed:					1/16/2020	
Comments:					On February 14, 2018, DTSC issued a comment letter on the 2017 Land Use Covenant (LUC) Annual Inspection Report (Report). The comment letter noted that photographs included in the Report showed apparent deterioration of pavement (Cap) on the eastern side of the Property.	
The Cap was restored in circa April 2019 to meet LUC requirements. The Cap was reconditioned with placement of 6-inch thick steel-reinforced concrete. Additionally, all uncovered soil in the external area of the Property was covered with the placement of 6-inch thick steel-reinforced concrete.						
Based on the 2020 LUC inspection, the Cap meets the provisions of the LUC and is currently effective by protecting public health and the environment. If minor cracking worse over time, DTSC recommends that sealants such as epoxy resins, asphaltic material, thermoplastics, silicone, etc. may be placed over cracking as corrective measure to retain Cap and swales effectiveness and level of protection.						
Title:					Cap Restoration - Letter Report

Title:		Vapor Intrusion Risk Assessment				

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
Title Link:					http://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=71003321&doc_id=60475178	
Area Name:						
Area Link:						
Sub Area:						
Sub Area Link:						
Document Type:					Risk Assessment Report	
Date Completed:					3/10/2020	
Comments:					A default assumption of 0.001 attenuation using the maximum trichloroethene (TCE) soil vapor concentration detected of 6,600 ug/m3 predicts an indoor air concentration of 6.6 ug/m3, which is within the risk management range for commercial/industrial incremental excess risk and falls below the TCE accelerated response action level for a commercial/industrial scenario of 8 ug/m3. Indoor air samples have not been collected to provide an empirical line of evidence for protectiveness from the vapor intrusion (VI) pathway.	
					Variation in soil vapor concentrations, degradation of subsurface volatile organic compounds, and wear and tear of the building slab may increase inhalation risk and hazard for site receptors. These factors should be monitored regularly to re-evaluate potential VI risk and hazard.

Date Completed:		11/2/2012				
Comments:		Workplan describe activities for groundwater sampling at up sixteen locations, chemical analysis of samples and reporting. The objective of the sampling is to provide data regarding current groundwater conditions. Groundwater samples are proposed throughout the property at locations associated with past plating activities, detected soil impact, and to provide adequate coverage of the property.

UNDER INVESTIGATION

Site History:

Electro Forming Co. Hayward (Site) is located at 3435 Enterprise Avenue, Hayward, California. The Site parcel size is approximately 18,600 square feet (sq. ft.) A concrete tilt-up type building (approximately 8,900 sq. ft.) occupies the east side of the parcel. The former exterior storage and parking areas occupy the west side of the parcel. The surrounding area consists of industrial and commercial facilities occupying a light industrial-zoned area that lies approximately 2 miles west of Interstate 880 and 1 mile east of San Francisco Bay.

Metal plating operations were conducted at the Site from approximately 1978 to 2001. The metal plating building contained a plating area, chemical storage area, wastewater treatment units, a polishing room, and shipping and office areas. The former exterior parking and the storage yard were used to store surplus equipment and materials.

Soils beneath the Site consist of low-permeability clays to a depth of approximately 8 ft. below ground surface (bgs), below which groundwater occurs within a thin (1 to 4 ft.) sand lens. The sand lens appears to be continuous across the Site and is underlain by a second clay that extends to the total depth of the investigated soil profile (15 ft. bgs).

Soil impacts are limited to localized detections of cadmium with concentrations above DTSC recommended screening level for commercial/industrial soil. Cadmium exceedances occurred beneath the building's concrete foundation. Potential exposure to cadmium in soils is likely limited to future construction workers.

Groundwater impacts are limited to trichloroethene (TCE), which occurred at a relatively uniform concentration (7 to 9 micrograms per liter [µg/L]) across the Site, slightly exceeding the California maximum contaminant level of 5 µg/L.

San Francisco Bay Regional Water Quality Control Board has designated the shallow groundwater at the immediate vicinity of the Site as non-potable due to poor ambient water quality and low yield. DTSC considers that the groundwater beneath the Site presents an unacceptable threat to present and future human health or safety or the environment

Sol vapor impacts are limited to TCE and tetrachloroethene (PCE). The highest measured TCE concentration in soil vapor was 6,600 micrograms per cubic (µg /m3) while the highest measured PCE concentration was 1,300 µg /m3. If a default attenuation factor of 0.001 is considered, these concentrations lay within the risk management range of 1x 10-4 to 1 x 10-6. When site-specific conditions are considered, including soil properties and onsite building dimensions, estimates of commercial/industrial exposure health risk lay beyond the departure point of 1 x 10-6.

A land use covenant (LUC) is required as part of the site remediation because hazardous wastes or constituents including cadmium, remain in soil above unrestricted cleanup goals at depths of one (1) ft. or more below the surface of the Site; and TCE remains in groundwater in and under portions of the Site. LUC recommended remediation includes maintaining a cover ("Cap") over most of the Property.

No activities that will disturb the soil at or below the Cap (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed on the Site without a Soil Management Plan approved by the DTSC in advance.

Over time, the Cap as described in the Covenant (concrete, asphalt, and compacted base material) deteriorated losing its effectiveness to prevent

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

dermal contact of impacted soils or restricting surface water percolation. The Cap was restored in April 2019 to meet Covenant requirements. The Cap was reconditioned with the placement of 6-inch thick steel-reinforced concrete. Additionally, all uncovered soil in the external area of the Property was also covered with the placement of 6-inch thick steel-reinforced concrete.

An annual inspection conducted at the Site on February 12, 2020. The purpose of the LUC annual inspection is to verify compliance with the Covenant to Restrict Use of the Property, executed on April 09, 2014, and recorded with Alameda County. According to the annual inspection report, the Site complies with the restrictions and requirements of the LUC.

Area Name:						
Area Link:						
Sub Area:						
Sub Area Link:						
Document Type:		Risk Assessment Report				
Date Completed:		3/10/2020				
Comments:		A default assumption of 0.001 attenuation using the maximum trichloroethene (TCE) soil vapor concentration detected of 6,600 ug/m3 predicts an indoor air concentration of 6.6 ug/m3, which is within the risk management range for commercial/industrial incremental excess risk and falls below the TCE accelerated response action level for a commercial/industrial scenario of 8 ug/m3. Indoor air samples have not been collected to provide an empirical line of evidence for protectiveness from the vapor intrusion (VI) pathway.				
		Variation in soil vapor concentrations, degradation of subsurface volatile organic compounds, and wear and tear of the building slab may increase inhalation risk and hazard for site receptors. These factors should be monitored regularly to re-evaluate potential VI risk and hazard.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
					Report (Report). The comment letter noted that photographs included in the Report showed apparent deterioration of pavement (Cap) on the eastern side of the Property.	
					The Cap was restored in circa April 2019 to meet LUC requirements. The Cap was reconditioned with placement of 6-inch thick steel-reinforced concrete. Additionally, all uncovered soil in the external area of the Property was covered with the placement of 6-inch thick steel-reinforced concrete.	
					Based on the 2020 LUC inspection, the Cap meets the provisions of the LUC and is currently effective by protecting public health and the environment. If minor cracking worse over time, DTSC recommends that sealants such as epoxy resins, asphaltic material, thermoplastics, silicone, etc. may be placed over cracking as corrective measure to retain Cap and swales effectiveness and level of protection.

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No: NA
Local Case No: RO0002629
Begin Date:

CUF Case: NO
Case Worker: DY
File Location: All Files are on GeoTracker or in the Local Agency Database

Stop Method: Other Means
Lead Agency: ALAMEDA COUNTY LOP
Local Agency: ALAMEDA COUNTY LOP
Potential COC: Waste Oil / Motor / Hydraulic / Lubricating
Potential Media of Concern: Under Investigation
How Discovered: * SA
How Discovered Description:
Stop Description:
Calwater Watershed Name: South Bay - East Bay Cities (204.20)
DWR GW Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:
Site History:

A site inspection found a number of improperly stored 55-gallon drums of waste oil and smaller waste containers with evident surface spillage. Three USTs were also located and removed; confirmation soil samples do not appear to have been collected / submitted. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No:	NA	CUF Case:	NO
Local Case No:	RO0002499	Case Worker:	NL
Begin Date:	10/12/2001	File Location:	All Files are on GeoTracker or in the Local Agency Database
Stop Method:	Other Means		
Lead Agency:	ALAMEDA COUNTY LOP		
Local Agency:	ALAMEDA COUNTY LOP		
Potential COC:	Lead, Zinc, Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating		
Potential Media of Concern:	Other Groundwater (uses other than drinking water)		
How Discovered:	Site Assessment/Site Investigation		
How Discovered Description:	facility inspection		
Stop Description:			
Calwater Watershed Name:	South Bay - East Bay Cities (204.20)		
DWR GW Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)		
Disadvantaged Community:			
Site History:			

A regulatory compliance inspection was conducted in July 2001 and multiple surface discharges were noted; including a diesel fuel spill, open drums of waste oil, fluids discharged from dismantling operations, and several other improper storage violations. Eight soil bores were drilled in late 2001, and three wells were installed in June 2003. Based on a 2016 Phase I environmental site assessment conducted for the Site, the site housed gasoline, waste oil, hydraulic oil, lead-acid batteries, antifreeze, tires, absorbents, auto parts, and solvents. A site cleanup removed 15,276 gallons of waste oil, 20,740 tires, 7.5 million pounds of iron, 560 lead acid batteries, and 2,176 cubic yards of solid waste. The site has been proposed for redevelopment as a concrete recycling facility.

Doc Link:	https://geotracker.waterboards.ca.gov/view_documents?global_id=T06019790228&enforcement_id=6437785&temptable=ENFORCEMENT

Title Description Comments:

Meeting Attendance Sheet RP to provide workplan for site characterization. grid pattern of shallow soil samples, stepwise by depth analysis. redevelop two site monitoring wells and sample. Full VOC list. commercial/industrial/or utility worker screening levels. Review prior data, some date transcription errors noted. previous site use was automobile recycling, wrecking. most of site was not historically characterized spatially due to density of vehicles.

RB Case No:	01S0685	CUF Case:	NO
Local Case No:		Case Worker:	CCM
Begin Date:	1/1/1984	File Location:	Regional Board
Stop Method:	Change Operating Procedures, Close and Remove Tank, Remove Contents		
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)		
Local Agency:			
Potential COC:	* Solvents, Other Solvent or Non-Petroleum Hydrocarbon, Xylene, * Metals, Diesel, Gasoline		
Potential Media of Concern:	Other Groundwater (uses other than drinking water)		
How Discovered:	* Other Means		
How Discovered Description:	ON 9/6/02, AN IRON OXIDE PIGMENT RESIDUE, WHICH WAS BEING CLEANED, WAS ACCIDENTALLY RELEASED AT QSI FACILITY AND ENTERED STORM DRAIN. THE SPILL AREA WAS ISOLATED AND THE IMPACTED MATERIAL WAS CLEANED UP. THE STORM SEWER WAS FLUSHED TO REMOVE THE IRON OXIDE. Qualawash facility closed and equipment transported to Quala's Richmond California facility.		
Stop Description:	South Bay - East Bay Cities (204.20)		
Calwater Watershed Name:	Santa Clara Valley - East Bay Plain (2-009.04)		
DWR GW Subbasin Name:			
Disadvantaged Community:			
Site History:			

The prior property owner, Clearance J. Perry, owner and operator of Clearance J. Perry Truck Yard (aka C.J. Perry Trucking) stored trucks and repaired vehicles in the garage/shop at the Site from 1973 to 1979. The business had two single-walled steel underground storage tanks (USTs) a 1,000 gallon and 8,000 gallon for diesel fuel, located at north east side of the garage/shop and in alignment with the driveway entrance. Sometime after 1984, in order to avoid tank monitoring requirements, the USTs were removed without notification or regulatory oversight. The USTs were reportedly transported to an undisclosed location in Pittsburg, California. In 1987, Odyssey Transportation occupied the Site and reportedly installed the wash rack building to the north of the garage/shop building. From 1987 to 2003, the Site was occupied by Quala Systems Inc. (QSI) and its predecessors Nubulk, Inc. and Odyssey Transportation operated a commercial cargo tank cleaning company decontaminated and cleaned empty chemical tank trailers and bulk storage containers. These operations generated hazardous wastes (i.e., spent aromatic hydrocarbon based solvents, and residual solids) from the tank cleaning processes. These wastes were drummed for offsite disposal. Products commonly cleaned from tanks included organic chemicals, such as flammable resins, solvents, alcohols, cresols, aniline, naphthalene, and phenols. The residual products emptied from the tanks were ignitable, corrosive, or toxic. Aromatic hydrocarbon-based solvents were used to facilitate the removal of residual materials from tanks. Steam cleaning, overspills onto unpaved ground surfaces, lack of containment and poor housekeeping practices impacted the soil, groundwater, storm drains and a nearby creek. Operational areas have the highest concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH), and metals.

Site History:

The prior property owner, Clearance J. Perry, owner and operator of Clearance J. Perry Truck Yard (aka C.J. Perry Trucking) stored trucks and repaired vehicles in the garage/shop at the Site from 1973 to 1979. The business had two single-walled steel underground storage tanks (USTs) a 1,000 gallon and 8,000 gallon for diesel fuel, located at north east side of the garage/shop and in alignment with the driveway entrance. Sometime after 1984, in order to avoid tank monitoring requirements, the USTs were removed without notification or regulatory oversight. The USTs were reportedly transported to an undisclosed location in Pittsburg, California.

In 1987, Odyssey Transportation occupied the Site and reportedly installed the wash rack building to the north of the garage/shop building. From 1987 to 2003, the Site was occupied by Quala Systems Inc. (QSI) and its predecessors Nubulk, Inc. and Odyssey Transportation operated a commercial cargo tank cleaning company decontaminated and cleaned empty chemical tank trailers and bulk storage containers. These operations generated hazardous wastes (i.e., spent aromatic hydrocarbon based solvents, and residual solids) from the tank cleaning processes. These wastes were drummed for offsite disposal. Products commonly cleaned from tanks included organic chemicals, such as flammable resins, solvents, alcohols, cresols, aniline, naphthalene, and phenols. The residual products emptied from the tanks were ignitable, corrosive, or toxic. Aromatic hydrocarbon-based solvents were used to facilitate the removal of residual materials from tanks. Steam cleaning, overspills onto unpaved ground surfaces, lack of containment and poor housekeeping practices impacted the soil, groundwater, storm drains and a nearby creek. Operational areas have the highest concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH), and metals.

Stop Description:						
Calwater Watershed Name:		South Bay - East Bay Cities (204.20)				
DWR GW Subbasin Name:		Santa Clara Valley - East Bay Plain (2-009.04)				
Disadvantaged Community:						
Site History:						

The Site is located approximately 1½ miles east of the San Francisco Bay shoreline and ½ mile east of marshlands and salt evaporation ponds. The Site and surrounding land use is commercial/industrial, and is anticipated to remain so in the future. A large building located near the center of the Site is used by a construction company for storage, maintenance, and office space. Two abandoned sumps (dip tanks) used by a former Site tenant for chrome plating operations are located within the northwestern portion of the building. The dip tanks were filled with soil and paved over with cement by the current Site owner. The remainder of the Site was paved by the current Site owner and is used as an outdoor storage yard for construction equipment. The western portion of the property and a narrow easement along the northern border of the Site is leased by a third party for storage of mobile containers and trailers.

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No:	01S0776	CUF Case:	NO
Local Case No:		Case Worker:	NF
Begin Date:	8/2/2016	File Location:	All Files are on GeoTracker or in the Local Agency Database
Stop Method:			
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)		
Local Agency:			
Potential COC:	Tetrachloroethylene (PCE), Diesel, Waste Oil / Motor / Hydraulic / Lubricating		
Potential Media of Concern:	Other Groundwater (uses other than drinking water), Soil Vapor		
How Discovered:			
How Discovered Description:			

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Stop Description:

Calwater Watershed Name: South Bay - East Bay Cities (204.20)
DWR GW Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:
Site History:

The site was used for precast concrete panel manufacturer for 40+ years. The current use of the Site is commercial, light industrial with two slab on grade tilt up buildings and open, non-paved areas for storage and handling of materials. Phase 1 reports historical above ground fuel tank enclosed on site as well as minor drum storage of unknown compounds on a concrete contained and covered storage pad. PCE and TPH (diesel and motor oil) has been detected in soil and groundwater.

Site History:						

The site consists of approximately 1.2 acres of land containing one industrial building that was constructed in 1981. The site is owned by MDC Vacuum Products (MDC) and is used for manufacturing and storage of vacuum products. The site is located within an industrial section of Hayward and is generally flat. MDC formerly maintained a hazardous material storage area and sump on the northeastern corner of the site. Soil and groundwater testing performed in 2004 and 2005 as part of a refinancing effort identified a release of volatile organic compounds (VOCs) to both media in proximity to the former sump. The VOCs identified included 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), trichloroethene (TCE), vinyl chloride, 1,1,1-trichloroethane (1,1,1-TCA) and cis-1,2-dichloroethene (cis-1,2-DCE). In addition, the stabilizer 1,4-dioxane was also identified in groundwater.

Site History:

The site consists of approximately 1.2 acres of land containing one industrial building that was constructed in 1981. The site is owned by MDC Vacuum Products (MDC) and is used for manufacturing and storage of vacuum products. The site is located within an industrial section of Hayward and is generally flat.

MDC formerly maintained a hazardous material storage area and sump on the northeastern corner of the site. Soil and groundwater testing performed in 2004 and 2005 as part of a refinancing effort identified a release of volatile organic compounds (VOCs) to both media in proximity to the former sump. The VOCs identified included 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), trichloroethene (TCE), vinyl chloride, 1,1,1-trichloroethane (1,1,1-TCA) and cis-1,2-dichloroethene (cis-1,2-DCE). In addition, the stabilizer 1,4-dioxane was also identified in groundwater.

Sites from GeoTracker Search - Cleanup Action Report (as of Feb 24, 2020)

Action Type:	EXCAVATION	Begin Date:	2/1/2007
Phase:	Soil	End Date:	2/28/2007
Description:	In February 2007, MDC Vacuum Products excavated soil from a 30-foot by 20-foot area surrounding the former sump down to first groundwater at approximately 11 feet below ground surface. Confirmation soil samples from the sides of the excavation revealed the vast majority of the impacted soils had been removed although some remains.		
Contaminant Mass Removed:

Conditional Approval of Work Plan and Requirement for Technical Report

Action Type: Cleanup Action
Action Date: 2/1/2007
Received Issue Date:
Action: Excavation
Doc Link:
Title Description Comments:

In February 2007, MDC Vacuum Products excavated soil from a 30-foot by 20-foot area surrounding the former sump down to first groundwater at approximately 11 feet below ground surface. Confirmation soil samples from the sides of the excavation revealed the vast majority of the impacted soils had been removed although some remains.

Calwater Watershed Name:	South Bay - East Bay Cities (204.20)		
DWR GW Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)		
Disadvantaged Community:			
Site History:			

Historic Salt Farm closed on 1/1/1981. Source of petroleum contamination is two underground tanks that were removed in 1998. Site has very shallow saline groundwater. Two remnant USTs used for kerosene, gasoline and diesel storage were removed in April-May 1998 by DECON Environmental. 500 cubic yards of impacted soil was excavated and hauled off-site for disposal to Altamont Landfill in Livermore, on July 6 and 7, 1998 by DECON. Soil contained diesel, gasoline, and BTEX compounds at elevated levels. During October 1999, DECON excavated an additional 500 tons of impacted soil from the Elevated Dike and former Train Barn area of the former Old Oliver Salt Plant and disposed off-site at Altamont Landfill. From September 2001 to July 2002, DECON stockpiled an additional 8,000 cubic yards of impacted soil for ex-situ treatment with mushroom compost for enhanced biodegradation and this soil was re-used on-site. Environmental Deed Restriction was recorded with the Alameda County 12/23/2014, and a Risk Management Plan dated November 18, 2014 was approved by the Regional Water Board Staff, to address residual pollutants at the site. Insitu chemical oxidation implemented as final cleanup plan for the site in October 2008. During October to November 2008, RegenOx and ORC Advanced was added using the Lang Tool and soil mixing to the impacted soil to breakdown the petroleum hydrocarbon contamination. Finally in September 2011, 208 tons of soil adjacent to the old wooden building was excavated and hauled offsite for disposal. The soil mixing was not effective for groundwater cleanup, as the TPH and Benzene concentrations increased in the groundwater after the soil cleanup plan was implemented. A deed restriction and risk management will address the residual pollution in soil and groundwater and protect human health and safety. Additional information on this case is available at Alameda County Environmental Health - Local Oversight Program at acgov.org (case file # RO000329).

Description:	Two remnant USTs used for kerosene, gasoline and diesel storage were removed in April-May 1998 by DECON Environmental. 500 cubic yards of impacts soil was excavated and hauled off-site for disposal to Altamont Landfill in Livermore, on July 6 and 7, 1998 by DECON. Soil contained diesel, gasoline, and BTEX compounds at elevated levels. During October 1999, DECON excavated an additional 500 tons of impacted soil from the Elevated Dike and former Train Barn area of the former Old Oliver Salt Plant and disposed off-site at Altamont Landfill. From September 2001 to July 2002, DECON stockpiled an additional 8,000 cubic yards of impacted soil for ex-situ treatment with mushroom compost for enhanced biodegradation and this soil was re-used on-site. During October to November 2008, RegenOx and ORC Advanced was added using the Lang Tool and soil mixing to the impacted soil to breakdown the petroleum hydrocarbon contamination. Finally in September 2011, 208 tons of soil adjacent to the old wooden building was excavated and hauled offsite for disposal. The soil mixing was not effective for groundwater cleanup, as the TPH and Benzene concentrations increased in the groundwater after the soil cleanup plan was implemented. A deed restriction and risk management will address the residual pollution in soil and groundwater and protect human health and safety.

Title Description Comments:						
California Department of Fish and Game Bay Delta EDEN LANDING ECOLOGICAL RESERVE - The former Oliver Brothers Salt Plant site is immediately adjacent to the State Department of Fish and Wildlife's Eden Landing Ecological Reserve, a key wetland restoration site that has sensitive wildlife receptors, including multiple special-status species. The cleanup numbers should be protective of those wildlife receptors, and we should strongly oppose closure of the case with the currently-observed high levels of contaminants in soil and groundwater. The Eden Landing Ecological Preserve (formerly called the Baumberg Tract), is a significant restoration of salt marsh, salt panne, and associated habitat on about 835 acres of land, and includes a number of sensitive ecological receptors: the western snowy plover (federally-listed as threatened, and located on the salt pannes immediately adjacent to the Oliver Brothers site); the salt marsh harvest mouse (federally-listed as endangered); the California clapper rail (federally-listed as endangered); and others. Some of these restoration areas may not look too appetizing to people, but they are key habitat for species.

Violation/Evaluation Summary

Note: NO VIOLATIONS: All of the compliance records associated with this facility (EPA ID) indicate NO VIOLATIONS; Compliance Monitoring and Enforcement table dated May, 2020.

Evaluation Details

Evaluation Start Date: 19910820
Evaluation Type Description: COMPLIANCE EVALUATION INSPECTION ON-SITE
Violation Short Description:
Return to Compliance Date:
Evaluation Agency: State Contractor/Grantee

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No

HALOGENATED SOLVENTS

Site History:

The site is the former location of Xerox Company's electronics manufacturing operations. Xerox stopped operating at this facility in 1989 but still owns the property. Volatile organic compounds (VOCs) were detected in site soils and groundwater underneath the facility during an environmental audit in February 1988. Contamination was suspected to have resulted from surface spills during routine facility operations.

Status:	NO FURTHER ACTION

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Facility Response Plan:

FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Mar 26, 2020

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Sep 22, 2020

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Sep 22, 2020

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Sep 22, 2020

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Aug 26, 2020

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Aug 26, 2020

Comprehensive Environmental Response, Compensation and Liability Information System -[CERCLIS](#)**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jul 27, 2020

RCRA non-CORRACTS TSD Facilities:[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jul 27, 2020

RCRA Generator List:[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jul 27, 2020

RCRA Small Quantity Generators List:

RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jul 27, 2020

RCRA Conditionally Exempt and Very Small Quantity Generators List:

RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt and Very Small Quantity Generators (VSQG and CESQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG and CESQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jul 27, 2020

RCRA Non-Generators:

RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jul 27, 2020

Federal Engineering Controls-ECs:

FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 26, 2020

Federal Institutional Controls- ICs:

FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Aug 26, 2020

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 19, 2020

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 3, 2019

FEMA Underground Storage Tank Listing:

[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property:

[SEMS LIEN](#)

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Aug 26, 2020

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Sep 22, 2020

State

State Response Sites:

[RESPONSE](#)

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Oct 5, 2020

EnviroStor Database:

[ENVIROSTOR](#)

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Oct 5, 2020

Delisted State Response Sites:

[DELISTED ENVS](#)

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Oct 5, 2020

Solid Waste Information System (SWIS):

[SWF/LF](#)

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Oct 15, 2020

EnviroStor Hazardous Waste Facilities:

HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Oct 5, 2020

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Land Disposal Sites:

LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Jul 15, 2020

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Jul 15, 2020

Delisted Leaking Storage Tanks:

DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Oct 7, 2020

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Permitted Underground Storage Tank (UST) in GeoTracker:

UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Jul 12, 2020

Proposed Closure of Underground Storage Tank Cases:

UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Oct 7, 2020

Historical Hazardous Substance Storage Information Database:

HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks:

AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Oil and Gas Facility Tanks:

TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Oct 7, 2020

Delisted Storage Tanks:

DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Oct 14, 2020

California Environmental Reporting System (CERS) Tanks:

CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 26, 2020

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Oct 5, 2020

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Oct 16, 2020

Deed Restrictions and Land Use Restrictions:

DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jul 15, 2020

Voluntary Cleanup Program:

VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Oct 5, 2020

GeoTracker Cleanup Program Sites:

CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Jul 15, 2020

Delisted County Records:

DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Nov 12, 2020

Delisted California Environmental Reporting System (CERS) Tanks:

[DELISTED CTNK](#)

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Oct 26, 2020

Historical Hazardous Substance Storage Container Information - Facility Summary:

[HIST TANK](#)

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands:

[INDIAN LUST](#)

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Underground Storage Tanks (USTs) on Indian Lands:

[INDIAN UST](#)

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Delisted Tribal Leaking Storage Tanks:

[DELISTED ILST](#)

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks:

[DELISTED IUST](#)

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

Alameda County - LOP Sites List:

[ALAMEDA LOP](#)

List of sites in the Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program (LOP). The ACDEH LOP program oversees the investigation and cleanup of hazardous materials releases to the environment under two programs. The Leaking Underground Fuel Tank (LUFT) program is specific to unauthorized releases associated with petroleum underground storage tank systems. The Site Cleanup Program (SCP) oversees the investigation and cleanup of releases from hazardous materials, including but not limited to releases of pesticides, heavy metals, dry cleaner solvents, etc., including redevelopment of sites with residual contamination from historic uses.

Government Publication Date: Jan 16, 2019

Alameda County - UST List:

[UST ALAMEDA](#)

A list of registered Underground Storage Tanks (USTs) in the County of Alameda. The list is made available by Alameda County Department of Environmental Health.

Government Publication Date: Jul 9, 2019

Alameda County - City of Berkeley CUPA Facilities:

[BERKELEY CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs at the City of Berkeley in Alameda County. This list is maintained by the Toxics Management Division at the City of Berkeley.

Government Publication Date: Sep 2, 2020

Alameda County - Hayward City CUPA List:

[HAYWARD CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Hayward City. This list is maintained by the Hayward City Fire Department.

Government Publication Date: Jul 16, 2019

Alameda County - San Leandro City CUPA Facilities List:[SANLEANDRO CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Leandro City, Alameda County. This list is made available by San Leandro City Environmental Services Section.

Government Publication Date: Apr 11, 2019

Alameda County - Union City USTs:[UNION UST](#)

A list of Underground Storage Tanks (USTs) in the city of Union in Alameda County. This data is made available by the Environmental Programs Division of Economic & Community Development, Union City.

Government Publication Date: Aug 31, 2020

Alameda County - Union City CERS CUPA List:[UNION CUPA](#)

A list of CERS registered facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. This list is made available by the City of Union Economic and Community Development Department.

Government Publication Date: Aug 31, 2020

Alameda County - Union City CUPA Facilities:[UNION CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. Includes facilities with active and inactive statuses. This list is made available by the City of Union Economic and Community Development Department.

Government Publication Date: Aug 31, 2020

Alameda County - City of Livermore and Pleasanton UST List:[LIVERMORE UST](#)

A list of registered Underground Storage Tank (UST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: May 1, 2019

Alameda County - City of Livermore and Pleasanton AST List:[LIVERMORE AST](#)

A list of registered Aboveground Storage Tank (AST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: May 1, 2019

Alameda County - City of Livermore and Pleasanton CUPA Facilities:[LIVERMORE CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in City of Livermore and City of Pleasanton in Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: May 1, 2019

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites:[PFAS NPL](#)

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Jul 7, 2020

Civil Enforcement Action Cases without Associated Facilities:[CEA2](#)

This database tracks civil, judicial, and administrative federal EPA enforcement cases, and is from the Integrated Compliance Information System. ICIS tracks enforcement actions taken against companies or individuals. Therefore, the ICIS case name may not exactly correspond to the facility name for ICIS records linked via FRS to facility records from other program office data systems. This dataset is provided by the EPA. This is a listing of cases where there are no facilities associated with a case.

Government Publication Date: Sep 11, 2020

Drug Establishment Annual Registration:[FDA REGISTRANT](#)

A list of drug firms which manufacture, prepare, propagate, compound, or process drugs that are commercially distributed in the U.S. or offered for import to the U.S. Listing made available by the U.S. Food and Drug Administration (FDA). Includes historical records dating back to 2000. Includes only facilities which are located in the U.S.A.

Risk Management Plan (RMP) Rule:

RMP

A list of facilities that are required to have a Risk Management Plan (RMP) in order to: identify the potential effects of chemical accidents, identify steps to prevent accidents and provide emergency response procedures should an accident occur. This list is provided by the EPA which is required by the Clean Air Act Amendments to publish regulations and guidance on chemical accident prevention.

Government Publication Date: Jan 31, 2020

Facility Registry Service/Facility Index:

FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Jun 15, 2020

Toxics Release Inventory (TRI) Program:

TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases:

PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality:

PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Jan 8, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Sep 22, 2020

State Coalition for Remediation of Drycleaners Listing:

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2020

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2020

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

PHMSA Pipeline Safety Flagged Incidents:

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Aug 5, 2020

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: May 1, 2020

Alternative Fueling Stations:

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Sep 24, 2020

Integrated Compliance Information System for Air:

ICIA

ICIS-Air contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners (automobiles and other mobile air pollution sources are tracked by a different EPA system). ICIS-Air records included in the download files are those where the operating status is planned (has applied for a construction permit), under construction, operating, temporarily closed, seasonal, or permanently closed. This is provided by the EPA.

Government Publication Date: Sep 28, 2020

Occupational Safety and Health Administration Enforcement Data:

OSHA

This dataset includes information regarding the impetus for conducting the inspection, and details on citations and penalty assessments resulting from violations of OSHA standards. Additionally, accident investigation information is provided, including textual descriptions of the accident, and details regarding the injuries and fatalities which occurred. Provided by the US Department of Labor.

Government Publication Date: Jul 16, 2020

Civil Enforcement Actions:

CEA

This database tracks civil, judicial, and administrative federal EPA enforcement cases, and is from the Integrated Compliance Information System. ICIS tracks enforcement actions taken against companies or individuals. Therefore, the ICIS case name may not exactly correspond to the facility name for ICIS records linked via FRS to facility records from other program office data systems. This dataset is provided by the EPA.

Government Publication Date: Sep 11, 2020

Criminal Enforcement Actions:

CRIM

Criminal Enforcement Actions database that is maintained by the US environmental protection agency (EPA) which reports criminal enforcement cases for all environmental statutes

Government Publication Date: Jul 22, 2020

Permit Compliance System (PCS):

PCS

Permit Compliance System (PCS) database that is maintained by US Environmental Protection Agency (EPA) provides historic water discharge permit information by state. The Permit Compliance System (PCS) is gradually being replaced by the modernized system called Integrated Compliance Information System (ICIS).

Government Publication Date: Nov 12, 2012

Federal National Pollutant Discharge Elimination System (NPDES):

NPDES

ICIS-NPDES is an information management system maintained by the Office of Compliance at the US Environmental Protection Agency (EPA) to track permit compliance and enforcement status of facilities regulated by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act (CWA). ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

Government Publication Date: May 19, 2020

Financial Assurance Summary:

[FINA](#)

RCRA regulated Treatment, Storage, & Disposal (TSD) sites with Financial Assurance coverage, listed on the Financial Assurance Summary made available by the US Environmental Protection Agency (EPA).

Government Publication Date: Jun 18, 2020

Biennial Reporting System (BRS):

[BRS](#)

The Biennial Reporting System (BRS) database maintained by the Environmental Protection Agency (EPA) that contains biennial reports submitted by generators of hazardous wastes and facilities that treat, store or dispose of hazardous wastes.

Government Publication Date: Dec 16, 2016

Enforcement and Compliance Data (ECHO):

[ECHO](#)

ECHO data focuses on compliance and enforcement-related information for regulated facilities, including permit data, inspection/compliance evaluation dates and findings, violations of environmental regulations, enforcement actions, and penalties assessed. The data encompasses facilities related to air emissions, surface water discharges, hazardous waste, and drinking water systems. The information contained in ECHO is made available to the public by the U.S. Environmental Protection Agency (EPA) for information purposes only.

Government Publication Date: Jan 20, 2020

Registered Pesticide Establishments:

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 31, 2020

Polychlorinated Biphenyl (PCB) Notifiers:

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 9, 2019

Civil Cases and Settlements:

[CIVIL CASES](#)

A listing of significant civil and cleanup cases and settlements from 1998 and onwards. This data is made available by the United States Environmental Protection Agency (US EPA).

Government Publication Date: Oct 20, 2020

State

NPDES Permits Listing:

[NPDES](#)

List of National Pollutant Discharge Elimination System (NPDES) permits maintained by the California State Water Resources Control Board. The list includes active, historical and terminated NPDES Permits for the state of California.

Government Publication Date: Apr 30, 2020

Dry Cleaning Facilities:

[DRYCLEANERS](#)

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

Delisted Drycleaners:

[DELISTED DRYCLEANERS](#)

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

Non-Toxic Dry Cleaning Incentive Program:

DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS):

PFAS

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Jul 15, 2020

PFOA/PFOS Groundwater:

PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Oct 22, 2020

Hazardous Waste and Substances Site List - Site Cleanup:

HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

List of Hazardous Waste Facilities Subject to Corrective Action:

DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 7, 2020

School Property Evaluation Program Sites:

SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Oct 5, 2020

California Hazardous Material Incident Report System (CHMIRS):

CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Oct 12, 2020

Hazardous Waste Manifest Data:

HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS):

HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data:

HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List:

[HIST CORTESE](#)

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:

[CDO/CAO](#)

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites:

[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 26, 2020

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker:

[GEOTRACKER](#)

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Jul 15, 2020

Waste Discharge Requirements:

[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Jul 15, 2020

Toxic Pollutant Emissions Facilities:

[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2018

Clandestine Drug Lab Sites:

[CDL](#)

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Jun 30, 2018

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Property Information

Order Number:	20312300269p
Date Completed:	November 23, 2020

Wells and Additional Sources.....	12
Summary.....	13
Detail Report.....	22
Radon Information.....	171
Appendix.....	172
Liability Notice.....	174

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo (2015)

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

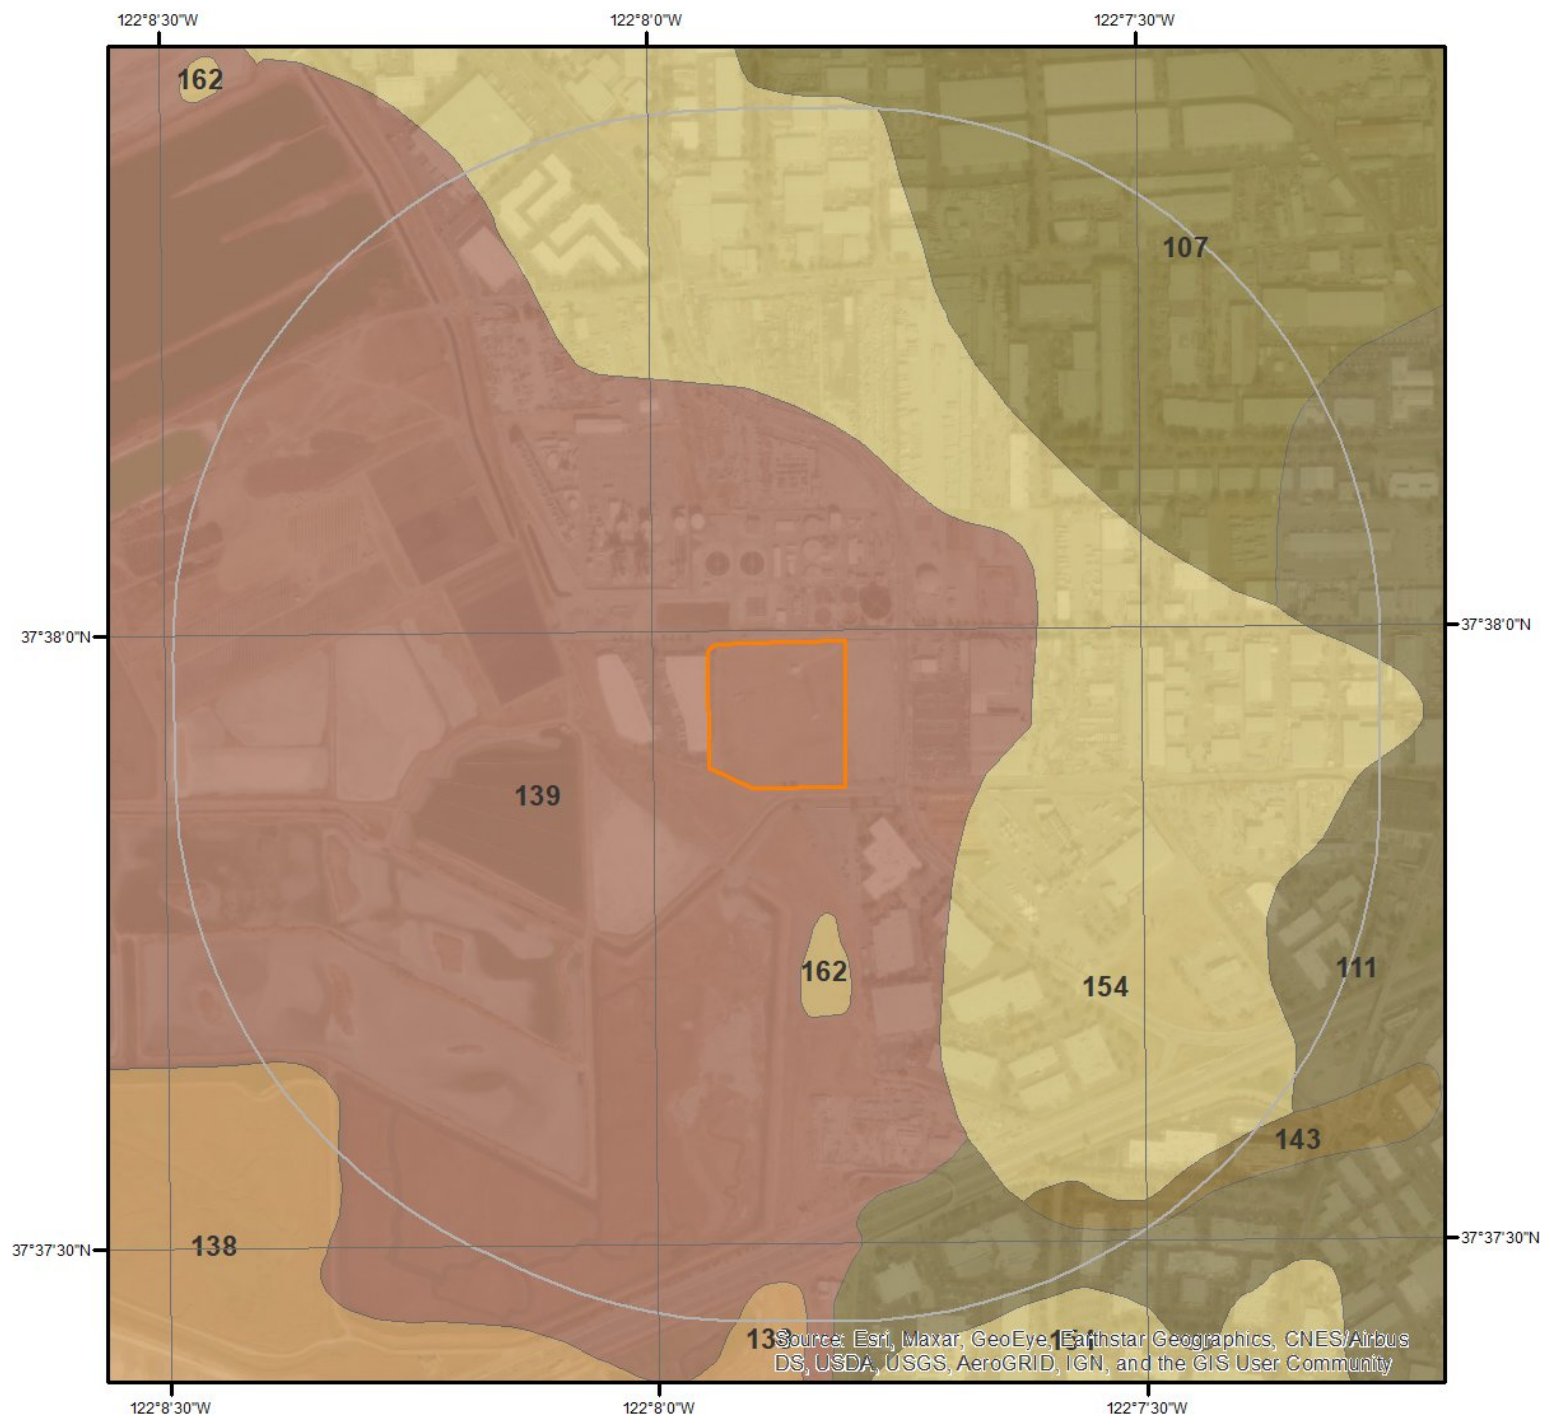

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 107 (23.02%)

Map Unit Name:	Clear Lake clay, drained, 0 to 2 percent slopes, MLRA 14
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	91cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.
Major components are printed below	
Clear Lake(90%)	
horizon Ap(0cm to 15cm)	Clay
horizon Bss1(15cm to 66cm)	Clay
horizon Bss2(66cm to 91cm)	Clay
horizon C(91cm to 152cm)	Clay

Map Unit 111 (7.88%)

Map Unit Name:	Danville silty clay loam, 0 to 2 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.
Major components are printed below	
Danville(85%)	
horizon H1(0cm to 53cm)	Silty clay loam
horizon H2(53cm to 135cm)	Silty clay
horizon H3(135cm to 203cm)	Silty clay loam

Map Unit 138 (38.16%)

Map Unit Name:	Reyes clay, ponded
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.
Major components are printed below	
Reyes(85%)	
horizon H1(0cm to 15cm)	Clay
horizon H2(15cm to 183cm)	Clay

Map Unit 139 (21.72%)

Soil Information

Map Unit Name:	Reyes clay, drained
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	92cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.
Major components are printed below	
Reyes(85%)	
horizon H1(0cm to 15cm)	Clay
horizon H2(15cm to 183cm)	Clay

Map Unit 143 (0.15%)

Map Unit Name:	Sycamore silt loam, drained
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Sycamore(85%)	
horizon H1(0cm to 46cm)	Silt loam
horizon H2(46cm to 152cm)	Silt loam

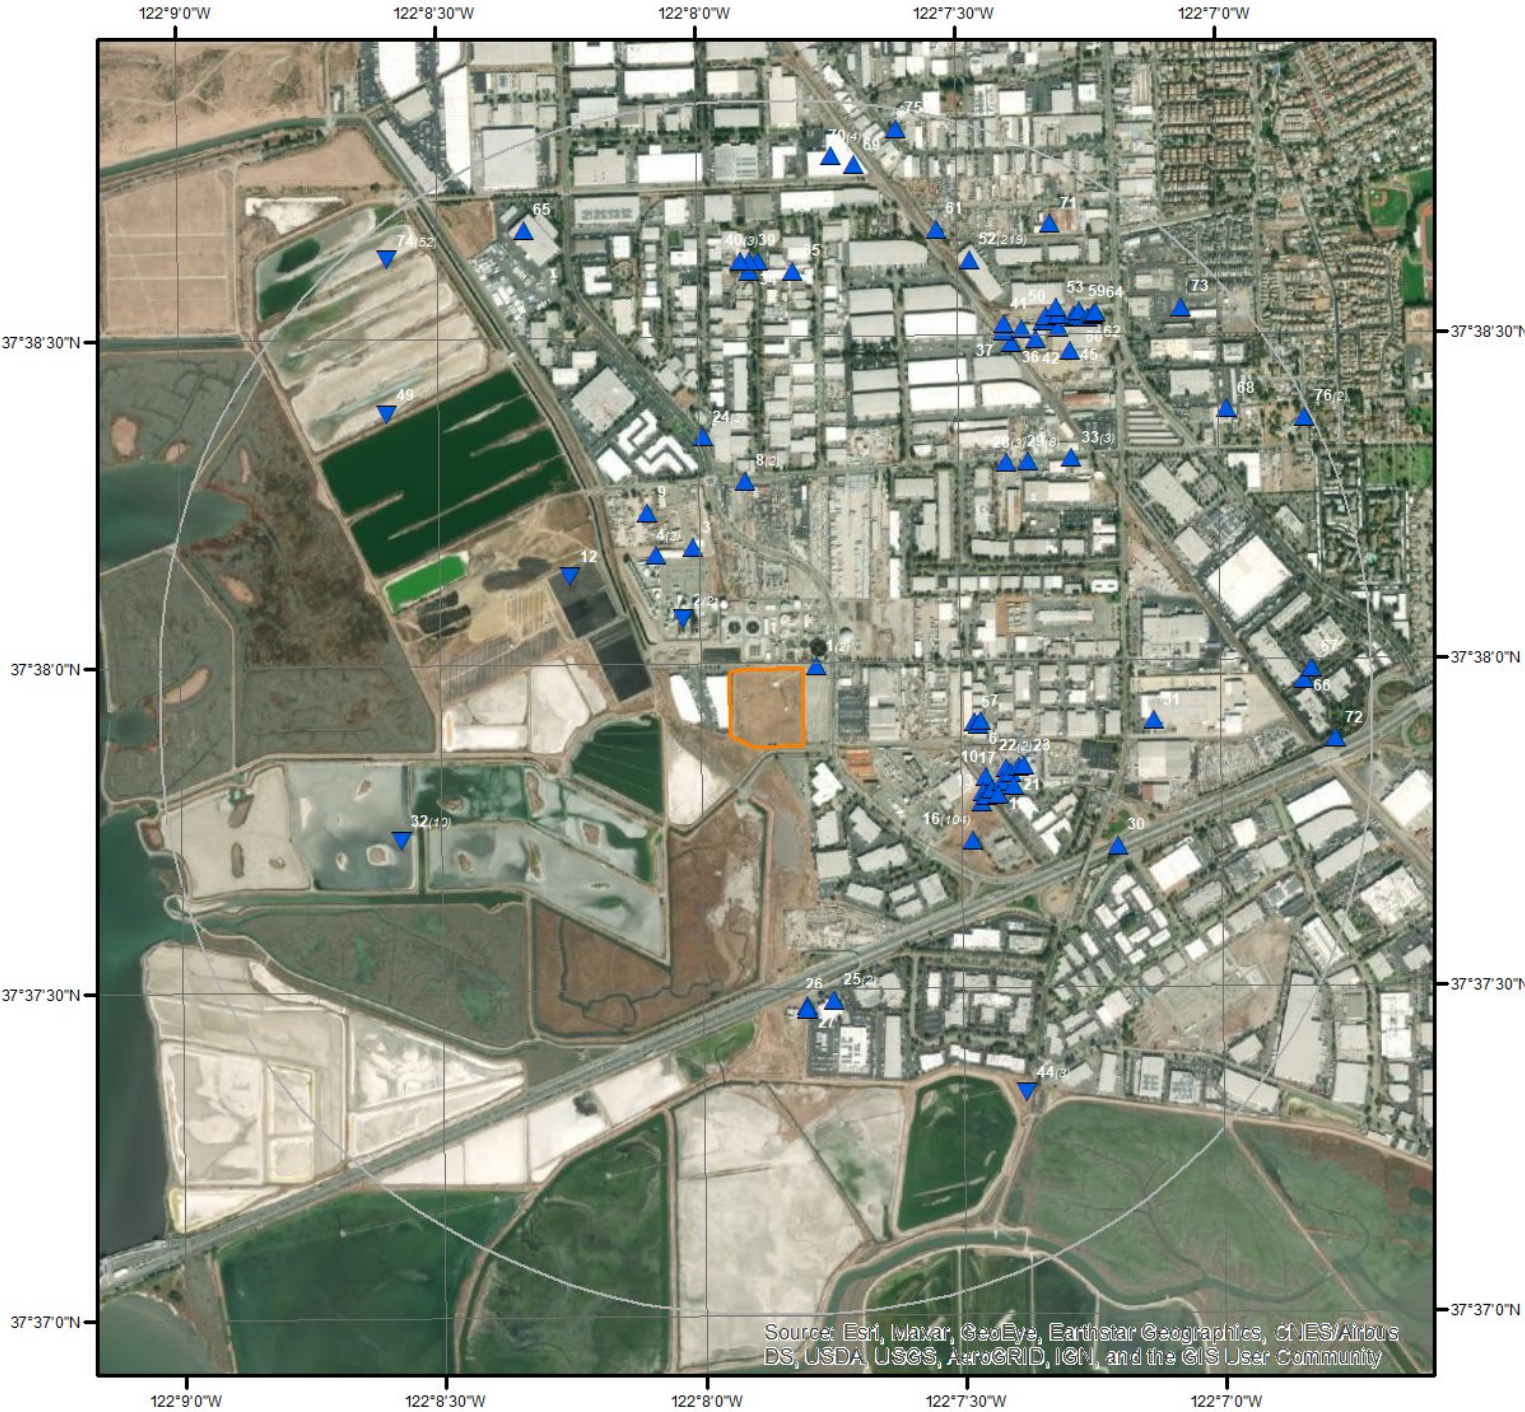

Map Unit 154 (9.04%)

Map Unit Name:	Willows clay, drained
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	168cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.
Major components are printed below	
Willows(85%)	
horizon H1(0cm to 48cm)	Clay
horizon H2(48cm to 183cm)	Clay

Map Unit 162 (0.03%)

Map Unit Name:	Water

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *ALAMEDA* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *ALAMEDA* County

No Measures/Homes:	60
Geometric Mean:	0.5
Arithmetic Mean:	0.8
Median:	0.7
Standard Deviation:	1
Maximum:	4
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

MONITOR WELLS

Well Completion Reports

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

WATER WELLS

Appendix E Resumes

Noli Valera

noli.valera@rpsgroup.com

Senior Consultant

Education: Master of Science in Civil Engineering, Loyola Marymount University
Bachelor of Arts, Environmental Sciences, University of California, Berkeley

Location: Oakland, California, USA

Overview

Mr. Valera is a Senior Consultant with the Transaction Advisory Services group out of the Northern California offices. Mr. Valera has over 12 years of experience in various environmental consulting sectors, including environmental due diligence, industrial hygiene/health and safety assessments, and environmental compliance. In this role, Mr. Valera is responsible for transaction services management for national and international projects, coordinating due diligence assessments associated with portfolio deals, technical review and support for clients, quantifying potential environmental liabilities, and identifying and developing new business.

Areas of Expertise

- Environmental due diligence investigations
- Regulatory compliance consulting
- Industrial hygiene assessments

Experience

Due Diligence Assessments

- Managed, conducted, prepared, and reviewed over 1,000 Phase I Environmental Site Assessments, Transaction Screen Assessments, Compliance Audits, and other due diligence assessments for residential, commercial, and industrial properties
- Conducted soil, soil vapor, and groundwater investigations for Phase II and remediation assessments
- Provided technical support for lenders, private equity firms, attorneys, and environmental risk managers
- Managed multi-site portfolios for gasoline service stations, multi-family residential communities, petroleum production facilities, commercial office parks, automotive repair facilities

Environmental, Health, and Safety Compliance

- Provided analysis and recommendations for environmental liabilities associated with current and historical operations
- Conducted compliance audits of commercial and industrial facilities, including dry cleaners and gasoline stations
- Developed and managed WDR, SPCC, SWPPP, EPCRA, HMBP, and other compliance submittals

Alonzo Granados, PE

alonzo.granados@rpsgroup.com

Vice President, Engineering & Transactional Compliance

Location: Oakland, California, USA

Project Role: Strategic National Account Manager

Overview

Alonzo Granados brings over 20 years of experience in program management of national and international accounts. Programs managed by Mr. Granados have provided property transactional compliance, environmental assessment, remediation, regulatory compliance, and infrastructure design/build consulting services to the real estate, transportation, manufacturing, and food and beverage industries.

Prior to joining RPS Group, Alonzo served as Industrial Sector Lead for Greater Northern California, where he managed cross-functional teams for multi-million dollar projects on behalf of Fortune 500 companies in the real estate, transportation, manufacturing, and food and beverage industries. Mr. Granados guided clients through challenging multi-year projects involving environmental assessment, remediation, and regulatory compliance. He has managed the assessment and remediation of multi-million-dollar, multi-shareholder, property development projects throughout the continental United States.

Areas of Expertise

- Transactional Compliance
- Environmental Assessment
- Soil and Groundwater Remediation
- Environmental health and safety compliance
- Construction Oversight

Sectors

- Real Estate
- Transportation
- Manufacturing
- Food and Beverage

Experience

Vice President, Engineering and Transactional Compliance

- Responsible for development of national real estate, transportation, and food and beverage sector market across remediation and environmental compliance business lines.
- National Account Manager

Associate

- Responsible for the successful development and implementation of business plan and sales strategy for real estate sector across assessment, remediation, and environmental compliance business lines.
- Manager of National Strategic Accounts (PepsiCo, Dean Foods, Jiffy Lube and Levi Strauss & Company)

Industrial Sector Lead – Greater Northern California

- Manage cross-functional teams of engineers and scientists providing engineering and consulting services to government and private clients

- Responsible for successful development and implementation of department business plan and sales strategy
- Responsible for resource planning and scheduling, including strategic hires
- Oversee employee career path guidance and performance evaluations

National Account Manager

- Manage PepsiCo account across all PepsiCo brands (Pepsi Beverages Company, Frito – Lay, Tropicana, Gatorade, and Quaker Oaks)
- Manage PepsiCo account throughout the Americas
- National Account Manager for PepsiCo across all business lines: Environmental, Infrastructure, Wastewater, and EH&S Compliance
- Responsible for successful development and implementation of account business plan and sales strategy
- Served as company liaison to PepsiCo Corporate Management and all PepsiCo brands
- Identified and secured strategic hires to augment AECOM team strength

Program Manager

- Program Manager for 5 year \$50 Million Army Corps of Engineers redevelopment project
- Project Manager for 2.3 million dollar decommissioning of heavy equipment wash rack facility and associated wastewater treatment facility at Fort Sill Army Garrison.
- Project Manager for 3.4 million dollar decommissioning of the Onizuka Air Force Station.
