Ms. Tina Anderson T&B Planning Inc. 3200 El Camino Real, Suite 100 Irvine, CA 92602

PATTERSON COMMERCE CENTER (DPR22-00003) VEHICLE MILES TRAVELED (VMT) SCREENING EVALUATION (REVISED)

Ms. Tina Anderson,

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Screening Evaluation for the Patterson Commerce Center (DPR22-00003) development (**Project**), which is proposed for a site located on the southwest corner of Patterson Avenue and Nance Street in the City of Perris' *Perris Valley Commerce Center Specific Plan* (PVCC SP).

PROJECT OVERVIEW

It is our understanding that the Project is to consist of a single 263,820-square-foot (sf) warehouse building which will be evaluated assuming 237,438 square feet of high-cube fulfillment center warehouse use (90% of the total square footage) and 26,382 square feet of manufacturing use (10% of the total square footage). A preliminary site plan for the proposed Project is shown on Exhibit 1.

EXHIBIT 1: PRELIMINARY SITE PLAN

BACKGROUND

Changes to the California Environmental Quality Act (**CEQA**) Guidelines were adopted in December 2018, which requires all lead agencies to adopt VMT as a replacement for automobile delay based on level of service (**LOS**) as the new measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (**OPR**) released a <u>Technical Advisory on Evaluating Transportation Impacts in CEQA</u> (December 2018) (**Technical Advisory**) (1). Based on OPR's Technical Advisory, the City of Perris adopted its <u>Transportation Impact Analysis Guidelines for CEQA</u> (May 2020) (**City Guidelines**) (2). The adopted City Guidelines have been utilized to prepare this VMT analysis.

VMT SCREENING

As the City Guidelines describe, the first step in evaluating a land use project's VMT impact is to perform an initial screening assessment utilizing the <u>City of Perris VMT Scoping Form for Land Use Projects</u> (**Scoping Form**). The Scoping Form provides an easy to use tool for VMT analysis.

The City Guidelines list standardized screening methods for project level VMT analysis that can be used to identify when a proposed land use development project is anticipated to result in a less than significant impact, thereby eliminating the need to conduct additional VMT analysis. City of Perris VMT screening methods, as described within the City Guidelines, are as follows:

- Affordable Housing
- High Quality Transit Areas (HQTA) Screening
- Local-Serving Land Use
- Low VMT Area
- Net Daily Trips Less than 500 ADT

As stated by the City Guidelines, land use projects need only meet one of the above screening criteria to result in a less than significant impact.

AFFORDABLE HOUSING

The City Guidelines state that if a project consists of 100% affordable housing, then the presumption can be made that it will have a less than significant impact on VMT. The Project does not include any residential uses.

Affordable Housing screening criteria not met.

HIGH QUALITY TRANSIT AREAS (HQTA) SCREENING

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (**TPA**) (i.e., within ½ mile of an existing "major transit stop" or an existing stop along a "high-

¹ Pub. Resources Code, § 21064.3 ("Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

quality transit corridor"²) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate or high-income residential units.

Based on the Western Riverside Councils of Governments (**WRCOG**) Screening Tool results presented in Attachment A, the Project site is not located within ½ mile of an existing major transit stop or along a high-quality transit corridor (See Attachment A).

HQTA screening criteria is not met.

LOCAL-SERVING LAND USE

As identified in the City Guidelines, local serving land uses provide more opportunities for residents and employees to shop, dine, and obtain services closer to home and work. Local serving uses can also include community resources that may otherwise be located outside of the city or local area. By improving destination proximity, local serving uses lead to shortened trip lengths and reduced VMT. The City Guidelines provides a list of applicable local serving retail categories below 50,000 square feet. The Project does not include any local serving retail/essential-service land uses.

Local-Serving Land Use screening criteria is not met.

LOW VMT AREA SCREENING

The City Guidelines states, "Projects that locate in areas with low VMT, and that incorporate similar features (i.e., land use type, access to the circulation network, etc.), will tend to exhibit similarly low VMT." The City of Perris utilizes its own VMT scoping form to identify areas of low VMT. The scoping form uses the sub-regional Riverside County Transportation Analysis Model (RIVTAM) to measure VMT performance within individual traffic analysis zones (TAZs) within the WRCOG region. The Project's physical location based on the WRCOG web-based screening tool is used to determine the TAZ in which the Project resides. The TAZ identification number is then selected within the scoping form. Finally, the VMT generated by the existing TAZ as compared to the City's impact threshold of "VMT per employee that is less than or equal to the Citywide average." The TAZ containing the proposed Project was selected, and the scoping form identified VMT per employee. Based on the scoping form results, the Project is located in TAZ 3754, and the

² Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

VMT per employee is 12.19. The City of Perris citywide VMT per employee average is 11.62. Therefore, the Project does not reside within a low VMT generating zone (See Attachment B).

Low VMT Area screening criteria is not met.

NET DAILY TRIPS LESS THAN 500 ADT

The City Guidelines state that projects that generate a net increase of less than 500 average daily trips (ADT) would not cause a substantial increase in the total citywide or regional VMT and are therefore presumed to have a less than significant impact on VMT. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021 (3). The Project is anticipated to generate a net increase of 492 ADT compared to the trip generation from onsite uses that were operating at the Project site when traffic counts were taken at the Project site on December 1 and 2, 2021. Therefore, the Project would generate a net increase in daily vehicle trips below the 500 daily vehicle trip threshold (See Attachment C).

Net Daily Trips Less than 500 ADT screening criteria is met.

CONCLUSION

In summary, the Project was evaluated against the City's applicable VMT screening steps. The Project was found to meet the Net Daily Trips Less than 500 ADT screening criteria. Thus, the VMT impact is presumed to be less than significant; no further VMT analysis is required.

If you have any questions, please contact me directly at aso@urbanxroads.com.

Respectfully submitted,

URBAN CROSSROADS, INC.

ATTACHMENT C PROJECT TRIP GENERATION

The entire Project site is disturbed. With the exception of the vacant parcel in the northwest portion of the Project site (4585 Wade Avenue; approximately 0.78 acres), GRFCO owned and occupied the Project site between 1984 and 2022, and vacated the site with the purchase of the property by RG Patterson, LLC (herein **Project Applicant**) on July 14, 2022. GRFCO operated a staging yard for a construction company, conducted concrete crushing and recycling, and conducted fleet maintenance and equipment washing onsite. When the environmental analysis commenced in late 2021, the southwest portion of the Project site (including former residential structures) was occupied by GRFCO, and GRFCO leased the eastern and northern portions of the Project site for truck trailer storage (starting in 2018). GRFCO vacated the site in July 2022 due to the sale and pending Project. At that time, the truck trailer storage operator entered into a lease agreement with the Project Applicant for the entire site. The property is currently leased monthto-month by the trailer storage operator and that lease will terminate upon receipt of entitlements. The foundation from a previous portable structure remains at the northwest corner of the site; this area has been vacant since 2020. For purposes of the analysis in this report, the baseline condition reflects the operation of various industrial uses at the Project site, which occurred consistently for approximately 40 years and were ongoing when the environmental analysis for the Project commenced in late 2021, including when traffic counts were taken at the Project site driveway on December 1 and 2, 2021. A summary of the count data collected is shown on Table 1.

TABLE 1: SUMMARY OF EXISTING DRIVEWAY COUNTS

	AM	Peak H	lour	PM			
Land Use	In	Out	Total	In	Out	Total	Daily
Day 1: December 1, 2021							
Passenger Cars:	2	3	5	2	4	6	79
2-axle Trucks:	0	0	0	0	0	0	4
3-axle Trucks:	1	0	1	0	0	0	39
4+-axle Trucks:	0	2	2	0	0	0	30
Total Truck Trips:	1	2	3	0	0	0	73
Total Trips ¹	3	5	8	2	4	6	152
Day 2: December 2, 2021							
Passenger Cars:	4	3	7	1	4	5	68
2-axle Trucks:	0	0	0	0	0	0	8
3-axle Trucks:	0	0	0	0	0	0	25
4+-axle Trucks:	0	0	0	1	1	2	26
Total Truck Trips:	0	0	0	1	1	2	59
Total Trips ¹	4	3	7	2	5	7	127

^{*} Note: data collected on December 1 and 2, 2021.

¹ Total Trips = Passenger Cars + Total Truck Trips.
