

# MITIGATED NEGATIVE DECLARATION

Project No. 609169 SCH No. 2022100046

#### SUBJECT:

**Novakovic Residence**: A COASTAL DEVELOPMENT PERMIT for demolition of the 480 square foot (sf) detached garage and partial demolition of the one-story 1,018 (sf) single-family residence to convert to a 1,018 sf accessory dwelling unit with a carport, and construction of a three-story 3,015 single-family modular residence with basement. The project would also construct associated site improvements (l.e. hardscape, site walls, driveway, landscaping). The proposed structures would not exceed 30 feet in height from grade. The 0.18-acre project site is located at 2288 Via Aprilia. The site is designated Residential and zoned RS-1-7 (Residential-Single Unit) zone within the Torrey Pines Community Plan area. Additionally, the site is located within the Coastal (Non-Appealable) Overlay Zone, Coastal Height Overlay Zone, Parking Impact Overlay Zone (Coastal Impact), and Mobility Zone 4. (LEGAL DESCRIPTION: Lots 26 and 27 in Block 1 of Del Mar Terrace per map 1527). APPLICANT: Tom Love.

I. PROJECT DESCRIPTION:

See attached Initial Study.

II. ENVIRONMENTAL SETTING:

See attached Initial Study.

#### III. DETERMINATION:

The City of San Diego conducted an Initial Study which determined that the proposed project could have a significant environmental effect in the following areas(s): **CULTURAL RESOURCES (ARCHAEOLOGY), TRIBAL CULTURAL RESOURCES.** Subsequent revisions in the project proposal create the specific mitigation identified in Section V of this Mitigated Negative Declaration. The project as revised now avoids or mitigates the potentially significant environmental effects previously identified, and the preparation of an Environmental Impact Report will not be required.

#### IV. DOCUMENTATION:

The attached Initial Study documents the reasons to support the above Determination.

#### V. MITIGATION, MONITORING AND REPORTING PROGRAM:

# A. GENERAL REQUIREMENTS – PART I Plan Check Phase (prior to permit issuance)

- 1. Prior to the issuance of a Notice To Proceed (NTP) for a subdivision, or any construction permits, such as Demolition, Grading or Building, or beginning any construction related activity on-site, the Development Services Department (DSD) Director's Environmental Designee (ED) shall review and approve all Construction Documents (CD), (plans, specification, details, etc.) to ensure the MMRP requirements are incorporated into the design.
- 2. In addition, the ED shall verify that the MMRP Conditions/Notes that apply ONLY to the construction phases of this project are included VERBATIM, under the heading, "ENVIRONMENTAL/MITIGATION REQUIREMENTS."
- These notes must be shown within the first three (3) sheets of the
  construction documents in the format specified for engineering construction
  document templates as shown on the City website:
  <a href="https://www.sandiego.gov/development-services/forms-publications/design-guidelines-templates">https://www.sandiego.gov/development-services/forms-publications/design-guidelines-templates</a>
- 4. The **TITLE INDEX SHEET** must also show on which pages the "Environmental/Mitigation Requirements" notes are provided.
- 5. **SURETY AND COST RECOVERY -** The Development Services Director or City Manager may require appropriate surety instruments or bonds from private Permit Holders to ensure the long-term performance or implementation of required mitigation measures or programs. The City is authorized to recover its cost to offset the salary, overhead, and expenses for City personnel and programs to monitor qualifying projects.
- B. GENERAL REQUIREMENTS PART II

  Post Plan Check (After permit issuance/Prior to start of construction)
  - 1. PRECONSTRUCTION MEETING IS REQUIRED TEN (10) WORKING DAYS PRIOR TO BEGINNING ANY WORK ON THIS PROJECT. The PERMIT HOLDER/OWNER is responsible to arrange and perform this meeting by contacting the CITY RESIDENT ENGINEER (RE) of the Field Engineering Division and City staff from MITIGATION MONITORING COORDINATION (MMC). Attendees must also include the Permit holder's Representative(s), Job Site Superintendent and the following consultants:

Qualified Archaeologist
Qualified Native American Monitor

Note: Failure of all responsible Permit Holder's representatives and consultants to attend shall require an additional meeting with all parties present.

#### CONTACT INFORMATION:

- a) The PRIMARY POINT OF CONTACT is the **RE** at the **Field Engineering Division 858-627-3200**
- b) For Clarification of ENVIRONMENTAL REQUIREMENTS, it is also required to call **RE and MMC at 858-627-3360**
- 2. MMRP COMPLIANCE: This Project, Project Tracking System (PTS) #609169, shall conform to the mitigation requirements contained in the associated Environmental Document and implemented to the satisfaction of the DSD's Environmental Designee (MMC) and the City Engineer (RE). The requirements may not be reduced or changed but may be annotated (i.e. to explain when and how compliance is being met and location of verifying proof, etc.). Additional clarifying information may also be added to other relevant plan sheets and/or specifications as appropriate (i.e., specific locations, times of monitoring, methodology, etc.

Note: Permit Holder's Representatives must alert RE and MMC if there are any discrepancies in the plans or notes, or any changes due to field conditions. All conflicts must be approved by RE and MMC BEFORE the work is performed.

3. OTHER AGENCY REQUIREMENTS: Evidence of compliance with all other agency requirements or permits shall be submitted to the RE and MMC for review and acceptance prior to the beginning of work or within one week of the Permit Holder obtaining documentation of those permits or requirements. Evidence shall include copies of permits, letters of resolution or other documentation issued by the responsible agency: *Not Applicable* 

#### 4. MONITORING EXHIBITS

All consultants are required to submit, to RE and MMC, a monitoring exhibit on a 11x17 reduction of the appropriate construction plan, such as site plan, grading, landscape, etc., marked to clearly show the specific areas including the **LIMIT OF WORK**, scope of that discipline's work, and notes indicating when in the construction schedule that work will be performed. When necessary for clarification, a detailed methodology of how the work will be performed shall be included.

NOTE: Surety and Cost Recovery - When deemed necessary by the Development Services Director or City Manager, additional surety instruments or bonds from the private Permit Holder may be required to ensure the long-term performance or implementation of required mitigation measures or programs. The City is authorized to recover its cost to offset the salary, overhead, and expenses for City personnel and programs to monitor qualifying projects.

#### 5. OTHER SUBMITTALS AND INSPECTIONS:

The Permit Holder/Owner's representative shall submit all required documentation, verification letters, and requests for all associated inspections to the RE and MMC for approval per the following schedule:

Document Submittal/Inspection Checklist				
Issue Area	Document Submittal	Associated Inspection/Approvals/Notes		
General	Consultant Qualification Letters	Prior to Preconstruction Meeting		
General	Consultant Construction Monitoring Exhibits	Prior to Preconstruction Meeting		
Cultural Resources (Archaeology)	Monitoring Report(s)	Archaeology/Historic Site Observation		
Tribal Cultural Resources	Monitoring Report(s)	Archaeology/Historic Site Observation		
Bond Release	Request for Bond Release Letter	Final MMRP Inspections Prior to Bond Release Letter		

## C SPECIFIC MMRP ISSUE AREA REQUIREMENTS

## HISTORIC RESOURCES (ARCHAEOLOGY)

- I. Prior to Permit Issuance
  - A. Entitlements Plan Check
    - Prior to issuance of any construction permits, including but not limited to, the first Grading Permit, Demolition Plans/Permits and Building Plans/Permits or a Notice to Proceed for Subdivisions, but prior to the first preconstruction meeting, whichever is applicable, the Assistant Deputy Director (ADD) Environmental designee shall verify that the requirements for Archaeological Monitoring and Native American monitoring have been noted on the applicable construction documents through the plan check process.
  - B. Letters of Qualification have been submitted to ADD
    - The applicant shall submit a letter of verification to Mitigation
       Monitoring Coordination (MMC) identifying the Principal Investigator
       (PI) for the project and the names of all persons involved in the
       archaeological monitoring program, as defined in the City of San

Diego Historical Resources Guidelines (HRG). If applicable, individuals involved in the archaeological monitoring program must have completed the 40-hour HAZWOPER training with certification documentation.

- MMC will provide a letter to the applicant confirming the qualifications of the PI and all persons involved in the archaeological monitoring of the project meet the qualifications established in the HRG.
- 3. Prior to the start of work, the applicant must obtain written approval from MMC for any personnel changes associated with the monitoring program.

#### II. Prior to Start of Construction

## A. Verification of Records Search

- The PI shall provide verification to MMC that a site-specific records search (1quarter-mile radius) has been completed. Verification includes, but is not limited to a copy of a confirmation letter from South Coastal Information Center, or, if the search was in-house, a letter of verification from the PI stating that the search was completed.
- 2. The letter shall introduce any pertinent information concerning expectations and probabilities of discovery during trenching and/or grading activities.
- 3. The PI may submit a detailed letter to MMC requesting a reduction to the ¼ mile radius.

#### B. PI Shall Attend Precon Meetings

 Prior to beginning any work that requires monitoring; the Applicant shall arrange a Precon Meeting that shall include the PI, Native American consultant/monitor (where Native American resources may be impacted), Construction Manager (CM) and/or Grading Contractor, Resident Engineer (RE), Building Inspector (BI), if appropriate, and MMC. The qualified Archaeologist and Native American Monitor shall attend any grading/excavation related Precon Meetings to make comments and/or suggestions concerning the Archaeological Monitoring program with the Construction Manager and/or Grading Contractor.  a. If the PI is unable to attend the Precon Meeting, the Applicant shall schedule a focused Precon Meeting with MMC, the PI, RE, CM or BI, if appropriate, prior to the start of any work that requires monitoring.

## 2. Identify Areas to be Monitored

- a. Prior to the start of any work that requires monitoring, the PI shall submit an Archaeological Monitoring Exhibit (AME) (with verification that the AME has been reviewed and approved by the Native American consultant/monitor when Native American resources may be impacted) based on the appropriate construction documents (reduced to 11x17) to MMC identifying the areas to be monitored including the delineation of grading/excavation limits.
- b. The AME shall be based on the results of a site-specific records search as well as information regarding existing known soil conditions (native or formation).
- 3. When Monitoring Will Occur
- a. Prior to the start of any work, the PI shall also submit a construction schedule to MMC through the RE indicating when and where monitoring will occur.
- b. The PI may submit a detailed letter to MMC prior to the start of work or during construction requesting a modification to the monitoring program. This request shall be based on relevant information such as review of final construction documents which indicate site conditions such as depth of excavation and/or site graded to bedrock, etc., which may reduce or increase the potential for resources to be present.

## III. During Construction

- A. Monitor(s) Shall be Present During Grading/Excavation/Trenching
  - The Archaeological Monitor shall be present fulltime during all soil
    disturbing and grading/excavation/trenching activities which could
    result in impacts to archaeological resources as identified on the
    AME. The Construction Manager is responsible for notifying the RE,
    PI, and MMC of changes to any construction activities such as in the
    case of a potential safety concern within the area being monitored.

In certain circumstances OSHA safety requirements may necessitate modification of the AME.

- 2. The Native American consultant/monitor shall determine the extent of their presence during soil disturbing and grading/excavation/trenching activities based on the AME and provide that information to the PI and MMC. If prehistoric resources are encountered during the Native American consultant/monitor's absence, work shall stop and the Discovery Notification Process detailed in Section III.B-C and IV.A-D shall commence.
- 3. The PI may submit a detailed letter to MMC during construction requesting a modification to the monitoring program when a field condition such as modern disturbance post-dating the previous grading/trenching activities, presence of fossil formations, or when native soils are encountered that may reduce or increase the potential for resources to be present.
- 4. The archaeological and Native American consultant/monitor shall document field activity via the Consultant Site Visit Record (CSVR). The CSVR's shall be faxed by the CM to the RE the first day of monitoring, the last day of monitoring, monthly (Notification of Monitoring Completion), and in the case of ANY discoveries. The RE shall forward copies to MMC.
  - B. Discovery Notification Process
    - In the event of a discovery, the Archaeological Monitor shall direct
      the contractor to temporarily divert all soil disturbing activities,
      including but not limited to digging, trenching, excavating or grading
      activities in the area of discovery and in the area reasonably
      suspected to overlay adjacent resources and immediately notify the
      RE or BI, as appropriate.
- 2. The Monitor shall immediately notify the PI (unless Monitor is the PI) of the discovery.
- 3. The PI shall immediately notify MMC by phone of the discovery and shall also submit written documentation to MMC within 24 hours by fax or email with photos of the resource in context, if possible.
- No soil shall be exported off-site until a determination can be made regarding the significance of the resource specifically if Native American resources are encountered.
  - C. Determination of Significance

- The PI and Native American consultant/monitor, where Native
   American resources are discovered shall evaluate the significance of
   the resource. If Human Remains are involved, follow protocol in
   Section IV below.
  - The PI shall immediately notify MMC by phone to discuss significance determination and shall also submit a letter to MMC indicating whether additional mitigation is required.
  - b. If the resource is significant, the PI shall submit an Archaeological Data Recovery Program (ADRP) which has been reviewed by the Native American consultant/monitor and obtain written approval from MMC. Impacts to significant resources must be mitigated before ground disturbing activities in the area of discovery will be allowed to resume. Note: If a unique archaeological site is also an historical resource as defined in Guidelines Section, then the limits on the amount(s) that a project applicant may be required to pay to cover mitigation costs as indicated in CEQA Section 21083.2 shall not apply.
  - c. If the resource is not significant, the PI shall submit a letter to MMC indicating that artifacts will be collected, curated, and documented in the Final Monitoring Report. The letter shall also indicate that that no further work is required.

### IV. Discovery of Human Remains

If human remains are discovered, work shall halt in that area and no soil shall be exported off-site until a determination can be made regarding the provenance of the human remains; and the following procedures as set forth in CEQA Section 15064.5(e), the California Public Resources Code (Sec. 5097.98) and State Health and Safety Code (Sec. 7050.5) shall be undertaken:

#### A. Notification

- Archaeological Monitor shall notify the RE or BI as appropriate, MMC, and the PI, if the Monitor is not qualified as a PI. MMC will notify the appropriate Senior Planner in the Environmental Analysis Section (EAS) of the Development Services Department to assist with the discovery notification process.
- 2. The PI shall notify the Medical Examiner after consultation with the RE, either in person or via telephone.

## B. Isolate discovery site

- Work shall be directed away from the location of the discovery and any nearby area reasonably suspected to overlay adjacent human remains until a determination can be made by the Medical Examiner in consultation with the PI concerning the provenance of the remains.
- 2. The Medical Examiner, in consultation with the PI, will determine the need for a field examination to determine the provenance.
- 3. If a field examination is not warranted, the Medical Examiner will determine with input from the PI, if the remains are or are most likely to be of Native American origin.

#### C. If Human Remains ARE determined to be Native American

- The Medical Examiner will notify the Native American Heritage Commission (NAHC) within 24 hours. By law, ONLY the Medical Examiner can make this call.
- NAHC will immediately identify the person or persons determined to be the Most Likely Descendent (MLD) and provide contact information.
- The MLD will contact the PI within 24 hours or sooner after the Medical Examiner has completed coordination, to begin the consultation process in accordance with CEQA Guidelines Section 15064.5(e), the California Public Resources and Health & Safety Codes.
- 4. The MLD will have 48 hours to make recommendations to the property owner or representative, for the treatment or disposition with proper dignity, of the human remains and associated grave goods.
- 5. Disposition of Native American Human Remains will be determined between the MLD and the PI, and, if:
  - a. The NAHC is unable to identify the MLD, OR the MLD failed to make a recommendation within 48 hours after being granted access to the site, OR;
  - b. The landowner or authorized representative rejects the recommendation of the MLD and mediation in accordance with PRC 5097.94 (k) by the NAHC fails to provide measures acceptable to the landowner, the landowner shall reinter the human remains and items associated with Native American

human remains with appropriate dignity on the property in a location not subject to further and future subsurface disturbance, THEN

- c. To protect these sites, the landowner shall do one or more of the following:
  - (1) Record the site with the NAHC;
  - (2) Record an open space or conservation easement; or
  - (3) Record a document with the County. The document shall be titled "Notice of Reinterment of Native American Remains" and shall include a legal description of the property, the name of the property owner, and the owner's acknowledged signature, in addition to any other information required by PRC 5097.98. The document shall be indexed as a notice under the name of the owner.

## V. Night and/or Weekend Work

- A. If night and/or weekend work is included in the contract
  - When night and/or weekend work is included in the contract package, the extent and timing shall be presented and discussed at the precon meeting.
  - The following procedures shall be followed.
    - a. No Discoveries

In the event that no discoveries were encountered during night and/or weekend work, the PI shall record the information on the CSVR and submit to MMC via fax by 8AM of the next business day.

b. Discoveries

All discoveries shall be processed and documented using the existing procedures detailed in Sections III - During Construction, and IV – Discovery of Human Remains. Discovery of human remains shall always be treated as a significant discovery.

c. Potentially Significant Discoveries

If the PI determines that a potentially significant discovery has been made, the procedures detailed under Section III - During Construction and IV-Discovery of Human Remains shall be followed.

- d. The PI shall immediately contact MMC, or by 8AM of the next business day to report and discuss the findings as indicated in Section III-B, unless other specific arrangements have been made.
- B. If night and/or weekend work becomes necessary during the course of construction
  - 1. The Construction Manager shall notify the RE, or BI, as appropriate, a minimum of 24 hours before the work is to begin.
  - 2. The RE, or BI, as appropriate, shall notify MMC immediately.
- C. All other procedures described above shall apply, as appropriate.

#### VI. Post Construction

- A. Preparation and Submittal of Draft Monitoring Report
  - 1. The PI shall submit two copies of the Draft Monitoring Report (even if negative), prepared in accordance with the Historical Resources Guidelines (Appendix C/D) which describes the results, analysis, and conclusions of all phases of the Archaeological Monitoring Program (with appropriate graphics) to MMC for review and approval within 90 days following the completion of monitoring. It should be noted that if the PI is unable to submit the Draft Monitoring Report within the allotted 90-day timeframe resulting from delays with analysis, special study results or other complex issues, a schedule shall be submitted to MMC establishing agreed due dates and the provision for submittal of monthly status reports until this measure can be met.
    - For significant archaeological resources encountered during monitoring, the Archaeological Data Recovery Program shall be included in the Draft Monitoring Report.
    - b. Recording Sites with State of California Department of Parks and Recreation

The PI shall be responsible for recording (on the appropriate State of California Department of Park and Recreation forms-DPR 523 A/B) any significant or potentially significant resources encountered during the Archaeological Monitoring Program in accordance with the City's Historical Resources Guidelines, and submittal of such forms to the South Coastal Information Center with the Final Monitoring Report.

- 2. MMC shall return the Draft Monitoring Report to the PI for revision or, for preparation of the Final Report.
- 3. The PI shall submit revised Draft Monitoring Report to MMC for approval.
- 4. MMC shall provide written verification to the PI of the approved report.
- 5. MMC shall notify the RE or BI, as appropriate, of receipt of all Draft Monitoring Report submittals and approvals.

## B. Handling of Artifacts

- 1. The PI shall be responsible for ensuring that all cultural remains collected are cleaned and catalogued
- 2. The PI shall be responsible for ensuring that all artifacts are analyzed to identify function and chronology as they relate to the history of the area; that faunal material is identified as to species; and that specialty studies are completed, as appropriate.
- 3. The cost for curation is the responsibility of the property owner.
- C. Curation of artifacts: Accession Agreement and Acceptance Verification
  - The PI shall be responsible for ensuring that all artifacts associated with the survey, testing and/or data recovery for this project are permanently curated with an appropriate institution. This shall be completed in consultation with MMC and the Native American representative, as applicable.
  - 2. The PI shall include the Acceptance Verification from the curation institution in the Final Monitoring Report submitted to the RE or BI and MMC.

3. When applicable to the situation, the PI shall include written verification from the Native American consultant/monitor indicating that Native American resources were treated in accordance with state law and/or applicable agreements. If the resources were reinterred, verification shall be provided to show what protective measures were taken to ensure no further disturbance occurs in accordance with Section IV – Discovery of Human Remains, Subsection 5.

## D. Final Monitoring Report(s)

- 1. The PI shall submit one copy of the approved Final Monitoring Report to the RE or BI as appropriate, and one copy to MMC (even if negative), within 90 days after notification from MMC that the draft report has been approved.
- 2. The RE shall, in no case, issue the Notice of Completion and/or release of the Performance Bond for grading until receiving a copy of the approved Final Monitoring Report from MMC which includes the Acceptance Verification from the curation institution.

#### TRIBAL CULTURAL RESOURCES

## TCR-1

Impacts to Tribal Cultural Resources would be reduced to below a level of significance with implementation of mitigation measures outlined under Historical Resources (Archaeology)

## VI. PUBLIC REVIEW DISTRIBUTION:

Draft copies or notice of this Mitigated Negative Declaration were distributed to:

## San Diego County Archaeological Society, Inc.

Environmental Review Committee

22 October 2022

To:

Ms. Marlene Watanabe

Development Services Department

City of San Diego

1222 First Avenue, Mail Station 501

San Diego, California 92101

Subject:

Draft Mitigated Negative Declaration

Novakovic Residence

Project No. 609169

Dear Ms. Watanabe .:

A-1

I have reviewed the subject DMND on behalf of this committee of the San Diego County Archaeological Society.

Based on the information contained in the DMND and the cultural resources report prepared by ASM, we agree with the recommendation for archaeological and Native American monitoring as described.

A-2

As I stated in the voice mail message I left for you this evening, the posted version of the ASM report for this project contains restricted information and should not be available to the public. Please ensure that it is treated in accordance with the requirements for such sensitive information.

Thank you for the opportunity to review and comment upon this DMND.

Sincerely,

James W. Royle, Jr., Chairperson Environmental Review Committee

cc: ASM Affiliates SDCAS President File

P.O. Box 81106 San Diego, CA 92138-1106 (858) 538-0935

#### City staff response(s) to the San Diego County Archaeological Society, Inc. comment(s) letter

- A-1. Comment noted. The comment does not address the adequacy of the draft Mitigated Negative Declaration. No further response is required.
- A-2. Confidential information has been removed from the posted version of the ASM report.

Hello, we the Campo Band of Mission Indians have received your Notice of Availability regarding "Project Name:

Novakovic Residence Project No. 609169". We do have concerns with this project concerning impacts on Tribal Cultural Resources and mitigation plans. We would like to be consulted on this matter. Thank you for reaching out.

Best Regards,

#### Daniel Tsosie

#### City staff response(s) to the Campo Band of Mission Indians comment(s) letter

B-1. Comment noted. The proposed project will be required to conduct Archaeological and Native American Monitoring during earthwork activities as outlined in the MND and Mitigation Monitoring and Reporting Program. Tribal Consultation under AB 52 was conducted for the proposed project in accordance with the requirements of Public Resources Code 21080.3.1. The City of San Diego provided formal notifications to tribes who have requested notification of projects and are traditionally and culturally affiliated with the project area on October 2, 2020. Tribal Consultation has since concluded.

#### **INITIAL STUDY CHECKLIST**

- 1. Project title/Project number: Novakovic Residence / 609169
- 2. Lead agency name and address: City of San Diego, 1222 First Avenue, MS-501, San Diego, California 92101
- 3. Contact person and phone number: Marlene Watanabe / (619) 446-5129
- 4. Project location: 2288 Via Aprilia, San Diego, California, 92014
- 5. Project Applicant/Sponsor's name and address: Thomas Love, 31915 Rancho California Road, Temecula, CA 92591, (951) 440-8149
- 6. General/Community Plan designation: Low Residential Density (5-9 du/ac)
- 7. Zoning: RS-1-7 (Residential Single Unit)
- 8. Description of project (Describe the whole action involved, including but not limited to, later phases of the project, and any secondary, support, or off-site features necessary for its implementation.):

The project requests a COASTAL DEVELOPMENT PERMIT for the demolition of the 480 square foot (sf) detached garage and partial demolition of the one-story 1,018 (sf) single-family residence to convert to a 1,018 sf accessory dwelling unit with a carport, and construction of a three-story 3,015 single-family modular residence with basement. The project would also construct associated site improvements (l.e. hardscape, site walls, driveway, landscaping). The proposed structures would not exceed 30 feet in height from grade. The project's landscaping has been reviewed by staff and would comply with all applicable City of San Diego Landscape ordinances and standards. Drainage would be directed into appropriate storm drain systems designated to carry surface runoff, which has been reviewed and accepted by City Engineering staff. All parking would be provided on-site.

Drainage would be directed into appropriate storm drain systems designated to carry surface runoff, which has been reviewed and accepted by City Engineering staff. Vehicular access would occur off of Via Aprilia. All parking would be provided on site.

9. Surrounding land uses and setting:

The 0.18-acre site is located at 2288 Via Aprilia and is located on the northern side of Via Aprilia, west of Via Cortina and east of Via Borgia. The project is within a developed residential neighborhood surrounded by similar existing single-family residences. The project site is developed with a single-family residence, and the project is bordered by similar residential development. The site is bounded by a rear yard descending slope. The

slope descends from the adjoining property on the north and is approximately 15 feet in maximum height at an approximate maximum inclination of 2:1 (H:V). The site is also bounded on the south by Via Aprilia. The street frontage along Via Aprilia is landscaped with non-native shrubs and grass, and with no sidewalk s along the frontage. Additionally, the project site is currently served by existing public services and utilities.

The parcel is designated Residential and zoned RS-1-7 (Residential-Single Unit) within the Torrey pines Community Plan area and North City Local Coastal Program Land Use Program. Additionally, the project is located within the Coastal Overlay Zone (Non-Appealable area), Coastal Height Limitation Overlay Zone, parking Impact Overlay Zone, and Mobility Zone 4.

- Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):
   None required.
- 11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

In accordance with the requirements of Public Resources Code 21080.3.1, the City of San Diego provided formal notifications to the lipay Nation of Santa Ysabel, the Jamul Indian Village, and the San Pasqual Band of Mission Indians which are traditionally and culturally affiliated with the project area; requesting consultation on October 2, 2020. lipay Nation of Santa Ysabel responded on October 4, 2020 concurring with staff's recommendation to require monitoring. Jamul Indian Village responded on October 14, 2020, concurring with staff's recommendation to require monitoring. San Pasqual Band of Mission Indians did not respond. Please see Section XVIII of the Initial Study for more detail.

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

		evisions i	n the project have been made		ment, there will not be a significant reed to by the project proponent. A
	The proposed project MAY is required.	have a sig	nificant effect on the environ	ment, and	an ENVIRONMENTAL IMPACT REPORT
	The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (a) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (b) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but must analyze only the effects that remain to be addressed.				
	Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or (MITIGATED) NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or (MITIGATED) NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.				

#### **EVALUATION OF ENVIRONMENTAL IMPACTS:**

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact answer should be explained where it is based on project specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis.)
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses", as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or (mitigated) negative declaration. *Section 15063(c)(3)(D).* In this case, a brief discussion should identify the following:
  - a. Earlier Analysis Used. Identify and state where they are available for review.
  - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated", describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
  - a. The significance criteria or threshold, if any, used to evaluate each question; and
  - b. The mitigation measure identified, if any, to reduce the impact to less than significant.

	Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

	R QUALITY – Where available, the significance air pollution control district may be relied on				
a)	Conflict with or obstruct implementation of the applicable air quality plan?				

The San Diego Air Pollution Control District (SDAPCD) and San Diego Association of Governments (SANDAG) are responsible for developing and implementing the clean air plan for attainment and maintenance of the ambient air quality standards in the San Diego Air Basin (SDAB). The County Regional Air Quality Strategy (RAQS) was initially adopted in 1991 and is updated on a triennial basis (most recently in 2020). The RAQS outlines the SDAPCD's plans and control measures designed to attain the state air quality standards for ozone (O3). The RAQS relies on information from the California Air Resources Board (CARB) and SANDAG, including mobile and area source emissions, as well as information regarding projected growth in San Diego County and the cities in the county, to project future emissions and then determine the strategies necessary for the reduction of emissions through regulatory controls. CARB mobile source emission projections and SANDAG growth projections are based on population, vehicle trends, and land use plans developed by San Diego County and the cities in the county as part of the development of their general plans.

The RAQS relies on SANDAG growth projections based on population, vehicle trends, and land use plans developed by the cities and by the county as part of the development of their general plans. As such, projects that propose development that is consistent with the growth anticipated by local plans would be consistent with the RAQS. However, if a project proposes development that is greater than that anticipated in the local plan and SANDAG's growth projections, the project might be in conflict with the RAQS and may contribute to a potentially significant cumulative impact on air quality.

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact	
-------	--------------------------------------	---	------------------------------------	-----------	--

The project would be consistent with the General Plan, community plan, and the underlying zoning for single-family residential development. Therefore, the project would be consistent at a subregional level with the underlying growth forecasts in the RAQS and would not obstruct implementation of the RAQS or applicable air quality plan. As such, no impacts would result.

b)	Result in a cumulatively considerable net increase of any criteria pollutant for			
	which the project region is non-		$\boxtimes$	
	attainment under an applicable federal			
	or state ambient air quality standard?			

## Short-Term (Construction) Emissions.

Construction-related activities are temporary, short-term sources of air emissions. Sources of construction-related air emissions include fugitive dust from grading activities; construction equipment exhaust; construction-related trips by workers, delivery trucks, and material-hauling trucks; and construction-related power consumption.

Variables that factor into the total construction emissions potentially generated include the level of activity, length of construction period, number of pieces and types of equipment in use, site characteristics, weather conditions, number of construction personnel, and the amount of materials to be transported on or offsite.

Fugitive dust emissions are generally associated with land-clearing and grading operations. Construction operations would include standard measures as required by the City of San Diego to limit potential air quality impacts. Construction activities will be required to comply with the City's Best Management Practices (BMPs) which are enforceable under San Diego Municipal Code (SDMC) Section 142.0710. Therefore, impacts associated with fugitive dust are considered less than significant and would not violate an air quality standard or contribute substantially to an existing or projected air quality violation.

## Long-Term (Operational) Emissions.

Long-term air emission impacts are those associated with stationary sources and mobile sources related to any change caused by a project. Operation of a single-family residence would produce minimal stationary sources emissions. The project is compatible with the surrounding development and is permitted by the community plan and zone designation. As identified in the City's Significance Determination Thresholds, projects that would typically result in significant air quality impacts would include projects that would produce 9,500 Average Daily Trips (ADT). The scope and size of the project as described in the project description, does not exceed the City's Significance Determination Thresholds for Air Quality. Based on the residential land use, project emissions over the long-term are not anticipated to violate any air quality standard or contribute substantially to an existing or projected air quality violation, nor would the project result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment.

Iss	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact			
c)	Expose sensitive receptors to substantial pollutant concentrations?							
other point implement construit produce exposure	As described above, construction operations could temporarily increase the emissions of dust and other pollutants. However, construction emissions would be temporary and short-term in duration; implementation of Best Management Practices (BMPs) would reduce potential impacts related to construction activities to a less than significant level. Operation of a single-family residence would produce minimal stationary sources emissions. Therefore, the project would not result in the exposure of sensitive receptors to substantial pollutant concentrations. Impacts would be less than significant.							
d)	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			$\boxtimes$				
Short-te	erm (Construction)							
of the p unburned odors a of peop <b>Long-te</b> . Typical I such od	Odors would be generated from vehicles and/or equipment exhaust emissions during construction of the project. Odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and architectural coatings. Such odors are temporary and generally occur at magnitudes that would not affect a substantial number of people. Therefore, impacts would be less than significant.  *Long-term (Operational)*  Typical long-term operational characteristics of the project are not associated with the creation of such odors nor anticipated to generate odors affecting a substantial number of people. Residential units, in the long-term operation, are not typically associated with the creation of such odors nor are							
•	ons would result in less than signific	cant impacts.						
iV. BIOL	OGICAL RESOURCES – Would the project:  Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?							
single-fa	ject site is located in a developed re amily residence. On-site landscapin e biological resources nor does it co acts would occur, and no mitigation	g is non-nativ ontain any car	e, and the project s ndidate, sensitive o	site does not	contain any			
ripar	e a substantial adverse effect on any rian habitat or other sensitive natural munity identified in local or regional				$\boxtimes$			

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
-------	--------------------------------------	--	------------------------------------	-----------

plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

The project site is within an urbanized developed residential setting, no such habitats exist on or near the project site. Refer to Response IV (a), above. The project site does not contain any riparian habitat or other identified community, as the site currently supports non-native landscaping. No impacts would occur, and no mitigation measures are required.

c)	Have a substantial adverse effect on federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				
ro	ject site does not contain federally pi	rotected we	tlands as defined	by Section 404	of the C

The project site does not contain federally protected wetlands as defined by Section 404 of the Clean Water Act. Wetlands or waters as regulated by the United States Army Corps of Engineers (USACE), the Regional Water Quality Control Board (RWQCB) or the California Department of Fish and Wildlife (CDFW) do not occur on-site and therefore will not be impacted by the project. The project site is located within a developed residential neighborhood and is currently developed with structures, hardscape, and landscaping. No impacts would occur, and no mitigation measures are required.

d)	Interfere substantially with the			
	movement of any native resident or			
	migratory fish or wildlife species or with			$\square$
	established native resident or	Ш		
	migratory wildlife corridors, or impede			
	the use of native wildlife nursery sites?			

Wildlife movement corridors are defined as areas that connect suitable wildlife habitat areas in a region otherwise fragmented by rugged terrain, changes in vegetation, or human disturbance. Natural features such as canyon drainages, ridgelines, or areas with vegetation cover provide corridors for wildlife travel. The project site is surrounded by existing residential development and is not located adjacent to an established wildlife corridor and would not impede the movement of any wildlife or the use of any wildlife nursery sites. Therefore, no impact would occur, and no mitigation measures are required.

e)	Conflict with any local policies or				
	ordinances protecting biological				$\nabla$
	resources, such as a tree preservation	Ш	Ш	Ш	
	policy or ordinance?				

Refer to response IV (a), above. The project site is designated for Low Residential Density (5-9 du/ac) pursuant to the Torrey Pines Community Plan and zoned RS-1-7. The project is located on a developed residential site and the project does not conflict with local policies or ordinances protecting biological resources. Therefore, no impacts would occur.

Iss	ue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact			
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?							
directly of conserve	Please refer to IV (e) above. The project is located in a developed urban area and is not within or directly adjacent to the City's Multi-Habitat Planning Area (MHPA) and no other adopted conservation plans affect the subject site. The project does not conflict with any other local, regional, or state habitat conservation plan. No impacts would result.							
V. CULTU	JRAL RESOURCES – Would the project:							
a)	Cause a substantial adverse change in the significance of an historical resource as defined in §15064.5?			$\boxtimes$				
(Chapter historica of San D projects environ adverse environ demoliti (sections Register	The purpose and intent of the Historical Resources Regulations of the Land Development Code (Chapter 14, Division 3, and Article 2) is to protect, preserve and, where damaged, restore the historical resources of San Diego. The regulations apply to all proposed development within the City of San Diego when historical resources are present on the premises. Before approving discretionary projects, CEQA requires the Lead Agency to identify and examine the significant adverse environmental effects which may result from that project. A project that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (sections 15064.5(b) and 21084.1). A substantial adverse change is defined as demolition, destruction, relocation, or alteration activities, which would impair historical significance (sections 15064.5(b)(1)). Any historical resource listed in, or eligible to be listed in the California Register of Historical Resources, including archaeological resources, is considered to be historically or culturally significant.							
evaluate uniquen modifica	The City of San Diego criteria for determination of historic significance, pursuant to CEQA, is evaluated based upon age (over 45 years), location, context, association with an important event, uniqueness, or structural integrity of the building. Projects requiring the demolition and/or modification of structures that are 45 years or older have the potential to result in potential impacts to a historical resource.							
records, an individeterministic	ect site contains a single-family resi a photographic survey, and other of idually designated resources nor is to ned the property and/or the structually significant resources under the would be less than significant.	locumentation the parcel wi Fre does not	on by City Historic thin a designated meet the local des	staff, the struc historic distric ignation criter	cture is not ct. b)	Cause a substantial adverse change in							

Many areas of San Diego County, including mesas and the coast, are known for intense and diverse prehistoric occupation and important archaeological and historical resources. The region has been

the significance of an archaeological resource pursuant to \$15064.5?

 $\boxtimes$ 

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
-------	--------------------------------------	--	------------------------------------	-----------

inhabited by various cultural groups spanning 10,000 years or more. The project area is located within an area identified as sensitive on the City of San Diego's Historical Resources Sensitivity Maps.

A Cultural Resources Survey and Testing Report was prepared for the proposed project in August 2020 by ASM Affiliates, Inc. A records search of the California Historical Resources Information System (CHRIS) was completed by the South Coastal Information Center SCIC in April 2019. The records search indicated no cultural resources have been previously recorded on the parcel and three cultural resources have been previously recorded within the 0.25-mile record search radius. A pedestrian survey and archaeological excavation at the project site resulted in the recovery of a relatively low-density distribution of highly weathered marine shell. Analysis of the cultural material recovered and soils observed during test excavation indicates that the marine shell at this location is lacking in integrity, as defined in PRC SS5024.1, Title 14 CCR, Section 4852 and the City of San Diego Historical Resources Guidelines and is therefore, not eligible for listing in the California Register of Historical Resources under any of the four criteria for eligibility. However, due to the existing structural development, paving and landscaping on the majority of the project site, neither full coverage survey nor systematic test excavation were possible. As a result, archaeological and Native American monitoring of ground disturbing activities associated with the proposed project was recommended during grading activities in order to identify and avoid the potential for impacts to any intact cultural deposits within native soils that may be present on the parcel.

As such, an archaeological and Native American monitor must be present during all grading activities in order to reduce any potential impacts to a level below significance. A Mitigation Monitoring and Reporting Program, as detailed within Section V of the Mitigated Negative Declaration would be implemented to reduce impacts related to Historical Resources (archaeology) to below a level of significance.

VI. ENEF	RGY – Would the project:				
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?				

Potentially Issue Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	---	------------------------------------	-----------

The project would be required to meet mandatory energy standards of the current California energy code. Construction of the proposed project would require operation of heavy equipment but would be temporary and short-term in duration. Additionally, long-term energy usage from the buildings would be reduced through design measures that incorporate energy conservation features in heating, ventilation and air conditioning systems, lighting and window treatments, and insulation and weather stripping. The project would also incorporate cool-roofing materials. Development of the project would not result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources. Impacts would remain less than significant.

he pro	ject would not result in a significant ssary consumption of energy resou	: environmenta	al impact due to	wasteful, ineffi	cient, or
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				
designa mplem ocal pl	oject is consistent with the General Fation. The project is required in compening energy reducing design means for renewable energy or energy of the project:	ply with the Cosures, therefo	ity's Climate Actions it the project wo	on Plan (CAP) b ould not obstru	у
a)	Directly or indirectly cause potential subst involving:	antial adverse eff	ects, including the ris	k of loss, injury, or	death
	i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology				

or

According to the site-specific Geotechnical Investigation prepared by Geoboden Inc., dated March 27, 2020, the closest known active fault, the Rose Canyon Fault Zone is located approximately 2.3 miles away from the project site. The site is not traversed by an active, potentially active, or inactive fault and is not within an Alquist-Priolo Fault Zone. Earthquakes that generate from these faults or from other faults within southern California are potential generators of significant ground motion at the project site. However, the project would be required to comply with seismic requirement of the California Building Code, utilize proper engineering design and standard construction practices, to be verified at the building permit stage, in order to ensure that the project would reduce impacts to people or structures to an acceptable level of risk. Therefore, impacts would be less than significant.

Special Publication 42.

ii)	Strong seismic ground shaking?		$\boxtimes$	
Refer to VI	II (a)(i).			
iii	<ul> <li>Seismic-related ground failure, including liquefaction?</li> </ul>			

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

Liquefaction generally occurs when loose, unconsolidated, water-laden soils are subject to shaking, causing the soils to lose cohesion. According to the site-specific geotechnical investigation, the site would have a negligible risk for liquefaction because the site is not located within an area identified as having a potential for liquefaction and soils susceptible to liquefaction are not present on the site due to presence of bedrock. As such, the likelihood of the proposed project exposing people to seismic related ground failure or liquefaction is considered to be low, resulting in a less than significant impact.

According to the site-specific geotechnical investigation, evidence of landslides or slope instability was not observed on or in the vicinity of the project site. Due to the shallow topographic relief of the site and surrounding area, the possibility for landsliding is negligible. Implementation of proper engineering design and utilization of standard construction practices, to be verified at the building permit stage, would ensure that the potential for impacts would be reduced to an acceptable level of risk. Impacts would be less than significant.

b) Result in substantial soil erosion or the loss of topsoil?

Demolition and construction activities would temporarily expose soils to increased erosion potential. The project would be required to comply with the City's Storm Water Standards which requires the implementation of appropriate Best Management Practices (BMPs). Grading activities within the site would be required to comply with the City of San Diego Grading Ordinance as well as the Storm Water Standards, which would ensure soil erosion and topsoil loss is minimized to less than significant levels. Furthermore, permanent storm water BMPs would also be required postconstruction consistent with the City's regulations, along with landscape regulations. Therefore, the project would not result in substantial soils erosion or loss of topsoil. Impacts would be less than significant.

c) Be located on a geologic unit or soil
that is unstable, or that would become
unstable as a result of the project, and
potentially result in on- or off-site
landslide, lateral spreading, subsidence,
liquefaction or collapse?

As discussed in Section VI(a) and VI(b), the project site has a negligible potential to be subject to landslides, and the potential for liquefaction and subsidence is negligible. The soils and geologic units underlying the site are considered to have a "low" expansion potential. The project design would be required to comply with the requirements of the California Building Code ensuring hazards associated with expansive soils would be reduced to an acceptable level of risk. As such, impacts due to expansive soils are expected to be less than significant.

d)	Be located on expansive soil, as defined			
	in Table 18-1-B of the Uniform Building		$\bowtie$	
	Code (1994), creating substantial direct	Ш		
	or indirect risks to life or property?			

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The project site is considered to have low expansive soil potential. The project would be required to

comply of people of proper of building	with seismic requirements of the Califo or structures due to local seismic events engineering design and utilization of sta permit stage, would ensure that the po emain less than significant.	rnia Building Co s to an acceptab andard construc	de that would re le level of risk. water ar	ject site is located within an area that is nd sewer lines) and does not propose a the construction of any new facilities as e project. No impact would occur.	ny septic systen	n. In addition, th	e project does	not	
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				$\boxtimes$	
According to the site-specific Geotechnical Investigation prepared by Geoboden Inc., dated March 27, 2020, the project site is underlain by terrace deposits underlain by marine silty sandstone of						

bedrock deposits, which have a high sensitivity for the discovery of paleontological resources. According to the City of San Diego's Significance Determination Thresholds, more than 1,000 cubic yards of grading at depths of greater than 10 feet (less than 10 feet if the site has been graded) into formations with a high resource sensitivity rating could result in a significant impact to paleontological resources. Grading operations would entail approximately 100 cubic yards of cut to a depth of approximately eight feet. Therefore, the project would not exceed the City's Significance Determination Thresholds. No impact would result.

VIII. GREENHOUSE GAS EMISSIONS - Would the project: a) Generate greenhouse gas emissions, either directly or indirectly, that may П  $\boxtimes$ have a significant impact on the

environment?

The City's Climate Action Plan (CAP) outlines the actions that the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions. A CAP Consistency Checklist is part of the CAP and contains measures that are required to be implemented on a project-byproject basis to ensure that the specified emission targets identified in the CAP are achieved. The project is consistent with the General Plan and the Torrey Pines Community Plan's land use and zoning designations. Further, the project would implement the applicable strategies and actions outlined in Step 2 of the CAP Consistency Checklist.

Based on the project's consistency with the City's CAP through the CAP Consistency Checklist, the project's contribution of GHG's to cumulative statewide emissions would be less than cumulatively

Iss	ue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact	
considerable. Therefore, the projects cumulative GHG emissions would have a less than significant impact.						
b)	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?					
of reduce Plan and evaluation the appl assump	iect would not conflict with an applicing the emissions of greenhouse gad Community Plan land use and zonion of the completed CAP Consistencicable strategies and actions of the tions for relevant CAP strategies toware considered less than significant	sses. The pr ing designat cy Checklist f CAP. Therefo vard achievir	oject is consistent victors. IX. HAZA	RDS AND HAZARDOUS MATERIALS – Would t	he project:				
a)	Create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials?					
Althougl not antion project,	lect proposes some demolition of the minimal amounts of hazardous su cipated to create a significant publice the routine transport, use, or disposticipated. Therefore, impacts would	bstances ma hazard. One sal of hazard	ay be present during te constructed, due ous materials on o	g construction to the total to the nature	n, they are e of the	
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?					
	response IX (a) above. No health ris us materials would result from the i nificant.		•	•	•	
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?					

Refer to response IX (a) above. Future risk of releases of hazardous substances would not occur as a result of project operations because it is anticipated that future on-site operations would not require the routine use or transport of acutely hazardous materials. Construction of the project may require the use of hazardous materials (fuels, lubricants, solvents, etc.), which would require proper storage, handling, use and disposal. Further, the project would be required to comply with all federal, state

ls	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
	al requirements associated with haza	ardous mate	rials; therefore, im	pacts would b	e less than
significa	ant.				
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
	dous waste site records search was of	•	-		
	65962.5: http://geotracker.waterboa				
	ords search identified that no hazard	dous waste si	tes exist onsite or	in the surrou	nding area.
No Imp	acts would result.				
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two mile of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				
•	posed project is not located within a or public use airport. No impacts wo	•	d use plan, or with	in two miles o	of a public
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				
emerge	eject would not impair the implement ency response plan or evacuation pla e with circulation or access, and all c	n. No roadwa	ay improvements a	are proposed	that would
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				
project wildland	oject is located within a developed ur would not expose people or structur d fires because the project is not adju on XX below. Any impacts would be l	res to a signif acent to any	icant loss, injury, c wildlands. Further	or death involv	⁄ing
X. HYDR	OLOGY AND WATER QUALITY - Would the pro	oject:			
a)	Violate any water quality standards or waste discharge requirements or			$\boxtimes$	

lss	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
	otherwise substantially degrade surface or groundwater quality?				
The project was reviewed for all applicable water quality standards and water discharge requirements. The project would be conditioned to comply with the City's Storm Water Regulations during and after construction, and appropriate Best Management Practices (BMP's) would be utilized. Implementation of project specific BMP's would preclude violations of any existing water quality standards or discharge requirements. Impacts would be less than significant.					
b)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the			$\boxtimes$	

The project does not require the construction of wells or the use of groundwater. The project would be conditioned to include pervious design features and appropriate drainage. Therefore, the project would not introduce a significant amount of new impervious surfaces that could interfere with groundwater recharge. The project as designed was reviewed by qualified City staff and would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge. The project is located in a residential neighborhood where all infrastructures exist. The project would connect to the existing public water system. Impacts would be less than significant.

basin?

c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:			
	result in substantial erosion or siltation on- or off-site:		$\boxtimes$	

Proper landscaping would prevent substantial erosion onsite. No streams or rivers are located on or adjacent to the site, the project will utilize drainage swales in order to manage runoff. The proposed project will not have a significant impact on downstream properties and the drainage system is engineered to adequately manage site stormwater and would therefore not substantially alter existing drainage patterns. The project would be required to implement BMPs to ensure that substantial erosion or siltation on or off-site during construction activities would not occur. Impacts would be less than significant.

ii)	substantially increase the rate or			
	amount of surface runoff in a manner which would result in		$\boxtimes$	
	flooding on- or off-site:			

Refer to response X (c)(i) above. the project would not substantially increase the rate or amount of surface runoff which would result in flooding on or off site. Impacts would be less than significant.

Issue		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
iii)	create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

XIII. NOIS	SE – Would the project result in:				
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?				

Potentially

Less Than

**Less Than** 

Short-term (Construction)

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
-------	--------------------------------------	---	------------------------------------	-----------

Short-term noise impacts would be associated with onsite grading, and construction activities of the project. Construction-related short-term noise levels would be higher than existing ambient noise levels in the project area but would no longer occur once construction is completed. Sensitive receptors (e.g. residential uses) occur in the immediate area and may be temporarily affected by construction noise; however, construction activities would be required to comply with the construction hours specified in the City's Municipal Code (Section 59.5.0404, Construction Noise) which are intended to reduce potential adverse effects resulting from construction noise. Impacts would remain below a level of significance.

## L

For the long-term, typical noise levels associated with residential uses are anticipated, and the
project would not result in an increase in the existing ambient noise level. The project would not
result in noise levels in excess of standards established in the City of San Diego General Plan or
Noise Ordinance. Impacts would remain below a level of significance.

For the I project we result in	rm (Operation) ong-term, typical noise levels associate would not result in an increase in the ex noise levels in excess of standards esta rdinance. Impacts would remain below	kisting ambient rablished in the C	noise level. The រ ity of San Diego	oroject would	not

c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				
	ect site is not located in an Airport Influ o working in the area to excessive aircr			•	ose
XIV. POP	ULATION AND HOUSING – Would the project:				
a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				

The project proposes the partial demolition of the existing single-family residence, conversion to an ADU, and construction of a three-story single-family residence on the same lot. The project is consistent with the underlying zone and is consistent with the Torrey Pines Community Plan Residential (Low Density) land use designation. The project site is currently served by existing infrastructure and would not require construction of new or extension of roads or infrastructure. As

ls	sue		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

Potentially Significant with Significant No Impact
Impact Impact
Incorporated

The project would construct a new single-family residence and an ADU in the place of an existing single-family residence in a neighborhood which serves similar residential development. A "Small Project" is defined as a project generating less than 300 daily unadjusted driveway trips using the City of San Diego trip generation rates/procedures.

The project qualifies as a "Small Project" and is screened out from further Vehicle Miles Traveled analysis. Therefore, as recommended in the City of San Diego TSM, the project would be presumed have a less than significant impact.

nave a i	ess than significant impact.

b) A resource determined by the lead

agency, in its discretion and supported

Potentially Significant Impact	Significant with Mitigation	Less Than Significant Impact	No Impact
	Significant	Potentially Significant with Significant Mitigation	Significant Significant Significant Impact

by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Tribal Cultural Resources include sites, features, places, cultural landscapes, and sacred places or objects that have cultural value or significance to a Native American Tribe. Tribal Cultural Resources include "non-unique archaeological resources" that, instead of being important for "scientific" value as a resource, can also be significant because of the sacred and/or cultural tribal value of the resource. Tribal representatives are considered experts appropriate for providing substantial evidence regarding the locations, types, and significance of tribal cultural resources within their traditionally and cultural affiliated geographic area (PRC § 21080.3.1(a)).

The City, as Lead Agency, determined that there are no sites, features, places or cultural landscapes that would be substantially adversely impacted by the proposed project. Although no Tribal Cultural Resources were identified within the project site, there is a potential for the construction of the project to impact buried and unknown Tribal Cultural Resources due to its location to known recorded resources in the near vicinity.

In accordance with the requirements of Assembly Bill (AB) 52, The City of San Diego sent notification to the Native American Tribes traditionally and culturally affiliated with the project area on October 2, 2020. On October 4, 2020, and October 14, 2022, lipay Nation of Santa Ysabel and Jamul Indian Village, respectively, responded concurring with staff's recommendation to require monitoring. San Pasqual Band of Mission Indians did not respond.

A Mitigation Monitoring and Reporting Program, as detailed within Section V of the Mitigated Negative Declaration would be implemented to reduce impacts related to Tribal Cultural Resources to below a level of significance.

 $\ensuremath{\mathsf{XIX}}.$  UTILITIES AND SERVICE SYSTEMS – Would the project:

a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which would cause significant environmental		
	would cause significant environmental effects?		

The project is not anticipated to generate significant amount of wastewater or stormwater. As discussed in VI (a), the project would not result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources. Wastewater facilities used by the project would be operated in accordance with the applicable wastewater treatment requirements of the Regional Water Quality Control Board (RWQCB). Existing sewer infrastructure

lss	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact		
	rithin roadways surrounding the pro Thus, impacts would be less than si	•	adequate services	are available	to serve the		
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			$\boxtimes$			
docume the curr crossful water reactivitie (City of sprepare expande existing the proj	The 2020 City Urban Water Management Plan (UWMP) serves as the water resources planning document for the City's residents, businesses, interest groups, and public officials. The UWMP assess the current and future water supply and needs for the City. The 2020 UWMP emphasizes a crossfunctional, systems approach that is intended to better guide and integrate any subsequent water resources studies, facilities master planning, and various regulatory reporting and assessment activities at the City, regional and state levels beyond a basic profiling of the City's water system. (City of San Diego 2020). The project does not meet Senate Bill 610 requirements for the project to prepare a water supply assessment. Implementation of the project would not result in new or expanded water entitlements from the water service provider, as the project is consistent with existing demand projections contained in the UWMP (which are based on the allowed land uses for the project site). Therefore, the project would not require new or expanded entitlements. No mpacts would result.						
c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's demand in addition to the provider's existing commitments?						
constru effects.	ject would not exceed the capacity of ction of new or expanded treatmen The project was reviewed by qualific quately sized to accommodate the p	t facilities of ed City staff	which would cause who determined th	significant er at the existing	nvironmental g facilities		
d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?						

Construction debris and waste would be generated from the construction of the project. All construction waste from the project site would be transported to an appropriate facility, which would have sufficient permitted capacity to accept that generated by the project. Long-term operation of the residential use is anticipated to generate typical amounts of solid waste associated with residential uses. Furthermore, the project would be required to comply with the City's Municipal Code requirement for diversion of both construction waste during the short-term, construction phase and solid waste during the long-term, operational phase. Impacts are considered to be less than significant.

Iss	ue	Potentially Significant Impact	Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

	FIRE – If located in or near state responsibilit e project:	y area or lands	classified as very high fi	re hazard severi	ty zones,	
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?					
The City of San Diego participates in the San Diego County Multi-Jurisdictional Hazard Mitigation Plan. The project complies with the General Plan and is consistent with the Torrey Pines Community Plan land use and the Land Development Code zoning designation. The project is located in an urbanized area of San Diego and construction of a three-story single-family residence and ADU would not disrupt any emergency evacuation routes as identified in the Hazard Mitigation Plan. Therefore, the project would have a less-than-significant impact on an emergency response and evacuation plan during construction and operation.  b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks,						
	and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?					
The project is located in an urbanized neighborhood of similar residential development and is not located in a Very High Fire Severity Zone. Due to the location of the project, the project would not have the potential to expose occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire. Therefore, impacts would remain below a level of significance.						
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?					

The project is located in a residential neighborhood with similar development. The site is currently serviced by existing infrastructure which would service the site after construction is completed. No new construction of roads, fuel breaks, emergency water sources, power lines, or other utilities would be constructed that would exacerbate fire risk, therefore impacts would be less than significant.

Iss	sue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

XXI. MAN	NDATORY FINDINGS OF SIGNIFICANCE –				
a)	Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				
Resourc this doc	alysis has determined that there is the es (Archaeology) and Tribal Cultural ument would reduce these potentia he Mitigated Negative Declaration.	Resources. A	As such, mitigation	measures in	cluded in
b)	Does the project have impacts that are individually limited but cumulatively considerable ("cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable				

As documented in this Initial Study, the project may have the potential to degrade the quality of the environment, notably with respect to Cultural Resources (Archaeology) and Tribal Cultural Resources, which may have cumulatively considerable impacts. As such, mitigation measures have been incorporated to reduce impacts to less than significant. Other future projects within the surrounding neighborhood or community would be required to comply with applicable local, State, and Federal regulations to reduce the potential impacts to less than significant, or to the extent possible. As such, the project is not anticipated to contribute potentially significant cumulative environmental impacts.

future projects)?

Issue	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?				

The project proposes the partial demolition of the existing single-family residence, conversion to an ADU, and construction of a three-story single-family residence on the same lot. The project is consistent with the environmental setting and with the use as anticipated by the City. Based on the analysis presented above, implementation of the mitigation measures would reduce environmental impacts such that no substantial adverse effects on humans would occur.
