Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Notes: On site to conduct a routine Hazardous Waste inspection. Met with Shae  
Howell, HSE Specialist. The facility manufactures a variety of rubber  
products. The facility is a Small Quantity Generator of non-RCRA  
hazardous wastes generated from maintenance of machinery and  
equipment. Observed the facilityG s Hazardous Waste storage area.  
Hazardous waste containers were observed properly labeled and stored  
closed. The perimeter of the facility was walked and municipal trash  
was observed. There are no signs of illegal disposal. Hazardous waste  
manifests were available for review. The facilityG s EPA ID number is  
active. Emergency plan is maintained on site. No hazardous waste  
violations were observed this date. This inspection report was sent to  
showell@warco.com.

Eval Type: Construction Storm Water Compliance Evaluation  
Eval Notes: Arrived at site vicinity approximately 1300 hours. Clear skies, approximately 72 degrees F. Walked along railroad tracks (north side of business) to the Bitterbush flood control channel. Observed moist soil along fence behind site (back perimeter), with some moss growing on the soil (area is above the flood control channel). A. Buck and P. Copeland climbed down into flood control channel and found three storm drains leading into the flood control channel from the West American Rubber Co. (WARCO) site. The northern-most and southern-most drains appeared to be concrete enclosed corrugated pipe, approximately 18-inches in diameter, draining into the bottom of the flood control channel. The central drain was located closer to the top of the channel (see photographs). Observed some black material deposited on the sides of the northern-most concrete drain leading into the flood control channel from WARCO. Observed a blackish-grey material covering the rocks and soil between the northern-most and southern-most drains. Observed deposit of unidentified pinkish, fibrous substance at the outfall from the southern-most drain into the flood control channel. Water was flowing from the central drain into the flood control channel. A. Buck tested the pH of the water and it appeared to be neutral. Collected samples of the black material (S-1, 1320 hrs, northern-most drain) and the other unidentified material (S-2, 1340 hrs, southern-most drain). Turned the samples and photographs over to the investigations and enforcement unit (SARWQCB).

Eval Notes: Dry and sunny at time of inspection. Review of SWPPP showed a poor sampling location on the site map. Discussed preferable location. SWPPP showed 2 prior WDIDs of 011510 and 004451. Prior inspection and NOV in April/May 2001. Some of same missing and inadequate BMPs as well as poor housekeeping were evident. See 14 pages of photos. White material mixed with water was released onto pavement, but had not left the facility. This appeared to be from a paint clean up operation. The housekeeping was poor in this maintenance area on the south side of the building. Rock filter beds are used on the SW corner of the facility to trap carbon black before it leaves to the flood control channel. These are changed once a year in April according to site personnel. They were very black in color. In the nearby storage area some large old pipes had leaked oil onto the pavement. Grease and oil coated an exposed axle/pipe and rubber drippings coated some iron racks. One open drum was half full of oil with no secondary containmnet. On the other side of the building, one SD inlet was plugged and black water had ponded there. A sample was taken and a split given to WARCO. The water also had an oily sheen. Between 2 large buildings there was a series of at least 3 SD inlets and a mop bucket and other leaks were draining in this area. Art thought they drained to the sewer, and said he would try to verify this. It appeared to inspectors they were obviously SDs. A look in the chanel showed a discharge at the middle outlet form the facility.

Eval Notes: General housekeeping has improved since last inspection. No unauthorized discharges were seen. There was a small spill of ZEP cleaner to be cleaned up. Another improvement is that there was less old equipment stored outdoors. A final determination is still to be made by Environ as to the connection of 3 storm drains in the center alley of the facility to the sanitary sewer or to the flood control channel. Art was very helpful and glad to see that the improvements were noted. He said new ownership is working hard to improve environmental compliance. A letter will be written to Art Ruben thanking him for improvements, encouraging them to continue, and requesting info on center drain's final destination.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 01-11-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site for a routine hazardous waste inspection. Brent Loughran, president, was present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the facility's hazardous waste was inspected. The receipts for the removal of the facility's hazardous waste were on site and available for review. The records for the last year were reviewed. Proper accumulation time for waste storage was observed. A hazardous waste emergency response card was posted at the front counter.

Eval Date: 04-07-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site for a routine hazardous waste inspection. Joe Jacques, master technician, was present for the inspection and provided consent to inspect. The area behind the shop and the shop's trash storage were viewed. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed and labeled with the required information. The receipts for the removal of the facility's hazardous waste was on site and available for inspection. The records for the last year were reviewed. A hazardous waste emergency response card was posted in the work area close to the front office. report PDF to autohause@sbcglobal.net

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-02-2019  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine Hazardous Waste inspection. Walked throughout the facility and observed the facility's Hazardous Waste storage area. Hazardous waste containers were observed properly labeled and stored closed. The perimeter of the facility was walked. The facility shares municipal trash dumpsters with other businesses. Dumpsters were observed and there are no signs of illegal disposal. Consolidated hazardous waste manifests were available for review. The facility's EPA ID number is active. Employees are reported to be trained. Emergency plan is posted in the office, spill response notification was discussed. No hazardous waste violations were observed this date. This inspection report was sent to autohause@sbcglobal.net.

Eval Notes: On site to conduct a routine Hazardous Waste inspection. Met with Ron Davis, Manager. The facility is a Very Small Quantity Generator of solvent wastes generated from printing operations. Walked throughout the facility and observed the facility's Hazardous Waste storage area. Hazardous waste containers were observed properly labeled and stored closed. Two, five gallon jugs containing unknown liquids were observed without labeling. Discussed proper management of the containers with Mr. Davis and provided hazardous waste labels. Please determine if the containers contain hazardous waste, and if they do please label them as hazardous waste. Containers containing hazardous waste must be labeled as hazardous waste along with generator information, chemical and physical characteristics of the waste, and accumulation start date. The perimeter of the facility was walked and the municipal trash dumpster was observed. There are no signs of illegal disposal. [Truncated]

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Type: Routine done by local agency  
Eval Notes: On site for a routine hazardous waste inspection. George Kassaseya, general manager, was present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed. The signed off manifests for the removal of the facility's hazardous waste was on site and available for inspection. The records were reviewed. The facility must provide written spill response directions and emergency contact numbers for their employees. A hazardous waste emergency response card was provided for use. report PDF to gkassaseya@pacificaerodynamic.com

Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine Hazardous Waste inspection. Met with George Kassaseya, President, and Charlie Kassaseya, Manager. The facility is a Small Quantity Generator of RCRA hazardous wastes generated from processing aerospace parts. Walked throughout the facility and observed the cleaning/stripping line, deburring, media blasting and painting operations. The facility has a line for cleaning parts and stripping materials off parts. Spent bath solutions are managed as hazardous waste. Deburring is done over a downdraft table, which is connected to a collection container with water. Deburring metal sludge is managed as hazardous waste. Media blasting operations were observed. Waste was analyzed on \_ and is non-hazardous. Paint booth exhaust filters are managed as hazardous waste. Observed the

**Environmental Interest/Information System:**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.  
Violation Notes: Returned to compliance on 07/03/2017. The used coolant had accumulated in on site storage past allowable times for a small quantity hazardous waste generator. Approximately 300 gallons of used coolant was on site this date. Records show the last removal of this waste streams almost 2 years prior. Have the used coolant removed by a registered hauler for recycling / disposal and submit a copy of the receipt to this Agency within 30 days.

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Hazardous metal grinding waste has been accumulating on site for over 180 days. The waste was last hauled off site on a uniform hazardous waste manifest on 11/2/17. Please have the waste hauled off site within 30 days. You may still manage the waste as Excluded Recyclable Material and have it picked up for recycling, otherwise it must be hauled off site as hazardous waste.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-03-2016  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site for a routine hazardous waste inspection. Jeff Goodwin, general manager, was present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. The inspection included a walk the facility's outside lot and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The facility handles their waste metal swarf as excluded recyclable material (ERM). A separate hazardous waste recycler inspection report was completed. The signed off manifests for the removal of the facility's hazardous waste were provided for inspection. The records for the last year were reviewed. The records for ERM receipt from OC Recycling.com (1601 E. Edinger Ave. Santa Ana) were also provided for inspection. The facility must provide written spill response directions and emergency contact numbers for their [Truncated]

Eval Notes: On site to conduct a Recycler inspection. Met with Jeff Goodwin, Owner. The facility generates hazardous metal grinding waste. The waste was previously being managed as Excluded Recyclable Material (ERM). Per Mr. Goodwin the waste has been accumulating due to low salvage value. The waste was last hauled off site on a uniform hazardous waste manifest 11/2/17. A hazardous waste violation has been cited due to waste accumulating past allowable accumulation times. Recycling bills of lading for 2016 were available for review. CERS ID 10548094 was reviewed. The facility has not had hazardous waste recycled since before July 1, 2016. Please note the Recyclable Materials Report must be completed in California Environmental

Eval Notes: On site to conduct a routine Hazardous Waste inspection. Met with Jeff Goodwin, Owner. Walked throughout the facility and observed the facility's Hazardous Waste storage area. Several containers of hazardous metal grinding waste were observed stored open and unlabeled. Containers were not properly labeled as hazardous waste. The facility was previously managing the metal grinding waste as Excluded Recyclable Material (ERM). Per Mr. Goodwin the waste has been accumulating due to low salvage value. The waste was last hauled off site on a uniform hazardous waste manifest 11/2/17. The perimeter of the facility was walked and the municipal trash dumpster was observed. There are no signs of illegal disposal. Hazardous waste manifests were available for review. Emergency plan is posted on site, spill response notification was discussed. This inspection report was emailed to jeff@alldiametergrinding.com.

Eval Type: Routine done by local agency  
Eval Notes: On site for a routine non-RCRA (CA regulated) hazardous waste large quantity generator (LQG) inspection. Jerry Duensing was present for the inspection and provided consent to inspect. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The facility's operations and the waste generated were discussed. A hazardous waste large quantity generator (LQG) is any business that generates greater than 1000 kg (roughly 275 gallons) of hazardous waste in any month. The storage of the facility's hazardous waste was inspected. Proper accumulation time for waste storage was observed. Adequate aisle space was observed. The receipts for the removal of the facility's hazardous waste were on site and available for review. The records for the last year were reviewed. The facility had a Business Emergency Plan. The facility also posted a [Truncated]

**Environmental Interest/Information System:**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 12/06/2014. Approximately 45 gallons of hazardous liquid waste was stored in an open drum. This drum was located within an open business shared dumpster positioned along side an abandoned couch. A loose lid sat on the top of the drum holding the liquid waste. The dark liquid emitted a strong odor of gasoline and oil. Containers holding hazardous waste must be stored closed. Facility must be maintained to minimize the possibility of of human exposure and / or a release to the environment. Correct immediately.

Complainant's call indicates that the other violation (storage and waste accumulation) are also open. We have Asad Zaidi identified as the business owner at the big e. However, I looked into ownership ID while on site and posted information and the employees identified the business as Grand Gas, Inc. Asad Zaidi was identified as the president. EC Account information shows that the facility's fees have gone to collections. I checked on a Santa ana site also owned by this owner. The facility has violations in HW, HM and UST PE open. That facility is operating without a UST operating permit. Their PE fees are unpaid and have gone to [Truncated]

gallon drum for solids storage which contained liquids, estimated at 3/4 full. I checked history. A21 was conducted 6-26-13. File could not be located in our office. History showed violations to be addressed. EC also consulted. EC showed a separate FA opened for the haz mat and the UST programs. RURs printed out for both FAs.

Eval Notes:

I had not received a call from Asad. Thus, I contacted the station and requested to speak with Asad. I was advised that he was not there. I stated that I would be on site to provide them their inspection report. I requested to know when he would be on site so that I could review it with him. I was advised that he very busy with lottery training and most likely would not be available. I provided my phone number and requested a call back to discuss.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

Violation Description: Failure to provide initial and annual training to employees, who handle cyanide process solutions, cyanide-containing rinse waters, or manage cyanide-containing aqueous waste, on how to reduce wastes in the production area, including, but not limited to, procedures to: 1. reduce drag-out of plating baths, 2. minimize contaminants in process baths, 3. extend process bath life, 4. minimize chemical spills and splashes from process and rinse solutions handling practices, and 5. respond to chemical spills to reduce waste and minimize releases from process and rinse solutions handling practices.

Violation Notes: Annual employee training records for employees handling cyanide were not available for review. The most recent training records were dated 4/17/18. Within 60 days have the employees trained and maintain training records for a minimum of three years. Training documentation should consist of: topic and date of training, employee name, signature and title/responsibilities.

Per Mr. Berry, the facility will be well below the 100 TQ threshold. Sorry for delay, I had 47 CERS filings to do!! We have reduced to amount we store below the 100 pound limit. I have confirmed the amount in the tanks is 81 pounds based on lab analysis from Western Analytical Labs. I can send lab reports if you would like. I will be at Thermal-Vac tomorrow and confirm the details of storage and send that confirmation to you. We have arranged with Miles Chemical to purchase Potassium Cyanide in smaller packaging. The assessment dated 1/24/19 is missing the certification statement listed in 66270.11(d) as required by Title 22, 66265.192 (a). Seismic calculations were missing per 66265.192 (a)(5). In the assessment the engineer has concluded that secondary containment is inadequate due to an opening in the concrete curb. Spoke with the facility whom stated the opening section of the concrete curb leads to a grate which would capture any liquids and said liquids would get pumped back to treatment. Please have the engineer submit a statement concluding the secondary containment is adequate. Violation I009 remains outstanding. Waste analysis records were unavailable for review. Eval Notes: On site for a routine hazardous waste inspection. Heather Falcone, director of quality, and Sean Driscoll, director of operations, were present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed and labeled with the required information, except as cited above. The facility is considering the on site reclamation of their used acetone for on site reuse. They are evaluating effective stills that will meet their standards. Eval Notes: Regional Board Staff conducted a compliance inspection of the above facility on July 3, 2018. The facility is currently in Level 1 for Zinc, Iron, Nitrite plus Nitrate, Aluminum, and pH. The Annual Report and Ad Hoc Reports have not yet been submitted for the 2017-2018 reporting period. Staff met with Sean Driscol, Director of Operations. Mr. Driscol did not have knowledge of where the SWPPP or training records were kept. A site walk was then conducted. Industrial materials and equipment were observed without BMP implementation in the maintenance area at the northeastern portion of the facility. Mr. Driscol noted that tarps are deployed during rain events. 55-gallon drums containing waste oil were observed without cover or secondary containment. Scrap metal and industrial equipment were observed stored without BMP implementation at the northeastern corner of the facility. A Notice of Violation, dated September 19, 2017, was issued regarding the observations. 55-gallon drums containing unknown liquids were observed next to the property fence line without BMP implementation. Totes and 55-gallon drums of unknown liquids without BMP implementation were observed in the waste water treatment area at the northern portion of the facility. The facility's Level 1 ERA Report BMP implementation schedule notes that old equipment and materials will be removed or covered by 10/2/2017. Mr. Driscol noted that they are planning on constructing permanent overhead cover for the maintenance and waste water treatment areas.

Eval Notes: Weather: Sunny and cool. SWPPP site plan has been updated to show previously-missing exposed equipment but needs labels. Trench drain from central yard has been cleaned, rusted barrel emptied of water, dirt removed, and some of the rusted metal is now gone. Storm water samples show excursions for various metals at both monitoring locations. Contacts reported that metal items are covered where they are important to operations. Recommended covering rusted metal items in particular to bring down their sample results and explained that results show that BMPs are inadequate. Contacts report that chiller leaking potable water is planned to be replaced.

Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Present for the inspection was Nithesh Paramesh, Operations Manager, Jose Sanchez, Plating Manager, and Charles Berry, Consultant. The facility is conducting on site recycling of used acetone. The facility operates a ultrasonic cleaner to clean parts contaminated with oil/grease using acetone. Once the acetone is spent, it is transferred to a 55 gallon drum. Once the drum is full it is pumped into an acetone recycling unit. Filters capture the contaminants from the acetone and are reported to be managed as hazardous waste, no waste filters were observed at this time. The facility recycles approximately 55 gallons of acetone per month. Violation I570 was cited during a routine inspection on 12/11/18 due to the storing over 100 lbs of potassium cyanide in storage and plating baths without a Risk Management Plan in place. The facility has provided calculations of cyanide concentrations in copper cyanide plating baths in tanks 13, 14, and 15, showing 73 lbs of cyanide. A walkthrough of the facility was conducted and observed chemical storage areas. At this time the facility is below process thresholds for potassium cyanide. The facility has arranged with their chemical supplier to receive cyanide in 90 lb containers. Mr. Paramesh will ensure there is not at any point over 100 lbs of cyanide in storage at any one time. Ad Hoc Reports from 2016-2017 showed very high levels of Nitrite + Nitrate of 204.04 mg/L (0.68 mg/L). The SWPPP was reviewed and needs to be re-written to be in compliance with the General Permit. A Monitoring Implementation Plan, Site Map, and all appendices were missing from the SWPPP. The Pollution Prevention Team needs to be updated and properly trained on sampling and monitoring requirements. The last training records that were provided were from 11/24/2015. A site walk was conducted and an uncovered boneyard with used industrial equipment was observed at the northeast corner of the site. Ms. Falcone noted the used industrial equipment will be cut up to scrap metal in the next couple of weeks. Evidence of unauthorized non-storm water discharges from the chiller in the eastern portion of the facility was observed during the inspection. Photos were taken.

Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violation Notes: Returned to compliance on 07/03/2017. Over 7 drums storing used acetone were on site, unmarked with each drum's accumulation start date. One tote storing nickel strike solution was on site, marked with an accumulation start date of 7-7-14. A drum storing used oil was unmarked. Review of manifests show that these waste streams were last removed by a registered hauler for proper recycling / disposal over 180 days ago. The allowable storage time for a small quantity generator (SQG) is 180 days. However, if the waste must be transported over a distance of 200 miles or more to its TSD facility, the generator may store the waste on site for up to 270 days. Have the hazardous waste that has been on site beyond allowable storage time removed for proper recycling/disposal. Submit a copy of the removal records to this Agency within 30 days.

Per Mr. Berry, the facility will be well below the 100 TQ threshold. Sorry for delay, I had 47 CERS filings to do!! We have reduced to amount we store below the 100 pound limit. I have confirmed the amount in the tanks is 81 pounds based on lab analysis from Western Analytical Labs. I can send lab reports if you would like. I will be at Thermal-Vac tomorrow and confirm the details of storage and send that confirmation to you. We have arranged with Miles Chemical to purchase Potassium Cyanide in smaller packaging. The assessment dated 1/24/19 is missing the certification statement listed in 66270.11(d) as required by Title 22, 66265.192 (a). Seismic calculations were missing per 66265.192 (a)(5). In the assessment the engineer has concluded that secondary containment is inadequate due to an opening in the concrete curb. Spoke with the facility whom stated the opened section of the concrete curb leads to a grate which would capture any liquids and said liquids would get pumped back to treatment. Please have the engineer submit a statement concluding the secondary containment is adequate. Violation I009 remains outstanding. Waste analysis records were unavailable for review. Eval Notes: On site for a routine hazardous waste inspection. Heather Falcone, director of quality, and Sean Driscoll, director of operations, were present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed and labeled with the required information, except as cited above. The facility is considering the on site reclamation of their used acetone for on site reuse. They are evaluating effective stills that will meet their standards. The continuous presence of floor drainage liquids in the ADB lineup (tank 7 nitric acid and tank 3 alkaline etch locations) two catch sumps and its possible classification as a wet process floor was discussed. Eval Notes: Regional Board Staff conducted a compliance inspection of the above facility on July 3, 2018. The facility is currently in Level 1 for Zinc, Iron, Nitrite plus Nitrate, Aluminum, and pH. The Annual Report and Ad Hoc Reports have not yet been submitted for the 2017-2018 reporting period. Staff met with Sean Driscoll, Director of Operations. Mr. Driscoll did not have knowledge of where the SWPPP or training records were kept. A site walk was then conducted. Industrial materials and equipment were observed without BMP implementation in the maintenance area at the northeastern portion of the facility. Mr. Driscoll noted that tarps are deployed during rain events. 55-gallon drums containing waste oil were observed without cover or secondary containment. Scrap metal and industrial equipment were observed stored without BMP implementation at the northeastern corner of the facility. A Notice of Violation, dated September 19, 2017, was issued regarding the observations. 55-gallon drums containing unknown liquids were observed next to the property fence line without BMP implementation. Totes and 55-gallon drums of unknown liquids without BMP implementation were observed in the waste water treatment area at the northern portion of the facility. The facility's Level 1 ERA Report BMP implementation schedule notes that old equipment and materials will be removed or covered by 10/2/2017. Mr. Driscoll noted that they are planning on constructing permanent overhead cover for the maintenance and waste water treatment areas.

Trench drain from central yard has been cleaned, rusted barrel emptied of water, dirt removed, and some of the rusted metal is now gone. Storm water samples show excursions for various metals at both monitoring locations. Contacts reported that metal items are covered where they are important to operations. Recommended covering rusted metal items in particular to bring down their sample results and explained that results show that BMPs are inadequate. Contacts report that chiller leaking potable water is planned to be replaced.

Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Present for the inspection was Nithesh Paramesh, Operations Manager, Jose Sanchez, Plating Manager, and Charles Berry, Consultant. The facility is conducting on site recycling of used acetone. The facility operates a ultrasonic cleaner to clean parts contaminated with oil/grease using acetone. Once the acetone is spent, it is transferred to a 55 gallon drum. Once the drum is full it is pumped into an acetone recycling unit. Filters capture the contaminants from the acetone and are reported to be managed as hazardous waste, no waste filters were observed at this time. The facility recycles approximately 55 gallons of acetone per month. Eval Notes: On site to conduct a California Accidental Release Program Level 1 reinspection. Met with Nithesh Paramesh, Director of Operations. Violation I570 was cited during a routine inspection on 12/11/18 due to the storing over 100 lbs of potassium cyanide in storage and plating baths without a Risk Management Plan in place. The facility has provided calculations of cyanide concentrations in copper cyanide plating baths in tanks 13, 14, and 15, showing 73 lbs of cyanide. A walkthrough of the facility was conducted and observed chemical storage areas. At this time the facility is below process thresholds for potassium cyanide. The facility has arranged with their chemical supplier to receive cyanide in 90 lb containers. Mr. Paramesh will ensure there is not at any point over 100 lbs of cyanide in storage at any one time. Ad Hoc Reports from 2016-2017 showed very high levels of Nitrite + Nitrate of 204.04 mg/L (0.68 mg/L). The SWPPP was reviewed and needs to be re-written to be in compliance with the General Permit. A Monitoring Implementation Plan, Site Map, and all appendices were missing from the SWPPP. The Pollution Prevention Team needs to be updated and properly trained on sampling and monitoring requirements. The last training records that were provided were from 11/24/2015. A site walk was conducted and an uncovered boneyard with used industrial equipment was observed at the northeast corner of the site. Ms. Falcone noted the used industrial equipment will be cut up to scrap metal in the next couple of weeks. Evidence of unauthorized non-storm water discharges from the chiller in the eastern portion of the facility was observed during the inspection. Photos were taken.

Evaluation:  
Eval General Type: Other/Unknown  
Eval Date: 12-12-2011  
Violations Found: No  
Eval Type: Construction Storm Water Compliance Evaluation  
Eval Notes: Weather: overcast with light rain. Runoff observed flowing from SW gate; took sample. Did not enter site. Observed fibers in the water clumped together. Flow was not rapid enough to flush the fibers out and water was making its way through the clumps like a slough; an oil sheen was present on top of the flow. Took sample from the largest flow path using a syringe. Drew sample from below surface slowly to avoid disturbing and sucking up the clumps of fibers. While drawing sample, was approached by Mr. Kreuger; identified myself and was accused of harrasment. Mr. Kreuger told employee to 'let him play' and left. Immediately took samples to Associated Lab for testing.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 06-07-2018  
Violations Found: Yes  
Eval Type: Industrial Storm Water Compliance Evaluation  
Eval Notes: Regional Board Staff conducted a compliance inspection for the above facility on June 7, 2018. Staff met with Mr. Richard Krueger, Legally Responsible Person. The facility is currently in Level 1 for Iron and Level 2 for Aluminum, Chemical Oxygen Demand, and Zinc. The facility's Level 2 ERA Action Plan has not outlined which demonstrations were selected. The SWPPP and training records were not available during the inspection. A site walk was then conducted. Mr. Krueger noted the facility is currently in the process of changing from a paper recycling facility to a document destroying facility where all processes will be conducted indoors. Bails of paper, pallets, and trash bins were stored outside. An uncovered boneyard of industrial equipment was observed at the northeast portion of the facility. When asked how often housekeeping is conducted, Mr. Krueger noted that housekeeping is not currently conducted as the facility transitions over. Staff explained to Mr. Krueger that housekeeping is a minimum

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-25-2011  
Violations Found: No  
Eval Type: Industrial Storm Water Compliance Evaluation  
Eval Notes: Weather: hot and sunny. Facility collects paper for shredding and baling. Numerous paper pieces found among bales in main yard. Contact reports that yard is swept by pushing a bale across the ground with a forklift. Paper bins are stored outside on west side of building and additional bins are stored in front by street. The front is a drop-off staging area and has a storage area with bins containing old wetted paper, old phones and electronics, including CRTs, and leaf litter from an overhanging tree. Contact and owner argued against cleaning it because storm water samples for the rest of the yard didn't indicate benchmark excursions; however, this area is not captured by current sample points. Contact agreed to add sample point at front area. At SW area found small piles of scrap metal and debris, including a fluorescent light bulb and containers of used oil; Contact agreed that this area was unnecessarily messy and agreed to clean. Contact also agreed to move south sample point to the street gutter to capture runoff from W-side of building. Discussed sampling reduction process.

Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Violation Notes: Returned to compliance on 05/02/2019. The floor wastewater holding tank has not been certified by a Professional Engineer (PE). Please have this tank certified by a PE within 60 days.

Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52

Violation Description: Failure to include all of the following in the Contingency Plan: 1) A description of actions the facility personnel shall take response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility; 2) A description of arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) All names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates; 4) A list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) An evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan is to describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires); 6) The current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this chapter.

to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) All names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates; 4) A list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) An evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan is to describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires); 6) The current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this chapter.

Returned to compliance on 03/26/2018. Hazardous crystallized waste residues were observed caked on and in between tanks of the process lineups in both rooms. Remove the hazardous waste debris from on and in between the equipment. Provide proper storage for the hazardous waste. Store the hazardous waste in closed, compatible containers marked with the required information. Initiate practices that will prevent the accumulation of hazardous waste debris on the outside of the process line tanks.

The facility had replaced the batch treatment unit's tank. The former tank was still present. Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed. The facility's consultant, Bart Hamlett, was present for the inspection. The facility is a Large Quantity Generator of RCRA hazardous waste. Walked throughout the facility and observed hazardous waste generation points and storage areas. Waste generation and operations were discussed. There are two areas where plating is conducted. Nickel and Tin plating is conducted in one suite of the building and zinc plating and anodizing are conducted in another suite. Both process floors are said to be cleaned everyday using vacuum pumps and waste is batch treated. Several process tanks along the zinc plating, anodize, and alkaline zinc plating lines are plumbed to three respective lift stations, which are plumbed to the continuous treatment system. Hazardous waste containers and tanks were observed. One tank labeled ZC-7 in the process line is being used to store waste floor wastewater. [Truncated]

Eval Notes: Evaluation concludes 4 tanks and no containers to be the correct count for the continuous treatment unit. However, clarification is necessary as to the operation and use of the batch treatment tank. Also, the tour along with the review of the 6-29-12 PE tank assessment report confirmed that the batch treatment tank, which was also in use as a pre-treatment tank for the continuous flow, was not included in the 6-29-12 PE assessment report. The drum rinsing is itself a separate unit. If batch treatment tank is a pretreatment tank for the continuous flow unit, then that adds one tank for the continuous flow unit. The waste to be treated within the batch treatment unit must be confirmed. If the batches are different in content, then each treatment process would be unique and require its own unit identification.

Eval Notes: Received email from the facility and confirmed with Richard Amezaga that tank ZC-7 which was previously being used to store hazardous waste floor water before treatment, will now only be used to store process bath water as needed. Please note tanks used for hazardous waste storage must be certified by a Professional Engineer (PE) before storing hazardous waste. Tank ZC-7 shall not be used for hazardous waste storage unless it is certified by a PE, violation I250 is corrected. This report was sent to richardamezaga@hotmail.com and cadillacplating@yahoo.com.

The plan also needs to be updated to include new staff as the pollution prevention team, as well as, the observation logs. All industrial activities are conducted indoors. Staff asked Mr. Ibarra to continue monitoring and implementing the program. Once the Regional Board office receives the facility's annual report, staff may recommend coverage under the General Permit be terminated.

Desai, they are working on the NOI and the SWPPP. Told Mr. Ibarra and Mr. Desai of a concern that the production area is being slopped to discharge to the storm swale and the adjacent storm drain and flood control channel. The production area shows evidence of spill of chemicals and tracks from forklifts being carried outside. The company contact stated that they would do something such as building a berm to contain the spill and would sweep the area on a regular basis. Mr. Desai showed a report of the lab analysis of a storm water taken the previous weeks. All the results looked within the benchmark ranges.

The 2014 Adjusted Closure Cost Estimate (CCE) was not properly calculated since it appears that the 2012 CCE was used. There is a comment "same as last year 2013 & inflation factor" on the attached Estimated Closure Cost (ECC). However, the copy of ECC submitted is from 2012. This Agency received a new closure cost and salvage value in 2013 (enclosed). The 2014 CCE is your 2013 CCE (\$7,784.19) multiplied by a factor of 1.014 which is \$7,893.17 - salvage value (\$6,698.09).

Eval Notes: On site to conduct a RCRA Hazardous Waste Large Quantity Generator reinspection. Met with Adan Ibarra, President. The following violations were cited during a routine inspection on 3/20/19: I070 - Weekly inspection logs of hazardous waste containers were not available for review. At this time records of weekly inspections for hazardous waste containers were still not available for review. Mr. Ibarra stated the inspections are being done, but he was unsure where the records were being kept. Within 30 days please maintain the records for review by this Agency. I145 - Hazardous waste containers, which were unable to be stored closed as required by Title 22 regulations, were observed storing waste. A walkthrough of the facility was conducted this date. All hazardous waste containers were observed stored closed at this time, violation I145 is corrected. This inspection report was sent to brandycorona13@yahoo.com and richardamezaga@hotmail.com.

Eval Notes: The following violation was cited on 3/23/17 and 3/26/18 and remains outstanding: I444 - Generator has prepared a Source Reduction Plan (SB14). Inspector comments: The SB14 observed on site was only the source reduction plan. Please note SB14 consists of 3 documents: 1) Source Reduction Review and Plan 2) Summary Progress Report 3) Performance Report. This violation is being closed and recited. The following violation was cited on 3/23/17 and remains outstanding: I545 - Generator has properly maintained storage in tanks for incompatible materials, spills and overfills. Inspector comments: The batch treatment tank required an overflow prevention device. Please submit proof showing the batch treatment tank is equipped with overflow prevention. The following violations were cited on 3/26/18: I068 - Owner/Operator has appropriate emergency equipment. Inspector comments: One eyewash station was not connected to a potable water source; violation is outstanding. [Truncated]

Violation Description: Failure to obtain a permit or grant of interim status to accumulate hazardous waste longer than 90 days.

Violation Notes: Returned to compliance on 03/26/2018. Hazardous waste was observed stored over the 90-day accumulation time. This waste must be removed/treated immediately. The following containers were observed over the 90-day accumulation time limit: - Floor liquid waste (250 gallon tote and 250 gallon black poly tank); and - Black dye waste (250 gallon tote) -

Violation Description: Failure to equip the facility with required emergency equipment, unless none of the hazards posed by waste handled at the facility could require the particular kind of required equipment.

Violation Notes: Returned to compliance on 12/04/2018. Safety showers/eyewash stations must be operational. (2) showers/eyewash stations were observed. One station was not connected to potable water and the other had its flow valve on the off position (this was corrected). In order to abate this violation, connect the shower to potable water and ensure it functions. A reinspection will be conducted within 60-days to verify functionality.

Citation: 22 CCR 15 66265.194 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.194  
Violation Description: Failure to place wastes or treatment reagents in a tank system that could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail; and for not using appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. (Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure).  
Violation Notes: Returned to compliance on 12/04/2018. The batch treatment tank needs to contain overflow spill prevention equipment. Please install the necessary equipment to satisfy 22 CCR 66265.194 immediately and prior to continued use.

Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed. The facility's consultant, Bart Hamlett, was present for the inspection. The facility is a Large Quantity Generator of RCRA hazardous waste. Walked throughout the facility and observed hazardous waste generation points and storage areas. Waste generation and operations were discussed. There are two areas where plating is conducted. Nickel and Tin plating is conducted in one suite of the building and zinc plating and anodizing are conducted in another suite. Both process floors are said to be cleaned everyday using vacuum pumps and waste is batch treated. Several process tanks along the zinc plating, anodize, and alkaline zinc plating lines are plumbed to three respective lift stations, which are plumbed to the continuous treatment system. Hazardous waste containers and tanks were observed. One tank labeled ZC-7 in the process line is being used to store waste floor wastewater. [Truncated]

Eval Notes: Evaluation concludes 4 tanks and no containers to be the correct count for the continuous treatment unit. However, clarification is necessary as to the operation and use of the batch treatment tank. Also, the tour along with the review of the 6-29-12 PE tank assessment report confirmed that the batch treatment tank, which was also in use as a pre-treatment tank for the continuous flow, was not included in the 6-29-12 PE assessment report. The drum rinsing is itself a separate unit. If batch treatment tank is a pretreatment tank for the continuous flow unit, then that adds one tank for the continuous flow unit. The waste to be treated within the batch treatment unit must be confirmed. If the batches are different in content, then each treatment process would be unique and require its own unit identification.

Staff asked that the discharge of non-stormwater, originated from a yard washdown, be stopped. Mr. Ibarra agreed to do that. Based on info from Mr. Ibarra and their consultant, Mr. Anil Desai, they are working on the NOI and the SWPPP. Told Mr. Ibarra and Mr. Desai of a concern that the production area is being slopped to discharge to the storm swale and the adjacent storm drain and flood control channel. The production area shows evidence of spill of chemicals and tracks from forklifts being carried outside. The company contact stated that they would do something such as building a berm to contain the spill and would sweep the area on a regular basis. Mr. Desai showed a report of the lab analysis of a storm water taken the previous weeks. All the results looked within the benchmark ranges.

Eval Notes: On site to conduct a routine Tiered Permitting Permit By Rule (PBR) inspection, accompanied by Dean Freed. The facility's consultant, Bart Hamlett, was present for the inspection. The following PBR treatment units were observed: FTU #1 Continuous treatment G Plating process baths are plumbed to three lift stations along the plating process lines. Waste is pumped from the lift stations to the continuous treatment system FTU #2 Batch treatment G Floor wastewater is collected in a holding tank and pumped into containers which are brought over to and treated in the batch tank. Container rinsate is also treated in the batch tank. The exteriors of the treatment units were marked with the required information. The secondary containment beneath each unit was observed dry. CERS ID 10511809 Tiered Permitting submittal dated 3/18/19 was evaluated during this inspection and is being declined. Within 30 days please make the changes specified on CERS. Eval Notes: On site to provide and review the 2-20-14 inspection report with Richard Amezcaga, manager. Violations (P004, P006, X018) were corrected. We reviewed the tiered permitting units' identification and tank count. The manager provided a tour of the treatment system and each individual tank. He identified the continuous flow treatment unit to be FTU#1 and the batch treatment to be FTU#2. This showed that the marking of the units was reversed. He will correct the identification. We discussed the facility's notification of container rinsing within both the batch and the continuous treatment units. The facility triple rinses 5 gallon containers prior to disposal into the common trash.

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 32550

- Waste code: D007
- Waste name: CHROMIUM
- Amount (Lbs): 32550

**Environmental Interest/Information System:**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.  
Violation Notes: Returned to compliance on 06/04/2014. The paint booth over spray hazardous debris waste, which was observed on 6-19-13, was removed. However, the waste was not removed as a hazardous waste and could not be located this date for inspection. The operator suspected that the employees had discarded the waste via the trash. The paint over spray debris waste must be handled as a hazardous waste unless demonstrated to be non hazardous. In order to make a hazardous waste determination, have a representative sample of the waste analyzed by a state certified lab for California regulated heavy metals (Title 22, CCR). Perform a Total Threshold Limit Concentration (TTLC) analysis and if necessary, a Soluble Threshold Limit Concentration (STLC) analysis. Submit a copy of the lab analysis report to this Agency for evaluation and comment. If the waste is not analyzed, or if the lab analysis results are above Title 22, CCR hazardous waste criteria, then the paint over spray waste must be handled as hazardous waste. [Truncated]

Eval Notes: Michelle Beckwith and I met with Jeff Bailey (owner). The SWPPP was dated 6/23/2009 and said that there are non-storm water discharges of atmospheric condensate. Mr. Bailey said that this was not accurate, and that they plumb the condensate to the treatment area. I told Mr. Bailey to update this section of the SWPPP and reminded him of the July 1st deadline for the new permit. Mr. Bailey gave consent to tour the facility and to take pictures. A small alley was present in the west of the building. Paint was observed around an open window. Mr. Bailey said they were painting inside and most likely some of the paint splashed outside. He said he would prevent this from happening in the future. I told Mr. Bailey to either remove exposure in the western part of the facility or take an additional storm water runoff sample from the southwestern edge of the exposed yard. See attached photos.

Eval Notes: On site for a hazardous waste re-inspection. Michelle Bailey, Jeff Bailey, Garret Bailey, and Carlos Alonso were present for the re inspection. All violations cited in the 6-15-16 inspection report were corrected. We discussed the facility's wastewater treatment daily inspection log's inclusion of the required hazardous waste storage container inspection records. I recommended changing the title of the log if it serves more purpose than just wastewater treatment inspections. I provided an example hazardous waste storage area inspection checklist for their review. report PDF to Jeff Bailey

Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine Tiered Permitting Permit By Rule (PBR) inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Met with Garrett Bailey, General Manager. The facility conducts continuous treatment of the following process baths: cleaner, dye rinses, waste process floors, anodize rinses, electroless nickel plating rinses. Process baths undergoing treatment are plumbed to one of two low pH and high pH hazardous waste holding tanks, or backup tanks. Waste from the tanks is plumbed to the treatment unit and feeds to the treatment continuously until a desired pH is reached. The waste undergoes treatment by pH adjustment, followed by flocculation and settling, and dewatering by filter press. Clean water at the top of the treatment unit clarifier goes to the sewer for disposal. Water separated through the filter press returns to the low pH waste tank. The exterior of the treatment unit FTU#2 was marked with required information. [Truncated]

Eval Notes: On site to conduct a routine Tiered Permitting inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. The facility is operating one Permit By Rule treatment unit. Wastewater being treated is from anodizing process baths and is hazardous for pH and Title 22 regulated metals. Wastewater is pumped from process line tanks to two holding tanks, one for low pH and one for high pH. Wastewater from the holding tanks is pumped to a tank where pH adjust is done with sulfuric acid and caustic, and flocculation is done to precipitate out regulated metals. Sludge which settles to the bottom of the tank is then put through a filter press. Treatment tanks were properly labeled with business ownership, facility ID, and individual

However, the waste was not removed as a hazardous waste and could not be located this date for inspection. The operator suspected that the employees had discarded the waste via the trash. The paint over spray debris waste must be handled as a hazardous waste unless demonstrated to be non hazardous. In order to make a hazardous waste determination, have a representative sample of the waste analyzed by a state certified lab for California regulated heavy metals (Title 22, CCR). Perform a Total Threshold Limit Concentration (TTLC) analysis and if necessary, a Soluble Threshold Limit Concentration (STLC) analysis. Submit a copy of the lab analysis report to this Agency for evaluation and comment. If the waste is not analyzed, or if the lab analysis results are above Title 22, CCR hazardous waste criteria, then the paint over spray waste must be handled as hazardous waste. [Truncated]

Eval Notes: Michelle Beckwith and I met with Jeff Bailey (owner). The SWPPP was dated 6/23/2009 and said that there are non-storm water discharges of atmospheric condensate. Mr. Bailey said that this was not accurate, and that they plumb the condensate to the treatment area. I told Mr. Bailey to update this section of the SWPPP and reminded him of the July 1st deadline for the new permit. Mr. Bailey gave consent to tour the facility and to take pictures. A small alley was present in the west of the building. Paint was observed around an open window. Mr. Bailey said they were painting inside and most likely some of the paint splashed outside. He said he would prevent this from happening in the future. I told Mr. Bailey to either remove exposure in the western part of the facility or take an additional storm water runoff sample from the southwestern edge of the exposed yard. See attached photos.

Eval Notes: On site to conduct a Hazardous Waste inspection. The facility has acquired 950 and 960 N Parker St, which are part of the same building. A walk through of these locations was conducted, 960 N Parker St is used as storage space for chemicals used by Dunham Metal Processing. No hazardous waste was observed at 960 N Parker St. The facility is doing business as Tech Plate at 950 N Parker St. Per Mr. Bailey, plating is not conducted at this location. Sandblasting units for preparation of parts were observed. The sandblasting media is reported to have not been changed out of the machines or otherwise disposed of. Discussed hazardous waste management practices with Mr. Bailey and the facility is choosing to manage the blasting media as hazardous waste. Please note, you may have a Total Threshold Limit Concentration (TTL) test for Title 22 CCR regulated heavy metals done by a State Certified Laboratory to determine if the waste is hazardous. Eval Notes: Please be advised that this Agency has received and reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Closure Cost Estimate (CCE) was not properly calculated since the inflation factor was applied to the salvage value as well as the total closure costs. You cannot apply the inflation factor to the salvage value. The inflation factor must be applied to total cost closure and then the salvage value can be deducted. Therefore, the adjusted closure cost for this facility is \$6,960.68 (\$12,073.78 - \$5,113.10). Revised Certification Of Financial Assurance Form and Estimated Closure Cost form (enclosed) must be submitted to this Agency before 3/31/14.

Met with Garrett Bailey, General Manager. The facility conducts continuous treatment of the following process baths: cleaner, dye rinses, waste process floors, anodize rinses, electroless nickel plating rinses. Process baths undergoing treatment are plumbed to one of two low pH and high pH hazardous waste holding tanks, or backup tanks. Waste from the tanks is plumbed to the treatment unit and feeds to the treatment continuously until a desired pH is reached. The waste undergoes treatment by pH adjustment, followed by flocculation and settling, and dewatering by filter press. Clean water at the top of the treatment unit clarifier goes to the sewer for disposal. Water separated through the filter press returns to the low pH waste tank. STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Complexity: should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### **Local Brownfield lists**

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

### WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

### CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

### Soil Map ID: 3

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PERMIT COPY

This permit becomes void if work not commenced within 180 days from date of issuance. OR if work not started, suspended or abandoned for a period of 180 days.

☐ LICENSED CONTRACTORS DECLARATION: I hereby affirm that I am a licensed contractor under provisions of Chapter 9 commencing with Section 7000 of Division 3 of the Business and Professions Code and the applicable rules and regulations.

☐ OWNER/BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason: Sec. 7031 of the Business and Professions Code. Any city or county which requires a permit to construct a new building, structure, or improvement, or any other work, shall not require a permit for such work if the owner or builder of the property is a licensed contractor under the provisions of Chapter 9 commencing with Section 7000 of Division 3 of the Business and Professions Code, or that he is exempt from the provisions of the same by a valid exemption. Any person who is not a licensed contractor and who is not exempt from the provisions of the same shall not be exempt from the provisions of the same. Any person who is not a licensed contractor and who is not exempt from the provisions of the same shall not be exempt from the provisions of the same.

☐ I am owner of the property or my employee will, as agent for the owner, do the work, and the structure is a new building or improvement for the owner. The Contractor's License Law does not apply to an owner of property who builds or improves the property and who does not employ a contractor. (Provide a list of all such improvements and the date of completion of each improvement.)

☐ I am owner of the property and am exclusively contracting a licensed contractor to construct the project. (Sec. 7044 Business and Professions Code. The Contractor's License Law does not apply to an owner of property who builds or improves the property and who does not employ a contractor.)

☐ I am exempt under Sec. 7031 of the Business and Professions Code. (Provide a list of all such improvements and the date of completion of each improvement.)

☐ WORKERS COMPENSATION DECLARATION: I hereby affirm that I have a certificate of consent to self-insure or a certificate of workers compensation insurance or a certificate of self-insurance. (Sec. 9000 Labor Code.)

☐ Certified copy of this permit is being furnished to the City Building Division.

CERTIFICATE OF EXEMPTION FROM WORKERS COMPENSATION INSURANCE: This section need not be completed if the permit is for one hundred (\$100) or less. I certify that in the performance of the work for which this permit is issued, I will not employ any person in any manner so as to become subject to the Workers Compensation Law of California.

Date: \_\_\_\_\_ Applicant: \_\_\_\_\_

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers Compensation Law of the Labor Code, you must furnish in compliance with such provisions of this permit that be required.

☐ DIVISION OF INDUSTRIAL PERMIT CERTIFICATION:

☐ I hereby certify that the excavation is 5 or more feet in depth in which a person is required to descend, will be made in compliance with the permit and that no building structure, scaffolding, or work of demolition or dismantling the structure will be more than thirty (30) feet high. (Lab. Code, Art. 2, Section 34, Title 8, C.A.G.)

☐ As owner or agent, I am employing a person to work which will require a permit from the Division of Industrial Safety. As noted above, I have such person's permit to do such work from the division.

☐ Division of Industrial Safety Permit No. \_\_\_\_\_

CURBSIDE ACTION LENDING AGENCY: I hereby affirm that I am a construction lending agency for the performance of the work for which this permit is issued. (Sec. 7051, C.A.G.)

Signature: \_\_\_\_\_

Signature of Agent: \_\_\_\_\_

CERTIFICATE OF COMPLIANCE AND AUTHORIZATION OF E-ENTRY: I certify that I have read this application and state that the information given is correct. I agree to comply with all state and city ordinances relating to building construction and a license is required of the City of Orange, Division of Building and Safety to enter upon the property for which this permit is issued for the purpose of making inspection.

☐ LICENSED CONTRACTORS DECLARATION: I hereby affirm that I am licensed under provisions of Chapter 9 commencing with Section 7000 of the Business and Professions Code, and my license is in full force and effect.

☐ OWNER'S DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (B.C. 7001.1, Business and Professions Code): Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, whether for its insurance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 commencing with Section 7000 of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).

☐ I, as owner of the property, or my employee, or any other person, will do the work, or the structure is not intended or offered for sale (B.C. 7044, Business and Professions Code). The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.

☐ I, as owner of the property, am exclusively contracting with a licensee to construct the project (B.C. 7044, Business and Professions Code). The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such purposes with a contractor (B.C. 7044, Business and Professions Code).

☐ I am exempt under B.C. \_\_\_\_\_, B & P.C. (Attach Certificate)

Date \_\_\_\_\_ Owner \_\_\_\_\_

WORKERS COMPENSATION DECLARATION: I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers Compensation Insurance, or a certified copy thereof (B.C. 2600, Lab. C.).

- ☐ Certified copy to be filed with the City Building Division

CERTIFICATE OF EXEMPTION FROM WORKERS COMPENSATION INSURANCE. This section need not be completed if the permit is for and limited to (1) or less. I certify that the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date \_\_\_\_\_ Applicant \_\_\_\_\_

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or the permit shall be deemed revoked.

DIVISION OF INDUSTRIAL PERMIT CERTIFICATION

☐ I hereby certify that no excavation five (5) or more feet in depth into which a person is required to descend, will be made in connection with work authorized by this permit, and that no building, structure, scaffolding, falsework, or demolition or dismantling thereof, will be more than thirty-six (36) feet high. (B.C. 322, Art 2, Section 341, Title 8 C.A.C.)

☐ As owner-builder, I will not employ anyone to work which would require a permit from the Division of Industrial Safety, as noted above, unless such person has a permit to do such work from the division.

☐ Division of Industrial Safety Permit No. \_\_\_\_\_

CONSTRUCTION LENDING AGENCY: I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (B.C. 3067, P.V.C.).
