

DRAFT

PHASE I ENVIRONMENTAL SITE ASSESSMENT

ASSESSOR'S PARCEL NUMBERS: 0037-030-200, 0037-030-210, AND 0037-060-480 1776 SUNSET AVENUE, FAIRFIELD, SOLANO COUNTY, CALIFORNIA

Prepared for: Red Tail Acquisitions LLC

March 2021

March 4, 2021 Project No. 2101-0371

Red Tail Acquisitions LLC 2082 Michelson Drive, Suite 400 Irvine, California 92612

Attention: Messrs. Ryan Keith and Malcolm Sun

Subject: Phase I Environmental Site Assessment – 1776 Sunset Avenue, APNs 0037-030-

200, 0037-030-210, and 0037-060-480, Fairfield, Solano County, California

Dear Messrs. Keith and Sun:

Padre Associates, Inc. is pleased to submit the attached Phase I Environmental Site Assessment report to Red Tail Acquisitions for the subject site. The report presents our findings, conclusions, and recommendations regarding the current environmental conditions at the subject site.

We declare that, to the best of my professional knowledge and belief, we meet the definition of *Environmental Professional*, as defined in 40 Code of Federal Regulations (CFR) §312.10. We have specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Additionally, the subject Phase I ESA has been performed in conformance with the scope and limitations of ASTM Practice E1527-13.

It has been a pleasure to have provided these services to Red Tail Acquisitions. If you have any questions or require additional information, please contact Eric Snelling at (805) 786-2650 extension 112 or by email at esnelling@padreinc.com.

Sincerely,

PADRE ASSOCIATES, INC.

Eric K. Snelling, R.E.P.A. Principal

Jerome K. Summerlin, C.E.G., C.Hg. President

1.0 INTRODUCTION

At the request of Red Tail Acquisitions, LLC (RTA), Padre Associates Inc. (Padre) conducted a Phase I Environmental Site Assessment (ESA) of the approximately 8.71-acre property located at 1776 Sunset Avenue, Fairfield, Solano County, California (Project Site). The Project Site consists of three separate parcels identified with the following Solano County Assessor's Parcel Numbers (APNs): 0037-030-200, 0037-030-210, and 0037-060-480. The Project Site is currently developed with one vacant single-family residential building at the south end of the Project Site. The remainder of the Project Site is vacant land.

This Phase I ESA was completed in accordance with the guidelines outlined in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments (E-1527-13) and the U.S. Environmental Protection Agency's All Appropriate Inquiry (AAI) standard promulgated in 2013. The objective of the ESA was to evaluate whether current or previous land use at or adjacent to the Project Site may have involved, or resulted in the use, storage, disposal, treatment, and/or release of hazardous substances to the environment, resulting in the determination of a Recognized Environmental Condition (REC) at the Project Site. A REC is defined by ASTM E-1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Additional key definitions from the ASTM E-1527-13 standard include the following:

- Environment includes navigable waters, the waters of the contiguous zone, and the
 ocean waters; and any other surface water, groundwater, drinking water supply, land
 surface or subsurface strata. It should be noted that this ESA did not include a
 survey of asbestos-containing materials (ACM) or lead-based paint (LBP), nor did it
 include sampling and chemical analysis of any environmental media at the Project
 Site.
- Historical Recognized Environmental Conditions (HRECs) a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (i.e., property use restrictions, activity and use limitations, institutional controls and engineering controls).
- Controlled Recognized Environmental Conditions (CRECs) a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable

regulatory authority (for example, as evidence by the issuance of a "No Further Action" letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (i.e., property use restrictions, activity and use limitations, institutional controls and engineering controls).

- Activity Use Limitations (AULs) legal or physical restrictions or limitations on the
 use of, or access to, a site or facility: (a) to reduce or eliminate potential exposure to
 hazardous substances or petroleum products in the soil, soil vapor, groundwater,
 and / or surface water on the property, or (b) to prevent activities that could interfere
 with the effectiveness of a response action, in order to ensure maintenance of a
 condition of no significant risk to public health or the environment.
- Migrate / Migration refers to the movement of hazardous substances or petroleum products in any form, including solid and liquid at the surface and subsurface, and vapor in the subsurface.

To achieve the objective of the ESA, the following tasks were completed:

- A review of readily available geologic and hydrogeologic literature;
- Historical research including a review of available historical aerial photographs, Sanborn Fire Insurance Maps, historical city directories, and historical topographic maps relating to the Project Site;
- A site reconnaissance of the Project Site and adjacent properties;
- Interviews with knowledgeable persons of the Project Site;
- Public agency records review;
- An environmental database search; and
- The preparation of this report presenting the results of the ESA.

Five appendices are included with this report: Appendix A presents photographs of the Project Site at the time of Padre's site visit; Appendix B presents the historical information obtained for the Project Site; Appendix C presents the environmental database report; Appendix D presents user-provided information; Appendix E presents the qualifications of the environmental professionals that conducted and supervised the ESA preparation.

2.0 ENVIRONMENTAL SETTING

The following discussion summarizes the geologic, hydrogeologic, and other relevant data pertaining to the physical setting of the Project Site.

2.1 SITE LOCATION AND DESCRIPTION

The location of the Project Site is illustrated on Plate 1 - Site Location Map and Plate 2 – Site Plan. The Project Site is currently developed with one vacant single-family residential building at the south end of the Project Site. The remainder of the Project Site is vacant land. The Project Site is bounded on the north by East Tabor Avenue and multi-family residences, on the east by a flood control channel and Grange Middle School, on the south by single-family residences, and on the west by Sunset Avenue and an apartment complex.

According to the Solano County Assessor's Office, the Project Site is approximately 8.71-acres in size on three parcels identified as APNs 0037-030-200, 0037-030-210, and 0037-060-480. According to the City of Fairfield Zoning Map, the Project Site is zoned for low-medium and medium density residential uses (RM, RLM). The Project Site is currently owned by Fairfield Terryland and the Cross Family Trust. According to the February 19, 2021 environmental database report obtained from Environmental Data Resources, Inc. of Shelton, Connecticut (EDR), the latitude and longitude coordinates of the approximate center of the Project Site are reported to be:

Latitude (North) 38.2635420°
 Longitude (East) -122.0192380°

2.2 TOPOGRAPHY AND DRAINAGE

Based on observations at the Project Site and a review of the United States Geological Survey (USGS) Fairfield North, California, 7.5-minute topographic quadrangle, the Project Site is located at an elevation of approximately 40 feet above mean sea level. The ground surface in the vicinity of the Project Site slopes toward the on-site drainage channel and then south (USGS, 1980). It is estimated that surface water generally flows towards the south.

2.3 GEOLOGY AND HYDROGEOLOGY

2.3.1 Geology

The Project Site is located along the western margin of the Great Valley Geomorphic Province. The Fairfield area is located along the valley floor north of Suisun Bay. The Project Site is underlain primarily by alluvial fan deposits from the late Pleistocene age, consisting of interbedded sand, gravel, silt and clay. The former drainage channel is underlain by recent (Holocene-age) stream deposits of alluvial sand, gravel, and silt (Wiegers et al, 2006).

2.3.2 Hydrogeology

According to the State Water Resources Control Board's GeoTracker Groundwater Ambient Monitoring and Assessment (GAMA) database, the closest water supply well to the Project Site is well 05N01W19L001M, which is located approximately one-eighth-mile northeast of the Project Site. Groundwater within the area of Project Site occurs in alluvial deposits at a depth of 8-10 feet below ground surface. Regional groundwater flow in the area of the Project Site reportedly ranges from toward the north to west depending on seasonal variations (Arcadis, 2020). A domestic water well was observed at the Project Site; however, Padre was unable to access the well to determine the depth of water. No well completion records were available from the State of California Department of Water Resources for the on-site well (DWR, 2021).

2.4 SURFICIAL SOIL

Soil at the Project Site is identified primarily as Antioch loam. The Antioch soil is a moderately deep Class D soil consisting of primarily silts and clays, characterized as moderately well drained, and exhibits very slow infiltration rates. The Antioch soil reportedly has a high corrosion potential for uncoated steel (EDR, 2021).

2.5 FLOODPLAIN

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (*Community Panel Number: 06083C1438H*), the Project Site is located within the 500-year floodplain (0.2% annual chance flood hazard) (FEMA, 2009).

2.6 OIL AND GAS WELLS

Padre reviewed the State of California Department of Conservation, Geologic Energy Management Division (CalGEM) online mapping system Well Finder to determine whether any oil and gas wells are located at or in the vicinity of the Project Site. According to the available CalGEM records, no oil and/or gas wells were developed or drilled at the Project Site or within a one-half mile radius of the Project Site (CalGEM, 2021).

2.7 RADON

Radon is an odorless, colorless, radioactive gas generated through the decay of naturally occurring radioactive isotopes in bedrock materials. Radon can migrate through the subsurface and accumulate in enclosed spaces such as basements and low-lying living areas. Radon can also enter the home through showers and faucets by using groundwater with elevated radon concentrations. The U.S. EPA lists Solano County as having a low risk (Zone 3) for elevated radon concentrations. The California Geological Survey indicates home indoor air in the Fairfield area is unlikely to exceed the U.S. EPA's recommended action level of 4 picocuries per liter (pCi/L). The EDR Radius Report indicates that according to the California Radon database indoor air samples collected in the Fairfield area were below 2 pCi/L (EDR,

2021). Radon risk is higher in areas of granitic and shale rock formations. The Project Site is also located on alluvial formations with lower risk of radon gas. The risk of radon gas is not anticipated to be a potential environmental concern at the Project Site.

3.0 HISTORICAL SITE CONDITIONS

Based on a review of publicly available historical information, Padre has compiled the following history of the Project Site.

3.1 HISTORICAL AERIAL PHOTOGRAPHS

Padre reviewed available aerial photographs of the Project Site and the surrounding area obtained and provided by EDR. Aerial photographs showing the area of the Project Site from the years 1937, 1947, 1952, 1957, 1968, 1974, 1982, 1993, 2006, 2009, 2012, and 2016 were reviewed by Padre. The following is a summary of the aerial photographs reviewed:

- 1937 The Project Site appears to be used for crop production. A single-family residence and three accessory buildings are shown on the southern portion of the Project Site. The drainage channel that crosses the Project Site from north to south is shown to be part of a more extensive drainage feature that extends north/southwest across the Project Site. Adjacent properties include agricultural land to the north, southeast, south, and west. Several agricultural buildings are shown east of the Project Site. Sunset Avenue and Tabor Lane are both shown in this photograph.
- **1947** The Project Site and the adjacent properties appear to be in a similar condition as observed in the 1937 photograph.
- 1952 The Project Site and the adjacent properties appear to be in a similar condition as observed in the 1947 photograph.
- 1957 The Project Site and the adjacent properties appear to be in a similar condition as observed in the 1952 photograph, with the exception that the majority of the Project Site appears to be utilized for dry-farming practices.
- 1968 The southern portion of the Project Site has been further developed with a barn and a large parking area. The remainder of the Project Site appears to be utilized for dry farming or grazing land. A residential subdivision and flood control channel have been constructed north of Tabor Avenue. The remaining adjacent properties are utilized for agricultural and residential uses.
- 1974 The Project Site and adjacent properties appear to be in similar condition as observed in the 1968 photograph. A school appears to be under construction east of the Project Site.
- The Project Site appears to be in similar condition as observed in the 1974 photograph. Adjacent properties to the north, east and south appear to be in similar condition as observed in the 1974 photograph. A multi-family residential development has been constructed west of the Project Site.

- 1993 The Project Site appears to be in a similar condition as earlier photographs. A flood control channel has been constructed along the eastern boundary of the Project Site and the on-site drainage channel appears to be no longer hydrologically connected to the upstream channel. The school east of the flood control channel is fully developed in this photograph. Single-family residences have been constructed to the south and south west of the Project Site.
- 2006 The Project Site and adjacent properties appear to be in a similar configuration as observed in the 1993 photograph. Adjacent property uses include single-family residences to the north, a flood control channel and school to the east, single-family residences to the south, and multi-family residences to the west.
- **2009** The Project Site and adjacent properties appear to be in a similar configuration as observed in the 2006 photograph. The on-site parking area in the southern portion of the Project Site appears to have been recently paved.
- 2012 The Project Site and adjacent properties appear to be in a similar configuration as observed in the 2009 photograph.
- **2016** The Project Site and adjacent properties appear to be in a similar configuration as observed in the 2012 photograph.

Padre's review of the historical aerial photographs acquired from EDR indicated that the Project Site was primarily utilized for agricultural (dry-farming and grazing) and residential purposes since at least the mid-1930s. No potential RECs were identified as a result of the historical aerial photograph review. Copies of the aerial photographs are provided as Appendix B1.

3.2 HISTORICAL SANBORN FIRE INSURANCE MAPS

Padre contracted with EDR to provide a search of available historical Sanborn Fire Insurance Maps, which are maintained exclusively by EDR. These maps, which have been periodically updated since the late 19th Century, often provide valuable insight into historical site uses, which can be used to assist the Phase I ESA preparer with assessing potential environmental conditions on or near a specific property. According to EDR, Sanborn Map coverage was not identified for the Project Site or adjacent properties. A copy of EDR's Sanborn map coverage statement for the Project Site is provided as Appendix B2.

3.3 UNITED STATES GEOLOGICAL SURVEY TOPOGRAPHIC MAPS

Padre obtained historical topographic maps from EDR for the area of the Project Site. Historical topographic maps dated 1917, 1940, 1944, 1947, 1948, 1950, 1968, 1973, 1980, and 2012 were available for review. In general, the scale of the topographic maps (1 inch = 0.5-mile, elevation contours at 20 feet or greater) is intended to depict general surface features and land use over a broad area, therefore most specific land uses at ground level are typically

indistinguishable. Furthermore, individual property details and structures are not provided on the 2012 map. However, based on the review of these topographic maps, the Project Site was utilized for agricultural purposes from at least 1917 to 2012. One small building is shown in the southwestern corner of the Project Site beginning with the 1940 map. No potential RECs were identified as a result of the historical topographic maps review. Copies of the historical topographic maps are provided as Appendix B3.

3.4 HISTORICAL CITY DIRECTORIES

The Project Site contains only one street address (1776 Sunset Avenue); therefore, Padre obtained an abstract of historical city directories provided by EDR for the available address. City directories for the years 1963, 1968, 1972, 1977, 1982, 1987, 1992, 1995, 2000, 2005, 2010, 2014, and 2017 were reviewed. Individuals were listed as residing at 1776 Sunset Avenue between 2005 and 2017. Padre's review of the historical city directories abstract provided by EDR did not indicate evidence or conditions that would pose a REC to the Project Site. A copy of EDR's city directory abstract is provided as Appendix B4.

3.5 CITY OF FAIRFIELD BUILDING DEPARTMENT

The City of Fairfield Building Department's permit records were reviewed. A demolition permit was issued for the demolition of a storage building at 1776 Sunset Avenue on December 27, 2018. No other building permits were available for the Project Site.

3.6 RECS OBSERVED DURING THE HISTORICAL REVIEW

Padre did not identify any evidence or conditions that would pose a REC to the Project Site during the course of the historical review.

4.0 CURRENT SITE CONDITIONS

This section summarizes current site conditions and Project Site uses as well as any hazardous substances use, handling, and storage, if any.

4.1 SITE RECONNAISSANCE

Mr. Eric Snelling of Padre visited the Project Site on February 18, 2021. The weather conditions at the time of the site reconnaissance were sunny and warm with temperatures of approximately 70 degrees Fahrenheit. All exterior areas of the Project Site were inspected, and Padre inspected the exterior of one vacant residence. The residence was secured, and entry was not provided. Selected photographs taken during the course of the site reconnaissance are included as Appendix A.

4.1.1 Exterior Observations

The Project Site is primarily vacant land except for a vacant single-family residence in the southern portion. Several two remaining concrete foundations and an asphalt-paved area were observed east of the residence. A water supply well and associated pressure tank are located along the southern property boundary. Extending from north to south in the center of the Project Site is a former drainage channel. The channel bottom was observed to have standing water and dense vegetation. No extensive solid waste dumping was observed in the channel or on other locations on-site. A large soil mound was observed east of the channel and may have been created during construction of the flood control channel along the eastern boundary of the Project Site.

Evidence of fuel or oil underground or aboveground storage tanks, or storage and generation of hazardous materials was not observed within the exterior areas of the Project Site. No evidence of dumping, pits, or spills of chemicals in the form of stained soil or stressed vegetation was observed at the Project Site.

4.1.2 Adjacent Property Observations

The adjacent properties appeared similar to the conditions observed in the 2016 aerial photograph. No evidence of potential environmental conditions that could affect the Project Site was observed on the adjacent properties.

4.2 UTILITIES

Overhead electrical and telecommunication lines were observed along Sunset Avenue. The Project Site contains an on-site water supply well and may also contain an on-site septic system.

4.3 ASBESTOS-CONTAINING MATERIALS

The use of asbestos in common building materials has been mostly discontinued since the late 1970s. According to the aerial photographs reviewed by Padre the residential structure was constructed in prior to 1938; therefore, it is possible that asbestos-containing building materials are located in the residential structure. An asbestos-containing materials survey was not conducted as part of this Phase I ESA.

4.4 LEAD-BASED PAINT

The use of lead-based paints (LBP) was common practice in building construction prior to 1978. According to the aerial photographs reviewed by Padre the northeastern most residential structure was constructed prior to 1938; therefore, it is possible that LBP materials may be present at the on-site residence. An LBP survey was not conducted as a part of this Phase I ESA.

4.5 POLYCHLORINATED BIPHENYLS

The federal Toxic Substances Control Act (TSCA) generally prohibited the domestic manufacturing of polychlorinated biphenyls (PCBs) after 1979. However, hydraulic fluids or dielectric insulating fluids typically found in electrical transformers, hydraulic equipment, capacitors, and similar equipment may contain PCBs if such materials have been present prior to the late 1970s. There were no observed materials that could contain hydraulic fluids identified during the site reconnaissance. One pole-mounted electrical transformer and one-vault mounted electrical transformer were observed along Sunset Avenue on the western property boundary. Staining or leakage was not observed at the locations of the transformers. Based on these observations, PCBs are not considered a REC to the Project Site.

4.6 RECS OBSERVED DURING THE SITE RECONNAISSANCE

Padre did not identify any evidence or conditions that would pose a REC to the Project Site during the course of the site reconnaissance.

5.0 ENVIRONMENTAL RECORDS REVIEW

Padre researched various publicly-accessed databases or files available at regulatory agencies in the region to evaluate whether soil and groundwater contamination is known or suspected at or adjacent to the Project Site. Regulatory agency databases were obtained from EDR for the Project Site and properties within the ASTM-prescribed radii.

5.1 PUBLIC RECORDS REVIEW AND AGENCY CONTACTS

5.1.1 County of Solano Environmental Health Services

Padre contacted the Solano County Environmental Health Services Department (SCEHS) regarding available files regarding hazardous materials use, storage or disposal at the Project Site. The Project Site was not listed on the SCEHS's leaking underground storage tanks or site mitigation case lists. The Project Site is listed as a former underground storage tank site (refer to Section 5.2.10 of this report). Padre received file information that included the following items:

- A March 25, 1986 letter from SCEHS to Mr. Charles Cross stating that either a
 permit from SCEHS must be obtained to continue use of the UST, or that the
 UST will need to be closed through removal.
- An Exemption Disclaimer dated August 8, 1989 and signed by Charles Cross states that the UST was not used to store hazardous materials.
- An August 20, 1986 letter from SCEHS to Mr. Charles Cross approved an application to remove two USTs from the Project Site (one 550 gallons in capacity and one with 1,000 gallons in capacity). Soil samples were required to be collected from the resulting excavation following the UST removal. The two USTs were reportedly located between the residence and a former storage building to the east.
- A Laboratory Analytical Report prepared by Alpha Chemical and Biomedical Laboratories and dated September 12, 1986, presents the results of two soil samples collected on September 3, 1986 at the Charlie Cross property. Neither sample was indicated with detectable concentrations of total petroleum hydrocarbons using a gas chromatography/flame ionization detector analytical method.
- A letter from J.H. Kleinfelder and Associates to Mr. Frank Dy of B.C. Stocking Distributing and dated September 19, 1986 states transmitted the soil sample analytical results discussed above.

5.1.2 State Water Resources Control Board

The State Water Resources Control Board (SWRCB) maintains public information pertaining to permitted Underground Storage Tanks (USTs), Leaking Underground Storage Tank (LUST), and Cleanup Program Sites (CPS) through the online GeoTracker database identified as GeoTracker. Padre reviewed the GeoTracker database for LUST and CPS sites that could pose a potential environmental concern to the Project Site. Based on the review of the GeoTracker database neither the Project Site nor adjacent properties were listed on GeoTracker.

5.1.3 California Department of Toxic Substances Control's EnviroStor Database

The California Department of Toxic Substances Control (DTSC) maintains the EnviroStor database for known or suspected hazardous waste sites in California. Based on the review of the EnviroStor database, the Project Site was listed as a School Site. The DTSC list properties as School Site when they have been or are currently being evaluated by the DTSC for possible hazardous materials contamination as required by the California Education Code. A review the EnviroStor listing for the Project Site indicates that a Phase I ESA was conducted in regard to the Project Site in 1999. The database indicated that no contaminants were found and that no action was required. Based on the information listed in the EnviroStor database there were no environmental conditions identified that would pose a risk to the Project Site.

5.1.4 Environmental Liens or Activity and Use Limitations

According to EDR, there are currently no environmental liens or state-registered deed restrictions in effect for the three parcels at the Project Site.

5.2 ENVIRONMENTAL DATABASE INFORMATION

Padre obtained environmental agency listings database information for the Project Site and for properties located within the ASTM-prescribed radii of the Project Site from EDR. The EDR report is included as Appendix C. The purpose of the environmental agency listings database review is to identify whether the Project Site or adjacent sites have been listed on local, state, or federal government database listings or retain historical documentation regarding current and/or past usage that could potentially pertain to RECs. Sites within the ASTM prescribed radii were also reviewed to identify outlying sites that might potentially impact the subsurface soil and/or groundwater conditions beneath the Project Site. The following sections summarize our findings for the required ASTM databases beginning with Federal listings and ending with local listings. Sites listed on additional or supplementary databases not required by the ASTM but reported by EDR were reviewed by Padre but are not summarized below, unless such sites are located within close proximity of the Project Site or could pose an unacceptable environmental risk to the Project Site.

5.2.1 National Priorities List - Federal Superfund

The National Priorities List (NPL) is a U.S. Environmental Protection Agency (U.S. EPA) listing of private, state, and federally owned sites, which have been included on the federal Superfund list for remediation.

• Neither the Project Site nor properties located within a one-mile radius of the Project Site were identified on the NPL.

5.2.2 U.S. EPA Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)

The U.S. EPA's CERCLIS listings are a compilation of sites that have been brought to the attention of the U.S. EPA, through various means, as being possible sites of hazardous waste activity. The CERCLIS listings are an information database and not necessarily an action list.

• Neither the Project Site nor properties located within a one-mile radius of the Project Site were identified on the CERCLIS List.

5.2.3 RCRA - TSD Facilities Listing

The U.S. EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA-TSD database is a compilation by the U.S. EPA of reporting facilities that transport, treat, store or dispose of hazardous waste.

 Neither the Project Site nor properties located within a one-half mile radius of the Project Site were identified on the RCRA-TSD List.

5.2.4 RCRA - CORRACTS Facilities Listing

The RCRA Corrective Action (CORRACTS) Sites Listing contains information pertaining to hazardous waste treatment, storage, and disposal facilities (RCRA TSD) which have conducted, or are currently conducting, a corrective action(s) as regulated under RCRA.

 Neither the Project Site nor properties located within a one-mile radius of the Project Site were identified on the CORRACTS List.

5.2.5 RCRA - LQG's List

The U.S. EPA's RCRA Program identifies and tracks large quantity generators (LQG's). LQG's generate over 1,000 kilograms (kg) of hazardous waste, or 1 kg acutely hazardous waste per month.

 Neither the Project Site nor properties located within a one-quarter mile of the Project Site were listed on the RCRA-LQG list.

5.2.6 RCRA - SQG's List

The U.S. EPA's RCRA Program identifies and tracks small quantity generators (SQG's). SQG's generate over 100 kg and 1,000 kg of hazardous waste per month.

• Neither the Project Site nor properties located within a one-quarter mile of the Project Site were listed on the RCRA-SQG list.

5.2.7 Facility and Manifest Data (HAZNET)

Facility and management data is extracted from the copies of the hazardous waste manifests received each year by the DTSC.

 Neither the Project Site nor properties located within a one-eighth mile radius of the Project Site were listed on the HAZNET list.

5.2.8 Emergency Response Notification System

The Emergency Response Notification System (ERNS) contains records on releases of oil and hazardous substances reported to the U.S. EPA and National Response Center of the U.S. Coast Guard.

• Neither the Project Site nor adjacent properties were listed on the ERNS list.

5.2.9 State Equivalent CERCLIS (formerly Cal-Sites List)

The State DTSC and Site Mitigation and Brownfields Reuse Program (SMBRP) have combined databases now identified as EnviroStor. This database includes the formerly known Cal-Sites List, which in turn included the former State of California Abandoned Sites Program Information System (ASPIS) and the BEP databases. The EnviroStor database is a compilation of sites that have been brought to the attention of the California Environmental Protection Agency (Cal EPA), through various means, as being possible sites of hazardous waste activity or contamination. It should be noted that the EnviroStor database is an informational database and not necessarily an action list.

• Neither the Project Site nor properties within one mile were listed in the State Equivalent CERCLIS' EnviroStor database.

5.2.10 Underground and Aboveground Storage Tank Databases

The UST and aboveground storage tank (AST) databases maintain an inventory of active and inactive UST and AST facilities gathered from local regulatory agencies. The Facility Inventory Database (CA FID UST) contains a historical listing of active and inactive UST

locations from the State Water Resources Control Board (SWRCB). The Hazardous Substance Storage Container Database (Hist UST) is a historical listing of UST sites. The Statewide Environmental Evaluation and Planning System (SWEEPS) is a UST database maintained by the SWRCB during the 1980s; the system is no longer updated or maintained.

 The Project Site is listed as a former UST site. No additional information was available through the EDR database report. Refer to Section 5.1.1 for more information.

5.2.11 Leaking Underground Storage Tanks

The leaking Underground Storage Tank Information System (LUST) records contain an inventory of reported leaking underground storage tanks incidents gathered from local and state (SWRCB) regulatory agencies.

 Neither the Project Site nor properties within a one-half mile of the Project Site were identified in the LUST database.

5.2.12 Spills, Leaks, Investigations, and Cleanup List

The RWQCB is the agency with jurisdiction over groundwater protection in the region of the Project Site. The RWQCB maintains a Spills, Leaks, Investigation, and Cleanup (SLIC) list regarding active investigations at non-LUST sites with the potential to affect groundwater quality.

• Neither the Project Site nor properties located within a one-half mile from the Project Site were identified in the SLIC database.

5.2.13 Solid Waste/Landfill Sites

The Solid Waste Assessment Test Program (SWAT) is a database maintained by the SWRCB for information on the ground water monitoring of sanitary landfills. The California Integrated Waste Management Board (CIWMB) maintains the Solid Waste Information System (SWIS) pursuant to the Solid Waste Information System (SWIS) pursuant to the Solid Waste Management and Resource Recovery Act of 1972. The SWIS list contains an inventory of active, inactive, and closed solid waste disposal and transfer facilities. The Waste Management Unit Database (WMUDS) is an inventory of waste management units developed by SWRCB and RWQCB staff.

• Neither the Project Site nor properties located within a one-half mile radius of the Project Site were identified on the SWAT/SWIS/WMUDS Lists.

5.2.14 Proposition 65 Notification Records

Proposition 65 Notification Records (Notify 65) database contains facility notification about any releases which could impact drinking water and thereby expose the public to a potential health risk.

The Project Site was not identified in the Notify 65 database.

5.2.15 Historical Dry Cleaners

EDR performed a database search of potential dry cleaner sites. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, and wash & dry facilities.

 Neither the Project Site nor properties within a one-eighth mile radius were identified on EDR's Historical Dry Cleaner List.

5.2.16 School Property Evaluation Program (SCH) Database

The DTSC maintains a database of school sites that are being evaluated for possible hazardous materials contamination as required by the California Education Code.

Neither the Project Site nor properties within a one-eighth mile radius of the Project Site were identified in the SCH database.

5.2.17 Other Ascertainable Records (Project Site and Adjacent Properties)

EDR performed a search of other database records listed in the EDR Radius Map Report with GeoCheck (EDR, 2021). The Project Site was not listed on any of these other databases.

5.3 USER PROVIDED INFORMATION

5.3.1 Owner, Property Manager, and Occupant Information

No owner-specific information was made available to Padre for review.

5.3.2 Specialized Knowledge

Padre was not provided with any additional "specialized site knowledge" regarding the Project Site.

5.4 RECS OBSERVED DURING THE ENVIRONMENTAL RECORDS REVIEW

Padre identified that two USTs were removed from the southern portion of the Project Site in 1986 with oversight of SCEHS. Additionally, two soil samples collected from the UST excavation did not indicate that a release of petroleum hydrocarbons had occurred at the UST locations. The UST case was subsequently closed by SCEHS; therefore, the former presence of USTs does not represent a REC at the Project Site.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the scope of services performed for this ESA, Padre makes the following conclusions regarding the Project Site.

6.1 CURRENT CONDITIONS AND HISTORICAL SITE BACKGROUND

Padre completed a Phase I ESA for the 7.81-acre Project Site located at 1776 Sunset Avenue in Farfield, Solano County, California.

The Project Site is currently developed with one vacant single-family residential building. One water supply well is existing at the Project Site. The remainder of the Project Site is vacant. The Project Site is bounded on the north by single-family residences, on the east by the flood control channel and a school, on the south by single-family residences, and on the west by multi-family residences.

Based on a review of readily available historical information, the Project Site was historically utilized for agricultural and residential purposes from at least the 1930s. No evidence of dumping, pits, spills, and/or or leaks of chemicals in the form of stained soil or stressed vegetation was observed at the Project Site. The interior of the on-site vacant residence was not available for inspection during Padre's site visit.

The Project Site is identified as historically containing two USTs. Padre identified that two USTs were removed from the southern portion of the Project Site in 1986 with oversight of SCEHS. Additionally, two soil samples collected from the UST excavation did not indicate that a release of petroleum hydrocarbons had occurred at the UST locations. The UST case was subsequently closed by SCEHS; therefore, the former presence of USTs does not represent a REC at the Project Site. The Project Site was not listed on any other environmental databases and/or listings reviewed.

6.2 CONCLUSIONS

Project Site. Based on the findings of this Phase I ESA, Padre did not identify evidence of RECs associated with the Project Site.

Surrounding Properties. Based on the findings of this Phase I ESA, the surrounding properties are not anticipated to pose a REC to the Project Site.

6.3 RECOMMENDATIONS

Padre makes the following recommendations regarding the Project Site:

Asbestos Containing Materials. Padre recommends the completion of an asbestos survey of the on-site structure prior to any renovation or demolition activities. If asbestos-containing materials be identified, then those materials should be properly abated by a licensed asbestos abatement contractor.

Lead Based Paint. Padre recommends the completion of a lead-based paint survey of the on-site structure prior to any renovation or demolition activities. Should lead-based paint be identified, they should be removed by a properly trained and licensed contractor.

Water Supply Well. Padre recommends the proper destruction of the on-site water supply well if no longer needed for future site uses. The well should be destroyed in accordance with State of California water well standards (California Department of Water Resources Bulletin 74-90). A well destruction permit should be obtained from the Solano County Environmental Health Services Division prior to initiating well destruction activities. A State of California C57-licensed well driller should complete the well destruction activities.

7.0 LIMITATIONS

This report has been prepared for the sole benefit of Red Tail Acquisitions LLC. No other persons may rely on the findings of this report without the expressed written consent of the client and Padre Associates, Inc.

In performing our professional services, we have attempted to apply present engineering and scientific judgment and use a level of effort consistent with the standard of practice measured on the date of work and in locale of the Project Site for similar type studies. Padre Associates, Inc. makes no warranty, express or implied.

The analyses and interpretations presented in this report have been developed based on the results from the review of existing information pertaining to the Project Site.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Padre Associates, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2020 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page	
BONFARE MARKET	890 TRAVIS BLVD	SSW 1/8 - 1/4 (0.207 mi.)	A3	18	

Database: SOLANO CO. UST, Date of Government Version: 12/03/2020

Database: UST, Date of Government Version: 12/04/2020

Facility Id: 30159 Facility Status: A Facility Id: 30159 Facility Id: 48-000-030159

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 10/19/2020 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BONFARE MARKET INC #	890 E TRAVIS BLVD	SSW 1/8 - 1/4 (0.207 mi.)	A2	9
JJ AUTOREPAIR	896 ETRAVIS BLVD	S 1/8 - 1/4 (0.225 mi.)	A7	27

Local Lists of Registered Storage Tanks

CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CERS TANKS list, as provided by EDR, and dated 10/19/2020 has revealed that there is 1 CERS TANKS site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BONFARE MARKET INC #	890 E TRAVIS BLVD	SSW 1/8 - 1/4 (0.207 mi.)	A2	9

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there is 1 CA FID UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page	
CHARLES CROSS Facility Id: 48002083 Status: I	1776 SUNSET	SW 0 - 1/8 (0.007 mi.)	1	9	

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

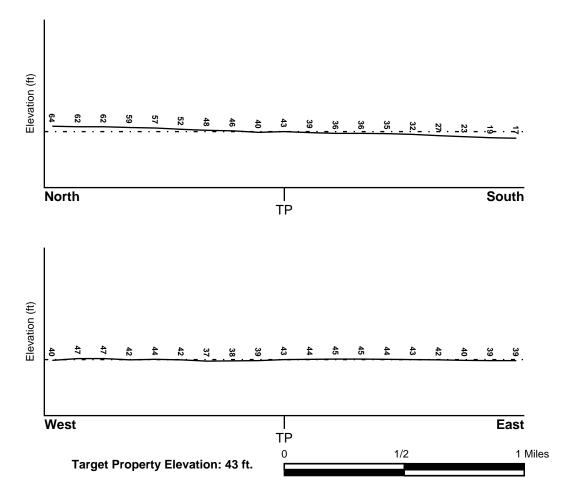

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

FAIRFIELD NORTH

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

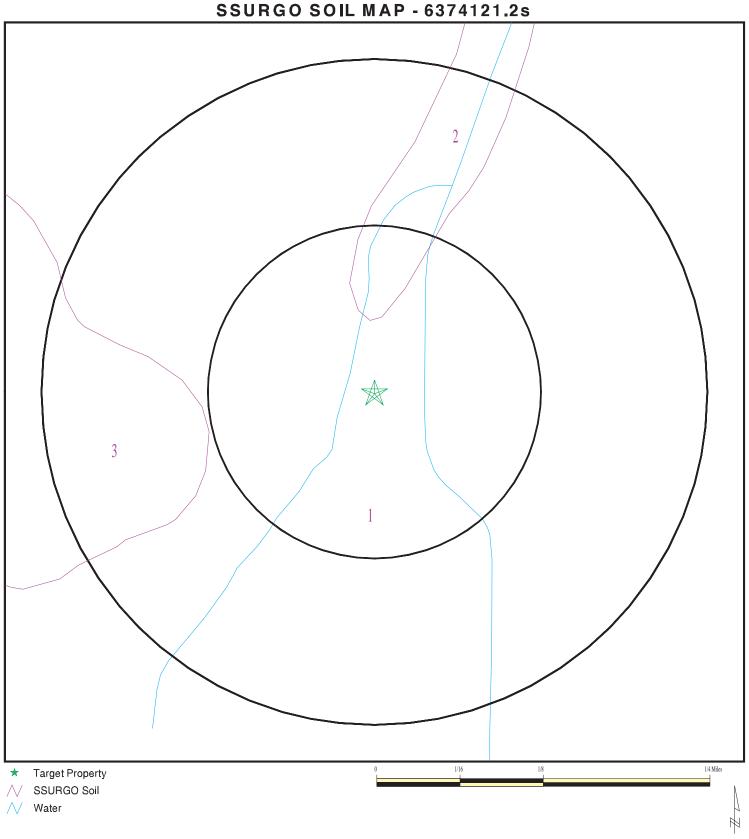

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic Category: Stratifed Sequence

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Antioch

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	
1	0 inches	25 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9
2	25 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9
3	59 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9

Soil Map ID: 2

Soil Component Name: Yolo

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

			Soil Layer	Information			
Layer	Boundary			Classification		Saturated hydraulic	
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	27 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
2	27 inches	44 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
3	44 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: Antioch

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)

				than 35 pct.	Clays (liquid		
				passing No.	limit less than		
				200), Silty	50%), Lean Clay		
				Soils.			
3	59 inches	72 inches	loam	Silt-Clay	FINE-GRAINED	Max: 4	Max: 9 Min:
				Materials (more	SOILS, Silts and	Min: 1.4	7.9
				than 35 pct.	Clays (liquid		
				passing No.	limit less than		
				200), Silty	50%), Lean Clay		
				Soils.			

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Date

March 25, 1986

Address Charles R. Cross

1319 Clay St.

Fairfield, CA 94533

Dear Owner or Operator:

CEIVED Solano County

SEP 3 1986

Environmental Health Services

Re: Charles R. Cross Contractor

Sunset Ave., Fairfield

Subject: Underground Storage Tank Containing Hazardous

Substances

As a result of state-wide groundwater contamination caused by leaking underground storage tanks the State of California passed AB 1362 (Sher) in 1983. In 1984 and 1985, several amending bills were passed: AB 3447, AB 3565, AB 3781, AB 2239, and AB 1755. conformity with these bills the County of Solano passed and enacted Ordinance 1219 of the Solano County Code in December of In April of 1985, The Guidelines for the Underground Storage of Hazardous Substances in Solano County were effected, and became the minimum performance standards implementing Ordinance 1219. Copies of these Guidelines are now available at a cost of \$2.25/copy (exact change only please) at the Environmental Health Services Division, 355 Tuolumne Street, Vallejo, and the County Environmental Management office at the County Courthouse on Texas Street, Fairfield.

This letter is intended to assist you with compliance pursuant to these new laws and to provide you with information regarding your obligations as an owner or operator.

Minimally, all underground tanks storing hazardous materials shall be permitted, monitored, tested utilizing a precision test, and have a report submitted to this office regarding their annual history. The Guidelines are separated into four essential components:

- Standards for new tank construction and monitoring.
- 2) Standards for existing tank construction, monitoring, and repair.
- 3) Standards for tank closure (removal).
- Standards for handling leaks and their reporting.

Items 1-3 above require an application and a permit. State and County law mandates that no existing underground tank may operate without a permit to operate. In order to obtain an Annual Permit

To Operate, all installations of monitoring equipment, construction, or repairs must be completed by September 1, 1986. The County is now issuing Interim Operating Permits so that tanks may remain operating while this work is being completed. The fee for your Interim Operating Permit is \$ 146.00 for 2 underground tanks. The term of this permit covers Fiscal Year 85/86.

In addition to this fee, the State Water Resources Control Board has established a State Surcharge of \$56.00/tank. This fee is assessed for a five year basis. Your fee for the Surcharge is \$ 112.00

Solano County is requiring that you remit two separate checks made out to Solano County Environmental Health Services Division; please identify one as the State Surcharge and one as the Interim Operating Permit fee. These checks are to be received within 45 days of the date of this letter.

Any work taking place at your underground tank facility must be initiated by the approval of the appropriate application:

- Existing Tanks: Application for a permit to operate, modify, or repair an existing underground tank system for the storage of hazardous substances.
- New Tanks: Application for a permit to install an underground storage system for the containment of hazardous substances.
- Closures: Application for a permit to permanently close and remove underground storage tank for hazardous substances.

The applications are also available at the same location indicated earlier for the Guidelines.

A representative of Solano County Environmental Health Services Department shall be inspecting your underground storage tank system(s) for compliance with the County Ordinance. (The compliance deadline is September 1, 1986.)

Should you have questions or need further clarification, contact Steve Krival of my staff at (707) 426-3776 (Fairfield) or (707) 553-5251 (Vallejo).

incepely yours

BRIAN J. ZAMORA, Chief

RECEIVED

AUG 9 1989

I understand the requirements of Chapters 6.5 and 61905 not Division 20 of the California Health and Safety Code and of Ordinance 1219 Solano County Code pertaining to the handling of hazardous materials, acutely hazardous materials, hazardous wastes and infectious wastes. "Handling" includes using, generating, processing, producing, packaging, treating, storing, emitting, discharging or disposing of hazardous materials or wastes. My business is exempt because ALL of the following apply.

- It does not handle infectious waste in any amount.
- 2. It does not handle hazardous waste in any amount.
- It does not handle hazardous materials or acutely hazardous materials in amounts equal to or greater than 55 gallons of liquids, 500 pounds of solid, or 200 cubic feet of compressed gasses except for the following:
- The hazardous materials handled by this business are contained solely in a consumer product, packaged for direct distribution to, and use by, the general public.
- This business operates a farm for the purposes of cultivating the soil or raising or harvesting any agricultural or horticultural commodity and the annual inventory required by law has been submitted to the County Agricultural Commissioner's office.
- It does not store any hazardous materials in underground storage tanks.

I understand that I must meet all the griteria listed above

11/88

I understand that I must meet all the criteria risted above
before I can be exempted from the requirements of the
Comprehensive Hazardous Materials Monitoring and Inspection
Program. I declare under penalty of perjury that to the best of
my knowledge and belief the statements made herein are correct
and true.

Re: Underground Tank Removal

1776 Sunset Ave., Fairfield

Dear Mr. Cross:

Your application has been approved subject to the following conditions as required by Chapter 13.5 of the Solano County Code:

- 1. The local Fire Department shall be notified of the pending removal operation and shall oversee the implementation of all Sections of Division VI of the Uniform Fire Code, 1982 edition, dealing specifically with matters of safety: Purging of harmful vapors contained in the tanks and removal of the tanks from the above location.
- Soil samples and/or water samples shall be required on the day of the tank removal.
- 3. With the exception of soils being accepted by a Class I hazardous waste facility, no soils shall leave the site until the laboratory results of the soil samples prescribed by this office have been examined by personnel of this office and a suitable receptacle for the soils has been established.
- 4. Contaminated backfill materials shall not be returned to the excavation pit, but shall be held on site with a barrier of cement, asphalt, visqueen, or other material deemed suitable by this office, separating the backfill materials from native soils.
- 5. Visqueen or other material deemed suitable by this office shall be placed underneath the removed tank prior to cleaning the outside surface of the tank for the purpose of inspection by this office. The tank shall then be scraped clean of all earthen materials so that upon inspection all pitting, holes and cracks may be visually identified. All materials removed from the tank shall be containerized and treated as hazardous

material according to Division 20, Chapter 6.5 of the California Health and Safety Code.

- 6. In addition to the aforementioned, the minimum standards for implementing Solano County Ordinance #1219, as defined by the Guidelines for the Underground Storage of Hazardous Substances in Solano County, shall be followed at all times.
- 7. Forty-eight hours notice shall be given to this office prior to initiating work at the above site. An appointed time for the removal of the tank shall be set. If that set time cannot be met by the contractor, cancellation of that appointment shall be made at least 4 hours before the set time.
- 8. The 1985-86 Interim Operating Fee of \$146.00 and the State Surcharge of \$112.00 are to be paid to this office prior to removal. These are now overdue as was indicated in the original letter of March 1986.

this to make he paid.

APPENDIX E QUALIFICATIONS

QUALIFICATIONS

The environmental professionals responsible for conducting or reviewing this Phase I ESA and preparing the report include Mr. Eric Snelling and Mr. Jerome Summerlin.

Eric K. Snelling, R.E.P.A. is a Principal with Padre. Mr. Snelling holds a Master of Science in Water Resource Management from California State University at Fresno and a Bachelor of Science degree in City and Regional Planning from California Polytechnic State University at San Luis Obispo. Mr. Snelling also obtained a Professional Certificate in Hazardous Materials Management from the University of California at Santa Barbara in 1998. Mr. Snelling's responsibilities include completion of Phase I and II environmental site assessment projects and implementation of soil and groundwater remediation programs within Padre's Geo-environmental group. Mr. Snelling has performed over 200 Phase I ESAs throughout California and also in Washington, Nevada, Texas, and the U.S. Virgin Islands. Mr. Snelling routinely manages the completion of Phase II site assessments for determining whether soil and groundwater impacts have occurred from current or historical site uses. Mr. Snelling manages the implementation of remediation activities, including soil vapor extraction, groundwater treatment systems, and excavation with either on-site treatment or off-site disposal. Mr. Snelling is a Registered Environmental Property Assessor.

Jerome K. Summerlin, P.G., C.E.G., C.Hg., is a Principal Geologist with Padre Associates, Inc.. He holds a Bachelor of Science degree in Geology from California State University, Chico. Mr. Summerlin obtained a Professional Certificate in Hazardous Materials Management from the University of California at Santa Barbara Extension in 1991 and a Professional Certificate in Site Assessment and Remediation from the University of California at Mr. Summerlin is a State of California Professional Geologist, Certified Engineering Geologist, and Certified Hydrogeologist. Mr. Summerlin is responsible for the firm's Geo-environmental assessment and remediation practices. Mr. Summerlin has been responsible for and participated in a variety of geotechnical, geologic, hydrogeologic, and geoenvironmental projects throughout California, Nevada, Utah, Alaska, Wyoming, Texas, Arizona, and Hawaii. He has managed environmental assessment and remediation projects, which have included preliminary site assessment (Phase I), site assessment (Phase II), remedial action design and planning/permitting, implementation of remedial action programs (Phase III), and verification monitoring upon completion of remedial actions (Phase IV). His training and experience includes a firm understanding of environmental laws and regulations, sample collection, analytical procedures and protocols, site safety procedures, quality assurance/quality control requirements, remedial action feasibility analyses, and design of remedial systems.
