# 1. Introduction

## 1.1. Project Overview

At the request of the Santa Monica-Malibu Unified School District (SMMUSD), Architectural Resources Group, Inc. (ARG) has prepared this Historic Resources Inventory for the campus of Grant Elementary School, 2368 Pearl Street, Santa Monica. This project commenced in May 2021 and is scheduled for completion in 2022.

The subject property is developed with an elementary school (Grades K-5) campus comprising multiple permanent buildings, multiple portable and modular buildings, and associated site and landscape features. The permanent buildings on the campus were constructed between 1936 and 1965. Campus development commenced under the auspices of the federal Works Progress Administration (WPA) and continued through the early postwar era, a period of extraordinary growth in Santa Monica.<sup>1</sup>

Grant Elementary School has previously been identified as a potential historic resource. In 1993, the campus was identified as potentially eligible for local designation through the City of Santa Monica's Historic Resources Inventory (HRI) process, and was subsequently recorded in the City's HRI (though it was not formally designated). It was again found to be potentially eligible for local designation when the City's HRI was updated in 2007 and 2018. In 2008, a draft Historic Resources Evaluation Report (HRER) was prepared in conjunction with Measure BB, a bond measure that allocated funds for the repair and renovation of District facilities. The HRER was prepared independent of the City's HRI and evaluated all schools within the District. Grant Elementary School was identified as potentially eligible for designation in the HRER. However, the HRER was not finalized, and its draft findings were not adopted.

In February 2021, the District adopted Board Policy 7113 and the accompanying Administrative Regulation 7113, which were developed to identify and clarify treatment of historical resources present on properties within the District's jurisdiction. The Board Policy and Administrative Regulation require completion of a Historic Resources Inventory (HRI) of a school campus prior to approval of either a master plan or design of a school facilities project at that campus. This campus HRI was prepared in conformance with Board Policy 7113 and Administrative Regulation 7113 as they relate to Grant Elementary School. The purpose of this document is to determine whether there are historical resources present at Grant Elementary School, and if so, to identify character-defining features and spaces to aid in matters related to site planning and facilities management at the campus moving forward.

This Historic Resources Inventory Report for Grant Elementary School includes a description of project scope and methodology, contextual information related to the developmental history of both the district and school, evaluations of eligibility, and identification of character-defining features and spaces.

---

<sup>1</sup> The Works Progress Administration (WPA) was re-named the Work Projects Administration in 1939.

## 1.2. Field and Research Methods

Preparation of this report included the following tasks related to research, documentation, and analysis:

- Site visit in June 2021 to assess existing conditions and document improvements with digital photographs;
- Review of pertinent federal and state technical bulletins, local ordinances, and other reference materials related to the evaluation of historical resources;
- Review of previous evaluations of the Grant Elementary School campus, including the City of Santa Monica's HRI and the draft Historic Resources Evaluation Report (HRER) prepared in 2008;
- Review of other applicable background materials including archival drawings and construction documents, historical building permits (to the extent that they were available), and the State of California's Built Environment Resource Directory (BERD) database;
- Supplemental research related to the campus's development history, physical design, social and cultural history, and potential historical significance;
- Identification of applicable historic contexts and themes;
- Evaluation of campus resources against eligibility criteria for the National Register of Historic Places, the California Register of Historical Resources, and local (Santa Monica Landmark) designation;
- Evaluation of integrity; and
- Identification of character-defining features and spaces.

Research materials were obtained from the following sources: the Santa Monica Public Library, including its local history collection; the Los Angeles Public Library; archival drawings and construction documents provided by the District; building permit records obtained from the City of Santa Monica Community Development Department; technical assistance bulletins published by the National Park Service (NPS) and the California Office of Historic Preservation (OHP); online repositories; and ARG's in-house collection of architectural books and reference materials. Additional materials, including historic photos and documents related to the history of the District, were provided courtesy of the Santa Monica Conservancy. A list of key source materials is included in *Section 7: Selected Bibliography* of this report.

To conform with public health directives and safety protocols associated with the COVID-19 pandemic, most research was conducted remotely using online repositories.

## 1.3. Outreach

In addition to the above-listed field and research tasks, ARG and the District coordinated public outreach efforts with community members, local history groups, and other key stakeholders. A community

meeting specific to the Grant Elementary School campus was held in June 2021, at which ARG and the District explained the purpose and objectives of the project and solicited public input. To comply with social distancing protocols associated with the COVID-19 pandemic, the community meeting was conducted virtually. In July 2021, ARG and the District participated in a meeting with the Santa Monica Conservancy to solicit additional input. The findings of this HRI are scheduled to be presented to the community and stakeholders at an additional public meeting, expected to be held in early 2022.

## 1.4. Preparer Qualifications

The following ARG staff contributed to this report: Katie E. Horak, Principal; Andrew Goodrich, AICP, Senior Associate; Elysha Paluszek; and Rosa Fry, all Architectural Historians and Historic Preservation Planners. All ARG staff who contributed to this project meet the *Secretary of the Interior's Professional Qualification Standards*, 36 CFR Part 61, in the discipline of Architectural History.<sup>2</sup>

---

<sup>2</sup> Staff resumes are included as an appendix to this report.

## 2. Physical Description

### 2.1. General Setting

Grant Elementary School is located at 2368 Pearl Street in the Sunset Park neighborhood of Santa Monica, in the southern section of the city. The surrounding neighborhood is residential in character. Its blocks are primarily developed with detached, one- and two-story single-family houses, some of which date to as early as the 1920s but most of which date to the Depression and early postwar periods.

This area of Santa Monica is generally flat with no discernible variation in topography. As they are throughout most of the city, streets in the area adhere to an orthogonal grid that conforms to the contour of the shoreline and is askew of the cardinal directions. The subject campus is located on the south side of Pearl Street, an east-west thoroughfare that transects the Sunset Park neighborhood.

*General location map. The location of Grant Elementary School is marked in yellow (Google Maps, annotations by ARG)*

The subject campus occupies a large rectangular site that constitutes the majority of a city block. Its boundaries are defined by Pearl Street (north), an alley called Pearl Place South (west), and another alley called 24<sup>th</sup> Court (east). Its south boundary is located mid-block between Pearl Street and Ocean Park Boulevard. 24<sup>th</sup> Street terminates at the south boundary of the campus, forming a cul-de-sac.

*Site Map. The boundaries of Grant Elementary School are marked in yellow (Google Maps, annotations by ARG)*

## 2.2. Campus Orientation and Layout

The subject campus is oriented to the north, toward Pearl Street. From the north, the campus is approached by a forecourt comprising dual concrete walkways and concrete steps that lead to its primary entrance. This space also contains low concrete buffer walls and planters, and metal gates that restrict access to the site. To the east of the forecourt is a surface parking lot that is accessed via Pearl Street. There are buffer plantings around the perimeter of the parking lot. To the west of the forecourt is a shallow lawn that is planted with grass, mature trees of various species, and perimeter shrubs. The northwest corner of the site is occupied by a playground, which is enclosed by a chain link fence obscured by vines. A concrete walkway with steel handrails leads to the playground from Pearl Street.

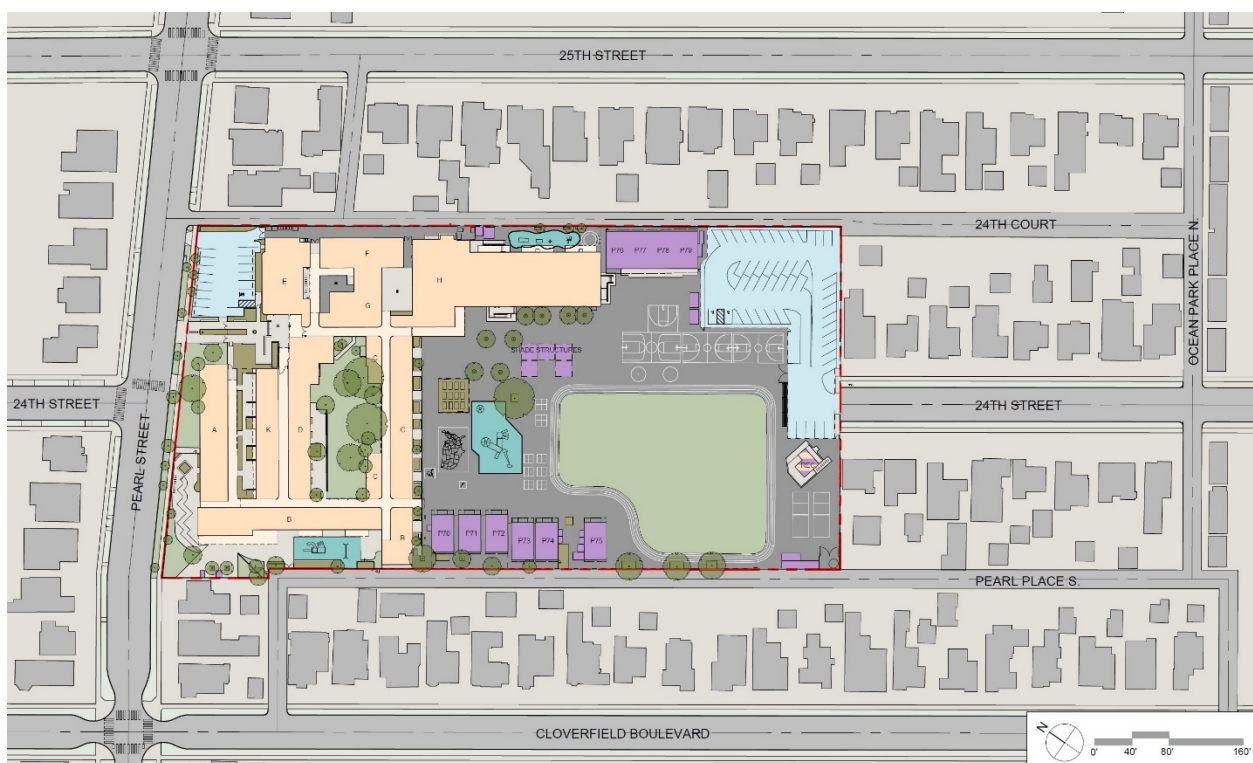

The campus comprises nine permanent buildings. These buildings are concentrated in the northern portion of the campus nearest Pearl Street, and along its west and east perimeters. They are organized around a network of courtyards and other interstitial spaces and house classrooms, an auditorium, a cafeteria, a library, administrative offices, and other school functions. Consistent with the eras in which they were built, these buildings are generally designed in the PWA Moderne and Mid-Century Modern styles of architecture. A detailed physical description of each building is included below in *Section 2.3*:

*Architectural Descriptions.* There are also several portable and modular buildings located along the east and west perimeters of the campus, to the rear (south) of the permanent buildings.

The southern portion of the campus is generally devoid of buildings and contains open space for recreation. Much of this space consists of a large, paved asphalt surface that is used for basketball and athletic courts and contains several shade structures. There is also playground equipment installed atop artificial turf, and a small garden that is enclosed by a low wood picket fence. The southwest corner of the site contains a broad lawn. Bleachers are installed adjacent to the south edge of the lawn. Beyond that, at the far south end of the site, is a small surface parking lot that is accessed from the south, via 24<sup>th</sup> Street. The parking lot is enclosed by chain link fencing, which restricts access to both the parking lot and the school campus.

In addition to the aforementioned landscape features at the front (north) of the campus, there is extensive landscaping within the courtyards and interstitial spaces between buildings, which generally consist of lawns, mature trees, and various types of shrubs. There are also mature shade trees peppering the asphalt surface at the south end of the campus and along the campus's west perimeter.

The west and east perimeters of the campus are enclosed by chain link fencing. The fencing along the east perimeter is installed atop a low perimeter wall composed of brick and rusticated stone.

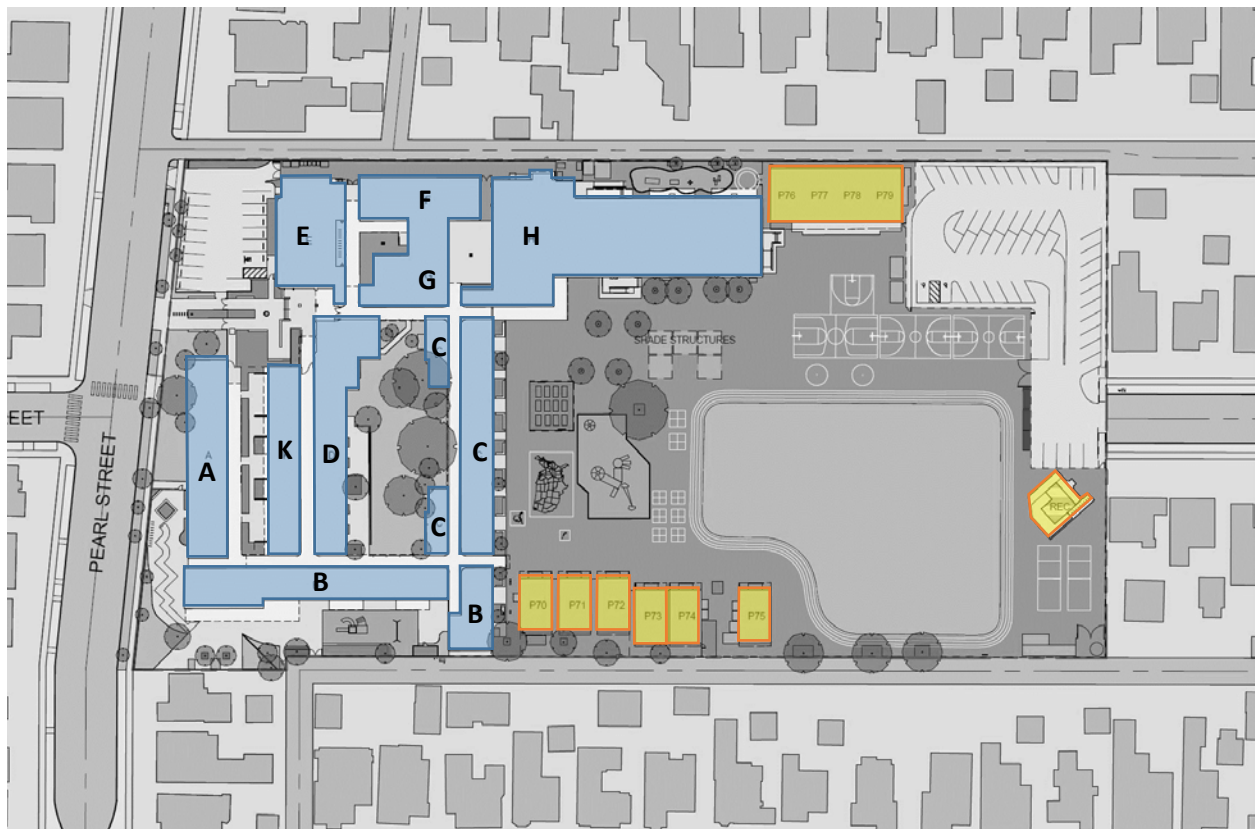

*Site plan, depicting the location of buildings and features on the subject campus (Johnson Favaro)*

## 2.3. Architectural Descriptions

As noted, there are nine permanent buildings (named A-H) and multiple modular and portable buildings on the campus. The permanent buildings are stylistically similar – though not identical – and exhibit characteristics of the PWA Moderne and Mid-Century Modern styles. Most of the buildings are connected to one another by a network of sheltered, semi-interior corridors. The modular and portable buildings are generally lacking in architectural distinction and do not possess any features of note.

The following sections include an architectural description of each building. For purposes of organization, buildings are described in the order of their alphabetical assignment (A-K), followed by a brief description of the modular and portable buildings.

The location of each building described herein is keyed on the site plan below.

*Site plan. Permanent buildings are marked in blue; portable, modular, and ancillary buildings are marked in yellow (Johnson Favaro, annotations by ARG)*

### Building A (Classrooms)

Spanning the north perimeter of the campus, Building A is used as classrooms. It was constructed in 1954, is one story tall, and has a long, narrow rectangular plan. It is designed in the Mid-Century Modern style. The building is capped by a flat roof with rolled asphalt sheathing; solar panels are installed atop the roof. Exterior walls are clad in stucco. There are multiple points of ingress, all on the south façade, and all comprising single, flush-mounted metal doors. These doors open onto a continuous sheltered breezeway with slender metal post supports. The north façade is extensively fenestrated with a continuous band of fixed and hopper metal windows, which are set in an articulated frame. Murals are painted on the north and east exterior walls.

Noted exterior alterations to this building include the replacement of original doors and windows, and the installation of solar panels atop the roof.

*Building A, south façade, view southwest (ARG, 2021)*

*Building A, north façade, view northeast (ARG, 2021)*

*Building A, mural on east façade, view southwest (ARG, 2021)*

### Building B (Classrooms)

Building B flanks the west perimeter of the campus and is connected to Buildings A, C, D, and K by a network of semi-enclosed corridors. It is used as classrooms. The building was constructed in 1940 and expanded in 1954. It is one story tall and designed in the PWA Moderne style. Most of the building ascribes to a long, narrow rectangular plan; however, there is a small volume at the south end of the

building that provides it with an L-shaped footprint. The building is capped by a flat roof with rolled asphalt sheathing and a parapet; exterior walls are clad in stucco. There are multiple points of ingress along the east façade, all comprising single, flush-mounted metal doors. There are also several doors on the west façade. Fenestration is largely confined to the west façade, and consists of bands of fixed and hopper metal windows surmounted by fabric awnings. At the north end of the east façade (which is a later addition), there are also bands of clerestory-style metal windows. The north end of the west façade (also associated with the addition) features a projecting canopy with slender metal post supports. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include an addition to the north façade (dating to 1954), the replacement of original doors and windows, the installation of awnings above the west-facing windows, and the installation of solar panels atop the roof.

*Building B, west façade, view north (ARG, 2021)*

*Building B, east façade, view northwest (ARG, 2021)*

### **Building C (Classrooms)**

Building C (along with Building H) anchors the south end of the campus's complex of permanent buildings, and is connected to Buildings B, G, and H by a network of semi-enclosed corridors. One such corridor bifurcates the building. This building was constructed in 1936 and is used as classrooms. It is designed in the PWA Moderne style and is one story tall. Most of the building consists of a rectangular footprint; however, there are two small volumes that project from the north end of the building and provide with a U-shaped footprint when viewed in plan. The building is capped by a flat roof with rolled asphalt sheathing and a parapet. Exterior walls are clad in stucco. There are multiple points of ingress on the north and south façades, which consist of single metal doors (non-original) and single, paneled wood doors with glazing (original). Fenestration is confined to the north and south façades and consists of bands of fixed and hopper metal windows. Most of the windows are surmounted by shallow canopies with reeded details, and most are surmounted by glass block transoms. The south-facing windows are surmounted by fabric awnings. A portion of the north façade opens onto a sheltered breezeway with slender metal post supports. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include the replacement of some original doors and all original windows, and the installation of awnings above the south-facing windows.

*Building C, north façade, view southwest (ARG, 2021)*

*Building C, south façade, view northwest (ARG, 2021)*

### **Building D (Administration/Classrooms)**

Building D is located near the center of the campus's complex of permanent buildings, and is connected to Buildings B, C, E, G, and K by a network of semi-enclosed corridors. It has a strong public presence from the north, along Pearl Street. This building was constructed in 1936 and contains administrative offices and classrooms. It is designed in the PWA Moderne style, has both one and two-story volumes, and is L-shaped in plan. The building is capped by a flat roof with rolled asphalt sheathing and a parapet. Exterior walls are clad in stucco. The two-story volume (at the east section of the building) has a strong vertical orientation, has formal massing, and is divided into multiple bays. The bays are defined by full-height stucco pilasters and stepped recesses. Fixed and hopper metal windows are installed within each bay; geometric metal grilles are installed between the first- and second-story bands of windows. Canopy letters spelling "GRANT SCHOOL" are installed along the second-story parapet and face north. The one-story volume projects to the west of the two-story volume. This volume contains multiple points of ingress along its north and south façades, which consist of single metal doors. The south façade also features bands of fixed and hopper metal windows that are surmounted by fabric awnings. Decorative grilles are "punched" into the stucco walls at various points along the north façade. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include the replacement of original doors and windows, and the installation of awnings above the south-facing windows.

*Building D, north façade, view southwest (ARG, 2021)*

*Building D, north façade (pictured left), view southwest (ARG, 2021)*

### Building E (Auditorium)

Building E is located at the northeast corner of the campus, and is connected to Buildings D, F, and G by a network of semi-enclosed corridors. This building was constructed in 1945 and is used as an auditorium. It is designed in the PWA Moderne style, is one story tall, is irregular in plan, and has public visibility from Pearl Street. The building is capped by a flat roof with rolled asphalt sheathing and a parapet; solar panels are installed atop the roof. Exterior walls are clad in stucco. The primary entrance is located on the west façade; it consists of paired metal doors that are set within a recessed bay with an articulated surround. Additional entrances consist of single metal doors. Fenestration is located on the north and south façades and comprises fixed and hopper metal windows with divided lights, which are set within tall, recessed bays. The window bays are delineated by fluted pilasters; the corners of the building also have fluted pilasters. A mosaic tile mural adorns the west-facing exterior wall; a marquee sign is affixed to the south-facing wall. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include the replacement of original doors and windows, and the installation of solar panels atop the roof.

*Building E, north façade, view southeast (ARG, 2021)*

*Building E, detail of mosaic tile mural on west façade, view northeast (ARG, 2021)*

### Building F (Library)

Building F is located to the rear (south) of Building E. It is connected to Building E by a semi-exterior corridor, and is directly appended to the east façade of Building G. The building was constructed in 1965 as an addition to Building G, and is used as a library. It is one story tall and rectangular in plan, and is designed in the Mid-Century Modern style. The building is capped by a flat roof and parapet; solar panels are installed atop the roof. Exterior walls are clad in stucco. The primary entrance is located on a south-facing wall and is accessed via an interstitial courtyard. It consists of paired, flush-mounted metal doors. There is an additional entrance on the south façade that consists of a single, flush-mounted metal door. Fenestration consists of continuous bands of clerestory-style windows on the east and west façades. Its west façade opens onto a small interstitial courtyard that is also framed by Buildings E (to the north) and G (to the south and west).

Noted exterior alterations to this building include the replacement of original doors and windows, the and the installation of solar panels atop the roof.

*Building F, west façade, view southeast (ARG, 2021)*

### **Building G (Computer Lab/Classrooms)**

Building G is also located to the rear (south) of Building E. It is connected to Building E by a semi-exterior corridor, and is directly appended to the west façade of Building F. This building was constructed in 1940 and is used as a computer lab and classrooms. It is one story tall and roughly L-shaped in plan, and is designed in the PWA Moderne style. The building is capped by a flat roof with rolled asphalt sheathing and a parapet; exterior walls are clad in stucco. Ingress is provided by flush-mounted metal doors. Fenestration is located on the north, south, and east façades and consists of groups of fixed and hopper metal windows that are set in vertical channels. Most of the windows are surmounted by shallow canopies with reeded details. The west façade opens onto a sheltered breezeway with slender metal post supports. The north, south, and east façades open into small interstitial courtyards. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include the replacement of original doors and windows.

*Detail of windows on Building G, view southwest (ARG, 2021)*

## Building H (Cafeteria/Classrooms)

Building H (along with Building C) anchors the south end of the campus's complex of permanent buildings and flanks its east perimeter. It is connected to Buildings F, G, and C by a network of semi-enclosed corridors. This building was constructed in 1945 and houses a cafeteria and classrooms. It is designed in the PWA Moderne style, is one story tall, and has an irregular footprint. The building is capped by a flat roof with rolled asphalt sheathing and a parapet; solar panels have been installed atop the roof. Exterior walls are clad in stucco. The building is oriented around a semi-enclosed, double-loaded corridor. There are multiple points of ingress throughout this corridor and at various points along the exterior façades of the building, which generally consist of single, flush-mounted metal doors. Fenestration generally consists of groups of fixed and hopper metal windows that are set in vertical channels. Most of the windows, as well as some of the doors, are surmounted by shallow canopies with reeded details. Some of the windows are surmounted by glass block transoms, and many of the east-facing windows feature fabric canopies. The east façade opens onto a small patio that is improved with a playground, artificial turf, and concrete planters. Some corners of the building feature rounded edges.

Noted exterior alterations to this building include the replacement of original doors and windows, the infill of some original windows in the corridor, the installation of awnings above some windows, and the installation of solar panels atop the roof.

*Building H, west façade, view southeast (ARG, 2021)*

*Building H, east façade, view northwest (ARG, 2021)*

*Building H, detail of door and windows (ARG, 2021)*

### Building K (Classrooms)

Building K is located near the front (north) of the campus, between Buildings A and D. It is connected to Building D by a semi-enclosed corridor. This building was constructed in 1945 and is used as classrooms. It is designed in the PWA Moderne style, is one story tall, and has a long, narrow rectangular plan. The building is capped by a flat roof with rolled asphalt sheathing and a parapet; solar panels are installed atop the roof. Exterior walls are clad in stucco. There are multiple points of ingress along the north and south façades, all of which consist of single, flush-mounted metal doors. The north-facing doors open onto patios that are partially enclosed by metal fencing. Fenestration is confined to the south façade and consists of horizontal bands of metal hopper windows surmounted by glass block transoms. A stylized metal gecko sculpture is affixed to the east-facing wall.

Noted exterior alterations to this building include the replacement of original doors and windows, and the installation of solar panels atop the roof.

*Building K, north façade, view southeast (ARG, 2021)*

*Building K, west façade, view southwest (ARG, 2021)*

### Modular, Relocatable, and Ancillary Buildings

As noted, the campus contains several modular and relocatable buildings that have been installed at various points to accommodate growth. These buildings are located to the rear (south) of the permanent buildings described above, along the east and west perimeters of the campus. Specifically, there are six relocatable buildings flanking the west edge of campus (named P70-P75), and four modular buildings flanking its eastern edge (named P76-P79), all of which are used as classrooms. Given their ephemeral nature, these buildings are utilitarian in appearance and lack any architectural characteristics of note.

Near the far southwest corner of the campus is a small ancillary building that is used as a restroom. It is also vernacular in form and appearance and lacks architectural characteristics of note.

*Modular buildings P76-P79, view southeast (ARG, 2021)*

## 3. Development Chronology and Alterations

### 3.1. Development Chronology

The following development chronology summarizes key events in the campus's development history between its original construction and the present day. The information was amalgamated from various sources including previous historic resource surveys and evaluations, construction documents and building records provided by the District, and archival building permit records obtained from the City of Santa Monica's Community Development Department. This information was augmented by additional source materials including historic photos and aerial images, parcel data from the Los Angeles County Office of the Assessor, Sanborn Fire Insurance Maps, and historic newspaper articles.

<b>1905</b>	Original construction of Grant School. The school originally consisted of a one-room schoolhouse at 22 <sup>nd</sup> Street and Virginia Avenue. Reflective of settlement patterns at the time, many pupils were of Mexican American descent and came from non-English speaking households.
<b>1906</b>	A new, four-room school building was constructed at the original Grant School site. The building was designed around the "central hall plan" that was commonly applied to schools at the time, wherein a central hall was flanked by classrooms and other essential school functions. The central hall acted as a <i>de facto</i> community center for members of the surrounding neighborhood.
<b>1924</b>	The original Grant School campus was expanded amid an increase in student enrollment.
<b>1936</b>	<p>Again faced with overcrowding, the District elected to move the Grant School about one-half-mile southeast of the original campus (its present-day site). Construction was financed in part by the federal Works Progress Administration (WPA), and in part by bond money that was approved by Santa Monica voters.</p> <p>The architectural firm of Parkinson and Parkinson developed plans for the new Grant Elementary School campus. It originally consisted of two buildings (Buildings C and D), oriented around a courtyard.</p>
<b>1937</b>	The original Grant Elementary School campus at 22 <sup>nd</sup> Street and Virginia Avenue was repurposed into a vocational school called the Santa Monica Technical School, or Samo Tech. (It has since been razed, and the site is now occupied by Virginia Avenue Park).
<b>1940</b>	Architect Joe Estep designed new classroom facilities for the campus (Buildings B and G). Construction was financed in large part by the WPA.
<b>1945</b>	Architect Joe Estep returned to the campus to design additional buildings including an auditorium (Building E), a combination cafeteria/library/classroom building at the rear of campus (Building H), and a classroom wing near the front of campus (Building K).

<b>1954</b>	Architect Pierre Claeysens designed an additional classroom building at the front of campus (Building A), and an addition to the north façade of Building B.
<b>1968</b>	A new library building (Building F) was constructed at the east end of campus, and was appended to the east façade of Building G. The new building was designed by architect Robert H. Thomas.
<b>1976-2002</b>	Multiple relocatable and modular buildings were added to the campus to accommodate additional campus growth.

### 3.2. Summary Table of Buildings

The following table includes an inventory of buildings on the subject campus including building name, construction date, architectural style, and architect.

NAME	CURRENT USE	YEAR BUILT	STYLE	ARCHITECT
Building A	Classrooms	1954	Mid-Century Modern	Pierre Claeysens
Building B	Classrooms	1940; 1954	PWA Moderne	Joe Estep (original volume) ; Pierre Claeysens (addition)
Building C	Classrooms	1936	PWA Moderne	Parkinson and Parkinson
Building D	Admin/Classrooms	1936	PWA Moderne	Parkinson and Parkinson
Building E	Auditorium	1945	PWA Moderne	Joe Estep
Building F	Library	1968	Mid-Century Modern	Robert H. Thomas
Building G	Computer Lab/Classrooms	1940	PWA Moderne	Joe Estep
Building H	Cafeteria/Classrooms	1945	PWA Moderne	Joe Estep
Building K	Admin/Classrooms	1945	PWA Moderne	Joe Estep

## 4. Historic Contexts

### 4.1. History of Santa Monica<sup>3</sup>

#### Early History

Human occupation of the Los Angeles Basin dates to approximately 12,000 to 13,000 years ago.<sup>4</sup> Indigenous groups including the Chumash and Tongva occupied the Santa Monica and Malibu region of the basin.<sup>5</sup> These Shoshonean-speaking groups occupied a vast territory and established numerous villages throughout the area along local rivers and near the coast, including in and around Santa Monica Canyon. The Tongva and Chumash were the “wealthiest, most populous, and most powerful ethnic nationality in aboriginal Southern California, their influence spreading as far north as the San Joaquin Valley Yokuts, as far east as the Colorado River, and south into Baja California.”<sup>6</sup>

#### Spanish Colonial and Mexican Periods

Juan Rodriguez Cabrillo led the first Spanish expedition into California in 1542. Cabrillo named various features along the coast of Southern California, including San Pedro Bay and the Channel Islands. On October 8<sup>th</sup> of that year, Cabrillo is believed to have dropped anchor in what is now Santa Monica Bay. He anchored in the bay of Malibu Lagoon later that month, naming it the “Pueblo de las Canoas” (Town of the Canoes), after the many Chumash canoes (*tomols*) in the area.

Despite this early exploration, the area was not further colonized until the arrival of the first land expedition in 1769, led by Gaspar de Portolá. Portolá traveled across Alta California from San Diego to Monterey, establishing a system of missions one day’s journey apart throughout the territory. He is said to have arrived in present-day Santa Monica on August 3<sup>rd</sup>. A few years later, on February 22, 1776, explorer Juan Bautista de Anza made camp “on a fine stream under the oak trees in the vicinity of today’s Malibu Creek State Park.”<sup>7</sup>

At the time of California’s annexation as Mexican territory in 1822, the Santa Monica area was still unoccupied, an “unclaimed mesa covered with wild grass.”<sup>8</sup> In 1827, Xavier Alvarado and Antonio Machado were given a provisional grant to “a place called Santa Monica,” referring to the land stretching from Santa Monica Canyon north to Topanga Canyon. (The Alvarado-Machado lands later

passed into the hands of Ysidro Reyes and Francisco Marquez.) In 1828, Don Francisco Sepulveda received possession of “a place called San Vicente,” which stretched from Santa Monica Canyon south to present-day Pico Boulevard, and from the coast inland to what is now Westwood and including all of the land that would become the original townsite of Santa Monica.<sup>9</sup> The area was slowly populated and developed with an adobe by Ysidro Reyes in 1839. The rancho had herds of cattle, horses, and sheep.

The 1840s brought several land disputes in Santa Monica between Sepulveda and the Reyes and Marquez families. The argument was not settled until 1851, the year after California achieved statehood. At that time, the Board of Land Commissioners deeded Sepulveda the 30,000 acres known as “Rancho San Vicente y Santa Monica.” The Reyes and Marquez families received approximately 6,600 acres known as the “Boca de Santa Monica.”<sup>10</sup>

## American Period

The original rancho lands remained intact and were used primarily for grazing purposes into the 1870s. Santa Monica’s local history really began in September of 1872, when some 38,409 acres of Sepulveda’s rancho was sold for \$54,000 to Colonel Robert S. Baker.<sup>11</sup> Baker, a cattleman from Rhode Island, acquired the flat expanse of the mesa to operate a sheep ranch. However, just two years later, Nevada Senator John P. Jones purchased a three-fourths interest in Baker’s property for \$162,500. Together, the two men subdivided a portion of their joint holdings and platted the town of Santa Monica recorded in the office of the County Recorder at Los Angeles on July 10<sup>th</sup>, 1875. The townsite fronted the ocean and was bounded by Montana Avenue on the northwest, by Railroad Avenue (now Colorado Avenue) on the southeast, and by 26th Street on the northeast.<sup>12</sup> The streets were numbered, and the avenues were named for the Western states.

Baker and Jones envisioned Santa Monica as a prosperous industrial port, with a dedicated rail line linking the mines of Colorado and Nevada to a long wharf in Santa Monica Bay. Construction of the wharf and the rail line commenced in early 1875. Jones and Baker organized the Los Angeles & Independence Railroad (LA&I), a steam-powered rail line that extended sixteen miles along a private right-of-way between the Santa Monica waterfront to 5<sup>th</sup> and San Pedro streets in downtown Los Angeles. The railroad was completed in a little over ten months, opening on October 17<sup>th</sup>.<sup>13</sup>

The official founding of Santa Monica dates to July 15<sup>th</sup>, 1875, when the first town lots were sold via auction.<sup>14</sup> The town’s immediate growth was rapid; in less than nine months it had 160 homes and over one thousand inhabitants.<sup>15</sup> However, hopes to establish Santa Monica as the region’s primary

commercial shipping center were short-lived. In the early 1880s, Southern Pacific undermined the LA&I railroad by cutting their passenger and freight rates so drastically that both the local railroad and wharf were forced to operate at a loss from the moment they began operations. Eventually, both enterprises were acquired by Southern Pacific, who later abandoned the port project in favor of a site in San Pedro.<sup>16</sup> Thus, the wharf was demolished, and Santa Monica was forced to reinvent itself as a seaside resort town. As it turned out, this was an easy transition, as new residents and tourists alike were already flocking to the coastal community, lured by its scenic views and temperate climate.<sup>17</sup>

On November 30<sup>th</sup>, 1886, residents of Santa Monica voted to incorporate as an independent city. By 1887, a rate war between the Southern Pacific and Santa Fe Railroads brought floods of people to Southern California, setting off a real estate boom in the still largely agricultural community. At that time, Santa Monica was home to a host of agricultural enterprises: carnations, lima beans, and produce were grown with great success.

The arrival of the first electric streetcar on April 1, 1896, and the later establishment of the “Balloon Route” from downtown Los Angeles, spurred further investment in Santa Monica real estate. A number of new subdivisions were opened during the first five years of the 20<sup>th</sup> century, and between 1900 and 1903 the resident population jumped from 3,057 to 7,208. By 1911, five electrical railway lines served Santa Monica with travel times of 30 to 50 minutes from downtown Los Angeles.<sup>18</sup> The completion of major roadways to the area only increased its popularity as the automobile became a factor in Southern California growth.

Santa Monica experienced continued growth and development following World War I. In the 1920s, Santa Monica’s population jumped from 15,000 to 37,000, the largest increase in the city’s history.<sup>19</sup> Commercial activity increased apace, and buildings were constructed to accommodate Santa Monica’s new or expanding businesses and increased tourist activity. Commercial trends that began in the early 20<sup>th</sup> century continued in the 1920s, with the establishment of numerous prominent commercial buildings downtown, including the city’s first skyscrapers, along with the continued development of resort- and tourist-related resources. The downtown commercial core continued to expand along with the growing population. However, the Great Depression and World War II slowed commercial development in Santa Monica. Building activity declined, and new commercial construction was rare. Santa Monica’s tourist attractions struggled throughout the Great Depression.

In the years leading up to the United States entry into the war in December 1941, a series of dramatic shifts began. Thousands of people migrated to Southern California from other parts of the country. The rapid influx of Douglas Aircraft and other defense workers exacerbated Southern California’s already

<sup>19</sup> Dave Berman, “Founders’ Dreams Dashed – City Finds its Own Identity,” *Santa Monica Outlook, Centennial Edition, 1875-1975*, 5A.

intense need for housing. In 1940, the population of Santa Monica was 53,500.<sup>20</sup> During the war, Douglas aircraft had 44,000 people (mostly women) on its payroll at the Santa Monica Cloverfield facility, nearly doubling Santa Monica's population.<sup>21</sup> Unlike other cities, Santa Monica had little open land on which to construct defense worker housing, even if the money and materials had been available. Instead, density increased in an already built-out city. The federal government converted newly-built public housing complexes to "defense housing," and constructed additional "war worker" housing complexes. These investments provided temporary relief, but housing was a problem that persisted for many years after the war's end.<sup>22</sup>

Like so many Southern California communities, Santa Monica's population density increased during the postwar period as returning G.I.s sought to live in Southern California. Educational institutions, libraries and civic buildings all expanded to meet the growing demand. However, housing continued to be a problem. So dire was the postwar housing situation in Santa Monica, in 1945 the Santa Monica Housing Authority repaired army barracks across from City Hall between Main Street and Ocean Avenue for use as residential quarters. Only discharged service men and women and their families were considered for housing in the restored barracks.

Southern California's postwar population boom and rise in consumer culture spurred retail and commercial development throughout the region. Santa Monica was no exception. During the post-war years, Santa Monica continued to expand as a residential community, as a resort and hub of "space age technological development,"<sup>23</sup> and in the provision of healthcare and financial services for Los Angeles' westside. Large-scale commercial development in the postwar era was largely concentrated along Wilshire and Santa Monica Boulevards.

Southern California's aerospace industry gained momentum following World War II. Many existing aviation firms, such as Santa Monica's Douglas Aircraft Company, repositioned themselves for a new wave of defense manufacturing: missiles and spacecraft. This theme explores the industrial development associated with Santa Monica's innovation and leadership in the defense industry in Cold War America and beyond. Santa Monica was a hub of technology and innovation during the postwar period. It was home to some of the most important and cutting-edge aerospace, electronics, and computer systems companies in the country. In many ways, these companies are the natural ancestors of the technological firms that dominated the industrial area of Santa Monica at the beginning of the 21<sup>st</sup> century. Industries from the previous decades such as agriculture, motion pictures and transportation and shipping took a backseat to the aerospace industry.

Transportation also changed in the post-war years. Named the Olympic Freeway while still in the planning stages, the portion of Interstate 10 in Santa Monica between Bundy and the McClure Tunnel opened to traffic January 29, 1965. As a part of the National System of Interstate and Defense Highways (now known as the Eisenhower Interstate System), route planning was done at a Federal level, with less concern for existing neighborhoods and buildings. By 1958, Interstate 10's present configuration had

been determined, generally following the old Los Angeles & Independence Railroad right-of-way from the eastern city limit to about 20<sup>th</sup> Street and running between Olympic and Michigan Avenues to the McClure Tunnel, cutting through established, less affluent residential neighborhoods. Construction began in downtown Los Angeles and progressed westward.<sup>24</sup>

Today, the City of Santa Monica has over 90,000 residents and its largest industries are professional, scientific and technical services.

## 4.2. History of the Santa Monica-Malibu Unified School District<sup>25</sup>

### Early Schools, 1875-1902

The first school to serve Santa Monica and Malibu was established within months of the recording of the subdivision of Santa Monica and the first sale of lots in 1875. The school district originally served the entire region from La Ballona Rancho on the southwest and the Malibu rancho to the northwest, but overtime was limited to the geographical boundaries of present-day Santa Monica and Malibu.

The district's first public school was located in the Presbyterian Church located at 3<sup>rd</sup> Street and Arizona Avenue. The school opened on March 6, 1876, with fifty-two students in attendance, and an administrative staff consisting of one teacher, one principal, and one janitor.<sup>26</sup> So swift was the settlement of Santa Monica in the early days that the student population jumped to 77 one month after the school opened, and there were over 100 students by the time the term ended.<sup>27</sup>

The first dedicated school building was constructed on property donated by Senator Jones and Colonel Baker. Opened on September 11, 1876, the 6<sup>th</sup> Street School was a two-story wood-frame building located on 6<sup>th</sup> Street between Santa Monica Boulevard and Arizona Avenue. By 1884, the school hired a third teacher, and in 1887, a fourth. High school courses were added to the 6<sup>th</sup> Street School in 1891 in accordance with a law passed by the state legislature establishing high schools. Additions were made to the school in 1887.

The first dedicated school building was a relatively modest two-story, wood-framed schoolhouse located at 6<sup>th</sup> Street near Arizona Avenue. The building was opened on September 11<sup>th</sup>, 1876, on two lots donated by town founders Colonel Baker and Senator Jones.

In 1890, the South Side School, was built in the southern reaches of Santa Monica at 4th and Ashland Streets. A continuous growth of population by the turn of the century led to the demolition of the

---

<sup>24</sup> The highway finally connected to the Pacific Coast Highway on January 5, 1965. Officially named the Santa Monica Freeway by the State Highway Commission on April 25, 1957, it has also been known as the Christopher Columbus Transcontinental Highway since 1976.

<sup>25</sup> This section has been excerpted and adapted from the "City of Santa Monica Historic Resources Inventory Update Historic Context Statement," prepared for the City of Santa Monica by Architectural Resources Group and Historic Resources Group, March 2018, and the "Santa Monica High School Campus Plan Historic Resources Technical Report," Prepared for the Santa Monica-Malibu Unified School District by Historic Resources Group, July 2018. It has been informed by additional research as referenced.

school in 1902 and its replacement with a larger, 8-room building. A fire destroyed the school in 1908, although it was quickly rebuilt as a brick building and named the Washington School (1908, Robert Farquhar).

The origins of a high school in Santa Monica date to 1884, when 6<sup>th</sup> Street School principal W.W. Seaman began teaching high school subjects as a two-year extension of the grammar school. This extension of the elementary school was a common practice throughout California at the time, as trustees were authorized to organize high schools under an act of 1866, and under the State Constitution of 1879.<sup>28</sup> However, the founding of the high school was not official until the enactment of the Union High School Law of 1891, which formally provided for the establishment of high schools in the state. Therefore, although students receiving diplomas in 1887 might be regarded as the first graduates of Santa Monica High School, it was not until 1894 – when the school was accredited with a four-year course of study – that it had its first official graduating class.<sup>29</sup> In 1895, there were approximately 500 students in the school system.

That year, residents approved a \$15,000 bond to erect a dedicated high school at 10<sup>th</sup> Street and Oregon Avenue (now Santa Monica Boulevard). The construction of that school, known as Lincoln High School (1898, H.X. Goetz, contractor) signaled a school building boom that would erect eight schools in eighteen years. Lincoln High School contained five classrooms, an assembly hall, and physical laboratories.<sup>30</sup>

## Unification and Expansion, 1903-1933

The early years of the twentieth century ushered in dramatic changes to schools in the area. From approximately 1903 to 1933, schools increased in number, grew in populations served, and changed in design and orientation.

In 1903, Santa Monica became a city of the fourth class, thereby entitling it to maintain its own schools. Thus, the school district became the Santa Monica City School District.<sup>31</sup> Increasingly, schools were expected to serve community needs in Santa Monica. In 1905, the newly established Woman's Club of Santa Monica championed the building of schools and a bond issue in 1906 provided funding for additional schools. By 1907, the population of Santa Monica had jumped to 7,200 residents.<sup>32</sup> The following year, the city expanded further by annexing the community of Ocean Park to the south.<sup>33</sup>

<sup>32</sup> Ibid. (15)

<sup>33</sup> Holliday, Bob. "Queen of the Setting Sun: A History of Santa Monica High School 1891-1991." Samohi Alumni Association, 1991. (35)

In the early twentieth century, the Progressive Education Movement came to influence education in Santa Monica. Shunning traditional teaching philosophies, the Progressive Education Movement emphasized hands-on methods of teaching that allowed children to explore and learn to the best of their own individual abilities.<sup>34</sup> This influenced school programming, which increasingly emphasized individualized curriculum. As populations increased and space became scarce at schools, the Progressive Education Movement philosophies also provided a method for economizing space. As recorded by Historian Donald M. Cleland, during the early twentieth century, great strides were made in the Santa Monica school system:

The phenomenal growth of enrollment which the Santa Monica schools experienced during the early part of the twentieth century focused the attention of the board of education upon the problem of providing adequate physical facilities. It was during this time that...changes in curriculum were observed at all levels of instruction. At the elementary level, the platoon system of organization was adopted and put into effect in the four new elementary schools designed for this program. The platoon schools, as such, continued in operation until the early 1930s.<sup>35</sup>

Platoon school systems divided larger student populations into two groups, one of which would study academic subjects in the classrooms in the morning while the second utilized the rest of the school facility for specialized subjects. Then, halfway through the day, the two groups would switch places and study subjects. The system was praised by leaders of the Progressive Education Movement including John Dewey and Evelyn Dewey and was thought to achieve a more humanistic and democratic education while also providing administrative efficiency.<sup>36</sup>

During this period of development, one of the biggest projects was the construction of Jefferson School (1907; demolished) at 1333 6th Street to replace the 6th Street School. A new, three-story high school of wood frame construction (1910) also replaced Lincoln High School at 10th Street and Arizona Avenue. Roosevelt School (1906) was constructed on 6th Street between Montana and Idaho avenues. John Adams School was built in 1913 on Ocean Park Boulevard between 5th and 6th streets.

By 1910, Lincoln High School was overcrowded, and plans were drafted for a new high school.<sup>37</sup> Because Ocean Park residents were clamoring for a new institution closer to their community, thirteen acres on what was known as Prospect Hill were selected for the new high school site. Santa Monica High School (1912, Allison & Allison), almost immediately nicknamed Samohi, cost \$200,000 to build and was regarded as one of the finest school buildings around. The large brick building featured a polychromatic tower and an open colonnade of arches. It was heralded by the *Los Angeles Times* as an “Architectural Marvel.”<sup>38</sup> “Red tapestry bricks with wide cement joints” were a featured component of the design. Composed of three buildings, the Academic (or main) building, the Science Household and Fine Arts Building facing Fremont Avenue, and the Manual Arts building along Michigan Avenue, the intent was to

<sup>38</sup> “Stately Buildings in Santa Monica’s Magnificent New Polytechnic High School,” *Los Angeles Times*, May 21, 1911, V1.

have all rooms facing the south or east to have “disappearing windows” to maximize ventilation and light. The original design also called for “outdoor school rooms.”<sup>39</sup> Landscaping featured lush plantings and tropical palm trees that lent an exotic air to the campus. Subsequent additions to the campus included a gymnasium and a health unit (c. 1913) and a printing plant (1918). On May 20, 1921, an open-air theater (a.k.a., the Memorial Bowl) was dedicated to honor the dead of World War I.

### **1920s Expansion**

During the 1920s, several new schools were built and existing schools were expanded. The 1920s also brought a new design vocabulary to many schools, with several employing the wildly popular period-revival styles that came to characterize Southern California architecture. Attention to design and detail was conferred on buildings from the 1920s, and campuses as a whole served a more unified role with grand entrances and a greater degree of spatial differentiation.

During this period, Santa Monica was first in spending on high school education among cities in Southern California.<sup>40</sup> A 1927 study found that half of the possible residential areas were already improved and that, in less than ten years, the population of the city would double. Recommendations included building a new junior high school in the southeast part of the city and renovating the existing high school and elementary schools. The study proposed an “Americanization School” with separate facilities from the general school population, perhaps a reflection of the multiethnic and multilingual nature of the population streaming into the area in the 1920s. The study also recommended that new school sites be spread evenly throughout the city, with little overlap.

The newly constructed schools featured two-story brick edifices. They included John Muir Elementary (1923) at 725 Ocean Park Boulevard; the new McKinley School (1923, Allison & Allison and John D. Parkinson)<sup>41</sup> at 24th Street and Santa Monica Boulevard; Madison Elementary (1926, Francis David Rutherford) on the site of the old Lincoln High School at 10th Street and Arizona Avenue; Lincoln Junior High (1923-1924) at 1425 California Avenue; the Garfield School at 1740 7th Street, and Franklin Elementary (reportedly built with beach sand) at 2400 Montana Avenue. Additions to the Grant School were made in 1924 by local architect Francis David Rutherford.<sup>42</sup> A six-room addition by Allison & Allison was made to John Adams School in 1920.<sup>43</sup>

### **Innovation and Reform, 1933-1945**

The 1930s and 1940s brought about major changes for schools serving Santa Monica and Malibu. The Long Beach Earthquake of 1933, Works Progress Administration program, and advent of World War II all left indelible marks on the cities of Santa Monica and Malibu and the schools therein.

<sup>43</sup> *Southwest Builder and Contractor*, January 2, 1920, 17.

### **Long Beach Earthquake of 1933**

In 1933, the Long Beach earthquake struck. Damage was widespread, and much of it focused on the schools in the greater Los Angeles area whose multi-story brick construction was adapted from east coast designs. Suddenly, they appeared ill-fit for Southern California's children. According to the *Santa Monica Evening Outlook*, "No single event has affected Santa Monica schools as much [as the earthquake]." <sup>44</sup> Although a cursory inspection had Santa Monica students returning to classrooms immediately, inspections by architects and engineers suggested otherwise. On March 13, 1934, the state commission inspected the city's schools and called for their immediate closure. For the next several years, classes were held in "tents" – temporary structures with wood floors with canvas tops and sides that could be rolled up for light and ventilation. <sup>45</sup>

Within thirty days of the Long Beach Earthquake, the California State Legislature passed the Field Act, one of the first pieces of legislation that mandated earthquake-resistant construction in the United States. <sup>46</sup> The Field Act required a statewide overhaul of building codes and practices, particularly for school buildings, and mandated state oversight to ensure proper implementation and enforcement of regulations. <sup>47</sup> Thus, the Long Beach Earthquake ushered in a period of widespread school renovation and reconstruction that would transform many area schools, including those in Santa Monica.

Beginning in 1934, local, state, and federal funds were made available to reconstruct, modernize, and expand area schools, not only to meet new seismic requirements, but also to address the changing school needs. As reported in the Los Angeles Times at the time, new and repaired buildings would be designed for "absolute safety with simplicity and beauty of architecture in harmony with the atmosphere and traditions of Southern California."

Instead of the imposing, monumental buildings of the early twentieth century, new school design championed the use of one-story buildings with a more differentiated, expansive school plant design. Modern school design was concerned with the infiltration of natural light and increasing air circulation in the classroom. California's moderate climate lent itself to passive heating and cooling designs that employed full-length sliding doors and operable windows at varying heights from different directions to draw in cool breezes and release warmer air.

New buildings would be "free of needless ornamentation," since applied decoration often failed and fell to the ground during earthquakes. Thus, early-20<sup>th</sup> century schools that were substantially repaired or rebuilt after the earthquake commonly reflect the architectural trends of the 1930s, as decorative period revival designs were replaced with a more simplified, modernist aesthetic. <sup>48</sup> The resulting

remodels displayed smooth concrete or stucco exteriors, flat roofs, recessed windows, rounded corners or other curved elements, as well as shallow relief panels and interior murals.

### **Works Progress Administration**

Much of the reconstruction activity that took place between 1934 and 1938 was accomplished with the assistance of the federal Works Progress Administration (WPA) and supplemented by local funds. In Santa Monica, the WPA helped to build several buildings throughout in the city, most notably City Hall, a 1938 Art Deco structure designed by Donald Parkinson with terrazzo mosaics by local artist Stanton Macdonald-Wright. In 1935, the Santa Monica City School District received \$1,500,000 in federal funds, along with \$290,000 in local school bonds, to repair or rebuild ten elementary, junior high and high school campuses. By far, the largest project was the complete rehabilitation and modernization of Santa Monica High School. By 1936, it was clear that existing funds would not be sufficient to complete the project at the high school, so an additional \$250,000 in bond money was approved by voters for this purpose. When the high school campus was finally complete, the WPA and Board of Education had spent more than \$1,225,000.

The net result was a \$3 million project wherein four schools, Adams, Roosevelt, Washington, and Grant, were all demolished and rebuilt. The second stories of Muir and Franklin Schools were removed. The brick facing at Santa Monica High School was removed, and the building was re-clad in stucco. The newly constructed schools eschewed period revival designs for more contemporary, pared-back, Streamline Moderne-style buildings with steel reinforcement. John Adams Junior High School (1935, Marsh, Smith & Powell) was located at 2355-2417 16th Street. Grant School at 2368 Pearl Street (1936, Parkinson and Estep) was constructed in the Streamline Moderne style and featured rows of steel sash hopper windows. Washington School was located at 2850 4th Street. Roosevelt School (1935, Marsh, Smith & Powell) at Lincoln and Montana was the most restrained in design, evoking the PWA Moderne style. The design for Franklin Elementary (c. 1934, H.L. Gogerty) was two stories in height and horizontal in orientation, with steel sash hopper windows.

In 1937, with funding from the Works Progress Administration (WPA), an auditorium (1937, Marsh, Smith & Powell; City of Santa Monica Landmark #47) was constructed for Samohi students and to act as a municipal hall for the community. The hall's elegant Streamline Moderne design represents some of the best architecture of the WPA program in Santa Monica. Its curved lines, horizontal massing, and decorative bands were emblematic of the style. Renamed Barnum Hall in 1944, the auditorium foyer houses tile murals of "The Vikings" by Stanton Macdonald-Wright, designed as part of a Federal Art Project for the WPA. Additionally, Wright designed the stage fire curtain mural, "Entrance of the Gods into Valhalla." Santa Monica funded two bond issues to complete the theater, but budgetary problems plagued the project.

In 1937, the Santa Monica Technical School opened on the old Grant School site. In a move toward a more specialized, vocational education that would help ease the problems created by the Depression, the school initially offered courses in cosmetology, carpentry and industrial sheet metal. SaMo Tech, as the school became known, expanded during the war when the defense industry needed additional manpower; new classes were offered in aircraft manufacturing, shipbuilding and other industrial fields.

At the peak of the war effort, classes were offered in three shifts, 24-hours a day, seven days per week. Between 1940 and 1945, over 40,000 students passed through SaMo Tech.<sup>49</sup>

## **World War II**

Beginning in the early 1940s with the advent of World War II, Santa Monica experienced a massive surge in population as military personnel and workers at Douglas Aircraft worked around the clock manufacturing military aircraft.<sup>50</sup> This infusion of new residents led not only to a housing crisis and subsequent building boom, but also to steep increases in enrollment in the city's schools. With a shortage of building supplies and resources, schools were forced to operate on double shifts to accommodate all of Santa Monica's children. After the war, returning GIs married and started families, thus increasing the pressure on Santa Monica's already overcrowded public school system. In addition to starting families, many returning GIs took advantage of the GI bill to help pay for their college educations.

Associated architects, firms, and design professionals from this period include Marsh, Smith & Powell; Allison and Allison; and Francis D. Rutherford, among others.

## **Postwar Modernism, 1946-1970**

Like elsewhere in Southern California, a growing population in Santa Monica put pressure on the limited resources in the city. After the war, returning GIs married and started families, thus increasing the pressure on Santa Monica's already overcrowded public school system. In addition to starting families, many returning GIs took advantage of the GI bill to help pay for their college educations. New school buildings and the expansion of existing campuses was the result of these pressures.

## **Modernism and Functional School Plants**

By the postwar years, the child-centered school plant first championed in the 1930s were adopted as standard design. Architecture reflected the humanist teaching theories championed, and schools were standardized to function for children. As a result, schools became increasingly modern, eschewing the period revival and historical design vocabularies of earlier decades. Postwar schools in Southern California were designed to "feel decentralized, nonhierarchical, approachable, informal, and child-centered."<sup>51</sup> Specifically, many schools were designed to have one-story massing, ample lighting and ventilation, and an indoor-outdoor spatial feeling. Typical construction materials included plywood, glass, and steel.

In addition to style and material, schools from this period also underwent a revolution in site plan, design, and layout. One new design principal in the postwar years was the finger-plan school. The finger-plan design featured a central corridor from which wings projected; this maximized the amount of fresh

---

<sup>49</sup> "A Century of History," *Santa Monica Evening Outlook*, 23D.

<sup>50</sup> Santa Monica Conservancy website, <http://www.smconservancy.org/>. Accessed December 2016.

<sup>51</sup> Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*, 78.

air and light for each wing. Over time, the simple finger-plan school adopted several variations including double-loaded hallways and zigzag building plans. In the 1950s, contrastingly, school plants increasingly adopted the cluster-plan style. The cluster-plan emphasized low massing and indoor-outdoor accessibility but grouped wings as modular units surrounding a common courtyard. This helped compact the campus and provided cost savings in construction.<sup>52</sup>

In Santa Monica during the postwar period, large increases in enrollment presented major problems. As a result, the school district developed new plans for the operation, maintenance, and modernization of the schools, including the expansion of Santa Monica High School. Voters approved two large bond measures, in 1946 and 1950, to fund a large-scale building program that would address not only the immediate issue of overcrowding but the long-term needs of the rapidly growing city.<sup>53</sup>

In order to improve efficiencies in the management of the schools, on July 1st, 1953, the City School District (elementary schools) and the High School District were consolidated into the Santa Monica Unified School District.<sup>54</sup> The area served by the new district included 8.3 square miles within the city limits, as well as 65 square miles in the then-unincorporated community of Malibu.

From 1951 to 1960, new schools were typically designed in the Mid-Century Modern or International style of architecture and landscape designs were modernized. The new schools in the school system included Will Rogers School (1948) at 2401 14th Street, a late example of the pared-back Streamline Moderne style, and Edison Elementary (1950) at 24th Street and Kansas Avenue. Many existing schools embarked on additions, including John Adams School (1969, James Mount).

Associated architects, firms, and design professionals from this period include Frederic Barienbrock & Andrew F. Murray; Garret Eckbo; John C. Lindsay, and J. Harold Melstrom & Joe M. Estep, among others.

Today, there are sixteen school sites within the Santa Monica-Malibu Unified School District (SMMUSD).

### 4.3. History of Grant Elementary School

The founding of Grant Elementary School dates to 1905. That year, a new public school campus was opened in the neighborhood then called Irwin Heights, which was located to the south and east of the central business district (in what is now known as the Pico neighborhood). The original campus consisted of a one-room schoolhouse that was constructed in 1905 and located on the south side of Virginia Avenue, at its intersection with 22<sup>nd</sup> Street (at present-day Virginia Avenue Park). It was a very modest operation that “housed about forty children, grades one through eight, with only one teacher.”<sup>55</sup>

---

<sup>52</sup> Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*, 80-84.

<sup>53</sup> Cleland, Donald Milton. “A Historical Study of the Santa Monica City Schools.” *History of Education Journal*, Vol. 5, No. 1, Autumn, 1953. (8)

<sup>54</sup> The district was later renamed the Santa Monica-Malibu Unified School District (SMMUSD).

<sup>55</sup> “Historic Resources Evaluation Report for the Santa Monica-Malibu Unified School District Measure BB Program” (unpublished draft), prepared by PCR Services Corporation for the Santa Monica-Malibu Unified School District, Jul. 2008, 35.

In addition to capacity issues – as it only consisted of a single building – the original Grant School faced challenges related to cultural and language barriers. In its early years, “about 50 percent of its pupils came from Mexican American homes, many of them non-English speaking, and special classes were thus required for their development. In view of the range of grades and the large number of children, many of whom spoke no English, the difficulties inherent in the task were self-evident”<sup>56</sup>

In 1906, proceeds from a municipal bond measure financed the construction of a new four-room schoolhouse for the Grant School campus, which was located on the original site at 22<sup>nd</sup> Street and Virginia Avenue. In addition to classrooms, this building held an office, a central hall, and a basement which was later converted into classroom and restroom facilities.<sup>57</sup> The school’s central hall became a *de facto* community center where meetings and other events were hosted. Grant, like other schools within the District at this time, was constructed around the “central hall plan,” in which the school was anchored by a central hall and flanked by classrooms, coat rooms, and other facilities. The central halls “were used as assembly halls, occasionally for recitations, and often for displays of work of the school. In addition, they made excellent meeting places for community groups of various interests.”<sup>58</sup>

*Original Grant School at 22<sup>nd</sup> Street and Virginia Avenue, 1906 (Santa Monica Public Library)*

Amid a rapid increase in enrollment and issues relating to overcrowding, the school was expanded in 1924. That year, a new, two-story building was added to the campus, which provided eight additional

---

<sup>56</sup> Ibid.

<sup>57</sup> Ibid.

<sup>58</sup> Ibid, 36.

classrooms and an auditorium. The existing schoolhouse building from 1906 was also modernized in order to harmonize with the new addition.<sup>59</sup> Historic photos of the school suggest that like most of Santa Monica's school facilities of this era, the Grant School was constructed of unreinforced brick and masonry. The improvements to the Grant campus were designed by architect Francis D. Rutherford.

*Original Grant School at 22<sup>nd</sup> Street and Virginia Avenue, ca. 1920s (Santa Monica Public Library)*

As with most public schools in Santa Monica and elsewhere in Southern California, Grant Elementary School sustained extensive structural damage as a result of the 1933 Long Beach Earthquake. Moreover, development of the Douglas Aircraft Company's facilities at nearby Clover Field had led to a rapid influx of new students, once again rendering the existing facilities at the school insufficient to accommodate an influx of new students.

Instead of embarking on another expansion of the existing Grant School, District officials elected to construct an entirely new campus from the ground up. The site selected for the new school was located at 24<sup>th</sup> and Pearl streets, within the rapidly developing Sunset Park neighborhood and about a half mile southeast of the original campus near Virginia Avenue and 22<sup>nd</sup> Street. An August, 1936 article in the *Evening Outlook* underscored the need for a new campus: "The demand for this new grade school has been greatly accelerated by the large increase in new home construction in Sunset Park," the article notes. "Each week sees several new homes started in Sunset Park and during the past six months, the

---

<sup>59</sup> Ibid.

appearance of this district has been entirely altered with the construction of scores of beautiful bungalows.”<sup>60</sup>

Construction of the new school was made possible by a grant provided the federal Works Progress Administration (WPA), and bond money that was approved by Santa Monica voters in 1935 to supplement the federal funding. In addition to the subject campus, the federal grant and bond money financed other projects including improvements to several other campuses within the District including Madison and McKinley Elementary Schools, Lincoln Middle School, and Santa Monica High School.<sup>61</sup>

The new Grant Elementary School campus was designed by the renowned Los Angeles-based architectural firm of Parkinson and Parkinson. In 1936, Parkinson and Parkinson submitted plans for “a modernistic, earthquake-proof grade school” at the new site at 24<sup>th</sup> and Pearl streets. The new campus, as planned, would contain eight classrooms, a kindergarten, and administrative facilities, which were described as being “sufficient to accommodate double the number of children now attending the old Grant School at Twenty-Second Street and Virginia Avenue.”<sup>62</sup> Buildings would have numerous windows for the provision of light and air, and classrooms would open onto a large, 20-by-40-foot courtyard to provide outdoor space for pupils.<sup>63</sup>

*Artist's sketch of the Parkinson and Parkinson plan for Grant Elementary School, 1936 (Evening Outlook)*

Construction of the campus commenced in 1936 and was built by the Jones Brothers, a building contractor.<sup>64</sup> It originally consisted of a two-story administration and classroom building at the front end of campus (Building D), and a one-story classroom wing to its rear (Building C). The District planned to

<sup>60</sup> “Architect’s Drawing Shows How New School Will Look,” *Evening Outlook*, Aug. 1, 1936.

<sup>61</sup> “Santa Monica to Ballot on Bond Issuance,” *Los Angeles Times*, Nov. 3, 1935.

<sup>62</sup> *Ibid.*

<sup>63</sup> *Ibid.*

<sup>64</sup> “Coast City School Contract Let,” *Los Angeles Times*, Nov. 8, 1936.

erect other buildings at the site, including a cafeteria and auditorium, once funds became available.<sup>65</sup> Both of the original campus buildings were designed in what was then called the “modernistic” style and is now known as PWA Moderne. They were formal in their composition and included abstract references to Classicism, but were modern in their extensive fenestration, judicious application of ornament, and streamlined details such as rounded corners that evinced the sense of an object in motion.

The original Grant campus was converted into a vocational school called the Santa Monica Technical School, or Samo Tech, in 1937. The school offered specialized vocational training in disciplines such as cosmetology, carpentry, and industrial sheet metal. It later became a part of Santa Monica City College.

*The new campus of Grant Elementary School at 24<sup>th</sup> and Pearl streets, circa 1936 (Santa Monica Public Library)*

Substantial additions were made to the campus in 1940 by architect Joe Estep, who often worked in collaboration with original campus architect Donald Parkinson. That year, new classroom wings (Buildings B and G – now a computer lab) were added to the west and east of the original two buildings, respectively, adding further definition to the courtyard that was touted as an integral component of the original campus plan. These buildings were also designed in the PWA Moderne style, and their aesthetic complemented the design of the two original campus buildings alongside which they were located.

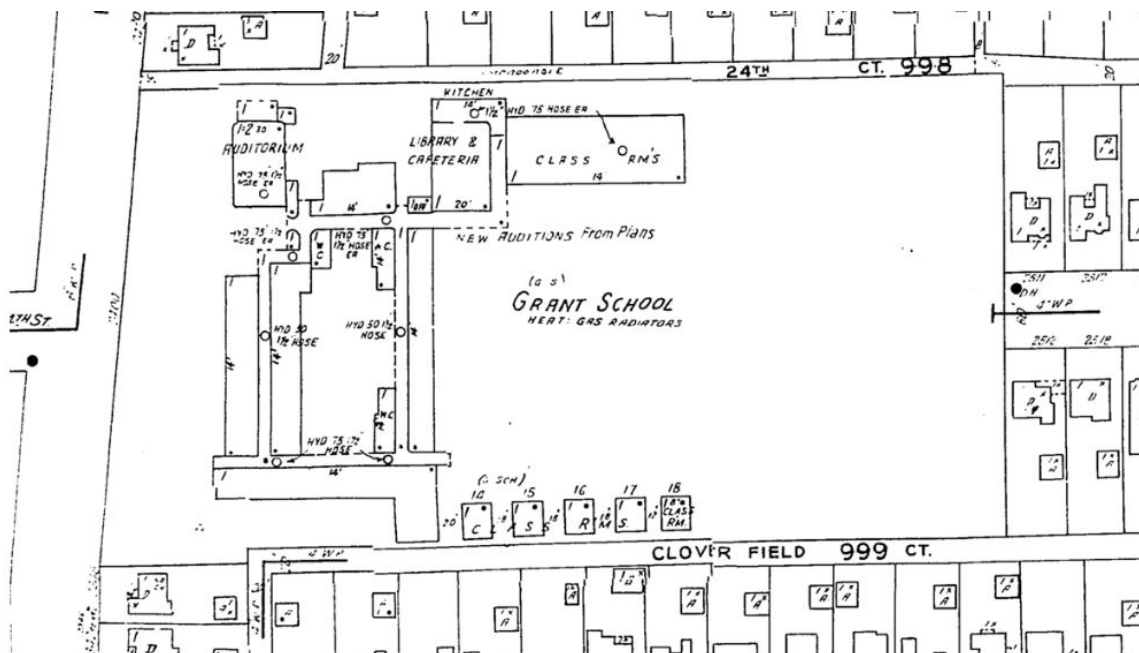

More buildings were added to the campus in 1945, again by architect Estep, as Santa Monica entered into the post-World War II period and witnessed a period of extraordinary growth. An auditorium (Building E) was added to the front of the campus, adjoining the administration building, and a large multi-purpose building comprising a library, cafeteria, and additional classrooms was added to the rear (south) of the campus (Building H). Another classroom building (Building K) was added to the front of the campus. Together, these buildings expanded the campus and provided it with additional capacity to

<sup>65</sup> “Architect’s Drawing Shows How New School Will Look,” *Evening Outlook*, Aug. 1, 1936.

house a steadily growing student body. Like the previous additions to the campus, these buildings were designed in the PWA Moderne style and blended seamlessly with the campus's existing improvements.

A Sanborn Fire Insurance Map prepared in 1950 shows the campus much as it appears today – comprising a collection of buildings that are connected with one another and oriented around a series of courtyards and other interstitial spaces. The Sanborn map also shows that at this time, there were five other small buildings along the west perimeter of the campus, to the rear (south) of the aforementioned complex of buildings, which the map identifies as “classrooms.” These additional buildings appear to have been temporary in nature, and have since been removed.

Sanborn Fire Insurance Map showing the Grant Elementary School campus in 1950 (Los Angeles Public Library)

Issues related to overcrowding had become apparent once again by the early 1950s, as Santa Monica – and particularly the Sunset Park neighborhood – witnessed a considerable amount of growth and development. In 1954, architect Pierre Claeysens, who designed a number of buildings and additions for the District in the 1950s and '60s, was retained to design another addition to Grant Elementary School. This resulted in the construction of a new, linear classroom building at the front of the campus (Building A) and an addition to the north façade of an existing classroom wing (Building B). The two Claeysens-designed additions deviated somewhat from the Moderne aesthetic of the earlier buildings and instead were more visually aligned with the Mid-Century Modern style, which was applied to almost all of the District's new buildings and facilities from the postwar period.

In 1965, a new library (Building F) was built at the far east end of the campus, and was appended to the existing Building G. It, too, was designed in the Mid-Century Modern style. Building F was designed by architect Robert H. Thomas, who designed a number of buildings on behalf of the District in the 1960s.

Subsequent to the 1965 addition, growth at the campus has primarily been accommodated by the placement of relocatable and modular structures to the rear (south) of the campus core. District building records show that these temporary structures were installed in 1992, 1997, and 1999.

## 4.4. Architecture and Design

Consistent with the eras in which they were constructed, the nine permanent buildings comprising the subject campus are designed in the PWA Moderne and Mid-Century Modern styles, which were often applied to public schools in Santa Monica and elsewhere in Southern California. Several architects contributed to the design of the campus. Its original buildings (Buildings C and D) were designed by the architectural firm of Parkinson and Parkinson; additions that were carried out in the 1940s (Buildings B, E, G, H, and K) were designed by architect Joe Estep; subsequent additions in 1954 (Building A and an addition to Building B) were designed by architect Pierre Claeysens; and the 1965 library addition

(Building F) was designed by architect Robert H. Thomas. Contextual information about key architectural styles and architects associated with the campus is included below.

## PWA Moderne Architecture

Buildings at Grant Elementary School that are associated with its original 1936 construction and subsequent additions that were carried out during the 1940s are designed in the PWA Moderne style.

Moderne style architecture is associated with the restrained aesthetic of the Depression era. It has its roots in the Art Deco movement, and loosely incorporates some decorative elements that are characteristic of the Art Deco style. The aesthetic that was eventually coined “Art Deco” was formally introduced in 1925 at the International Exposition of Modern Decorative and Industrial Arts in Paris and became a popular choice for commercial and institutional architecture in the late 1920s.<sup>66</sup> The style broke from past architectural traditions and incorporated elements that were seen as “modern.” It took traditional building forms and reinterpreted them by incorporating clean shapes, rigid geometries, and a bevy of ornament and architectural flourishes that exuded the optimistic spirit of the 1920s.<sup>67</sup>

However, the zenith of Art Deco was short lived. With the onset of the Great Depression and the economic devastation that ensued, the lavish and exuberant aesthetic of the Art Deco style was perceived as far too ostentatious for a society reeling from the worst financial crisis in its history.<sup>68</sup> Architects and the American public alike sought out new forms of architectural expression that exhibited greater restraint and were more appropriately suited to the austerity of the Depression era. This, in turn, gave rise to a variety of related architectural styles that were popular in the 1930s and ‘40s and are collectively referred to as Moderne. The various iterations of Moderne architecture exhibited stylistic differences that rendered them distinct, but shared the common aspiration of appearing modern.

The PWA Moderne style was among these alternative interpretations of modernity that became popular during the Depression era. Reaching its apex between the mid-1930s and mid-1940s, the style referenced the myriad federal assistance and relief programs – such as the Public Works Administration (PWA), Works Progress Administration (WPA), Civilian Conservation Corps (CCC), and others – that were associated with the New Deal and funneled federal dollars into capital improvements.<sup>69</sup> The litany of projects that were executed under these New Deal programs exhibited a common visual vocabulary that eventually came to be known as PWA Moderne. Buildings designed in the PWA Moderne style were defined by their clean lines, rigid geometries, and a strict sense of symmetry, but also incorporated simplified and abstracted elements of the Art Deco style to provide a degree of articulation and architectural interest. What resulted was an aesthetic that was equal parts monumental and restrained.

---

<sup>66</sup> Suzanne Tarbell Cooper, et al., *Images of America: Los Angeles Art Deco* (Charleston, SC: Arcadia Publishing, 2005), 7.

<sup>67</sup> Ibid.

<sup>68</sup> Leon Whiteson, “The Graceful Lines of Streamline Moderne,” *Los Angeles Times*, Feb. 11, 1990.

<sup>69</sup> Ibid.

PWA Moderne architecture struck a balance between the rigid formality of the Beaux Arts tradition and the sleeker aesthetic of the Art Deco and Moderne styles. It was an idiom that was seen as both familiar and innovative, as described by architectural historian Elizabeth McMillian:

[PWA Moderne] buildings were formal and fundamentally Classical with enough Moderne details to convey a contemporary feeling. Their characteristics include balanced and symmetrical form and classical horizontal proportions. Rather than columns, they used piers, which were occasionally fluted, but usually had no capitals or bases. Surfaces were smooth and often sheathed in sturdy materials like stone, polished marble, granite and terrazzo with terracotta detail. Ornament was frequently a program of traditional-style relief sculpture. Windows were rhythmically arranged as vertical, recessed panels... [on buildings'] interiors, rich materials, relief work and murals adorned the lobbies and major spaces.<sup>70</sup>

The aesthetic of the PWA Moderne style was an accurate reflection of the economic woes afflicting the nation, but it also signified confidence in the ability of civic institutions to overcome these challenges by symbolizing “solidity, solvency, and optimism.”<sup>71</sup> It also stood as a symbol of the government’s largesse, and its commitment to improving the lives of its citizens during these tumultuous times. Appropriately, the style was most commonly applied to civic and government buildings such as post offices, courthouses, schools, libraries, and city halls. Often, characteristics of the style were also incorporated into the design of bridges and other types of infrastructure projects.

Common character-defining features of the PWA Moderne style include:

- Flat roofs
- Formal symmetry and massing
- Smooth wall surfaces, such as stucco, marble, terrazzo, polished stone and brick, although rare)
- Pier supports (rather than columns)
- Windows arranged in vertical recessed bays
- Stripped appearance with minimal ornamentation, including some zigzags or plaster reliefs
- May incorporate rounded corners, speedlines, and other elements of the Streamline Moderne style

## Mid-Century Modern Architecture

Later additions to the Grant Elementary School campus that were completed in the 1950s and ‘60s are designed in the Mid-Century Modern style.

Prior to World War II, Modernism was considered to be a fringe movement that was often associated with nontraditional schools of thought and the avant-garde. However, the onset of World War II had a profound impact on architects and American society’s approach to architecture. During the war, architects and engineers were tasked with devising new building methods that were efficient and utilized innovative building materials. Following the war, architects applied these new methods and

---

<sup>70</sup> Elizabeth McMillian, *Deco and Streamline Architecture in L.A.: A Moderne City Survey* (Atglen, PA: Schiffer, 2004), 188.

<sup>71</sup> Susan Vaughn, “Buildings Still Sport Streamline Legacy,” *Los Angeles Times*, Feb. 9, 1992.

materials in an effort to accommodate growing residential demand and the expanding U.S. economy. The postwar Modern movement promoted a school of architecture that was rational and economical.

Mid-Century Modern describes a broad classification of Modernism that was popular between the late 1940s and early 1970s. Mid-Century Modern architecture is found in all aspects of design from residential to institutional to commercial. The style rose to prominence in Southern California due in no small part to publications like *Arts + Architecture* magazine's Case Study House program. Internationally recognized, the program, which ran from 1945 to 1966, famously publicized thirty-six dwellings designed by prominent modernist architects. Of the 36 homes designed for the Case Study program, 25 were constructed. The prevailing goal of the program was to create and promote quality modern single-family dwellings suitable for mass production and attainable to the quickly-expanding American middle-class.

As the Mid-Century Modern style grew in popularity, its aesthetic was adapted to a host of different building types ranging from houses, gas stations, hotels, schools, office buildings, police stations, and industrial plants, among others.

Character-defining features of the Mid-Century Modern style include the following:

- One or two-story configuration
- Horizontal massing (for small-scale buildings)
- Simple geometric forms
- Exposed post-and-beam construction, in wood or steel
- Flat roof or low-pitched gable roof with wide overhanging eaves and cantilevered canopies
- Unadorned wall surfaces
- Wood, plaster, brick or stone used as exterior wall panels or accent materials
- Flush-mounted metal frame fixed windows and sliding doors, and clerestory windows
- Exterior staircases, decks, patios and balconies
- Little or no exterior decorative detailing

## Parkinson and Parkinson, Architects

The two original campus buildings (Buildings C and D) at Grant Elementary School were designed by the architectural firm of Parkinson and Parkinson.

Parkinson and Parkinson was a Los Angeles-based architectural firm headed by the father-son team of John and Donald Parkinson, both highly prolific and esteemed regional architects. John D. Parkinson (1861-1935) was born in England and came to the United States in the late nineteenth century to pursue a career in architecture, first settling in the San Francisco Bay Area before moving to Los Angeles in 1894.<sup>72</sup> Parkinson's arrival coincided with a period of considerable growth in Los Angeles, and so the architect had ample opportunity to make his mark on the up-and-coming city. In 1897, he designed the Homer Laughlin Building, which was Los Angeles's first Class A steel-frame structure; in 1902, he

---

<sup>72</sup> Stephen Gee, *Iconic Vision: John Parkinson, Architect of Los Angeles* (Santa Monica: Angel City Press, 2013), 55.

designed the Braly Block, which is considered to be Los Angeles's first skyscraper and, at 175 feet, bore distinction as the city's tallest building until height restrictions were finally lifted after World War II.

Between 1905 and 1915, Parkinson partnered with architect G. Edwin Bergstrom. Their firm, called Parkinson and Bergstrom, churned out an impressive array of building projects in and around Downtown Los Angeles. Parkinson and Bergstrom's expansive portfolio included the city's largest and most opulent hotels (Hotel Alexandria, 1906; Hotel Rosslyn, 1914); department stores (Bullocks, 1906; The Broadway, 1914); banks (Security Trust and Savings Bank, 1907; Citizens National Bank Building, 1914-15); train depots (Southern Pacific Passenger Terminal, 1914); a factory for the Ford Motor Company (1913); the Los Angeles Athletic Club (1911-12); and numerous Class-A office buildings and commercial blocks throughout the central business district.<sup>73</sup> The firm played a heavy hand in shaping the architectural character of Downtown Los Angeles amid its growth and expansion in the early decades of the twentieth century. Following the dissolution of their partnership in 1915, Parkinson was hired by the University of Southern California (USC) to develop its first-ever master plan and design several of its buildings.<sup>74</sup>

John Parkinson entered into partnership once again in 1920, this time with his son, Donald Berthold Parkinson (1895-1945). The firm was renamed Parkinson and Parkinson. "They made a splendid team," remarked fellow architect John C. Austin, "one with his ripe experience, and the other with the enthusiasm of youth."<sup>75</sup> The formation of their partnership corresponded with a period marked by phenomenal optimism and growth: between 1920 and 1930, the economy was thriving, the population of Los Angeles more than doubled, and the city witnessed a wave of development unprecedented in scale and impact.<sup>76</sup> It was an exciting time to be practicing architecture and provided ample opportunity for the city's leading practitioners to dabble in new forms.

Indeed, some of the most iconic and enduring architectural works in Parkinson's portfolio were completed during the period during which he partnered with his son. Notable commissions include the Los Angeles Memorial Coliseum (1921); a new flagship store for the Bullocks department store company on Wilshire Boulevard (Bullocks Wilshire, 1929); many new office buildings in Downtown Los Angeles (Title Insurance Building, 1928; Title Guarantee and Trust Building, 1929-31); and banks and financial institutions (Federal Reserve Bank of San Francisco's Los Angeles Branch, 1929; California Bank, Hollywood and Gramercy Branch, 1930). Between 1925 and 1928, Parkinson teamed with fellow architects Albert C. Martin and John C. Austin to design Los Angeles City Hall, a remarkably bold display of architectural prowess that is one of the most, if not the single most iconic building in Los Angeles.<sup>77</sup>

Aesthetically, the work that came out of the Parkinson firm in the 1920s and early 1930s reflects the stylistic shifts in architecture that were taking place at this time. While most of John Parkinson's earlier work took cues from Classical traditions and the Beaux Arts style that dominated American commercial architecture at the time, his later buildings veered more in the direction of the Art Deco and Moderne styles that were coming into vogue. This stylistic shift is particularly well expressed in the Parkinsons' design for Bullocks Wilshire, whose vertical recesses, luminous spire, and buff-hued terra cotta cladding

render it one of the most resplendent examples of the Art Deco style in Los Angeles.<sup>78</sup> Donald Parkinson is often credited as the principal force behind the firm's evolving aesthetic. His youth, creative passion, and artistic inclinations helped to breathe new energy into his father's already-well established practice.

John Parkinson died in 1935, at age 73, in Santa Monica. The *Los Angeles Times* aptly noted that "future citizens have only to walk through the streets of Los Angeles to be reminded of how much John Parkinson in his lifetime contributed to the city that grew up under his hand."<sup>79</sup> Donald Parkinson assumed control of the firm until his death in 1945, presiding over the completion of Los Angeles Union Station (1939) and also designing many other iconic buildings including Santa Monica City Hall (1938).

In addition to designing the original campus of Grant Elementary School, Parkinson and Parkinson were involved in the reconstruction of McKinley Elementary School and Lincoln Middle School in the 1930s.

## Joe Estep, Architect

Buildings that are associated with the 1940s additions to the original Parkinson and Parkinson-designed campus – specifically, Buildings B, E, G, H, and K – were designed by architect Joe Estep.

Joseph Morgan Estep (1888-1959) was born in Ohio. There is little information available about his early life. By the mid-1920s, Estep had moved to Southern California and entered into partnership with architect Arthur R. Kelly. Their firm, which was called Estep and Kelly, Associated Architects, became known for its body of high-style custom residential buildings. Among Estep and Kelly's most highly profiled residential projects included the Tudor Revival-style John Blystone Residence in Beverly Hills (1925); the William Channer Residence in Brentwood (1925); the Arthur Letts, Jr. Residence in Holmby Hills (1927, now known as the Playboy Mansion), and the W.B. Cline House in Beverly Hills (1930).<sup>80</sup>

The tasteful custom houses designed by Estep and Kelly earned them notoriety in the architectural profession. Residences designed by the firm were often prominently featured in architectural journals and trade publications. In 1930, Estep and Kelly participated in "Pillars of Fine Architecture," an architectural exhibition that featured high-style dwellings "that have made the architecture of California nation ally known for its beauty and charm."<sup>81</sup> Estep and Kelly's work was presented alongside other highly regarded residential architects of the day including John Byers, Roland Coate, Myron Hunt, Gordon Kaufmann, and Wallace Neff, putting them in an exclusive group of esteemed practitioners.

With Kelly, Estep also designed commercial and institutional buildings early in his career including a drive-in market on Hollywood Boulevard (1928) that was notable for its accommodation of the car

<sup>79</sup> "John Parkinson," *Los Angeles Times*, Dec. 12, 1935.

<sup>80</sup> "Many Homes Being Built," *Los Angeles Times*, Jul. 26, 1925; Pacific Coast Architecture Database, "Estep and Kelley, Associated Architects (Partnership)," accessed Sept. 2021.

<sup>81</sup> "Permanent Exhibition Announced," *Los Angeles Times*, Sept. 21, 1930.

during the early days of vehicular travel; and the campus of the Westlake School for Girls in Holmby Hills (1928, the forebear to today's Harvard-Westlake School).<sup>82</sup>

Estep appears to have continued working in association with Kelly through the mid-1930s. While he continued to design residential projects, by this time his primary focus had shifted from residential commissions to larger-scale institutional and public buildings. In 1936, Estep and Kelly designed the Home Gardens Elementary School campus in South Gate. In 1941, Estep and architect H. Donald West designed the Phi Delta Theta fraternity house near the UCLA campus.<sup>83</sup>

In Santa Monica, Estep's legacy is expressed through his large-scale civic and institutional contributions to the cityscape. In the late 1930s, he worked with architect Donald Parkinson to design the PWA Moderne-style Santa Monica City Hall, which is widely considered to be one of the city's most iconic architectural landmarks. When the facility was dedicated in November 1939, it attracted "a crowd that included local dignitaries [and] radio and movie personalities," and was heralded by PWA administrator Kenneth Goodwin as "one of the best [buildings] on the Pacific Coast built with PWA funds."<sup>84</sup>

Beginning in the late 1930s and continuing through the 1950s, Estep carved out a niche in school architecture and frequently worked on behalf of the Santa Monica Unified School District, designing buildings and other improvements at a number of its campuses. Notably, Estep designed substantial additions to Grant Elementary School in the 1940s, and also designed buildings at several other local campuses including Edison, McKinley, Roosevelt, and Will Rogers Elementary Schools; John Adams Middle School; and Santa Monica High School. Estep's school designs "emphasized the relationship between the interior and exterior spaces organized around open courtyard, made extensive use of large banks of windows, and provided circulation via covered outdoor hallways."<sup>85</sup>

Estep's designs in Santa Monica demonstrated his skill and comfort working in the Moderne style of architecture and his penchant for skillfully blending formal massing and composition with new, modernistic approaches to architecture. The large civic and institutional buildings that Estep designed emerged as architectural focal points, setting the aesthetic tone for local civic architecture during the Depression era. For these reasons he is regarded as a locally significant practitioner. Estep died in 1959.

## Pierre Claeysens, Architect

Two later additions to the Grant Elementary School campus – Building A (1954) and an addition to the north façade of Building B (1954) – were designed by architect Pierre Claeysens.

Pierre Paul Claeysens (1908-2003) was born in Antwerp, Belgium. After serving in the Belgian Army, he immigrated to the United States in 1938, initially settling in Chicago and later moving to Southern

California. During World War II, he helped design Liberty ships at Terminal Island.<sup>86</sup> His career in architecture blossomed after World War II, though there is relatively little information about the oeuvre of his architectural work. It is known that during the 1950s and '60s, Claeysens designed several public schools, libraries, and similar types of institutional properties. Notable commissions include an elementary school campus in the Central California community of Lompoc (1960), and several projects for the Santa Monica Unified School District in the post-World War II period.<sup>87</sup> In addition to designing additions to the Grant campus in the early 1950s, Claeysens developed the original plot plan for Juan Cabrillo Elementary School (1954-1956), and also designed additions for the campuses of Edison, Washington, and Webster Elementary Schools and John Adams Middle School. Claeysens also designed childcare centers for the District, one in Ocean Park and another adjacent to Lincoln Middle School.<sup>88</sup>

Claeysens is remembered as a philanthropist. He married Ailene Wood, an oil heiress, and in 1980 established the Wood-Claeysens Foundation, which distributed more than \$3 million each year to some 200 charities.<sup>89</sup> Claeysens was a longtime resident of Santa Barbara. He died in 2003.

## Robert H. Thomas, Architect

One building at the Grant Elementary School campus (Building F, 1965) was designed by architect Robert F. Thomas.

Robert Hyle Thomas (1900-1996) was born in Los Angeles. Little information is available about his early life or education. In the early 1950s, Thomas was working in partnership with fellow architects Phillip McFarland and Wallace Bonsall. Their firm, known as McFarland, Bonsall and Thomas, designed custom dwellings in the desert communities of Apple Valley, California and Flagstaff, Arizona.<sup>90</sup> In 1954, the firm won an American Institute of Architects (AIA) award for its design of a bank building in Apple Valley.<sup>91</sup>

By the late 1960s, Thomas appears to have been working in private practice. It was during this time that he developed a relationship with the Santa Monica Unified School District and was retained to design additions at several of its campuses. In 1968, he designed a new auditorium building for Lincoln Junior High School to replace the original (1924), Allison and Allison-designed auditorium. He also designed additions at the Edison (1968) and Will Rogers (1970) campuses, as well as new library buildings for the Grant and Madison campuses (1968).<sup>92</sup>

## 5. Regulations and Criteria for Evaluation

### 5.1. National Register of Historic Places

The National Register of Historic Places (National Register) is the nation's master inventory of known historic resources. Established under the auspices of the National Historic Preservation Act of 1966, the National Register is administered by the National Park Service (NPS) and includes buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archaeological, or cultural significance at the national, state, or local level. Eligibility for in the National Register is addressed in National Register Bulletin (NRB) 15: *How to Apply the National Register Criteria for Evaluation*. NRB 15 states that in order to be eligible for the National Register, a resource must both: (1) be historically significant, and (2) retain sufficient integrity to adequately convey its significance.

Significance is assessed by evaluating a resource against established eligibility criteria. A resource is considered significant if it satisfies any one of the following four National Register criteria:<sup>93</sup>

- Criterion A (events): associated with events that have made a significant contribution to the broad patterns of our history
- Criterion B (persons): associated with the lives of significant persons in our past
- Criterion C (architecture): embodies the distinctive characteristics of a type, period, or method of construction, or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction
- Criterion D (information potential): has yielded or may be likely to yield, information important in prehistory or history

Once significance has been established, it must then be demonstrated that a resource retains enough of its physical and associative qualities – or *integrity* – to convey the reason(s) for its significance. Integrity is best described as a resource's "authenticity" as expressed through its physical features and extant characteristics. Generally, if a resource is recognizable as such in its present state, it is said to retain integrity, but if it has been extensively altered then it does not. Whether a resource retains sufficient integrity for listing is determined by evaluating the seven aspects of integrity defined by NPS:

- Location (the place where the historic property was constructed or the place where the historic event occurred)
- Setting (the physical environment of a historic property)
- Design (the combination of elements that create the form, plan, space, structure, and style of a property)

---

<sup>93</sup> Some resources may meet multiple criteria, though only needs to be satisfied for National Register eligibility.

- Materials (the physical elements that were combined or deposited during a particular period of time and in a particular manner or configuration to form a historic property)
- Workmanship (the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory)
- Feeling (a property's expression of the aesthetic or historic sense of a particular period of time)
- Association (the direct link between an important historic event/person and a historic property)

Integrity is evaluated by weighing all seven of these aspects together and is ultimately a “yes or no” determination – that is, a resource either retains sufficient integrity, or it does not.<sup>94</sup> Some aspects of integrity may be weighed more heavily than others depending on the type of resource being evaluated and the reason(s) for the resource's significance. Since integrity depends on a resource's placement within a historic context, integrity can be assessed only after it has been concluded that the resource is in fact significant.

## 5.2. California Register of Historical Resources

The California Register of Historical Resources (California Register) is an authoritative guide used to identify, inventory, and protect historical resources in California. Established by an act of the State Legislature in 1998, the California Register program encourages public recognition and protection of significant architectural, historical, archeological, and cultural resources; identifies these resources for state and local planning purposes; determines eligibility for state historic preservation grant funding; and affords certain protections under the California Environmental Quality Act (CEQA).

The structure of the California Register program is similar to that of the National Register, though the former more heavily emphasizes resources that have contributed specifically to the development of California. To be eligible for the California Register, a resource must first be deemed significant under one of the following four criteria, which are modeled after the National Register criteria listed above:

- Criterion 1 (events): associated with events or patterns of events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States
- Criterion 2 (persons): associated with the lives of persons important to local, California, or national history
- Criterion 3 (architecture): embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values
- Criterion 4 (information potential): has yielded, or has the potential to yield, information important to the prehistory or history of the local area, state, or the nation

---

<sup>94</sup> Derived from NRB 15, Section VIII: “How to Evaluate the Integrity of a Property.”

Mirroring the National Register, the California Register also requires that resources retain sufficient integrity to be eligible for listing. A resource's integrity is assessed using the same seven aspects of integrity used for the National Register. However, since integrity thresholds associated with the California Register are generally less rigid than those associated with the National Register, it is possible that a resource may lack the integrity required for the National Register but still be eligible for listing in the California Register.

Certain properties are automatically listed in the California Register, as follows:<sup>95</sup>

- All California properties that are listed in the National Register
- All California properties that have formally been determined eligible for listing in the National Register (by the State Office of Historic Preservation)
- All California Historical Landmarks numbered 770 and above
- California Points of Historical Interest which have been reviewed by the State Office of Historic Preservation and recommended for listing by the State Historical Resources Commission

Resources may be nominated directly to the California Register. State Historic Landmarks #770 and forward are also automatically listed in the California Register. There is no prescribed age limit for listing in the California Register, although guidelines state that sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with a resource.

### 5.3. City of Santa Monica Landmarks and Historic Districts Ordinance

Historic preservation in Santa Monica is governed by Chapter 9.56 (Landmarks and Historic Districts Ordinance) of the Santa Monica Municipal Code. The Ordinance was adopted by the Santa Monica City Council on March 24, 1976, and was amended in 1987 and again in 1991.<sup>96</sup> Its current version was adopted in 2015. Among the primary objectives achieved by the Ordinance was the creation of a local designation program for buildings, structures, sites, objects, districts, and landscapes in the City that are of historical significance.

With respect to individually significant properties, the Ordinance distinguishes between two tiers of designation: Landmarks and Structures of Merit. Landmarks, outlined in §9.56.100, are considered to exhibit "the highest level of individual historical or architectural significance"; Santa Monica's designated landmarks include well-known and highly significant properties like the Rapp Saloon, Santa Monica City Hall, and the John Byers Adobe. Structures of Merit, outlined in §9.56.080, possess a degree

<sup>95</sup> California Public Resources Code, Division 5, Chapter 1, Article 2, § 5024.1.

<sup>96</sup> City of Santa Monica General Plan, "Historic Preservation Element," prepared by PCR Services Corporation and Historic Resources Group (September 2002), 1-2.

of individual significance that is more limited in scope.<sup>97</sup> Protections against demolition and alterations are commensurate with the tier of individual designation assigned to a particular resource.

Landmarks are sited on Landmark Parcels. §9.56.030 defines a Landmark Parcel as “any portion of real property, the location and boundaries as defined and describes by the Landmarks Commission, upon which a Landmark is situated, which is determined by the Landmarks Commission as requiring control and regulation to preserve, maintain, protect or safeguard the Landmark.”<sup>98</sup>

In addition to individual Landmarks and Structures of Merit, the Ordinance establishes statutory criteria and procedures for the designation of Historic Districts, defined in §9.56.030 as a “geographic area or noncontiguous grouping of thematically related properties” that collectively contribute to the historic character of an area within the City. Unlike individual properties, whose designation does not require owner consent and is approved by the City’s Landmarks Commission, Historic Districts must win the support of a majority of property owners within the district and be approved by the City Council.<sup>99</sup>

Per §9.56.100(A) of the Ordinance, a property merits consideration as a Landmark if it satisfies one or more of the following six statutory criteria:

- (1) It exemplifies, symbolizes, or manifests elements of the cultural, social, economic, political, or architectural history of the City
- (2) It has aesthetic or artistic interest or value, or other noteworthy interest or value
- (3) It is identified with historic personages or with important events in local, state, or national history
- (4) It embodies distinguishing architectural characteristics valuable to a study of a period, style, method of construction, or the use of indigenous materials or craftsmanship, or is a unique or rare example of an architectural design, detail, or historical type valuable to such a study
- (5) It is a significant or a representative example of the work or product of a notable builder, designer, or architect
- (6) It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community, or the City

## 6. Evaluation of Significance

### 6.1. Records Search

In lieu of a formal records search, ARG reviewed the California Office of Historic Preservation's Built Environment Resources Directory (BERD) database. The subject property, 2368 Pearl Street, is not listed in the BERD database for Los Angeles County.

### 6.2. Previous Evaluations

Grant Elementary School has previously been identified as a potential historic resource. The first evaluation of the campus was conducted in 1993 as part of the City of Santa Monica's Historic Resources Inventory (HRI) process. The 1993 HRI identified a potential thematic district of public school campuses (called the Santa Monica Schools Thematic District), which consisted of six public school campuses in Santa Monica. Grant Elementary School was among the six campuses identified as contributors to the potential district, and the site was assigned a California Historical Resource Status Code of 5D1, connoting its status as a contributor to a potential historic district identified through survey evaluation. It was subsequently recorded in the City's HRI, though it was not formally designated by this process.

An update of the City's HRI was conducted in 2007, which included re-evaluation of all resources identified in previous iterations of the HRI. Grant Elementary School was again evaluated for potential historic significance, and was again identified as a contributor to a potential thematic district of public school campuses in Santa Monica (since re-named the Santa Monica Public Schools District). The campus was assigned the corresponding California Historical Resource Status Code of 5D3: "appears to be a contributor to a district that appears eligible for local listing through survey evaluation."<sup>100</sup>

In 2008, a draft Historic Resources Evaluation Report (HRER) was prepared in conjunction with the adoption of Measure BB, a bond measure that allocated funds for the repair and improvement of buildings and facilities. Measure BB was approved by voters in November 2006 and was intended "to improve health, safety and class instruction by repairing and renovating outdated facilities" within the District's jurisdiction.<sup>101</sup> Seventeen school campuses were evaluated for potential historical significance in the draft HRER, of which eight were found to be potentially eligible for listing. In the draft HRER, Grant Elementary School was found to be potentially eligible for individual listing in the California Register of Historical Resources and the local (Santa Monica) register under Criteria 1 and 3, as follows:

Grant Elementary School appears eligible for the California Register under Criterion 1 for its association with events that have made a significant contribution to District history and the broad patterns of history and culture in Santa Monica and the Southern California region, and under Criterion 3 as a distinctive work of architecture by Master architects Parkinson and

---

<sup>100</sup> DPR form for the Grant School, prepared by Leslie Heumann as part of the City of Santa Monica HRI, 1993.

<sup>101</sup> "Historic Resources Evaluation Report for the Santa Monica-Malibu Unified School District Measure BB Program" (unpublished draft), prepared by PCR Services Corporation for the Santa Monica-Malibu Unified School District, Jul. 2008, 1.

Parkinson, and notable local architect Joe M. Estep that conveys the significant architectural associations and characteristics of Modern architecture and planning, and post-earthquake school architecture... Grant Elementary School also appears locally significant both individually as a contributor to a district that appears eligible through survey evaluation.<sup>102</sup>

The 2008 draft HRER assigned the site the corresponding California Historical Resource Status Codes of 3CS (“appears eligible for the California Register as an individual property through survey evaluation”) and 5B (“locally significant both individually and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation”). However, the HRER was never finalized, and its draft findings were never formally adopted. Its findings remain in draft form.

Another update of the City’s HRI was completed in 2016, which again included re-evaluation of all resources identified in previous iterations of the HRI. Consistent with contemporary best practices in historic preservation planning, this iteration of the HRI did not identify potentially eligible thematic districts, but instead evaluated resources on their own merits and in accordance with the National Park Service (NPS)’s Multiple Property Documentation (MPD) approach, which allows for the streamlined evaluation of resources with shared contextual qualities. Grant Elementary School was identified as potentially eligible for local designation as an individual resource and was assigned the corresponding California Historical Resource Status Code of 5S3: “appears to be individually eligible for local listing or designation through survey evaluation.” The campus is currently listed in the HRI with a 5S3 status code.

## 6.3. Evaluation of Eligibility

### Summary of Findings

Based on review of background materials, primary and secondary source research, public outreach, and development of applicable historic contexts and themes, ARG arrives at the following conclusions:

- Grant Elementary School appears eligible for listing in the California Register of Historical Resources under Criteria 1 and 3, and for local (City of Santa Monica) listing under Criteria 1, 4, and 5 as a historic district comprising multiple buildings and associated site/landscape features.
- Potential significance is derived from the synergy between contributing buildings and site features; no one building or site feature on the campus appears to be individually eligible when evaluated independent of the larger historic district.
- The following are considered to be contributing elements of the district: Buildings B, C, D, E, G, H, and K; the landscaped courtyard bounded by Buildings B, C, D, and G; and the paved forecourt and flagpole at the north end of the campus, as approached from Pearl Street.
- Other buildings and site/landscape features do not contribute to the historic district.

---

<sup>102</sup> Ibid, 203.

- Grant Elementary School does not appear eligible for listing in the National Register of Historic Places due to compromised integrity.

These findings are generally consistent with previous evaluations of the campus described above.

The following sections provided a discussion of how these determinations of eligibility were made.

## Evaluation as a Historic District

School campuses and other institutional resources often encompass multiple buildings and site features with common characteristics. In these instances, it is appropriate to evaluate campuses as historic districts, which are defined and described in NRB 15 as follows:

A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development. A district derives its importance from being a unified entity, even though it is often composed of a wide variety of resources. The identity of a district results from the interrelationship of its resources, which can convey a visual sense of the overall historic environment or be an arrangement of historically or functionally related properties...A district can comprise both features that lack individual distinction and individually distinctive features that serve as focal points. It may even be considered eligible if all of the components lack individual distinction, provided that the grouping achieves significance as a whole within its historic context.<sup>103</sup>

As per the above definition, school campuses, which are often geographically concentrated and purpose-built, are often evaluated as historic district. Schools in the United States, especially those built in the twentieth century, often exhibit definable campuses and unified site plans which reflect individual buildings' interconnectedness and functionality as a larger grouping. Although historic districts can contain resources built during distinct periods of development, many school campuses historic districts reflect a specific era of development and are contained within a common period of significance.

Grant Elementary School satisfies the above definition, and so it was evaluated as a potential district.<sup>104</sup> Though constructed over the span of a decade, contributing buildings are all designed in compatible iterations of the PWA Moderne style, resulting in a sense of visual continuity. They were all designed by the same group of architects – Parkinson and Parkinson, and Joe M. Estep, who often worked in collaboration – resulting in a consistent and harmonious visual character. Buildings that were inserted into the campus in the 1940s are architecturally and visually indistinguishable from earlier buildings.

The following includes an analysis of the campus through the lens of a district. When removed from their broader context and evaluated independently, none of the individual buildings or site features

<sup>103</sup> *National Register Bulletin No. 15, How to Apply the National Register Criteria for Evaluation* (1990, rev. 1995), 5.

<sup>104</sup> For any given historic district, the retention of all contributors and character-defining features may not be necessary for that historic district to continue to convey its historical significance and remain eligible for historic listing. However, analysis should be conducted on a case-by-case basis to consider all potential impacts that a project may have on a historic district.

associated with the context appear to rise to the level of individual significance. Rather, their significance is part and parcel of their visual and spatial association with other buildings and features.

## National Register of Historic Places

Eligibility criteria for the National Register of Historic Places are almost identical to those for the California Register of Historical Resources. However, integrity thresholds for the National Register are generally understood to be more stringent than those for the California Register. Technical assistance bulletins published by the California Office of Historic Preservation (OHP) note this distinction between integrity thresholds for federal and state registration programs. As noted in OHP's Technical Assistance Series No. 6, "it is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they still be eligible for listing in the California Register."<sup>105</sup>

ARG concludes that the campus of Grant Elementary School appears to be eligible for listing in the California Register, per the discussion below. However, because of alterations that have been made to most of the campus's buildings (as discussed in *Section 6.5: Evaluation of Integrity*), the campus does not appear to satisfy the higher thresholds for integrity associated with National Register listing.

## California Register of Historical Resources

ARG concludes that Grant Elementary School appears to be eligible for listing in the California Register of Historical Resources as a historic district under Criterion 1 and 3, as follows:

***California Register Criterion 1:*** *associated with events or patterns of events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.*

### Evaluation of District Eligibility

Grant Elementary School appears to satisfy California Register Criterion 1 for its association with patterns of events significant to the institutional history of Santa Monica during the Great Depression and World War II, an important period of institutional development in the City's history.

The 1930s and '40s were a particularly influential and transformative period in the institutional development of Santa Monica for several reasons. Compared to many other communities in Southern California that saw new development come to a near-standstill, Santa Monica fared considerably better, due in large part to the presence of a burgeoning local defense industry that attracted a steady influx of

---

<sup>105</sup> *California Office of Historic Preservation Technical Assistance Series #6: California Register and National Register, a Comparison (for purposes of determining eligibility for the California Register)*, accessed Sept. 2021.

new residents and necessitated growth. Many of the city's existing civic buildings and facilities proved ill-equipped to accommodate increasing demand amid a backdrop of economic uncertainty and malaise.

This was reflected particularly strongly in the City's existing public schools, many of which had far surpassed their intended capacity and had become outmoded and overcrowded. These challenges were only exacerbated with the 1933 Long Beach Earthquake, which resulted in widespread damage to schools and other civic buildings, and the subsequent adoption of the Field Act, state legislation that mandated additional seismic safety standards for public schools and rendered many buildings unusable.

Meanwhile, as the nation was mired in economic depression the federal government embarked upon an extraordinarily ambitious effort to reinvigorate the national economy and put unemployed artisans, craftspeople, and other laborers back to work through the implementation of the New Deal. Various acronymically-named federal agencies – including the Public Works Administration (WPA) and the Works Progress Administration (WPA) – were conceived under the auspices of the New Deal and allocated substantial sums of money to local governments to invest in new infrastructure, public art, and other civic projects. Santa Monica received a sizable amount of federal aid from New Deal-era programs due to the considerable strain that defense-driven population growth had placed on its public buildings.

The influx of federal dollars associated with New Deal-era programs provided Santa Monica with the opportunity and the wherewithal to invest substantially in improving and modernizing its civic infrastructure. Beginning in the 1930s and continuing into the 1940s, the City applied the resources provided by these federal agencies to a number of large civic improvement projects, resulting in a substantial collection of new civic and institutional improvements across the city that exemplified trends in modern architecture and design. A new post office (1938) and city hall (1939) were financed by New Deal-era programs and stood as new, modern, and visually prominent anchors within the community.

However, public schools arguably stood as some of the strongest expressions of civic investment and largesse at this time. Between the 1930s and '40s, nearly all of the City's public schools were extensively remodeled or completely rebuilt using federal dollars, both to accommodate new growth and conform to the requirements of the Field Act. Consequently, Santa Monica was home to a collection of new, modern school public school plants by the 1940s, almost all of which had benefited from the New Deal to some extent. This sentiment is reflected in an *Evening Outlook* article dated April 1937, which states that "the city has a virtually new school system in which all of the buildings conform to the general type of modern architecture with special features to provide for modern methods of teaching."<sup>106</sup>

Consequently, local public schools emerged as a point of civic pride; in the same *Evening Outlook* article from April 1937, one observer of Santa Monica's recently-modernized schools opined that "that earthquake must almost have been a blessing in disguise since it has led to a comparatively new, modern and attractive school system for this city...almost any other city would be willing to undergo considerable anxiety for a time if eventually it could have a brand new school system."<sup>107</sup>

---

<sup>106</sup> "Santa Monica Has Reason to be Proud of its Schools," *Evening Outlook*, Apr. 28, 1937.

<sup>107</sup> Ibid.

Different campuses within the District were affected by these rehabilitation efforts in different ways; at some sites, existing buildings were retained and modified, while at others, District officials elected to abandon existing improvements altogether and erect entire new school campuses from the ground up.

Grant Elementary School falls into the latter camp. Rather than rehabilitate existing (and acutely overcrowded) buildings at the original 22<sup>nd</sup> Street site, the District instead purchased a large swath of undeveloped land in the still-sparsely-developed Sunset Park neighborhood and construct an entirely new campus. Thus, the architects of Grant Elementary School were unencumbered by existing buildings and were given a blank slate on which to realize how a new, modern school plant should look and feel. Grant was constructed under the auspices of the New Deal and specifically the Works Progress Administration (WPA), which provided the majority of funding for its construction. The WPA (which had been re-branded as the Work Projects Administration by this time) also allocated funds for additions dating to the 1940s. The campus stands as a testament to the New Deal and WPA, and clearly shows how these federal assistance programs had a tangible impact on the communities that they touched.

As a campus that was newly built at the height of the “Golden Era” of schools (as opposed to one that was merely rehabilitated or modernized to conform with the Field Act), Grant exudes an especially cohesive character and is a strong reflection of the institutional forces that shaped the character of Santa Monica’s civic landscape during the Depression and World War II periods. Taken together, the buildings and site features that are associated with the campus’s primary (1936-1945) period of growth present a strong expression of the civic-mindedness and bold institutional ambitions that typified this era of Santa Monica’s history and culminated in a robust collection of civic buildings. This helps to distinguish Grant from a number of other schools that were also built during the Depression era but provide a less tangible or clearly legible nexus to this important period of civic and institutional history.

For these reasons, Grant Elementary School reads as a strong, cohesive example of a resource associated with the modernization and expansion of Santa Monica’s civic buildings in the Depression and World War II periods, an important and influential period of local history. Its various buildings and site features work together to form a distinctive sense of place that is reflective of the values and events associated with this chapter of the city’s past. The campus appears to meet Criterion 1.

#### Evaluation of Individual Eligibility

None of the buildings associated with the campus appear to be individually significant for their association with historic events. The significance of the campus in conveying important patterns of institutional development during the Depression and World War II periods is derived from the synergistic relationship that is created by its contributing buildings and site features. When removed from this context and evaluated independent of the district, none of the buildings on campus represent these patterns of development that would merit recognition under this criterion. There is also insufficient evidence demonstrating that any of the campus buildings is associated with a singular event important to history.

For these reasons, none of the campus buildings appears to be individually eligible for listing under California Register Criterion 1.

***California Register Criterion 2: associated with the lives of persons important to local, California, or national history.***

#### Evaluation of District Eligibility

*National Register Bulletin (NRB) 15: How to Apply the National Register Criteria for Evaluation* provides guidance related to properties associated with historic personages, which can be applied to evaluating California Register and local eligibility as well as National Register eligibility. It identifies two benchmarks that should be met for a property to meet this criterion: first, “the persons associated with the property must be individually significant within a historic context,” and second, the property is “associated with a person’s productive life, reflecting the time period when he or she achieved significance.”<sup>108</sup>

Based on ARG’s research and analysis, there is insufficient evidence to substantiate any such determination. Generations of students, teachers, staff, administrators, and alumni have attended the school and have had a physical presence on its grounds between the campus’s original (1936) construction and the present-day. None of these individuals appear to be historically significant and have a meaningful nexus to the campus in a manner that would merit consideration in the spirit of this criterion. That the school has been frequented by a substantial number of individuals – some of whom may have gone on to lead successful lives and careers independent of their grade-school experience – is an extraordinarily common trait among schools, and among public buildings in general, and is not something that, in and of itself, would typically make an institutional building significant for this reason.

Thus, there is insufficient evidence demonstrating that the campus is associated with the lives of persons significant in our past. The campus does not appear to satisfy California Register Criterion 2.

#### Evaluation of Individual Eligibility

For the same reasons described above, ARG did not find evidence demonstrating a meaningful nexus between the productive life of a historically significant individual and any one individual building. None of the campus buildings appear to be individually eligible for listing under California Register Criterion 2.

***California Register Criterion 3: embodies the distinctive characteristics of a style, type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values.***

#### Evaluation of District Eligibility

Grant Elementary School appears to satisfy California Register Criterion 3 for embodying distinctive characteristics of PWA Moderne style architecture, and for representing the work of master architects Donald Parkinson and Joe Estep, both of whom are widely regarded as locally significant practitioners.

---

<sup>108</sup> Ibid.

When they were constructed in 1936, the original two buildings comprising the Grant Elementary School campus (Buildings C and D) deliberately deviated from the historicist architecture that had previously characterized public schools and instead embodied what was then known as “modernistic” architecture and is now referred to as the Moderne style. Subsequent improvements to the campus that were completed in the 1940s emulate and complement the style. Loosely rooted in the Art Deco movement but also incorporating the formal symmetry and massing of Classical architectural styles, Moderne style architecture aspired to be an ambitious, yet familiar architectural idiom. Selection of the Moderne aesthetic for the campus very clearly moved away from design trends and architecture of the past, and embraced a visual vocabulary that clearly connoted the traits and values associated with modern design.

*National Register Bulletin (NRB) 15: How to Apply the National Register Criteria for Evaluation* provides guidance on ascertaining if a resource is eligible for its architecture. To assess whether a resource “embodies the distinctive characteristics of a style” per this criterion, it states that “distinctive characteristics” of the style must be present – which are defined as “the physical features or traits that commonly recur in individual types, periods, or methods of construction. To be eligible, a property must clearly contain enough of those characteristics to be considered a true representative” of that style.<sup>109</sup>

When considered together, the contributing buildings and site features at Grant Elementary School appear to satisfy this definition. Though they may lack individual distinction, when considered collectively the campus’s contributing buildings exhibit distinctive characteristics demonstrating how the essential tenets of PWA Moderne architecture were applied in the context of an institutional campus. Character-defining features of the style that are represented in the and its buildings include flat roofs; formal symmetry and massing (particularly with respect to buildings with high visibility including Buildings D and E); smooth stucco exterior walls; tall, vertical window bays; fluted pilasters that are a pared-down iteration of Classical columns; and rounded building corners and horizontal speedlines. The buildings are complemented by various site features that help reinforce their PWA Moderne aesthetic.

These features are clearly expressed both in the campus’s original buildings (1936, Buildings C and D) and in the subsequent additions that were completed during the 1940s (Buildings B, E, G, H, and K), all of which were designed to blend seamlessly into the existing campus environment. The harmonious architectural features linking these buildings evince a common thread of modern architecture that is characteristic of this campus’s design and built environment, and reflects the values underpinning PWA Moderne style architecture. As a style that, by definition, is best expressed in the context of large-scale institutional endeavors, PWA Moderne architecture and its requisite features are perhaps best expressed in the context of large and complex institutional properties – those like the subject property – so that observe and comprehend the ambitions and modern attitudes that commonly belied this style.

By contrast, later additions to the campus (including Buildings A and F and the north addition to Building B) veer away from the Moderne aesthetic and in favor of the Mid-Century Modern style, which is generally compatible with the Moderne style buildings but is reflective of a new architectural paradigm, and so these subsequent (post-1948) insertions to the campus do not contribute to its sense of identity.

---

<sup>109</sup> *National Register Bulletin No. 15, How to Apply the National Register Criteria for Evaluation* (1990, rev. 1995), 18.

*NRB 15* also provides guidance related to the evaluation of resources under this criterion for their association with a master architect, builder, or other practitioner:

A master is a figure of generally recognized greatness in a field, a known craftsman of consummate skill, or an anonymous craftsman whose work is distinguishable from others by its characteristic style and quality. The property must express a particular phase in the development of the master's career, an aspect of his or her work, or a particular idea or theme in his or her craft.<sup>110</sup>

When this guidance is applied to Grant Elementary School, the campus appears to satisfy this criterion for representing the work of two masters – architects Parkinson and Parkinson, and Joe Estep – both of whom are locally significant practitioners. The Parkinson firm is an indubitable player in the definition and refinement of Southern California's built environment, having designed many of the region's most visually prominent and iconic architectural landmarks of the early 20<sup>th</sup> century. Estep, too, is widely considered to be a master in the context of Santa Monica civic architecture, having designed a number of large institutional projects – notably, Santa Monica City Hall in collaboration with Donald Parkinson – in addition to Grant Elementary School.

Both Parkinson and Estep enjoyed peak popularity amid the Depression era, and in the context of Santa Monica both expressed their skill and prowess through large-scale civic and institutional projects. The campus of Grant Elementary School demonstrates how these practitioners demonstrated mastery in their profession and worked in successful collaboration with one another, albeit in succession, to create a cohesive environment rooted in popular perceptions of progressive architecture.

For these reasons, ARG concludes that the Grant Elementary School campus embodies the distinctive characteristics of a style (PWA Moderne), and represents the work of locally acclaimed master architects (Parkinson and Parkinson, and Joe M. Estep). Thus, the campus appears to satisfy Criterion 3.

#### Evaluation of Individual Eligibility

None of the buildings associated with the campus appear to be individually significant on their architectural merits. The architectural significance of Grant Elementary School is derived from the synergistic relationship that is created by its contributing buildings and site features, painting a complete picture of how architects applied the style to institutional settings. When removed from this context and evaluated independent of the district, that essential sense of synergy is compromised.

For these reasons, none of the campus buildings appears to be individually eligible for listing under California Register Criterion 3.

***California Register Criterion 4: has yielded, or has the potential to yield, information important to the prehistory or history of the local area, state, or the nation.***

---

<sup>110</sup> Ibid, 20.

As an archaeological assessment was not conducted as part of this study, the campus's potential for containing subsurface archaeological resources is unknown.

### Local (City of Santa Monica) Eligibility

Grant Elementary School appears to satisfy local (City of Santa Monica Landmark) Criteria 1, 4, and 5, as follows:

**9.56.100(A)(1).** *[The resource] exemplifies, symbolizes, or manifests elements of the cultural, social, economic, political, or architectural history of the City.*

#### Evaluation of District Eligibility

As discussed in the evaluation against California Register Criterion 1, Grant Elementary School is associated with patterns of events linked to Santa Monica's institutional history – namely, substantial investment in the improvement of civic infrastructure, and the heavy influence that New Deal era assistance programs exerted in shaping Santa Monica's institutional landscape in the 1930s and 1940s. For these same reasons, ARG concludes that the campus appears to satisfy local Criterion 1.

#### Evaluation of Individual Eligibility

Also as discussed in the evaluation against California Register Criterion 1, none of the campus buildings appear to be individually significant when removed from the larger context of the district. Therefore, none of the campus buildings appears to be individually eligible for designation under local Criterion 1.

**9.56.100(A)(2).** *[The resource] has aesthetic or artistic interest or value, or other noteworthy interest or value.*

#### Evaluation of District Eligibility

This criterion is understood to pertain to resources possessing high artistic values. Grant Elementary School is notable on account of its architecture, but apart from being a good representation of the PWA Moderne style the campus and its buildings do not possess any distinctive characteristics or singular features that have aesthetic or artistic interest or value. There are murals and artwork adorning some of the buildings, but these are later additions to the campus and do not significantly define its visual character and sense of place in a way that would merit recognition under this criterion. Therefore, the campus does not appear to satisfy local Criterion 2.

#### Evaluation of Individual Eligibility

For the same reasons stated above, none of the campus buildings appear to be individually eligible for designation under local Criterion 2.

**9.56.100(A)(3).** *[The resource] is identified with historic personages or with important events in local, state, or national history.*

#### Evaluation of District Eligibility

As discussed in the evaluation against California Register Criterion 2, numerous people have been associated with Grant Elementary School between its construction in 1936 and the present-day – this includes successions of students, teachers, parents, staff, and other campus affiliates. Many of these individuals have a personal connection with the campus, but as discussed in the evaluation against California Register Criterion 2, there needs to be a clear and justifiable nexus between the contributions of a historically significant individual and a property. Such a nexus does not appear to exist here. Extensive archival research about the campus and its history did not produce information showing that any of the students or other campus affiliates made historically significant contributions that are meaningfully linked to their affiliation with the school. Rather, the school appears to have merely been a place where generations of students and others have attended – a characteristic that is applicable to all schools. For these same reasons, the campus does not appear to meet local Criterion 3.

#### Evaluation of Individual Eligibility

Also as discussed in the evaluation against California Register Criterion 3, none of the campus buildings appear to be individually significant when removed from the larger context of the district. Therefore, none of the campus buildings appears to be individually eligible for designation under local Criterion 3.

**9.56.100(A)(4).** *[The resource] embodies distinguishing architectural characteristics valuable to a study of a period, style, method of construction, or the use of indigenous materials or craftsmanship, or is a unique or rare example of an architectural design, detail, or historical type valuable to such a study.*

#### Evaluation of District Eligibility

As discussed in the evaluation against California Register Criterion 3, Grant Elementary School embodies distinguishing characteristics of the PWA Moderne style as applied to an institutional campus. The synthesis of architectural features that are expressed in the design of its buildings paint a picture of the aesthetic principles and values that underpin that style of architecture. The campus's distinguishing characteristics are valuable to a study of Moderne style architecture specifically, and Depression-era civic and institutional architecture generally. For these same reasons, ARG concludes that the campus appears to satisfy local Criterion 4.

#### Evaluation of Individual Eligibility

Also as discussed in the evaluation against California Register Criterion 3, none of the campus buildings appear to be individually significant when removed from the larger context of the district. Therefore, none of the campus buildings appears to be individually eligible for designation under local Criterion 4.

**9.56.100(A)(5).** *[The resource] is a significant or a representative example of the work or product of a notable builder, designer, or architect.*

#### Evaluation of District Eligibility

As discussed in the evaluation against California Register Criterion 3, Grant Elementary School is significant as the work of master architects Parkinson and Parkinson and Joe M. Estep, both significant practitioners who made notable contributions to the architectural character of Santa Monica during the first half of the twentieth century. The Parkinson firm and Estep sometimes worked in collaboration with one another to design iconic landmarks like Santa Monica City Hall (1939). Grant Elementary School is a good representative example of the collaborative efforts of these two masters, and shows their prowess and skill in large-scale institutional design. For these same reasons, ARG concludes that the campus appears to satisfy local Criterion 5.

#### Evaluation of Individual Eligibility

Also as discussed in the evaluation against California Register Criterion 3, none of the campus buildings appear to be individually significant when removed from the larger context of the district. Therefore, none of the campus buildings appears to be individually eligible for designation under local Criterion 4.

**9.56.100(A)(6).** *[The resource] has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community, or the City.*

#### Evaluation of District Eligibility

The campus does not possess any singular feature or physical characteristic that stands out as memorable or noteworthy. While it reads as a central feature of the neighborhood, it is not notable for reasons aside from its relative scale (amid an environment dominated by single-story buildings) and use as a school (in a neighborhood composed almost entirely of residences). It is located on a lesser-traveled street, and does not occupy an especially prominent location. It may be familiar to those who reside in the neighborhood and pass by on a regular basis, but to the casual passer-by the building does not stand out as an aesthetically distinctive property in the spirit of this criterion. It is compatible with, but not distinguishable from, other properties nearby. The campus does not appear to meet local Criterion 6.

#### Evaluation of Individual Eligibility

For the same reasons discussed above, none of the campus buildings appears to be individually eligible for designation under local Criterion 4.

## 6.4. Period of Significance

Historical resources are assigned one or more periods of significance. According to the National Park Service (NPS), “period of significance refers to the span of time during which significant events and activities occurred. Events and associations with historic properties are finite; most properties have a clearly identifiable period of significance.”<sup>111</sup>

The period of significance for Grant Elementary School has been identified as 1936-1945. This accounts for the campus’s primary period of development, beginning with its original planning and construction (1936) and ending with the completion of compatible additions (1945). Additions that were completed after 1945 were not included within the period of significance because their placement and overall aesthetic deviate from the original appearance and site planning features associated with the school.

## 6.5. Evaluation of Integrity

Integrity is the ability of a property to convey its significance, and is defined by the NPS as the “authenticity of a property’s historic identity, evidenced by the survival of physical characteristics that existed during the property’s prehistoric or historic period.”<sup>112</sup> The NPS identifies seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association.

Following is an assessment of Grant Elementary School against each aspect of integrity.

### **Location**

*Location is the place where the historic property was constructed or the place where the historic event occurred.*

The campus remains in the same location as it has since 1936. It retains integrity of location.

### **Design**

*Design is the combination of elements that create the form, plan, space, structure, and style of a property.*

The campus generally retains its original plan, configuration, and design intent from its 1936-1945 period of significance, though some additions and other changes have since taken place. The insertion of Buildings A and the north addition to Building B, both completed in 1954, resulted in changes to the campus as it is experienced from its primary public vantage point along Pearl Street. However, the campus’s essential planning framework and orientation around a series of courtyards and other interstitial spaces remain intact. Similarly, the original design intent has been somewhat modified by the

---

<sup>111</sup> Ibid, 42.

<sup>112</sup> U.S. Department of the Interior, *National Register Bulletin 16A: How to Complete the National Register Registration Form* (Washington D.C.: National Park Service, 1997), 4.

replacement of original doors and windows, but original fenestration patterns remain intact. Thus, the campus retains integrity of design, though this aspect of integrity has been compromised.

### **Setting**

*Setting is the physical environment of a historic property constituting topographical features, vegetation, manmade features, and relationships between buildings or open space.*

Aerial photographs of the subject campus show that when it was originally built in 1936, the surrounding area was somewhat sporadically developed with single-family residences, though the city blocks adjacent to the campus had previously been subdivided into residential neighborhoods. These blocks were incrementally filled in with new houses over time, as they were intended to, resulting in the maturation of the surrounding neighborhood, but no substantial changes to the essential land use patterns in the immediate vicinity of the campus. Therefore, the campus retains integrity of setting.

### **Materials**

*Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.*

Some of the campus's historic materials have been removed and replaced. This includes the replacement of original steel and wood windows with contemporary metal windows, and the replacement of original wood doors with contemporary steel doors. Some, but not all of the original doors and windows have been replaced, and the replacements are generally sensitive in their approach to materiality. However, on the whole original materials associated with the campus remain intact. The stucco walls, metal grilles, and other materials dating to the campus's 1936-1945 period of significance continue to be important features of the campus and its buildings. Thus, the campus retains integrity of materials, though this aspect of integrity has been compromised.

### **Workmanship**

*Workmanship is the physical evidence of the crafts of a particular culture, people or artisan during any given period in history or pre-history.*

As noted, some elements of the campus's historic building fabric – in particular, original doors and original windows – have been removed. However, most of the distinguishing characteristics that provided the campus with its distinctive character, as well as architectural details that express the skill belying its design, remain largely intact. The campus, then, continues to convey the physical evidence of technological practices and aesthetic principles from its 1936-1945 period of significance. It therefore retains integrity of workmanship, though this aspect of integrity has been compromised.

### **Feeling**

*Feeling is a property's expression of the aesthetic or historical sense of a particular period of time.*

In spite of additions that were made to the campus in the period after its 1936-1945 period of significance – including the addition of Buildings A and F, an addition to the north façade of Building B,

and the insertion of multiple modular and relocatable buildings – the campus retains most of its essential character-defining features and appearance. It retains the distinctive look and feel of a Depression era/early postwar era school campus through its architectural forms and details. The campus therefore retains integrity of feeling.

### **Association**

*Association is the direct link between an important historic event or person and a historic property.*

Through its combination of site planning and architectural characteristics, the campus retains the distinctive look, feel, and appearance of a public school campus dating to the Depression and very early postwar periods. It therefore retains integrity of association.

### **Summary of Integrity**

To be eligible for listing, a resource must retain enough of its historic character or appearance to be recognizable as a historic resource and convey the reason(s) for its significance.

In summary, Grant Elementary School retains integrity of location, setting, feeling, and association. It also retains integrity of design, materials, and workmanship, though these latter three aspects of integrity have been compromised. When these aspects are weighed together, the campus has sufficient integrity to be eligible for state and local listing. However, as previously noted it does not appear to retain sufficient integrity for listing in the National Register given the higher integrity thresholds that are associated with the federal registration program.

## **6.6. District Characteristics**

### **Contributing Resources**

Resources that have been found to contribute to the historic identity of a district are referred to as *district contributors*. Resources located within the district boundaries that do not contribute to its significance are identified as *non-contributors*.

Contributing resources were identified as such if they satisfied the following conditions:

- They date to the campus's period of significance (1936-1945)
- They retain sufficient integrity to convey their association with applicable historic contexts

Generally, if a building or other resource has one or more minor alterations but retains most of its original features, it was treated as a contributing element of the campus. Alterations including window replacement, door replacement, and installation of solar panels are common and, in most instances, do not result in dramatic aesthetic changes so long as doors and windows are installed in original openings.

The following have been identified as contributors to the historic district:

- Building B (built 1940 – excludes the north addition)<sup>113</sup>
- Building C (built 1936)
- Building D (built 1936)
- Building E (built 1945)
- Building G (built 1940)
- Building H (built 1945)
- Building K (built 1945)
- Covered breezeways and corridors connecting the above buildings
- Paved forecourt and flagpole at front (north) of campus
- Landscaped courtyard bounded by Buildings B, C, D, and G

*The original portion of Building B (outlined and shaded) falls within the district's period of significance (1936-1945) and was identified as a contributor (Johnson Favaro, annotations by ARG)*

The above-listed buildings are all designed in the PWA Moderne style, they were all constructed within the school's primary period of development (1936-1945), and they all possess a common cadre of characteristics that render them compatible with one another and reflective of institutional development patterns and architectural values associated with the Depression and wartime periods.

Some contributing buildings – notably, Buildings B, C, G, H, and K – are more restrained in their architectural styling than others. Buildings D and E, by contrast, constitute the front of the campus and are its public face when viewed from Pearl Street, and these buildings have a greater degree of articulation and detail than those listed above. However, none of the buildings appear to have a level of articulation that would render them individually eligible, as noted in the eligibility evaluation above. It is the synergy between these buildings and their associated site and landscape features – not the qualities associated with any one particular building or feature – that define the campus's sense of place.

<sup>113</sup> Graphics depicting the contributing and noncontributing sections of Building B are included on the following pages.

## Noncontributing Resources

Conversely, if a resource post-dates the period of significance, it was considered to be a noncontributing element of the campus. Buildings that were inserted into the campus after its primary (1936-1945) period of development deviate from earlier improvements with respect to their siting, orientation, and style. They do not have the same visual and contextual qualities as contributing elements of the campus.

The following have been identified as noncontributors to the historic district:

- Building A (built 1954 – falls outside period of significance)
- Building B, north addition only (built 1954 – falls outside period of significance)
- Building F (built 1965 – falls outside period of significance)

All other campus improvements not identified above – including the portable/modular/ancillary buildings and other site/landscape features – also do not contribute to the significance of the district.

Later additions to the campus do not contribute to its significance. Building A and the north addition to Building B were both constructed in 1954, outside the period of significance, and while they are not incompatible with the rest of the campus, their Mid-Century Modern architectural styling and placement at the front of the campus do not bear a particularly strong relationship with other buildings and site features. They also do not convey the same historic contexts and themes that are expressed elsewhere on site. Building F, which is appended to the east façade of Building G, is a later addition that dates to 1965, far outside the established period of significance. It, too, does not bear a particularly strong relationship with the contributing buildings and site/landscape features comprising the campus.

*The northernmost volume of Building B (outlined and shaded red) was a later addition that falls outside of the district's period of significance (1936-1945). This portion of the building was identified as a noncontributor (Johnson Favaro, annotations by ARG)*

## District Boundary

The district boundary is depicted in the following figures. This boundary was selected because it corresponds with those associated with the campus's primary period of development (1936-1945). It is

[illegible]

Architectural floor plan of Grant School, showing existing and proposed additions. The plan includes rooms such as Auditorium, Kitchen, Library & Cafeteria, Class, and Gym. Dimensions and room numbers are provided. A dashed red line indicates the new additions. The plan is labeled "GRANT SCHOOL" and "HEAT: GAS RADIATORS". The surrounding streets are 24th St. and Clover Field 999 Ct.

F-67

## List of Character-Defining Features

Character-defining features are those physical elements of a resource that define its historic character and help to convey its significance. In instances of future change to a historic resource, character-defining features should be retained to the greatest extent feasible in order to ensure that a resource can continue to physically represent its historical period.

The following are character-defining features for the Grant Elementary School campus:

### Site and Setting

- Orientation to the north, toward Pearl Street
- Formal, monumental massing
- Decentralized plan comprising multiple semi-attached buildings
- Semi-enclosed circulation corridors connecting individual buildings
- Paved forecourt and flagpole at primary (north) entrance to campus
- Central landscaped courtyard framed by Buildings B, C, D, and G

### Building Exteriors (contributing buildings)

- Low building profiles, ranging from 1-2 stories tall
- Simple, rectilinear building forms
- Flat roofs and parapets
- Smooth stucco exterior walls
- Flush-mounted doors
- Tall, narrow window channels
- Shallow canopies with reeded details above some windows
- Rounded building corners
- Geometric window grilles (north façade of Building B)
- Canopy letters that spell “GRANT SCHOOL” (north façade of Building B)
- Reeded pilasters (Building E)

Building interiors have been extensively modified over the years. Therefore, no interior character-defining features were identified.

## 6.7. Future Project Considerations

### CEQA Thresholds

According to Appendix G, Environmental Checklist of the State CEQA Guidelines, cultural resource impacts resulting from the implementation of a proposed project would be considered significant if the project would cause a substantial adverse change in the significance of a historical resource defined in CEQA Guidelines Section 15064.5.

The State CEQA Guidelines indicate that a project would normally have a significant impact on historical resources if it would result in a substantial adverse change in the significance of a historical resource. A substantial adverse change in significance occurs if the project involves “physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.”<sup>114</sup>

The Guidelines go on to state that “[t]he significance of an historic resource is materially impaired when a project... [d]emolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources... local register of historic resources... or its identification in a historic resources survey.”<sup>115</sup>

## Secretary of the Interior’s Standards

The *Secretary of the Interior’s Standards for the Treatment of Historic Properties* (the “Standards”) provide guidance for reviewing proposed projects that may affect historic resources. The intent of the *Standards* is to assist the long-term preservation of a property’s significance through the preservation, rehabilitation, and maintenance of historic materials and features.

The *Standards* are a tool for understanding and the potential impacts of substantial changes to historic resources. However, under California environmental law, compliance with the *Standards* does not necessarily determine whether a project would cause a substantial adverse change in the significance of an historic resource. Rather, projects that comply with the *Standards* benefit from a regulatory presumption that they would have a less than significant adverse impact on a historic resource.<sup>116</sup>

Specifically, Section 15064.5(b)(3) of the CEQA Guidelines states that:

Generally, a project that follows the Secretary of the Interior’s Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior’s Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historical resource.<sup>117</sup>

The language above references the Secretary of the Interior’s standards and guidelines for four distinct historic “treatments,” including: (1) preservation; (2) rehabilitation; (3) restoration; and (4) reconstruction. The specific standards and guidelines associated with each of these possible treatments are provided on the National Park Service’s website regarding the treatment of historic resources.<sup>118</sup> For analytical purposes, a threshold decision must be made regarding which “treatment” standards should be used to analyze a project’s potential effect on historic resources. According to the National Park

---

<sup>114</sup> Language derived from the CEQA Guidelines.

<sup>115</sup> Ibid.

<sup>116</sup> Ibid.

<sup>117</sup> Ibid.

<sup>118</sup> U. S. Department of the Interior, National Park Service, “Rehabilitation Standards and Guidelines,” Technical Preservation Services, <https://www.nps.gov/tps/standards/rehabilitation.htm> (accessed December 2021).

Service, the “rehabilitation” standards (the Rehabilitation Standards) are most frequently applied for the majority of historic buildings. The Rehabilitation Standards acknowledge the need to alter or add to a historic property to meet continuing or changing uses while retaining the property’s historic character.

In the case of schools located within the Santa Monica-Malibu School District that contain historic resources, the Rehabilitation Standards provide a framework for conservative impact analysis for future projects.

The Standards are intended as general guidance for work on any historic building. The National Park Service encourages maintaining the integrity of a district through the appropriate design of infill buildings at vacant sites or sites where new buildings replace non-contributing buildings. The Guidelines for Rehabilitation expand the discussion to sites and neighborhoods.

As written in the Guidelines for Rehabilitation, there is a distinction, but not a fundamental difference, between the concerns for additions to historic buildings and new construction, or “infill” adjacent to historic buildings on a property or within a district. As with most matters of design and planning, the differences are defined by the scale, site, setting, and project.

## Rehabilitation Standards for Historic Districts

Future projects that involve new infill construction and/or demolition of contributing features to a historic district have the potential to impact the historic district. However, for potential impacts to be considered a “substantial adverse change” to a historic district under CEQA, it must be shown that the new construction and/or removal of the contributing buildings associated with a project would result in the physical alteration of the historic district such that its ability to convey its historical significance and eligibility for historic listing would be threatened.

Typically, if new buildings are designed to be compatible and differentiated from the historic district using the Rehabilitation Standards, future projects will not result in a “substantial adverse change.” Similarly, if a historic district retains a majority of its contributing features and integrity, and continues to convey its significance, future projects will not result in a “substantial adverse change.” Analysis should be conducted on a case-by-case basis to consider all potential impacts that a project may have on a historic district, including the percentage of resources retained and lost, historic spatial and circulation patterns, scale and massing, and visibility from the public right-of-way. As such, the Rehabilitation Standards provide a level of flexibility for future projects planned within or adjacent to historic districts.
