# City of Monterey Environmental Checklist Form

- 1. Project title: City of Monterey Greenbelt Fuel Reduction Project Old Capitol Site
- 2. Lead agency name and address: City of Monterey, 570 Pacific Street, Monterey, California 93940
- 3. Contact person and phone number: Christy Sabdo, AICP, Associate Planner, (831) 646-3885
- **4. Project location:** This project is located within the following eight City of Monterey greenbelts: (1) Skyline Forest, (2) Veteran's Park, (3) Monte Vista, (4) Carmelo Street, (5) Don Dahvee, (6) Josselyn Canyon, (7) Fisherman Flats, and (8) Old Capitol Site (see **Figures 1** and **2**).
- 5. **Project sponsor's name and address:** Christy Sabdo, City of Monterey, Planning Office, 580 Pacific Street, Monterey, California 93940
- 6. General Plan designation: Parks and Open Space, Residential Very Low Density
- 7. **Zoning:** Open Space (O), Planned Community (PC), and Residential Single-Family District (R-1)

# 8. Description of project:

### PROJECT LOCATION

The City of Monterey (City) Greenbelt Fuel Reduction Project (project or proposed project) is located within the following eight City greenbelts: (1) Skyline Forest, (2) Veteran's Park, (3) Monte Vista, (4) Carmelo Street, (5) Don Dahvee, (6) Josselyn Canyon, (07) Fisherman Flats, and (8) Old Capitol Site (see **Figures 1** and **2**).

#### PROJECT BACKGROUND

The City has identified eight treatment areas within the City's greenbelt system—the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, Fisherman Flats, and Old Capitol Site greenbelts, collectively the "Plan Area" (**Figure 1**), where the fire hazard is high due to high fuel loads. Wildfire in these greenbelts could result in substantial impacts to natural resources and substantial health, safety, and welfare impacts to the built/human environment adjacent to these areas. To reduce the risk of wildfire, the City prepared a Fuel Reduction Plan (Plan) for the Plan Area and approved an Initial Study/Mitigated Negative Declaration (IS/ MND) for the Plan in 2020; however, at the time these documents were prepared, the Old Capitol Site greenbelt was not part of the Plan Area. The City recently acquired the Old Capitol Site greenbelt from the Pebble Beach Company as part of a deed agreement and, due to high fuel loads within this greenbelt, added it to the Plan Area. The addition of the Old Capitol Site greenbelt to the Plan Area resulted in revisions to the adopted Fuel Reduction Plan. Therefore, the City prepared this Draft Supplemental IS/MND to analyze and disclose the potentially significant environmental effects associated with the expansion of the Plan Area to include the Old Capitol Site greenbelt. This IS/MND is a Supplemental IS/MND to the project's Final IS/MND.

ith: D:\GIS\GIS\_Projects\2019-36 City of Monterey On-Call\792 Greenbelt Fuel Reduction\Map Products\Fig 1 - Project Location Map

## PURPOSE AND REQUIREMENTS OF A SUPPLEMENTAL IS/MND

This Draft Supplemental IS/MND was prepared pursuant to CEQA Guidelines Sections 15162 and 15163. CEQA Guidelines Section 15162 sets the criteria for the preparation of a subsequent negative declaration, and states that "When an EIR has been certified or negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:
  - The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
  - Significant effects previously examined will be substantially more severe than shown in the previous EIR;
  - Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
  - Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

CEQA Guidelines Section 15163 sets the criteria for the preparation of a supplemental negative declaration, and states that:

- "The lead or responsible agency may choose to prepare a supplement to an EIR rather than a subsequent EIR if:
  - Any of the conditions described in Section 15162 would require the preparation of a subsequent EIR, and
  - Only minor additions or changes would be necessary to make the previous EIR adequately apply to the project in the changed situation.
- The supplement to the EIR need contain only the information necessary to make the previous EIR adequate for the project as revised.
- A supplement to an EIR shall be given the same kind of notice and public review as is given to a draft EIR under Section 15087.
- A supplement to an EIR may be circulated by itself without recirculating the previous draft or final EIR.
- When the agency decides whether to approve the project, the decision-making body shall consider the previous EIR as revised by the supplemental EIR. A finding under Section 15091 shall be made for each significant effect shown in the previous EIR as revised."

Consistent with CEQA Guidelines Sections 15162 and 15163, the City reviewed the revised project description and determined that it was appropriate to prepare a supplement to the project's adopted IS/MND in the form of a Draft Supplemental IS/MND. The purpose of this Draft Supplemental IS/MND is to describe the changes to the project

that have been identified and to analyze their environmental impacts and identify appropriate mitigation measures if needed. Based on the analysis in this Draft Supplemental IS/MND, the City concludes that the Draft Supplemental IS/MND adequately addresses the environmental effects of the project, and that the proposed revisions to the project constitute a minor refinement of the project description. Furthermore, the City finds that these minor refinements to the proposed project (and associated environmental effects) do not meet the conditions described in CEQA Guidelines Section 15162 calling for preparation of a subsequent negative declaration.

# **PROJECT OBJECTIVES**

The objective of the proposed project is to reduce the risk of wildfire in the Plan Area, including the Old Capitol Site greenbelt, through fuel reduction actions undertaken by the City. These actions would be conducted in a manner that minimizes adverse environmental effects and implements goals for resource and habitat management. Specific goals that have been established by the City for the project include the following:

- Reduce the fire hazard within the City's greenbelt system to an acceptable level of risk,
- Maintain and enhance ecological values for plant and wildlife habitat while achieving fire reduction goals,
- Preserve aesthetic landscape values for neighboring residents and visitors, and
- Improve watershed conditions by protecting it from the adverse effects of wildland fire on soil and water quality.

# PROJECT DESCRIPTION

The City is proposing to modify the approved City of Monterey Greenbelt Fuel Reduction Project to add the 135acre Old Capitol Site greenbelt to the Plan Area. This greenbelt would be subject to the same fuel management activities outlined in the approved project; no new management activities are proposed. The expanded project would result in the managed reduction of fire fuel hazards in the entire Plan Area, including the Old Capitol Site greenbelt, while maintaining plant and animal habitat, preserving cultural and aesthetic resources, and protecting water quality. As part of the expanded project, the following actions, which were approved in the project's Final IS/MND for the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, and Fisherman Flats greenbelts, would also be implemented in the Old Capitol Site greenbelt to reduce fire hazards:

- Thinning of vegetation to reduce woody biomass and to break-up horizontally- and vertically-continuous fuels would be implemented on an as-needed basis depending upon topography and vegetation type.
- Removal of trees, focusing primarily on dead and dying trees, would be implemented. However, in areas with hazardous fuels, live tree removal may be necessary to improve vegetation spacing and to reduce overall fuel continuity. Where removal of trees is required, root systems would generally be left intact, as needed, to maintain slope stability.
- Trees or large tree-form shrubs (reaching four (4) feet or taller at maturity) that are to be retained in defensible spaces would be trimmed or pruned to reduce both vertical and horizontal fuel continuity. Pruning, where feasible, would eventually attain an at least eight-foot vertical clearance (16-foot vertical clearance preferable where attainable) from the highest slope point within the canopy, yet should not exceed 50% reduction in live crown (canopy).
- Removal of dead/dying plants from the treatment areas would be implemented to help reduce low fuel moisture biomass and highly flammable fine fire fuels. This practice would be conducted in combination with vegetation thinning efforts and may help reach or completely satisfy thinning objectives in some areas.
- Removal of exotic/invasive plants would be implemented to help reduce the presence of undesirable species and enhance thinning efforts aimed at reducing overall biomass levels. Typical undesirable exotic species include, but are not limited to, the following: Cape ivy, rattlesnake grass, French broom, panic veldt grass, English ivy, kikuyu grass, Himalayan blackberry, and poison hemlock.
- Mechanical thinning and removal of vegetation would be implemented using string and blade trimmers (i.e., weed eaters), mowers, and chainsaws.

- Prescribed grazing, utilizing goats and sheep, would be implemented to thin and remove vegetation in difficult to access areas and in areas where high fire hazard conditions exist due to dry conditions. These areas would be fenced-off using temporary fencing for the duration of grazing activities.
- Treated fire fuel materials would either be removed from the Plan Area and disposed of in a landfill with a green waste composting program or would be chipped and used as mulch within the Plan Area.
- Staging areas for vehicles and equipment would be primarily focused on existing roads and within existing road right-of-way.
- Vehicle and equipment use associated with fire fuel reduction activities would be implemented using only rubber-tired, non-metal-tracked vehicles to eliminate soil disturbance.

As part of the fire fuel reduction program, the following Best Management Practices (BMPs), which were approved in the project's adopted IS/MND for the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, and Fisherman Flats greenbelts, would also be implemented in the Old Capitol Site greenbelt to limit construction dust and emissions (where feasible and appropriate):

- Prohibit all mastication or other activities causing fine particles or ground disturbance during periods of high wind (over 15 mph).
- Water all active work areas, where ground/soil disruption may occur, at least twice daily. Frequency should be based on the type of operation, soil, and wind exposure.
- Maintain at least two feet of freeboard in haul trucks.
- Cover all trucks hauling dirt, sand, or loose materials.
- Cover inactive storage piles.
- Post a publicly visible sign which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance).
- Construction equipment shall conform to the Air Resources Board's Tier 3 or 5 emission standards and, where feasible, construction equipment shall use alternative fuels such as compressed natural gas (CNG), propane, electricity, or biodiesel.

# APPROACH TO ENVIRONMENTAL ANALYSIS

Potential project impacts resulting from fuel management of the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, and Fisherman Flats greenbelts were already evaluated in the project's Final IS/MND and, where necessary, mitigation measures were identified to minimize potentially significant impacts to a less than significant level under CEQA. The modified project would expand the Plan Area to allow fuel management activities in the Old Capitol Site greenbelt but would not modify approved management activities in the original seven greenbelts. As a result, the expanded project would not result in new impacts to those greenbelts. Therefore, consistent with CEQA Guidelines Section 15163, this Draft Supplemental IS/MND only analyzes potential project impacts which could result from fuel reduction activities within the Old Capitol Site greenbelt.

#### **PROJECT SCHEDULE**

Fuel reduction activities would be conducted year-round depending upon fire safety conditions, availability of labor and resources, and avoidance of sensitive biological, cultural, and water resources.

### PROJECT PERMITS

The project is not expected to require any permits. However, if impacts to any of the potentially jurisdictional drainages, riparian areas, and potential wetland areas within the Plan Area occur as a result of the expanded project, the project may require the following approvals:

- U.S. Army Corps of Engineers (USACE) Section 404 Authorization,
- Regional Water Quality Control Board (RWQCB) Section 401 Water Quality Certification, and/or
- California Department of Fish and Wildlife (CDFW) Section 1602 Lake and Streambed Alteration Agreement.
- Per MBARD Rule 201, Section 4.14.1, any stationary IC engine greater than 50 HP must be CARB registered or permitted by the Air District

**Surrounding land uses and setting:** The land uses surrounding the project site include the following:

- Residential Low Density,
- Residential Medium Density
- Public / Semi-Public,
- Parks and Open Space,
- Commercial,
- Ocean / Lake, and
- City Boundary.

#### Other public agencies whose approval is required:

- City of Monterey Fire Department,
- Monterey Bay Air Resources District (MBARD), and
- California Department of Forestry and Fire Protection (Cal Fire).

# ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, as indicated by the checklist on the following pages.

Aesthetics	Land Use Planning
Agriculture Resources	Mineral Resources
Air Quality	Noise
XBiological Resources	Population/Housing
XCultural Resources	Public Services
Energy	Recreation
XGeology/Soils	Transportation/Traffic
Greenhouse Gas Emissions	Tribal Cultural Resources
XHazards & Hazardous Materials	Utilities/Service Systems
XHydrology/Water Quality	X Mandatory Findings of Significance

#### DETERMINATION: On the basis of this initial evaluation:

.....I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

- .....X ........ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ENVIRONMENTAL IMPACT REPORT is required.
- ..... I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ..... I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier Environmental Impact Report (EIR) or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

#### **Public Review Period**

Begins: September 1, 2022 Ends: October 3, 2022

#### **Public Meeting**

Date: October 25, 2022 Time: 4:00 pm or 7:00 pm Location: Hybrid Meeting Meeting will be conducted both in person at the City Council Chambers and online via Zoom. Closer to the meeting date, view agenda at: http://isearchmonterey.org/onbaseagendaonline/) Reviewing Body: Planning Commission

Anyone interested in this matter is invited to comment on the document by written response (send comments to sabdo@monterey.org), or by calling in to the Planning Commission hearing (instructions for calling in are described on the Planning Commission agenda).

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION
I. AESTHETICS – Would the pl	roject:				
a) Have a substantial adverse effect on a scenic vista?			x		<ul> <li>City of Monterey, General Plan Map 2 Showing Special Places, and Urban Design Element Policies b3. and c.1</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			x		<ul> <li>City of Monterey, General Plan Urban Design Element Polices h.19 and h.22</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
<ul> <li>c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?</li> </ul>			x		<ul> <li>City of Monterey, General Plan Urban Design Element</li> <li>City of Monterey, General Plan Open Space Element, Policies a.3 and b.4</li> <li>City of Monterey City Code (M.C.C.), Chapter 37, <i>Preservation of Trees</i></li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?				x	<ul> <li>City of Monterey General Plan Urban Design Element policy h.4</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>

The City of Monterey consists of approximately 10 square miles of coastal lands and forested hills. Much of the City is urbanized; however, its coastline and wooded ridges are devoted primarily to open space and recreational uses. Located one hour away from San Jose and 1.5 hours from San Francisco, Monterey is frequently a vacation destination for inland and City residents. The Monterey region is well known for its scenic visual character, and the City's coastal areas provide expansive views of the Pacific Ocean (Monterey Bay). The adjacent beach and coastal bluff areas are visually intriguing and offer a variety of passive and active recreational opportunities. Fisherman's Wharf and Cannery Row provide a variety of shops, art and craft galleries, boutiques, and restaurants in an historic seaport setting.

As identified in the City's General Plan, all major roads leading to Monterey are scenic highways. State Route (SR) 1, south of the City, is a State of California-designated scenic highway. SR 68 from SR 1 to the Salinas River is a state- and County of Monterey (County)-designated scenic highway. In addition, SR 1 north of the City is an eligible state scenic highway, and SR 68 along the western boundary of the City is identified as a "Proposed Scenic Road" in the City's General Plan.

#### Discussion:

- **a-c)** The City's General Plan identifies "special places," which are considered to have significant visual resources; most of the Old Capitol Site greenbelt is designated as "canyon" or "wooded hill" special places in the City's General Plan. Portions of this greenbelt are intermittently visible from SR 1. Potential impacts related to the scenic vistas, scenic resources, and public views were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- d) Potential impacts related to light and glare were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

## Mitigation:

Implementation of the proposed project would not result in significant impacts to aesthetics; therefore, impacts are expected to be less than significant, and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION				
<b>II. AGRICULTURE AND FOREST RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:									
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				x	<ul> <li>City of Monterey, General Plan Conservation Element</li> <li>City of Monterey General Plan Update Initial Study 2003</li> <li>City of Monterey Zoning Ordinance</li> <li>Monterey County Important Farmland 2014 (California Department of Conservation, 2016)</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				x	<ul> <li>City of Monterey, General Plan Conservation Element</li> <li>City of Monterey General Plan Update Initial Study 2003</li> <li>City of Monterey Zoning Ordinance</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
c) Conflict with existing zoning for, or cause rezoning of forest land (as defined in Public Resources Code Section 12220g), timberland (as defined by Public Resources Code Section 4526) or timberland zoned Timberland Production (as defined by Government Code Section 51104g)?				x	<ul> <li>City of Monterey, General Plan Conservation Element</li> <li>Final IS/MND for the City of Monterey</li> <li>Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
d) Result in the loss of forest land or conversion of forest land to non-forest use?				х	<ul> <li>City of Monterey, General Plan Conservation Element</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				

e) Involve other changes in the existing environment which, due to their location		<ul> <li>City of Monterey, General Plan Conservation</li> <li>Element</li> <li>City of Monterey General Plan Update Initial</li> </ul>
or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	x	Study 2003 – City of Monterey Zoning Ordinance – Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)

While much of Monterey County is known for, and associated with, an abundance of agricultural operations, the City itself has no agricultural operations or potential for future agriculture resources or activities. The City does not have any forest lands zoned for Timberland Production. The City is primarily an urbanized environment.

# Discussion:

**a-e)** Potential impacts to agriculture and forest resources were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would not result in impacts to agriculture and forest resources; therefore, mitigation is not necessary.

The project site is located within the North Central Coast Air Basin (NCCAB), which is comprised of Santa Cruz, San Benito, and Monterey Counties, and is regulated by the MBARD (formerly known as the Monterey Bay Unified Air Pollution Control District). A semi-permanent high-pressure system in the eastern Pacific Ocean is the controlling factor in the climate of the air basin. In late spring and summer, the high-pressure system is dominant and causes persistent west and northwesterly winds over the entire California coast. The onshore air currents pass over cool ocean waters to bring fog and relatively cool air into the coastal valleys. Warmer air aloft creates elevated inversions that restrict dilution of pollutants vertically, and mountains forming the valleys restrict dilution horizontally.

In the fall, the surface winds become weak, and the marine layer grows shallow, dissipating altogether on some days. The airflow is occasionally reversed in a weak offshore movement, and the relatively stagnant conditions allow pollutants to accumulate over a period of days. It is during this season that the north or east winds develop that transport pollutants from either the San Francisco Bay Area or the Central Valley into the NCCAB. During winter

and early spring, the Pacific high-pressure system migrates southward and has less influence on the air basin. Wind direction is more variable, but northwest winds still dominate. The general absence of deep, persistent inversions and occasional storm passages usually result in good air quality for the basin as a whole. The air basin is bounded by pine-wooded hills to the south and by the crescent-shaped southerly end of the Monterey Bay to the north. Persistent sea breezes ventilate the area with respect to other metropolitan areas, and the City generally enjoys good air quality throughout the year.

The Federal Clean Air Act (FCAA) and the California Clean Air Act mandate the control and reduction of specific air pollutants. Under these Acts, the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (ARB) have established ambient air quality standards for specific "criteria" pollutants, designed to protect public health and welfare. Primary criteria pollutants include carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxides (NOx), particulate matter (PM<sub>10</sub>), sulfur dioxide (SO<sub>2</sub>), and lead (Pb). Secondary criteria pollutants include ozone (O<sub>3</sub>), and fine particulate matter (PM<sub>2.5</sub>).

The EPA administers the National Ambient Air Quality Standards (NAAQS) under the FCAA. The EPA sets the NAAQS and determines if areas meet those standards. Violations of ambient air quality standards are based on air pollutant monitoring data and evaluated for each air pollutant. Areas that do not violate ambient air guality standards are considered to have attained the standard. The FCAA allows states to adopt additional or more health-protective standards, and California has established the California Ambient Air Quality Standards (CAAQS) for some pollutants not addressed by NAAQS. The NCCAB is in attainment for all NAAQS and for all CAAQS except O<sub>3</sub> and PM<sub>10</sub>. The primary sources of O<sub>3</sub> and PM<sub>10</sub> in the NCAAB are from automobile engine combustion. To address exceedance of these CAAQS, the MBARD has developed and implemented several plans including the 2005 Particulate Matter Plan, the 2007 Federal Maintenance Plan, and the 2012-2015 Air Quality Management Plan (AQMP), a revision to the 2012 Triennial Plan. NCCAB Attainment Status to National and California Ambient Air Quality can be found in Table 1 below.

Table 1. North Central Coast Air Basin Attainment Status Summary as of January 2015								
Pollutant	State Standards <sup>1</sup>	National Standards						
Ozone (O <sub>3</sub> )	Nonattainment <sup>2</sup>	Attainment / Unclassified <sup>3</sup>						
Inhalable Particulates (PM <sub>10</sub> )	Nonattainment	Attainment						
Fine Particulates (PM <sub>2.5</sub> )	Attainment	Attainment / Unclassified <sup>4</sup>						
Carbon Monoxide (CO)	Attainment	Attainment / Unclassified						
Nitrogen Dioxide (NO <sub>2</sub> )	Attainment	Attainment / Unclassified <sup>5</sup>						
Sulfur Dioxide (SO <sub>2</sub> )	Attainment	Attainment <sup>6</sup>						
Lead	Attainment	Attainment / Unclassified <sup>7</sup>						
Notoo:								

Notes

1) State designations based on 2010 to 2012 air monitoring data.

2) Effective July 26, 2007, the ARB designated the NCCAB a nonattainment area for the state ozone standard, which was revised in 2006 to include an 8-hour standard of 0.070 ppm.

3) On March 12, 2008, the U.S. EPA adopted a new 8-hour ozone standard of 0.075 ppm. In April 2012, the U.S. EPA designated the NCCAB attainment/unclassified based on 2009-2011 data.

4) This includes the 2006 24-hour standard of 35 μg/m3 and the 2012 annual standard of 12 μg/m3.

5) In 2012, the U.S. EPA designated the entire state as attainment/unclassified for the 2010 NO2 standard.

6) In June 2011, the ARB recommended to the U.S. EPA that the entire state be designated as attainment for the 2010 primary SO2 standard. Final designations to be addressed in future U.S. EPA actions.

7) On October 15, 2008 EPA substantially strengthened the national ambient air quality standard for lead by lowering the level of the primary standard from 1.5 µg/m3 to 0.15 µg/m3. Final designations were made by the U.S. EPA in November 2011.

8) Nonattainment designations are highlighted in Bold.

Plans to attain these standards already accommodate the future growth projections available at the time these plans were prepared. Any development project capable of generating air pollutant emissions exceeding regionallyestablished criteria is considered significant for the purposes of CEQA analysis, whether or not such emissions have been accounted for in regional air planning. Furthermore, any project that would directly cause or substantially contribute to a localized violation of an air quality standard would generate substantial air pollution impacts. The same is true for a project that generates a substantial increase in health risks from toxic air contaminants or introduces future occupants to a site exposed to substantial health risks associated with such contaminants.

#### Discussion:

- a, b) Potential impacts related to air quality plans and criteria pollutants were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- c, d) Generally, residences, schools, parks, and playgrounds are considered to be "sensitive receptors" in relation to air quality issues. Adjacent sensitive receptors to the Old Capitol Site greenbelt include residences, schools, and a hospice care facility (the Westland House of Community Hospital of the Monterey Peninsula). Potential air quality impacts to sensitive receptors were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would not result in significant impacts to air quality; therefore, impacts are expected to be less than significant and mitigation is not necessary.

Monterey County consists of more than 3,324 square miles of land (over 2 million acres) with a variety of habitats from rocky Pacific shores to open grasslands to high mountains at elevations exceeding 5,000 feet. The Monterey Bay area, located in northern Monterey County, is home to a diverse population of animal, bird, and plant species. The waters of Monterey Bay and the adjacent Pacific Ocean off the central California coast have been designated and protected as the Monterey Bay National Marine Sanctuary since 1992. The climate of the Plan Area is typical of the California central coast, with mild year-round and morning coastal fog that is generally cleared by afternoon breezes. Monterey typically experiences cool summer months, with temperatures averaging in the high 50s to low 60s, and warm weather in the fall. The average yearly rainfall is approximately 18 inches and is concentrated in the winter and early spring months.

A biological survey of the Old Capitol Site greenbelt was conducted on April 30, 2021 (DD&A, 2021). The greenbelt was evaluated for the potential presence of special-status plant and animal species, and for sensitive habitats (see discussion of Regulations below). Mixed Monterey pine forest/coast live oak woodland is the dominant habitat type within the greenbelt. Like the other seven greenbelts which were analyzed in the project's Final IS/MND, the Old Capitol Site greenbelt is generally urbanized and impacted by non-native species that have escaped from nearby landscaped areas or, more commonly, are part of a general spread of invasive species in the greenbelt are rattlesnake grass (*Briza maxima*) and French broom (*Genista monspessulana*), both prolific seed producers capable of invading disturbed areas in a short time. Native trees like Monterey pine (*Pinus radiata*), coast live oak (*Quercus agrifolia*), and others in the greenbelt are in varying states of health. A discussion of the habitat conditions associated with each segment of the Old Capitol Site greenbelt is provided below.

# Segment A: Viejo Road to Barnet Segal Lane

This westernmost section of the Old Capitol Site greenbelt lies south of State Route 1 and Barnet Segal Lane and east of Viejo Road (**8a; Figure 2**). Where this greenbelt abuts roads, slopes are generally steep. Most of this greenbelt consists of a moderately dense upper canopy of mixed Monterey pine and coast live oak trees. The understory is dominated by an abundance of native and non-native shrubs, including poison oak (*Toxicodendron diversilobum*), French broom, and sticky monkeyflower (*Diplacus aurantiacus*), along with accumulations of dead

twigs and fallen logs. In the few areas where the canopy is open, the understory is dominated by non-native grasses, including rattlesnake grass and slender wild oat (*Avena barbata*). An approximately one- to two-foot-wide drainage, which was dry at the time of the April 2021 survey, runs south to north along the eastern edge of this greenbelt area and connects to the drainage within the adjacent section (Section B) to the north via a culvert under Barnet Segal Lane.

## Segment B: Barnet Segal Lane to South Iris Canyon Drive

This small section of the Old Capitol Site greenbelt lies directly south of State Route 1 between Barnet Segal Lane and Iris Canyon Drive (**8b**; **Figure 2**). This area is relatively flat and more open than other areas of the Old Capitol Site greenbelt. The canopy is an open to moderately dense mix of coast live oak and Monterey pine trees. The understory is generally grassy and is dominated by rattlesnake grass and slender wild oat. An approximately two-foot-wide drainage, which was dry at the time of the April 2021 survey, runs south to north along the western edge of this greenbelt area. Near the drainage, the canopy is denser and the understory is dominated by poison oak, Cape ivy (*Delairea odorata*), and hedge nettle (*Stachys* sp.) rather than grasses.

### Segment C: Barnet Segal Lane to Westland House

This easternmost and largest section of the Old Capitol Site greenbelt lies south of State Route 1, between Barnet Segal Lane and the Westland House nursing facility (**8c; Figure 2**). Like Segment A, this greenbelt consists of a moderately dense upper canopy of mixed Monterey pine and coast live oak trees with a dense understory of poison oak, hedge nettle, French broom, and accumulations of dead twigs and fallen logs. A portion of this greenbelt area is designated critical habitat for the federally Endangered Yadon's rein orchid (*Piperia yadonii*) (DD&A, 2021; **Figure 3**).

### **Regulations:**

### Monterey Tree Protection Ordinance

Monterey's image is that of a small-scale residential community beside the bay, framed by a forested hill backdrop and drawing its charm from a rich historical background, certain commercial enterprises, and natural scenic beauty. Trees within the City significantly contribute to this image. The Preservation of Trees and Shrubs Ordinance is intended to assure preservation of trees and replacement of trees when removal is unavoidable. The ordinance also establishes a Landmark Tree Program.

#### **General Plan Conservation Element**

The City's Conservation Element contains a variety of goals, policies, and programs. Its elements protect the character and composition of existing native vegetative communities, as well as provide policy to conserve, manage, and restore habitats for endangered species, and protect biological diversity represented by special-status plant and wildlife species in the City.

#### Special-Status Species

Special-status species are those plants and animals that have been formally listed or proposed for listing as endangered or threatened, or are candidates for such listing under the Endangered Species Act (ESA) or the California Endangered Species Act (CESA). Listed species are afforded legal protection under the ESA and CESA. Species that meet the definition of rare or endangered under the CEQA Guidelines Section 15380 are also considered special-status species. Animals on the CDFW's list of "species of special concern" (most of which are species whose breeding populations in California may face extirpation if current population trends continue) meet this definition and are typically provided management consideration through the CEQA process, although they are not legally protected under the ESA or CESA. CDFW also includes some animal species that are not assigned any of the other status designations on the CDFW's "Special Animals List"; however, these species have no legal or protection status and are not analyzed in this document.

Plants listed as rare under the California Native Plant Protection Act (CNPPA) or listed as California Rare Plant Rank (CRPR; formerly known as CNPS Lists) 1A, 1B, 2A, and 2B species in the California Native Plant Society's (CNPS) *Inventory of Rare and Endangered Vascular Plants of California* (CNPS, 2019) are also treated as special-status species as they meet the definitions of Sections 2062 and 2067 of the CESA and in accordance with CEQA Guidelines Section 15380. In general, the CDFW requires that plant species identified as CRPR 1A (Plants

presumed extirpated in California and Either Rare or Extinct Elsewhere), CRPR 1B (Plants rare, threatened, or endangered in California and elsewhere), CRPR 2A (Plants presumed extirpated in California, but more common elsewhere); and CRPR 2B (Plants rare, threatened, or endangered in California, but more common elsewhere) in the CNPS *Inventory of Rare and Endangered Vascular Plants of California* (CNPS, 2019) be fully considered during the preparation of environmental documents relating to CEQA. Plant species identified as CRPR 3 (plants about which more information is needed) and CRPR 4 (plants of limited distribution) may, but generally do not, meet the definitions of Sections 2062 and 2067 of CESA, and are not typically considered in environmental documents relating to CEQA. While other species (i.e., CRPR 3 or 4 species) are sometimes found in database searches or within the literature, these do not meet the definitions of Section 2062 and 2067 of CESA and are not analyzed in this document.

Raptors (e.g., eagles, hawks, and owls) and their nests are protected in California under Fish and Game Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy the nest or eggs of any such bird except otherwise provided by this code or any regulation adopted pursuant thereto." In addition, protected species under Fish and Game Code Section 3511 (birds), Section 4700 (mammals), Section 5515 (fish), and Section 5050 (reptiles and amphibians) are also considered special-status wildlife species. Species with no formal special-status designation but thought by experts to be rare or in serious decline may also be considered special-status animal species in some cases, depending on project-specific analysis and relevant, localized conservation needs or precedence.

#### Sensitive Habitats

The Old Capitol Site greenbelt was also evaluated for sensitive habitats. Sensitive habitats include riparian corridors, wetlands, habitats for legally protected species, areas of high biological diversity, areas supporting rare or special-status wildlife habitat, and unusual or regionally restricted habitat types. Vegetation communities considered sensitive include those listed as sensitive on CDFW's *California Natural Communities List* (i.e., those habitats that are rare or endangered within the borders of California; CDFW, 2020), those that are occupied by species listed under the ESA or are critical habitat in accordance with ESA, and those that are defined as Environmentally Sensitive Habitat Areas (ESHA) under the California Coastal Act. Specific habitats may also be identified as sensitive in city or county general plans or ordinances. Sensitive habitats are regulated under federal regulations (such as the Clean Water Act and Executive Order 11990 – Protection of Wetlands), state regulations (such as the CDFW Streambed Alteration Program), or local ordinances or policies (such as city or county tree ordinances).

### **Discussion:**

- a) One special-status plant community (Monterey pine forest) and one special-status plant species Monterey pine (CRPR 1B<sup>1</sup>) — was observed in the Old Capitol Site greenbelt during the April 2021 biological survey. In addition, Yadon's rein orchid (FE/1B) is known to occur within the Old Capitol Site greenbelt (DD&A, 2021), a portion of which is also designated critical habitat for this species (DD&A, 2021; Figure 3). Additionally, while not observed to be present, but due to presence of suitable habitat and known occurrences in the area, the following special-status plant and wildlife species were determined to have a moderate or high potential to occur within the Old Capitol Site greenbelt.
  - Special-Status Plant Species:
    - Hickman's onion (Allium hickmanii) 1B,
    - Jolon clarkia (*Clarkia jolonensis*) 1B,
    - Seaside bird's-beak (Cordylanthus rigidus ssp. littoralis) 1B,
    - Hospital Canyon larkspur (Delphinium californicum ssp. interius) SE/1B,
    - Hutchinson's larkspur (Delphinium hutchinsoniae) 1B,
    - Eastwood's goldenbush (Ericameria fasciculata) 1B,
    - Fragrant fritillary (*Fritillaria liliacea*) 1B,
    - Gowen cypress (Hesperocyparis goveniana) FT/1B,
    - Kellogg's horkelia (Horkelia cuneata var. sericea) 1B,
    - Contra Costa goldfields (*Lasthenia conjugens*) FE/1B,
    - Carmel Valley bush-mallow (Malacothamnus palmeri var. involucratus) 1B,
    - Marsh microseris (Microseris paludosa) 1B,
    - Northern curly-leaved monardella (Monardella sinuata ssp. nigrescens) 1B,
    - Woodland woollythreads (Monolopia gracilens) 1B,
    - Hickman's cinquefoil (Potentilla hickmanii) FE/SE/1B,
    - Pine rose (Rosa pinetorum) 1B,
    - Santa Cruz clover (*Trifolium buckwestiorum*) 1B,
    - Pacific Grove clover (*Trifolium polyodon*) —SR/1B, and
    - Monterey clover (*Trifolium trichocalyx*) FE/SE/1B.
  - Special-Status Wildlife Species:
    - Monterey dusky-footed woodrat (Neotoma fuscipes luciana) CSC,
    - Monterey shrew (Sorex ornatus salarius) CSC,
    - Northern California legless lizard (Anniella pulchra) CSC,
    - Coast Range newt (*Taricha torosa*) CSC, and
    - Raptors and other nesting birds.

While all these species have the potential to occur within the Old Capitol Site greenbelt where suitable habitat occurs, the following is a breakdown of the known CNDDB occurrences of these species within or adjacent to the greenbelt:

<sup>&</sup>lt;sup>1</sup> Status Designation: FE: Federally Endangered; FT: Federally Threatened; SE: State Endangered; SR: State Rare; and 1B: CNPS CRPR 1B; CSC: CDFW Species of Special Concern.

- Monterey pine (CNDDB Occ. 4),
- Monterey shrew (CNDDB Occ. 4),
- Hickman's cinquefoil (CNDDB Occ. 3),
- Woodland woollythreads (CNDDB Occ. 6), and
- Yadon's rein orchid (CNDDB Occ. 8).

The proposed project would include the prescribed implementation of various methods for the managed reduction of fire fuel hazards within the Old Capitol Site greenbelt. Mechanical thinning and removal of vegetation would be conducted using string and blade trimmers (i.e., weed eaters), mowers, chainsaws, and prescribed grazing using goats and sheep. Potential impacts to special-status species were already discussed in the project's Final IS/MND, which determined that impacts from the project would be **less than significant with mitigation incorporated**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

# Mitigation:

Implementation of the measures described below, which are consistent with the measures identified in the project's Final IS/MND for the original seven greenbelts, would reduce potential project-related impacts to special-status species to a less than significant level.

- **BIO-1** Prior to initiation of all activities resulting in physical disturbance of a treatment area, including but not limited to mobilization of equipment and clearing of vegetation, a qualified biologist shall survey the area. Survey results and recommendations shall be implemented to avoid impacts to sensitive biological resources.
- **BIO-2** For locations containing rare and sensitive plant and animal species, fuel reduction actions shall adhere to avoidance recommendations outlined in the 2021 *City of Monterey Greenbelt Fuel Reduction Plan* (DD&A, 2021; **Appendix A**).
- **BIO-3** If trees or large tree form shrubs are to be removed between February 1 and August 31, a qualified biologist shall conduct a nesting bird survey of the trees and shrubs and an area within 100 feet of the tree removal site, for active bird nesting, breeding, or rearing activity no more than five days prior to the start date. If nesting activity is observed by the qualified biologist, tree and shrub removal containing the nests shall be delayed until young have fledged (are flying and foraging on their own) and the nest is abandoned, per observations of the qualified biologist. In addition, the qualified biologist will recommend an appropriate buffer zone around nests to ensure no indirect disturbance occurs. The recommended buffer will depend upon the species (e.g., raptor vs. passerine) and other site-specific conditions such as proximity to roadways, slope, etc.
- **BIO-4** Tree removal required due to imminent threat to a structure or safety concerns along roads (including road rights-of-way) shall not be restricted as to timing but, at the discretion of the qualified biologist, shall involve coordination with the California Department of Fish and Wildlife.
- **BIO-5** Should disturbance of soil or ground need to be implemented for removal of tree and shrub stump and root systems, as well as removal of non-native plant species, work shall not proceed unless authorized by a qualified biological monitor. If sensitive resources are present, they shall be avoided.
- **BIO-6** Environmental awareness training shall be conducted for fuel reduction personnel prior to initiation of fuel reduction measures. Training shall include the identification and avoidance of resources.
- **b**, **c**) A number of sensitive natural communities occur within the Old Capitol Site greenbelt, including designated critical habitat for Yadon's rein orchid, Monterey pine forest, intermittent streams, and associated riparian woodland and potential wetland habitats. The project does not propose ground-disturbing activities using heavy construction equipment in any of these habitats, would not modify or

place fill in any of the stream channels, and would generally improve the habitat structure through the managed reduction of fire fuel hazards within the Old Capitol Site greenbelt.

Fuel management activities which target non-native invasive species would overall benefit Yadon's rein orchid and habitat for this species; therefore, the project may affect but would be unlikely to adversely modify critical habitat for this species where it has been designated within the Old Capitol Site greenbelt. This impact is **less than significant**.

Potential impacts to other sensitive natural resources were already discussed in the project's Final IS/MND, which determined that impacts from the project would be **less than significant with mitigation incorporated**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of mitigation measures **BIO-1** through **BIO-6** in addition to the measures described in mitigation measure **BIO-7** below, which is consistent with the measure identified in the project's adopted IS/MND for the original seven greenbelts, would reduce potential project-related impacts to sensitive natural communities, riparian habitat, and potential wetlands to a less than significant level.

- **BIO-7** Creeks, drainages, and potential wetland areas shall not be crossed with motorized vehicles, and refueling of all motorized equipment shall be conducted utilizing a minimum 50-foot setback from these resources.
- d) Potential impacts to habitat corridors and nursery sites were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- e, f) The Old Capitol Site greenbelt would retain its current zoning designation. In addition, the City does not have an adopted Habitat Conservation Plan or Natural Community Conservation Plan that addresses the Plan Area. Potential impacts related to local policies and plans were already discussed in the project's adopted IS/MND, which determined that no impacts would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

10004.01					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
b) Cause a substantial adverse change in the significance of an		v			<ul> <li>Archaeological Sensitivity Map, Figure 8, Draft EIR, City of Monterey General Plan Update, July 2004</li> </ul>
archaeological resource pursuant to 15064.5?					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
c) Disturb any human remains, including those					<ul> <li>City of Monterey, General Plan, Historical Preservation Program</li> </ul>
interred outside of formal cemeteries?		X			<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>

According to the City's General Plan, the City is one of the most historic cities in the United States and preservation of historic resources has long been a concern of Monterey citizens. Over the past three centuries, the City has served, at various times, as a Spanish mission, a center of government, a major commercial port, and a cultural center. The dramatic ocean scenery, abundant wildlife, pine forests, and historic communities continue to attract explorers, dignitaries, seafarers, artists, writers, and vacationers. Today, Monterey thrives as a cultural center and tourist destination. The City currently has a population of almost 30,000 people and is host to more than two million visitors annually.

# Discussion:

a, b, c) According to the City's General Plan Environmental Impact Report (EIR), a portion of the Old Capitol Site greenbelt has a high probability of containing prehistoric resources; however, there are no known archaeological or historic resources present within the greenbelt. Potential impacts to cultural resources were already discussed in the project's Final IS/MND, which determined that impacts from the project would be less than significant with mitigation incorporated. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

# Mitigation:

Implementation of the measure described below, which is consistent with the measure identified in the project's Final IS/MND for the original seven greenbelts, would reduce potential project-related impacts to unknown cultural resources to a less than significant level.

CUL-1 If archaeological materials or features are discovered at any time during ground-disturbing activities (excavation, grading, grubbing, etc.), these ground-disturbing activities shall be halted within 50 meters (150 feet) of the find until it can be evaluated by a qualified professional archaeologist (defined as one who is certified by the Society of Professional Archaeologists). If the find is determined to be significant, appropriate mitigation measures shall be formulated and implemented. If human remains are discovered at any time during ground-disturbing activities, work shall be halted within 50 meters (150 feet) of the find. The contractor shall call the Monterey County Coroner and await the Coroner's clearance. If the coroner determines the remains are Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours. NAHC shall notify the most likely descendent. The Native American descendent, with permission of the landowner or representative, may inspect the site of the discovery and recommend the means for treating or disposing with appropriate dignity the human remains and any associated grave goods. The Native American descent shall complete their inspection and make their recommendation within 48 hours of their notification by the Native American Heritage Commission. The recommendation may include the removal and analysis of human remains and associate items: preservation of the Native American human remains and associated items in place: relinguishment of Native American human remains and associated items to the descendants for treatment; other culturally appropriate treatment. If the NAHC is unable to identify a descendent or the descendent identified fails to make a recommendation within 48 hours, the landowner shall reinter the human remains and items associated with the Native American burials with appropriate dignity on the property in a location not subject to further subsurface disturbance. If the landowner and Native American descendent reach agreement on the appropriate procedure, the landowner shall follow this procedure. If the landowner and Native American descent cannot reach agreement, the parties shall consult with the Native American Heritage Commission. The landowner shall consider and if agreeable follow the identified procedure. If the landowner and Native American descendant cannot reach agreement after consultation, the Native American human remains shall be reinterred on the property with appropriate dignity. All procedures described in California Government Code Section 65352a(11) shall apply. As requested by the Esselen Tribe of Monterey County through AB52 consultation, an Esselen Tribe cultural monitor will be notified two weeks in advance of any project-related activities in drainage areas and 1,000 feet from drainage areas. The monitor can be present for all project activities in drainage areas and within 1,000 feet from drainage areas. Appropriate safety protocols shall be adhered to by all people on-site during the project or site access may be revoked.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION		
VI. ENERGY – Would the project:							
a) Result in potentially					<ul> <li>Project Description</li> </ul>		
significant environmental impact due to wasteful,			v		<ul> <li>City of Monterey, General Plan, Housing Element</li> </ul>		
consumption of energy resources, during project construction or operation?			X		<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>		
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			х		<ul> <li>Project Description</li> <li>City of Monterey, General Plan</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>		

Starting in 2018, all Pacific Gas & Electric (PG&E) customers within Monterey, San Benito, and Santa Cruz Counties were automatically enrolled in Central Coast Community Energy (CCCE), formerly Monterey Bay Community Power. CCCE is a locally-controlled public agency providing carbon-free electricity to residents and businesses. Formed in February 2017, CCCE is a joint powers authority, and is based on a local energy model called community choice energy. CCCE partners with PG&E, which continues to provide billing, power transmission and distribution, customer service, grid maintenance services and natural gas services to Monterey County. CCCE's standard electricity offering is carbon free and is classified as 31 percent renewable, exceeding State requirements. CCCE currently purchases a variety of renewable energy sources, including solar, geothermal, battery storage, and offshore wind (CCCE 2022a). CCCE aims to achieve 100% clean and renewable energy by 2030 – 15 years ahead of California's SB100 requirement of 100% zero-carbon energy by 2045 (CCCE 2022b).

# Discussion:

**a, b)** Potential impacts to energy were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the proposed project would not result in significant impacts to energy; therefore, impacts are expected to be less than significant and mitigation is not necessary.

Monterey is underlain by a major geologic feature, the Salinian Block, which in turn is underlain by granitic basement rock. The Salinian Block is bounded on the northeast by the San Andreas Fault and on the southwest by the Palo Colorado-San Gregorio Fault. The block is approximately 50 miles wide and 300 miles long. The Salinian Block consists of Cretaceous granitic rocks and older Paleozoic metamorphic rocks that have been moved north from their original position as a result of tectonic activity during the Paleogene (Wakabayashi and Moores, 1988). The types of soils and geologic formations that underlie the City are varied, ranging from unconsolidated dune sands along the Monterey Bay to exposed granite and sandstone.

California is one of the most active seismic regions in the United States. The City lies adjacent to the boundary zone between the North American and Pacific tectonic plates. The faults associated with this zone are predominantly northwest-trending strike-slip faults that have a right-lateral slip. The General Plan identifies three faults that traverse the City, including the Chupines Fault, the Navy Fault, and the Berwick Fault. Information available on the activity of these faults is generally not conclusive, but each is assumed to be potentially active.

Active faults in the proposed project vicinity include: the San Andreas-1906 Segment, located approximately 26 miles northeast of the Plan Area; the Palo Colorado-Sur, located approximately 8 miles southwest of the Plan Area; the Rinconada, located approximately 9 miles northeast of the Plan Area; and the Monterey Bay-Tularcitos, located approximately one mile from the Plan Area.

Topography and slope within the City are quite variable. Lands along the margin on Monterey Bay tend to be relatively flat but sloped towards the bay. Much of the upland portion of the City is incised by a series of intermittent stream channels that have cut into surface soil and subsurface geologic formations, leaving a series of mesas that trend towards the bay. Much of the City is built on these mesas and on the more level margins of the bay. The

northern terminus of the Santa Lucia Mountains is the major regional landform that forms the backdrop to the City. Due to slope and access constraints, development within this area tends to be less dense. Steep slopes within the City tend to be located along stream channels and within the hillside areas.

Numerous soil types are located within the City. Each soil type has unique characteristics and potential development limitations and erosion characteristics. Generally, the erosion potential of soils and their expansion properties (soil expansion and contraction can result in damage to building foundations, roads, etc.) are of the greatest interest from a development impact perspective.

Coastal areas along Monterey Bay, especially dune deposits, are highly susceptible to coastal erosion from waves and tidal events. Erosion potential varies along the length of the coast. Variability in erosion rates is caused by several factors, including sea level, wave patterns influenced by the form of the ocean floor, storm patterns, and the structure and character of dunes in localized areas. Historic average coastal bluff retreat rates have been highest in the former Fort Ord area, averaging up to 8 feet per year. Average erosion rates decrease down coast to about 3 to 5 feet per year in Sand City. Farther south, within the City, average erosion rates are believed to be about 1 to 2 feet per year (Philip Williams & Associates, 2008). Coastal erosion would be a significant factor for any development proposed along the margin of Monterey Bay.

### **Discussion:**

- **a, c, d)** Potential impacts were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- b) Potential erosion impacts already discussed in the project's Final IS/MND, which determined that impacts from the project would be less than significant with mitigation incorporated. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

# Mitigation:

Implementation of mitigation measure **BIO-7** will reduce potential erosion-related impacts to less-thansignificant.

- e) Potential impacts related to wastewater disposal systems were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- f) Potential impacts to paleontological resources were already discussed in the project's Final IS/MND, which determined that impacts from the project would be less than significant with mitigation incorporated. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the measure described below, which is consistent with the measure identified in the project's adopted IS/MND for the original seven greenbelts, would reduce potential project-related impacts related to discovery of unique paleontological resources to a less than significant level.

**GEO-1** If a unique paleontological resource, such as a fossil, is discovered during fuel reduction activities the equipment operator and/or site project manager shall stop work and mark the area surrounding the site with flagging until the discovery can be fully explored and evaluated. Construction activities in the immediate vicinity of the site shall stop until authorization for work to continue is provided by a qualified paleontologist. All scientifically important fossils shall be salvaged and fully documented within a detailed stratigraphic framework as construction conditions and safety considerations permit.

VIII. GREENHOUSE GAS EMISSIONS – Would the project:									
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?					<ul> <li>Project Description</li> </ul>				
			х		<ul> <li>ARB GHG 1990 Emissions Level and 2020 Limit</li> </ul>				
					- MBARD				
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
b) Conflict with an applicable					- Project Description				
plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				х	<ul> <li>ARB GHG 1990 Emissions Level and 2020 Limit</li> </ul>				
					- City of Monterey Climate Action Plan (2016)				
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				

Various gases in the earth's atmosphere, classified as atmospheric greenhouse gases (GHGs), play a critical role in determining the earth's surface temperature. Solar radiation enters the atmosphere from space and a portion of the radiation is absorbed by the earth's surface. The earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, the radiation that otherwise would have escaped back into space is retained, resulting in a warming of the atmosphere known as the greenhouse effect. Among the prominent GHGs contributing to the greenhouse effect and climate change are carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), ozone (O<sub>3</sub>), water vapor, nitrous oxide (N<sub>2</sub>O), and chlorofluorocarbons (CFCs). Human-caused emissions of these GHGs in excess of natural ambient concentrations are responsible for enhancing the greenhouse effect. In California, the transportation sector is the largest emitter of GHGs.

To reduce the statewide level of GHG emissions, the State Legislature adopted California Assembly Bill 32 (AB 32), the California Global Warming Solutions Act, in 2006. AB 32 established a comprehensive statewide program of regulatory and market mechanisms to achieve reductions in GHG emissions, thereby reducing the State's vulnerability to climate change. AB 32 directs the ARB with helping direct state efforts on the reduction of GHG emissions and engaging state agencies.

The project is in the NCCAB, where air quality is regulated by MBARD. Neither the state, MBARD, nor Monterey County have adopted GHG emissions thresholds or a GHG emissions reduction plan that would apply to the project. However, other air districts within the State of California have recently adopted recommended CEQA significance thresholds for GHG emissions. MBARD recommends using either the Bay Area Air Quality Management District (BAAQMD) or San Luis Obispo Air Pollution Control District (SLOAPCD) approved thresholds of significance for the evaluation of project-related increases of GHG emissions. The BAAQMD's CEQA Air Quality Guidelines recommends a GHG threshold of 10,000 metric tons per year (MT/yr) of carbon dioxide equivalent (CO<sub>2</sub>e) for stationary-source projects. Development projects located within these jurisdictions that would exceed these thresholds would be considered to have a potentially significant impact on the environment which could conflict with applicable GHG-reduction plans, policies and regulations. Projects with GHG emissions that do not exceed the applicable threshold would be considered to have a less than significant impact on the environment and would not be anticipated to conflict with AB 32 GHG emission reduction goals.

#### Discussion:

- a) Potential impacts related to greenhouse gas emissions were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- b) Potential impacts related to applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of greenhouse gases were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would not result in significant impacts related to GHG emissions; therefore, impacts are expected to be less than significant and mitigation is not necessary.

				2020)

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

### Hazardous Materials

In terms of hazardous materials usage, many types of hazardous wastes are used throughout the City in residential, commercial, and industrial applications. The Monterey County Environmental Health Division is responsible for managing the use, storage, and disposal of hazardous materials in amounts over a specific threshold (the threshold varies among uses and types of materials). The Environmental Health Division keeps an inventory of hazardous materials users and is responsible for working with users to develop plans that ensure the materials are safely used, stored, transported, and disposed.

# Fire

Fire hazards can generally be divided into two main types: (1) fires within urban areas that primarily involve specific sites and structures; and (2) fires within undeveloped or minimally developed areas, commonly called wildland fires. Most of the land within the present City limits is developed with urban uses. The City of Monterey Fire Department responds to both structure and wildland fires within the planning area. The City of Monterey Fire Department maintains three stations and operates several fire prevention programs. In the event that the City does not have the capacity to safely handle a structural or wildland fire, it can request additional firefighting resources through the Monterey County Mutual Aid Plan. The Monterey County Mutual Aid Plan enables any jurisdiction that participates in the plan to receive support from fire protection services of other jurisdictions that participate in implementing the plan. Response times to nearly all areas of the City are within the Fire Department's recommended range of five to seven minutes.

The Monterey City Code (M.C.C.) Chapter 13, Fire Protection, adopted the 2019 California Fire Code pursuant to Monterey City Ordinance No. 3600 (effective January 1, 2028). Amendments to this chapter of the code, as well as amendments to the City's General Plan Map 14, Showing Fire Hazard Severity Zones, were adopted by the City Council on June 2, 2009, to comply with legislation (Government Code Section 51175). This legislation calls for the Cal Fire Director to evaluate fire hazard severity in Local Responsibility Areas and make a recommendation to the local jurisdiction when the Very High Fire Hazard Severity Zone (VHFHSZ) exists. Based on the findings of the Cal Fire Director, there are both High and Very High Fire Hazard Severity Zone within the City of Monterey City limits.<sup>2</sup>

# Airport Safety

Monterey Regional Airport operations have the potential to create safety issues related to safe operation of approaching and departing aircraft. The Monterey Peninsula Airport Master Plan Update (Monterey Peninsula Airport District, 2019) shows "runway protection zones" at each end of the main airport runway. These zones are areas 2,500 feet wide and 5,000 feet long. Within these areas, land use controls are exercised to minimize potential safety conflicts with activities that take place within the zones. Such controls and guidelines include the prohibition or limitation of uses that involve large assemblages of people, limitations on building heights and heights of other potential obstructions, and prohibition of new structures. Existing land uses that are within the western approach safety zone include much of the U.S. Navy Golf Course, the Monterey County Fairgrounds, and a small section of residential development. Uses within the eastern protection zone include commercial and residential development

<sup>&</sup>lt;sup>2</sup> See Map 14 at the City's website: <u>http://www.monterey.org/Portals/0/Policies-Procedures/Planning/GeneralPlan/14-Fire-Zone-Map.pdf</u>

at the SR 218/SR 68 intersection. Smaller additional safety areas extend beyond the primary protection zone wherein specific development standards apply in order to minimize conflicts with airport operations.

## Emergency Preparedness/Emergency Response

The City of Monterey Fire Department and City of Monterey Police Department coordinate emergency response within the City. The City operates its Emergency Operations Center (EOC) as the center of emergency response coordination and actions. During an emergency, all response activities are managed by the EOC, including information, equipment, volunteers, and other resources. Plans for responses to emergency situations are formulated by fire and police officials, and actions to implement those plans are communicated to emergency response teams that operate out of the EOC and throughout the City. The City also operates the Citizens Emergency Response Training (CERT). The main goal of the CERT program is to help the citizens of Monterey to be self-sufficient in a major disaster by developing multifunctional teams that are cross-trained in basic skills. The City's emergency response efforts are coordinated under the broader umbrella of the State of California Office of Emergency Services. The County also has an emergency response office, but the City is not a participating jurisdiction in the County's response program. The County Environmental Health Division Hazardous Materials Branch and the City of Seaside Hazardous Materials Team would likely be the first agencies to provide support to the City if the City does not have the capacity or capability to fully address a hazard. Both agencies are fully trained and equipped to respond to a variety of hazardous materials related incidents.

#### Discussion:

- a) Potential impacts related to the routine transport, use, or disposal of hazardous materials were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- b) Potential impacts related to accidental spills and release of hazardous materials into the environment were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant with mitigation incorporated. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of mitigation measure **BIO-7** would reduce potential project-related impacts that could result from use of petroleum products that are used or store incorrectly to a less than significant level.

- c) The Old Capitol Site greenbelt is located just over ¼ mile from the nearest school (La Mesa Elementary School). Potential impacts to schools were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- d) The Old Capitol Site greenbelt is not located on any sites listed as a hazardous materials site, within an airport land use plan, or within the vicinity of a private airstrip. Potential impacts were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- e) A portion of the Old Capitol Site greenbelt is located within the traffic overflight zone mapped in the Monterey Regional Airport Land Use Compatibility Plan. Potential impacts were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- f) The Old Capitol Site greenbelt is located adjacent to evacuation routes and roads that provide access to evacuation routes as identified in the City's General Plan—specifically, SR 1. Potential impacts were already discussed in the project's adopted IS/MND, which determined that impacts from the project would

be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

**g)** The Old Capitol Site greenbelt is in a very fire hazard severity zone, as determined by Cal Fire and as mapped in the City's General Plan. Potential impacts were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

The setting information provided below is based on information provided in the City's General Plan, General Plan EIR, and the Monterey Regional Storm Water Management Program.

### Drainage Patterns

The City owns and maintains a storm drainage system that collects and transports storm water to the Monterey Bay. The system includes over 10 miles of pipelines and drainage channels. Storm water runoff is collected through catch basins and storm water inlets that direct runoff into the pipelines and channels. A series of storm water outfalls are located along the margin of the bay through which storm water is discharged.

#### Flooding

Areas of the City of Monterey are located in 100-year and 500-year flood zones and are subject to significant storm wave inundation that causes erosion of coastal bluffs and potential damage to property. Per the Flood Zones of the General Plan and Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps Community-Panel Number 06053C0308G, the Old Capitol Site greenbelt is located outside both the 100-year and 500-year floodplains.

#### Water Quality and Storm Water Regulation

The City maintains approximately 10 miles of storm drainage infrastructure—drainage channels, storm drains, pipelines, culverts, pump stations, and outfalls—within the City of Monterey. The existing drainage system collects non-point surface water runoff and conveys it through channels, pipelines, and culverts that, in most instances, eventually terminate at the Monterey Bay.

Monterey's storm water collection system is not tied into the sanitary sewer collection system. Therefore, storm water flows are, for the most part, not treated prior discharge. Storm water flows are discharged to local waterways including the Monterey Bay at multiple drainage outfalls located throughout Monterey's coastal area.

Monterey's discharge of storm water to local surface waters is regulated by the federal Clean Water Act, National Pollutant Discharge Elimination System (NPDES) Permit Program, and the California Porter-Cologne Act, and is permitted through the Central Coast Regional Water Quality Control Board (RWQCB). The City storm water permit and ordinance require local regulation of water pollution and prevention through the mandated implementation of BMPs to protect the water quality of local waterways.

The Model Urban Runoff Program is a how-to-guide developed for local governments to address the issues of polluted runoff in urban areas. This guide incorporates the essential elements of a strong urban runoff program with examples of ordinances, BMPs and reporting forms from existing programs. The Model Urban Runoff Program was developed by a team of representatives from municipal and state government in cooperation with Woodward-Clyde Consultants and was funded by the State Water Resources Control Board (SWRCB).

The Model Urban Runoff Program incorporates a watershed management strategy with the requirements that small municipalities will face through the NPDES Phase II process mandated under the Clean Water Act. Some of the management topics covered in this document include management structure, legal authority, fiscal resources and funding mechanisms, institutional arrangements and coordination, and implementation. The implementation topics covered include public involvement and participation, public education and outreach, illicit connections and discharges, municipal operations, construction site, new development and redevelopment, commercial facilities, and industrial facilities.

To address regional urban runoff issues and develop innovative approaches to storm water management, the City collaborates with other local permittees in the Monterey Regional Storm Water Management Program (MRSWMP). The MRSWMP is a regional storm water management, implementation, and education program that assists the City and region with permit compliance. By ordinance and permit implementation, the City regulates applicable new and redevelopment projects for storm water control; construction activities for erosion, sediment, and discharge control; identifies and enforces illicit connections and illicit discharges; and implements good housekeeping practices for municipal operations to protect local water quality.

#### Water Supply

It is the goal of the City and the General Plan to obtain a long-term, sustainable water supply, including evaluation of water supply options outside the present Monterey Peninsula Water Management District (MPWMD) framework. Water is supplied to most of the Monterey Peninsula by the California American Water Company (Cal Am) through wells in Carmel Valley, dams on the Carmel River, and a well on the Seaside Aquifer. The City is wholly within the MPWMD, which is responsible for developing long-term water supply for the Monterey Peninsula cities in the district.

The Monterey Peninsula is subject to a Cease and Desist Order (CDO) imposed by the SWRCB on Cal Am (the water purveyor) in 2009. Both the CDO and the action by the California Public Utilities Commission (Decision 11-03-048 rendered March 24, 2011) implemented a water moratorium on customers of Cal Am. All projects are subject to both orders for Change or Intensification of Use and the addition of New Connections.

According to the General Plan, the City has a limited amount of water available for new residential or commercial development. To mitigate this problem, the City has incorporated programs to address water capacity, including giving preference in the City's water allocation process to projects meeting fair-share housing goals and to affordable housing projects. In addition, the City has established an internal allocation system, whereby water allotments are established for residential, commercial, and industrial uses.

#### Discussion:

a, e) Potential impacts related to water quality standards and plans were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant with mitigation incorporated. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of mitigation measure **BIO-7** would reduce potential project-related impacts that could result from use of petroleum products that are used or store incorrectly to a less than significant level.

- b) Potential impacts to groundwater resources were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- c.i) Potential impacts related to soil erosion or siltation were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant with mitigation incorporated**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of mitigation measure **BIO-7** would reduce potential project-related impacts that could result in erosion to a less than significant level.

- c.ii, c.iii) Potential impacts to stormwater runoff and drainage patters were already discussed in the project's adopted IS/MND, which determined that no impacts would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- **c.iv)** The proposed project would not place a structure within a 100-year flood hazard area, which would impede or redirect flood flows. Therefore, **no impact** would result.
- d) The Old Capitol Site greenbelt is not located within a flood hazard, tsunami, or seiche zone. Therefore, **no impact** would result.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION				
XI. LAND USE AND PLANNING – Would the project:									
					<ul> <li>City of Monterey, General Plan, Land Use Element</li> </ul>				
established community?				Х	<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
					<ul> <li>City of Monterey, General Plan and Area Plans</li> </ul>				
b) Cause a significant					<ul> <li>City of Monterey Local Coastal Program</li> </ul>				
environmental impact due				- M.C.C. Chapter 38, Zoning Ordinance					
use plan, policy, or				х	<ul> <li>Monterey Regional Airport Land Use Compatibility Plan (2019)</li> </ul>				
purpose of avoiding or mitigating an environmental effect?					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
					<ul> <li>City of Monterey Fuel Reduction Plan (DD&amp;A, 2021)</li> </ul>				

The City is a small-scale community that is largely residential and visitor serving in nature. Most of the land in the City already contains some development. Primary land uses include residential development at low to moderate density and visitor-serving, professional office, and retail commercial uses. A number of small, vacant parcels do exist within the City, most of which are designated for single-family residential development. Approximately 138 acres of land located east of the Ryan Ranch industrial park that were part of the former Fort Ord were annexed to the City just prior to the 2005 General Plan Update; this area represents the most significant vacant land resource in the City.

### Discussion:

- a) Potential impacts to established communities were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- b) The proposed project is consistent with the land uses outlined in Policy a.1 within the Land Use Element of the City General Plan. A portion of the Old Capitol Site greenbelt is located within the traffic overflight zone and within the airport influence area zone of the Monterey Regional Airport, as mapped in the Monterey Regional Airport Land Use Compatibility Plan (Monterey County Airport Land Use Commission, 2019). In addition, the Old Capitol Site greenbelt contains two Special Attention Areas (SAAs): the 8.4acre County Condition 31/Monterey Pine Easement Area SAA (County SAA) and the 6.1-acre Stevenson Deed Restriction Area SAA (Stevenson SAA) (see Figure 4). The County SAA contains no special management conditions or restrictions; however, the Stevenson SAA must be managed in accordance with the deed restrictions identified in the Second Amendment to Agreement for Preservation of Natural Habitat (Second Amendment), made between the Stevenson School and the Pebble Beach Company in 2019. The Second Amendment prohibits development of the Stevenson SAA and removal of native or major vegetation within this SAA, unless necessary for management activities (e.g., fuel maintenance). The Second Amendment also requires that the Stevenson SAA be managed in accordance with the Old Capitol Site Forest Management Plan prepared by Thompson Wildland Management (Thompson, 2017). As outlined in the 2021 City of Monterey Greenbelt Fuel Reduction Plan, proposed project activities are consistent with the management actions recommended in the Old Capitol Site Forest Management Plan.

The proposed project would not conflict with any applicable land use plans, policies, or regulations. Therefore, **no impact** would occur as a result of the proposed project.

## Mitigation:

Implementation of the proposed project would not result in significant impacts related to land use and planning; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION				
XII. MINERAL RESOURCES – Would the project:									
a) Result in the loss of					<ul> <li>City of Monterey, General Plan Conservation Element</li> </ul>				
availability of a known mineral resource that would be of value to the region and the residents of the state?				x	<ul> <li>City of Monterey, General Plan Initial Study, Page 11</li> </ul>				
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
b) Result in the loss of availability of a locally					<ul> <li>City of Monterey, General Plan Conservation Element</li> </ul>				
important mineral resource				x	<ul> <li>City of Monterey, General Plan Initial Study, Page 11</li> </ul>				
a local general plan, specific plan or other land use plan?					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				

While there are at present small-scale mineral extraction operations in the vicinity of the Old Capitol Site greenbelt, these operations are limited to commercial sand removal operations in the Sand City/Marina area and there are no mineral resources within the City's limits.

#### Discussion:

**a, b)** No mineral resources exist within the Old Capitol Site greenbelt. Therefore, **no impact** would occur as a result of the proposed project.

## Mitigation:

Implementation of the proposed project would not result in significant impacts to mineral resources; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION						
XIII. NOISE - Would the project	XIII. NOISE – Would the project result in:										
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			x		<ul> <li>City of Monterey, General Plan Noise Element goals, policies, and programs</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>						
b) Generation of excessive ground borne vibration or ground borne noise levels?			x		<ul> <li>City of Monterey, General Plan Noise Element goals, policies, and programs</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>						
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			x		<ul> <li>City of Monterey, General Plan Noise Element Policies b.1–b-5</li> <li>City of Monterey, General Plan Map 17- Showing Airport Noise Contours</li> <li>Monterey Regional Airport Land Use Compatibility Plan (2019)</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>						

The City's General Plan identifies the major noise sources affecting the community as motor vehicles (autos, trucks, buses, motorcycles) and aircraft. Motor vehicles and aircraft continue to be the primary noise sources. Some events at the fairgrounds have also generated noise complaints. No stationary source, such as an industrial plant, is known to create noise at an unacceptable level.

### **Discussion:**

- **a, b)** Potential noise impacts were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- c) A portion of the Old Capitol Site greenbelt is within the traffic overflight zone of the Monterey Regional Airport, as mapped in the Monterey Peninsula Airport Land Use Compatibility Plan (Monterey County Airport Land Use Commission, 2019). In addition, this greenbelt is within the airport influence area zone. Potential impacts were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would not result in significant impacts related to noise; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION					
XIV. POPULATION AND HOUSING – Would the project:										
a) Induce substantial population growth in an					<ul> <li>City of Monterey, General Plan, Land Use and Housing Element</li> </ul>					
area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				х	<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				Х	<ul> <li>City of Monterey, General Plan, Housing Element</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					

The 2014–2023 Regional Housing Needs Allocation Plan prepared by AMBAG identified a future housing need in Monterey of 650 new dwelling units for the period of 2014–2023. The City's General Plan is required to show adequate sites for the 650 units to comply with state law requirements. The Department of Finance (DOF) estimates the current population for the City is 28,082 persons (2022).

#### Discussion:

**a, b)** Potential impacts to population and housing were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the proposed project would result in no impacts to population and housing and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION					
<b>XV. PUBLIC SERVICES</b> – Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:										
a) Fire protection?					- City of Monterey, General Plan Public Facilities Element Goal c, Policies c.1–c.5					
				×	- City of Monterey Fire Department					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
b) Police protection?					<ul> <li>City of Monterey, General Plan Public</li> <li>Facilities Element Goal b, Policies b.1–b.3</li> </ul>					
				x	<ul> <li>City of Monterey Police Department</li> </ul>					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
c) Schools?					<ul> <li>City of Monterey, General Plan Public</li> <li>Facilities Element Goal d, Policies d.1–d.6</li> </ul>					
				×	- Monterey Peninsula Unified School District					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
d) Parks?					<ul> <li>City of Monterey, General Plan Public</li> <li>Facilities Element Goal j, Policies j.1–j.6</li> </ul>					
					<ul> <li>City of Monterey Recreation &amp; Community Services Department</li> </ul>					
				X	<ul> <li>City of Monterey Maintenance Division- Parks &amp; Beaches</li> </ul>					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
e) Other public facilities?					<ul> <li>City of Monterey, General Plan Public Facilities Element Goals a, e, f–i, k–p; Policies f.1–f.7, i.1–i.3, k.1–p.2; Programs m.1.1–m.2.1</li> </ul>					
				x	<ul> <li>City of Monterey Public Works Department</li> </ul>					
					<ul> <li>City of Monterey Maintenance Division- Streets &amp; Utilities</li> </ul>					
					<ul> <li>City of Monterey Recreation and Community Services Department</li> </ul>					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					

The major public facilities in the City are police and fire, park and recreation facilities, schools, military facilities, cultural facilities, a conference center, health care facilities, the civic center, cemeteries, and the harbor.

#### Discussion:

**a-e)** Potential impacts to public services were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the proposed project would result in no impacts to public services and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION					
XVI. RECREATION- Would the project:										
a) Increase the use of existing neighborhood and					<ul> <li>City of Monterey, General Plan Public</li> <li>Facilities Element Goal j, Policies j.1–j.6</li> </ul>					
regional parks or other recreational facilities such					<ul> <li>M.C.C. Chapter 38, Zoning Ordinance, Article 9, Open Space District</li> </ul>					
deterioration of the facility would occur or be accelerated?				х	<ul> <li>M.C.C. Chapter 33, Subdivision, Article 3, §33-29(c) Park and Recreation dedication and fees</li> </ul>					
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					
b) Include recreational facilities or require the					<ul> <li>City of Monterey Recreation and Community Services Department</li> </ul>					
construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?				х	<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>					

The City of Monterey Recreation and Community Services Department manages a wide range of park and recreation facilities. The Open Space Element provides background information, goals, and policies regarding the City's open space and park resources implemented by the Parks Master Plan. Significant recreation facilities include the Monterey Sports Center, community centers, neighborhood park facilities, and beaches. Neighborhood parks also include various athletic fields, tennis courts, and other park facilities.

### Discussion:

**a, b)** Potential impacts to recreation were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would result in no impacts to recreation and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION				
XVII. TRANSPORTATION/TRAFFIC – Would the project:									
a) Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and			x		<ul> <li>City of Monterey Plans &amp; Public Works Department, Traffic Engineering Division</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
b) Would the project conflict or be inconsistent with					<ul> <li>City of Monterey, General Plan Circulation Element Program j.1.1</li> </ul>				
CEQA Guidelines Section 15064.3, subdivision (b)?			х		<ul> <li>City of Monterey Plans &amp; Public Works</li> <li>Department, Traffic Engineering Division</li> </ul>

c) Substantially increase hazards due to a geometric					<ul> <li>City of Monterey, General Plan, Circulation Element</li> </ul>				
design feature (e.g., sharp curves or dangerous					<ul> <li>City of Monterey Plans &amp; Public Works</li> <li>Department, Traffic Engineering Division</li> </ul>				
intersections) or incompatible uses (e.g., farm equipment)?				х	<ul> <li>M.C.C. Chapter 20, Motor Vehicles and Traffic, Chapter 33, Subdivisions, Article 3, several sections related to circulation</li> </ul>				
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				
d) Result in inadequate emergency access?					<ul> <li>City of Monterey, General Plan, Circulation Element</li> </ul>				
				х	<ul> <li>City of Monterey Fire and Police Departments</li> </ul>				
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>				

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

#### Roadway Classification

The City has a roadway classification system which includes freeways, major arterials, minor arterials, collectors, and local streets.

#### Level of Service Standards and Study Road Segment/Intersection Operations

The Level of Service (LOS) is a standard used to describe the operating conditions on a roadway segment or at an intersection. LOS A represents free-flow, uncongested traffic conditions, while LOS F represents highly congested traffic conditions with unacceptable delay to vehicles at the intersections and on the road segments. The intermediate levels of service represent incremental levels of congestion and delay between these two extremes. Factors that may affect traffic flow conditions on roadway segments include intersection channelization design, type of traffic control devices, bicycle and pedestrian volumes, driveway activities, and on-street parking activities. Furthermore, urban street levels of service are based on through-vehicle travel speed for the segment or for the entire street under consideration. Travel speed is the basic service measure for urban streets.

### Transit Service

Monterey-Salinas Transit (MST) is the principal transit service for the City and the surrounding communities. MST is a joint powers agency with a board of directors that includes a representative from the City. Thirteen MST routes currently serve the citizens of the community. Simoneau Plaza, located in downtown Monterey, is the transfer center for all routes serving the City. Senior and disabled citizens can use the MST fixed-route and Direct Area Response Transit (DART). MST also operates the RIDES program for disabled citizens. These routes operate on weekdays and Saturdays from approximately 7:00 AM to 11:00 PM and from approximately 7:30 AM to 5:30 PM on Sundays and holidays.

#### Existing Bikeway and Pedestrian Facilities

The City maintains an extensive network of Class 1, 2, and 3 bicycle paths and pedestrian sidewalks. The most notable bicycle and pedestrian path is the City's Recreational Trail that is located along the coastal side of the City. The Recreational Trail is a dual use facility that offers people destination opportunities, such as the restaurants or retail stores along Cannery Row or Fisherman's Wharf, or one of many parks for relaxing or wildlife viewing and sightseeing. The City maintains sidewalks on almost all City roadways, and some roadways have bicycle lanes.

#### <u>Parking</u>

Parking conditions throughout the City vary greatly. Some areas, mostly in the residential neighborhoods, have onsite and street parking, while much of the retail areas, such as Cannery Row, have street parking and public garages available with a minimal amount of on-site parking. The City's goal is to fully utilize the valuable commercial land opportunities throughout the City by implementing a variety of parking programs. Some programs include shared parking, which provides users with different peak parking requirements to share the same parking facilities. In addition, the City provides bicycle and pedestrian infrastructure throughout the City as an incentive to walk or ride a bike rather than drive. The available incentives help to reduce the demands on parking throughout the City.

#### **Discussion:**

- a, b) Potential impacts related to the circulation system and to CEQA Guidelines Section 15064.3, subdivision (b) were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- c, d) Potential impacts related to transportation hazards and emergency access were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

### Mitigation:

Implementation of the proposed project would not result in significant impacts to transportation and traffic; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION
XVIII. TRIBAL CULTURAL RE	SOURCES	5 – Would	the project	et:	
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:			x		<ul> <li>City of Monterey, General Plan, Historic Preservation Element, and General Plan EIR</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or			x		<ul> <li>City of Monterey, General Plan and General Plan EIR</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
<ul> <li>ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.</li> </ul>			×		<ul> <li>City of Monterey, General Plan and General Plan EIR</li> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>

The City falls within the contact-period lands of at least two aboriginal tribal groups. These groups are known ethnographically as Costanoan and Esselen, which are the names given to their language or language family. Ethnographic and ethnohistoric information regarding Costanoan and Esselen speakers comes from the records of early Spanish explorers, mission documents, the works of ethnographers and linguists, and from Native American descendants. The cultural history of the California central coast and inland region area has, until recently, been poorly documented. Since 1970, however, hundreds of surveys have been conducted and more than 60 archaeological sites have been excavated in Monterey and San Luis Obispo Counties, with more than 200 radiocarbon dates reported. Most of this work was undertaken to comply with CEQA and the National Environmental Policy Act (NEPA). Investigations of 19 sites along the northern shore of the Monterey Peninsula confirmed the existence of two archaeological "populations" in the area of ethnographic Rumsen Costanoans. Over time,

archeological investigations within the City have resulted in the recording of approximately 29 prehistoric archeological sites.

#### **Discussion:**

**a.i, a.ii)** Potential impacts to tribal cultural resources were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis. However, CEQA Guidelines Section 15163 requires that a supplemental IS/MND be given the same kind of notice and public review as given to a draft IS/MND; therefore, the City completed tribal consultation for this Draft Supplemental IS/MND in accordance with the requirements of AB 52.

Governor Newsom issued Executive Order N-54-20 to extend tribal consultation timelines under AB 52. The Executive Order suspends the timeframes within which a California Native American tribe must request consultation and the lead agency must begin the consultation process for a period of 60 days, effective April 22, 2020, in consideration that tribal capacity to engage in or request consultation may be limited at this time.

In satisfaction of the notification requirements of AB 52 at Public Resources Code § 21083.1, a notification letter was sent on either June 11, 2021 or July 13, 2021 to Native American tribes. The letter provided a brief project description and provided contact information for questions or a request to initiate consultation. Three tribes requested a tribal consultation. On September 15, 2021 a tribal consultation was held with Kanyon Sayer Roods of the Indian Canyon Mutsun Band of Costanoan. Kanyon Sayer Roods reviewed the protocol for sensitive species concluded that the biological mitigation measures were appropriate; and reviewed and approved of the cultural resources mitigation measure. On September 22, 2021, a tribal consultation was held with Chairman Tom Little Bear Nason, Jana Nason, Brenna Wheelis, and Susan Morley of the Esselen Tribe of Monterey County, and communication continued with the tribe thereafter. Discussion of various topics included the following: potential impacts to cultural resources overall and within drainage areas within the Old Capitol Site; request for additional cultural resource research (Phase I Study), and request for Cultural Sensitivity Training. The City confirmed that biological and cultural resource mitigation measures address these cultural resourced. Furthermore, the City amended Mitigation Measure CUL-1 to include the following language: As requested by the Esselen Tribe of Monterey County, an Esselen Tribe cultural monitor will be notified two weeks in advance of any project-related activities in drainage areas and 1,000 feet from drainage areas. The monitor can be present for all project activities in drainage areas and within 1,000 feet from drainage areas. Appropriate safety protocols shall be adhered to by all people on-site during the project or site access may be revoked. On September 29, 2021, a tribal consultation was held with Tribal Chairperson Louis Miranda-Ramirez of the Ohlone/Costanoan-Esselen Nation. She requested 48 hours' notice to the tribe in the event potential tribal cultural resources are found. Mitigation Measure CUL-1 has been updated from 24-hour notification to 48 hours of notification. All three tribal consultations have been closed. Therefore, impacts are less than significant.

#### Mitigation:

Implementation of the proposed project would not result in significant impacts to tribal resources; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION

regulations related to solid waste?				x	<ul> <li>City of Monterey, General Plan Public Facilities Element subsection n. Reduction and Recycling of Waste</li> </ul>
					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

#### Wastewater

The City maintains the sanitary sewer collection system within its jurisdictional boundaries. The existing sanitary sewer collection system conveys sewage from sewer point sources within the City (e.g., homes, businesses, and public facilities) to a regional wastewater treatment plant for treatment and disposal. The sanitary sewer collection system operated by the City consists of approximately 102 miles of sewer pipeline maintained by City personnel and seven sewer lift stations.

Monterey's sewage is conveyed through pipelines to the Monterey One Water (M1W) sewer treatment plant near the City of Marina for treatment and disposal. Per M1W, 60% of incoming wastewater is highly treated through their water recycling facility and distributed for irrigation uses on farmlands in northern Monterey County. M1W performs secondary treatment of the remaining wastewater, which is then discharged though an ocean outfall two miles into Monterey Bay.

Local sewer collection pipelines of various capacities exist underground within the City and eventually flow to larger sewer mains that feed into the M1W interceptor pipeline. The interceptor pipeline receives sewer flows from both Pacific Grove and Monterey and carries those flows to the wastewater treatment plant.

Monterey's existing sewer collection system is aging and requires ongoing maintenance and rehabilitation. Engineering studies and assessments of the system performed over the past 10 years provided results regarding the condition of the existing sewer collection system and identified priority repair and replacement projects. Utilizing an 'A' through 'F' standard rating system for sewer collections systems, sewer pipes were flagged for repair based on their existing level of defect. Those pipes that received a C, D, or F rating based on the quantitative measure of pipe defects are planned for rehabilitation, which will include repair or replacement of the existing sewer pipe.

The existing capacity of the system is adequate to convey the sewer loads generated, but the infrastructure is in need of repair and is planned to undergo rehabilitation in the near future upon funding availability. Rehabilitation of the City's aged sewer collection system is an important factor in mitigating sewer spills locally and into Monterey Bay. As a result, the rehabilitation of this system is a priority project for the City's Plans and Public Works Department.

#### Potable Water

Water is supplied to most of the Monterey Peninsula by Cal Am through wells in Carmel Valley, dams on the Carmel River, and a well on the Seaside Aquifer. The City is wholly within MPWMD's jurisdiction, which is responsible for developing long-term water supply for the Monterey Peninsula cities in the district.

As of the 2005 General Plan, the City had reached the limits of its allocation and still has very little water available to meet the City's goals. The MPWMD has not provided a stable, long-term source of water, and many of the alternatives proposed by MPWMD would provide only enough water for short-term needs. The City has a limited amount of water available for new development. Due to the Monterey Peninsula's limited water resources, the City of Monterey does not have water credits available for allocation. All private property development that requires a water permit is limited to the water credits associated with the specific site (City of Monterey, 2020).

#### Storm Water

The City maintains storm drainage infrastructure—drainage channels, storm drains, pipelines, culverts, pump stations, and outfalls—within City limits. The existing drainage system collects non-point surface water runoff and conveys it through channels, pipelines, and culverts that, in most instances, eventually terminate at the Monterey Bay. Monterey's storm water collection system is not tied into the sanitary sewer collection system. Therefore, storm water flows are, for the most part, not treated prior discharge. Storm water flows are discharged to local waterways including the Monterey Bay at multiple outfalls located throughout Monterey's coastal area.

Monterey's discharge of storm water to local surface waters is regulated by the Clean Water Act, NPDES Permit Program, and the California Porter-Cologne Act, and permitted through the SWRCB and Central Coast RWQCB. The City storm water permit and ordinance control water pollution through the implementation of BMPs and local regulation of pollutant discharges into waters of the U.S. To address regional urban runoff issues and develop innovative approaches to storm water management, the City collaborates with local entities in the MRSWMP, a regional storm water management, implementation, and education program to accomplish permit compliance and water quality protection.

#### Solid Waste

The regional waste collection facility is located in the City of Marina and is operated by the Monterey Regional Waste Management District (MRWMD). Locally, there is a transfer facility in Ryan Ranch operated by Monterey City Disposal Service, a private contractor.

#### Discussion:

- **a-c, e)** Potential impacts to utilities and service facilities, water supply, and federal, state, and local statutes and regulations related to solid waste were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- d) Potential impacts to solid waste generation were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be less than significant. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the proposed project would not result in significant impacts to utilities and service systems; therefore, impacts are expected to be less than significant and mitigation is not necessary.

M.C.C. Chapter 13, Fire Protection, adopted the 2019 California Fire Code pursuant to Monterey City Ordinance No. 3600 (effective January 1, 2020). Legislation (Government Code Section 51175) calls for the Cal Fire Director to evaluate fire hazard severity in Local Responsibility Areas and make a recommendation to the local jurisdiction when the VHFHSZ exists. Based on the findings of the Cal Fire Director, there are both High and VHFHSZ within the City limits.<sup>3</sup>

<sup>&</sup>lt;sup>3</sup> See Map 14 at the City's website: <u>http://www.monterey.org/Portals/0/Policies-Procedures/Planning/GeneralPlan/14-Fire-Zone-Map.pdf</u>

#### Discussion:

- **a, c)** Potential impacts related to emergency response plans and the installation or maintenance of associated infrastructure were already discussed in the project's adopted IS/MND, which determined that **no impacts** would result from the project. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.
- **b**, **d**) Potential impacts related to the exposure of people or structures to significant risks from wildfire and to pollutant concentrations were already discussed in the project's adopted IS/MND, which determined that impacts from the project would be **less than significant**. Potential impacts from the currently proposed Plan Area are consistent with the original analysis; no new impacts would occur.

#### Mitigation:

Implementation of the proposed project would not result in significant impacts related to wildfire; therefore, impacts are expected to be less than significant and mitigation is not necessary.

SUBJECT AREA	Potentially Significant Impact	Less-than- significant with Mitigation	Less-than- significant Impact	No Impact	SUPPORTING INFORMATION
XXI. MANDATORY FINDINGS OF SIGNIFICANCE					
a) Does the project have the					<ul> <li>City of Monterey, General Plan</li> </ul>
potential to degrade the quality of the environment,					<ul> <li>City of Monterey Greenbelt Fuel Reduction Plan (DD&amp;A, 2021).</li> </ul>
habitat of a fish or wildlife species, cause a fish or wildlife population to drop					<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the		х			
number or restrict the range of a rare or endangered plant or animal or eliminate important					
examples of the major periods of California history or prehistory?					
b) Does the project have					<ul> <li>City of Monterey, General Plan</li> </ul>
impacts that are					– ARB (2014)
individually limited, but cumulatively considerable?					<ul> <li>California Air Pollution Control Officers' Association (2009)</li> </ul>
considerable" means that					– MBARD
the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and			х		<ul> <li>Final IS/MND for the City of Monterey Greenbelt Fuel Reduction Project (City, 2020)</li> </ul>
the effects of probable					
future projects.)					
c) Does the project have					<ul> <li>City of Monterey, General Plan</li> </ul>
environmental effects					<ul> <li>Final IS/MND for the City of Monterey</li> </ul>
substantial adverse effects			Х		Greenbelt Fuel Reduction Project (City,
on human beings either					2020)
directly or indirectly?					

### Discussion:

- a) Less than Significant with Mitigation Incorporated. Based on the analysis provided in this Initial Study, the proposed project would not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. Mitigation measures are identified for potential impacts of the project on biological and cultural resources, geology, hazards and hazardous materials, hydrology, and tribal cultural resources to reduce these effects to a less-than-significant level.
- **b, c)** Less Than Significant. As evidenced in this Initial Study, the proposed project would not result in significant cumulative impacts, nor would it result in substantial adverse effects on human beings, directly or indirectly, since all potentially significant impacts would be less than significant based on compliance with regulatory requirements, and implementation of project design features such as BMPs, and mitigation measures identified in this Initial Study.

PLANNING AND ENVIRONMENTAL CONSULTING

August 15, 2022

Thys Norton Assistant Urban Forester City of Monterey Forestry Department 580 Pacific Street Monterey, California 93940

# SUBJECT: City of Monterey Greenbelt Fuel Reduction Plan

Dear Mr. Norton,

Denise Duffy & Associates, Inc. (DD&A) is contracted to provide environmental consulting services to the City of Monterey (City). The City has identified eight areas within the City's greenbelt system—the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, Fisherman Flats, and Old Capitol Site greenbelts, collectively the "Plan Area" (Figure 1)—where fire hazard is high due to high fuel loads. Wildfire in these greenbelts could result in substantial impacts to natural resources, and substantial health, safety, and welfare impacts to the built/human environment adjacent to these areas. In January 2020, DD&A biologists conducted surveys of the Skyline Forest, Veterans Park, Monte Vista, Carmelo Street, Don Dahvee, Josselyn Canyon, and Fisherman Flats greenbelts to update the 2017 Fuel Reduction Plan prepared by Patrick Reagan (Reagan, 2017), which assessed biological conditions and evaluated whether typical fuel reduction maintenance activities scheduled for these greenbelt areas would negatively impact special-status species of plants or animals and require any unique avoidance measures. The City recently acquired the Old Capitol Site from the Pebble Beach Company and, due to high fuel loads within the greenbelt, added it to the Plan Area. As a result, DD&A conducted a reconnaissance survey of the Old Capitol Site in April 2021 to determine biological constraints and recommend fuel reduction measures within this greenbelt.

This updated Fuel Reduction Plan (Plan) includes the fuel reduction recommendations for the greenbelt areas evaluated in the 2017 Fuel Reduction Plan and adds the field results and fuel reduction recommendations for the Old Capitol Site greenbelt. This Plan also evaluates potential Plan impacts to special-status species and sensitive habitats and includes mitigation to avoid or minimize potential impacts. Much of the data and language in this Plan were pulled from the previous report and updated accordingly. In addition, the fuel reduction recommendations in the *Old Capitol Site Forest Management Plan* (Thompson Wildland Management [Thompson], 2017) were used to help inform the fuel reduction recommendations for the Old Capitol Site greenbelt.

ith: D:\GIS\GIS\_Projects\2019-36 City of Monterey On-Call\792 Greenbelt Fuel Reduction\Map Products\Fig 1 - Project Location Map

### **Overview of the Plan Area**

The eight greenbelts in the Plan Area are all generally urbanized and impacted by non-native species which have escaped from nearby landscaped areas or, more commonly, are part of a general spread of invasive species in the greater Monterey area. Native trees like Monterey pine (*Pinus radiata*), coast live oak (*Quercus agrifolia*), and others are in varying states of health. Many pines and oaks have collapsed and remain on the ground in several greenbelt areas. Large, collapsed trunks are not an immediate fire hazard and, in most cases, can be left to decompose and benefit habitat. The abundance of non-native weedy grasses and forbs is the most significant potential fuel hazard throughout the Plan Area. The low herbaceous growth that is perennial or evergreen can be managed through annual or bi-annual scheduled thinning or cutting to the ground, but annual grasses require a more frequent cutting back or mowing to prevent them from reaching maturity, setting seed, and dying. A general thinning of trees and shrubs where they interface with development, like those near fence lines of houses and apartment buildings, will decrease risk of spreading fire and make these areas easier to defend.

## **Common Issues and Fuel Management Recommendations Throughout the City**

Most of the eight greenbelts have similar non-native weed components that pose a more significant fire danger than do the native species co-occurring on site. Two of the most common non-native species are rattlesnake grass (*Briza maxima*) and French broom (*Genista monspessulana*), both prolific seed producers capable of invading disturbed areas in a short time and both having unique timing issues for control. Rattlesnake grass, a cool season annual grass (sprouts at onset of rainy season and usually sets seed and dies by early summer), was found at virtually every greenbelt area evaluated. It is currently the dominant "standing tinder" throughout the City's greenbelt areas. The California Invasive Plant Council (Cal-IPC) rates this species as *Limited*<sup>1</sup> (Cal-IPC, 2021). For fuel management, it would be beneficial to cut down this species before seed set occurs in May and June. Any fuel management activities conducted after seed set occurs in May and June will cut or knock down the dead growth and remove the dry biomass, but will spread the year's crop of seed further.

French broom is of much greater concern than rattlesnake grass, and was observed to form dense, almost mono-culture stands in many of the greenbelt areas. French broom is rated by the Cal-IPC as  $High^2$  (Cal-IPC, 2021). This is a plant that realistically will never be eradicated from the local landscape; however, managing its spread in the Plan Area can dramatically reduce fire danger. This plant flowers in spring and summer and then forms thin, black seed pods. When daytime temperatures start to climb in late summer into fall, these seed pods explode open and hurl seed over 10 feet in every direction. To prevent invasion of the Plan Area, French broom plants should be cut down annually in spring and early summer, prior to development of mature seed. Eradication of plants growing among native species poses a bigger problem in terms of cost and/or impacts to native species. Larger trunked plants can be cut at ground level during the spring into early summer to reduce seed production, or can be pulled out of the ground with a weed wrench type tool, avoiding native species where feasible. Pulling of younger shrubs can be accomplished

Denise Duffy & Associates, Inc. | 947 Cass Street, Suite 5 | Monterey, CA 93940 | (831) 373 - 4341 | www.ddaplanning.com

<sup>&</sup>lt;sup>1</sup> These species are invasive, but their ecological impacts are minor on a statewide level or there was not enough information to justify a higher score. Their reproductive biology and other attributes result in low to moderate rates of invasiveness. Ecological amplitude and distribution are generally limited, but these species may be locally persistent and problematic. On a local level in Monterey County, rattlesnake grass is much more abundant than it is throughout much of the state.

 $<sup>^2</sup>$  These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically.

in the late fall or early winter after first rains have softened the soil. Both methods are labor intensive and time consuming and may require long-term planning and budgeting to reduce fire fuel in the Plan Area.

Other non-native plant species were observed consistently throughout the Plan Area, but none to the extent of the rattlesnake grass and French broom. Wetter locations contain extensive patches of Poison hemlock<sup>3</sup> (*Conium maculatum*), Himalayan blackberry<sup>4</sup> (*Rubus armeniacus*), and the perennial grass panic veldtgrass<sup>5</sup> (*Ehrharta erecta*), which is not currently as abundant as the previous species but is becoming more prevalent in Monterey County. Dry shady areas had firmly established patches of English ivy<sup>6</sup> (*Hedera helix*), an escapee from old urban gardens, and greater periwinkle<sup>7</sup> (*Vinca major*), another species that overtakes and outcompetes native species and turns shady oak woodland understory to a low-diversity or monoculture plant cover. It is, however, a low-growing plant that is not particularly fire prone. Like the Himalayan blackberry, periwinkle, and English ivy are choking some of the drainages in greenbelts closer to downtown and out near Fisherman Flats. These species should be targeted for removal or significant thinning in future management for reducing flooding and erosion problems in the Plan Area. Future anticipated flood management plans for drainages in the greenbelt complex should include riparian clean up<sup>8</sup> and restoration to remove these and other invasive non-native species and reintroduce native riparian trees and understory species that will prevent erosion and restore natural habitat function.

#### **Greenbelt-Specific Issues and Fuel Management Recommendations**

The following is a station-by-station breakdown of the biological conditions within each greenbelt, the sensitive biological resources that are present or potentially present within each greenbelt, and the fuel reduction actions that are recommended to reduce fuel loads and risk of spreading fire within each greenbelt

<sup>&</sup>lt;sup>3</sup> *Conium maculatum* (poison-hemlock; Cal-IPC Inventory rating: Moderate) is a biennial forb (family Apiaceae). Poison-hemlock has spread throughout California in areas below 5,000 feet (1,500 m) elevation, excluding the Great Basin and Desert provinces and is commonly found in dense patches along roadsides and fields. It also thrives in meadows and pastures and is occasionally found in riparian forests and flood plains, but prefers disturbed areas. All parts of poison-hemlock are toxic to humans and animals when ingested; handling plants can cause contact dermatitis in some people. Poison-hemlock can spread quickly after the rainy season in areas that have been cleared or disturbed. Once established, it is highly competitive and prevents establishment of native plants by over-shading.

<sup>&</sup>lt;sup>4</sup> *Rubus armeniacus* (Himalayan blackberry; Cal-IPC Inventory rating: <u>High</u>), formerly known as *Rubus discolor*, is a sprawling, essentially evergreen, glandless, robust shrub (family Rosaceae). *Rubus armeniacus* occurs in California in the coast ranges, Central Valley, and Sierra Nevada. This weed is a strong competitor. It rapidly displaces native plant species and thickets to produce such a dense canopy that the lack of light severely limits the growth of understory plants.

<sup>&</sup>lt;sup>5</sup> *Ehrharta erecta* (erect veldtgrass; Cal-IPC Inventory rating: Moderate) is a perennial grass (family Poaceae) found along California's coastline and in the southern Sacramento Valley. Erect veldtgrass is commonly found in disturbed areas, including riparian areas, scrub, grassland, woodland, urban areas and turf. This native to South Africa was cultivated in Berkeley and Davis in the mid-1900s as an experimental grass. It spreads rapidly and is known to out-compete native grasses and herbs. Erect veldtgrass causes more litter accumulation than native grasses and herbs do, which further inhibits native plant growth.

<sup>&</sup>lt;sup>6</sup> *Hedera helix* (English ivy; Cal-IPC Inventory rating: High) is a perennial evergreen woody vine (family Araliaceae) found throughout California along the coast, as well as in Shasta and Butte Counties. English ivy grows vigorously in forests where nothing else seems able to compete and inhibits regeneration of understory plants, including forest wildflowers and new trees and shrubs.

<sup>&</sup>lt;sup>7</sup> Vinca major (big periwinkle; Cal-IPC Inventory rating: Moderate) is a spreading perennial vine or ground cover (family Apocynaceae) with dark green stems that contain milky latex. In California, it is rapidly spreading in most coastal counties, foothill woodlands, the Central Valley, and even desert areas. Big periwinkle has escaped from garden plantings, and lowers species diversity and disrupts native plant communities. Riparian zones are particularly sensitive. Fragments of periwinkle vines can break, wash downstream, and start new invasions.

<sup>&</sup>lt;sup>8</sup> Riparian habitat in the greenbelt areas consists primarily of Arroyo willow and Poison oak and California blackberry. These native species are being overtaken by invasive, nonnative species that alter the habitat value and drainage function of the riparian corridors. "Cleanup" would include the eradication of the French broom, Himalayan blackberry, English Ivy, Cape Ivy, periwinkle and garden nasturtium.

while preserving habitat for plants and wildlife. Depending on biological conditions, some greenbelts are further broken down into separate subareas, as follows (Figure 1):

- 1. Skyline Forest

# a. North End of Skyline Drive

Near the high point of the City below Highway 68 as it winds down into Pacific Grove, this area is a maintained, generally dry Monterey pine forest with a limited understory. While not dense within the greenbelt, rattlesnake grass is abundant on the margins of this greenbelt. Due to ongoing management, trees have been thinned and left on the ground to decompose and benefit habitat. Continued management for

weedy grasses would include cutting low (with a string or blade trimmer) in May to June to remove seed production and following-up in August to September, if feasible, to reduce standing dead fuel.

# b. Wyndemere Way

Intersecting with Skyline Drive from the south, this section of greenbelt extends up toward highway 68 between housing developments. This is in area where the federally Endangered Yadon's rein orchid (*Piperia yadonii*) has been documented in the past. String or blade trimmer cutting or mowing in this area prior to September 1 can avoid impacting any potentially occurring flower stalk or seed pods that may persist late into fall by having a qualified biologist walk the area and cage flower and seed stalks prior to the weed management work. The removal of weed competition coinciding with dispersal of Yadon's rein orchid seed would have a beneficial impact on Yadon's rein orchid by increasing the survival and spread of the species.

All pine tree thinning and removal should be done in such a way as to do the least possible amount of soil disturbance. The engineered log drops for erosion control through the middle of this greenbelt present a unique management issue where undermining of the sidewalls has caused extensive damage in the past and maintenance of these log drops may require vehicles and machinery to travel through the pine forest to reach each "drop". As with fuel management activities, the best time to conduct such maintenance would be between August 15 and October 15 to have the least impact to animal and plant species. Because Monterey pine is a special-status species, vehicle and machinery access through Monterey pine forest should be done in consultation with a qualified biologist to ensure that potential impacts to Monterey pine forest and Monterey pine individuals are avoided or mitigated.

## c. Greenwood Way

This section of the greenbelt continues to follow Skyline Drive. It is tall mature Monterey pine forest with occasional coast live oak trees and remnant patches of *Arctostaphylos* (manzanita) species. The dominant weeds are rattlesnake grass in the dry understory and Kikuyu grass<sup>9</sup> (*Pennisetum clandestinum*) in wetter low spots and drainages from road and development storm drains. Kikuyu grass, like previously mentioned Himalayan blackberry and blue periwinkle, is not of particular concern regarding fire danger; however, it is an ecological concern in drainages, where it will spread and outcompete native species.

# d. Skyline Forest Drive

This area of greenbelt where Skyline Forest Drive intersects with Skyline Drive is one of the botanically "cleanest" areas of the greenbelt system in that it has a much higher level of native plant diversity, more typical of undisturbed Monterey pine woodland with fewer non-native species invading. Aside from the ubiquitous rattlesnake grass which is not as dense in this area, the plants beneath the Monterey pine trees include Douglas Iris (*Iris douglasiana*), rough leaf aster (*Eurybia radulina*), California blackberry (*Rubus ursinus*), common yarrow (*Achillea millefolium*), yerba buena (*Clinopodium douglasii*), poison oak (*Toxicodendron diversilobum*), evergreen huckleberry (*Vaccinium ovatum*), Fremont's star lily

Denise Duffy & Associates, Inc. | 947 Cass Street, Suite 5 | Monterey, CA 93940 | (831) 373 - 4341 | www.ddaplanning.com

<sup>&</sup>lt;sup>9</sup> *Pennisetum clandestinum* (kikuyu grass: Cal-IPC Inventory rating: Limited) is a perennial grass (family Poaceae) that prefers disturbed areas, such as roadsides, urban areas, cropland, turf, forested sites and wetland areas. Kikuyu grass reproduces from seed and vegetatively, using its extensive system of creeping stolons and rhizomes. Kikuyu grass populations can be controlled by hand removal if detected early. Agricultural and landscape maintenance equipment should be cleaned after use in areas with kikuyu grass infestations to prevent the spread of rhizome and stolon fragments.

(*Toxicoscordion fremontii*), and a few wooly leaf manzanita (*Arctostaphylos tomentosa* var. *tomentosa*) (Reagan, 2017). In this area, woody shrubs should be avoided and string trimmer maintenance should be limited to areas of low herbaceous annuals and perennials. While these plants can recover from a hard trimming just as if they had been burned, woody shrubs will have a more difficult time recovering than would the herbaceous plants. As is the case throughout all greenbelt areas, fallen trees that are potential safety concerns should be removed without soil disturbance. Those that can be left in place on the ground without creating safety risks should remain for habitat improvement.

# e. LDS Church to Wright Place

Like Section *d* above, this part of the greenbelt is much more diverse and denser with native species than other greenbelt areas in the City. It is bordered by fewer residential properties than other greenbelts. It does have the same invasions of rattlesnake grass in some of the brighter openings where pine trees have died and allowed more light to reach the forest floor, as well as occasional patches of Kikuyu in drainage areas. While not an immediate fire concern, non-native species within this greenbelt should be removed to benefit habitat for native species.

# f. Forest Knoll Road to Mar Vista Drive

While this section of greenbelt has a Monterey pine and coast live oak overstory typical of Skyline Forest, the understory is unlike other greenbelts in the area. It looks more like wet meadow with a broader range of non-native weed species as well as native. An obvious wet area that is supporting a few native plant species that are typical of wetlands is found in an opening between mature Pine trees about 50 feet back from the road. It may be unnaturally wet from development uphill from the site, and could eventually cause decline of the surrounding pine trees. This wet meadow area should be protected from disturbance during any fuel management activities in the area.

# g. Mar Vista Drive on East Side of Skyline Drive

This is a very broad area of the greenbelt that extends along the east side of Skyline from the South end of Mar Vista, north toward Skyline forest drive. The Pine forest is dense and tall in this area and the understory is diverse with native and non-native species. Many fallen trees are in partial breakdown and could provide increased fire danger or safety issues from falling material. No special-status species were observed in this area, but it is expected that Yadon's rein orchid, Hooker's manzanita, and other special-status species could be present deep in the interior areas that were not surveyed. In sunny openings in the forest and out along the road, the population of French broom is very dense and this is an area that needs ongoing management both for reducing fire danger and for ecological processes in the forest. A native species that is exceptionally abundant and dense here is poison oak (*Toxicodendron diversilobum*). It is found spreading along creek banks and climbing up Monterey pine trunks. The poison oak seems to favor the more moist, shady canyons along the creek channel and north facing slopes but it can be found in virtually any part of the greenbelt system.

The creek drainage running along the south end of this greenbelt is showing some advanced incising of the banks that will cause erosion or tree undercutting sooner than later. This area should receive further evaluation for potential use of engineered energy dissipation and erosion control.

# h. Intersection of Skyline Drive and Mar Vista Drive to Dry Creek Road

This section of the greenbelt is a swath between the houses along Dry Creek Road and the east side of Skyline Drive. The canopy consists of Monterey pine and coast live oak; however, spacing of the trees in this portion of the greenbelt is less dense than in many other areas. The understory is mostly non-native grasses and forbs, including panic veldtgrass in some areas. This area is being maintained through tree thinning, with large trunks left in place to decompose and benefit habitat. Continued tree thinning, as necessary, and removal of non-native veldtgrass would reduce fire hazard and benefit habitat for native species.

# i. North End of Mar Vista Drive

This section of greenbelt is a drier area with widely spaced Monterey pine trees and an understory of pine duff and maintained non-native grasses and forbs. Some French broom is present but appears to be maintained. Trees have also been thinned and left to decompose and benefit habitat. Continued tree thinning, as necessary, and maintenance of non-native understory would reduce fire hazard and benefit habitat for native species.

# j. Skyline Drive to Crandall Road

This section of greenbelt connects to the east side of the greenbelt described under Section h above, and follows a relatively steep drainage east downhill and under Crandall Road. On both sides of Crandall Road, the drainage is well vegetated with a wide variety of native and non-native species. Coast live oak is dominant, with some Monterey pine trees throughout. French broom and non-native grasses are dominant in the understory, and is dense further into the greenbelt. Fallen trees higher up the drainage are fire dangers and potentially future culvert plugs that could cause backing up above Crandall and incising of both sides of the channel. This stretch could use a lot of clean up and brush clearing.

# 2. <u>Veterans Park</u>

The Veterans Park greenbelt is a large, densely vegetated area of mixed Monterey pine and coast live oak woodland, with remnant areas of maritime chaparral and many small drainages throughout. The forest is dense and tall in this area and the understory is diverse with both native and non-native species. Many fallen trees are in partial breakdown and could provide increased fire danger or safety issues from falling material. In addition, rattlesnake grass and French broom are common throughout this entire greenbelt. Because of the abundant fuel loads, this is an area that should be prioritized for fuel reduction. However, several special-status species, including pine rose (*Rosa pinetorum*), Yadon's rein orchid, sandmat manzanita (*Arctostaphylos pumila*), and Hooker's manzanita (*Arctostaphylos hookeri* ssp. *hookeri*) are known to occur in the area (CDFW, 2020). Where brush is thick, a qualified biologist should conduct surveys for special-status plants prior to fuel reduction activities.

# 3. Monte Vista

# a. Dry Creek Road

This portion of greenbelt is a small area nestled between multiple single-family homes. It consists of a mixed Monterey pine and coast live oak woodland, with an understory of pine duff and native grasses and rushes. Due to its proximity to homes, this area is regularly maintained. Trees have been thinned and left in place to decompose. Although the understory is generally low, some tall French broom plants are present

along the margins of this greenbelt near residential fence lines. Recommended fuel reduction activities include continued tree thinning, as necessary, and removal of French broom. Large, downed trunks can be left in place to decompose and benefit habitat.

## b. Crandall Road

This area of the greenbelt rapidly drops downhill away from Crandall. Both sides of Crandall Road have been repaired with erosion control matting and engineered log drops from previous erosion activity. The East side has two drainages that merge partway down the arroyo that have been engineered to prevent further washouts. The non-native species in the understory should be cleared to reduce potential fire danger.

## c. Soledad Drive to San Bernabe Drive

This area consists of a continuation of a drainage channel from Soledad place and Soledad Drive and another from Wellings Place running behind houses on Via Ventura and Via Descanso. The extra water through this section of greenbelt keeps it quite lush and green and causes the non-native weeds and garden escapees to thrive. The understory is a dense mix of Himalayan blackberry, English Ivy, Kikuyu grass on the north side of the drainage, and French broom and rattlesnake grass and scattered native species, including small oak trees, on the south side. While this combination is not a particularly volatile mix of fire fuel, it is ecologically destructive.

## d. Pacific Street and San Bernabe Drive

At the intersection of Pacific Street and San Bernabe Dr. and directly adjacent to single-family homes, this greenbelt is a medium-density coast live oak woodland with some occurrences of toyon and coast redwood. The understory is mostly non-native grasses and forbs, with some fallen branches and an abundance of oak duff throughout. A seasonal creek runs through this greenbelt along Pacific Street. The creek supports a mesic area dominated by plants typical of wetlands, including common rush (*Juncus patens*), California blackberry (*Rubus ursinus*), nutsedge (*Cyperus* sp.), Santa Barbara sedge (*Carex barbarae*), and western chain fern (*Woodwardia fimbriata*). Removal of oak duff and fallen branches would reduce fire hazard within this greenbelt. However, the mesic area should be protected from disturbance during any fuel management activities in the area.

## e. Pacific Street and Via Arboles

This section of the Monte Vista greenbelt consists of a mixed Monterey pine and coast live oak woodland on approximately 40 percent slopes from Pacific Street up to residential developments at the top of the slope. A seasonal creek runs along the bottom of the greenbelt along Pacific Street. The understory is a low herbaceous growth of non-native grasses and forbs. Although there are some downed trees on slopes, most downed trees have been chipped and left in place to decompose. Poison oak is present in some areas, and a few occurrences of garden escapes are scattered throughout. Due to ongoing maintenance activities, this greenbelt area presents a low fire hazard. Continued mowing and tree maintenance (e.g., trimming, chipping in place) would ensure that that fire hazard remains low.

## 4. Carmelo Street

The Carmelo Street greenbelt extends from Carmelo Street to Pacific Street near downtown Monterey. A seasonal creek runs adjacent to the greenbelt, but does not overlap City property until the end of the greenbelt near Pacific Street. This area consists of a medium-density mixed Monterey pine and eucalyptus

(*Eucalyptus* sp.) forest on approximately 30 percent slopes. The understory consists of a low herbaceous growth of non-native grasses and forbs, with almost zero native groundcover, and a shrub and vine component of French broom, English ivy, poison oak, and greater periwinkle. The adjacent creek consists almost entirely of English ivy, eucalyptus, and French broom.

Eucalyptus duff, which is a major fire hazard and contains volatile chemicals which inhibit native vegetation growth, is abundant within this greenbelt. Downed wood is also abundant and poses a fire risk. Removal of eucalyptus duff, downed wood, and non-native species such as French broom and English ivy would reduce fire hazard and benefit native species.

## 5. Don Dahvee

## a. Soledad Drive to El Dorado Street

Portions of this greenbelt are the most open and clear of all the areas surveyed, especially in some areas that have been cleared for trail maintenance. This greenbelt follows a drainage course that runs from the Corner of Soledad Drive and Munras Avenue and runs northeast to El Dorado street all along the frontage of the Del Monte Center shopping mall. Fire danger is minimal all along this greenbelt even in the northern portions where the trees along the channel or more numerous, large, and growing closer together. English ivy dominates (drapes over) the understory throughout the channel, particularly in the portion north of the main entry to the shopping mall. In the south end closer to Soledad drive, small openings along the drainage banks are filled with non-native species like French broom and poison hemlock. This greenbelt needs riparian clean out work along the drainage channel more than it needs fire fuel reduction activities.

# b. Don Dahvee Lane and South Iris Canyon Road

This section of greenbelt has a variety of issues based on its location between the shopping mall and residential streets and use by transients and locals for shortcuts into and out of the shopping center. As in virtually all the greenbelt areas, annual grasses and invasive shrubs and vines are prevalent and, in this case, provide an odd combination of fuel buildup, erosion protection, and cover for urban wildlife and transient camp sites. Open areas away from the drainage channel are dry and dominated by non-native grasses and forbs. There are no sensitive species in these areas that would prevent completely cutting all of this vegetation to the ground. Extra available moisture from storm drains and development runoff provides beneficial conditions for the invasive species like English ivy. It is virtually smothering other plants and forming a solid ground cover. This is not an extreme fire concern but is ecologically destructive. The extreme biomass that would need to be removed in this area calls for creative vegetation management techniques. Although an urban area, this may be an opportunity to utilize grazing goats or sheep herds, fenced in small controllable areas for short periods, to reduce the sheer mass and allow more access to undertake more traditional vegetation management practices.

# c. North Iris Canyon Road to Fishnet Road

This is a continuation of the greenbelt above and is a similar mix of native and non-native species with vast swaths of poison oak along the drainage channel and English ivy, French broom, and poison hemlock choking the channel. The greenbelt runs along both sides of Iris Canyon. The north facing side slopes are dominated by older coast live oaks with a mix of the typical invasive weed species in lower areas along the roadway. At the time of the January 2020 site visit, many of the trees in this greenbelt had been cut and chipped in place, and new trees had been planted adjacent to the road. The north side closer to Monterey Peninsula College is densely vegetated with native shrubs typical of oak and pine understory but is also

invaded by the vigorous growth of the non-natives already listed as well as Cape ivy (*Delairea odorata*), another high concern invasive exotic plant. This is another area that is not likely as prone to high fire danger as it is to being entirely overrun by non-native species.

## 6. Josselyn Canyon

# a. Old Salinas Highway

This portion of the Josselyn Canyon greenbelt consists of a riparian corridor supported by a seasonal creek, which drains into a culvert under Highway 1, and a steep slope adjacent to the riparian corridor which is dominated by nasturtium (*Tropaeolum majus*). Riparian areas are dominated by a mix of native and non-native species, including California blackberry, English ivy, dogwood (*Cornus sericea*), and arroyo willow (*Salix lasiolepis*). This area is not an immediate fire concern, but would benefit from riparian cleanup.

## b. Josselyn Canyon Road

This portion of the Josselyn Canyon greenbelt starts off relatively flat at its southern end, then turns to steep slopes of mixed Monterey pine forest and coast live oak woodland. A seasonal drainage runs along the floor of this greenbelt area adjacent to Josselyn Canyon Road. The understory here is densely vegetated with a mix of native and non-native species, including greater periwinkle, California blackberry, poison oak, and nasturtium. In addition, remnant chaparral species such as sticky monkeyflower (*Diplacus aurantiacus*) and coyote brush are present. Rattlesnake grass is also present on the upper slopes of this greenbelt. There are no fallen trees within this greenbelt; however, large branches are present throughout. Removal of fallen branches and non-native shrubs and vines would reduce fire hazard and benefit habitat for native species.

# c. Intersection of Josselyn Canyon Road and Mark Thomas Drive

This short section of the Josselyn Canyon greenbelt is regularly mowed and maintained and consists of a sparse canopy of coast live oak and horticultural Monterey cypress plantings, with a low herbaceous understory of non-native grasses and forbs. Continued mowing of this area would ensure that fire hazard remains low.

# d. Mark Thomas Drive

This greenbelt area consists of a pedestrian and bicycle trail from Josselyn Canyon Rd to the Old Salinas Highway, with a maintained coast live oak and toyon overstory on approximately 30 percent slopes on the south side of the trail. Groundcover is mostly oak duff and non-native grasses and forbs. Continued maintenance and mowing of this area would ensure that fire hazard remains low.

# 7. Fisherman Flats

# a. August Place to Olmstead Road

The greenbelt in this part of the City is a narrower band running through portions of the Fisherman Flats neighborhood, bounded throughout by backyard fences and then opening up in a wider drainage swath running north and south and divided by the drainage line between City of Monterey coverage and private ownership of a development on the west side of the drainage. These greenbelt sections are obviously well used by walkers and hikers and would be priority for keeping clear of weeds and low hanging branches. As is the case throughout the entire Plan Area, the two primary fire fuel issues here are fallen pines and oaks and low to medium height annual grasses and invasive shrubs. The portion of this greenbelt closest to
regularly used trails appears to be regularly maintained, with few occurrences of rattlesnake grass and French broom; however, further into this greenbelt where the trail is less traveled, rattlesnake grass and French broom are abundant. This is another area where large scale vegetation removal might be achieved most efficiently by occasional goat grazing, creating small controlled reductions by fencing areas and allowing the animals to graze down all vegetation over a few days before moving to the next location. Goat grazing as vegetation management could be utilized throughout much of the year as they would have a low impact in terms of noise, wildlife utilization, and soil disturbance. The most ideal timing would be summer into fall.

Pine trees are naturally prone to shedding lower branches as they grow taller but oak trees are not so inclined until advanced in age. "Limbing up" branches of existing oak trees to above 6-8 feet in this greenbelt and others is recommended to create wider gaps in the fuel "ladder" between the ground and tree canopies, but should be done with the long-term health of the tree in mind.

#### b. Via Casoli and Foothill Boulevard

This is a short section of greenbelt along the west side of Via Casoli as it approaches Foothill Elementary School. The southern end of this greenbelt is more densely vegetated with an overstory of oaks and Toyon and an understory of rattlesnake grass and other non-native grasses. The northern end is an open area directly adjacent to Via Casoli which is apparently encroached upon by fences put up by residents along Via Casoli. This greenbelt does not appear to be high fire danger but would be further enhanced for fire safety by mowing low and thinning of those trees in clusters and keeping them away from the fence lines, or having homeowners place their fence lines appropriately within their property.

#### 8. Old Capitol Site

#### a. Viejo Road to Barnet Segal Lane (Parcel 1761035000)

This westernmost section of the Old Capitol Site greenbelt lies south of State Route 1 and Barnet Segal Lane and east of Viejo Road (**8a; Figure 1**). Where this greenbelt abuts roads, slopes are generally steep. Most of this greenbelt consists of a moderately dense upper canopy of mixed Monterey pine and coast live oak trees. The understory is dominated by an abundance of native and non-native shrubs, including poison oak, French broom, and sticky monkeyflower, along with accumulations of dead twigs and fallen logs. In the few areas where the canopy is open, the understory is dominated by non-native grasses, including rattlesnake grass and slender wild oat (*Avena barbata*). An approximately one- to two-foot-wide drainage, which was dry at the time of the April 2021 survey, runs south to north along the eastern edge of this greenbelt area and connects to the drainage within the adjacent greenbelt area to the north via a culvert under Barnet Segal Lane.

Due to the accumulation of dead or senescing woody biomass and the proliferation of non-native invasive species, including French broom and rattlesnake grass, fire fuel loads are considerably high through this greenbelt. In addition, fuel loads are high in adjacent woodland areas that border the property. Large, collapsed trunks are not an immediate fire hazard and, unless they pose a safety hazard, can be left to decompose and benefit habitat. The abundance of non-native weeds and kindling-sized dead biomass is the most significant fuel hazard within this greenbelt. Removal of woody biomass and invasive species throughout the greenbelt, along with a general thinning of trees and shrubs where they interface with adjacent properties will decrease risk of spreading fire.

12

#### b. Barnet Segal Lane to South Iris Canyon Drive (Parcel 1761051000)

This small section of the Old Capitol Site greenbelt lies directly south of State Route 1 between Barnet Segal Lane and Iris Canyon Drive (**8b**; Figure 1). This area is relatively flat and more open than other areas of the Old Capitol Site greenbelt. The canopy is an open to moderately dense mix of coast live oak and Monterey pine trees. The understory is generally grassy and is dominated by rattlesnake grass and slender wild oat. An approximately two-feet-wide drainage, which was dry at the time of the April 2021 survey, runs south to north along the western edge of this greenbelt area. Near the drainage, the canopy is denser and the understory is dominated by poison oak, Cape ivy, and hedge nettle (*Stachys* sp.) rather than grasses.

This greenbelt area appears to be somewhat maintained. Monterey pine saplings were recently planted in the middle of this greenbelt area, where the canopy is most open. The small patches of French broom within this greenbelt are minor and under control. Shrubs appear to have been recently cut and are relatively low growing. However, grasses are moderately tall. Regular mowing or grazing of this area before early summer, conducted with care to avoid planted pine saplings, would prevent the spread of rattlesnake grass and French broom.

#### c. Barnet Segal Lane to Westland House (Parcel 1771043000)

This easternmost and largest section of the Old Capitol Site greenbelt lies south of State Route 1, between Barnet Segal Lane and the Westland House nursing facility (8c; Figure 1). This greenbelt contains two Special Attention Areas (SAAs): the 8.4-acre County Condition 31/Monterey Pine Easement Area SAA (County SAA) and the 6.1-acre Stevenson SAA (Figure 2). The County SAA contains no special management conditions or restrictions; however, the Stevenson Deed Restriction Area SAA (Stevenson SAA) must be managed in accordance with the deed restrictions identified in the Second Amendment to Agreement for Preservation of Natural Habitat (Second Amendment), made between the Stevenson School and the Pebble Beach Company in 2019. The Second Amendment prohibits development of the Stevenson SAA and removal of native or major vegetation within this SAA, unless necessary for management activities (e.g., fuel maintenance). The Second Amendment also requires that the Stevenson SAA be managed in accordance with the *Old Capitol Site Forest Management Plan* (Thompson, 2017).

Like the adjacent area to the west (see Section *a*), this greenbelt consists of a moderately dense upper canopy of mixed Monterey pine and coast live oak trees with a dense understory of poison oak, hedge nettle, French broom, and accumulations of dead twigs and fallen logs. In some areas, French broom forms dense, monoculture stands. To the east where the canopy is open, the understory is dominated by non-native grasses and forbs, including soft chess (*Bromus hordeaceus*) and poison hemlock. A vegetated drainage, which was dry at the time of the April 2021 survey, runs west to east and south to north within the easter section of this greenbelt. A portion of this greenbelt area is designated critical habitat for the federally Endangered Yadon's rein orchid (*Piperia yadonii*) (Figure 3).

Like the greenbelt area described in Section *a*, fire fuel loads are considerably high through this greenbelt due to the accumulation of dead or senescing woody biomass and the proliferation of non-native invasive species, such as French broom. The abundance of French broom and kindling-sized dead biomass is the most significant fuel hazard within this greenbelt. Removal of French broom and woody biomass, along

with a general thinning of trees and shrubs where they interface with adjacent properties, will decrease risk of spreading fire.

In accordance with the *Old Capitol Site Forest Management Plan*, fuel and vegetation within the Stevenson SAA can be managed using a variety of methods, including mastication<sup>10</sup>, chemical control (i.e., herbicide), cultural control (e.g., grazing by goats or other livestock), and other mechanical methods (e.g., hand removal using mechanized hand tools). As recommended in the *Old Capitol Site Forest Management Plan*, targeted herbicide application should ideally be perfumed by a licensed application in mid-winter through early spring, prior to flowering and seed establishment. Measures should be taken to avoid the incidental treatment of non-target native species. Follow-up treatments will likely be necessary.

#### **Potential Impacts to Sensitive Biological Resources**

Under the California Environmental Quality Act (CEQA), potential impacts to special-status species and sensitive habitats resulting from implementation of the Plan must be considered. Special-status species are those plants and animals that have been formally listed or are Candidates for listing as Endangered or Threatened under the federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA), are California Department of Fish and Wildlife (CDFW) "species of special concern," are listed as Rare under the California Native Plant Protection Act (CNPPA), are included in the California Native Plant Society (CNPS) California Rare Plant Ranks (CRPRs) 1A, 1B, 2A, or 2B, or are California Fully Protected Species (CFP). In addition, raptors (e.g., eagles, hawks, and owls), migratory birds, and their nests are protected under California Fish and Game Code. Sensitive habitats include riparian corridors, wetlands, habitats for legally protected species, areas of high biological diversity, areas supporting rare or special-status wildlife habitat, and unusual or regionally restricted habitat types. Habitat types considered sensitive include those listed on CDFW's *California Natural Communities List* (CDFW, 2020), those that are occupied by species listed under ESA or are critical habitat in accordance with ESA, and those that are defined as Environmentally Sensitive Habitat Areas (ESHA) under the California Coastal Act (Coastal Act).

An analysis was completed to verify or update the list of special-status species and sensitive habitats that were determined present or potentially present within the Plan Area in the 2017 Fuel Reduction Plan. A list of special-status species with the potential to occur in the Plan Area (**Appendix A**) was compiled utilizing all available occurrence data, including the 2020 Fuel Reduction Plan, the 2017 Fuel Reduction Plan, the 2017 IS/MND for the project (City, 2017), California Natural Diversity Database (CNDDB) reports for the Monterey and Seaside quadrangles (CDFW, 2021; **Appendix B**), and the U.S. Fish and Wildlife Service (Service) Information for Planning and Consulting (IPaC) resource list (Service, 2021a; **Appendix C**). Each species was analyzed to determine its presence or potential presence within the Plan Area.

#### Sensitive Resources Known to Occur within the Plan Area

Two sensitive natural communities—Monterey pine forest and central maritime chaparral—and three special-status plant species— Monterey pine (CNPS CRPR 1B<sup>11</sup>), Hooker's manzanita (CNPS CRPR 1B), and Yadon's rein orchid (*Piperia yadonii*; FE/1B)—were observed in some or all the greenbelts by DD&A

16

<sup>&</sup>lt;sup>10</sup> Mastication, also known as "forestry mulching", is a method of vegetation management that is generally completed with a skidsteer or excavator machine. A special attachment used to mulch down small trees and brush, leaving finer debris (similar to debris from a chipper) behind. This helps to reduce fuels in overgrown forests and is often the most cost-effective treatment option for large areas.

<sup>&</sup>lt;sup>11</sup> Status Designation: FE: Federally Endangered; FT: Federally Threatened; SE: State Endangered; SR: State Rare; and 1B: CNPS CRPR 1B; CSC: CDFW Species of Special Concern.

and/or Reagan<sup>12</sup>. Monterey pine occurs within all eight greenbelts, but Hooker's manzanita was only observed within portions of the Skyline Forest and Veterans Park greenbelts. Yadon's rein orchid has been observed by Reagan in a few of the greenbelts during surveys for other purposes (Reagan, 2017) and is also known to occur within the Old Capitol Site greenbelt (CNDDB, 2021), a portion of which is also designated critical habitat for this species (Service, 2021b; **Figure 3**).

Studies have shown that reduction of invasive weed cover and dispersal of Yadon's rein orchid seed in the cleared areas has resulted in increased recruitment of Yadon's rein orchid plants in those areas, and that if fuel reduction activities do not include soil disturbance, no adverse impacts to Yadon's rein orchid would occur (Reagan, 2017). Competition with non-native species is a very distinct threat to this species and ongoing fuel management activities, including weed eradication and thinning, which can avoid non-targeted species (e.g., mechanical removal using hand tools), can have a positive impact on the increase and sustainability of the species in the greenbelt areas they currently occupy (Reagan, 2017). The Yadon's rein orchid listing rule states that pampas grass (*Cortaderia jubata*) and French broom are two non-native plant taxa that invade forests and meadows on the Monterey Peninsula. In addition, rattlesnake grass has been listed as threats in the Del Monte Forest populations (Reagan, 2017). Invasion of non-native plants is a continuing threat and could increase in severity if the remaining populations are reduced in size, dissected into many smaller parcels, or become isolated by surrounding development. Therefore, management activities which target non-native species would overall benefit Yadon's rein orchid and would be unlikely to adversely modify critical habitat for this species where it has been designated within the Plan Area.

#### Sensitive Resources with the Potential to Occur within the Plan Area

Although not observed to be present, but due to presence of suitable habitat and known occurrences in the area, the following special-status species have a moderate or high potential to occur within the Plan Area (**Appendix A**):

- Special-status plant species:
  - Hickman's onion (Allium hickmanii) 1B,
  - Toro manzanita<sup>13</sup> (*Arctostaphylos montereyensis*) 1B,
  - Pajaro manzanita (Arctostaphylos pajaroensis) 1B,
  - Sandmat manzanita (Arctostaphylos pumila) 1B,
  - Jolon clarkia (*Clarkia jolonensis*) 1B,
  - Seaside bird's-beak (Cordylanthus rigidus ssp. littoralis) 1B,
  - Hospital Canyon larkspur (Delphinium californicum ssp. interius) SE/1B,
  - Hutchinson's larkspur (*Delphinium hutchinsoniae*) 1B,
  - Eastwood's goldenbush (Ericameria fasciculate) 1B,
  - Fragrant fritillary (Fritillaria liliacea) 1B,
  - Gowen cypress (Hesperocyparis goveniana) FT/1B,
  - Kellogg's horkelia (Horkelia cuneata var. sericea) 1B,

17

<sup>&</sup>lt;sup>12</sup> Monterey cypress (*Hesperocyparis macrocarpa*), a CNPS Rank 1B species, was also identified within some of the greenbelts. However, the Plan Area is outside the native range of this species, and any individuals occurring within the Plan Area are of unknown horticultural origin and not considered special-status.

<sup>&</sup>lt;sup>13</sup> Although perennial species such as manzanita can be identified outside of their blooming periods, these species may be present in the deeper portions of greenbelts (e.g., the Skyline Forest and Veterans Park greenbelts) that were not reached during surveys.

- Contra Costa goldfields (Lasthenia conjugens) FE/1B,
- Carmel Valley bush-mallow (Malacothamnus palmeri var. involucratus) 1B,
- Marsh microseris (Microseris paludosa) 1B,
- Northern curly-leaved monardella (Monardella sinuata ssp. nigrescens) 1B,
- Woodland woollythreads (Monolopia gracilens) 1B,
- Hickman's cinquefoil (Potentilla hickmanii) FE/SE/1B,
- Pine rose (*Rosa pinetorum*) 1B,
- Santa Cruz clover (Trifolium buckwestiorum) 1B,
- Pacific Grove clover (Trifolium polyodon) SR/1B, and
- Monterey clover (*Trifolium trichocalyx*) FE/SE/1B.
- Special-status wildlife species:
  - Monterey dusky-footed woodrat (Neotoma fuscipes luciana) CSC,
  - Monterey shrew (Sorex ornatus salaries) CSC,
  - Northern California legless lizard (Anniella pulchra) CSC,
  - Coast Range newt (Taricha torosa) CSC, and
  - Raptors and other nesting birds.

#### Measures to Avoid or Minimize Impacts to Sensitive Resources

To avoid or reduce potential impacts to sensitive biological resources, the following measures should be implemented prior to or during fuel reduction activities:

- Prior to initiation of all activities resulting in physical disturbance of a treatment area, including but not limited to mobilization of equipment and clearing of vegetation, a qualified biologist should evaluate the area and determine if a survey of the treatment area is necessary based on the potential for resources to be present. If previous surveys have been conducted in the treatment area, those can be used to inform the evaluation at the biologist's discretion. Existing data and survey results and recommendations should be implemented to avoid resource impacts.
- For locations containing rare and sensitive plant and animal species, fire fuel reduction measures should adhere to state and federal guidelines specific to each species.
- In areas along Skyline Drive and Veterans Park in the western part of the City, effort should be made to limit disturbance to existing patches of central maritime chaparral containing remnant *Arctostaphylos* species. These species may be pruned back to reduce density, if deemed necessary, but should not be removed in any location.
- Creeks, drainages, and wet meadows (e.g., the features located in the Monte Vista and Skyline Forest Areas) should not be crossed with motorized vehicles. In addition, refueling of all motorized equipment should be conducted utilizing a minimum 50-foot setback from such resources and utilizing fueling and hazardous material best management practices (BMPs).
- Should disturbance of soil or ground need to be implemented for removal of tree and shrub stump and root systems as well as non-native plant species, work should not proceed unless authorized by a qualified biological monitor. If sensitive resources are present, they should be avoided.
- If trees or large tree form shrubs are scheduled for removal between February 1 and August 30, a qualified biologist should conduct a nesting bird survey of the treatment area and an area within

100 feet of the treatment area for active bird and bat nesting, breeding, or rearing activity no more than five days prior to the start date. If nesting activity is observed by the qualified biologist, tree and shrub removal where nests are founds should be delayed until young have fledged (are flying and foraging on their own) and the nest is abandoned, per observations of the qualified biologist. In addition, the qualified biologist should recommend an appropriate buffer zone around nests to ensure no indirect disturbance occurs. The recommended buffer would depend upon the species (e.g., raptor vs. passerine) and other site-specific conditions, such as proximity to roadways, slope, etc.

- Tree removal required due to imminent threat to a structure or safety concerns along roads (including road right-of-ways) should not be restricted as to timing but, at the discretion of the qualified biologist, should involve coordination with CDFW.
- Tree pruning should be conducted utilizing standard BMPs to avoid unnecessary injuries to the tree. General principals of pruning include placing cuts immediately beyond the branch collar, making clean cuts by scoring the underside of the branch first, and for live oak, avoiding the period from February through May.
- Environmental awareness training should be conducted for fuel reduction personnel prior to initiation of fire fuel reduction measures. Training should include, but not be limited to, applicable sensitive biological resources, and avoidance of these and other environmental issues.

#### Conclusions

Every effort should be taken to reduce or eliminate soil disturbance during fuel reduction activities throughout the Plan Area. To the greatest extent practicable, shrub and grass maintenance should be restricted to cutting down without extracting root systems. The exception would be hand removal of French broom plants, which is most easily done in the early winter into spring when rains have softened soils enough to allow removal via hand pulling or use of weed-wrench type tools to extract the entire root system. In lieu of herbicide applications to kill the plants in place, mechanical removal of the plant, roots and all, is the only way to make progress toward eradication of this species in the Plan Area. Tree thinning for safety reasons should only remove what is necessary for safety purposes, leaving as much of the remaining tree as a snag for habitat purposes. To avoid or minimize potential impacts to sensitive biological resources, fuel reduction activities should be conducted in accordance with the mitigation measures identified above.

If you have any questions or comments about this Fuel Reduction Plan, please contact me at (831) 373-4341 or at jharwayne@ddaplanning.com.

Sincerely,

Joh

Josh Harwayne Senior Environmental Scientist/Project Manager Denise Duffy & Associates, Inc.

## **APPENDIX A**

Special-Status Species Table

#### CITY OF MONTEREY GREENBELT FUEL REDUCTION PLAN

#### Special-Status Species Table

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
	i i	MAMMALS	
Neotoma fuscipes luciana Monterey dusky-footed woodrat	/ CSC /	Forest and oak woodland habitats of moderate canopy with moderate to dense understory. Also occurs in chaparral habitats.	<b>Present</b> Suitable habitat is present within the Plan Area. A nest was observed on a coast live oak tree within the Plan Area.
Sorex ornatus salarius Monterey shrew	/ CSC /	Mostly moist or riparian woodland habitats, and within chaparral, grassland, and emergent wetland habitats where there is a thick duff or downed logs.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
<i>Taxidea taxus</i> American badger	/ CSC /	Dry, open grasslands, fields, pastures savannas, and mountain meadows near timberline are preferred. The principal requirements seem to be sufficient food, friable soils, and relatively open, uncultivated grounds.	<b>Unlikely</b> No suitable habitat within the Plan Area.
		BIRDS	-
Agelaius tricolor Tricolored blackbird (nesting colony)	/ ST /	Nest in colonies in dense emergent wetland vegetation, along rivers, lagoons, lakes, and ponds. Forages over grassland or aquatic habitats.	<b>Low</b> Suitable foraging habitat is present within the Plan Area; however, no suitable nesting habitat is present.
Athene cunicularia Burrowing owl (burrow sites & some wintering sites)	/ CSC /	Year-round resident of open, dry grassland and desert habitats, and in grass, forb and open shrub stages of pinyon- juniper and ponderosa pine habitats. Frequent open grasslands and shrublands with perches and burrows. Use rodent burrows (often California ground squirrel) for roosting and nesting cover. Pipes, culverts, and nest boxes may be substituted for burrows in areas where burrows are not available.	Low Marginal habitat present within the Plan Area. The CNDDB reports one occurrence of this species directly adjacent to the Plan Area.
Brachyramphus marmoratus Marbled murrelet	FT / SE /	Occur year-round in marine subtidal and pelagic habitats from the Oregon border to Point Sal. Partial to coastlines with stands of mature redwood and Douglas-fir. Requires dense mature forests of redwood and/or Douglas-fir for breeding and nesting.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Charadrius alexandrinus nivosus Western snowy plover	FT / CSC /	Sandy beaches on marine and estuarine shores, also salt pond levees and the shores of large alkali lakes. Requires sandy, gravelly or friable soil substrate for nesting.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Coturnicops noveboracensis Yellow rail	/ CSC /	Wet meadows and coastal tidal marshes. Occurs year round in California, but in two primary seasonal roles: as a very local breeder in the northeastern interior and as a winter visitor (early Oct to mid-Apr) on the coast and in the Suisun Marsh region	<b>Unlikely</b> No suitable habitat within the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
<i>Cypseloides niger</i> Black swift	/ CSC /	Regularly nests in moist crevice or cave on sea cliffs above the surf, or on cliffs behind, or adjacent to, waterfalls in deep canyons. Forages widely over many habitats.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Empidonax traillii extimus Southwestern willow flycatcher	FE / SE /	Breeds in riparian habitat in areas ranging in elevation from sea level to over 2,600 meters. Builds nest in trees in densely vegetated areas. This species establishes nesting territories and builds, and forages in mosaics of relatively dense and expansive areas of trees and shrubs, near or adjacent to surface water or underlain by saturated soils. Not typically found nesting in areas without willows ( <i>Salix sp.</i> ), tamarisk ( <i>Tamarix ramosissima</i> ), or both.	<b>Unlikely</b> The CNDDB does not report any occurrences of this species within the quadrangles evaluated. The riparian areas may provide suitable habitat; however, the Plan Area is very likely outside of the current range for this species.
<i>Gymnogyps californianus</i> California condor	FE / SE /	Roosting sites in isolated rocky cliffs, rugged chaparral, and pine covered mountains 2000-6000 feet above sea level. Foraging area removed from nesting/roosting site (includes rangeland and coastal area - up to 19 mile commute one way). Nest sites in cliffs, crevices, potholes.	<b>Unlikely</b> No suitable habitat within the Plan Area. The CNDDB does not report any occurrences of this species within the quadrangles evaluated.
<i>Laterallus jamaicensis coturniculus</i> California black rail	/ ST&CFP /	Inhabits freshwater marshes, wet meadows & shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that does not fluctuate during the year & dense vegetation for nesting habitat.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Pelecanus occidentalis californicus California brown pelican	/ CFP /	Found in estuarine, marine subtidal, and marine pelagic waters along the California coast. Usually rests on water or inaccessible rocks, but also uses mudflats, sandy beaches, wharfs, and jetties.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Sterna antillarum browni</i> California least tern	FE / SE /	Prefers undisturbed nest sites on open, sandy/gravelly shores near shallow-water feeding areas in estuaries. Sea beaches, bays, large rivers, bars.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Vireo bellii pusillus Least Bell's Vireo	FE / SE /	Riparian areas and drainages. Breed in willow riparian forest supporting a dense, shrubby understory. Oak woodland with a willow riparian understory is also used in some areas, and individuals sometimes enter adjacent chaparral, coastal sage scrub, or desert scrub habitats to forage.	<b>Unlikely</b> The CNDDB does not report any occurrences of this species within the quadrangles evaluated. The riparian areas may provide very marginal habitat; however, the Plan Area is very likely outside of the current range for this species. Roberson (2002) reports that within Monterey County, this species was likely always limited to the humid interior outside of the direct influence of summer fog. The three known records of this species along the coast within the past 50 years were migrants.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
		<b>REPTILES AND AMPHIBIANS</b>	
Ambystoma californiense California tiger salamander	FT / ST /	Annual grassland and grassy understory of valley-foothill hardwood habitats in central and northern California. Need underground refuges and vernal pools or other seasonal water sources.	Low Suitable upland and dispersal habitat is present within the Plan Area; however, the Plan Area is outside of the known dispersal range of any known breeding resources.
Anniella pulchra Northern California legless lizard	/ CSC /	Requires moist, warm habitats with loose soil for burrowing and prostrate plant cover, often forages in leaf litter at plant bases; may be found on beaches, sandy washes, and in woodland, chaparral, and riparian areas.	<b>High</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported less than a mile from the Plan Area.
<i>Emys marmorata</i> Western pond turtle	/ CSC /	Associated with permanent or nearly permanent water in a wide variety of habitats including streams, lakes, ponds, irrigation ditches, etc. Require basking sites such as partially submerged logs, rocks, mats of vegetation, or open banks.	<b>Unlikely</b> No suitable habitat is present within the Plan Area.
<i>Rana boylii</i> Foothill yellow-legged frog	/ SC /	Partly-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats, including hardwood, pine, and riparian forests, scrub, chaparral, and wet meadows. Rarely encountered far from permanent water.	Low Suitable upland habitat present within the Plan Area. However, no permanent water is present. The nearest CNDDB occurrence is a non-specific occurrence less than a mile from the Plan Area in the City of Pacific Grove.
<i>Rana draytonii</i> California red-legged frog	FT / CSC /	Lowlands and foothills in or near permanent or late-season sources of deep water with dense, shrubby, or emergent riparian vegetation. During late summer or fall adults are known to utilize a variety of upland habitats with leaf litter or mammal burrows.	Low Suitable breeding, upland, and dispersal habitat is present within the Plan Area; however, the Plan Area is outside of the known dispersal range of any known breeding resources.
Taricha torosa Coast Range newt	/ CSC /	Occurs mainly in valley-foothill hardwood, valley-foothill hardwood-conifer, coastal scrub, and mixed chaparral but is known to occur in grasslands and mixed conifer types. Seek cover under rocks and logs, in mammal burrows, rock fissures, or man-made structures such as wells. Breed in intermittent ponds, streams, lakes, and reservoirs.	Moderate Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is approximately 5 miles south of the Plan Area within Palo Corona Regional Park.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
		FISH	
Eucyclogobius newberryi Tidewater goby	FE / CSC /	Brackish water habitats, found in shallow lagoons and lower stream reaches. Tidewater gobies appear to be naturally absent (now and historically) from three large stretches of coastline where lagoons or estuaries are absent and steep topography or swift currents may prevent tidewater gobies from dispersing between adjacent localities. The southernmost large, natural gap occurs between the Salinas River in Monterey County and Arroyo del Oso in San Luis Obispo County.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Oncorhynchus mykiss irideus Steelhead (south-central California coast DPS)	FT / /	Cold headwaters, creeks, and small to large rivers and lakes; anadromous in coastal streams.	<b>Unlikely</b> No suitable habitat within the Plan Area.
		INVERTEBRATES	
Bombus occidentalis Western bumble bee	/ SC /	Occurs in open grassy areas, urban parks, urban gardens, chaparral, and meadows. This species generally nest underground. Western bumble bee populations are currently largely restricted to high elevation sites in the Sierra Nevada.	Unlikely Suitable habitat is present within the Plan Area; however, the area is very likely outside the current range of this species.
Branchinecta lynchi Vernal pool fairy shrimp	FT / /	Require ephemeral pools with no flow. Associated with vernal pool/grasslands from near Red Bluff (Shasta County), through the central valley, and into the South Coast Mountains Region.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Euphilotes enoptes smithi</i> Smith's blue butterfly	FE / /	Most commonly associated with coastal dunes and coastal sage scrub plant communities in Monterey and Santa Cruz Counties. Plant hosts are <i>Eriogonum latifolium</i> and <i>E. parvifolium</i> .	<b>Unlikely</b> No suitable habitat within the project site.
		PLANTS	
Allium hickmanii Hickman's onion	/ / 1B	Closed-cone coniferous forests, maritime chaparral, coastal prairie, coastal scrub, and valley and foothill grasslands at elevations of 5-200 meters. Bulbiferous perennial herb in the Alliaceae family; blooms March-May.	Moderate Suitable habitat is present within the Plan Area. The CNDDB reports a 1980 occurrence of this species which overlaps the Plan Area.
Arctostaphylos hookeri ssp. hookeri Hooker's manzanita	/ / 1B	Closed-cone coniferous forest, chaparral, cismontane woodland, and coastal scrub on sandy soils at elevations of 85-536 meters. Evergreen shrub in the Ericaceae family; blooms January-June.	Present Identified within the Plan Area during biological surveys by Patrick Reagan and DD&A.
Arctostaphylos montereyensis Toro manzanita	/ / 1B	Maritime chaparral, cismontane woodland, and coastal scrub on sandy soils at elevations of 30-730 meters. Evergreen shrub in the Ericaceae family; blooms February-March.	Moderate Suitable habitat is present within the Skyline Forest and Veterans Park greenbelts. The nearest CNDDB occurrence is reported 2.3 miles from the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
Arctostaphylos pajaroensis Pajaro manzanita	/ / 1B	Chaparral on sandy soils at elevations of 30-760 meters. Evergreen shrub in the Ericaceae family; blooms December- March.	Moderate Suitable habitat is present within the Skyline Forest and Veterans Park greenbelts. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
Arctostaphylos pumila Sandmat manzanita	/ / 1B	Openings of closed-cone coniferous forests, maritime chaparral, cismontane woodland, coastal dunes, and coastal scrub on sandy soils at elevations of 3-205 meters. Evergreen shrub in the Ericaceae family; blooms February-May.	<b>Moderate</b> Suitable habitat is present within the Skyline Forest and Veterans Park greenbelts. The nearest CNDDB occurrence is reported 0.3 mile from the Plan Area.
Arenaria paludicola Marsh sandwort	FE / SE / 1B	Known from only two natural occurrences in Black Lake Canyon and at Oso Flaco Lake. Sandy openings of freshwater of brackish marshes and swamps at elevations of 3-170 meters. Stoloniferous perennial herb in the Caryophyllaceae family; blooms May-August.	<b>Unlikely</b> No suitable habitat within the Plan Area. The Plan Area is outside of the currently known range for this species.
Astragalus tener var. tener Alkali milk-vetch	/ / 1B	Playas, valley and foothill grassland on adobe clay, and vernal pools on alkaline soils at elevations of 1-60 meters. Annual herb in the Fabaceae family; blooms March-June.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Astragalus tener var. titi Coastal dunes milk-vetch	FE / SE / 1B	Sandy soils in coastal bluff scrub, coastal dunes, coastal prairie (mesic); elevation 3-164 feet. Annual herb in the Fabaceae family; blooms March-May.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Bryoria spiralifera</i> Twisted horsehair lichen	/ / 1B	California North Coast coniferous forest at elevations of 0–30 meters. Often found on conifers, including <i>Picea</i> sitchensis, <i>Pinus contorta</i> var. contorta, <i>Pseudotsuga</i> menziesii, Abies grandis, and <i>Tsuga heterophylla</i> . Fruticose lichen in the Parmeliaceae family.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Castilleja ambigua var. insalutata Pink Johnny-nip	/ / 1B	Coastal prairie and coastal scrub at elevations of 0-100 meters. Annual herb in the Orobanchaceae family; blooms May-August.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Centromadia parryi</i> ssp. <i>congdonii</i> Congdon's tarplant	/ / 1B	Valley and foothill grassland on heavy clay, saline, or alkaline soils at elevations of 0-230 meters. Annual herb in the Asteraceae family; blooms May-November.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Chorizanthe minutiflora Fort Ord spineflower	/ / 1B	Sandy openings of maritime chaparral and coastal scrub at elevations of 55-150 meters. Only known occurrences on Fort Ord National Monument. Annual herb in the Polygonaceae family; blooms April-July.	<b>Unlikely</b> No suitable habitat within the Plan Area. The Plan Area is outside of the currently known range for this species.
Chorizanthe pungens var. pungens Monterey spineflower	FT / / 1B	Maritime chaparral, cismontane woodland, coastal dunes, coastal scrub, and valley and foothill grassland on sandy soils at elevations of 3-450 meters. Annual herb in the Polygonaceae family; blooms April-July.	<b>Low</b> Low quality habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 0.5 mile from the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
<i>Clarkia jolonensis</i> Jolon clarkia	/ / 1B	Cismontane woodland, chaparral, riparian woodland, and coastal scrub at elevations of 20-660 meters. Annual herb in the Onagraceae family; blooms April-June.	<b>Moderate</b> Suitable habitat within the Plan Area. The nearest CNDDB occurrence is reported 0.24 mile from the Plan Area.
<i>Collinsia multicolor</i> San Francisco collinsia	/ / 1B	Closed-cone coniferous forest and coastal scrub, sometimes on serpentinite soils, at elevations of 30-250 meters. Annual herb in the Plantaginaceae family; blooms March-May.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 1.9 miles from the Plan Area.
<i>Cordylanthus rigidus</i> ssp. <i>littoralis</i> Seaside bird's-beak	/ SE / 1B	Closed-cone coniferous forests, maritime chaparral, cismontane woodlands, coastal dunes, and coastal scrub on sandy soils, often on disturbed sites, at elevations of 0-425 meters. Annual hemi-parasitic herb in the Orobanchaceae family; blooms April-October.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
<i>Delphinium californicum</i> ssp. <i>interius</i> Hospital Canyon larkspur	/ / 1B	Openings in chaparral, coastal scrub, and mesic areas of cismontane woodland at elevations of 230-1095 meters. Perennial herb in the Ranunculaceae family; blooms April- June.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 3.0 miles from the Plan Area.
Delphinium hutchinsoniae Hutchinson's larkspur	/ / 1B	Broadleaved upland forest, chaparral, coastal scrub, and coastal prairie at elevations of 0-427 meters. Perennial herb in the Ranunculaceae family; blooms March-June.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 0.8 mile from the Plan Area.
Ericameria fasciculata Eastwood's goldenbush	/ / 1B	Openings in closed-cone coniferous forest, maritime chaparral, coastal dunes, and coastal scrub on sandy soils at elevations of 30-275 meters. Evergreen shrub in the Asteraceae family; blooms July-October.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
<i>Erysimum ammophilum</i> Sand-loving wallflower	/ / 1B	Openings in maritime chaparral, coastal dunes, and coastal scrub on sandy soils at elevations of 0-60 meters. Perennial herb in the Brassicaceae family; blooms February-June.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Erysimum menziesii</i> Menzies' wallflower	FE / SE / 1B	Coastal dunes at elevations of 0-35 meters. Perennial herb in the Brassicaceae family; blooms March-September.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Fritillaria liliacea</i> Fragrant fritillary	//1B	Cismontane woodland, coastal prairie, coastal scrub, and valley and foothill grassland, often serpentinite, at elevations of 3-410 meters. Bulbiferous perennial herb in the Liliaceae family; blooms February-April.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 1.1 miles from the Plan Area.
<i>Gilia tenuiflora</i> ssp. <i>arenaria</i> Monterey gilia	FE / ST / 1B	Openings in maritime chaparral, cismontane woodland, coastal dunes, and coastal scrub on sandy soils at elevations of 0-45 meters. Annual herb in the Polemoniaceae family; blooms April-June.	<b>Low</b> Low quality habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 0.5 mile from the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
Hesperocyparis goveniana Gowen cypress	FT / / 1B	Closed-cone coniferous forest and maritime chaparral at elevations of 30-300 meters. Evergreen tree in the Cupressaceae family. Natively occurring only at Point Lobos near Gibson Creek and the Huckleberry Hill Nature Preserve near Highway 68.	<b>Not Present</b> The Plan Area is outside of the currently known range for this species.
<i>Hesperocyparis macrocarpa</i> Monterey cypress	/ / 1B	Closed-cone coniferous forest at elevations of 10-30 meters. Evergreen tree in the Cupressaceae family. Natively occurring only at Cypress Point in Pebble Beach and Point Lobos State Park; widely planted and naturalized elsewhere.	Not Present Project site is outside of the currently known range for this species. Planted individuals of unknown origin were identified during the surveys in January 2020; however, no naturally occurring individuals are present.
Horkelia cuneata ssp. sericea Kellogg's horkelia	/ / 1B	Openings of closed-cone coniferous forests, maritime chaparral, coastal dunes, and coastal scrub on sandy or gravelly soils at elevations of 10-200 meters. Perennial herb in the Rosaceae family; blooms April-September.	Moderate Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
Lasthenia conjugens Contra Costa goldfields	FE / / 1B	Mesic areas of valley and foothill grassland, alkaline playas, cismontane woodland, and vernal pools at elevations of 0-470 meters. Annual herb in the Asteraceae family; blooms March-June.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 6.1 miles from the Plan Area.
<i>Layia carnosa</i> Beach layia	FE / SE / 1B	Coastal dunes and coastal scrub on sandy soils at elevations of 0-60 meters. Annual herb in the Asteraceae family; blooms March-July.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Lupinus tidestromii</i> Tidestrom's lupine	FE / SE / 1B	Coastal dunes at elevations of 0-100 meters. Perennial rhizomatous herb in the Fabaceae family; blooms April-June.	<b>Unlikely</b> No suitable habitat within the Plan Area.
Malacothamnus palmeri var. involucratus Carmel Valley bush-mallow	/ / 1B	Chaparral, cismontane woodland, and coastal scrub at elevations of 30-1100 meters. Perennial deciduous shrub in the Malvaceae family; blooms May-October.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 0.8 mile from the Plan Area.
<i>Malacothrix saxatilis</i> var. <i>arachnoidea</i> Carmel Valley malacothrix	/ / 1B	Chaparral and coastal scrub on rocky soils at elevations of 25- 1036 meters. Perennial rhizomatous herb in the Asteraceae family; blooms June-December.	<b>Low</b> Marginal habitat present within the Plan Area. The nearest CNDDB occurrence is reported 4.0 mile from the Plan Area.
<i>Microseris paludosa</i> Marsh microseris	/ / 1B	Closed-cone coniferous forest, cismontane woodland, coastal scrub, and valley and foothill grassland at elevations of 5-300 meters. Perennial herb in the Asteraceae family; blooms April-July.	High Suitable habitat within the Plan Area. The CNDDB reports several occurrences of this species within 5 miles of the Plan Area and which overlap the Plan Area.
Monardella sinuata ssp. nigrescens Northern curly-leaved monardella	/ / 1B	Chaparral, coastal dunes, coastal scrub, and lower montane coniferous forest (ponderosa pine sandhills) on sandy soils at elevations of 0-300 meters. Annual herb in the Lamiaceae family; blooms April-September.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
Monolopia gracilens Woodland wollythreads	/ / 1B	Openings of broadleaved upland forest, chaparral, cismontane woodland, North Coast coniferous forest, and valley and foothill grassland on serpentinite soils at elevations of 100- 1200 meters. Annual herb in the Asteraceae family; blooms February-July.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
Pinus radiata Monterey pine	/ / 1B	Closed-cone coniferous forest and cismontane woodland at elevations of 25-185 meters. Evergreen tree in the Pinaceae family. Only three native stands in CA at Ano Nuevo, Cambria, and the Monterey Peninsula; introduced in many areas.	<b>Present</b> Individual Monterey pine trees are present throughout the site. The Plan Area is within the historic native range for this species.
<i>Piperia yadonii</i> Yadon's rein orchid	FE / / 1B	Sandy soils in coastal bluff scrub, closed-cone coniferous forest, and maritime chaparral at elevations of 10-510 meters. Annual herb in the Orchidaceae family; blooms February- August.	<b>Present</b> Identified within the Plan Area by Patrick Reagan (Reagan, 2017). The CNDDB reports many occurrences of this species within one mile of the Plan Area, including several occurrences that were reported within or which overlap the Plan Area.
Potentilla hickmanii Hickman's cinquefoil	FE / SE / 1B	Coastal bluff scrub, closed-cone coniferous forests, vernally mesic meadows and seeps, and freshwater marshes and swamps at elevations of 10-149 meters. Perennial herb in the Rosaceae family; blooms April-August.	Moderate Suitable habitat is present within the Plan Area. The CNDDB reports a nonspecific occurrence of this species which overlaps the Plan Area.
<i>Ramalina thrausta</i> Angel's hair lichen	/ / 2B	North coast coniferous forest on dead twigs and other lichens. Epiphytic fructose lichen in the Ramalinaceae family. In northern CA it is usually found on dead twigs, and has been found on <i>Alnus rubra</i> , <i>Calocedrus decurrens</i> , <i>Pseudotsuga</i> <i>menziesii</i> , <i>Quercus garryana</i> , and <i>Rubus spectabilis</i> . In Sonoma County it grows on and among dangling mats of <i>R</i> . <i>menziesii</i> and <i>Usnea</i> spp.	<b>Unlikely</b> No suitable habitat within the Plan Area.
<i>Rosa pinetorum</i> Pine rose	/ / 1B	Closed-cone coniferous forest at elevations of 2-300 meters. Perennial shrub in the Rosaceae family; blooms May-July. Possible hybrid of <i>R. spithamea</i> , <i>R. gymnocarpa</i> , or others; further study needed.	<b>High</b> Suitable habitat is present within the Plan Area. The CNDDB reports an occurrence of this species which overlaps the Plan Area.
Stebbinsoseris decipiens Santa Cruz microseris	/ / 1B	Broadleaved upland forest, closed-cone coniferous forest, chaparral, coastal prairie, coastal scrub, and openings in valley and foothill grassland, sometimes on serpentinite, at elevations of 10-500 meters. Annual herb in the Asteraceae family; blooms April-May.	<b>Moderate</b> Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 1.3 miles from the Plan Area.
Trifolium buckwestiorum Santa Cruz clover	/ / 1B	Gravelly margins of broadleaved upland forest, cismontane woodland, and coastal prairie at elevations of 105-610 meters. Annual herb in the Fabaceae family; blooms April-October.	Moderate Suitable habitat is present within the Plan Area. The nearest CNDDB occurrence is reported 0.5 mile from the Plan Area.

Species	Status (Service/CDFW/CNPS)	General Habitat	Potential Occurrence within Project Site
<i>Trifolium hydrophilum</i> Saline clover	/ / 1B	Marshes and swamps, mesic and alkaline valley and foothill grassland, and vernal pools at elevations of 0-300 meters.	Low Marginal habitat present within the Plan Area. The
		Annual herb in the Fabaceae family; blooms April-June.	nearest CNDDB occurrence is reported 0.7 mile from the Plan Area.
Trifolium polyodon	/ SR / 1B	Mesic areas of closed-cone coniferous forest, coastal prairie,	Moderate
Pacific Grove clover		meadows and seeps, and valley and foothill grassland at	Suitable habitat is present within the Plan Area. The

		family; blooms April-July.	from the Plan Area.
Trifolium trichocalyx	FE / SE / 1B	Sandy openings and burned areas of closed-cone coniferous	Moderate
Monterey clover		forest at elevations of 30-240 meters. Annual herb in the	Suitable habitat is present within the Plan Area. The
		Fabaceae family; blooms April-June.	CNDDB reports several occurrences of this species
			within 0.5 mile of the Plan Area.

#### STATUS DEFINITIONS

#### Federal

- FE = listed as Endangered under the federal Endangered Species Act
- FT = listed as Threatened under the federal Endangered Species Act
- FC = Candidate for listing under the federal Endangered Species Act
- -- = no listing

#### State

- SE = listed as Endangered under the California Endangered Species Act
- ST = listed as Threatened under the California Endangered Species Act
- SC = Candidate for listing under California Endangered Species Act
- SR = plants listed as Rare under the California Native Plant Protection Act
- CFP = California Fully Protected Species
- CSC = CDFW Species of Concern
- -- = no listing

#### California Native Plant Society

- 1B = California Rare Plant Rank 1B species; plants rare, threatened, or endangered in California and elsewhere
- -- = no listing

#### POTENTIAL TO OCCUR

Present= known occurrence of species within the site; presence of suitable habitat conditions; or observed during field surveysHigh= known occurrence of species in the vicinity from the CNDDB or other documentation; presence of suitable habitat conditionsModerate= known occurrence of species in the vicinity from the CNDDB or other documentation; presence of marginal habitat conditions within the siteLow= species known to occur in the vicinity from the CNDDB or other documentation; lack of suitable habitat or poor qualityUnlikely= species not known to occur in the vicinity from the CNDDB or other documentation, no suitable habitat is present within the siteNot Present= species was not observed during surveys

## **APPENDIX C**

IPaC Resource List

# IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

## Local office

Ventura Fish And Wildlife Office

(805) 644-1766 (805) 644-3958

2493 Portola Road, Suite B Ventura, CA 93003-7726

# Endangered species

# This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

- 1. Draw the project location and click CONTINUE.
- 2. Click DEFINE PROJECT.
- 3. Log in (if directed to do so).
- 4. Provide a name and description for your project.
- 5. Click REQUEST SPECIES LIST.

Listed species<sup>1</sup> and their critical habitats are managed by the <u>Ecological Services Program</u> of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries<sup>2</sup>).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact <u>NOAA Fisheries</u> for <u>species under their jurisdiction</u>.

- Species listed under the <u>Endangered Species Act</u> are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the <u>listing status page</u> for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
- 2. <u>NOAA Fisheries</u>, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

California Condor Gymnogyps californianus There is final critical habitat for this species. The location of the critical habitat is not available. <u>https://ecos.fws.gov/ecp/species/8193</u>	Endangered

## Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

This location overlaps the critical habitat for the following species:

NAME	TYPE
Yadon's Piperia Piperia yadonii https://ecos.fws.gov/ecp/species/4205#crithab	Final

# Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act<sup>1</sup> and the Bald and Golden Eagle Protection Act<sup>2</sup>.

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described <u>below</u>.

- 1. The <u>Migratory Birds Treaty Act</u> of 1918.
- 2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern <u>http://www.fws.gov/birds/management/managed-species/</u> <u>birds-of-conservation-concern.php</u>
- Measures for avoiding and minimizing impacts to birds <u>http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/</u> <u>conservation-measures.php</u>
- Nationwide conservation measures for birds <u>http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf</u>

The birds listed below are birds of particular concern either because they occur on the <u>USFWS Birds</u> <u>of Conservation Concern</u> (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ <u>below</u>. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the <u>E-bird data mapping tool</u> (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird

species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found <u>below</u>.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

# Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

# Probability of Presence (

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

- 1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
- 2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
- 3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

## Breeding Season (=)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

## Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

## No Data (–)

A week is marked as having no data if there were no survey events for that week.

## Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

<u>Nationwide Conservation Measures</u> describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. <u>Additional measures</u> or <u>permits</u> may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

#### What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS <u>Birds of Conservation Concern (BCC)</u> and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the <u>Avian Knowledge Network</u> (<u>AKN</u>). The AKN data is based on a growing collection of <u>survey</u>, <u>banding</u>, <u>and citizen science datasets</u> and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (<u>Eagle Act</u> requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the <u>AKN Phenology Tool</u>.

# What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the <u>Avian Knowledge Network (AKN)</u>. This data is derived from a growing collection of <u>survey, banding, and citizen</u> <u>science datasets</u>.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

### How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: <u>The Cornell Lab of Ornithology All About Birds Bird Guide</u>, or (if you are unsuccessful in locating the bird of interest there), the <u>Cornell Lab of Ornithology Neotropical Birds</u> <u>guide</u>. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

### What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

- 1. "BCC Rangewide" birds are <u>Birds of Conservation Concern</u> (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
- 2. "BCC BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
- 3. "Non-BCC Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the <u>Eagle Act</u> requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

#### Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the <u>Northeast Ocean Data Portal</u>. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the <u>NOAA NCCOS</u> <u>Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf</u> project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the <u>Diving Bird Study</u> and the <u>nanotag studies</u> or contact <u>Caleb Spiegel</u> or <u>Pam</u> <u>Loring</u>.

### What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to <u>obtain a permit</u> to avoid violating the Eagle Act should such impacts occur.

### Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

# Facilities

# National Wildlife Refuge lands

Any activity proposed on lands managed by the <u>National Wildlife Refuge</u> system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

# Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

# Wetlands in the National Wetlands Inventory

Impacts to <u>NWI wetlands</u> and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local <u>U.S. Army Corps of</u> Engineers District.

### WETLAND INFORMATION IS NOT AVAILABLE AT THIS TIME

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the <u>NWI map</u> to view wetlands at this location.

#### **Data limitations**

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

#### Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

#### **Data precautions**

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this

#### 5/14/2021

#### IPaC: Explore Location resources

inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.
