□ Categorical Exemption. State type and section Replacement or Reconstruction, § 15303 Class 3, New Const § 15314 Class 14, Minor Additions to Schools	n number: 14 CCR § 15301 Class 1	
Statutory Exemptions. State code number:		

CEQA: California Environmental Quality Act
The proposed project is exempt from further environmental documentation under the California Environmental Quality Act (Public Resources Code §§ 21000 et seq.), categorical exemptions Classes 1, 2, 3, 4, and 14.
Class 1, Existing Facilities (CEQA Guidelines § 15301). The proposed project includes paving and striping on one of the newly acquired parcels totaling 0.52 acres (453 Moffat Boulevard) to provide approximately 60 parking spaces to the existing south parking lot to serve the existing high school use. The proposed project would also expand the north parking lot slightly to the south as part of Phase 3. No change to the existing 419 Moffat Boulevard parcel is proposed, and it would continue its use as a custodial yard for the high school. These parking lot expansions would meet the existing parking demands to support the existing high school use. Therefore, the proposed project meets the criteria for an exemption under CEQA Guidelines Section 15301.
Class 2, Replacement or Reconstruction (CEQA Guidelines § 15302): The proposed project would demolish the existing classrooms (Wings 20 through 80) to construct a replacement classroom and media center building in the same area. The proposed project would demolish 38 classrooms in Wings 20 through 80, and the new replacement building would have 28 classrooms and a media center. The new 10-classroom building and the wood shop building would be constructed on the newly acquired vacant area within the campus and would not require any demolition. Because the proposed classroom and media center building would replace the existing classrooms in multiple buildings in the same area, this exemption would be applicable.
Class 3, New Construction or Conversion of Small Structures (CEQA Guidelines § 15303): The proposed project would require water, sewer, natural gas, and electricity improvements to support the new buildings. The new utilities would connect to the existing utility system that currently serves the high school. The proposed project could also include street improvements along Mikesell Avenue and Moffat Boulevard. The necessary utility systems and street improvements for the proposed project meet the criteria for an exemption under CEQA Guidelines § 15303.
Class 4, Minor Alterations to Land (CEQA Guidelines § 15304): The proposed project would require grading of the land and minor trenching and backfilling for utility systems installation, after which the surface will be restored. The proposed project would require these soil disturbances and would not involve the removal of healthy, mature, scenic trees, and the area to be disturbed is fairly level with a slope of less than 10 percent. Therefore, the proposed project meets the criteria for an exemption under CEQA Guidelines § 15304.
Class 14, Minor Additions to Schools (CEQA Guidelines § 15314): The proposed project involves the construction of a two-story classroom and media center building with 28 classrooms, a two-story classroom building with 10 classrooms, and a weight room, therefore constructing a total of 38 classrooms. The new classroom and media center building would require demolition of the existing Wings 20 through 80, except for the east side of Wings 60 and 70, removing a total of 38 classrooms. Therefore, there would be no net increase in classrooms at the buildout of the project. Class 14 exemption allows minor additions to existing schools where the addition does not increase original student capacity by more than 25% or ten classrooms, whichever is less. Since the proposed project does not increase the original student capacity at Manteca High School, the proposed project meets the criteria for an exemption under CEQA Guidelines §15314.

SUPPLEMENT TO NOTICE OF EXEMPTION

Manteca High School Improvement Project

Manteca Unified School District

The Manteca Unified School District (District) is proposing to upgrade the Manteca High School by replacing the existing classroom and school-supporting facilities with new structures and improvements. Some of the improvements would be to the newly acquired properties adjacent to the existing campus. However, the expanded campus size would not increase the existing student capacity. This Supplement to Notice of Exemption (Supplement) provides justification for the Categorical Exemption pursuant to the California Environmental Quality Act (CEQA) Guidelines under California Code of Regulations, Title 14 §§ 15300.2, 15301, 15302, 15303, 15311, and 15314.

1. EXISTING CONDITIONS

PROJECT LOCATION

Manteca High School is at 450 E. Yosemite Avenue in the City of Manteca, San Joaquin County (Assessor's Parcel Numbers 221-09-020, 221-09-017, 221-18-013, 221-09-018, 221-09-019, 221-09-014, 221-09-015, 221-18-012, 221-18-011, 221-18-010, 221-18-009, 221-08-001, and 221-08-002) and totals 31.09 acres. The original high school campus totaled 29.27 acres and included APNs 221-09-020, 221-09-017, 221-18-013, 221-09-018, 221-09-019, 221-09-014, however, the District has recently acquired five parcels totaling 1.09 acres on Mikesell Avenue (510, 524, 534, 544, and 554 Mikesell Avenue) and two parcels totaling 0.73 acres on Moffat Boulevard (419 and 453 Moffat Boulevard) as shown below.

Newly Acquired Parcels				
APNs	Address	Acres	General Plan	Zoning
221-09-015	510 Mikesell Ave	0.16 ac	LDR	R1
221-18-012	524 Mikesell Ave	0.27 ac	LDR	R1
221-18-011	534 Mikesell Ave	0.19 ac	LDR	R1
221-18-010	544 Mikesell Ave	0.20 ac	LDR	R1
221-18-009	554 Mikesell Ave	0.27 ac	LDR	R1
Subtotal		1.09 acres		
221-08-001	419 Moffat Blvd	0.21 ac	HDR	R3
221-08-002	453 Moffat Blvd	0.52 ac	HDR	R3
	Subtotal	0.73 acres		
Newly Acquired Parcels Total 1.82 acres				

Regional access to the high school is provided by State Routes (SR) 99 and 120, approximately 0.65 miles to the south and 0.90 miles to the east, respectively, as shown on Figure 1, *Regional Location*. The project site has five street frontages, E. Yosemite Avenue, S. Sherman Avenue, S. Garfield Avenue, Mikesell Avenue, and Moffat Boulevard. Figure 2, *Local Vicinity*, shows the project site in the local context.

EXISTING CONDITIONS

Manteca High School is currently developed with classroom buildings, admin, library, theater, cafeteria, labs, shop buildings, two gyms, ball fields, football stadium, tennis courts, and three parking lots. The north parking lot is accessed from S. Sherman Avenue; the south parking lot is accessed mainly from S. Garfield Avenue, with an exit-only driveway on S. Sherman Avenue; and the central Garfield parking lot is accessed from Mikesell Avenue and S. Garfield Avenue.

The newly acquired parcels on Mikesell Avenue and the 453 Moffat Boulevard parcel are vacant, and 419 Moffat Boulevard is a custodial yard for the high school. See Figure 3, *Aerial Photograph*. There are a total of 46 classrooms in Wings 20 through 80, and 38 of the existing classrooms would be impacted by the proposed project.

SURROUNDING LAND USES

The existing high school is surrounded by various urban land uses, retail, institutional, and residential uses to the north across E. Yosemite Avenue; retail, residential, and a motel use to the west across S. Sherman Avenue; residential, industrial, and vacant lots to the south; and institutional uses (Lincoln Park and Lincoln Elementary School) to the east. The Union Pacific Rail Road (UPRR) track is approximately 215 feet south of the campus, and the Manteca Transit Center Arr is approximately 275 feet west of the high school.

2. PROJECT DESCRIPTION

The District proposes to improve the existing Manteca High School facilities by constructing two 2-story classroom buildings and a single-story woodshop building to replace existing classroom buildings. The existing Wings 20 through 80, totaling 38 classrooms, would be demolished, and 38 classrooms would be replaced. Therefore, there would be no increase in student capacity. The new two-story, 28-classroom building would be approximately 30,000 square feet, the new two-story 10-classroom building would be approximately 14,000 square feet, and the new woodshop building would be approximately 8,000 square feet, for a combined total of 52,000 square feet. No changes to on- or off-site vehicular access and circulation would occur. Other components of the project include the expansion of the north parking lots on Sherman Avenue and the expansion of the southern parking lot onto the recently acquired 453 Moffat Boulevard property. The District is tentatively scheduled to begin construction in the summer of 2023. The proposed phasing is described below:

- Phase 1: Construct a new two-story 10-classroom building and a one-story wood shop building on the east side of campus (on the newly acquired Mikesell Ave parcels). Add four interim housing classrooms to the grass area south of JROTC portables.
- Phase 2:
 - Phase 2A. Demolish Wings 20 through 80 (west side) and renovate the existing wood shop to a weight room.
 - o Phase 2B. Construct a new two-story, 28-classroom building with a media center and adjacent quad.
 - o Phase 2C. After the new two-story, 28-classroom building is built, demolish the remaining classroom wings (east side) except for the east side of Wings 60 and 70.
- Phase 3: Improve the newly acquired 453 Moffat Boulevard property to expand the south parking lot to add approximately 60 parking spaces, and expand the north parking lot.

3. REASONS WHY THE PROJECT IS EXEMPT

The proposed project is exempt from further environmental documentation under the California Environmental Quality Act (Public Resources Code §§ 21000 et seq.) categorical exemptions Class 1, Class 2, Class 3, Class 4, and Class 14.

Class 1, Existing Facilities (CEQA Guidelines § 15301), consists of the operation, repair, maintenance, permitting, leasing, licensing, or minor alteration of existing public or private structures, facilities, mechanical equipment or topographical features, involving negligible or no expansion of existing or former use.

The proposed project includes paving and striping on one of the newly acquired parcels totaling 0.52 acres (453 Moffat Boulevard) to provide approximately 60 parking spaces to the existing south parking lot to serve the existing high school use. The proposed project would also expand the north parking lot slightly to the south as part of Phase 3. No change to the existing 419 Moffat Boulevard parcel is proposed, and it would continue its use as a custodial yard for the high school. These parking lot expansions would meet the existing parking demands to support the existing high school use. Therefore, the proposed project meets the criteria for an exemption under CEQA Guidelines Section 15301.

Class 2, Replacement or Reconstruction (CEQA Guidelines § 15302), consists of replacement or reconstruction of existing structures and facilities where the new structure will be located on the same site as the structure replaced and will have substantially the same purpose and capacity as the structure replaced.

The proposed project would demolish the existing classrooms (Wings 20 through 80) to construct a replacement classroom and media center building in the same area. Wings 20 through 80 are shown on Figure 3, *Aerial Photograph*, and the replacement classroom and media center building is shown on Figure 4, *Proposed Site Plan*. The proposed project would demolish 38 classrooms in Wings 20 through 80, and the new replacement building would have 28 classrooms and a media center. The new 10-classroom building and the wood shop building would be constructed on the newly acquired vacant area within the campus and would not require any demolition. Because the proposed classroom and media center building would replace the existing classrooms in multiple buildings in the same area, this exemption would be applicable.

Class 3, New Construction or Conversion of Small Structures (CEQA Guidelines § 15303), consists of construction and location of limited numbers of new, small facilities or structures; installation of small new equipment and facilities in small structures; and the conversion of existing small structures from one use to another where only minor modifications are made in the exterior of the structure.... Examples of this exemption include ... (d) Water main, sewage, electrical, gas, and other utility extensions, including street improvements, of reasonable length to serve such construction.

The proposed project would require water, sewer, natural gas, and electricity improvements to support the new buildings. The new utilities would connect to the existing utility system that currently serves the high school. The proposed project could also include street improvements along Mikesell Avenue and Moffat Boulevard. The necessary utility systems and street improvements for the proposed project meet the criteria for an exemption under CEQA Guidelines § 15303.

Class 4, Minor Alterations to Land (CEQA Guidelines § 15304), consists of minor public or private alterations in the condition of land, water, and/or vegetation which do not involve removal of healthy, mature, scenic trees except for forestry or agricultural purposes.

The proposed project would require grading of the land and minor trenching and backfilling for utility systems installation, after which the surface will be restored. The proposed project would require these soil disturbances and would not involve removal of healthy, mature, scenic trees, and the area to be disturbed is fairly level with a slope of less than 10 percent. Therefore, the proposed project meets the criteria for an exemption under CEQA Guidelines § 15304.

Class 14, Minor Additions to Schools (CEQA Guidelines § 15314), consists of minor additions to existing schools within existing school grounds where the addition does not increase original student capacity by more than 25% or ten classrooms, whichever is less. The addition of portable classrooms is included in this exemption.

The proposed project involves construction of a two-story classroom and media center building with 28 classrooms, a two-story classroom building with 10 classrooms, and a weight room, therefore constructing a total of 38 classrooms. The new classroom and media center building would require demolition of the existing Wings 20 through 80, except for the east side of Wings 60 and 70, removing a total of 38 classrooms. Therefore, there would be no net increase in classrooms at buildout of the project. Class 14 exemption allows minor additions to existing schools where the addition does not increase original student capacity by more than 25 percent or ten classrooms, whichever is less. Since the proposed project does not increase the original student capacity at Manteca High School, the proposed project meets the criteria for an exemption under CEQA Guidelines § 15314.

A review of the possible exceptions to the exemption, outlined under CEQA Guidelines § 15300.2 and discussed in Section 4 of this document, determined that no characteristics or circumstances would invalidate findings that the project is exempt from further analysis under CEQA.

4. REVIEW OF EXCEPTIONS TO THE CATEGORICAL EXEMPTION

The proposed project has been reviewed under CEQA Guidelines § 15300.2, Exceptions, for any characteristics or circumstances that might invalidate findings that the project is exempt from further CEQA analysis. Each exception is reproduced and followed by an assessment of whether that exception applies to the proposed project.

(a) Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located—a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

The project site is on the existing Manteca High School campus in a community surrounded by various urban uses in the city of Manteca. The project site is already developed and operates as a comprehensive high school. The campus does not have any sensitive biological species due to its development as a school campus, actively maintained turf field and landscape, frequent human disturbances, and absence of habitat. The project site does not support native wildlife species, and it does not have any streams or water bodies, or native habitat for wildlife species to thrive. The project site is not designated or precisely mapped as a hazardous materials site, as discussed in below item (e).

(b) Cumulative Impact. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant.

A cumulative impact could occur if the project would result in an incrementally considerable contribution to a significant cumulative impact in consideration of past, present, and reasonably foreseeable future projects for each resource area. Because the proposed project would not increase the student capacity and would accommodate existing school programs without changing or expanding the uses within the boundaries of the existing high school campus, the impacts would be limited to short-term construction and would not be cumulatively considerable. The District plans to implement similar classroom improvement project on East Union High School without increasing the student capacity. East Union High School is at 1700 Union Road, approximately 2 miles north of the project site. Considering the distance from the project site and scale, construction impacts would be limited to the immediate vicinity and would not result in cumulative impacts. No other successive projects of the same type in the same place that could result in cumulative impacts are anticipated. Cumulative impacts would not be significant. This exception does not apply to the proposed project.

(c) Significant Effects. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

Aesthetics

The project site is in an urban area already developed as a high school and is not part of a scenic vista or within a state scenic highway. The proposed project is consistent with the existing use of the site as a high school and would not conflict with any zoning regulations governing scenic quality. The existing high school is surrounded by various urban land uses, including retail, institutional, residential, industrial, and motel uses. Vacant lots are also present south of Moffat Avenue along the railroad easement. There are no unique or protected views on or near the project site. The proposed buildings would not use any highly reflective building materials to cause adverse daytime light or glare impact in the area. Therefore, there are no unusual circumstances that could result in significant aesthetics impacts, and this exception would not apply to the proposed project.

Air Quality

As substantiated in Attachment A, *Air Quality Technical Memorandum*, to this Supplement and summarized below, the proposed project would not result in any significant impact related to air quality during construction and operation of the proposed project.

Construction Impact

The San Joaquin Valley Air Pollution Control District (SJVAPCD) has prepared several plans to attain the National ambient air quality standard (AAQS) and California AAQS. The established thresholds of significance for criteria pollutant emissions are based on SJVAPCD offset requirements for stationary sources, and projects with emissions below the thresholds of significance for criteria pollutants would be determined to not conflict or obstruct implementation of the SJVAPCD's air quality plan. The proposed project would not exceed the SJVAPCD significance thresholds due to the project size of 52,000 square feet, which is under the SJVAPCD Small Project Analysis Level (SPAL) screening criterion of 153,600 square feet for high school projects. The proposed project would also result in no increase to the student population, resulting in no additional vehicle trips under the proposed project. Therefore, this impact would be less than significant. There are no unusual circumstances that could result in significant construction air quality impacts, and this exception would not apply to the proposed project.

Operational Impact

Long-term air pollutant emissions generated by the project would be generated by area sources (e.g., landscape fuel use, aerosols, and architectural coatings), mobile sources from vehicle trips, and energy use (natural gas) associated with the proposed school buildings. In general, the primary source of long-term criteria air pollutant emissions generated by land use development projects, such as the proposed project, are usually from mobile sources. As the proposed project would result in no increase in student enrollment or subsequent vehicle trip generation, the proposed project's greatest emission sources are anticipated to be area and energy source emissions from operation of the new buildings. The proposed buildings would be constructed to meet the latest California Building and Energy Efficiency Standards. Because the proposed project would result in the construction of approximately 48,100 square feet and result in no additional students or vehicle trips, it would be below the SJVAPCD SPAL screening criterion of 153,600 square feet, 1,160 students, and 1,000 average one-way trips, and is therefore considered to generate criteria air pollutant emissions that would be less than SJVAPCD's significance thresholds. Therefore, this impact would be

less than significant. There are no unusual circumstances that could result in significant operational air quality impacts, and this exception would not apply to the proposed project.

Biological Resources

The project site is developed as a comprehensive high school, and as shown on Figure 3, *Aerial Photograph*, the areas to be disturbed by the proposed project are developed with existing school buildings, paved, or covered in dirt. There is no native or sensitive habitat on or near the project site. The entire high school campus is surrounded by urban uses. Furthermore, the project site is identified as "urban" by Figure 3.4-1, Land Cover Types, of the City of Manteca General Plan EIR. According to the California Natural Diversity Database (CNDDB), the project site is within the Manteca Quad where six special status species are identified: three birds (Swainson's hawk, great egret, and tricolored blackbird), two insects (western bumble bee and moestan blister beetle), and one mammal (riparian brush rabbit) (CDFW 2023). As described in Table 1, *Special Status Biological Resources in CNDB Manteca Quad*, the project site does not contain the described habitat to sustain the listed special status species. And the areas to be disturbed by the proposed project either contain buildings or had previously contained buildings but are now vacant without any natural habitat. Considering the lack of native habitat and any type of natural open space within or near the project site, the proposed project is not anticipated to adversely impact any of the special status species.

Table 1 Special Status Biological Resources in CNDB Manteca Quad

Species	Habitat Description
Swainson's hawk	Nests in oaks or cottonwoods in or near riparian habitats. Forages in grasslands, irrigated
	pastures, and grain fields.
Great egret	Usually forages in rather open situations, as along edges of lakes, large marshes, shallow
	coastal lagoons and estuaries; also along rivers in wooded country. Usually nests in trees
	or shrubs near water, sometimes in thickets some distance from water, sometimes low
	in marsh.
Tricolored blackbird	Nests in dense colonies in emergent marsh vegetation, such as tules and cattails, or
	upland sites with blackberries, nettles, thistles, and grainfields. Habitat must be large
	enough to support 50 pairs. Probably requires water at or near the nesting colony.
Western bumble bee	Open coniferous, deciduous, and mixed-wood forests; wet and dry meadows; montane
	meadows and prairie grasslands; meadows bordering riparian zones; and along roadsides
	in taiga adjacent to wooded areas, urban parks, gardens and agricultural areas, subalpine
	habitats, and more isolated natural areas.
Moestan blister	Annual grasslands, foothill woodlands, or saltbush scrub.
beetle	
Riparian brush rabbit	Native valley riparian habitats with large clumps of dense shrubs, low-growing vines, and
	some tall shrubs and trees.

The proposed project involves demolition of seven buildings (i.e., Wings 20 through 80) and in an urban environment, structures can host nesting birds. However, nesting habitat for raptors and migratory birds are protected under the California Fish and Game Code (CFGC) § 3503. Therefore, if Phase 2 construction is proposed between February 1 and August 31, a qualified biologist must conduct a preconstruction nesting bird survey(s) no more than three days prior to initiation of demolition to document the presence or absence of nesting birds or raptors within or directly adjacent (100 feet) to the impact area. Construction outside the nesting season (between September 1 and January 31) does

not require preconstruction nesting bird surveys. The District is required to comply with the existing regulatory requirement concerning migratory birds, and no unusual circumstances are anticipated. Furthermore, the city of Manteca is a participant in the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP), and because the project site does not contain any native or sensitive habitat or covered species, no impact to SJMSCP is anticipated. There is no reasonable possibility that the proposed project will have a significant effect on the environment due to unusual circumstances related to biological resources. This exception does not apply to the proposed project.

Cultural Resources

A Historic Resources Technical Report (HRTH) was prepared by ASM Affiliates for the proposed project and is included as Attachment B to this Supplement. The report evaluated whether there are historical resources within the project site and if the proposed project would result in either a direct or indirect impact to those historical resources. The Manteca High School contains 15 buildings that are more than 45 years old, as shown in Table 2, *Summary of Evaluation of the Potential Manteca High School Historic District*. The proposed project would demolish five classroom buildings (Wings 20 through 50, and Wing 80) and a portion of two classroom buildings (Wings 60 and 70) that are more than 45 years of age.

Table 2 Summary of Evaluation of the Potential Manteca High School Historic District

Building Name	Approx. Year Built	Contributor	Individually Eligible
Agricultural Shop Unit/Lab	1947	No	No
Gymnasium	1950	No	No
Shop	1953	No	No
Shop North	1958; 1961	No	No
Wing 20	1956; 1961	No	No
Wing 30	1958; 1961	No	No
Wing 40	1954	No	No
Wing 50	1954	No	No
Wing 60	1954	No	No
Wing 70	1958	No	No
Wing 80	1961	No	No
Music Building	1961	No	No
Cafeteria	1961	No	No
Theater	ca. 1970	No	No
Administration Building	ca. 1970	No	No

The Manteca HS campus was considered for historical significance under the broad themes of Education and Architecture and the more specific subtheme of the Postwar Modern Functionalist School Plant (1939–1972) under California Register of Historical Resources (CRHR) criteria 1, 2, 3, and 4, as stated below.

- 1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- 2. It is associated with the lives of persons important to local, California, or national history.
- 3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values.
- 4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The campus as a whole was carefully considered as a potential historic district, and the HRTR determined that it is not eligible. The campus buildings were surveyed and evaluated for individual eligibility under the same themes and criteria, and none were found individually eligible. The core of the Manteca HS campus—specifically the seven classroom "wings"—is an example of a "finger-plan" school that was designed to express educational ideals of the postwar era. However, the typology was developed much earlier at other locations, and it became a common property type during the postwar era. Furthermore, although the core of the site plan, i.e., the classrooms, was constructed between 1954 and 1961, several of the buildings 45 years or older surveyed and evaluated in the HRTR were constructed outside this period of time. Two of the campus buildings—the Agricultural Shop Unit/Lab and Winter Gymnasium—were constructed in the late 1940s, and two—the Theater and the Administration Building—were constructed in the early 1970s. Furthermore, a few major buildings have been constructed since the 1990s as the campus went through modernization. Therefore, the campus is recommended not eligible as a historic district under CRHR under any themes or criteria considered for this evaluation. The Manteca High School Historic District is not a historical resource as defined by CEQA, and impacts would be less than significant.

As part of the HRTR, a cultural resources records search was conducted through the Central California Information Center (CCIC), part of the California Historical Resources Information System (CHRIS) at California State University, Stanislaus. The records search identified one cultural resource, a historic school building (P-39-005002) within the Manteca High School campus, and five building resources were identified within 0.5 miles of the campus. Although the records search result showed the presence of one historic building, the HRTR did not find any impacts on a historic building. The area to be disturbed by the proposed project has already been disturbed and is developed with school facilities, and no archaeological resources were identified on or near the campus. Therefore, there are no unusual circumstances that would result in significant impacts to archaeological resources. This exception does not apply to the proposed project.

Geology and Soils

The project site is not within an Alquist-Priolo Earthquake Zone, and there are no known active faults crossing the project site (CGS 2023). The nearest Alquist-Priolo Fault Zone, the Greenville Fault Zone, is approximately 25 miles southwest of the city's boundary. There are also no known geological hazards, such as liquefaction, landslide, lateral spreading, or subsidence, within the project site (Manteca 2022). The proposed project would be required to comply with the seismic design parameters of the California Building Code (CBC), California Code of Regulations, Title 24, which regulates all building and construction projects and implements a minimum standard for building design and construction that includes specific requirements for foundation and seismic safety. All school facilities would require review and approval by the Division of the State Architect (DSA). There are no unusual circumstances pertaining to geology and soils that would apply to the proposed project. This exception does not apply to the proposed project.

Hazards and Hazardous Materials

Project construction would require the use of hazardous materials, including fuels, greases and other lubricants, and coatings such as paint. And since the proposed project would not require building demolition other than a small utility building, no substantial release of hazardous materials into the environment is anticipated. The handling, use, transport, and disposal of hazardous materials during the construction phase of the project are required to comply with the existing regulations of several agencies, such as the EPA, Occupational Safety and Health Administration, California Division of Occupational Safety and Health, and the US Department of Transportation. After construction, building maintenance may require the use of cleaners, solvents, paints, and other custodial products that are potentially hazardous. These materials would be used in relatively small quantities, clearly labeled, and stored in

compliance with state and federal requirements. With the exercise of normal safety practices by the school maintenance staff, the proposed project would not create substantial hazards to the public or the environment.

According to the Phase I Environmental Site Assessment prepared for the proposed project by PlaceWorks and included as Attachment C, after reviewing the site history, existing observable conditions, current site use, and current and historic uses of surrounding properties, there are no recognized environmental conditions, controlled recognized environmental conditions, historical environmental conditions, or significant data gaps in connection with the subject property. Therefore, the proposed project would have less than significant impacts related to hazards and hazardous materials. There is no reasonable possibility that the proposed project would have a significant effect on the environment due to unusual circumstances related to hazards and hazardous materials. This exception does not apply to the proposed project.

Hydrology and Water Quality

Urban runoff from storms or nuisance flows (runoff during dry periods) from development projects can carry pollutants to receiving waters. The construction and operational phases of the proposed project could have the potential to impact water quality. Construction activities may impact water quality due to sheet erosion of exposed soils. Clearing, grading, excavation, and construction activities associated with the proposed project may impact water quality through soil erosion and increase the amount of silt and debris carried in runoff. Additionally, the use of construction materials such as fuels, solvents, and paints may present a risk to surface water quality. Finally, the refueling and parking of construction vehicles and other equipment on-site during construction may result in oil, grease, or related pollutant leaks and spills that may discharge into the storm drain system. To minimize these potential impacts, the proposed project would be required to comply with the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP) as well as prepare a Storm Water Pollution Prevention Plan (SWPPP) that requires the incorporation of best management practices (BMPs) to control sedimentation, erosion, and hazardous materials contamination of runoff during construction. The State Water Resources Control Board (SWRCB) mandates that projects that disturb one or more acres of land must obtain coverage under the Statewide CGP. The two-story classroom and media center building would replace the existing classroom buildings (Wings 20 through 80), and therefore would not create additional impermeable surfaces to increase runoff volume and concentration. The two-story, 10-classroom building and the woodshop would be constructed on the newly acquired 1.09-acre area along Mikesell Avenue, which was previously developed with single-family residential units. The southern parking lot expansion would be onto a vacant, 0.52-acre area that was previously developed as a motel with surface parking lot. Areas to be developed as part of the proposed project exceed one acre, and all construction activities are required by the Central Valley Regional Water Quality Control Board to comply with the NPDES CGP to reduce water quality and hydrology impacts to a less than significant level. The project would occur within the existing high school with various school facilities, and no unusual circumstances that would cause significant environmental impacts are anticipated.

Because the areas to be disturbed and developed have previously been developed with buildings and pavement, when completed, the total impervious surface area under the pre- and post-construction is not anticipated to change substantially. And prior to ground disturbance, the District is required to prepare a Water Quality Management Plan (WQMP) and implement appropriate BMPs to ensure that impervious areas are minimized, that post-development conditions have substantially the same drainage pattern, and that the stormwater time of concentrations are preserved. There are no unusual circumstances related to hydrology and water quality impacts that would result in a significant impact on the environment due to project implementation. This exception does not apply to the proposed project.

Noise

As substantiated in Attachment D to this Supplement, *Noise Technical Memorandum*, amd summarized below, the proposed project would not result in any significant impact related to noise during construction and operation of the proposed project.

Construction Noise

Two types of short-term noise impacts could occur during construction: (1) mobile-source noise from transport of workers, material deliveries, and debris and soil haul and (2) stationary-source noise from use of construction equipment. Existing uses surrounding the project site would be exposed to construction noise. The transport of workers and materials to and from the construction site would incrementally increase noise levels along access roadways in the project vicinity. Individual construction vehicle pass-bys and haul trucks may create momentary noise levels of up to 85 dBA (Lmax) at 50 feet from the vehicle, but these occurrences would be temporary and generally short-lived as trucks pass by. It is assumed that the highest worker and vendor trips would approach 40 trips during overlapping construction activity. Comparing the temporary construction trips to trips generated from existing student enrollment, which is approximately 1,864 students for the year 2021+2022, the addition of 40 temporary worker and vendor daily trips would result in a negligible noise increase. Therefore, impacts would be less than significant.

Noise generated during construction is based on the type of equipment used, the location of the equipment relative to sensitive receptors, and the timing and duration of the noise-generating activities. Noise levels from construction activities are dominated by the loudest piece of construction equipment. The top three loudest pieces of construction equipment for each construction phase were modeled using the Roadway Construction Noise Model (RCNM) and equipment mix based on CalEEMod defaults. The detailed noise modeling result is included in Attachment D to this Supplement. The construction noise modeling result found that the closest residences from the project site, single-family homes approximately 75 feet to the north across Mikesell Avenue (as measured from the façade of the new proposed classroom building to the receptor property line) would experience noise levels between 63.4 and 79.5 dBA Leq during various construction activities (e.g., demolition, grading, paving, building construction etc.). This would be below the FTA criterion of 80 dBA Leq. All other receptors would experience further attenuated (lower) noise levels which would be below 80 dBA Leq. Therefore, as discussed above, construction noise impacts would not have a significant impact on the environment due to unusual circumstances, and this exception does not apply to the proposed project.

Operational Noise

The nearest sensitive receptor to the new building that would have heating, ventilation, and cooling equipment (HVAC) equipment would be approximately 95 feet to the west. Typical HVAC equipment generates noise levels ranging up to 72 dBA at a distance of 3 feet. At 70 feet, HVAC-related noise would attenuate to 45 dBA or less. This would be below the daytime and nighttime City noise standards of 55 and 45 dBA Leq, respectively, and impacts would be less than significant.

With the planned school remodel, the proposed project would not result in an increase in students. Additionally, there are no planned roadway upgrades associated with the proposed project. Therefore, the project would not result in a significant change in long-term traffic volumes. Therefore, traffic noise increases from the proposed project on nearby roadway segments would be less than significant. As discussed above, operational noise impacts would not have a significant impact on the environment due to unusual circumstances, and this exception does not apply to the proposed project.

Public Services

The Manteca Fire Department provides fire protection services to the city of Manteca, including the project site. The nearest fire station to Manteca High School is Manteca Fire Station 1 at 290 S. Powers Avenue, approximately 0.10 miles east of the campus. The proposed project would replace existing classroom buildings and would not increase the student capacity to increase the service population within the Manteca Fire Department's service boundary. Furthermore, construction of the new building would adhere to the applicable fire code and emergency access standards to ensure fire safety. Therefore, the proposed project would not increase the demand for fire services or have a substantial impact on response times. There is no unusual circumstances that would result in significant impacts to fire protection services.

The Manteca Police Department provides police protection services to the City of Manteca, including the streets that surround the existing Manteca High School campus. Additionally, the campus security system includes a School Resources Officer, a surveillance system, and fire and alarm systems. The proposed project would not increase student capacity at the high school, and therefore would not increase police protection demands in the Manteca Police Department's service area to cause significant environmental impacts. There is no unusual circumstance surrounding public services such as fire and police services that could result in a significant impact to the environment. This exception does not apply to the proposed project.

Transportation

For the purposes of CEQA, transportation impacts are analyzed in terms of vehicle miles traveled (VMT). The Office of Planning and Research's "Technical Advisory on Evaluating Transportation Impacts in CEQA" (December 2018) includes specifications for VMT methodology and recommendations for significance thresholds, mitigation, and screening of projects that may be presumed to have less than significant impacts. Screening criteria include small projects, which the Technical Advisory concluded that, absent any information to the contrary, projects that generate 110 trips per day or less may be assumed to cause a less than significant transportation impact. The proposed project would not increase the existing student capacity by increasing the number of classrooms or creating new uses that could generate additional traffic. The future expansion of the parking lots would accommodate the existing school's parking demands and would not generate additional trips to increase VMT. Therefore, the proposed project meets OPR's Technical Advisory screening criteria. There are no unusual circumstances that would cause a significant transportation impact. This exception does not apply to the proposed project.

Utilities and Service Systems

The newly constructed buildings would require water, wastewater, natural gas, and electricity services. The existing campus is already served by these wet and dry utility systems, and no new services would be required. The new buildings would be designed using green building practices, including those of the most current Building Energy Efficiency Standards (Title 24, California Code of Regulations, Part 6) and CALGreen (Title 24, California Code of Regulations, Part 11). Both standards contain energy efficiency requirements for newly constructed buildings. Therefore, the new buildings would consume less water, natural gas, and electricity and generate less wastewater compared to the buildings to be demolished. As stated in the *Project Description*, the proposed project would not increase the student capacity, and the utilities and service systems demands would not be increased. There is no reasonable possibility that the proposed project will have a significant effect on the environment due to unusual circumstances related to utilities and service systems. Therefore, this exception does not apply to the proposed project.

Wildfire

The project site is in a highly urbanized area and no wildfire hazards are anticipated. There is no reasonable possibility that the proposed project will have a significant effect on the environment due to unusual circumstances related to wildfire. Therefore, this exception does not apply to the proposed project.

(d) Scenic Highways. A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway.

There are no officially designated state scenic highways near Manteca. The closest officially designated state scenic highway is Interstate 580 (I-580)—(from I-5 to Alameda County line)—approximately 15 miles to the southwest (Caltrans 2022). The closest eligible state scenic highway is an I-580 segment in Alameda County, approximately 20 miles to the west (Caltrans 2022). Due to the distance between the project site and scenic highways, the proposed project would not have any effect on the scenic value of officially designated or eligible scenic highways. There are no scenic resources on campus or in the surrounding community. This exception does not apply to the proposed project.

(e) Hazardous Waste Sites. A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

California Government Code Section 65962.5 requires the compiling of lists of the following types of hazardous materials sites: hazardous waste facilities compiled by the Department of Toxic Substances Control; hazardous waste discharges for which the State Water Quality Control Board has issued certain types of orders; public drinking water wells containing detectable levels of organic contaminants; underground storage tanks with reported unauthorized releases; and solid waste disposal facilities from which hazardous waste has migrated. A standard environmental records review was performed through EDR, and Table 3, Hazardous Materials Records Review Result, shows the databases reviewed.

Table 3 Hazardous Materials Records Review Result

Database	Approximate Search Distance	Project Site Listed?	Number of Sites Within Search Area
Federal NPL (Superfund) sites	1 mile	No	0
Federal Delisted NPL sites	1 mile	No	0
Federal sites subject to CERCLA removals & CERCLA orders	0.5 mile	No	0
Federal CERCLA sites with NFRAP	0.5 mile	No	1
Federal RCRA facilities undergoing Corrective Action	1 mile	No	0
Federal RCRA TSD facilities	0.5 mile	No	0
Federal RCRA generators	0.25 mile	No	1
Federal institutional controls / engineering controls registries	0.5 mile	No	0
Federal ERNS list	Site & Adjoining	No	0
State- and tribal (Superfund) equivalent sites	1 mile	No	0
State- and tribal hazardous waste facilities	1 mile	No	11
State and tribal landfills and solid waste disposal facilities	0.5 mile	No	0
State and tribal leaking storage tanks	0.5 mile	No	29
State and tribal registered storage tanks	0.25 mile	No	30
State and tribal voluntary cleanup sites	0.5 mile	No	0
State and tribal brownfield sites	0.5 mile	No	0
Orphans	Site & Adjoining	No	4
HAZNET	Site & Adjoining	Yes	4

As shown in Table 3, the project site is listed in the Hazardous Waste Information System (HAZNET) database, which includes information on hazardous waste shipments for generators, transporters, and treatment, storage and disposal facilities. However, as described below, the laboratory waste and asbestos-containing wastes were transferred to authorized landfills, and no release or spill of hazardous materials occurred that required further action or investigation. Furthermore, a Phase I ESA was prepared for the proposed project and determined that there is no recognized environmental conditions that would result in significant impacts related to hazardous materials.

- In 2021 laboratory waste chemicals were transferred off-site.
- In 2020 asbestos-containing waste and latex waste were transferred to a landfill.
- In 2019 laboratory waste chemicals, asbestos-containing waste, and inorganic solid waste were transferred
 off-site.
- In 2014 asbestos-containing waste was transferred to a landfill.
- In 2012 asbestos-containing waste was transferred to a landfill.
- In 2010 photo chemicals and photo processing waste were transferred to a landfill.
- In 2009 laboratory waste chemicals were transferred off-site.
- In 1997 asbestos-containing waste was transferred to a landfill.
- In 1987 asbestos-containing waste was transferred to a landfill.
- In 1984 and 1985 asbestos-containing waste was transferred to a landfill.

Therefore, the project would not create a hazard to the public because of a hazardous materials site pursuant to Government Code § 65962.5. This exception does not apply to the proposed project.

(f) Historical Resources. A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of historical resources.

Under Public Resources Code § 21084.1, a historical resource is a resource listed in or determined to be eligible for listing in the California Register of Historical Resources. Additionally, historical resources in a local register of historical resources are presumed to be historically or culturally significant, and a lead agency can determine whether the resource may be an historical resource.

The Manteca HS campus was considered for historical significance under the broad themes of Education and Architecture and the more specific subtheme of the Postwar Modern Functionalist School Plant (1939–1972) under CRHR criteria 1, 2, 3, and 4. However, as substantiated in HRTR, included as Attachment B to this Supplement, the campus as a whole and the surveyed 15 buildings individually were not recommended to be eligible. The core of the Manteca HS campus—specifically the seven classroom "wings"—is an example of a "finger-plan" school that was designed to express educational ideals of the postwar era. However, the typology was developed much earlier at other locations, and it became a common property type during the postwar era. Furthermore, although the core of the site plan, i.e., the classrooms, was constructed between 1954 and 1961, several of the buildings 45 years or older surveyed and evaluated in the HRTR were constructed outside this period. Two of the campus buildings—the Agricultural Shop Unit/Lab and Winter Gymnasium—were constructed in the late 1940s, and two—the Theater and the Administration Building—were constructed in the early 1970s. Furthermore, a few major buildings have been constructed since the 1990s as the campus went through modernization. As such, the campus is recommended not eligible as a historic district under CRHR under any themes or criteria considered for this evaluation. Therefore, the Manteca High School Historic District is not a historical resource as defined by CEQA and impacts would be less than significant. This exception does not apply to the proposed project.

Conclusion

As substantiated in this document, the proposed project would not meet the conditions specified in § 15300.2, Exceptions, of the CEQA Guidelines, and the project is categorically exempt under Class 1, Class 2, Class 3, Class 4, and Class 14.

SUBJECT Air Quality Technical Memorandum for Manteca High School Improvement Project

PROJECT NUMBER MANT-06.0

PlaceWorks technical staff has prepared an air quality emissions memorandum to support the Notice of Exemption under a Class 32 Categorical Exemption (CEQA Guidelines § 15332) for the Manteca High School Improvement Project (proposed project) at 450 E. Yosemite Avenue, Manteca, California.

Project Description

The project site is within the San Joaquin Valley Air Basin (SJVAB). The proposed project will include the construction of two two-story classroom buildings (one 28-classroom building and one 10-classroom building) and a one-story wood shop building to replace existing classroom buildings. The existing 38 classrooms would be demolished. The proposed project also includes the expansion of the south parking on the 453 Moffat Boulevard property. The proposed project would not increase the current student capacity at the high school campus.

Methodology

Criteria air pollutant emissions were analyzed qualitatively due to the size of the project qualifying under San Joaquin Valley Air Pollution Control District's (SJVAPCD's) Small Project Analysis Level (SPAL) (SJVAPCD 2020). To develop the SPAL analysis, the SJVAPCD pre-quantified emissions using the project type, size, and number of vehicle trips, and determined values below which it is reasonable to conclude that a project would not exceed applicable thresholds of significance for criteria pollutants. Therefore, this analysis compares the project-related construction and operational activities against the SJVAPCD's applicable SPAL criteria to determine the potential emissions impact significance resulting from implementation of the proposed project. Should the proposed project exceed the applicable SPAL criteria, a detailed, quantified emissions analysis is recommended by the SJVAPCD.

Thresholds of Significance

SJVAPCD has developed the Guide for Assessing and Mitigating Air Quality Impacts (GAMAQI) and recently adopted the latest version on March 19, 2015 (SJVAPCD 2015). The current GAMAQI represents the latest guidance for addressing air quality impacts in the SJVAB. Changes to the GAMAQI are primarily administrative in nature to update air basin information, attainment status, and general guidance to reflect

updated conditions. The following thresholds of significance from the SJVAPCD's GAMAQI are used to determine whether a proposed project would result in a significant air quality impact.

REGIONAL SIGNIFICANCE THRESHOLDS

According to the GAMAQI, the SJVAPCD establishes regional significance thresholds to determine whether a project would significantly contribute to a nonattainment designation based on the mass emissions generated. Table 1, SJVAPCD Regional Criteria Air Pollutants Significance Thresholds, lists SJVAPCD's regional significance thresholds. Nonetheless, per SJVACPD's SPAL methodology, a high school project that would result in less than 153,600 square feet of new building space or 1,160 new students, as well as less than 1,000 average daily one-way trips, would not generate emissions that exceed SJVAPD's regional significance thresholds.

Table 1 SJVAPCD Regional Criteria Air Pollutants Significance Thresholds

Air Pollutant	Construction and Operation Phase
Reactive Organic Gases (ROG)	10 tons/year
Carbon Monoxide (CO)	100 tons/year
Nitrogen Oxides (NOx)	10 tons/year
Sulfur Oxides (SOx)	27 tons/year
Coarse Particulates (PM ₁₀)	15 tons/year
Fine Particulates (PM _{2.5})	15 tons/year
Source: SJVAPCD 2015	

AMBIENT AIR QUALITY ANALYSIS

Determination of whether a project would violate a federal and/or state ambient air quality standard (AAQS) is largely a function of air dispersion modeling. If project emissions would not exceed the AAQS at the project boundaries, a project would not be considered to violate an air quality standard or contribute substantially to an existing or projected air quality violation. Nonetheless, per the GAMAQI, the SPAL screening criteria have been established by the SJVAPCD to streamline the process of assessing the significance of impact of criteria pollutant emissions from projects. Projects which fall below these screening criteria would not be considered to have the potential to violate the AAQS and a quantified ambient air quality analysis (AAQA) would not be required. Since NO_X is the predominant combustion exhaust pollutant and would be the first pollutant to exceed the 100 lb/day trigger for conducting an AAQA, SPAL levels are based on NO_X emissions.

CONSISTENCY WITH THE APPLICABLE AIR QUALITY PLAN

SJVAPCD has prepared plans to attain federal and State AAQS. The significance thresholds in Table 1 are based on SJVAPCD's New Source Review (NSR) offset requirements for stationary sources. Emission reductions achieved through implementation of SJVAPCD's offset requirements are a major component of SJVAPCD's air quality plans. Thus, projects with emissions below the thresholds of significance for criteria pollutants (see Table 1) would be determined to "not conflict or obstruct implementation of the [SJVAPCD's] air quality plan." Projects with emissions that exceed these values are considered to have the potential to exceed the AAQS, resulting in a potentially significant impact.

ODOR

Odor impacts associated with a proposed project would be considered significant if the project has the potential to frequently expose members of the public to objectionable odors. There are two general scenarios where a project could expose people to substantial odors:

- Odor Generator. Projects that would potentially generate odorous emissions proposed to locate near existing sensitive receptors or other land uses where people may congregate.
- Odor Receiver. Residential or other sensitive receptor projects or other projects built for the intent of attracting people locating near existing odor sources.

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, there are no quantitative or formulaic methodologies to determine if potential odors would have a significant impact. Rather, projects must be assessed on a case-by-case basis. As shown in Table 2, SIVAPCD Screening Levels for Potential Odor Sources, the SIVAPCD has identified buffer distances for common types of facilities that have been known to produce odors in the SIVAB. The degree of odors could be significant and may be based on a review of SIVAPCD's complaint records.

Table 2 SJVAPCD Screening Levels for Potential Odor Sources

Land Use/Type of Operation	Screening Distance
Wastewater Treatment Plant	2 miles
Sanitary Landfill	1 mile
Transfer Station	1 mile
Composting Facility	1 mile
Petroleum Refinery	2 miles
Asphalt Batch Plant	1 mile
Chemical Manufacturing	1 mile
Fiberglass Manufacturing	1 mile
Painting/Coating Operations	1 mile
Food Processing Facility	1 mile
Feed Lot/ Dairy	1 mile
Rendering Plant	1 mile
Source: SJVAPCD 2015	<u> </u>

For a project locating near an existing source of odors, in California Building Industry Association v. Bay Area Air Quality Management District (CBIA), the California Supreme Court ruled that CEQA generally does not require an evaluation of impacts of the environment on a project unless a project will exacerbate an existing environmental hazard.

HEALTH RISK THRESHOLDS

School projects that use state funds are subject to Public Resources Code Section 21151.8 and Education Code Section 17213 pursuant to Title 5 requirements. These code sections require the preparation of a health risk assessment for state-funded school projects if freeways or other busy traffic corridors have been identified within 500 feet of a proposed school site. A busy traffic corridor is defined as having 50,000 or more average daily vehicle trips in a rural area or 100,000 or more average daily trips in an urban area. Additionally, these code sections also require school districts to identify facilities, including but not limited to freeways and other busy traffic corridors, large agricultural operations, and rail yards within one quartermile of a proposed school site that might reasonably be expected to emit hazardous air emissions.

As shown in Figure 3.14-3, Existing Conditions Average Daily Traffic and Level of Service, of the City of Manteca General Plan EIR, no roadways within 500 feet of the project site exceed 50,000 average daily vehicle trips (Manteca 2022). The Union Pacific Railroad track is located approximately 215 feet southwest of the project site; however, the project site is not located with a quarter-mile of any freeways, large agricultural operations, rail yards or other operations that would be expected to emit hazardous air emissions. Furthermore, the proposed project would not result in an increase in school enrollment, and therefore would not result in the addition of new receptors that could be exposed to nearby hazardous air emission sources. As such, no health risk assessment is required for the proposed project.

Whenever a project would require use of chemical compounds that have been identified in SJVAPCD's Rule 2201, placed on CARB's air toxics list pursuant to Assembly Bill 1807 (AB 1807), Toxic Air Contaminant Identification and Control Act (1983), or placed on the US EPA's National Emissions Standards for Hazardous Air Pollutants, a health risk assessment is warranted. In addition, if a project would place sensitive land uses proximate to major sources of TACs (roadways with over 50,000 vehicles per day or major stationary sources), a health risk assessment may also be warranted. As discussed, the project site is not located in proximity to any major sources of TAC's. Table 3, *SJVAPCD Toxic Air Contaminants Incremental Risk Thresholds*, lists the SJVAPCD's TAC incremental risk thresholds for operation of a project or placement of sensitive land uses proximate to major sources of air pollution. As stated, under the CBIA ruling, while CEQA is generally not required to analyze impacts of the environment on a project, where a project will exacerbate an existing environmental hazard, CEQA requires an analysis of the worsened condition on future project residents and the public at large. However, projects that do not generate emissions that exceed the values in Table 3 would not substantially contribute to cumulative air quality hazards or exacerbate an existing environmental hazard.

Table 3 SJVAPCD Toxic Air Contaminants Incremental Risk Thresholds

Risk Type	Threshold
Cancer Risk ¹	≥ 10 in 1 million
Hazard Index ²	≥1.0

Source: SJVAPCD 2015

CUMULATIVE IMPACTS

By its very nature, air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development. Future attainment of federal and State AAQS is a function of successful implementation of the SJVAPCD's attainment plans. Consequently, SJVAPCD's application of thresholds of significance for criteria pollutants is relevant to the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality. Pursuant to the SJVAPCD's guidance, if project-specific emissions would be less than the thresholds of significance for criteria pollutants, the project would not be expected to result in a cumulatively considerable net increase of any criteria pollutant for which the SJVAPCD is in nonattainment under applicable federal or State AAQS.

Environmental Impacts

This analysis addresses the impacts of the proposed project on ambient air quality and the exposure of people, especially sensitive individuals, to unhealthful pollutant concentrations.

The primary air pollutants of concern for which the AAQS have been established are ozone (O₃), carbon monoxide (CO), coarse inhalable particulate matter (PM₁₀), fine inhalable particulate matter (PM_{2.5}), sulfur

For the Maximum Exposed Individuals (MEI).

² Ground-level concentrations of noncarcinogenic TACs for the MEI.

dioxide (SO₂), nitrogen dioxide (NO₂), and lead (Pb). Areas are classified under the federal and California Clean Air Act as either in attainment or nonattainment for each criteria pollutant based on whether the AAQS have been achieved. The San Joaquin Valley Air basin (SJVAB) has been identified as a nonattainment area for ozone (O₃) and particulate matter (PM₁₀ and PM_{2.5}) under the California and/or National AAQS (CARB 2023).

The following describes project-related regional, localized, and odor impacts from operational activities from implementation of the project. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. CEQA requires that General Plans be evaluated for consistency with applicable air quality management plans (AQMPs). A consistency determination plays an important role in local agency project review by linking local planning and individual projects to the AQMPs. It fulfills the CEQA goal of informing decisionmakers of the environmental impacts of the project under consideration early enough to ensure that air quality concerns are fully addressed. It also provides the local agency with ongoing information as to whether they are contributing to clean air goals in the AQMPs. Only new or amended general plan elements, specific plans, and major projects need to undergo a consistency review. This is because the AQMP strategies are based on projections from local general plans. Projects that are consistent with the local general plan are considered consistent with the air quality-related regional plan. The project site currently operates as a school and the proposed additions to the campus would construct new school-serving buildings, consistent with the intended use of the site under the City's Public/Quasi-Public land use designation. The proposed project would allow the school to further accommodate the demand for current student education within the San Joaquin County area. In addition, SJVAPCD is tasked with implementing programs and regulations required by the Clean Air Act and the California Clean Air Act.

SJVAPCD has prepared several plans to attain the National AAQS and California AAQS. Emission reductions achieved through implementation of SJVAPCD's New Source Review offset requirements are a major component of SJVAPCD's air quality plans. The established thresholds of significance for criteria pollutant emissions are based on SJVAPCD offset requirements for stationary sources. Thus, projects with emissions below the thresholds of significance for criteria pollutants would be determined to not conflict or obstruct implementation of the SJVAPCD's air quality plan. Development of the proposed additions to Manteca High School would not exceed the SJVAPCD significance thresholds (Table 1) due to the project size of 52,000 square feet, which is under the SJVAPCD SPAL screening criterion of 153,600 square feet for high school projects. The proposed project would also result in no increase to the student population, resulting in no additional vehicle trips under the proposed project. Therefore, this impact would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact. Based on the size of the project, it qualifies under SJVAPCD's SPAL methodology for construction and operational criteria air pollutant emissions; and therefore, a quantified analysis of the project's construction and operational emissions is not warranted. Per SJVACPD's methodology, a qualitative analysis of the project's construction and operational impacts based on SJVACPD's screening level sizes is provided.

Regional Short-Term Construction Impacts

Construction activities produce combustion emission from various sources, such as on-site heavy-duty construction vehicles, vehicles hauling materials to and from the site, and motor vehicles transporting the crew. Site preparation activities produce fugitive dust emissions (PM₁₀ and PM_{2.5}) from demolition and soil-

disturbing activities, such as grading and excavation. Air pollutant emissions from construction activities on site would vary daily as construction activity levels change. Construction activities associated with the project would result in emissions of VOC, NOX, CO, PM_{10} , and $PM_{2.5}$.

Construction onsite would include the construction of two two-story classroom buildings together totaling approximately 44,000 square feet and a new woodshop building totaling approximately 8,000 square feet, resulting in approximately 52,000 square feet of new building space. The proposed project would also expand the existing south parking lot into the 453 Moffat Boulevard property. Construction activities associated with development of the proposed project would include building demolition, site preparation, grading, building construction, paving, and painting. Due to the project size of approximately 52,000 square feet of new building space, the proposed project would be below the SJVAPCD SPAL screening criterion of 153,600 square feet. Therefore, per SJVAPCD methodology, project-related construction activities are not anticipated to exceed the SJVAPCD's regional significant thresholds (Table 1). Therefore, this impact would be less than significant.

Regional Long-Term Operational Impacts

The proposed project would construct additional buildings to serve the existing Manteca High School campus. Long-term air pollutant emissions generated by the project would be generated by area sources (e.g., landscape fuel use, aerosols, and architectural coatings), mobile sources from vehicle trips, and energy use (natural gas) associated with the proposed school buildings. In general, the primary source of long-term criteria air pollutant emissions generated by land use development projects, such as the proposed project, are usually from mobile sources. As the proposed project would result in no increase in student enrollment or subsequent vehicle trip generation, the proposed project's greatest emission sources are anticipated to be area and energy source emissions from operation of the new buildings. The proposed buildings would be constructed to meet the latest California Building and Energy Efficiency Standards. Because the proposed project would result in the construction of approximately 48,100 square feet and result in no additional students or vehicle trips, it would be below the SJVAPCD SPAL screening criterion of 153,600 square feet, 1,160 students, and 1,000 average one-way trips, and is therefore considered to generate criteria air pollutant emissions that would be less than SJVAPCD's significance thresholds. Therefore, this impact would be less than significant.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Land uses that have the potential to be substantial stationary sources that would require a permit from SJVAPCD to operate include industrial land uses, such as chemical processing, and warehousing operations where substantial truck idling could occur onsite. Operation of the proposed new school buildings would include occasional use of landscaping equipment and natural gas consumption for heating and would not result in the operation of land uses expected to generate substantial amounts of toxic air contaminants (TAC).

Localized Short-Term Construction Impacts

Health risk assessments are based on risk accumulated over a 70-year lifetime. Given the short-term nature of the proposed construction activities (construction of two buildings and a new parking lot in addition to the demolition of existing site buildings), the proposed project would not result in a long-term substantial source of TAC emissions. In addition, the proposed project was previously identified as falling below the applicable SPAL screening criteria, indicating it would not exceed SJVAPCD significance thresholds for criteria pollutants or AAQS during construction or operation. While the SJVAPCD significance thresholds and AAQS are not directly associated with potential health risks, health risk impacts are the product of the quantity of emissions generated and the duration of those emissions' exposure to off-site sensitive

receptors. Considering construction of the proposed project would be short-term and the proposed project's size would be well below the applicable SPAL screening criteria, implying it would not generate substantial emissions during construction or operation, project-related diesel particulate matter impacts during construction are not anticipated to be significant.

Localized Long-Term Operational Impacts

CO HOTSPOTS

Areas of vehicle congestion have the potential to create pockets of CO called hotspots. These pockets have the potential to exceed the state one-hour standard of 20 ppm or the eight-hour standard of 9.0 ppm. The SJVAPCD Guidance for Assessing and Mitigation Air Quality Impacts guidance document previously required CO hotspot monitoring. However, emissions from motor vehicles, the largest source of CO emissions, have been declining since 1985 despite increases in vehicle miles traveled (VMT) due to the introduction of new automotive emission controls and fleet turnover. Furthermore, under existing and future vehicle emission rates, a project would have to increase traffic volumes at a single intersection to more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—or result in a conflict with the local congestion management plan in order to have the potential to generate a CO hotspot (BAAQMD 2017). Operation of the proposed project would generate no additional vehicle trips and would therefore not produce the volume of traffic or present a conflict with the local congestion management plan that could result in generating a CO hotspot. Therefore, impacts from CO hotspots are considered less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. The proposed project would not result in objectionable odors. The threshold for odor is if a project creates an odor nuisance pursuant to SJVAPCD Rule 4102, Nuisance, which states:

A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

The type of facilities that are considered to have objectionable odors include wastewater treatments plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities. The uses proposed by the project do not fall within the aforementioned land uses. Emissions from construction equipment, such as diesel exhaust and volatile organic compounds from architectural coatings and paving activities, may generate odors. However, these odors would be low in concentration, temporary, and are not expected to affect a substantial number of people. Therefore, odor impacts would be less than significant.

Executive Summary

ASM Affiliates, Inc. (ASM), under contract to PlaceWorks, has prepared this Historic Resources Technical Report (HRTR) in advance of Phase 2 of a modernization project at Manteca High School. As requested by the Manteca Unified School District (MUSD), this study fulfills the regulatory requirements of the California Environmental Quality Act (CEQA). The project area encompasses the Manteca High School (Manteca HS) campus at 450 East Yosemite Avenue, Manteca, California. The campus is southeast of the intersection of East Yosemite Avenue and South Sherman Avenue (Assessor's Parcel Number [APN] 0201191150000). State Route 99 is about 1 mile to the east, and State Route 120 is less than 1 mile to the south.

This HRTR summarizes the background, methods, and results and provides recommendations for any further work required for CEQA compliance. ASM evaluated each building more than 45 years old to determine its eligibility for listing in the California Register of Historical Resources (CRHR) and as a historical resource under CEQA. The campus was also considered as a potential historic district under the same guidelines. The evaluation was conducted in conformance with guidance on conducting historical building assessments and evaluations, specifically the National Register of Historic Places (NRHP) Bulletin No. 15, How to Apply the National Register Criteria for Evaluation (National Park Service 1991), the California Office of Historic Preservation's Instructions for Recording Historical Resources (1995), and Technical Assistance Series #7 How to Nominate a Resource to the California Register of Historical Resources (2001), and CEQA. The report was prepared by ASM's architectural historians and archaeologists who meet and/or exceed the Secretary of the Interior's Professional Qualification Standards.

This evaluation report and assessment of potential impacts to cultural resources was conducted in compliance with CEQA and guided by the *Secretary of the Interior's Standards for the Treatment of Historic Properties (SOI Standards)* (Weeks and Grimmer 2017). CEQA Guidelines Section 15064.5 defines significant impacts as a substantial adverse change to a historical resource, encompassing "demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (AEP 2016:140). The Guidelines also state: "Generally, a Project that follows the Secretary of the Interior's Standards for Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring and Rehabilitating Historic Buildings ... shall be considered as mitigated to a less than significant level" (AEP 2016:141).

ASM considered the potential for eligibility for the CRHR under criteria 1, 2, 3, and 4 for the buildings more than 45 years old on the Manteca HS campus within the project area. Attention was paid to the potential of the group of buildings and landscape to be considered a historic district. Each of the recommended contributors also was considered for individual eligibility. Manteca HS campus is recommended not eligible under any criteria; none of the buildings were found to be individually eligible either. As such, the project will not result in a substantial adverse change to historical resources such that the significance of a historical resource would be materially impaired. Therefore, no impacts to any historical resources will occur as a result of the project, and no mitigation recommendations are required.

1.0 Introduction

This Historic Resources Technical Report (HRTR) describes the goals, methods, and findings of the identification of historical resources and impacts analysis conducted by ASM Affiliates, Inc. (ASM), for the Manteca High School (Manteca HS) modernization project in Manteca, San Joaquin County, California. The Project proposes construction within the Manteca High School Historic District, as identified in this report. The California Environmental Quality Act (CEQA) applies to discretionary projects undertaken, approved, or funded by a public agency. As such, the proposed Project is subject to CEQA. ASM has prepared this report to evaluate whether there are historical resources within the project area and if the Project would result in either a direct or indirect impact to those historical resources. For this HRTR, the area of potential impact (API) was limited to the MHS campus. The following introductory sections present a description of the Project and the applicable regulatory framework.

ASM has prepared this HRTR in accordance with the requirements of CEQA, as requested by the Manteca Unified School District (MUSD). The report addresses the Manteca HS campus at 450 East Yosemite Avenue, Manteca, California, which contains 15 buildings that are more than 45 years old and therefore must be considered as potential historical resources pursuant to CEQA. This report provides an assessment and evaluation of direct and indirect impacts on potential historical resources as a result of the proposed project. This report is organized into the following sections: Introduction, Methodology, Identification of Historical Resources, Regulatory Framework, Historic Context, Survey Findings, Eligibility Criteria, Statement of Significance/Evaluation, Impacts Assessment, and Conclusion. A records search summary is included as an appendix. Original architectural drawings are on file at MUSD, labeled as indicated in this report.

1.1 Project Location

The Manteca HS campus is at 450 East Yosemite Avenue, Manteca, California, which is centrally located within the City of Manteca, California, San Joaquin County (Assessor's Parcel Numbers [APN] 22109020, 22109017, and 22118013). The campus also includes several small previously residential, light industrial, or commercial properties that have yet to be developed by MUSD. East Yosemite Avenue is a major east-west route in Manteca and served as the primary east-west route until Highway 120 was established in the 1970s. It remains Manteca's main thoroughfare and is populated by small commercial enterprises including the historic downtown businesses. South Main Street is located a few blocks to the west, and Moffatt Boulevard parallels the railroad tracks at an oblique angle to the southwest. Single- and multi-family properties fill the remaining space near the campus (Figures 1-3).

1.2 Project Description

This HRTR was prepared in advance of Phase 2 of a multi-phase modernization project at Manteca HS. Phase 1 is either under way or completed. Phase 2 comprises the following:

- Phase 2A: Demolition of 29 classrooms, relocation of existing wood shop to new shop building, modernization of existing wood shop to weight room.
- Phase 2B: Construction of new two-story classroom building with media center and adjacent quad.

- Phase 2C: Demolition of the majority of remaining classroom wings after the new two-story classroom building is built. The east side of Wing 60 and Wing 70 will remain to keep specialized programs in place (MUSD)
- MUSD is undertaking a comprehensive modernization program to make upgrades and repairs of existing buildings and to construct new facilities to improve the safety and educational experience of students, faculty, and staff at Manteca HS. The project consists of demolition, construction, and renovation of buildings and campus facilities. As part of Phase 2 of the Project, five classroom buildings more than 45 years of age are planned for demolition, in addition to a portion of two other buildings. Two additional buildings older than 45 years of age will be modernized (the Cafeteria and the Agricultural Lab), and several new buildings and extensive landscaping are planned for the campus.

1.3 Project Personnel

ASM Senior Architectural Historian Shannon Davis, M.A., served as Project Manager for ASM. Ms. Davis exceeds the professional qualification standards for Architectural Historian and Historian, with more than two decades of experience, as identified in the *SOI's Standards for Archeology and Historic Preservation* (36 CFR 61). As Director of Architectural History at ASM, Ms. Davis has documented and evaluated numerous cultural resources (including numerous schools) for CEQA compliance, impacts/effects analysis, Historic Structures Reports (HSRs), Historic American Building Survey (HABS), and National Register of Historic Places (NRHP) nominations. Ms. Davis additionally has past professional experience with the cultural resources programs of the National Park Service, including eight years as a historian with the NRHP.

ASM Architectural Historian Marilyn Novell, M.S., was the team leader conducting the evaluation and impacts analysis. Ms. Novell meets the professional qualification standards for Architectural Historian and Historian as identified in the *SOI's Standards for Archeology and Historic Preservation* (36 CFR 61) and has more than a decade of experience in the field. As an Architectural Historian, Ms. Novell has conducted historic and cultural resource assessments for projects throughout Los Angeles County and California, including numerous school campuses. Ms. Novell has experience in developing historical and cultural resources reports and in evaluating properties under federal, state, and local criteria, including NRHP, Section 106, CRHR, and CEQA compliance.

Identification of Historical Resources 2.0

ASM followed established guidelines to identify historical resources that have the potential to be impacted by the proposed project. Specifically, a project area was identified, and a records search was conducted prior to a survey of the project area to determine the presence of any previously determined eligible resources under CRHR or NRHP. Archival research was undertaken to develop the appropriate historic context and site-specific history to evaluate any identified resources as potential CEQA historical resources.

Description of the Area of Potential Impact 2.1

The project area is the Manteca HS campus. It is an L-shaped site bounded by East Yosemite Avenue and Mikesell Avenue on the north, South Sherman Avenue on the west, South Garfield Avenue and City of Manteca property on the east, and Moffat Boulevard on the southwest.

2.2 Records Search Results

On February 13, 2023, ASM submitted a records search request to the Central California Information Center (CCIC), part of the California Historical Resources Information System (CHRIS) at California State University, Stanislaus. The results of the search were provided to ASM on February 14, 2023 (Figure 4, Tables 1a and 1b, and Table 2). The records search summary letter provided by the SCCIC is provided in an appendix. The records search identified two previous cultural resource studies that had been conducted within the project area (Table 1a). An additional 12 previous studies had been conducted within a 0.5-mile radius of the project area (Table 1b).

A total of five cultural resources have been previously recorded within 0.5 mile of the project area (Table 2)1. All are historical-period resources, primarily consisting of various school buildings and structures as well as a historic railway track.

2.3 Field Survey

ASM Architectural Historian Marilyn Novell, M.S., conducted an intensive pedestrian survey of the Project area on February 8 and 9, 2023. The survey covered the grounds of the Manteca HS campus, focusing on the buildings 45 years of age or older. During the intensive-level survey, digital photographs of the exteriors of the buildings were taken, as well as interiors where accessible and overviews of the campus and landscaping. Detailed field notes were recorded addressing features of the buildings, landscaping, and setting. No archaeological survey was conducted.

Fifteen buildings 45 years or older were surveyed and evaluated, as shown in Table 3 and Figure 5. Although constructed over a period ranging from the 1940s to 1970s, all of the buildings were designed by architect Harry J. Devine (or Harry J. Devine, Inc., for the later buildings), as indicated by as-built architectural drawings on file with the Manteca Unified School District.

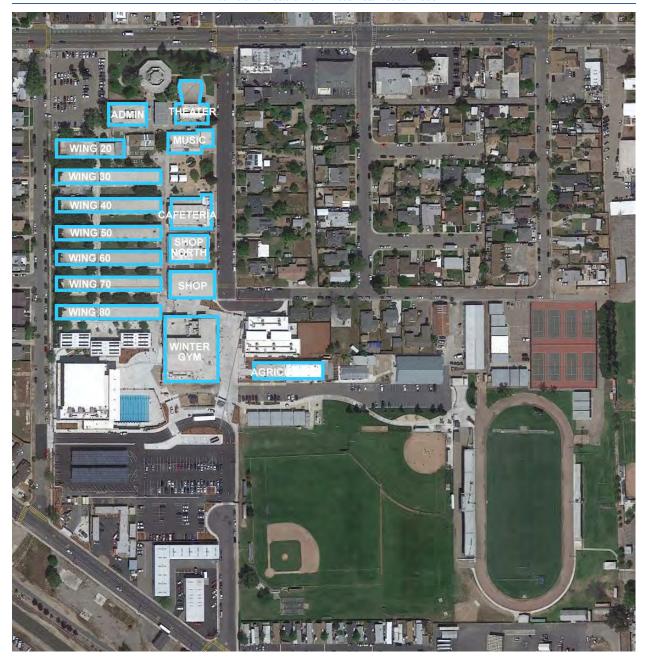

Figure 5. Aerial image of Manteca HS campus showing buildings surveyed and evaluated.

2.4 Archival Research

ASM confirmed the buildings' dates of construction and the general history of the property through historic aerial photographs, newspaper searches, Manteca Unified School District (MUSD) facilities data, and documentation provided by MUSD and Manteca HS. In particular, original as-built architectural drawings and alterations of the campus buildings provided by MUSD were valuable in determining details regarding construction and modifications. The Manteca HS Library provided historic aerial views, images, and a full set of campus yearbooks, depicting the campus over the years. Other than parcel maps available at the City of Manteca, San Joaquin County Assessor data was not available for the campus. The Manteca Historical Society and Museum was contacted; to date, no response has been received. The project was found to be outside areas mapped by Sanborn Fire Insurance Maps. Historic United States Geological Survey (USGS) maps of the project area and aerials from historicaerials.com were consulted to determine changes over time of the campus area.

Additional research was conducted to develop a sufficient historic context within which the campus was evaluated on the local level. The campus has not been evaluated previously, and no historic context previously existed.

In evaluating the properties, ASM considered several factors relevant to making a recommendation of eligibility, including:

- the history of MUSD and Manteca HS;
- the history of the buildings' construction and use;
- whether the campus or the buildings were associated with important people or events;
- whether the campus or the buildings are the work of a master architect, craftsman, artist, or landscape designer;
- whether the buildings are representative of a particular style or method of construction;
- whether the buildings have undergone structural alterations over the years, the extent to which such alterations have compromised their historical integrity, and the current condition of the buildings.

3.0 **Historic Context**

Prior to urbanization, the valley floor was a vast plain consisting of a network of wetlands, sloughs, tributaries, and natural levels, with thick tule marshes surrounded by sparsely populated grassland dotted with valley oaks. Riparian woodlands dominated the streams and rivers with sycamores, cottonwoods, and willows. The valley environmental provided a rich habitat for wildlife, such as fish, mussels, turtles, birds, waterfowl, tule elk, pronghorn antelope, rabbits, squirrels, beaver, and quail (Patrick 2019:7).

Indigenous populations have occupied the Central Valley for approximately 13,000 years. The first inhabitants developed an elaborate material culture and trade network. They established villages and population densities comparable to agricultural societies of the southwest and southeast United States. The Northern Valley Yokut organized into tribes of approximately 300, establishing villages along waterways on elevated mounds. Villages consisted of single-family dwellings covered in tule mats, each with a sweathouse and a ceremonial assembly chamber. The Yokut were hunters and gatherers, exploiting the wetlands and nearby riverine and oak savanna environments, while engaging in an exchange system with their neighbors to the west along the coast and the east with the foothill tribes (Patrick 2019:7).

When Europeans arrived, approximately 100,000 people occupied the Central Valley, comprising one-third of California's native population. Manteca lies within the ethnographic aboriginal territory of the Yokut. In 1806, Spanish lieutenant Gabriel Moraga passed through the valley on his way north along the San Joaquin River, giving the river and the county their names. On the heels of Moraga, members of the Hudson's Bay Company and other trappers and traders camped along the rivers. Among them was Jedediah Smith in 1827, the first American to come overland to California. On his second expedition, Lt. John C. Frémont of the U.S. Topographical Corps passed through the Manteca area. (Patrick 2019:7). At the start of the American Period, development and settlement in California were concentrated north of the San Joaquin Valley due to the Gold Rush, which began in 1848. Those settlers not seeking gold sought to find prosperity through agriculture. A group of pioneers arriving from Grants County, Wisconsin, included Joshua Cowell, who was considered the "Father of Manteca." Cowell came west on foot over the Sierra Nevada in 1861, settling in the heart of what is now downtown Manteca (Patrick 2019:7-8).

3.1 Transportation

Construction of the San Joaquin Valley mainline of the Southern Pacific Railroad (SPRR), originally known as the San Joaquin Valley Railroad, began in 1869. The railroad provided easy passenger travel and efficient commercial transport of goods to and from large urban centers such as San Francisco and Sacramento. As a result, settlement increased in the San Joaquin Valley (ICF 2021).

The railroad branched off the transcontinental line at the newly established town of Lathrop in San Joaquin County. Lathrop and Manteca were major railroad stops by 1871 and 1873, respectively. From 1870 to 1880, the population of the San Joaquin Valley increased by 40 percent, and the SPRR established 50 stations in the San Joaquin Valley, 24 of which became town sites (ICF 2021). Other railroads also were important to the area. The Tidewater Southern Railway began as an electric railway transporting freight and passengers from various cities within Stanislaus County.

Construction began in 1910 in Stockton by the Tidewater & Southern Railroad Company. In 1917, the Western Pacific Railroad (WPRR) acquired the company and converted the line into a conventional feeder railroad to WPRR's mainline near Manteca (ICF 2021). It was at this time that the name Manteca was given to the town.

During the early twentieth century, plans were made to connect various parts of California with a state highway system, which included a route from the Oregon state line through the Sacramento and San Joaquin valleys to Los Angeles (ICF 2021). Automobiles and the construction of highways were contributing factors to the growth and development of the San Joaquin Valley. Perhaps the most important factor was the establishment of State Route 99, a major roadway that connected San Joaquin Valley agricultural towns to larger urban markets.

With the approval of bond issues in 1910, work began to establish Route 3, which ran from Oregon to Sacramento, and Route 4, which connected Sacramento and Los Angeles via the San Joaquin Valley (U.S. Department of Transportation 2016). Portions of Route 3 north of Sacramento replaced the Siskiyou Trail, an old Native American trail, while other portions of the roadway along Route 4 followed main lines of the SPRR. While portions of this route were still being paved in 1926, it was designated SR 99 (U.S. Department of Transportation 2016). The adoption of the interstate system and construction of Interstate 5 (I-5) and other interstate routes during the 1960s truncated SR 99, which now runs from near Wheeler Ridge in Kern County north to Red Bluff in Tehama County (California Highways 2016) (ICF 2021).

3.2 Early Manteca

In the early years of the twentieth century, Manteca began to develop in earnest. Early irrigation in the late 1890s, advocated by Cowell and other early settlers, triggered the beginnings of the dairy industry. The completion of the irrigation network in 1914 resulted in the formation of the South San Joaquin Irrigation District (SSJID). A combination of the coming of the railroad and the establishment of the irrigation system brought on large-scale production with the Spreckels Sugar Company and the Manteca Canning Company (Patrick 2019:8).

Wheat was the primary crop, eventually replaced by alfalfa, melons, grapes, almonds, and watermelons. Private efforts were made to bring water to the Manteca-Ripon-Escalon triangle from the Stanislaus River, and the SSJID was established in 1909. Indicating a plentiful supply of water, boosters called Manteca "The Watermelon Capital of the World" from 1905 to 1910. In about 1917, the Manteca Board of Trade was actively promoting the potential of the area. A brochure called Manteca "The Payroll Town," suggesting the promise of prosperity through agriculture. The brochure cited the "deep, rich, sandy loam, soil under the most dependable and efficient irrigation system in America" (Manteca Board of Trade 1917/1922). Tomatoes "were large and solid, of the very highest color," and three local canning companies were ready to process them. Also thriving in the conditions around Manteca were melons of various types, including canteloupes, cassabas, and muskmelons; alfalfa for use as forage for dairy cows; and sugar beets, which Spreckels Sugar Company was already capitalizing on. The Manteca Creamery was associated with the dairy industry. Also advertised were "a string of country schools from two to four miles apart," along with churches and fraternal lodges (Manteca Board of Trade 1917/1922) (Figures 6–8).

Seeing the potential in sugar beets, Claus Spreckels had seeds shipped from Germany, which arrived in 1915. During this prosperity, the City of Manteca was incorporated on May 28, 1918. Soon, however, severe drought, including the Great Drought of 1924, hurt Manteca's economy (MNC 2018).

The 1930s brought agricultural downturns, precipitated by floods and fires. The Spreckels Sugar Plant closed in 1930 because of sugar beet disease, to reopen later. It closed again during World War II. Meanwhile, Dust Bowl immigrants were arriving and provided stiff competition for low-skill agricultural jobs, resulting in a reduction in pay for locals (MNC 2018).

3.3 Mid-Century Development

Like many other cities, Manteca weathered World War II despite the labor shortages and the economic downturn. Soldiers returned from the front, and the baby boom began. Spreckels production skyrocketed in the latter part of 1940s (Patrick 2019:8). Because of Manteca's location on flat land close to the confluence of the San Joaquin and Stanislaus rivers, it has naturally been prone to flooding. Even with dams built by the U.S. Bureau of Reclamation and the California Water Project to control the water, major floods marred an otherwise quiet decade of the 1950s. The city was besieged by a flood in the winter of 1950-1951 and a fire that burned a large part of the central district in 1952.

With rapid expansion of the community, the latter part of the twentieth century saw a disparity between pro-growth and anti-growth sentiment as Manteca became a bedroom community for the San Francisco Bay Area. Workers were squeezed out of the housing market west of Altamont Pass and saw Manteca as an affordable option for homeownership. Subdivisions proliferated, threatening the availability of agricultural lands. The right-to-farm ordinance and a set of regulations attempted to curb the consumption of farmland and control the unbridled expansion (Patrick 2019:8). In the 1970s, the Highway 120 bypass was approved, taking the place of Yosemite Avenue as the major east-west thoroughfare and marking a move away from Manteca's dependence on agriculture. "Leapfrogging" growth was eventually discouraged in favor of "geocentric growth," as the city attempted to drop its bedroom community status (MNC 2018).

3.4 Manteca High School

The First Buildings

The referendum for the formation of MUSD was held on May 19, 1920. Nineteen men of the community borrowed money to construct temporary buildings on the site where Manteca HS now sits. In September 1920, a temporary wood building was begun by local contractor Dan Baysinger. This building contained two small classrooms, an office, a study hall, and a library. On October 4, 1920, school began in the temporary building. Because of the large freshman class, three new classroom buildings were added, and four new teachers joined the faculty in the 1921–1922 school year. The group of wooden structures officially known as Manteca Union High School, also known as "The Shacks," remained in use for just over two years (personal communication with Mary Buchanan).

On December 23, 1921, a bond election for \$200,000 for a new school building passed. The building was designed by Davis, Heller, and Pierce Co. of Stockton from plans dated March 29, 1922. The construction contract was awarded to Brown and Stafford of Madera, which began work almost immediately (Manteca HS 2018:44).

As was common in early-twentieth-century schools, all functions at Manteca Union HS were housed in a single building. The multi-wing building had a generally symmetrical plan. The auditorium and gymnasium extended in a large wing from the central lobby. Single-loaded corridors to the east and west housed classrooms and offices to the north. Secondary wings at the ends of the east and west wings extended to the north and south. These wings housed lecture rooms, laboratories, the library,

a large study hall, and classrooms (MUSD records: Architectural Drawings, DSA 00-32922, 1922) (Figure 9).

All doors were solid oak, the floors were hardwood, and the rooms were heated by steam from a furnace in the fireproof basement. The school was equipped with its own phone lines, which were controlled by the switchboard in the office. The *Stockton Evening Record* described the H-shaped building as 242 feet across the front and 175 feet deep, to which units could be added in a modular fashion. The roof was composed of "handsome red tile." The first graduating class was in 1923 with 10 students. On January 27, 1923, Manteca Union High School was formally dedicated (*Stockton Evening Record* 1923).

In 1922, the district requested bids for a new homemaking building near the main building. The 50-by-70 building had a concrete foundation and frame construction (*Stockton Evening Record* 1922a). The same year, agricultural classes moved into new, larger buildings and the department began searching for a full-time agriculture instructor (*Stockton Evening Record* 1922b).

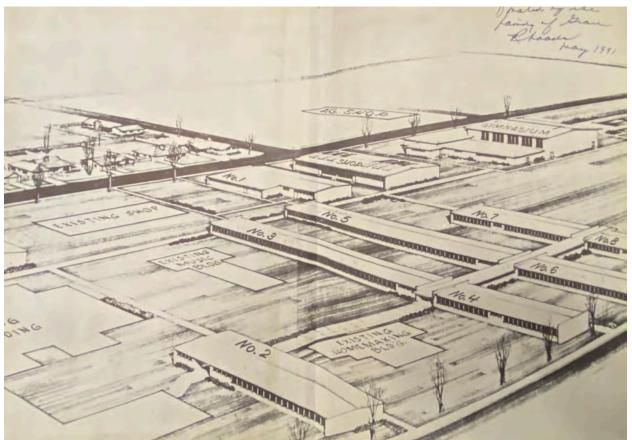

Figure 9. The 1922 Manteca HS building. Source: MUSD website.

The Postwar Campus

Responding to the postwar need to educate the baby boom generation, building plans with a budget of \$500,000 were distributed for approval in 1953. The plans included a homemaking building with two cooking, two clothing, and three science rooms (\$143,069); a combination library and study hall (\$70,400); a commercial department (\$68,150); art and mechanical drawing rooms (three rooms, \$48,900); and an auto shop (\$63,481) (*Stockton Evening Record* 1953). After the first set of bids came in

high, a contract was awarded in 1955 to C. T. Brayton & Sons to construct the buildings that would form the core of the current "finger-type" school (Stockton Evening Record 1955a, 1955b). In 1956, three wings were added, designed by Harry J. Devine. The new buildings were described as steel frame and stucco, faced with brick on sides and in corridors, with large windows on the north side and steel louvers on the south (Stockton Evening Record 1956a, 1956b, 1956c). Similar classroom buildings, as well as a Music Building and a Cafeteria, were added in the early 1960s. In the early 1970s, the Theater and Administration Building were constructed to replace the original 1922 building (Figures 10–13).

The original building with the iconic tower was destroyed by fire on May 22, 1968. Ten architectural firms were interviewed regarding plans for replacement buildings, including Harry J. Devine, who had designed the 1950s "wing" buildings and shops. To replace the functions of the original building, the school needed administration offices, off-street parking, classrooms, and an auditorium (Stockton Evening Record 1969a, 1969b). By the end of 1970, MUSD was expressing dissatisfaction with the Devine firm's response times for the new buildings at Manteca HS, as well as projects at East Union High School (Modesto Bee 1970). Although it is not clear how this was resolved, we can reasonably assume the buildings were constructed some time after the architectural drawings were produced. We know that the buildings were in place by 1972 (Modesto Bee 1972).

3.5 Campus Architect

All extant buildings 45 years of age or older evaluated for this report were designed by a single architect, Harry J. Devine, Sr., or by the firm established by his son, Harry J. Devine, Inc. This includes buildings dating from 1947 through ca. 1970 (Table 3).

Architect Harry J. Devine, Sr.²

Harry Joseph Devine (1894-1963) was born in Sacramento and attended Christian Brothers High School. Devine was listed as a member of the San Francisco Architectural Club who worked as a draftsman in the State Engineer's Office before serving in the Navy during World War I (*The Architect* 1918:349). He graduated from the University of California, Berkeley, in 1919 with a bachelor's degree in architecture. Following graduation, he worked at the offices of Dean & Dean in Sacramento. Devine opened his own practice in Sacramento in 1926 and developed a reputation as a respected architect and civic leader.

Devine's work included commissions for institutions including schools, as well as government offices, churches, hospitals, banks, and military buildings. A lifelong Catholic and active member of the church, many of Devine's early projects were commissioned by the Sacramento Catholic Archdiocese. In 1930, Devine completed plans for the new Sacred Heart Church at 39th and J Streets in Sacramento, and construction was completed a year later. Another early commission was St. Patrick's Catholic Orphanage on Franklin Boulevard (1932), designed in the Venetian Gothic style (Riggs 2017). Devine received two National Catholic Education Association awards in 1957 for his work on St. Ignatius Catholic Church at Arden Way and Watt Avenue in the outskirts of Sacramento (*Sacramento Bee* 1963).

Devine's experience included extensive work with educational facilities, and he served as supervising architect for the Sacramento Unified School District from 1947 until the time of his death in 1963. In the 1940s, Devine was commissioned to design additions for schools around Sacramento, including a new gym at Sacramento High School and an indoor pool at Sacramento City College. He designed the Bishop Armstrong High School and drew plans for additions to the Sacramento City College Campus. He was said to be a driving force behind the overall modernization of Sacramento architecture (Riggs 2017).

Devine served on the Sacramento planning commission. He was a member of the California State Board of Architectural Examiners for 10 years and president of the board for three years. He also was a member of several community organizations, including the Rotary Club and the American Legion (*Sacramento Bee* 1963). Upon Devine's death in 1963, his son, Harry Devine, Jr., took over the architectural practice until his retirement in 1990.

Notable Projects³

- Sacred Heart Catholic Church (ca. 1931)
- St. Patrick's Orphanage (Saint Patrick Academy), 5945 Franklin Boulevard (1932)

² Except where indicated, this section was excerpted and adapted from Architectural Resources Group (2018).

³ Projects listed are in Sacramento, unless otherwise indicated. Listings are compiled from Architectural Resources Group (2018), Riggs (2017:59-60), and PCAD #19920. At the time of publication of these resources, all projects listed were extant.

- Channel Pie Shop (1934)
- Lucky Manor, 1701 11th Avenue (1935)
- Sacramento City College Library (1937)⁴
- American Trust Company, 1011 10th Street (1938)
- New Helvetia Historic District, 752 Revere Street, with Charles F. Dean and Leonard F. Starks (1941) (Riggs 2017:31) (Figure 14)⁵
- Dos Rios Homes Housing Project, 321 Eliza Street (1942)
- Roos-Atkins Building, 1011 Tenth Street (1946)
- Holy Spirit Parish School, 3920 West Land Park Drive (1948)
- Holy Rosary Catholic Church, 301 Walnut Street, Woodland, California (1949)
- St. Patrick's Catholic Church and Rectory, 235 Chapel Street, Grass Valley, California (1950)
- Mercy General Hospital, 4001 J Street (1953)
- Sacramento City Jail, 651 I Street (1956)
- Sacramento County Jail, 7th and H Streets (ca. 1956)
- Bishop Armstrong High School (ca. 1957) (Figure 15)
- St. Ignatius Loyola Parish, 3235 Arden Way (1957)
- Hiram W. Johnson High School, 6879 14th Avenue (1957)
- John Moss Federal Building, 650 Capitol Mall, with Herbert Goodpastor and Franceschi, Dreyfuss, Rickey and Brooks (1958)⁶ (Figure 16)
- Hollywood Park School, with Herbert Goodpastor (ca. 1958)
- Collis P. Huntington School, with Herbert Goodpastor (ca. 1958)
- Sacramento Fire Station (The Firehouse Restaurant), 1112 2nd Street (1959)
- County Administration Building, 7th and I Streets (ca. 1960)
- Jesuit High School, 1200 Jacob Lane Carmichael, Carmichael, California (1962)
- Wells Fargo Bank, Capitol Mall (ca. 1964)

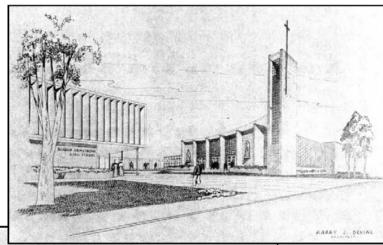

⁴ Buildings that Devine designed were designated as the Sacramento City College Historic District and placed on the Sacramento Register of Historic and Cultural Resources and the California Register of Historical Resources, for their New Deal era significance and workmanship (Riggs 2017:30).

⁵ The New Helvetia housing project was commissioned through the Federal Housing Administration and is considered one of Devine's most acclaimed projects. The 62-building project exhibits Mid-Century Modern and other streamlined architectural styles.

⁶ A report from the General Services Administration (GSA) dated August 2018, determined that the John E. Moss Federal Building "meets National Register of Historic Places Criterion A and C, when evaluated within a local, state, and national context" (Architectural Resources Group 2018).

4.0 Survey Findings

The Manteca HS campus was surveyed for architectural resources, focusing on the 15 buildings more than 45 years old (Table 3 and Figure 5). The extant campus buildings constructed 45 years or more ago were designed exclusively by Harry J. Devine (Harry J. Devine, Inc., in a later iteration). The architectural drawings for these 15 buildings are dated from 1947 to 1970.

The extant buildings were constructed in several phases. The Agricultural Shop is the earliest, constructed from drawings prepared in 1947. The first classroom wing (Wing 20) was constructed from drawings dated 1954, along with Wing 40, Wing 50, and Wing 60. Wing 70 was added ca. 1958, and the final wing was added in 1961. The 1961 drawings by Devine also included a new Music Building (designated Unit A on the architectural drawings), Cafeteria (student center; Unit B), extension of Shop Building North (drafting room addition; Unit C), an east wing of the Library (faculty facilities; Unit D), the west end of Wing 30 (Unit E), Wing 80 (language classrooms; Unit F), and the Gymnasium (not extant; girls' gymnasium; Unit G) (MUSD records: Architectural Drawings, DSA 02-21770, 1961).

The Manteca HS campus is undergoing a multi-phase modernization. As part of Phase 1, a few buildings have been demolished and replaced by new buildings, and small parcels have been acquired. Landscaping has been altered around the new buildings, such as the gymnasium and Wing 90, and South Garfield Avenue has been vacated to allow the west and east sections of campus to be joined. The remaining buildings retain a coherent plan, which will be altered when demolition and construction are completed under Phase 2. The campus was extensively modernized by the architectural firm Architecnica in 1992, when HVAC systems were installed (MUSD records: Architectural Drawings, DSA 02-51593, 1992).

The mid-century school campus is an example of a finger-plan school, which became a common school plan adopted by school districts nationwide in the mid-twentieth century. It was said to best capture the design principles of the immediate postwar years (Sapphos 2014:82). The seven elongated mid-1950s to early 1960s classroom buildings are configured around a single connecting corridor, known on campus as the "Salmon Run," creating "fingers" that splay out from the corridor (Figures 17–19). Additional components are clustered to the north and east of the group of classroom buildings, separated from the classrooms by an open walkway (Figure 20). Some athletic and agricultural buildings are east of the campus core and north of the playing fields. Many of the buildings designed by Devine are identified with attached metal letters in a distinctive font (Figure 21). Since 1996, Manteca HS has become the site of an extensive mural project. As the result of the efforts of a former teacher, murals have been added to the exterior walls of nearly every campus building (Figure 22).

Most of the landscaping is at the north side of campus adjacent to East Yosemite Avenue and near the main entrance to campus. However, relatively small areas of lawns and patios, along with regularly planted mature junipers, occupy the areas between classroom wings. The wings are set back from South Sherman Avenue on the west, where lawns and the same junipers are at the west end of each wing. These distinctive junipers are a character-defining feature of the campus landscaping (Figures 23 and 24).

Character-Defining Features

- Site plan includes seven elongated, rectangular-plan classroom buildings in a classic finger plan
- Shed roofs with deep fascia on classroom buildings
- Red-brick end walls and accents
- Open corridors with flat roofs at south facades of classroom buildings
- Continuous windows at the north façades
- Landscaping between classroom buildings including mature junipers

Table 3. Buildings Surveyed

¹Except where indicated, year built is approximate. Dates shown with asterisk are those on original architectural drawings; actual year of construction might have followed a few years later. MUSD does not keep a record of years built.

²Metal and Wood shop in use 1954 (Stockton Evening Record 1954).

³Library opened 1956 (Stockton Evening Record 1956a).

Agricultural Shop Unit/Lab 4.1

The Agricultural Shop Unit/Lab, constructed ca. 1947, is the oldest extant building on campus. It is within the eastern section of campus, south of Mikesell Avenue and east of the fire access lane that was previously an extension of South Garfield Avenue.

As originally designed, the building contained a shop area, occupying approximately half of the floor space, with classrooms, offices, a library, a milk testing room, and toilets opening off a doubleloaded corridor occupying the western half of the building (MUSD records: Architectural Drawing, DSA 02-4970; MUSD records) (Figures 25-27).

The single-story industrial-style building has a rectangular plan and a flat roof with a narrow fascia. The original part of the building is in two parts, distinguished by a lower section on the west end. The exterior is composed of concrete with plaster, and the building sits on a poured-concrete foundation. A striking concrete pylon extends from the side wall and meets the top of the higher section of the building where the two sections meet. Individual wood letters reading "AGRICULTURE" are affixed vertically on the west side of the blade extension.

The higher, eastern, section of the building has a recessed entrance at the south façade with a roll-up metal vehicle door. Stucco projections run horizontally across the entrance and extend across the windows on the eastern section of the building. The projecting frame motif is repeated below the banks of windows. Groups of three three-by-four light steel windows separated by a flat stucco vertical band continue across the façade. The vertically centered section of each window is an operable three-by-two light awning-style section.

The lower (eastern) section of the primary (south) façade has a recessed entrance opening to a small lobby. To the east of the entrance is a three-by-three wood recessed window with a narrow wood sill. To the west of the entrance are two vertically oriented two-by-three light wood windows and a small wood sash. All windows on this section of the main façade display the same narrow wood sill. A series of regularly spaced metal vents are below the parapet, and a scupper and downspout are at the east end of the section. A narrow planting area follows the foundation of this section of the building.

At the west façade is a deeply recessed entrance with a transom. A single two-by-three light vertically oriented window to the south resembles the one at the south façade.

At the east end of the north façade is a scupper and downspout. Two sets of double doors, each with a single light, flank banks of steel windows resembling those at the south façade of the east end of the building. As at the south, the windows are three-by-four lights with a horizontal concrete projection above and below.

There are two banks of recessed wood windows at the north façade of the lower section of the building. The bank to the east is composed of five windows, each with four lights, and the western group consists of nine similar awning-type windows.

A wing added between 1957 and 1968 obscures the east façade of the original building.

A large interior space is at the east end of the building. At the west end are several agriculturerelated labs. A central corridor has acoustical tile ceiling and walls with attached fluorescent lighting fixtures. The floors are asphalt tile (Figure 28).

Alterations: The exterior appears to be minimally altered, except for the two double doors (at the west and south façades) and the roll-up vehicle door at the south façade. The east end of the interior appears to be minimally altered. The offices, labs, and L-shaped corridor at the west end has been renovated with a drop ceiling and replacement doors.

Figure 26. South façade of the Agricultural Shop Unit/Lab, view to the northeast.

Figure 27. North and west façades of the Agricultural Shop Unit/Lab, view to the southeast.

Figure 28. Interior corridor of the Agricultural Shop Unit/Lab, view to the east.

4.2 Gymnasium

The Gymnasium, constructed in 1950, is the second oldest extant building on campus. The building is southeast of the group of original classroom buildings and east of the new gymnasium. Commonly known as Winter Gym, it was named for Dr. Robert C. Winter, who had volunteered as team doctor for the school (plaque in lobby). The gym had a seating capacity for 620 and the building was constructed by Younger & Hallsteen of San Francisco. The Gymnasium was used for first time in 1950 (*Stockton Evening Record* 1950). The building originally had an irregular plan before additions to the girls' and boys' locker rooms at the north and south façades expanded the footprint (MUSD records: Architectural Drawings, DSA 00-6212 1948 and 00-17410, 1958) (Figure 29). Further additions and renovations from plans drawn in 2008 resulted in the current configuration (MUSD records: Architectural Drawings, DSA 02-109153, 2008).

The Gymnasium is a single-story building with a double-height section housing the main gym itself. Two flat-roofed sections overlap at the primary entrance at the west façade. A third single-story section is at the northwest side of the building. The roof projects moderately over the wall of the building. Horizontally oriented windows placed high on the exterior walls are set in a continuous

row. The window pattern is repeated at the south façade. The bases of the two lower sections are faced in red brick, and red brick frames the recessed primary entrance at the south end of the north single-story section. A sign reading "Dr. Robert C. Winter Gymnasium spans the opening to the recessed entrance. The remainder of the exterior walls is clad in concrete scored in a grid pattern (Figures 30–32).

The double-height section has a slight gable roof and rises from the center of the west section of the building. The west façade of the higher section has two sets of double doors with filled-in transoms. The doors are approached by a ramp, and a flat canopy shelters each set of doors. The wall is clad in concrete with a scored grid like the exterior walls on the other façades.

The primary entrance at the south opens to a small lobby. The walls and ceiling are wall board, and the floor is asphalt tile. Rows of fluorescent lighting are attached to the ceiling. At the south side is what appears to be a ticketing window. To the north is a small gym used for wrestling practice. Steel beams are exposed, and the ceiling between the beams is coated in sprayed stucco or plaster. Rows of windows are set high on the east wall. In the lobby, at the west wall is a buffalo head above two sets of double doors that open to the gymnasium (Figures 33–36).

At the interior of the gymnasium are exposed metal trusses that form the gabled shape of the roof. Rectangular fluorescent lighting fixtures are attached to the ceiling. Collapsible bleachers run along the south and north walls. The floor is polished wood with markings for basketball play (Figures 37 and 38).

Alterations: It appears that windows in the main gym were removed (based on a news photo from the *Stockton Daily Evening Record*, March 3, 1950). The windows at the west and south were originally covered with horizontal metal louvers at the upper level, following the motif used throughout campus on the classroom buildings. The interior of the lobby and adjacent rooms has been remodeled. Until recently the primary entrance at the east façade was adjacent to South Garfield Avenue; the street has been vacated.

Figure 37. Interior of main gymnasium, view to the west.

Figure 38. Painting of buffalo mascot on floor of main gymnasium.

4.3 Shop Building

The Shop Building is one of two similar buildings located along South Garfield Avenue at the east side of campus. The building was constructed in 1954 from plans drawn in 1953 (MUSD records: Architectural Drawings, DSA 00-11334, 1953).

The Shop Building is a single-story building with a rectangular plan and sits on a poured-concrete foundation. The roof is gabled at the west and east facades, where it has no overhang. Aluminum turbine-style vents are located irregularly on the roof.

The east and west exterior walls are cement plaster and lack fenestration. At the east façade adjacent to South Garfield Avenue, metal letters are attached toward the north end reading "SHOP BUILDING" (Figure 39).

The façades at the north and south are deeply recessed from the gable ends of the building. The bottoms of the roof overhangs are composed of horizontally oriented wood boards. The gabled façades in effect become wing walls at the north and south ends. At the south façade, continuous steel multi-light windows are set beneath the roof overhang. The windows are each two-by-four light, with a central operable awning-type two-by-two section. There are two vehicle doors with metal roll-up doors, each with an adjacent personnel door (Figures 40 and 41).

The north façade is like the south façade and is similarly recessed beneath the roof overhangs. It has continuous operable steel windows like those on the south. At the north façade are two personnel

doors. The window configuration between the two doors continues approximately halfway down the height of the doors (Figures 42–44).

At the interior are two main spaces. The space to the east is a wood shop, as originally designed. A sawdust collector sits outside the building toward the east end of the south façade. The exposed ceiling is composed of obliquely laid wood boards between wood beams. Fluorescent tube lighting fixtures are attached to the beams. An air filtration/air conditioning system with round or rectangular ducts and round vents is suspended from the ceiling. The walls are finished, and the floor is concrete (Figures 45 and 46).

The other large space is to the west and is called an athletic training room. This room has a dropped ceiling with a grid of acoustical tile and square vents. The walls are finished, and cabinetry is attached. A continuous counter with cabinets runs along the sides of the room. The floor is asphalt tile (Figures 47 and 48).

Alterations: Skylights have been removed. Vehicle doors and personnel doors have been replaced. The athletic training room corridor, and offices have been remodeled.

Figure 46. Ceiling of wood shop, view to the northeast.

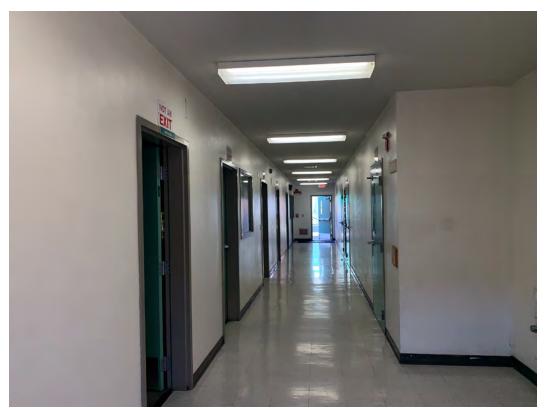

Figure 47. Interior corridor in Shop Building.

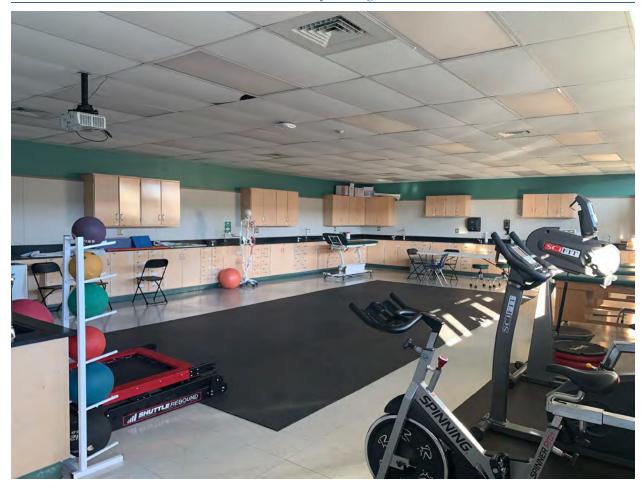

Figure 48. Athletic training room in Shop Building, view to the northeast.

4.4 Shop Building North

The Shop Building North is one of two similar buildings located along South Garfield Avenue at the east side of campus. It is north of the Shop Building and has a similar rectangular plan to the Shop Building. Whereas the Shop Building is adjacent to the sidewalk along South Garfield Avenue, Shop Building North is set back from the street, allowing space for a small lawn and planting area. The west end of the building was constructed from plans drawn in 1958 (MUSD records: Labeled "New Shop Building," Architectural Drawings, DSA 02-17923, 1958); the east end was added in 1961 (MUSD records: Architectural Drawings, DSA 02-21770, 1961). The west end is slightly higher than the newer east end.

The Shop Building North is a single-story building. It sits on a poured-concrete foundation. The roof is gabled at the west and east facades, where it has no overhang. The east and west exterior walls are concrete and plaster and lack fenestration. At the east façade adjacent to South Garfield Avenue, metal letters are attached toward the north end reading "SHOP BUILDING" (Figures 49 and 50).

The façades at the north and south are deeply recessed from the gable ends of the building. The east end of the building at both north and south façades is recessed further than the west end. The gabled

façades in effect become wing walls at the north and south ends, and a third wing wall is formed where the two sections of the building meet. At both the north and south façades, the east end of the building is approached via a concrete ramp (Figures 51–54).

Windows at the north and south façades consist of continuous rows of large fixed-pane sections that extend to the top of the main wall of the building, each with two side-by-side operable sections below. The remainders of the exterior walls are clad in stucco or plaster. The windows extend to the tops of the doors. A section that originally housed a vehicle entrance has been covered in stucco and replaced with a personnel door.

At the interior are several spaces, including a photo lab, which was remodeled from plans drawn in 1992 (MUSD records: Architectural Drawings, DSA 02-58056, 1992).

Alterations: Skylights have been removed. Vehicle doors and personnel doors have been replaced. Windows have been replaced. The interior has been remodeled.

Figure 52. Detail of the north façade of the Shop Building North, view to the southeast.

Figure 53. South façade of the Shop Building North, view to the northeast.

Figure 54. Detail of south façade of the Shop Building North, view to the northwest.

4.5 Classroom Wings

A central enclosed corridor that connects the classroom wings runs through each wing at a right angle. This corridor was augmented with each addition of a classroom wing. The corridor walls are clad in red brick, and the ceiling is stucco. The floors are poured concrete. Between each set of classroom buildings, the corridor opening is covered with opaque panels and windows. It appears the wall space between each set of classroom wings was originally open. Except for Wing 20, which has a low gabled roof, the classroom wings are nearly identical. All have shed roofs, poured-concrete floors, and an elongated rectangular plan. The central corridor passes through each wing, creating two distinct sections. The end walls of the wings are clad in red brick, and the exteriors are otherwise covered in "cement plaster," according to architectural plans. An open corridor with a flat roof runs along the south façade of each building. Above the corridor roof were originally continuous spans of clerestory windows, with horizontal metal louvers sheltering them from direct sun. The north facades are fully glazed toward the top, with opaque panels below.

Between each set of classroom wings is a lawn or patio. Landscaping includes mature junipers along the corridors and at the Sherman Avenue end of each wing.

The classroom wings were modernized by architectural firm Architecnica in 1990, when windows were replaced, and in 1992, when HVAC systems were installed (MUSD records: Architectural Drawings, DSA 02-51593, 1990; DSA 02-51593, 1992). At the interiors, the ceilings were dropped to accommodate ducting.

4.5.1 Wing 20

Wing 20 is the northernmost classroom building. Originally the library, the west end was constructed in 1956 from plans drawn in 1954 (MUSD records: Architectural Drawings, DSA 02-12631, 1954). The west end was constructed by C. T. Brayton & Sons, Escalon, contractors (Stockton Evening Record, January 17, 1956). When constructed, it was to the southwest of the 1922 main building; a homemaking building was located to the south. The east end was added in 1961; architectural drawings labeled the east end as Building D Faculty Facilities (MUSD records: Architectural Drawings, DSA 02-21770, 1961).

Unlike the other classroom buildings, which have shed roofs, Wing 20 has a slightly gabled roof. It has an elongated rectangular plan and sits on a poured concrete foundation. The west facade is clad in red brick, as is the visible portion of the original east façade. The walls along the corridors are clad in cement plaster (Figure 55).

The north façade is recessed from the gable ends. Where windows and porcelain panels originally occupied the north façade, all windows have been replaced with panels. At the south façade is an open corridor with a flat roof and a wood board ceiling. Steel pipe columns support the roof. The area above the roof of the corridor consists of a series of panels. Classrooms open off the corridor with flat metal doors, each with a single light. At the east end, a short span of the original metal louvers remains (Figures 56–59).

The interior originally housed the library in a large space to the east, and a study hall occupied the west end. An enclosed corridor ran north-south along the east façade. The building now houses the student store and five classrooms.

Alterations: Letters identifying the building as the library have been removed. The building was "reconstructed" (remodeled) in 1992 (MUSD records: Architectural Drawings, DSA 02-58285, 1992). All windows have been removed from the north façade of the west part of the building, replaced with ceramic panels. At the south façade, the windows and horizontal aluminum louvers have been replaced with opaque panels.

Figure 55. West and south facades of Wing 20, oblique view to the northeast.

Figure 57. Detail of the east end of the south façade of Wing 20, view to the northwest.

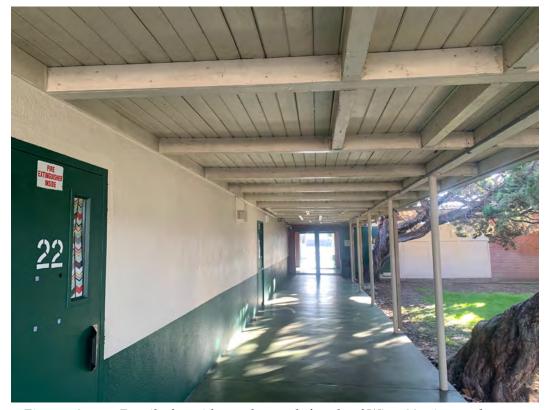

Figure 58. Detail of corridor at the south façade of Wing 20, view to the east.

Figure 59. Detail of door off corridor at the south façade of Wing 20, view to the north.

4.5.2 Wing 30

The west end of Wing 30 was constructed from plans drawn in 1958 (MUSD records: Architectural Drawings, DSA 02-17923, 1958). It replaced a music building. The east end was added in 1961, along with an extension of the central corridor connecting it to Wing 20 and Wing 40 (MUSD records: Architectural Drawings, DSA 02-21770, 1961). The west end of Wing 30 replaced a homemaking building (see Figure 10).

The building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are at regular intervals along the south and west façades. Metal letters reading "ENGLISH" are attached to the west façade (Figures 60–62).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At

the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable (Figures 63 and 64).

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The 1954 drawings show an art room, a crafts roof, and all-purpose rooms. The classrooms/labs have dropped ceilings with acoustical tile and recessed fluorescent rectangular lighting (Figures 65 and 66).

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced.

Figure 65. Interior of classroom/lab in Wing 30, view to the northeast.

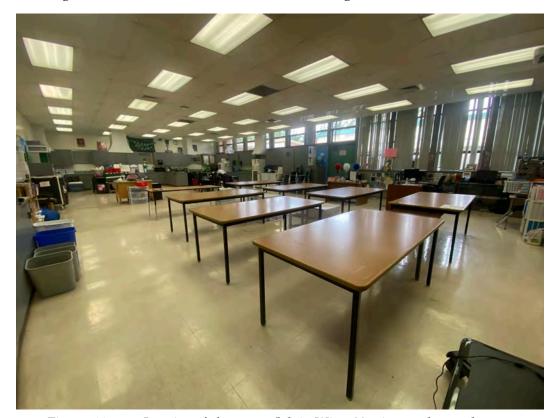

Figure 66. Interior of classroom/lab in Wing 30, view to the northwest.

4.5.3 Wing 40

Wing 40 was constructed from plans drawn in 1954 (MUSD records: Architectural Drawings, DSA 02-12631, 1954). It is labeled "Wing A" in the 1954 drawings, which show that an alternate design was used that extended toward the east.

The building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are planted at regular intervals along the south and west façades. Metal letters reading "ARTS AND HOMEMAKING" are attached to the west façade (Figures 67–69).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable. Unlike the other classroom wings, Wing 40 has two doors at the north façade (Figures 70–72).

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The ceilings are dropped and covered in acoustical tile with recessed fluorescent lighting (Figures 73 and 74).

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced.

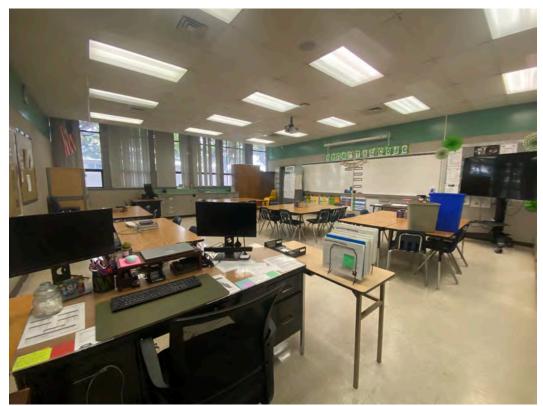

Figure 73. Interior of classroom in Wing 40, view to the northeast.

Figure 74. Interior of classroom in Wing 40, view to the souteast.

4.5.4 Wing 50

Wing 50 was constructed from plans drawn in 1954 (MUSD records: Architectural Drawings, DSA 02-12631, 1954). It is labeled "Wing B" in the original drawings.

The building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are at regular intervals along the south and west façades. Metal letters that once appeared to read "COMMERCIAL" are attached to the west façade (Figures 75 and 76).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable (Figures 77–79).

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The original drawings show dedicated rooms for typing, bookkeeping, business machines, and stenography. The classrooms have dropped ceilings with acoustical tile and recessed fluorescent lighting (Figures 80–82).

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced.

Figure 81. Interior of classroom in Wing 50, view to the southeast.

Figure 82. Interior of classroom in Wing 50, view to the southwest.

4.5.6 Wing 60

Wing 60 was constructed from plans drawn in 1954 (MUSD records: Architectural Drawings, DSA 02-12631, 1954). It is labeled "Wing C" in the original drawings (Figure 83).

Like the other classroom wings, the building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are at regular intervals along the south and west façades. Metal letters reading "SCIENCE" are attached to the west façade (Figures 84–86).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable.

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The original drawings show a chemistry and physics lab and rooms for general science, biology, and drawing.

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced.

Figure 85. Oblique view of the west and south façades of Wing 60, view to the northeast.

Figure 86. Oblique view of south and east façades of Wing 60, view to the northwest.

4.5.7 Wing 70

Wing 70 was constructed from plans drawn in 1958 (MUSD records: Architectural Drawings, DSA 00-17410, 1958). It is labeled "Wing D" in the original drawings.

Like the other classroom wings, the building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are planted at regular intervals along the south and west façades. Metal letters reading "MATHEMATICS" are attached to the west façade (see Figure 21).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable (Figures 87–91).

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The original drawings show three classrooms at the west end and five at the east end.

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced.

Figure 90. Detail of corridor at south façade of east end of Wing 70.

Figure 91. North façade of Wing 70, view to the southeast.

4.5.8 Wing 80

Wing 80 was constructed from plans drawn in 1961 (MUSD records: Architectural Drawings, DSA 02-21770, 1961). It is labeled Unit F (language classrooms) in the original drawings.

Like the other classroom wings, the building has an elongated rectangular plan and sits on a poured-concrete foundation. It has a shed roof with a wide fascia that slopes downward toward the north. The plan is interrupted by the central corridor that connects the classroom wings. The east and west facades are clad in red brick. Junipers are at regular intervals along the south and west façades. Metal letters reading "FOREIGN LANGUAGE" are attached to the west façade (Figure 92).

At the north and south façades, the wall of the building is slightly recessed from the roof and the side walls. An open corridor with a flat roof supported by steel pipe columns runs along the south façade. The roof of the corridor is composed of horizontally oriented wood boards supported by wood crossbeams. The floor of the corridor is poured concrete. The classroom doors are metal. At the north façade a continuous row of windows is placed high on the wall. The three-part anodized aluminum windows are partially operable (Figures 93–99).

At the interior are three classrooms at the west end and five classrooms plus toilets at the east end. The original drawings show three classrooms at the west end and five at the east end.

Alterations: All windows and louvers at the south façade above the corridor roof have been replaced with opaque panels. The removal of the windows allows the roof of the corridor to accommodate HVAC equipment. The original windows at the north façade have been replaced. The classroom doors have been replaced. Junipers and other landscaping along the south façade have been replaced with a concrete-paved courtyard and raised concrete planters.

4.6 Music Building

The Music Building (also referred to as the "band" building; designated Unit A on the architectural drawings; currently called Addie Hall) was constructed from plans drawn in 1961 (MUSD records: Architectural Drawings, DSA 02-21770, 1961). It is located adjacent to South Garfield Avenue. It was designed as part of a complex including the Cafeteria (student center) to the south. A courtyard of approximately 160 feet separates the two buildings. The courtyard is composed of square sections of poured concrete separated by sections of aggregate. The pattern includes a round section with lawn, trees, and a concrete statue of the school's buffalo mascot (Figures 100–105).

The Music Building is rectangular in plan and has several sections with flat roofs. The exterior of the building is clad in red brick. Metal letters spell out "ADDIE HALL" at the east end of the south façade and the south end of the west façade. At the north façade, two sections housing windows are recessed from the brick side walls. The continuous windows are set close to the roof overhang at the top; opaque panels are below each window. The overhanging portion of the roof is covered in horizontally oriented wood board.

At the south façade is a lower single-story section of the building. The band room at the east extends above the two other building sections. Several metal doors with single lights open onto the courtyard at the south. A long, flat canopy shelters the doors.

The band room is at the east end of the building. It contains hemispherical wood risers for instrumental play. A similar, but smaller choral room occupies the west end. Between the two performance rooms, small practice rooms run along the north side, separated by a corridor from offices and toilets. The corridor turns to the south to meet an exterior door. At the north end, the corridor makes a turn to the north to connect with an exterior door that also provides access to the band room. This entrance is screened from the exterior by an extension of the brick wall at the north.

Alterations: The concrete wall at the west end of the courtyard has been removed. The wall at the east end has been moved farther to the east. At the interior, the ceilings have been dropped to accommodate HVAC.

Figure 104. East end of the south façade of the Music Building, view to the north.

Figure 105. Interior of the practice room in the Music Building, view to the north.

4.7 Cafeteria

The Cafeteria (designated Unit B on the architectural drawing) was constructed from plans drawn in 1961 (MUSD records: Architectural Drawings, DSA 02-21770, 1961). It is adjacent to South Garfield Avenue. It was designed as part of a complex including the Music Building to the north.

The Cafeteria has an irregular plan and sits on a poured-concrete foundation. In keeping with the design motif of the Music Building, it is clad in red brick and has several sections, each with a flat roof. HVAC equipment sits atop the roof. Metal letters reading "DAWSON CENTER" are affixed to the north end of the west façade, which is unfenestrated. At the east façade, window openings have been filled in (Figure 106).

The north side of the Cafeteria is a dining pavilion. Rectangular columns clad in red brick support the flat roof, which has a wide fascia. A red brick wing wall extends from the westernmost column. The red brick motif of the columns is repeated in pilasters on the main wall of the building framing the entrances. The ceiling of the pavilion is composed of exposed wood board and beams (Figures 107 and 108).

At the south façade, regularly placed brick pylons span most of the façade. Between each pair of pylons is a continuous group of four windows set high on the wall. Each window is in two parts, divided horizontally with a smaller section below. Below the windows are opaque panels (Figures 109–111).

At the interior of the Cafeteria is a large dining area with a higher ceiling. Continuous rows of clerestory windows set high on the wall are on the north and south façades. A kitchen and food service area are located to the east. The exposed ceiling is composed of diagonally placed wood boards. Round ducting and vents are regularly suspended from the ceiling. Steel trusses are exposed (Figures 112–114).

Alterations: Windows have been filled in at the east façade. HVAC equipment has been added to the roof. Sliding glass doors at the north façade opening to the dining pavilion have been replaced with partially glazed double doors and fixed panes on the sides of each set.

Figure 113. Interior of the dining area of the Cafeteria, view to the east.

Figure 114. Interior of the dining area of the Cafeteria, view to the northeast.

4.8 Theater

The Theater (Speech Arts Building) is accessed from Yosemite Avenue at the corner of South Garfield Avenue. It was constructed ca. 1971 from plans drawn in 1970 (MUSD records: Architectural Drawings, DSA 02-33777, 1970). The building experienced a delay in its completion (*Modesto Bee* 1970). The Theater was completed by March 1972 (*Modesto Bee* 1972).

The Theater is set back from both streets, allowing space for lawns and mature trees. Centered in front of the entrance is a brick sign identifying the school. Individual letters are attached to the main wall of the building west of the entrance reading "DOROTHY B. MULVIHILL THEATRE," in recognition of the Manteca HS drama teacher (Figures 115–118).

The building has an irregular plan that marks the sections of a theater. It has a generally rectangular double-height area to the south, which houses the platform for the stage and a variety of backstage support spaces. The area to the north houses ticket booths, a full-width lobby, and audience seating.

The section of the building toward the south is a story-and-a-half in height. It has a generally rectangular plan, and the exterior walls are constructed of tilt-up concrete. A single-story section with a flat roof extends toward the south.

The symmetrical primary (north) façade has a long central extension with a hexagonal roof that slopes toward the north. This section is clad in vertically scored cement plaster. A wide set of concrete steps extends to the sides beyond four fully glazed entrance doors. The doors are set in full-height red brick and have fixed transoms.

At the east façade, a set of double doors approached via a concrete loading dock provides access to the stage and backstage area. A second set of double doors is below ground level, and a single recessed door is in the sloped theater area toward the north. The fenestration is repeated at the west façade.

A single door opens from the south facade of the stage area. A second single door flanks the single-story section at the center of the symmetrical façade. At the interior, the stage is set within a proscenium arch, and the apron curves toward the audience section (Figure 119).

Alterations: The interior has been remodeled, including replacement of seating.

Figure 118. Oblique view of the south and east façades of the Theater, view to the northwest.

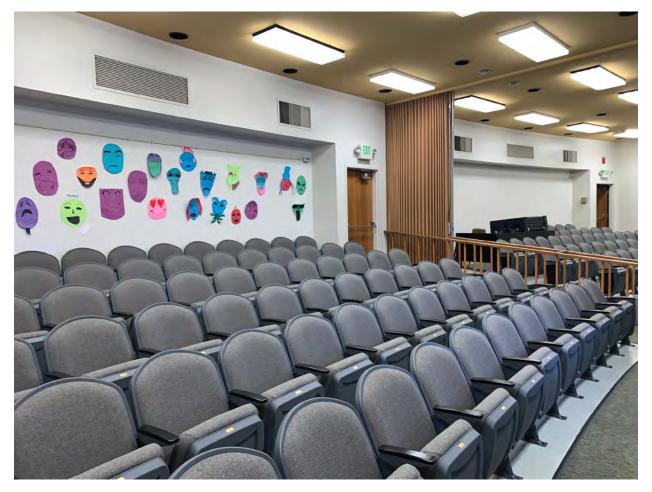

Figure 119. Interior of the Theater, view to the northeast.

4.9 Administration Building

The Administration Building is a single-story building with a rectangular plan. It sits on a poured-concrete foundation. It has a flat roof with a deep wood fascia and no overhang. The building was constructed ca. 1970 from drawings by Harry J. Devine, Inc., approved December 2, 1970. A reported delay in completion suggests the date of construction is ca. 1971 (completed by March 1972) (*Modesto Bee* 1970; *Modesto Bee* 1972).

The primary entrance of the Administration Building faces west toward the parking area at East Yosemite Avenue and South Sherman Avenue. A flat canopy with a deep fascia like the roof extends from the west façade below the top of the roof parapet. The canopy is supported by red-brick columns. Between the columns, the wall is fully glazed with fixed panes in a grid of aluminum mullions. A glazed double door with a fixed transom is located to the north side of the wall section. Metal letters reading "ADMINISTRATION" are centered at the west side of the canopy. The underside of the canopy is stucco with square recessed lighting fixtures. A second similar, but wider, canopy extends from the east façade. Beneath the canopy is a brick extension of the building with fixed glazing and operable slide-up windows above a brick base. To the south of the canopy is

a double entrance door. A third, smaller canopy extends from the south façade. This canopy shelters two entrances (Figures 120–123).

At the interior of the Administration Building is a small lobby at the west end. A counter separates the lobby from open offices beyond. To the north is a double-loaded corridor housing offices of various sizes. To the east are additional open offices (Figures 124 and 125).

5.0 Eligibility Criteria

5.1 California Register of Historical Resources

The CRHR program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for state historic preservation grant funding; and affords certain protections under CEQA. The criteria established for eligibility for the CRHR are directly comparable to the national criteria established for the NRHP.

In order to be eligible for listing in the CRHR, a building, object, or structure must satisfy at least one of the following four criteria:

- 1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- 2. It is associated with the lives of persons important to local, California, or national history.
- 3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values.
- 4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Historical resources eligible for listing in the CRHR must also retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. For the purposes of eligibility for the CRHR, integrity is defined as "the authenticity of an historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance" (California Office of Historic Preservation 2001). This general definition is generally strengthened by the more specific definition offered by the NRHP—the criteria and guidelines upon which the CRHR criteria and guidelines are based.

5.2 Integrity

To be eligible for listing in the NRHP, a property must retain sufficient integrity to convey its significance. The NRHP publication *How to Apply the National Register Criteria for Evaluation*, National Register Bulletin 15, establishes how to evaluate the integrity of a property: "Integrity is the ability of a property to convey its significance" (National Park Service, National Register of Historic Places 1991). The evaluation of integrity must be grounded in an understanding of a property's physical features and how they relate to the concept of integrity. Determining which of these aspects are most important to a property requires knowing why, where, and when a property is significant. To retain historic integrity, a property must possess several, and usually most, aspects of integrity:

- 1. Location is the place where the historic property was constructed or the place where the historic event occurred.
- 2. Design is the combination of elements that create the form, plan, space, structure, and style of a property.

- 3. Setting is the physical environment of a historic property, and refers to the character of the site and the relationship to surrounding features and open space. Setting often refers to the basic physical conditions under which a property was built and the functions it was intended to serve. These features can be either natural or manmade, including vegetation, paths, fences, and relationships between other features or open space.
- 4. Materials are the physical elements that were combined or deposited during a particular period or time, and in a particular pattern or configuration to form a historic property.
- 5. Workmanship is the physical evidence of crafts of a particular culture or people during any given period of history or prehistory, and can be applied to the property as a whole, or to individual components.
- 6. Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, when taken together, convey the property's historic character.
- 7. Association is the direct link between the important historic event or person and a historic property.

5.3 California Environmental Quality Act

CEQA Guidelines 15064.5 Determining the Significance of Impacts to Archeological and Historical Resources requires that all private and public activities not specifically exempted be evaluated for potential environmental impacts, including impacts to historical resources. CEQA Section 21084.1 states that significant impacts may occur if a project "may cause a substantial adverse change in the significance of an historical resource." CEQA defines historical resources as "any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California."

Lead agencies have a responsibility to evaluate a project's impacts to historical resources and to determine whether those impacts are significant. Mitigation of significant impacts is required if the proposed Project will cause substantial adverse change to a historical resource. Substantial adverse change includes "demolition, destruction, relocation, or alteration such that the significance of an historical resource would be impaired." While demolition and destruction are fairly obvious significant impacts, it is more difficult to assess when change, alteration, or relocation crosses the threshold of substantial adverse change. The CEQA Guidelines provide that a project that demolishes or alters those physical characteristics of an historical resource that convey its historical significance (i.e., its character-defining features) can be considered to materially impair the resource's significance.

For purposes of CEQA, a "historical resource" is a resource listed in or eligible for listing in the CRHR. The CRHR includes resources listed in, or formally determined eligible for listing in, the NRHP, as well as some California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts), or that have been identified in a local historical resources inventory, may be eligible for listing in the CRHR and are presumed to be historical resources for purposes of CEQA unless a preponderance of evidence indicates otherwise.

Generally, a resource shall be considered by the lead agency to be a "historical resource" if it:

- 1. Is listed in, or determined to be eligible by, the State Historical Resources Commission, for listing in the CRHR (PRC Section 5024.1, Title 14 CCR, Section 4850 et seq.).
- 2. Is included in a local register of historical resources, or is identified as significant in an historical resource survey meeting the requirements of Section 5024.1(g) of the PRC.
- 3. Is a building or structure determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Generally, a resource is considered "historically significant" if it meets the criteria for listing in the CRHR.

5.4 Themes for Educational Properties⁷

Finger-Plan Schools

One of the most important of the prototypes for postwar schools was Franklin & Kump and Associates' Acalanes Union High School in Lafayette, California, east of San Francisco. Constructed in 1939/1940, Acalanes Union High School was designed with one-story wings extending outward in finger-like extensions. Acalanes Union High School moved interior hallways outside, with sheltered outdoor corridors throughout the campus. The finger-like plan also allowed for cross-lighting and ventilation for each classroom. To the north, students enjoyed outdoor views through full-length windows. To the south, bands of high clerestory lights provided balanced illumination without glare.

Modular design and construction allowed for easy expansion of the school as enrollment increased. The campus included a variety of facilities, including gymnasium and playing fields, workshops, dining room, a network of classroom wings, and a parking area, all configured in a unified site plan (Sapphos 2014:56 and 57). Kump applied the same design principles to San Jose High School in 1952. This plan type, dubbed the "western finger plan," became the most influential building typology for schools in the 1940s. According to Architectural Forum, the finger-plan school resembled

a tree plan, based on a trunk corridor with side branches. It rests on radical standardization of classrooms; on absolute insistence that all classrooms share the best (north) orientation to sun and air; daylight for all of them from the open corridor side as well as the main window side. This plan is not only flexible ... but extensible indefinitely outward like a tree, by growing at branch-ends and by sprouting new branches (Architectural Forum 1949:104; in Sapphos 2014:82).

Theme: The Postwar Modern, Functionalist School Plant, 1945–1969

Property Type: Institutional/Educational

Property Subtypes: Elementary Schools, Junior High Schools, and High Schools

⁷ As the Manteca Unified School District does not have a historic context statement to evaluate its schools, ASM adapted the appropriate themes, eligibility standards, and character-defining features from the Los Angeles Unified School District: Historic Context Statement, 1870 to 1969 (Sapphos Environmental, 2014).

Period of Significance: 1945 to 1969 Area of Significance: Education

Geographic Location: Throughout California

Area of Significance: A/1

Eligibility Standards

- Clearly embodies the characteristics of a postwar modern functionalist school campus
- Displays a unified, functional site design, with buildings extending across the site and oriented in relation to outdoor spaces (courtyards, patios, outdoor play areas)
- One-story massing for elementary schools; up to two stories for junior/high schools
- Classrooms, in detailing and plans, clearly express their function, with axial, fingerlike wings, plentiful fenestration, and connections to the outdoors
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features: Buildings/Structures

- Building plans and site design clearly express their function; classroom wings often exhibit one-story "finger-like" wings, arranged on an axis
- Easily identifiable indoor-outdoor spaces, connections to classrooms through the incorporation of patios, courtyards, and outdoor canopied corridors
- One-story massing
- Building types and plans expressive of postwar ideals in school design; these can include finger-plan schools (usually in 1940s through 1950s)
- Typologies clearly expressive of the ideals for informality, indoor-outdoor connections, and zoned planning for the site

Character-Defining Features: Campus/District

- Unified campus design includes most or all of the following attributes: lack of formality and monumentality; low massing (usually one stories for classrooms and up to two stories for auditoriums/multipurpose rooms); strong geometric ordering of buildings and outdoor spaces; decentralized, pavilion-like layout; rational, function-driven site design; buildings extend across the site; buildings are oriented to outdoor spaces (courtyards, patios, outdoor areas), purposeful indoor-outdoor integration
- Buildings often turn inward, toward green spaces, such as courtyards and lawns
- Outdoor corridors, sheltered beneath simple canopies, forming links between the buildings of the campus
- Classrooms often consist of a series of axial, modular units
- An informal, domestic scale for the buildings and campus
- Swaths of patios, terraces, and plantings adjacent to and alternating with buildings
- Generous expanses of windows, including steel- and wood-framed multilight windows, in awning and hopper casements, clerestories, and fixed panes
- Flat roof or broken-plane roof often used for lighting and acoustical issues
- Modular design, with a rhythmic, asymmetrical but balanced composition
- Usually displays a modern design idiom, usually either regional modernist (with use of native materials such as stone, brick, and wood siding and/or framing)

May have been designed by a prominent architect of the period

Integrity Considerations

- Retains most of the essential physical features from the period of significance
- School expansion and new construction over the years, in particular in the postwar period, might have resulted in the addition of in-fill buildings and structures in areas that were originally designed as open spaces. Such new additions should not interfere with or serve as a visual impairment to the designed connections between buildings, in particular classroom wings, and adjacent outdoor patios and spaces.
- Many postwar schools were designed to be easily expandable as enrollment increased; the original site design and building types and plans should be readily discernible. If additional wings were added or the campus extended, the additions should be compatible with and visually subordinate to the original.
- Some materials may have been removed or altered
- Should retain integrity of Setting, Materials, Design, Workmanship, Feeling, and Association from its period of significance
- Addition of portable or permanent buildings after the period of significance acceptable as long as original campus design is intact

6.0 Statement of Significance/Evaluation

The Manteca HS campus was considered for historical significance under the broad themes of Education and Architecture and the more specific sub-theme of the Postwar Modern Functionalist School Plant (1939–1972) under CRHR criteria 1, 2, 3, and 4. The campus as a whole was carefully considered as a potential historic district under these themes and criteria and is recommended not eligible (Table 4). The campus buildings surveyed for this HRTR were also considered for individual eligibility under the same themes and criteria, and none were found individually eligible.

Themes relied on for this evaluation are drawn from a detailed historic context statement developed for California's largest school district—Los Angeles Unified School District—which has applicability to all districts in the state for universal changes in approaches to education and how those approaches manifested in school development and design. The theme most applicable to Manteca HS is the Postwar Modern Functionalist School Plant, 1939–1969 (Sapphos Environmental 2014). Overall, schools constructed during the period of significance demonstrated a high degree of indooroutdoor integration and sheltered open corridors. Often single story, they lacked the monumentality of earlier school designs, as exemplified by the original 1922 Manteca HS building. A design that expressed these ideals was the finger-plan school (Sapphos 2014:13).

6.1 Historic District Eligibility

The Manteca HS campus was surveyed and evaluated as a potential historic district. Fifteen buildings were surveyed and evaluated for this HRTR, none of which are recommended as contributors to the proposed historic district (Table 4). As a result of this evaluation, the potential Manteca High School Historic District, as well as the individual buildings, are all given a status code of 6Z (found ineligible for NR, CR, or Local designation through survey evaluation). As the potential historic district and the individual buildings do not meet any criteria for eligibility, an assessment of historic integrity is not necessary.

Table 4.	Summary of Eva	luation of the Po	tential Manteca H	ligh School Historic District

Contributor	Individually Eligible
No	No
	No No No No

Bldg. Name	Approx. Year Built	Contributor	Individually Eligible
Cafeteria	1961	No	No
Theater	ca. 1970	No	No
Administration Building	ca. 1970	No	No

6.1.1 CRHR Criterion 1

The potential Manteca High School Historic District is recommended not eligible for the CRHR under Criterion 1 at the local level. The period of significance begins in 1947, which the first extant building was constructed (the Agricultural Shop Unit/Lab) and ends in 1972, when the final two buildings more than 45 years of age were constructed (the Theater and the Administration Building). The campus exemplifies new thinking about education expressed in a unified, functional site design, as described in the theme for the Postwar Modern, Functionalist School Plant, 1945-1969 (see Section 5.3, above). By the end of the 1960s, the once-innovative finger plan was seen as dull and somewhat stodgy, as educators were drawn to more flexibility in teaching. The new schools featured open interiors with movable walls in a new typology known as the open plan (Sapphos 2014:93).

The finger-plan school was a product of postwar expansion as school districts struggled to keep up with demand and architects had ample opportunities to test new ideas (Sapphos 2014:114). A unified campus design, building types and plans that accommodate a high degree of indoor-outdoor integration, and sheltered corridors marked the educational property type. The open corridors with access to landscaped areas are familiar in California, in that concerns over inclement weather can be disregarded. The priority remained the creation of a single-story domestic scale for schools. Site plans lacked the formality and monumentality that characterized earlier eras of school design. School types expressive of these ideals include the finger plan, as exhibited at Manteca HS. However, the campus is not the first nor best expression of these ideas. Architects were experimenting with the plan as early as the 1930s, and it became common in the 1940s through the 1950s (Sapphos 2014:13). Therefore, the potential historic district is recommended not eligible for listing in the CRHR under Criterion 1.

6.1.2 CRHR Criterion 2

ASM considered the Manteca High School Historic District for eligibility under Criterion 2 for association with persons important in our history. Although Manteca HS is notable for its excellence in athletics during the period of significance, outstanding athletes began their careers at Manteca HS and went on to become known after leaving the school. No notable individuals were found to be associated specifically with the campus over the majority of their productive lives. Therefore, the potential historic district is recommended not eligible for listing in the CRHR under Criterion 2.

6.1.3 **CRHR Criterion 3**

Regarding Criterion 3, the Manteca High School Historic District does not exhibit outstanding architecture; rather, it represents a widespread school design that was developed in the late 1930s. The campus is not the first to display the building type or the site plan, which was developed earlier by well-known architects. Displaying character-defining features of Mid-Century Modernism, the buildings are simple in design, with shed or low gabled roofs and composed of plaster concrete exterior walls with consistent red-brick accents.

The architect responsible for the overall campus design and the individual buildings, Harry J. Devine, is recognized for his work in and around Sacramento and served for many years as architect for the Sacramento Unified School District. According to one account, "Devine became the go-to architect for the Sacramento Public School System, eventually becoming the supervising architect for the entire school district" (Riggs 2017:33). He was responsible for a number of schools, as well as government buildings, churches, and other institutional properties. Although he can be said to be a notable architect, it is arguable whether he could be considered a master. Among Devine's educational projects during his lengthy term as architect for the Sacramento Public System, most campus site plans are similar to Manteca HS in that they display some version of the finger plan. Like Manteca HS, all employ the design feature of masonry accent walls or base walls, in most cases red brick, most have shed roofs, and all are oriented with expansive windows on the north façades and clerestory windows above the roofs of open corridors on the south facades. All have narrow strips of landscaping between the classroom buildings. Among these projects, Manteca HS is not outstanding from a design perspective; in fact, it appears to be a standardized expression of midtwentieth-century school design in the northern San Joaquin Valley area and perhaps statewide. Devine's award-winning projects were done in collaboration with other architects.

The campus and its buildings do not possess high artistic value or embody distinctive characteristics of a type, period, and method of construction. They are designed in a workmanlike manner by a district architect. For these reasons, the potential Manteca High School Historic District is recommended not eligible under CRHR Criterion 3 for its design and construction.

CRHR Criterion 4 6.1.4

The potential Manteca High School Historic District is recommended not eligible under Criterion 4 because it has not yielded, and is not likely to yield, information important to the prehistory or history of the area.

Individual Eligibility 6.2

ASM carefully considered each of the contributors to the historic district to determine whether they are individually eligible for the CRHR under Criterion 1, 2, 3, or 4. For this HRTR, ASM considered eligibility only for the buildings more than 45 years of age that were surveyed. In summary, none of the buildings are recommended individually eligible, for the following reasons.

When viewed individually, none of the contributors were found to be good representations of the broad theme of Education and the more specific theme of the Postwar Modern Functionalist School Plant (1945-1972). Therefore, none are recommended individually eligible under Criterion 1 for association with events important in the history of Manteca or San Joaquin County. Under CRHR Criterion 2, no evidence of a strong association with the lives of any person of historical significance was found, including the many outstanding athletes who began their careers at Manteca HS; as such, none of the contributors are recommended individually eligible under this criterion.

Under CRHR Criterion 3, none of the contributors individually convey significance for architecture. The campus generally conveys features of Mid-Century Modernism, as shown in the simple

geometric volumes of the long, single-story buildings with simple shed roofs, use of red brick accent walls, and lack of historicism. However, the individual buildings do not possess high artistic value, or embody distinctive characteristics of a type, period, and method of construction. Although the architect, Harry J. Devine, was prolific in the Sacramento area and served as architect for the Sacramento Unified School District, the buildings at Manteca are not the best examples of his work. As such, none of the contributors are recommended individually eligible under Criterion 3 for architecture.

Under CRHR Criterion 4, all of the buildings are common property types that do not have the potential to provide information about history or prehistory that is not available through historic research. As such, none of the contributors are recommended individually eligible under Criterion 4 because they have not yielded, and are not likely to yield, information important to the prehistory or history of the area.

6.3 Summary of Identification Efforts

The core of the Manteca HS campus—specifically the seven classroom "wings"—is an example of a "finger-plan" school that was designed to express educational ideals of the postwar era. However, the typology was developed much earlier at other locations, and it became a common property type during the postwar era. Furthermore, although the core of the site plan, i.e., the classrooms, was constructed between 1954 and 1961, several of the buildings 45 years or older surveyed and evaluated for this HRTR were constructed outside this period of time. Two of the campus buildings—the Agricultural Shop Unit/Lab and Winter Gymnasium—were constructed in the late 1940s, and two—the Theater and the Administration Building—were constructed in the early 1970s. A few major buildings have been constructed since the 1990s as the campus undergoes modernization. As such, the campus is recommended not eligible as a historic district under CRHR under any themes or criteria considered for this evaluation. Therefore, the Manteca High School Historic District is not a historical resource as define by CEQA.

7.0 Impacts Assessment

The potential Manteca High School Historic District is recommended not eligible for listing in the CRHR under any criteria, and no buildings are recommended individually eligible. As such, the project will not result in an adverse impact to a historical resource pursuant to CEQA Section 15064.5.

Conclusion 8.0

For this HRTR, ASM surveyed the campus of Manteca HS, including 15 potential contributing resources. No eligible historic district was identified within the campus, and no building is recommended individually eligible. As the campus and the individual buildings are not recommended eligible for listing for CRHR listing under any criteria, none are not considered historical resources as defined by CEQA. As such, no adverse impacts to historical resources will result from Phase 2 of the project, and no mitigation measures are necessary.

Page iv • PlaceWorks

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of the Manteca Unified School District (District) for the property located at Manteca High School in the City of Manteca, San Joaquin County, California (Figures 1 and 2). The project site consists of four distinct areas containing portions of nine parcels located in the City of Manteca. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard, and discussed in the Introduction section of this report.

The site includes portions of APNs 221-090-20 and 221-090-17 on the current Manteca High School Campus. The District has recently acquired five parcels totaling 1.09 acres on Mikesell Avenue (510, 524, 534, 544, and 554 Mikesell Avenue) and two parcels totaling 0.73 acres on Moffat Boulevard (419 and 453 Moffat Boulevard) as described in below Table 1:

Table 1 – Project Site Addresses and APNs

School Campus			
Address	Accessor Parcel Number	Acres	
450 E. Yosemite Avenue	221-090-20 (Portion)	3.10	
230 S. Garfield Avenue	221-090-17 (Portion)	0.25	
Former Retail/Motel			
419 Moffat Boulevard	221-080-01	0.21	
453 Moffat Boulevard	221-080-02	0.52	
Residential	•		
Address	Accessor Parcel Number	Acres	
510 Mikesell Avenue	221-090-15	0.16	
524 Mikesell Avenue	221-180-12	0.27	
534 Mikesell Avenue	221-180-11	0.19	
544 Mikesell Avenue	221-180-10	0.20	
554 Mikesell Avenue	221-180-09	0.27	
Total Acreage:		5.17	

Figure 1 depicts the regional location of the project site, Figure 2 shows the local vicinity of the project site, and Figure 3 is an aerial photograph showing the current conditions of the project site. Regional access to the site is provided by the State Route 99, approximately 0.84-mile east of the project site. Local access is from Yosemite Avenue, Garfield Avenue, and Mikesell Avenue (Figure 3).

The objective of a Phase I ESA is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the project site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the project site. Our opinion regarding a REC's potential impact on the project site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-21 Standard defines an REC (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition. RECs were not identified at the project site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

No HRECs were identified for the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous. substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."

This Phase I ESA has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

Page vi • PlaceWorks February 2023

BUSINESS ENVIRONMENTAL RISK

A business environmental risk is defined by ASTM E 1527-21 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, and is not necessarily an issue required to be investigated under ASTM E 1527-21 practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Our review identified there have been structures on the site that predate 1978. Based on the time frame of some of the existing and former structures on the site there is the potential for residual organochlorine pesticides and lead in shallow soils. An addendum to this Phase I has been implemented and will be submitted after all sampling data has been reported.

SUMMARY

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the project site. Any exceptions to, or deletions from, this practice are described in Section 1 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, historical environmental conditions, or significant data gaps in connection with the subject property.

This page intentionally left blank.

Page viii • PlaceWorks February 2023

This Phase I Environmental Site Assessment (ESA) was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-21 Standard for the Manteca Unified School District (District) for the Manteca High School in the City of Manteca, San Joaquin County, California (Figures 1 and 2). The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and with the EPA "All Appropriate Inquiries" standard. Exceptions to, or deletions from, this practice are described in Section 1 of this report.

The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability." An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligation" (ASTM, 2021).

Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard and the United States Environmental Protection Agency (EPA) All Appropriate Inquiry (AAI) standard.

1.1 OBJECTIVE

The objective of this assessment was to evaluate site history, existing observable conditions, current site use, and current and historic uses of surrounding properties to identify the potential presence of Recognized Environmental Conditions (RECs) in connection with the project site. RECs are defined by ASTM as

"the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition." (ASTM, 2021).

In addition, the Standard requires the identification of historical RECs (HRECs) in the Phase I ESA report. The standard defines historical RECs as

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting

unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous. substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."

Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the site, defined by ASTM as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, and is not necessarily an issue required to be investigated under ASTM E 1527-21 practice. Consideration of environmental risk issues may involve addressing one or more non-scope considerations."

1.2 SITE IDENTIFICATION

The project site comprises four distinct areas both on and off the Manteca High School campus. The project site includes a 3.35-acre portion of Manteca High School at 450 E. Yosemite Avenue in the City of Manteca, San Joaquin County (Assessor's Parcel Numbers 221-09-020 and 221-09-017). The District has recently acquired five parcels totaling 1.09 acres on Mikesell Avenue (510, 524, 534, 544, and 554 Mikesell Avenue) and two parcels totaling 0.73 acres on Moffat Boulevard (419 and 453 Moffat Boulevard) as described in below Table 2:

Table 2 - Project Site Addresses and APNs

Manteca High School Campus

544 Mikesell Avenue	221-180-10	0.20
554 Mikesell Avenue	221-180-09	0.27
Total Acreage:		5.17

1.3 DETAILED SCOPE OF SERVICES

PlaceWorks performed the following detailed scope of services to complete our Phase I ESA assessment:

- 1. Visual observations of site conditions, and of adjoining property use, to evaluate the nature and type of activities that have been or are being conducted at and adjacent to the site, in terms of the potential for release or threat of release of hazardous substances or petroleum products.
- 2. Review of federal and state environmental database information within the ASTM- specified radii from the project site using a database service to access records. Use of 7.5-minute topographic maps to evaluate the site's physical setting.
- 3. Review of federal and state environmental files, as necessary, pertaining to the project site and nearby sites with the potential to impact the project site.
- 4. Review of previous reports (if any) prepared for the project site.
- 5. Review of historical aerial photographs and topographic maps.
- 6. Contacts with state and local agencies, as necessary, regarding the site and surrounding properties and structures.
- 7. Interviews with the Key Site Manager and property tenant representatives (if any). Interpretation of information and data assembled as a result of the above work tasks, and formulation of conclusions regarding the potential presence and impact of RECs as defined by the ASTM E 1527-21 Standard.

1.4 NON-SCOPE CONDSIDERATIONS

The ASTM E 1527-21 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I ESA practice: Asbestos-Containing Materials, Biological Agents, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Resources, PCBs containing materials, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality unrelated to releases of hazardous substances or petroleum products in the environment, and mold.

1.5 LIMITING CONDITIONS AND DEVIATIONS

PlaceWorks has completed this assessment in substantial conformance with ASTM E 1527-21. In our opinion, there were no exceptions, addition, deviations, or deletions made to the ASTM work scope.

1.6 LIMITATIONS

Our work for this project was performed generally consistent with the ASTM E 1527-21 Standard for Phase I Environmental Site Assessments. Several organizations other than ASTM, such as professional associations (e.g. ASFE and AGWSE) have also developed "guidelines" or "standards" for environmental site assessments. The Phase I ESA presented herein is consistent with the ASTM E 1527-21 Standard, which may vary from the specific "guidelines" or "standards" required by other organizations.

This Report was prepared pursuant to an Agreement between the Client and PlaceWorks. All uses of this Report are subject to, and deemed acceptance of, the conditions and restrictions contained in the Agreement. The observations and conclusions described in this Report are based solely on the Scope of Services provided pursuant to the Agreement. PlaceWorks has not performed any additional observations, investigations, studies, or other testing not specified in the Agreement. PlaceWorks shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Agreement.

This Report is prepared for the exclusive use of the Client in connection with the project site. There are no intended beneficiaries other than the Client. PlaceWorks shall owe no duty whatsoever to any other person or entity on account of the Agreement or the Report. Use of this Report by any person or entity other than the Client for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from the Client and from PlaceWorks. Use of this Report by such other person or entity without the written authorization of the Client and PlaceWorks shall be at such other person's or entity's sole risk and shall be without legal exposure or liability to PlaceWorks.

Use of this Report by any person or entity, including by the Client, for a purpose other than the site, is expressly prohibited unless such person or entity obtains written authorization from PlaceWorks indicating that the Report is adequate for such other use. Use of this Report by any person or entity for such other purpose without written authorization by PlaceWorks shall be at such person's or entity's sole risk and shall be without legal exposure or liability to PlaceWorks.

This Report reflects site conditions observed and described by records available to PlaceWorks as of the date of report preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the report. Accordingly, the Client and any other party to whom the report is provided recognize and agree that PlaceWorks shall bear no liability for deviations from observed conditions or available records after the time of report preparation. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

The findings, conclusions, and recommendations contained in this report are based on site conditions as they existed at the time of our investigation. Our review of documents, lists, databases, and public agency files have been conducted with due diligence. However, our conclusions are based on available information and are subject to constraints imposed by public agencies on review procedures and information retrieval. As a result,

Page 4 • PlaceWorks February 2023

PlaceWorks may have been unable to identify potential concerns. PlaceWorks assumes no responsibility for conditions that did not come to our attention despite reasonable care, or for conditions that were not generally recognizable as environmentally unacceptable at the time of this report. Opinions and judgments expressed are based on our understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice.

Use of this Report by any person or entity in violation of the restrictions expressed in this Report shall be deemed and accepted by the user as conclusive evidence that such use and the reliance placed on this Report, or any portions thereof, is unreasonable, and that the user accepts full and exclusive responsibility and liability for any losses, damages or other liability which may result.

This page intentionally left blank.

Page 6 • PlaceWorks February 2023

This section describes the site location and ownership of the site as well as other pertinent details.

2.1.1 Name of Site Owner

Project Site Addresses and APNs

School Campus				
Address	Accessor Parcel Number	Owner		
450 E. Yosemite Avenue	221-090-20 (Portion)	District		
230 S. Garfield Avenue	221-090-17 (Portion)	District		
Former Retail/Motel				
Address	Accessor Parcel Number	Owner		
419 Moffat Boulevard	221-080-01	District		
453 Moffat Boulevard	221-080-02	District		
Residential				
Address	Accessor Parcel Number	Owner		
510 Mikesell Avenue	221-090-15	District		
524 Mikesell Avenue	221-180-12	District		
534 Mikesell Avenue	221-180-11	District		
544 Mikesell Avenue	221-180-10	District		
554 Mikesell Avenue	221-180-09	District		

2.1.2 Site Location Map

The United States Geological Survey (USGS) topographic map for the site is the Manteca, California Quadrangle. The USGS topographic map was used as the source for site setting information. The project site is in San Joaquin County at approximately 37.7970 north latitude and 121.2118 west longitude. The project site is in Section 4 of Township 2 South, Range 7 East of the Mt. Diablo Base Line and Meridian. Figures 1 through 3 show the location of the project site. Topographic maps of the site are included in Appendix A.

2.2 SITE AND VICINITY DESCRIPTION

The project site is approximately 5.17 acres in size. The project site is located at 450 E. Yosemite Avenue, 230 S. Garfield Avenue, 419 Moffat Boulevard, 453 Moffat Boulevard, 510 Mikesell Avenue, 524 Mikesell Avenue,

534 Mikesell Avenue, 544 Mikesell Avenue, and 554 Mikesell Avenue in the City of Manteca, San Joaquin County, California. Figure 3 is an aerial photograph showing the current site conditions. The project site has an irregular shape and is partially occupied by the Manteca High School campus, two adjoining former retail/motel parcels and five adjoining residential parcels.

The property is in an area of residential and commercial use. There are residences to the west, east, and north of the project site. There are commercial buildings to the north and south of the project site. State Route 99 is located approximately 0.84 miles to the east of the project site.

2.3 PHYSICAL SETTING

Subsurface explorations were not performed for this evaluation; therefore, site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the subject property area.

2.3.1 Topography

Topographically, the property slopes slightly to the west southwest. Based on a review of the USGS 7.5-minute Topographic Series, Manteca, California Quadrangle Map (USGS 2021), surface elevation of the project site is approximately 38 feet above mean sea level.

2.3.2 Geologic Information

The site is located within the Great Valley Geomorphic Province. The Great Valley is an alluvial plain about 50 miles wide and 400 miles long in the central part of California. Its northern part is the Sacramento Valley, drained by the Sacramento River and its southern part is the San Joaquin Valley drained by the San Joaquin River. The Great Valley is a trough in which sediments have been deposited almost continuously since the Jurassic (CGS 2002). No active faults are known to have been mapped within a half-mile radius of the project site. The project site is over nine miles northeast of the Vernalis Fault. The site sits atop Holocene Great Valley fan deposits (Rogers 1966).

The United States Department of Agriculture Natural Resources Conservation Services maps the soil beneath the project site as being a component of the Delhi soil series, which is classified with a high infiltration rate and is well drained to excessively drained (USDA 2022).

2.3.3 Naturally Occurring Asbestos Containing Minerals and Radon Gas

Based on a review of A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos (Department of Conservation, Division of Mines and Geology 2000) and Van Gosen and Clinkenbeard (2011), the site is not located within a ten-mile radius from an area thought to contain naturally occurring asbestos (NOA).

Page 8 • PlaceWorks

The Indoor Radon Abatement Act of 1988 directs the United States Environmental Protection Agency to identify and lists areas of the United States with the potential for elevated indoor radon levels. The U.S. EPA's Map of Radon Zones assigns one of three zones based on radon potential:

- Zone 1 counties have a predicted average indoor radon screening level greater than 4 pico curies per liter (pCi/L)
- Zone 2 counties with a predicted average indoor radon screening level between 2 and 4 pCi/L
- Zone 3 counties with a predicted average indoor radon screening level less than 2 pCi/L

Based on the EPA (2022) map, the project site is within a county that is mapped within Zone 2, which is below the level of concern. The California Department of Health Services recommends action to be taken to reduce radon levels inside buildings if they are 4 pCi/L or greater.

2.3.4 Groundwater and Surface Water Information

The project site is located in the San Joaquin Delta. The San Joaquin River Watershed is approximately 15,600 square miles and is located in between the Sacramento River Watershed to the north and Tulare Basin Watershed to the south. The San Joaquin River watershed is bordered on the east by the Sierra Nevada Mountains and on the west by the Coast Range mountains. The San Joaquin River located approximately 4.9 miles to the is the principal surface water drainage feature. Based on the FEMA Flood Map Center, the project site is not located in a flood risk zone (FEMA 2009).

This page intentionally left blank.

Page 10 • PlaceWorks February 2023

3. Site History and Background Information

3.1 PREVIOUS REPORTS

No previous reports were reviewed by PlaceWorks for the preparation of this Phase I ESA report.

3.2 PAST USAGE OF THE SITE

Past usage of the site was assessed through review of historical aerial photographs, topographic maps, and databases. Copies of historical information reviewed are included in Appendix A. Based on a review of historical information, the Yosemite portion of the project site has been part of the Manteca High School campus since 1920. The Garfield portion and Mikesell portion of the project site appear to have been used for row crops in 1937, although the Garfield portion has been part of the Manteca High School campus since at least 1952 and residences were constructed on the Mikesell portion of the project site between 1948 and 1965, and all but the two eastern parcels were observed to be completely demolished during the site visit in January 2023. The Moffat portion of the project site were formerly occupied by a motel from at least 1952 to 2022, and a retail structure from at least 1968 to about 2012.

3.2.1 Historical Aerial Photographs

Aerial photographs for the proposed sites obtained from EDR for the years 1937, 1957, 1963, 1968, 1975, 1982, 1993, 2006, 2009, 2012, and 2016 were reviewed for the project site. Copies of the aerial photographs are included in Appendix A.

- 1937 The project site appears to have school buildings and a sports track and baseball diamond on the west half of the project site. The eastern half of the project site appears to be utilized for row crop agriculture. The surrounding area is a mix of agriculture and rural residential uses.
- 1957 The project site has more buildings on the western half of the project site. The motel is apparent along Moffat Boulevard. The eastern half of the project site is no longer occupied by row crops and now there appears to be two baseball diamonds and another sports track. There are also residential structures on the northern edge of the eastern half of the project site. The surrounding area appears to be predominately residential and commercial.
- 1963 The project site and surrounding area appear relatively unchanged in comparison to the 1957 aerial photograph.
- 1968 Additional residential dwellings are apparent on the Mikesell portion of the project site. There appears to be a new structure near the corner of Moffat Boulevard and Sherman Avenue. The remainder

3. Site History and Background Information

of the project site and surrounding area appear relatively unchanged in comparison to the 1963 aerial photograph.

- 1975 The project site and surrounding area appear relatively unchanged in comparison to the 1968 aerial photograph.
- 1982 The project site and surrounding area appear relatively unchanged in comparison to the 1975 aerial photograph.
- 1993 The project site and surrounding area appear relatively unchanged in comparison to the 1982 aerial photograph.
- 2006 The project site and surrounding area appear relatively unchanged in comparison to the 1993 aerial photograph.
- 2009 The project site and surrounding area appear relatively unchanged in comparison to the 2006 aerial photograph.
- 2012 The project site and surrounding area appear relatively unchanged in comparison to the 2009 aerial photograph.
- 2016 The structure near the corner of Moffat Boulevard and Sherman Avenue is no longer apparent. The remainder of the project site and surrounding area appear relatively unchanged in comparison to the 2012 aerial photograph.

3.2.2 Historical Topographic Maps

Historical Topographic Maps obtained from EDR for the years 1914, 1952, 1968, 1976, 1987, 1991, 1994, 2012, 2015, and 2018 were reviewed for the project site. Copies of the topographic maps are included in Appendix A.

- 1914 No structures are depicted on the project site, and it appears to be vacant undeveloped land. Southern Pacific Railroad is shown southwest of the project site. There is a cluster of structures depicted to the west northwest of the project site and sparse structures are shown in the surrounding area.
- 1952 The project site is shown to be occupied by Union High School. Lincoln School is shown adjacent to the east of the project site. The area north, northwest, and west of the project site is highlighted in omission tint, reflecting dense build out of those areas. Agricultural use is also marked north of the project site and to the southwest and northeast of the project site. Oil Tanks are marked east of the project site across Spreckels Road as part of the sugar refinery.

Page 12 • PlaceWorks February 2023

3. Site History and Background Information

- 1968 There are more buildings shown on the project site that are part of the Union High School Campus. More of the surrounding area is highlighted in omission tint and there is less agricultural land used depicted in the surrounding area.
- 1976 The project site and surrounding area appear relatively unchanged in comparison to the 1968 topographic map. State Route 99 is now mapped northeast of the project site.
- 1987 The project site and surrounding area appear relatively unchanged in comparison to the 1976 topographic map. State Route 120 is now mapped south of the project site.
- 1991 The project site and surrounding area appear relatively unchanged in comparison to the 1987 topographic map.
- 1994 The project site and surrounding area appear relatively unchanged in comparison to the 1991 topographic map.
- 2012 Only fire stations schools, roads, and contours are depicted on this topographic map.
- 2015 Only fire stations schools, roads, and contours are depicted on this topographic map.
- 2018 Only fire stations schools, roads, and contours are depicted on this topographic map.

3.2.3 Sanborn Fire Insurance Maps

Sanborn maps were not available for the project site. A copy of the Certified Sanborn Search Document coverage statement is included in Appendix A.

3.2.4 Historical City Directories

PlaceWorks reviewed the EDR-City Directory of the project site located at 450 E Yosemite Avenue. A copy of the EDR-City Directory is in Appendix A. EDR searched Polk Directory Company, Haines & Company, and other databases for the report. City Directory data was searched for the years spanning from 1968 through 2017.

1968 - Manteca High School, Manteca Unified School District, and Manteca Unified School District Bus Garage.

1973 - Manteca High School

1978 - Manteca High School

1981 - Manteca High School

1985 - Manteca High School

3. Site History and Background Information

1992 - Manteca High School

1995 - Manteca High School

2000 - Manteca High School, Manteca Unified School District, MHS Association Student Body, and Diede Construction.

2005 - Manteca High School

2010 - Manteca Unified School District and Manteca High School

2014 - Manteca Unified School District

2017 - Manteca Unified School District

3.2.5 Building Permits

PlaceWorks reviewed the EDR Building Permit report, which is generated by searching municipal building permit records and is used to find indicators of environmental conditions. Building permit data can be used to identify current and/or former operations and structures/features of environmental concern, such as the presence of underground storage tanks, pump islands, sumps, drywells, etc. A copy of the EDR-Building Permit Report is in Appendix A.

The City of Manteca Building and Safety Division building permit records and San Joaquin County Permits and Licenses Department were searched for the years 1987 to 2022. No permits were found for project site located at 450 E Yosemite Avenue.

3.2.6 Environmental Lien and Activity and Use Limitations (AULs)

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls. A copy of the EDR-Environmental Lien and AUL report is in Appendix A. EDR searched the San Joaquin County Recorder's Office, California Environmental Protection Agency, and the United States Environmental Protection Agency. There were no environmental liens or AULs identified for the project site.

3.2.7 Prior Agricultural Use

Based on the review of historical aerial photographs, the eastern project site appears to have been used for row crops from at least 1914 until 1937. By 1952 the Manteca High School Campus expanded into the eastern area, and the former residential houses in the Mikesell portion of the site were constructed between 1948 and 1965. Based on our historical research, it appears that the prior agricultural use pre-dated 1950.

Page 14 • PlaceWorks February 2023

3. Site History and Background Information

3.2.8 Mines

Based on the review of historical aerial photographs and topographic maps, the project site appears to not have been as a site for mining operations.

3.2.9 Illegal Drug Manufacturing

The proposed site was not identified by the California Hazardous Material Incident Report System (CHMIRS) which is maintained by the California Office of Emergency Services and contains information regarding hazardous material incidents such as accidental releases or spills. Clandestine Drug Laboratory Locations (CDL) database maintained by the U.S. Department of Justice was also reviewed for the presence of drug laboratories or dumpsites. Drug-related waste was not observed on the site during the site inspection.

3.2.10 Prior U.S. Government Ownership

Based on the review of the EDR database, historical aerial photographs, and topographic maps reviewed, there are no indications that the project site was owned by the U.S. Government or devoted to military use or operations.

3.3 SURROUNDING PROPERTY LAND USES

Based on the review of the EDR, historical aerial photographs, and topographic maps, the properties surrounding the project site are predominately residential and educational. Historically the surrounding properties were used for rural agricultural and commercial prior to the development that occurred in the area starting in the 1950s.

3. Site History and Background Information

This page intentionally left blank.

Page 16 • PlaceWorks February 2023

4.1 STANDARD ENVIRONMENTAL RECORDS REVIEW

PlaceWorks utilized the electronic database service EDR to complete the environmental records review. To determine if the Site has any documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the Site prescribed by ASTM 1527-21 and All Appropriate Inquiry, PlaceWorks reviewed a summary of regulatory agency database listings prepared by EDR. In addition, where appropriate, we reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of possible concern to the project site. The EDR report presenting a summary of the agency databases reviewed and a map showing the location of the identified sites is provided as Appendix B (EDR, 2022). The results of the database search and follow-up agency file review are summarized below.

The database search was used to identify properties that may be listed in the referenced Agency records, located within the American Society for Testing and Materials (ASTM)-specified search radii indicated below:

Database	Approximate Search Distance	Project site Listed?	Number of Sites within Search Area
Federal NPL (Superfund) sites	1 mile	No	0
Federal Delisted NPL sites	1 mile	No	0
Federal sites subject to CERCLA removals & CERCLA orders	0.5 mile	No	0
Federal CERCLA sites with NFRAP	0.5 mile	No	1
Federal RCRA facilities undergoing Corrective Action	1 mile	No	0
Federal RCRATSD facilities	0.5 mile	No	0
Federal RCRA generators	0.25 mile	No	1
Federal institutional controls / engineering controls registries	0.5 mile	No	0
Federal ERNS list	Site & Adjoining	No	0
State- and tribal (Superfund) equivalent sites	1 mile	No	0
State- and tribal hazardous waste facilities	1 mile	No	11
State and tribal landfills and solid waste disposal facilities	0.5 mile	No	0
State and tribal leaking storage tanks	0.5 mile	No	29
State and tribal registered storage tanks	0.25 mile	No	30
State and tribal voluntary cleanup sites	0.5 mile	No	0
State and tribal brownfield sites	0.5 mile	No	0
Orphans	Site & Adjoining	No	4
HAZNET	Site & Adjoining	Yes	4

A review of selected regulatory agency databases for documented environmental concerns on the site, or in close proximity to the site, was conducted by EDR. A copy of the radius report, dated December 9, 2022 is included in Appendix B. The project site is listed on CERS Hazardous Waste Site and as a HAZNET Site.

4.1.1 Federal NPL (Superfund) Sites

The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for clean-up by the EPA.

- The project site is not listed on the NPL list.
- The database search did not identify any NPL sites within a mile radius of the project site.

4.1.2 Federal Delisted NPL Sites

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

- The project site is not listed on the delisted NPL list.
- The database did not identify any delisted NPL sites within a mile radius of the project site.

4.1.3 Federal sites subject to CERCLA removals and CERCLA orders

The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess if they should be considered for inclusion on the NPL.

- The project site is not listed on the CERCLIS list.
- The database did not identify any CERCLIS listings within a half mile radius of the project site.

4.1.4 CFRCLIS Sites with NFRAP

CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.

- The project site is not listed on the CERCLIS-NFRAP list.
- The database search did identified one CERCLIS-NFRAP Site within a half mile radius of the project site.

Page 18 • PlaceWorks February 2023

O Spreckels Development Co INC at 18800 S Spreckels Road, approximately 0.41-miles southeast of the project site, is listed because the site was formerly used to process sugar. Investigations into the site for redevelopment purposes revealed contamination from historic above-ground storage tanks (ASTs) and underground storage tanks (USTs). Soil, soil vapor, and groundwater sampling in 2018 indicated that there is no significant threat to public health or the environment from remaining constituents of concern at the site. Currently, there is a deed restriction in place. The deed restriction requires a soil management plan for any soils taken off-site.

4.1.5 Federal RCRA Facilities undergoing Corrective Action

The RCRA CORRACTS Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

- The project site is not listed as a RCRA CORRACTS TSD Facility.
- The database search did not identify any RCRA CORRACTS TSD Facilities within a one-mile radius of the project site.

4.1.6 Federal RCRA TSD Facilities

The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.

- The project site is not listed as a RCRA non-CORRACTS TSD facility.
- The database search did not identify any RCRA non-CORRACTS TSD facilities within a one-half mile radius of the project site.

4.1.7 Federal RCRA Generators

The RCRA Generator list is maintained by the EPA to track facilities that generate hazardous waste.

- The project site is not listed as a RCRA Generator facility.
- The database search did identified one RCRA Generator within a quarter mile radius of the project site.
 - o Jim Turner INC at 123 Main Street, approximately 0.21-miles west of the project site, is listed as a small quantity generator of hazardous waste. There are no violations noted for the site.

4.1.8 Federal Institutional Control / Engineering Controls

A listing of sites with institutional and or engineering controls in place is maintained by the EPA. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- The project site is not listed as having an institutional or engineering control.
- The database search did not identify any federal institutional control / engineering control sites within a half mile radius of the project site.

4.1.9 Federal ERNS List

The Federal ERNS list is the Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The list is maintained by the National Response Center United States Coast Guard.

The project site is not listed on the ERNS List.

4.1.10 State-and Tribal- equivalent NPL (Superfund)

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- The project site is not listed on state- and tribal-equivalent NPL.
- The database search did not identify any state-and tribal equivalent NPL sites within a one-mile radius of the project site.

4.1.11 State and Tribal- Hazardous Waste Facilities

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Page 20 • PlaceWorks February 2023

- The project site is listed on the state-and tribal-hazardous waste facilities database.
 - o Proposed Manteca High School Addition of 206, 216 and 220 S Garfield Avenue. The District wanted to acquire adjacent three parcels and expand Manteca High School. Two of the parcels contained residences built in 1939 and the other parcel was vacant. In 2007 the site was investigated and had sampling collected and submitted a Phase I Addendum to the Department of Toxic Substances Control (DTSC). However, during DTSC review of the Phase I Addendum, the District withdrew the project from DTSC oversight and the cleanup status is listed as inactive needs evaluation as of October 17, 2007.
- The database search identified 11 state-and tribal-equivalent hazardous waste facilities within a mile radius of the project site.
 - O United Agri Products at 301 Wetmore Street, approximately 0.078-miles south southwest of the project site, is listed as a discovery site that was identified from a Food & Agriculture List for pest control operators (PCO) and a questionnaire is recorded as having been sent in July 1982. The status is listed as refer to other agency as of November 16, 1994.
 - OK Cleaners #1 at 162 Maple Avenue, approximately 0.29-miles northwest of the project site, is listed as a historical site and was a discovery site that was identified from a DMI list in 1982. The status is listed as refer to other agency as of November 16, 1994.
 - O Advanced Technology Interconnect INC at 55 Carnegie Street, approximately 0.30-miles south of the project site, is listed because the facility managed hazardous waste pursuant to a permit issued in 1995. In 2012, with the oversight of the DTSC, site investigations were conducted. Currently, the cleanup status is listed as No Further Action (NFA) as of April 16, 2013.
 - O Mainz Cleaners at 358 N Main Street, approximately 0.40-miles northwest of the project site, is listed as a historical site and was a discovery site that was identified from a DMI list in 1982. The status is listed as refer to other agency as of November 16, 1994.
 - O Qualex INC at 555 Industrial Park Drive, approximately 0.41-miles south of the project site, is listed as a tiered permit site and the status is listed as inactive needs evaluation.
 - o Indy Electronics at 400 Industrial Park Drive, approximately 0.43-miles south of the project site, is listed as a tiered permit site and the status is listed as inactive needs evaluation.
 - Olin Interconnect Technologies at 544 Industrial Park Drive, approximately 0.47-miles south of the project site, is listed because it operated as a permitted treatment facility until approval of closure in 1996. Currently, the cleanup status is listed as NFA as of December 31, 1995.

- o French Cleaners at 416 Yosemite Avenue, approximately 0.48-miles west of the project site, is listed as a historical site and was a discovery site that was identified from a DMI list in 1982. The status is listed as refer to other agency as of November 16, 1994.
- O Bobson Cleaners INC. at 600 N Main Street, approximately 0.67-miles north of the project site, is listed as it is currently under evaluation for potential contamination. The cleanup status is listed as active as of March 1, 2022. The site is located downgradient of the project site and it is unlikely to have had an impact.
- o South Manteca Elementary School at Tannehill Drive, approximately 0.85-miles north of the project site, is listed as a school investigation site that was formerly used for agricultural purposes. The cleanup status is listed as NFA as of May 18, 2001.

4.1.12 State and Tribal- Landfill and Solid Waste Disposal Sites

The database search did not identify any State Landfills or Solid Waste Disposal Sites within a one-half mile radius of the project site.

- O The project site is not listed on state- and tribal- landfill and solid waste disposal site lists.
- O The database search did not identify any state-and tribal Landfill and Solid Waste Disposal sites within a half mile radius of the project site.

4.1.13 State and Tribal Leaking Storage Tanks

The State Water Resources Control Board Leaking Storage Tank Information System contains an inventory of Leaking Underground Storage Tank (LUST) Incident Reports.

- The project site is listed on state- and tribal leaking underground storage tanks.
 - O The project site is listed due to a leak of diesel that was reported November 16, 1998. Currently, the case is listed as completed case closed as of September 7, 2007.
- The database search identified 32 separate LUST facilities within a half-mile radius of the project site.
 - O Rainwater Car Wash at 420 Yosemite Avenue is incorrectly mapped as being on the project site on the EDR database but is actually 0.6-miles west of the project site and outside the radius of concern for State and Tribal Leaking Storage Tanks. The case is under the active oversight of the local State Water Resources Control Board and is active as of February 2022.
 - O Agricultural Commission at 392 Moffat Boulevard, approximately 0.014-miles southwest of the project site, is listed due to a leak of gasoline reported on November 1, 1988. Currently the case is listed as completed case closed as of July 1, 2014. Based on the regulatory status of this facility is not expected to impact the project site.

Page 22 • PlaceWorks February 2023

- This case is listed twice in the EDR report.
- O 99 Auto Recycling (De Rose Property) at 430 Moffat Boulevard, approximately 0.016-miles south of the project site, is listed due to a leak of benzene, diesel, and gasoline reported in 2005. Currently, the case is listed as open inactive as of October 12, 2005.
- O Bob's Muffler at 466 Moffat Boulevard, approximately 0.016-miles south of the project site, is listed due to a leak of diesel and gasoline reported December 16, 1988. Currently, the case is listed as completed case closed as of May 16, 2011. Based on the regulatory status of this facility is not expected to impact the project site.
 - This case is listed twice in the EDR report.
- O Pitts Property at 203 Lincoln Lane, approximately 0.07-miles west of the project site, is listed due to a leak of gasoline reported December 11, 1987. Currently, the case is listed as completed case closed as of May 12, 1998. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O City of Manteca at 210 Wetmore Street, approximately 0.12-miles west southwest of the project site, is listed due to a leak of gasoline, MTBE / TBA / other fuel oxygenates reported August 9, 1999. Currently, the case is listed as completed case closed as of February 10, 2009. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O Eckert Cold Storage at 757 Moffat Boulevard, approximately 0.13-miles south southeast of the project site, is listed due to a leak of reported gasoline reported April 1, 1987. Currently, the case is listed as completed - case closed as of November 29, 2012. Based on the regulatory status of this facility it is not expected to impact the project site.
 - This case is listed three times in the EDR report.
- O Manteca Bean at 229 Moffat Boulevard, approximately 0.13-miles west of the project site, is listed due to a leak of gasoline March 6, 1987. Currently, the case is listed as completed case closed as of May 13, 1997. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
 - This case is listed twice in the EDR report.
- O Ponte's Car Wash Case #1 at 707 Yosemite Avenue, approximately 0.14-miles north of the project site, is listed due to a leak of diesel reported April 12, 1989. Currently, the case is listed as completed case closed as of March 19, 1996. Based on the regulatory status of this facility, it is not expected to impact the project site.
- O CKE Distribution Center at 800 Mellon Avenue, approximately 0.16-miles south of the project site, is listed due to a leak of diesel reported May 4, 1999. Currently, the case is listed

- as completed case closed as of May 18, 2007. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O 7-Eleven Food Store 2243-21756 at 853 Yosemite Avenue, approximately 0.17-miles northeast of the project site, is listed due to a leak of gasoline, MTBE / TBA / other fuel oxygenates reported May 7, 1999. Currently, the case is listed as completed case closed as of October 13, 2008. Based on the regulatory status of this facility it is not expected to impact the project site.
- O Lee Jennings Enterprises at 815 Moffat Boulevard, approximately 0.18-miles south southeast of the project site, is listed due to a leak of diesel reported December 14, 1994. Currently, the case is listed as completed case closed as of August 4, 1997. Based on the regulatory status of this facility it is not expected to impact the project site.
- O Sterling Transit at 410 Main Street, approximately 0.18-miles west of the project site, is listed due to a leak of diesel reported January 17, 1989. Currently, the case is listed as completed case closed as of March 30, 1989. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
 - This case is listed twice in the EDR report.
- O Claudio Dell'eva at 260 Main Street, approximately 0.19-miles west of the project site, is listed due to a leak of other solvent or non-petroleum hydrocarbon reported December 16, 1988. Currently, the case is listed as completed case closed as of March 19, 1996. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O Diamond Lumber at 151 Main Street, approximately 0.20-miles west of the project site, is listed due to a leak of gasoline reported April 12, 1990. Currently, the case is listed as completed case closed as of April 9, 2007. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O Manteca Express at 419 Main Street, approximately 0.13-miles west of the project site, is listed due to a leak of gasoline reported January 6, 1997. Currently, the case is listed as completed case closed as of April 28, 2009. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O Brophy Texaco (Former) at 941 Yosemite Avenue, approximately 0.22-miles northeast of the project site, is listed due to a leak of gasoline reported March 16, 1988. Currently, the case is listed as completed case closed as of November 27, 1996. Based on the regulatory status of this facility it is not expected to impact the project site.
- O E-Z Serve #100878 at 1012 Yosemite Avenue, approximately 0.27-miles northeast of the project site, is listed due to a leak of gasoline reported July 25, 1989. Currently, the case is

Page 24 • PlaceWorks February 2023

- listed as completed case closed as of May 26, 2004. Based on the regulatory status of this facility it is not expected to impact the project site.
- O Rino Gas (Diablo Gasoline) at 1001 Yosemite Avenue, approximately 0.28-miles northeast of the project site, is listed due to a leak of gasoline reported February 27, 1985. Currently, the case is listed as completed case closed as of April 16, 2010. Based on the regulatory status of this facility it is not expected to impact the project site.
- O Super Stop Market at 290 Main Street, approximately 0.31-miles northwest of the project site, is listed due to a leak of gasoline reported April 14, 1998. Currently, the case is listed as completed case closed as of February 15, 2012. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O 7-11 Store #2243-17647 at 1048 Yosemite Avenue, approximately 0.31-miles northeast of the project site, is listed due to a leak of gasoline reported August 2, 1989. Currently, the case is listed as completed case closed as of March 16, 2004. Based on the regulatory status of this facility it is not expected to impact the project site.
- O City of Manteca Public Works at 220 Oak Street, approximately 032-miles west of the project site, is listed due to a leak of gasoline reported September 18, 1992. Currently, the case is listed as completed case closed as of January 22, 1998. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
- O Pony Express Courier at 959 Moffat Boulevard, approximately 0.38-miles southeast of the project site, is listed due to a leak of gasoline reported September 19, 1983. Currently, the case is listed as completed case closed as of March 19, 1996. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
 - This case is listed twice in the EDR report.
- o MBP-Manteca at 983 Moffat Boulevard, approximately 0.41-miles southeast of the project site, is listed due to a leak of gasoline reported September 10, 1998. Currently, the case is listed as completed case closed as of April 29, 2008. Based on the regulatory status of this facility and its downgradient location, it is not expected to impact the project site.
 - This case is listed twice in the EDR report.
- ISE Labs Incorporated at 400-560 Industrial Park Drive, approximately 0.43-miles south of
 the project site, is listed due to a leak of petroleum and solvents reported in December 1998.
 Currently, the case is listed as open inactive as of December 2, 1998.
 - This case is listed twice in the EDR report.
- O Former Spreckels Sugar Company at 407 Spreckels Avenue, approximately 0.43-miles southeast of the project site, is listed due to a leak. Currently, the case is listed as completed -

- case closed as of July 26, 2018 and there is a land use covenant on the site. Based on the regulatory status of this facility it is not expected to impact the project site.
- O Schwan's Home Service Manteca at 575 Industrial Park Drive, approximately 0.46-miles south of the project site, is listed due to a leak of aviation and petroleum/fuels/oils reported January 2, 1965. Currently, the case is listed as completed as of June 4, 2018. Based on the regulatory status of this facility it is not expected to impact the project site.
- O French Cleaners at 416 Yosemite Avenue, approximately 0.47-miles west of the project site, is listed due to a leak of tetrachloroethylene (PCE), trichloroethylene (TCE) discovered in 2003. Currently, the case is listed as open inactive as of August 5, 2013.

4.1.14 State and Tribal Registered Storage Tanks

The State Water Resources Control Board's Hazardous Substance Storage Container Database maintains a list of tanks regulated by the Resource Conservation and Recovery Act.

- The project site is listed on the registered storage tank list.
 - o MUSD Grounds Shop at 660 Mikesell Street is listed as two inactive USTs. The USTs were removed and in 2007 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- The database search identified 30 registered storge tank facilities within a quarter mile radius of the project site.
 - o SJC Dept of AG Manteca at 392 Moffat Boulevard, approximately 0.006-miles southwest of the project site, is listed as having inactive permits for three USTs. The three tanks were pulled in 1988 and in 2014 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
 - o Bobs Muffler & Radiator at 466 Moffat Boulevard, approximately 0.018-miles south of the project site, is listed as having inactive permits for three USTs. The three tanks were pulled in 1988 and in 2011 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
 - o Texaco USA 411 Yosemite Avenue, approximately 0.019-miles north of the project site, is listed as having inactive permits for four USTs. The San Joaquin County Environmental Health Department lists the tanks as having been abandoned in 1986. The facility ID is listed as FA0005530.

Page 26 • PlaceWorks February 2023

- Edward Pitts Property at 203 Lincoln Lane, approximately 0.07-miles west of the project site, is listed as having an inactive permit for one UST. The tank was pulled in 1986 and the case is listed as completed case closed as of May 12, 1998.
- O City of Manteca Vehicle Maintenance at 205 E Wetmore Street, approximately 0.98-miles southwest of the project site, is listed as having inactive permits for three USTs. The tanks were pulled in 1999 and in 2009 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
 - This case is listed three times in the EDR report.
- O Concrete INC at 450 Wetmore Street, approximately 0.11-mile south of the project site, is listed as having an inactive permit for one UST. The tank was pulled in 1990 and in 1993 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- O Eckert Cold Storage at 757 Moffat Boulevard, approximately 0.13-miles south southeast of the project site, is listed as having permits for ASTs. The CERS ID for the facility is listed as 10182409. The site is also listed as having inactive permits for four USTs. The tanks were pulled in 1995 and in 2012 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
 - This case is listed twice in the EDR report.
- O Manteca Bean at 229 Moffat Boulevard, approximately 0.13-miles west of the project site, is listed as having an inactive permit for a UST. The tank was pulled in 1986 and the case is listed as completed – case closed as of May 13, 1997.
- O Quicki Kleen Car Wash at 707 Yosemite Avenue, approximately 0.14-miles north of the project site, is listed as having an inactive permit for an UST. The tanks were pulled in 1999 and in 2004 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- O Lambs Auto Sales at 777 Yosemite Avenue, approximately 0.15-miles north of the project site, is listed as having inactive permits for three USTs. The tanks were pulled in 1990 and in 1993 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- o Fleet Maintenance at 120 Wetmore Street, approximately 0.15-mile west of the project site, is listed as having permits for ASTs. The CERS ID for the facility is listed as 10609636.
- o Quick & Easy Food Mart at 824 Yosemite Avenue, approximately 0.15-mile northeast of the project site, is listed as having an active permit for a UST. The facility ID is listed as FA0008600

- and the CERS ID is listed as 10181295. The permit is through the San Joaquin County Environmental Health Department.
- o MBM, INC. at 800 Mellon Avenue, approximately 0.16-mile south of the project site, is listed as having inactive permits for two USTs. The facility is also listed as having a permit for an AST. The CERS ID is listed as 10181315.
 - This case is listed three times in the EDR report.
- o 7-Eleven INC. Store #21756 at 853 E Yosemite Avenue, approximately 0.17-mile northeast of the project site, is listed as having inactive permits for five USTs. The tanks were pulled in 1999 and in 2008 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- O Lee Jennings Target Express INC at 815 Moffat Boulevard, approximately 0.18-mile south southeast of the project site, is listed as having an inactive permit for a UST. The tank was pulled in 1994 and in 1997 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- o Raymond at 812 Moffat Boulevard, approximately 0.18-mile south of the project site, is listed as having an inactive permit for a UST. The tank was pulled in 1986. The facility ID is listed as FA0006163.
- O Manteca Multimodal Station at 260 Main Street, approximately 0.19 west of the project site, is listed as having inactive permits for two USTs. The tanks were pulled in 1989 and in 1996 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- o 76 Express Market at 419 Main Street, approximately 0.21 west of the project site, is listed as having inactive permits for three USTs. The tanks were pulled in 1996 and in 2009 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action.
- o Manteca Equipment Rental at 616 Main Street, approximately 0.21 west southwest of the project site, is listed as having inactive permits for two USTs. The facility ID is listed as FA0009080. The CERS ID is listed as 10182395.
- O Los Amigos Tire & Wheel at 123 Main Street, approximately 0.21 west of the project site, is listed as having inactive permits for two USTs. The tanks were pulled in 1987 and in 1994 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action. The facility ID is listed as FA0006057.

Page 28 • PlaceWorks February 2023

- Dons Mobile Glass at 151 Main Street, approximately 0.21 west of the project site, is listed as having inactive permits for two USTs. The tanks were pulled in 1997 and in 2007 the case is listed as completed case closed. The facility ID is listed as FA0005075.
- O Texaco Service Station at 941 Yosemite Avenue, approximately 0.22 northeast of the project site, is listed as having inactive permits for five USTs. The tanks were pulled in 1988 and in 1996 the case is listed as completed case closed. The facility ID is listed as FA0005531.
- O German Car Rental at 461 Powers Avenue, approximately 0.24 southeast of the project site, is listed as having an inactive permit for one UST. The tanks were pulled in 1991 and in 1993 the San Joaquin County Environmental Health Department issued a NFA for the site and tank pull based on the completion of a site investigation and corrective action. The facility ID is listed as FA0005207.

4.1.15 State and Tribal Voluntary Cleanup Site

The DTSC maintains a list of low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

- The project site is not listed on the state and tribal voluntary cleanup program.
- The database did not identify any state and tribal voluntary cleanup program sites within a half mile radius of the project site.

4.1.16 State and Tribal Brownfield Sites

- The project site is not listed on the state and tribal brownfield site database.
- The database did not identify any state and tribal brownfield sites within a half mile radius of the project site.

4.1.17 HAZNET

The California Environmental Protection Agency, Department of Toxic Substances Control maintains a list of facility and manifest data. The Hazardous Waste Information System (HAZNET) database includes information hazardous waste shipments for generators, transporters, and TSDFs.

- The project site is listed on the HAZNET Hazardous Waste Tracking System database.
 - o In 2021 laboratory waste chemicals were transferred off site.
 - o In 2020 asbestos containing waste and latex waste were transferred to a landfill.

- o In 2019 laboratory waste chemicals, asbestos containing waste, and inorganic solid waste were transferred off site.
- o In 2014 asbestos containing waste was transferred to a landfill.
- In 2012 asbestos containing waste was transferred to a landfill.
- o In 2010 photo chemicals and photo processing waste were transferred to a landfill.
- o In 2009 laboratory waste chemicals were transferred off site.
- o In 1997 asbestos containing waste was transferred to a landfill.
- o In 1987 asbestos containing waste was transferred to a landfill.
- o In 1984 and 1985 asbestos containing waste was transferred to a landfill.

4.1.18 CERS HAZ Waste and CA CERS

CERS Haz Waste is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator and RCRA LQ HW Generator Program. CERS is the CalEPA database that combines data about environmentally regulated sites and facilities from a variety of regulated activities across the spectrum of environmental programs including hazardous materials and waste. There were 23 CA CERS sites identified within the radius of concern.

- Manteca High School is listed as a hazardous waste generator and as a chemical storage facility. The CERS ID is listed as 10182385 and the site ID is listed as 46326. In 2021, the school had laboratory waste chemicals transferred off site. In 2020, the school had asbestos containing waste and laboratory waste chemicals transferred to a landfill. In 2019 laboratory waste chemicals, inorganic solid waste, and asbestos containing waste were transferred off-site. In January 2019 the school was cited for failure to prepare a uniform hazardous waste manifest and failure to properly label hazardous waste containers, but it is noted that the school returned to compliance in February 2019. The campus is also listed as a CERS site due to construction of a storm water drain and has the CERS ID 882684 and the site ID 585131.
- o Rainwater Car Wash at 420 Yosemite Avenue, adjacent to the north of the project site, is listed as a Leaking UST cleanup site. The case is discussed in section 4.1.13.
- Joe's Auto Repair at 469 Moffat Boulevard, adjacent to the south of the project site, is listed as a hazardous waste generator and a chemical storage facility. The CERS ID is listed as 10187029 and the site ID is listed as 40208. In March 2022, the site was cited for failure to have at least one employee available to respond to an emergency by reaching the facility within a short period of time, but it is noted that they returned to compliance in April 2022.

Page 30 • PlaceWorks February 2023

- o Bill's Alignment & Brake at 469 Moffat Boulevard, adjacent to the south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10185027 and the site ID is listed as 363460. In January 2020, the site was cited for failure to manage empty containers that previously held hazardous material/waste, but it is noted that they returned to compliance in January 2020.
- O'Reilly Auto Parts #3501 at 469 Moffat Boulevard, adjacent to the north of the project site, is listed as a hazardous waste generator and as a chemical storage facility. The CERS ID is listed as 10401907 and the site ID is listed as 139331. In 2020, the facility was inspected by a local agency and no violations were noted.
- O Brake Masters #164 at 515 Yosemite Boulevard, approximately 0.027-miles north of the project site, is listed as a hazardous waste generator, a chemical storage facility, and as having an AST for petroleum. The CERS ID is listed as 10184551 and the site ID is listed as 13341. In October 2020 the site was cited for failure to complete and submit business owner operator identification page and a site map with all required content, but it is noted that they returned to compliance in October 2020.
- O Gold Coast Lift Trucks Inc. at 335 Wetmore Street, approximately 0.080-miles south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10824517 and the site ID is listed as 556590. In September 2019 the site was cited for failure to properly manage used oil and/or fuel filters in accordance with the requirements and failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days, but it is noted that they returned to compliance by October2019.
- O Jacks Transmission Repair at 275 Moffat Boulevard, approximately 0.082-miles west of the project site, is listed as a hazardous waste generator and chemical storage facility. The CERS ID is listed as 10186673 and the site ID is listed as 39258. In March 2022 the site was cited for failure to provide initial and annual training to all employees in safety procedures.
- O Conco-West Inc. at 322 Wetmore Street, approximately 0.10-miles south of the project site, is listed as a hazardous waste generator, a chemical storage facility, and as having an AST for petroleum. The CERS ID is listed as 10182579 and the site ID is listed as 21281. In February 2019 the site was cited for failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days, but it is noted that they returned to compliance in March 2019.
- O Concrete Inc. (Manteca) at 450 Wetmore Avenue, approximately 0.11-miles south of the project site, is listed as a hazardous waste generator and chemical storage facility. The CERS ID is listed as 10182897 and the site ID is listed as 21319. In July 2020 the site was cited for failure to complete and electronically submit a site map with all required content, but it is noted that they returned to compliance in October 2020.
- O Anthony's Auto Repair at 265 Moffat Boulevard, approximately 0.11-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10644427 and the site

ID is listed as 358506. In September 2015 the site was cited for failure to maintain uniform hazardous waste manifest and failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response, but it is noted that they returned to compliance in November 2015.

- O Pro-Touch Auto Repair at 265 Moffat Boulevard, approximately 0.11-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10183055 and the site ID is listed as 145073.
- On The Spot Auto Care at 710 Yosemite Avenue, approximately 0.12-miles north of the project site, is listed as a hazardous waste generator and chemical storage facility. The CERS ID is listed as 10184267 and the site ID is listed as 517830. In September 2013 the site was cited for administration documentation violation, but it is noted that they returned to compliance in November 2013.
- Eckert Cold Storage at 757 Moffat Boulevard, approximately 0.13-miles south southeast of the project site, is listed as a hazardous waste generator, a chemical storage facility, and as having an AST. The CERS ID is listed as 10182409 and the site ID is listed as 391989. In January 2020 the site was cited for failure to complete and submit a site map with all required content, but it is noted that they returned to compliance in January 2020.
- O Dabb Corporation at 707 Yosemite Avenue, approximately 0.14-miles north of the project site, is listed as a household hazardous waste collection site and as a UST site. The CERS ID is listed as 10182307 and the site ID is listed as 59546. In October 2019 the site was cited for failure to have a current UST monitoring plan available on site, but it is noted that they returned to compliance in October 2020.
- o Fleet Maintenance at 120 Wetmore Street, approximately 0.15-miles west of the project site, is listed as a hazardous waste generator and as having an AST. The CERS ID is listed as 10609636 and the site ID is listed as 30575.
- Kelly Moore Paint Company at 210 Main Street, approximately 0.17-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10481704 and the site ID is listed as 436340.
- Road King Repair Inc. at 600 Main Street, approximately 0.18-miles southwest of the project site, is listed as a hazardous waste generator and a chemical storage facility. The CERS ID is listed as 10187609 and the site ID is listed as 359973. In July 2020 the site was cited for failure to complete and submit an adequate emergency response plan and procedures for a release, but it is noted that they returned to compliance in July 2020.
- O Lee Jennings Target Express Inc. at 815 Moffat Boulevard, approximately 0.18-miles south southeast of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10181365 and the site ID is listed as 130141.

Page 32 • PlaceWorks February 2023

- O DBA Circle-K at 419 Main Street, approximately 0.21-miles west southwest of the project site, is listed as a hazardous waste generator, chemical storage facility, and as having a UST. The CERS ID is listed as 10181307 and the site ID is listed as 1668. In May 2019 the site was cited for failure to maintain secondary containment, but it is noted that they returned to compliance in December 2020.
- O Dollar General #14353 at 915 Yosemite Avenue, approximately 0.21-miles north northeast of the project site, is listed as a hazardous waste generator and chemical storage facility. The CERS ID is listed as 10413154 and the site ID is listed as 391616. In February 2019 the site was cited for failure to provide initial and annual training to all employees in safety procedures, but it is noted that they returned to compliance in November 2021.
- Northern Tire & Wheel at 123 Main Street, approximately 0.22-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10833160 and the site ID is listed as 562911.
- O AutoZone #3335 at 147 Main Street, approximately 0.24-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10140033 and the site ID is listed as 386907.

4.1.19 Orphan Sites

The EDR database did identify three sites that were indicated as being potentially in the area and were not mapped due to incomplete address information.

- Spreckels Sugar Company at 18800 S Spreckels Road, approximately 0.41-miles southeast of the project site, is discussed in section 4.1.4.
- Sedan Avenue Property at the intersection of Sedan Avenue and Manteca Road, is located approximately 2.5-miles south southwest of the project site and is outside the radius of concern.
- 7-Eleven Inc. #41530 at 1110 N Main Street is listed as a hazardous waste generator. The site ID is listed as 611855 and the CERS ID is listed as 10899421. The site is approximately 1.3-miles north of the project site and is outside of the radius of concern.

4.2 ADDITIONAL ENVIRONMENTAL RECORDS REVIEW

In conformance with ASTM inquiry was made with the additional agencies described below.

4.2.1 Local Brownfield Lists

The DTSC's Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. There were no brownfield sites identified on the EnviroStor database in the radius searched for the project site.

4.2.2 Local Lists of Hazardous Waste Contaminated Sites

A record search was done on the following databases: CERS HAZ Waste, Clandestine Drug Labs, HIST Cal-Sites Historical CalSites Database, and Toxic Pits Cleanup Act Sites. School Property Evaluation Program records were also searched.

- The project site was identified on the CERS Hazardous Waste databases as a hazardous waste generator. The project site's CERS ID is listed as 10182385 and the site ID is listed as 46326.
- The database search identified 21 local hazardous waste contaminated sites within a quarter mile radius of the project site.
 - O Joe's Auto Repair at 469 Moffat Boulevard, adjacent to the south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10187029 and the site ID is listed as 40208
 - Bill's Alignment & Brake at 469 Moffat Boulevard, adjacent to the south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10185027 and the site ID is listed as 363460
 - O'Reilly Auto Parts #3501 at 469 Moffat Boulevard, adjacent to the north of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10401907 and the site ID is listed as 139331.
 - o Brake Masters #164 at 515 Yosemite Boulevard, approximately 0.027-miles north of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10184551 and the site ID is listed as 13341.
 - O Gold Coast Lift Trucks Inc. at 335 Wetmore Street, approximately 0.080-miles south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10824517 and the site ID is listed as 556590.
 - Jacks Transmission Repair at 275 Moffat Boulevard, approximately 0.082-miles west of the project site, is listed as a hazardous waste generator and chemical storage facility. The CERS ID is listed as 10186673 and the site ID is listed as 39258.
 - O Conco-West Inc. at 322 Wetmore Street, approximately 0.10-miles south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10182579 and the site ID is listed as 21281.
 - O Concrete Inc. (Manteca) at 450 Wetmore Avenue, approximately 0.11-miles south of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10182897 and the site ID is listed as 21319.

Page 34 • PlaceWorks February 2023

- Anthony's Auto Repair at 265 Moffat Boulevard, approximately 0.11-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10644427 and the site ID is listed as 358506.
- Pro-Touch Auto Repair at 265 Moffat Boulevard, approximately 0.11-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10183055 and the site ID is listed as 145073.
- On The Spot Auto Care at 710 Yosemite Avenue, approximately 0.12-miles north of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10184267 and the site ID is listed as 517830.
- Eckert Cold Storage at 757 Moffat Boulevard, approximately 0.13-miles south southeast of the project site, is listed as a hazardous waste generator. The CERS ID for the facility is listed as 10182409 and the site ID is listed as 391989.
- Dabb Corporation at 707 Yosemite Avenue, approximately 0.14-miles north of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10182307 and the site ID is listed as 59546.
- Fleet Maintenance at 120 Wetmore Street, approximately 0.15-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10609636 and the site ID is listed as 30575.
- o Kelly Moore Paint Company at 210 Main Street, approximately 0.17-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10481704 and the site ID is listed as 436340.
- o Road King Repair Inc. at 600 Main Street, approximately 0.18-miles southwest of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10187609 and the site ID is listed as 359973.
- o Lee Jennings Target Express Inc. at 815 Moffat Boulevard, approximately 0.18-miles south southeast of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10181365 and the site ID is listed as 130141.
- DBA Circle-K at 419 Main Street, approximately 0.21-miles west southwest of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10181307 and the site ID is listed as 1668.
- Dollar General #14353 at 915 Yosemite Avenue, approximately 0.21-miles north northeast of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10413154 and the site ID is listed as 391616.

- Northern Tire & Wheel at 123 Main Street, approximately 0.22-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10833160 and the site ID is listed as 562911.
- AutoZone #3335 at 147 Main Street, approximately 0.24-miles west of the project site, is listed as a hazardous waste generator. The CERS ID is listed as 10140033 and the site ID is listed as 386907.

4.2.3 Local Lists of Registered Storage Tanks

A search of the County of San Joaquin Environmental Management Department records showed that the project site is included as facilities within the County with potentially hazardous materials. The County maintains copies of inspection reports for the campus. Furthermore, a record search was done of the local lists of registered storage tanks. There were 26 registered UST sites identified with 0.25 miles of the project site.

4.2.4 High Risk Historical Records

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and dry cleaners. There were 5 historical facilities identified within the searched radius.

- o French Cleaners at 416 Yosemite Avenue, north of the project site, is listed as having been a dry cleaner's from 1993 until 2014.
- o Rainwater Corporation at 420 Yosemite Avenue, north of the project site, is listed as having been a gasoline service station from 1969 until 1994.
- Harden's Texaco Service at 411 Yosemite Avenue, north of the project site, is listed as having been a gasoline service station from 1971 until 1983.
- o Monks Grady & Edith at 531 Moffat Boulevard, south of the project site, is listed as having been a gasoline service station from 1971 to 1972.
- o Performance Machine at 275 Moffat Boulevard, west of the project site, is listed as having been an automotive repair shop station from 1976 until 2014.

4.2.5 State of California Geologic Energy Management Division

A review of California Division of Geologic Energy Management (CalGEM) Well Finder indicates that there are no oil wells or oil fields in the vicinity of the project site. The closest oil well is located approximately 0.25 miles south of the project site. The well is identified as dry plugged hole that was advanced by Occidental Petroleum Corporation. (CalGEM 2022).

Page 36 • PlaceWorks February 2023

4.2.6 San Joaquin Valley Air Pollution Control District

The San Joaquin Valley Air Pollution Control District Public Permits Information Portal website was searched for the project site (SJVAPCD 2023). The project site was not labeled as a permitted facility. The closest site listed is Eckert Cold Storage at 757 Moffat Boulevard for agricultural products processing.

4.2.7 Vapor Migration

The ASTM 1527-21 standard states that "for the purposes of this practice, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether we perceive a risk of vapor migration to the project site.

To assess a vapor migration risk according to the ASTM E2600-15 standard, a review and analysis of the sitespecific environmental database report and other reasonably ascertainable records was implemented to assess whether:

- 1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
- 2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on the records review, it is unlikely that a potential source of vapor migration currently exists beneath the site from off-site properties. No chlorinated VOC contamination was identified, and off-site underground storage tanks were not identified adjacent or within 30 feet of the project site.

4.2.8 User-Provided Information

The ASTM Standard requires disclosure in the Phase I ESA report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs or HRECs, or whether the user has determined that the property's Title contains environmental liens or other information related to environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations, as defined by ASTM. In addition, we are required by the ASTM Standard to inquire whether the user of the report has prior knowledge that the price of the property has been reduced for environmentally related reasons.

PlaceWorks was informed by the user that to their knowledge there are no liens or other information about the environmental condition of the property in the Title. In addition, the user was not aware of specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs with the exception of the information provided above, and has not indicated that the price of the property has been reduced for environmentally-related reasons.

This page intentionally left blank.

Page 38 • PlaceWorks February 2023

Site Reconnaissance and Key Personnel Interview(s)

Current site conditions were observed during a reconnaissance to observe site conditions was conducted by PlaceWorks on January 30, 2023. No weather-related conditions or other conditions that would limit our ability to observe the site occurred during our site reconnaissance. PlaceWorks personnel observed the exterior portions of the property, including the property boundaries. PlaceWorks was unaccompanied during the site visit. Site photographs from the reconnaissance are included in Appendix C.

ASTM requires that the current site owner or Key Site Manager and user, if different from the current owner or Key Site Manager, be asked if there are any helpful documents or information that can be made available for review. These consist of environmental site assessment reports, audits, permits, tank registrations, Material Safety Data Sheets, Community Right-to-Know plans, safety plans, hydrogeologic or geotechnical reports, or hazardous waste generator reports.

5.1 CURRENT USE OF THE PROPERTY

The project site is comprised of four separate areas including two portions of Manteca High School at 450 E. Yosemite Avenue and 230 S. Garfield Avenue totaling 3.35-acres in the City of Manteca, San Joaquin County (Assessor's Parcel Numbers 221-09-020 and 221-09-017), five parcels totaling 1.09 acres on Mikesell Avenue (510, 524, 534, 544, and 554 Mikesell Avenue) and two parcels totaling 0.73 acres on Moffat Boulevard (419 and 453 Moffat Boulevard).

5.2 SITE VISIT OBSERVATIONS

5.2.1 General Description of Structures

Buildings in the northwestern portion (along S Sherman Avenue) of the site include wing 20 through wing 80. These buildings are well-maintained and used as classrooms for staff and students. There are no buildings in the southwestern portion of the site (along Moffat Boulevard); this site is currently under construction and appears to be recently graded. In the northern-central portion of the site, there are no buildings at the following addresses: 510, 524, 534, and 554 Mikesell Avenue; however, there are two residential structures at 554 and 558 Mikesell Avenue. These two structures are slated for demolition in the near future.

5.2.2 Heating and Cooling System

Central heating and cooling systems are present for the school buildings.

Site Reconnaissance and Key Personnel Interview(s)

5.2.3 Potable Water Supply and Sewage Disposal System or Septic Systems

Potable water is provided by the City of Manteca Water Division, under the City Department of Public Works. Sewage disposal systems are provided by the City of Manteca which operates and maintains approximately 243 miles of sanitary sewer mains and the City of Manteca Wastewater Quality Control Facility.

5.2.4 Use and Storage of Petroleum Products and Hazardous Materials

No use or storage of petroleum products or hazardous materials was observed on the project site.

5.2.5 Vehicle Maintenance Lifts

No vehicle maintenance lifts were observed at the project site.

5.2.6 Emergency Generators and Sprinkler System Pumps

No generator or sprinkler system pumps were observed on the project site.

5.2.7 Polychlorinated Biphenyls (PCBs) Associated with Electrical or Hydraulic Equipment

There is one pad mounted transformer on the site on the north side of wing 80. This transformer had no signs of leakage.

5.2.8 Floor Drain and Sumps

No floor drains and sumps were observed at the project site.

5.2.9 Catch Basins

No catch basins were observed on the project site.

5.2.10 Dry Wells

No dry wells were observed at the project site.

5.2.11 Pits, Ponds, Lagoons, and Pools of Liquid

No pits, ponds, lagoons, or pools of liquid were observed at the project site.

5.2.12 Odors

No odors were observed at the project site.

Page 40 • PlaceWorks February 2023

5. Site Reconnaissance and Key Personnel Interview(s)

5.2.13 Stains or Corrosion on Floors, Walls, or Ceilings

Stains and corrosion were not observed on floors, walls, or ceilings at the project site.

5.2.14 Stained Soil or Pavement

Stained soil or pavement were not observed at the project site.

5.2.15 Stressed Vegetation

No stressed vegetation was observed at the project site.

5.2.16 Solid Waste and Evidence of Waste Filling

Solid waste was observed at 554 and 558 Mikesell Avenue. Waste was scattered throughout those parcels and inside the two residential structures. The structures are slated for demolition in the near future and the trash will be collected and disposed of properly. No evidence of waste filling was observed.

5.2.17 Wastewater and Stormwater Discharge

No wastewater discharge was observed on the project site. Stormwater is expected to exit the project site via overland flow to local roadways and creeks.

5.2.18 Monitoring, Water Supply, or Irrigation Wells

No monitoring, water supply or irrigation wells were observed at the project site. An irrigation well was observed on the adjoining property south of the 534 Mikesell Avenue parcel.

5.3 INTERVIEWS

A questionnaire was completed by Mr. Aaron Bowers. Mr. Bowers was not aware of any leaks, spills, or discharges of hazardous materials to the parcels or adjacent to the parcels. Mr. Bowers was not aware of any environmental cleanup liens against the properties nor was he aware of any land use limitations due to environmental issues. He was also not aware of any environmental cleanups, spills, or chemical releases that may have occurred on the project site. The questionnaire is included in Appendix D.

5. Site Reconnaissance and Key Personnel Interview(s)

This page intentionally left blank.

Page 42 • PlaceWorks February 2023

6. Data Gap Identification

Adjacent landowners were not interviewed for this Phase I Environmental Site Assessment. No adjacent sites of concern were identified in the database search. The database search contained in Appendix B indicates that the project site is not on the Recorded Environmental Cleanup Liens database which is maintained by the DTSC and contains a listing of liens placed upon real properties. The project site is also not listed on the DTSC's Deed Restriction database which lists sites with DTSC with restricted land use. The project site is not listed on NPL Liens, a database the EPA maintains on real property, in order to recover remedial action expenditures when the property owner has received notification of potential liability.

6. Data Gap Identification

This page intentionally left blank.

Page 44 • PlaceWorks February 2023

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of the Manteca Unified School District (District) for the property located at Manteca High School in the City of Manteca, San Joaquin County, California (Figures 1 and 2). The project site consists of nine parcels located in the City of Manteca. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-21 Standard, and discussed in the Introduction section of this report.

The site includes portions of APNs 221-090-20 and 221-090-17 on the current Manteca High School Campus. In addition, the District has recently acquired five parcels totaling 1.09 acres on Mikesell Avenue (510, 524, 534, 544, and 554 Mikesell Avenue) and two parcels totaling 0.73 acres on Moffat Boulevard (419 and 453 Moffat Boulevard) as described in the table below:

Manteca High School Campus		
Address	Accessor Parcel Number	Acres
450 E. Yosemite Avenue	221-090-20 (Portion)	3.10
230 S. Garfield Avenue	221-090-17 (Portion)	0.25
Former Retail/Motel		
Address	Accessor Parcel Number	Acres
419 Moffat Boulevard	221-080-01	0.21
453 Moffat Boulevard	221-080-02	0.52
Residential	<u> </u>	
Address	Accessor Parcel Number	Acres
510 Mikesell Avenue	221-090-15	0.16
524 Mikesell Avenue	221-180-12	0.27
534 Mikesell Avenue	221-180-11	0.19
544 Mikesell Avenue	221-180-10	0.20
554 Mikesell Avenue	221-180-09	0.27
Total Acreage:		5.17

Figure 1 depicts the regional location of the project site, Figure 2 shows the local vicinity of the project site, and Figure 3 is an aerial photograph showing the current conditions of the project site. Regional access to the

site is provided by the State Route 99, approximately 0.84-mile east of the project site. Local access is from Yosemite Avenue, Garfield Avenue, Moffat Boulevard, and Mikesell Avenue (Figure 3).

The objective of a Phase I ESA is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the project site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the project site. Our opinion regarding a REC's potential impact on the project site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-21 Standard defines an REC (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition. RECs were not identified at the project site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-21 Standard defines an HREC as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

No HRECs were identified for the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous. substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."

This Phase I ESA has revealed no evidence of CRECs in connection with the project site following the ASTM standard

BUSINESS ENVIRONMENTAL RISK

Page 46 • PlaceWorks February 2023

A business environmental risk is defined by ASTM E 1527-21 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, and is not necessarily an issue required to be investigated under ASTM E 1527-21 practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Our review identified there have been structures on the site that predate 1978. Based on the time frame of some of the existing and former structures on the site there is the potential for residual organochlorine pesticides and lead in shallow soils. An addendum to this Phase I has been implemented and will be submitted after all sampling data has been reported.

SUMMARY

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the project site. Any exceptions to, or deletions from, this practice are described in Section 1 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, historical environmental conditions, or significant data gaps in connection with the subject property.

8. Credentials

We declare to the best of our professional knowledge and belief, that we meet the definition of Environmental Professional as defined in the ASTM Standard. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the project site property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Qualifications information for the project personnel is provided in Appendix E.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

Asearch of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of PlaceWorks on Dec 08, 2022.

TARGET PROPERTY

450 E Yosemite Avenue Manteca, CA 95336

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: YES

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- ICC: The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections): This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- Jurisdiction: This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- GC: General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- HVAC (Mechanical, Heating & Air companies): HVAC = Heating, Ventilation, and Air Conditioning.
- ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):

 Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- "Pull" a permit: To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- Planning Department: The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- PIN (TMS, GIS ID, Parcel#): Property Identification Number and Tax Map System number.
- State Card (Business license): A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000 Permit Type: Bldg -

New Permit Number: 101000000405 Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

Anetwork of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- · access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

Contact: Mike Watson

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PlaceWorks were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 3AF2-4982-9690

PO # MANT-06.0

Project Manteca HS Improvements

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3AF2-4982-9690

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIFECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Copyright 2022 by Environmental Data Resources, LLC. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, LLC, or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, LLC or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

450 E YOSEMITE AVENUE MANTECA, CA 95336

COORDINATES

Latitude (North): 37.7942640 - 37[^] 47[^] 39.35[^] Longitude (West): 121.2100000 - 121[^] 12[^] 36.00[^]

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 657605.6 UTM Y (Meters): 4184292.5

Elevation: 38 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SPRECKELS DEVELOPMEN Site ID: 0902654	18800 S SPRECKLES RD	ESE 1/4 - 1/2 (0.413 mi.)	201	825
EPA Id: CAT000624635				

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EPA ID:: CAD981687809			

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 29 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 9 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 25 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 42 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/03/2022 has revealed that there are 5 FINDS sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2021 has revealed that there are 2 HAZNET sites within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 07/18/2022 has revealed that there are 3 CERS sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

Cleaner site within approximately 0.125 miles of the target property.

Citation: 22 CCR 12 66262.20 - California Code of Regulations, Title 22, Chapter

12, Section(s) 66262.20

Violation Description: Failure to prepare a Uniform Hazardous Waste Manifest and, if

necessary, a Continuation Sheet, before the transport of a hazardous

waste off-site for transfer, treatment, storage, or disposal.

Violation Notes: Returned to compliance on 02/13/2019. Lab pack hazardous waste was

transported off site for disposal on 2/24/17,

5/26/17,11/21/17,2/23/18,5/25/18, and 11/27/18 without first preparing a uniform hazardous waste manifest. A generator shall prepare a Uniform Hazardous Waste Manifest on EPA Form 8700-22 prior to the transport of a hazardous waste for off-site transfer, treatment, storage or disposal. Ensure that a manifest is prepared each time hazardous waste is transported for off site transfer, treatment,

storage or disposal.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22,

Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and

> portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical

characteristics of the Hazardous Waste, and starting accumulation

Violation Notes: Returned to compliance on 02/13/2019. One yellow 30 gallon metal

> container with used absorbent located in the welding room observed with no hazardous waste label. All hazardous waste containers shall be marked with the following information: - the words Hazardous Waste name and address of generator - hazardous properties - physical state - composition (contents) - accumulation start date Immediately label these containers and ensure that all containers are marked with all the required information. Since it cannot be determined how long the one yellow 55 gallon metal container with used absorbent located in the welding room observed with no hazardous waste label. has been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the

EHD.

> > RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Description: Plumber was using industrial strength, it reacted

with chlorine already in sewer line. Violent reaction caused chemical burn and required hospitalization at Doctor's Hospital in Manteca. Fire Dept. neutralized chemicals on scene.

Aquifer used for drinking water supply Potential Media Affect:

Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Benzene,

Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Toluene,

Xylene

Site History: Three underground storage tanks were removed from the site in

December 1998. Soil sample were collected from beneath the tanks and reported petroleum hydrocarbon contamination. Between April 1999 and

September 2002, six soil borings, four cone penetrometor test borings, twelve groundwater monitoring wells and one groundwater extraction well were installed onsite. Interim remediation by

groundwater extraction began in January 2002.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Chapter 1, Section(s) 262.34(d)(5)(i)

Violation Description: Failure to have at least one employee either on the premises or on

call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for

coordinating all emergency response measures.

Violation Notes: Returned to compliance on 04/18/2022. OBSERVATION: A current modified

contingency plan with an assigned emergency coordinator was not posted at the facility. REGULATION GUIDANCE: The emergency coordinator or his designee must respond to any emergencies that arise. The business operator must post the following information next to telephones or in areas directly involved in the generation and accumulation of hazardous waste: the name and emergency telephone number of the emergency coordinator, the location of fire extinguishers and spill control material, and the telephone number of the fire department unless the facility has a direct alarm. CORRECTIVE ACTION: Immediately

post the required information at the facility. Provide a statement to the San Joaquin County Environmental Health Department that the

correction is complete.

Violation Date: 01-16-2020

Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter

11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity

that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner

liner to a person who reclaims its scrap value; or (3) By

reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being

emptied.

Violation Notes: Returned to compliance on 01/16/2020. OBSERVATION: The following were

observed in the hazardous waste storage area: -One empty 55 gallon drum labeled drained used oil filters. Operator states that he does not use drum for used metal oil filters as of early last year. He used

5 gallon bucket for drained used metal oil filters, since this

business does not generate that much. REGULATION GUIDANCE: Empty

containers which previously held a hazardous material, including hazardous waste must be managed per Title 22 California Code of Regulations (CCR) section 66261.7. Refer to this section and California Department of Toxic Substances Control guidance for more

information. CORRECTED ON SITE.

submit a copy of the manifest to the EHD. San Joaquin County Environmental Health

Violation Program: HW
Violation Source: CERS,

Evaluation:

Violation Division:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 01-12-2016 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Complete and submit a copy of the Return to Compliance Certification

form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by 2-12-16. Please be aware as of January 1, 2013, all businesses are required to submit all hazardous materials information online to the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Be sure to include your hazardous waste activity in the Businesses Activities section in CERS in addition to any other relevant activities and required fields. This facility generates the following wastes: -used oil -used antifreeze -metal fines -parts washer solution -fuel and gasoline filters -shop rags are being sent out to a commercial laudry Provided: -EHD free class schedule

Eval General Type: Compliance Evaluation Inspection

Eval Date: 01-16-2020 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Routine hazardous waste inspection performed today on 1/16/2020. All

violations cited were corrected on site. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an appointment, please call (209) 468-3420. Documents provided during inspection: Inspection report, free cupa classes flier, household hazardous waste facility. Waste streams found: Brake lathe shavings, used metal oil filters, soiled rags. Note: Operator states he does not generate much used oil and used oil filters from business. Operator states that he has not generated any waste antifreeze since 2016, he keeps a container on site for waste

antifreeze as a precaution.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply

Potential Contaminants of Concern: Gasoline

Site History: November 1988 three 1,000-gallon underground storage tanks used by

the Ag Dept to store weed oil were removed from the site. Soil samples for analysis were collected from beneath the tanks; petroleum hydrocarbon contamination was noted in the analytical results. October 1999 a site investigation began with the advancement of geoprobe soil borings and the collection of soil and grab groundwater samples for analysis. March 2001 three groundwater monitoring wells

were installed; all are impacted with petroleum hydrocarbon contamination. 2002 additional geoprobe borings were advanced to define the lateral extent of the plume. Additional groundwater

monitoring wells are needed, the site is not defined.

Potential Contaminants of Concern: Diesel, Gasoline

Site History: Three underground storage tanks were removed from the site in 1988.

Soil samples collected from beneath the tank were analyzed and reported petroleum hydrocarbon contamination. February 1999 a site

investigation began with the installation of geoprobe soil borings; soil and grab groundwater samples were collected for

analysis; more contamination was reported. Between December 1999 and January 2004 additional soil borings and groundwater monitoring wells

were installed to define the vertical and lateral extent of the

contaminant plume. September 2005 a soil vapor extraction test was conducted but failed, no contaminant vapors were recovered. January 2008 a dual phase extraction test was conducted, but also failed. The test was conducted during rainy weather, which precluded it working properly. The soil contamination remaining at this site is just under

the water table. Onsite wells continue to report fairly high

concentrations of contaminant. The State Water Quality Control Board Cleanup Fund recommends site closure. The Regional Water Quality Control Board disagrees with the recommendation for closure.

6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in

safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training

records for a minimum of three years.

Violation Notes: Returned to compliance on 11/12/2020. Employee training records were

not available for review at time of inspection. The business plan shall include provisions for ensuring that appropriate personnel receive initial and annual refresher training. All employees shall be trained in safety procedures in the event of a release or threatened release of a hazardous material, including, but not limited to, familiarity with the following plans and procedures: (A) Immediate notification contacts to the appropriate local emergency response personnel and to the unified program agency. (B) Procedures for the mitigation of a release or threatened release to minimize any

potential harm or damage to persons, property, or the environment. (C) Evacuation plans and procedures, including immediate notice, for the business site. This training shall be documented electronically or by hard copy and shall be made available for a minimum of three years. Immediately provide employee training for appropriate personnel and

submit a copy

HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5,

Citation:

Section(s) 25250.22 Violation Description:

Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

09-03-2019

Returned to compliance on 09/26/2019. OBSERVATION: Containers of used Violation Notes:

> metal oil filters out of compliance with the storage rules were observed on-site. The following used metal oil filter containers were on-site: - One 55 gallon container with used metal oil filters

observed with no lid. Found in the hazardous waste storage area. - 2 used metal oil filters observed on the floor of the hazardous waste storage area. Operator corrected this by placing used metal oil

filters into 55 gallon container for used metal oil filters.

REGULATION GUIDANCE: (b) used oil filters are defined as filters which contain a residue of used oil and which are exempt from regulation as a hazardous waste under the scrap metal provision found in federal law. (c) Used oil filters that meet the conditions of subsection (b) of this section and are managed and recycled in compliance with the following requirements shall not be regulated as hazardous waste. (1) The filters are drained of free-flowing used oil. For the purposes of

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter

6.5, Section(s) 25123.3(h)(1)

Failure to send hazardous waste offsite for treatment, storage, or Violation Description:

> disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month

if all of the following conditions are met: (1) The quantity of

hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount

greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 10/25/2019. OBSERVATION: The following

> hazardous waste containers were found on-site with an accumulation start date of greater than 180 days or no accumulation start date: -One 55 gallon container with waste antifreeze observed with accumulation start date of 12-17-2018. Found in the hazardous wast storage area. REGULATION GUIDANCE: A generator of less than 1,000

kilograms of hazardous waste in any calendar month who accumulates hazardous waste onsite for 180 days or less, or 270 days or less if the generator transports the generator's own waste, or offers the generator's waste for transportation, over a distance of 200 miles or more, for offsite treatment, storage, or disposal, is not a storage facility if all of the following apply: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not

hold acutely hazardous

1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the

possibility of a fire, explosion, or any unplanned sudden or

non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or

the environment.

Violation Notes: Returned to compliance on 10/11/2019. OBSERVATION: The following was

observed in the hazardous waste storage area of the facility: - Used absorbent contaminated with used oil found underneath secondary containment for used oil and use metal oil filter containers. Note: Operator states that used absorbent will be hauled off as hazardous

waste. REGULATION GUIDANCE: A hazardous waste generator must maintain

and operate its facility to minimize the possibility of a fire,

explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment. CORRECTIVE ACTION: Immediately clean used absorbent from floor of hazardous waste storage area. Manage the waste according to Title 22 California Code of Regulations for hazardous waste. Submit a statement and supporting documentation to the San Joaquin County Environmental Health Department describing the storage and final disposition of the cleaned

up

Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title

40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Description: Failure to ensure employees are familiar with the handling and

compliance of hazardous waste regulations and emergency response.

Violation Notes: Returned to compliance on 11/02/2015. At the time of inspection, it could not be demonstrated (not necessarily documented) that employees

who handle hazardous waste were properly trained. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the EHD. While onsite Mr. Williamson called the EHD and enrolled in the December 2015

free hazardous waste training class offered through the SJCEHD.

Provide proof of correction to the EHD.

Violation Date: 09-29-2015

Citation: 40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter

1, Section(s) 265.32

Violation Description: Failure of the facility to maintain the following emergency equipment

or equivalents: 1) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam,

inert gas, or dry chemicals), spill control equipment, and

decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or

automatic sprinklers, or water spray systems.

Violation Notes: Returned to compliance on 11/02/2015. The modified contingency plan

indicated that spill control equipment is located inside the office, however no spill control equipment was found onsite. All facilities shall be equipped with an internal communication or alarm system, a device capable of calling outside emergency help, spill control equipment, and decontamination equipment at all times. Immediately provide spill control equipment and maintain on site. Provide proof of

correction to the EHD.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22,

Chapter 12. Section(s) 66262.34(d)

Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste

is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violation Notes: Returned to compliance on 11/02/2015. One open unlabeled tub full of

metal fines was located beneath the metal grinding equipment located inside the shop. Mr. Williamson indicated that no metal fines were disposed of from this equipment and that this waste was onsite for at least one year; he also indicated that he will handle metal fines as hazardous waste. Facilities who generate less than 1000 kg of

hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the EHD.

Violation Date: 02-14-2019

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter

6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or

disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month

if all of the following conditions are met: (1) The quantity of

hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount

greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 03/08/2019. One black metal 55 gallon drum

of oily solids was observed in the hazardous waste storage area with an accumulation start date of 5/1/2018. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the

EHD.

part of the business plan. The site map is missing an evacuation staging area, emergency shut off/ utilities shut offs (power, water, natural gas, and diesel), exit and entrance for structures. A site map shall contain a north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. If a site map element is not applicable for your facility then list it on the map and label as NA". Immediately log into the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/,

upload the correct or updated information, and submit to the EHD for

approval.

Violation Division: San Joaquin County Environmental Health

Violation Program: **HMRRP** Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 02-23-2016

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: No violations found at time of inspection. Please be aware as of

January 1, 2013, all businesses are required to submit all hazardous materials information online to the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Be sure to include your hazardous material activity in the Businesses Activities section in CERS in addition to any other relevant activities and required fields.

Eval Division: San Joaquin County Environmental Health

Eval Program: **HMRRP** Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection

Eval Date: 07-17-2020

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Complete and submit a copy of the Return to Compliance Certification

> form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by 8/16/2020. To minimize person to person contact EHD is choosing to write the name of person receiving the report instead of having them sign. Starting September 1, 2018, all in-office CERS help

will be provided at EHD hourly rate (\$152). To schedule an

appointment, please call (209) 468-3420.

22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Citation:

Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated

manifest, or bills of lading copies for three years.

Violation Notes: Returned to compliance on 11/02/2015. Copies of uniform manifests for

> the disposal of hazardous waste were not found on site. Reportedly this facility began operation in October of 2014. This facility shares the building with another family auto repair business located at 275 Moffat Blvd (Jack's Transmission Repair); the two facilities are interconnected and have a walkway between the two. According to Anthony Anacleto, the facility owner, he walks all his wastes (used oil, used antifreeze, waste absorbent, etc) and places it into his dad's hazardous waste storage area from which it's hauled away by a licensed hazardous waste hauler. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. Begin a record keeping log which will document the date, the type and the quantity of the waste transfered from this facility to the neighboring [Truncated]

Violation Notes: Returned to compliance on 11/02/2015. At the time of inspection, it

could not be demonstrated (not necessarily documented) that employees who handle hazardous waste were properly trained. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. Immediately provide training to all employees who handle hazardous

waste and submit a copy of the training records to the EHD.

Violation Notes: Returned to compliance on 09/29/2015. A submission to the California

Electronic Reporting System (CERS) for the hazardous waste program has not been made. Beginning January 1, 2013, all businesses are required to submit all new (or any changes to existing) hazardous waste information online to the CERS at http://cers.calepa.ca.gov. Be sure to include your hazardous waste activity in the Businesses Activities section in CERS in addition to any other relevant activities and required fields. Assisted in creating the CERS account (CERS ID

10644427), a submittal was made at the time of inspection. This was

corrected on site.

Violation Division: San Joaquin County Environmental Health

Violation Program: HW Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 09-29-2015 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Complete and submit a copy of the Return to Compliance Certification

form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by October 29, 2015. Please be aware as of January 1, 2013,

all businesses are required to submit all hazardous materials information online to the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Be sure to include your hazardous

waste activity in the Businesses Activities section in CERS in addition to any other relevant activities and required fields. This facility generates the following wastes on infrequent basis, no reportable quantities of hazardous materials were noted at this facility at the time of inspection: -waste oil -waste antifreeze -used oil and gasoline filters -lead acid batteries -waste absorbent -oily mop water The following minor violations were corrected onsite at the

time of [Truncated]

Violation Description: Failure to maintain aisle space to allow the unobstructed movement of

personnel, fire protection, spill control equipment, and

decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle

space is not needed for any of these purposes.

Violation Notes: Returned to compliance on 11/12/2015. The observed four 55-gallon

containers of used/waste oil were positioned on top of the secondary containment pallet which had some free staining oily liquid inside it . These four 55-gallon containers (located inside the shop) were located back to back against the wall with no access to the back two containers. Mr. Gamez indicated that he was already planing on changing the set up since the existing hazardous waste storage area is taking up too much space. Adequate aisle space shall be maintained to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to all areas of facility operation in an emergency. Immediately maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of

facility operation in an emergency.

02-20-2015 Violation Date:

Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95,

Section(s) 25508(d)

Violation Description: Failure to complete and/or electronically submit a business plan when

storing/handling a hazardous material at or above reportable

quantities.

Returned to compliance on 02/20/2015. The facility's business plan was Violation Notes:

> not submitted electronically to the California Environmental Reporting System (CERS). As of January 1, 2013, all businesses were required to submit all business plans electronically. Immediately log into the CERS at http://cers.calepa.ca.gov/, enter the correct or updated information, and submit to the EHD for approval. This is a Class II

violation. This was corrected on site.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter

6.95, Section(s) 25508(a)(1)

Violation Description: Failure to establish and electronically submit an adequate training

program in safety procedures in the event of a release or threatened

release of a hazardous material.

Violation Notes: Returned to compliance on 07/22/2021. A training program was not

submitted. Training programs for all employees and annual training, including refresher courses, shall include safety procedures for the event of a release or threatened release of a hazardous material,

including, but not limited to, familiarity with the facility's

emergency response plans and procedures. These training programs may

take into consideration of each employee. Immediately prepare or update the facility's training program, log into the California

Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/, upload the correct or updated information, and submit to the EHD for

approval.

Violation Date: 09-14-2018

Citation: 40 CFR 1 262.34(d)(5)(i) - U.S. Code of Federal Regulations, Title 40,

Chapter 1, Section(s) 262.34(d)(5)(i)

Violation Description: Failure to have at least one employee either on the premises or on

call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for

coordinating all emergency response measures.

Violation Notes: Returned to compliance on 09/14/2018. An emergency coordinator and

modified contingency plan information is lacking. There must be at least one emergency coordinator on site or on call to coordinate emergency response measures, and the following information must be posted by a phone: the name and phone number of the emergency coordinator; location of fire extinguishers, spill control equipment, and if present, fire alarm; and the phone number of the fire department, unless the facility has a direct alarm. Immediately appoint an emergency coordinator and post the required information by

a phone. A form is provided that can be used for this purpose.

Potential Media Affect: Aquifer used for drinking water supply

Potential Contaminants of Concern: Gasoline

Site History: All known on-site USTs removed from this facility in 1995. After UST

removal, a soil and ground water investigation (8 MWs) were installed on-site. Soil was excavated and a DPE Pilot Test was completed. The

ground water plume is defined, stable, and declining in

concentration. Site Closed.

Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated

manifest, or bills of lading copies for three years.

Violation Notes: Returned to compliance on 02/24/2016. 1) Manifest numbers 021473463JJK

and 014783045JJK were not found on site. Hazardous waste generators shall retain copies of all manifests for three years or until a copy signed off by the destination facility is received. The signed off copy shall be retained and made readily available for review for three years. If the generator did not receive a copy of the manifest with the handwritten signature of the owner or operator of the facility to which the generator's waste was submitted within 60 days of the date the waste was accepted by the initial transporter, the generator shall submit a legible copy of the missing manifest, with some indication that the generator has not received confirmation of delivery. This

information shall be submitted to: DTSC Report Repository Generator Information Services Section P.O. Box 806 Sacramento, CA 95812-0806

Immediately locate a copy of the missing manifests or prepare and submit the required information to DTSC. to a [Truncated]

Violation Description: Failure to have a UST Monitoring Plan available on site.

Violation Notes: Returned to compliance on 05/31/2018. An approved copy of the

monitoring plans were not available for inspection. The monitoring plan indicated external audible/visual as an overfill protection in addition to the fill tube shut-off valve, no external audible visual alarm was observed at the time of inspection, also monitoring for the secondary containment of the UDCs was identified (the onsite UDC's are single walled). A copy of these plans shall be accessible on site at

all times. Immediately locate and retain a copy on site.

to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of

liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30

days

Violation Notes: Returned to compliance on 10/27/2020. The following was observed on

the designated operator s monthly inspection reports: -Section V of the reports were missing follow up actions about scheduling an Overfill Prevention Equipment Inspection. -Section VI of the report was missing date, name and signature of the owner/operator. -Secondary

Containment test date was incorrectly stated. During the visual inspection, the designated operator shall check all required testing

and maintenance for the UST system have been completed and shall check all required items on the report. Ensure that designed operators

performing visual inspections at this facility are including all of

the required information on the reports.

Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter

12, Section(s) 66262.12

Violation Description: Failure to obtain an Identification Number prior to treating, storing,

disposing of, transporting or offering for transportation any

hazardous waste.

Violation Notes: Returned to compliance on 08/08/2018. This facility does not have a

valid EPA ID number to manage hazardous waste. ID number CAL000383350

is currently inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an EPA ID number. Go to the DTSC web site

http://www.dtsc.ca.gov/IDManifest/PERMHWID.cfm for the form to apply for an EPA ID number. Immediately obtain an EPA ID number to manage

hazardous waste and submit evidence to the EHD.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22,

Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least

three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the

designated facility which received the waste.

Violation Notes: Returned to compliance on 08/22/2018. Manifest number 00610114SKS from

December 19, 2017 was found without a signed off copy from the destination facility. Hazardous waste generators shall retain copies of all manifests signed off by the destination facility on site for three years and have them readily available for review. If the generator did not receive a copy of the manifest with the handwritten

signature of the owner or operator of the facility to which the

generator's waste was submitted within 35 days of the date the waste was accepted by the initial transporter, the generator shall contact the transporter and/or the owner or operator of the designated facility to determine the status of the waste. If the generator did not receive a copy of the signed off copy of the manifest within 45 days of the date that the waste was accepted by the initial transporter, the generator shall submit an Exception Report that includes a legible copy of the missing manifest, and a cover letter

signed by the generator [Truncated]

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter

6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all

required content.

Violation Notes: Returned to compliance on 04/20/2020. The site map was not complete as

part of the business plan. The site map is missing loading areas, storm and sewer drains, access and exit points, emergency shutoffs for utilities (water, power, and natural gas), evacuation staging areas, hazardous material handling and storage areas, and emergency response

equipment (fire extinguishers, first aid kits, eye wash, and spill kits) locations. A site map shall contain a north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response

equipment. If a site map element is not applicable for your facility then list it on the map and label as NA". Immediately log into the

California Environmental Reporting System (CERS) at

http://cers.calepa.ca.gov/, upload the correct or updated information,

and submit to the EHD for approval.

Citation: 23 CCR 16 2715(c)(4) - California Code of Regulations, Title 23,

Chapter 16, Section(s) 2715(c)(4)

Violation Description: Failure to maintain a list of employees trained by the designated

operator on-site or off-site at a readily available location, if approved by the UPA. For training that occurs on or after October 1,

2018, failure to maintain a copy of the "Facility Employee Training Certificate" on-site or off-site at a readily available location, if

approved by the UPA.

Violation Notes: Returned to compliance on 12/07/2020. "Facility Employee Training

Certificate" dated 2/28/19 was found on site without the signature from the Designated Operator. Furthermore Noorullah Fnu and Manpreet Singh started working in the facility in May 2019 and April 2019 and are yet to be trained byt the DO. All site employees must be trained prior to taking responsibility as a facility employee if after October 1, 2018, or within 30 days of hire if prior to October 1, 2018. The "Facility Employee Training Certificate" shall contain accurate information for all employees trained. Update the "Facility Employee Training Certificate" to contain the accurate information and submit a

copy of the updated form to the EHD.

with the requirements.

Violation Notes: OBSERVATION: This facility generates drained used metal oil or fuel

filters. A complete three year bill of lading record for used filter

recycling was not observed during the inspection. REGULATION GUIDANCE:

Persons generating, transporting, or receiving used drained metal oil or fuel filters shall use a bill of lading to record the transfer of used filters. Bills of lading must indicate generator, transporter, and receiving company names, addresses, telephone numbers, the quantity and size of used filter containers transferred, and the date of transfer. A copy of each bill of lading must be kept on the

premises of the generator, transporter, and receiving facility where

16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before

October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of

liquid/debris in spill containers. Inspect for the presence of

liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30

days.

Violation Notes: 1) OBSERVATION: The designated operator failed to check and note all

required items on the visual inspection reports. The incorrect and missing information included the following from the inspection reports: -The DO reports for 06/30/2020, 07/2/8/2020, 08/26/2020, 09/23/2020, 10/22/2020, 11/22/2020, 12/18/2020 and 01/18/2021 did not include the CERS ID number. REGULATION GUIDANCE: During the visual

capacity of the largest container and sufficient freeboard for

precipitation.

Violation Notes: Returned to compliance on 07/05/2019. The 55 gallon drums by the outer

fence, the 240 gallon used oil tank and the 55 gallon oil drum within the shop area were observed with insufficient secondary containment. The 55 gallon drums by the outer fence were labeled and described as storing hydraulic oil, the secondary containment structure was full of liquid and unable to contain the contents of the largest container. The 240 gallon waste oil tank appeared to be single walled and secondary containment was not evident. The 55 gallon in the shop area is described in the SPCC plan as having secondary containment for 10% of the contents. All bulk storage tanks must be provided with a

secondary means of containment for the entire capacity of the tank and sufficient freeboard to contain precipitation. Immediately provide sufficient secondary containment for this and all other tanks at this

facility.

Violation Description: Failure to comply with the applicable requirements related to

accumulation and containment standards for universal waste aerosol

cans.

Violation Notes: Returned to compliance on 09/11/2019. The following was observed in

the maintenance area: - One 55 gallon container with waste aerosol cans observed with lid open. Waste aerosol cans shall be accumulated in a container that is closed, structurally sound and compatible with the contents of the universal waste aerosol can and show no leakage, spillage, or damage that could cause leakage. Immediately close container and properly dispose of waste aerosol cans. Provide disposal receipts to EHD. Once disposal receipts are received we will close out

the facilities hazardous waste account.

6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to position or locate mobile or portable storage containers to

prevent a discharge as described in 40 CFR 112.1(b), and/or failure to provide adequate secondary containment for mobile or portable oil storage containers (excluding mobile refuelers and other non-transportation-related tank trucks) with sufficient capacity to

non-transportation-related tank trucks) with sufficient capacity to contain the largest single compartment or container and sufficient

freeboard to contain precipitation.

Violation Notes: Returned to compliance on 04/10/2020. An addendum page submitted

through email on 09/20/2019, titled "SPCC addendum 9-20-19.pdf", states that "the 150 Gallon portable #2 Diesel fuel tank is maintained within the yard and has no secondary containment." This statement is found on page 17, in the section titled "Discharge Drainage Control 40 CFR 112.7(a)(3)(iii)". Previous submitted versions of the SPCC plan do not address secondary containment of the tank in question. Secondary means of containment for the entire capacity of the largest single compartment or container and sufficient freeboard to contain precipitation has not been provided. The regulation states: Position or locate mobile or portable oil storage containers to prevent a discharge as described in 112.1(b). Except for mobile refuelers and other non-transportation-related tank trucks, you must furnish a secondary means of containment, such as a dike or catchment basin, sufficient to contain the capacity of the largest single compartment

or container with s

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 04-16-2019

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: No violations were found at time of inspection. Starting September 1,

2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an appointment, please call (209) 468-3420.

Eval Division: San Joaquin County Environmental Health

Eval Program: HMRRP Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection

Eval Date: 09-18-2019

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: No violations observed. According to store manager, facility recently

changed the hazardous waste managment procedures. In the past, the facility did not generate hazardous waste, and therefore no records were available. Waste streams observed: 1 gallon paint, universal waste aerosols, empty coloring containers, universal waste batteries. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an appointment, please call

(209) 468-3420.

procedures were not complete. Line E3 was missing the location of the evacuation staging area. A business plan shall include the following emergency response procedures for a release or threatened release of hazardous materials, including, but not limited to, the following: - immediate notification of local emergency personnel and the

Environmental Health Department (EHD) - procedures for the mitigation of a release or threatened release to minimize any potential harm or damage to persons, property, or the environment - evacuation plans and procedures, including immediate notice, for the site This violation

has been corrected on site.

Violation Division: San Joaquin County Environmental Health

Violation Program: HMRRP Violation Source: CERS,

Site ID: 130141

Site Name: LEE JENNINGS TARGET EXPRESS INC

Violation Date: 02-27-2019

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter

6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all

required content.

Violation Notes: Returned to compliance on 02/27/2019. The site map was not complete as

part of the business plan. The site map was missing emergency response equipment locations (fire extinguishers and spill kits), utility shut offs (water and power) locations, hazardous material storage area locations, storm drain locations. Please add missing elements to the site map. A site map shall contain a north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment.

If a site map element is not applicable for your facility then list it on the map and label as NA". This violation has been corrected on

site.

Violation Division: San Joaquin County Environmental Health

Violation Program: HMRRP Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 02-27-2019 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: All violations were corrected on site. Starting September 1, 2018, all

in-office CERS help will be provided at EHD hourly rate (\$152). To

schedule an appointment, please call (209) 468-3420.

Eval Division: San Joaquin County Environmental Health

Eval Program: HMRRP Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection

Eval Date: 09-22-2015 Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: No violations found at time of inspection. Please be aware as of

January 1, 2013, all businesses are required to submit all hazardous materials information online to the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Be sure to include your

Section(s) 25290.2(c)

Violation Description: Failure to maintain secondary containment (e.g., failure of secondary

containment testing).

Violation Notes: Returned to compliance on 12/07/2020. Fuel filters were observed

outside of all under dispenser containments at the facility. The underground storage tank system shall be operated to prevent unauthorized releases. Immediately contact a properly licensed, trained, and certified contractor to replace or upgrade the component

under permit and inspection (if required) of the EHD.

Chapter 6.75, Section(s) 25299.30-25299.34

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.

Violation Notes: Returned to compliance on 05/08/2019. Financial responsibility

documents have not been submitted to the EHD. The certificate of financial responsibility was last signed on 7/31/17. Current financial responsibility documents are required to be submitted annually. The president of the site, Hussain Ismail logged into the California

Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/, and uploaded the required documents while the inspector was on site.

This was corrected on site.

Violation Program: UST Violation Source: CERS,

Site ID: 1668

Site Name: DBA CIRCLEK, REFUEL PETROLEUM INC.

Violation Date: 05-17-2016

Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter

16, Section(s) 2712(i)

Violation Description: Failure to submit, obtain approval, or maintain a complete/accurate

response plan.

Violation Notes: Returned to compliance on 05/17/2016. The monitoring plan is not

current and/or not approved by the EHD. Incorrect line leak detectors and UDC monitoring were identified in forms submitted into CERS. The monitoring plan must be uploaded to the California Environmental

Reporting System (CERS). Immediately log into CERS, make the necessary changes, and submit for review by the EHD. This was corrected on site.

Violation Division: San Joaquin County Environmental Health

Violation Program: UST Violation Source: CERS,

Site ID: 1668

Site Name: DBA CIRCLEK, REFUEL PETROLEUM INC.

Violation Date: 05-15-2017

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23,

Chapter 16, Section(s) 2636(f)(1)

Violation Description: Failure of the double-walled pressurized piping to be continuously

monitored with a system that activates an audible and visual alarm or

stops flow at the dispenser when a leak is detected.

Violation Notes: Returned to compliance on 05/15/2017. The Bravo box float and chain

for the 87-product in under dispenser containment 3-4 failed to stop the flow of product at the dispenser when tested. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The service technician adjusted the pin on the float and verified

functionality. This was corrected on site. San Joaquin County Environmental Health

DBA CIRCLEK, REFUEL PETROLEUM INC. (Continued)

S121749154

Violation Description: Failure to perform and/or pass the annual line integrity test for pressurized piping that does not utilize fail safe or shut down.

Violation Notes: Returned to compliance on 05/28/2015. The 87-octane turbine was not

fail safe when tested and does not meet the requirements for annual line tightness testing exemption. The service technician replaced the malfunctioning turbine relay and verified that this turbine has positive shut down and is fail safe, which satisfies the annual line tightness testing requirement. Ensure that all leak detection

equipment is properly programmed at all times. This was corrected on

site.

Violation Division: San Joaquin County Environmental Health

Violation Date: 05-23-2022

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter

16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before

October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded

to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of

inquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30

days.

Violation Notes: OBSERVATION: The designated operator failed to check and note all

required items on the visual inspection reports. The incorrect and missing information included the following from the inspection reports: -The DO reports did not include the secondary containment testing date. REGULATION GUIDANCE: During the visual inspection, the

designated operator shall check that all required testing and

maintenance for the UST system have been completed and shall check all required items on the report. CORRECTIVE ACTION: Ensure that designated operators performing visual inspections at this facility are including all of the required information on the reports.

Section(s) 25291(e)

Violation Description: Failure to remove, contain, analyze, and dispose of properly, water

removed from the secondary containment by the owner or operator. Returned to compliance on 05/17/2016. Liquid was observed in the 87 STP sump. If water could enter into the secondary containment by

precipitation or infiltration, it must be removed and disposed of properly. The service technician removed 1-3 cups of liquid from the 87 sump. Ensure that all sumps and annular spaces are maintained free

of liquid. This was corrected on site.

Violation Description: Failure to comply with one or more of the following overfill

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering

hazardous waste generated in 2018 could not be determined at the time of inspection. Based on a review of manifests after the inspection, it was determined that the facility generated .6 tons of hazardous waste in 2018. - A separate bin for Hazardous Waste Smoking Cessation items was not observed in the hazardous waste storage area at the time of inspection. - Steve Bohnak, District Manager, requested the following list of the manifest numbers that were not found on site, and the manifest numbers that were found without a signed off copy from the destination facility, at the time of inspection: The following manifests were not found on site: - 013120477FLE (4/21/19) -013120476FLE (4/22/19) - 005888200FLE (5/25/18) - 011387029FLE (3/14/18) - 008548655FLE (3/29/17) - 008548865FLE (5/18/17) -

010685552FLE (9/13/17) - 008572425FLE (10/20/16) - 008664889FLE (9/23/16) The following manifests were found wi

Eval Division: San Joaquin County Environmental Health

Eval Program: HW Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection

02-25-2019 Eval Date: Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Complete and submit a copy of the Return to Compliance Certification

form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by 3/27/2019. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an

appointment, please call (209) 468-3420.

FINDS:

Registry ID: 110002905679

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Aviation

Potential Media Affected: Other Groundwater (uses other than drinking water)

Site History: A Phase 1 environmental site assessment (ESA) conducted on behalf of

Ditz Brothers Incorporated in 1990 identified low levels (< = 450 micrograms per liter) of total petroleum hydrocarbons as diesel in groundwater samples. San Joaquin County Environmental Health Department (SJCEHD) staff transferred the case to the Central Valley Water Board in 1992. In 2018, Board staff reviewed the case file, obtained additional files from SJCEHD, and prepared a case file

review memorandum. Based on our review, Board staff changed the case status in GeoTracker from "open-inactive" to "non-case information" for the following reasons: 1) The reported condition of the Site at the time of the ESA was undeveloped land in a light industrial park.

Prior to the creation of the industrial park, the land was

undeveloped range land. 2) Based on groundwater flow direction, the detected extractable petroleum hydrocarbons appear to be from an off-Site source. 3) Chemical analyses did not detect other synthetic chemicals including chlorinated and aromatic hydrocarbons, PCBs, and pesticides. 4) Given the age of the petroleum detections and the understanding of natural attenuation processes related to petroleum hydrocarbons, further monitoring or assessment of the petroleum hydrocarbon detections are not needed. Board staff will contact SJCEHD with a request that they purse proper destruction of the three

monitoring wells (if they still exist) installed as part of the ESA.

CERS Description: Hazardous Waste Generator

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 03-31-2015

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: Business has only 8 gallons of Exxon Dry Cleaning fluid, and about 150

> pounds of Hazardous waste solid. Business is exempt from the Hazardous Material Business Plan (HMBP) program and from submitting HMBP to CERS. Please be aware as of January 1, 2013, all businesses are required to submit all hazardous materials information online to the

California Environmental Reporting System (CERS) at

http://cers.calepa.ca.gov. Be sure to include your hazardous material activity in the Businesses Activities section in CERS in addition to

any other relevant activities and required fields.

Eval Division: San Joaquin County Environmental Health

Eval Program: **HMRRP Eval Source:** CERS.

Eval General Type: Compliance Evaluation Inspection

Eval Date: 06-18-2020 Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: All violations were corrected on site. Currently no open hazardous

waste violations. To minimize person to person contact EHD is choosing to write the name of person receiving the report instead of having them sign. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an appointment, please call (209) 468-3420. Documents provided during inspection: Inspection Report Waste streams found: used oil. The following minor violations were corrected on site: Minor violation 1: OBSERVATION: Hazardous waste containers were observed on-site with incomplete labeling. The containers were: -One 10-gallon drum with used oil observed lacking accumulation start date. Operator corrected on site by adding accumulation start date. Note: Operator stated that used oil comes from dry cleaning machine, the oil is drained approximately 3-4 times a month. REGULATION GUIDANCE: All hazardous waste containers shall be

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 38 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 12008736 MANTECA, CA

Version Date: 2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

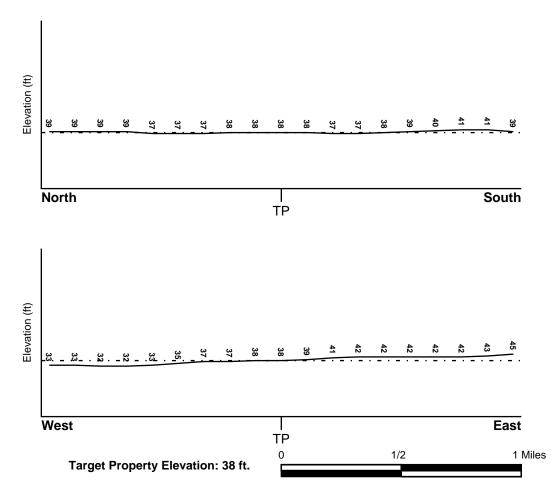

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

MANTECA YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to

excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information						
Boundary			Class		fication	Saturated hydraulic	
Layer	Upper Lower Soil Texture C		Soil Texture Class	AASHTO Group Unified Soil		conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	16 inches	25 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
3	25 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558 Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

EDR Site Report™

TABLE OF CONTENTS

The EDR-Site ReportTM is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases.

Sec	tion 1: Facility Detail Reports Page 3
	All available detailed information from databases where sites are identified.
Sec	tion 2: Databases and Update InformationPage 2
	Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.Please contact EDR at 1-800-352-0050 with any questions or comments.

SECTION 2: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HWTS: Hazardous Waste Tracking System

Source: Department of Toxic Substances Control

Telephone: 916-324-2444

DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Date of Government Version: 04/05/2022 Database Release Frequency: Varies

Date of Last EDR Contact: 10/03/2022 Date of Next Scheduled Update: 01/16/2023

CA HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency

Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests
received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000
annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests
submitted without correction, and therefore many contain some invalid values for data elements
such as generator ID, TSD ID, waste category, and disposal method. This database begins with
calendar year 1993.

Date of Government Version: 12/31/2021 Database Release Frequency: Annually Date of Last EDR Contact: 09/27/2022 Date of Next Scheduled Update: 01/16/2023

Environmental Site Assessment Questionnaire for Client

The following information is requested to evaluate the potential for environmentally related impacts and property contamination. This questionnaire is to be completed by the User of the Phase I Environmental Site Assessment, as defined by ASTM E-1527-21, or its authorized representative.

PART I

- 1. <u>Project description</u>: Manteca Unified School District is proposing major upgrades to the Manteca High School Campus and acquisition of 6 adjoining residential parcels. The district requested the preparation of a Phase I Environmental Site Assessment (ESA) as part of its due diligence responsibilities for the proposed project.
- 2. <u>Property address(es) and Assessor Parcel Number(s) (APN)</u>: The addressed associated with project site are: 450 Yosemite Avenue, 419 Moffat Boulevard, 453 Moffat Boulevard, 510 Mikesell Avenue, 524 Mikesell Avenue, 534 Mikesell Avenue, 544 Mikesell Avenue, and 554 Mikesell Avenue.

The APNs associated with the project site are: 221-080-01, 221-080-02, 221-090-15, 221-180-12, 221-180-11, 221-180-10, and 221-180-09.

- 3. <u>Current property owner (name, address, telephone number)</u>: The District currently owns the property.
- 4. <u>Current property development/improvements</u>: The project site is currently occupied by the Manteca High School campus and 2 existing residential dwellings.
- 5. <u>Date(s) of current property development/improvements</u>: The project site appears to have been used for agricultural purposes before 1937. The campus shows up around 1937 and the residential uses along Mikesell Avenue were constructed between 1948 and 1965. The residential lots are vacant and all but two houses have been demolished, with the last two slated for demolition soon.
- 6. Past property use, development/improvements: No identified land uses prior to 1914. Topographic maps show the project site as vacant, undeveloped property in 1914. The 1937 aerial photograph show the start of the campus on the western portion of the project site and agriculture use of the eastern half of the project site. The 1957 aerial photograph show the campus expanding and residential use and the disappearance of agriculture from the eastern portion of the project site.
- 7. <u>Neighboring property uses</u>: There is a mix of resident and commercial to the north, east, and west of the project site. There is a mix of residential, commercial, and industrial south of the project site. Lincoln Park is east of the project site.

PART II

 Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, local or state law? Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law? Do you have any specialized knowledge or experience related to the <i>property</i> or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the <i>property</i> or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (a) do you know of specific chemicals that are present at the <i>property</i>? (b) do you know of spills or other chemical releases that have taken place at the <i>property</i>? (c) do you know of any environmental cleanups that have taken place at the <i>property</i>? Based on your knowledge and experience related to the <i>property</i>, are there any obvious indicators that point to the presence or likely presence of contamination at the <i>property</i>? If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this <i>property</i> reasonably reflect the fair market value of the <i>property</i>? Are you aware of any past or present above ground or underground storage tanks on the <i>property</i>? Are you aware of any past or present above ground or underground storage tanks on the <i>property</i>? Are you aware of any past or present above ground o	and the second second			
 use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law? 3. Do you have any specialized knowledge or experience related to the <i>property</i> or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the <i>property</i> or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? 4. Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (a) do you know of specific chemicals that are present at the <i>property</i>? (b) do you know of spills or other chemical releases that have taken place at the <i>property</i>? 5. Based on your knowledge and experience related to the <i>property</i>, are there any obvious indicators that point to the presence or likely presence of contamination at the <i>property</i>? 6. If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this <i>property</i> reasonably reflect the fair market value of the <i>property</i>? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the <i>property</i>? 7. Are you aware of any past or present above ground or underground storage tanks on the <i>property</i>? To your knowledge, has there ever been any hazardous substances or wastes stored on the <i>property</i>? If a "Yes" response was provided to Questions 1 – 5 or a "No" response was provided to Question 6 	No			
properties? For example, are you involved in the same line of business as the current or former occupants of the <i>property</i> or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? 4. MICHAEL J. WATSON PG

Senior Geologist

With two decades in the environmental consulting industry, Mike is proficient in performing site assessments and remediation. He specializes in site assessments, geohazard studies, operations and maintenance programs, air quality and industrial hygiene assessments, groundwater investigations, and remedial actions. Mike also manages materials acquisition, field equipment maintenance, and subcontractor coordination on large field investigations and monitoring programs.

A dedicated geologist, Mike continually strives to refine his knowledge, methods, and efficacy. He is especially committed to his current work for numerous school districts throughout California, where he assists in site assessment services and the Department of Toxic Substances Control's school site approval process. He performs Phase I ESAs, PEAs, geohazard studies, supplemental site investigations, remedial investigation reports, removal action documents, feasibility study reports, Title 5 Constraints Studies, and fill testing reports. In addition, he assists with the management and implementation of field investigations, assembles project data, and arranges methodical and comprehensive procedures to attain the client's goals.

HIGHLIGHTS OF EXPERIENCE

Site Assessments

- PEA and Geological and Environmental Hazards Assessment (GEHA) for Proposed STEM High School, Natomas USA | Natomas CA
- PEA-Equivalent and GEHA for Mare Island Technology Academy Renovations, Griffin Technology Academies | Vallejo CA
- Supplemental Site Investigation for David Starr Jordan High School | Los Angeles USD
- PEAs, Phase I ESAs, and GEHAs for various schools | Riverside USD
- Phase I ESAs, Addendums and GEHAs for various sites | Paradise USD
- PEA, Housekeeping Services, and GEHA for Rise Kohyang High School, Bright Star Schools | Los Angeles CA
- PEA and Remedial Action for New High School at 201 North Douglas Street, Wiseburn USD | El Segundo CA
- PEA, SSI and Removal Action for Dillard Elementary School Reconstruction | Elk Grove USD
- Phase I ESAs for multiple properties | Rancho Cordova CA
- PEAs, Phase I ESAs, Geohazards Study Reports, and Title 5 Studies for various schools | Moreno Valley USD
- PEAs and Fill Testing for various schools | Clovis USD
- PEA for Proposed Castaic High School, William S. Hart Union High School District | Castaic CA

DANIELLE CLENDENING

Project Planner

Danielle is a quick study. In a relatively short period of time, she has proven herself amongst principals, senior managers, and peers to be a highly versatile planner and valuable member of PlaceWorks' environmental planning and technical services team. Her work on technical studies includes environmental site assessments, geology and hazards assessments, operations and maintenance reports, and removal action workplans and completion reports for private- and public-sector clients, including school districts and local jurisdictions throughout California. Her fieldwork experience includes soil sampling and meteorological and dust monitoring, and site inspections following ASTM standards for Phase I environmental site assessments.

In her role on projects as a CEQA generalist, Danielle covers topical sections such as geology, hazards, environmental site assessment, transportation, and more for initial studies and environmental impact reports. And in addition to being a strong member of the environmental planning team, Danielle has shown an interest and aptitude in preparing housing studies and has already assisted PlaceWorks' housing services group with the production of five general plan housing elements for southern California local jurisdictions.

Attachment D Noise Technical Memorandum

NOISE TECHNICAL MEMORANDUM

DATE March 2023

TO Manteca Unified School District

CONTACT Aaron Bowers, Director II of Facilities and Operations

FROM Alejandro Garcia, INCE-USA, Senior Associate, Noise and Vibration

Abdul Khan, Project Planner

SUBJECT Noise Technical Memorandum for the Manteca High School Improvement Project

PROJECT NUMBER MANT-06

This noise technical memorandum provides a community noise assessment of the proposed improvements at the Manteca High School project at 450 East Yosemite Avenue in Manteca (Project). The analysis evaluates construction and operational noise and vibration with implementation of the project for compliance with the City of Manteca Municipal Code noise level standards. Noise fundamentals and common definitions are included in Appendix A.

Project Description

The project applicant is proposing improvements to Manteca High School at 450 East Yosemite Avenue in Manteca, California. The existing high school is surrounded by various urban land uses, retail, institutional, and residential uses to the north across E. Yosemite Avenue; retail, residential, and a motel uses to the west across S. Sherman Avenue; residential, industrial, and vacant lots to the south; and institutional uses (Lincoln Park and Lincoln Elementary School) to the east. The Union Pacific Railroad (UPRR) track is approximately 215 feet south of the campus, and the Manteca Transit Center Arr is approximately 275 feet west of the high school.

The proposed project will include the construction of two two-story classroom buildings (one 28-classroom building and one 10-classroom building) and a one-story wood shop building to replace existing classroom buildings. The existing 38 classrooms would be demolished (Wings 20 through 80). The proposed project also includes the expansion of the south parking on the 453 Moffat Boulevard property. The proposed project would not increase the current student capacity at the high school campus.

Applicable Standards

CITY OF MANTECA NOISE STANDARDS

Manteca Municipal Code

Section 17.58.050(e), Prohibited Activities, sets restrictions on when construction is allowed:

 Operating or causing the operation of tools or equipment on private property used in alteration construction, demolition, drilling, or repair work, do not take place between the hours of 7:00 pm and 7:00 am.

Under Section 17.58.070, Vibration, the following rules apply for any activity which may cause vibration at nearby sensitive receptors:

- Uses, activities, and processes shall not generate vibrations that cause discomfort or annoyance to reasonable persons of normal sensitivity, or which endanger the comfort, repose, health, or peace of residents whose property abuts the property line of the parcel.
- Vibrations from temporary construction/demolition and vehicles that leave the subject parcel (e.g., trucks, trains, and aircraft) are exempt from the provisions of this Section. (Ord. 1501 § 1, 2011).

Manteca General Plan

The City of Manteca General Plan provides exterior noise standards for off-site sensitive receptors from stationary noise sources, as shown in Table 1`.

Table 1 City of Manteca General Plan Stationary Noise Standards

	Daytime	Nighttime
Noise Level Descriptor	7:00 am to 10:00 pm	10:00 pm to 7:00 am
Hourly L _{eq} , dBA	55	45
Source: Manteca 2022a.		

Federal Transit Administration

The City of Manteca does not have a quantified threshold for temporary construction noise and vibration.

Therefore, to determine impact significance, the following FTA criteria are adopted.

A vibration or construction noise impact would occur if:

- Vibration levels would exceed 0.20 inches/second (in/sec) peak particle velocity (PPV) at the façade of a non-engineered structure (e.g., wood-frame residential) at the nearby sensitive receptors.
- Project construction activities would generate noise levels greater than 80 dBA L_{eq} at the sensitive receptor property line.

Sensitive Receptors

The project site is L-shaped site and extends to parts of the existing playfields bounded by South Sherman Avenue, East Yosemite Avenue, South Garfield Avenue, Mikesell Avenue, and Moffat Boulevard. The closest sensitive receptors to the project site improvements are the single-family homes across Mikesell Avenue, South Garfield Avenue, and South Sherman Avenue. Further sensitive receptors include the mobile home park residences to the south.

Existing Noise Conditions

The project site is primarily characterized by vehicular traffic from State Route 99 (SR-99), approximately 0.90 miles to the east; local roadways; and railroad noise from the UPRR, approximately 215 feet south of the project site boundary. Noise sources from nearby residential uses (e.g., property maintenance) also contribute to the overall ambient noise environment in the project vicinity. Based on the General Plan's Recirculated DEIR Noise Chapter, the project site is well outside the SR-99 60 dBA CNEL noise contour, but partially within the 60 and 65 Ldn UPRR noise contours.

Environmental Impacts

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Project Construction Noise

Two types of short-term noise impacts could occur during construction: (1) mobile-source noise from transport of workers, material deliveries, and debris and soil haul and (2) stationary-source noise from use of construction equipment. Existing uses surrounding the project site would be exposed to construction noise.

Construction Vehicles

The transport of workers and materials to and from the construction site would incrementally increase noise levels along access roadways in the project vicinity. Individual construction vehicle pass-bys and haul trucks may create momentary noise levels of up to 85 dBA (L_{max}) at 50 feet from the vehicle, but these occurrences would be temporary and generally short lived. The highest number of worker and vendor trips would approach 40 trips during overlapping construction activity. Existing average daily trips in the project vicinity are unknown, but student enrollment for the year 2021-2022 is approximately 1,864 students (CDE n.d.). Comparing the temporary construction trips to trips generated by existing student enrollment alone, the addition of 40 temporary worker and vendor daily trips would result in a negligible noise increase. Therefore, impacts would be less than significant.

Construction Equipment

Noise generated during construction is based on the type of equipment used, the location of the equipment relative to sensitive receptors, and the timing and duration of the noise-generating activities. Each activity phase of construction involves the use of different construction equipment, and therefore each activity phase has its own distinct noise characteristics. Noise levels from construction activities are dominated by the loudest piece of construction equipment. The dominant noise source is typically the engine, although work piece noise (such as dropping of materials) can also be noticeable.

The noise generated at each activity phase is determined by combining the L_{eq} contributions from each piece of equipment used at a given time. Construction activities associated with the proposed project would not require blasting or pile driving. Demolition and grading typically generate the highest noise levels because they require the largest equipment. Construction noise quite often exhibits a high degree of variability because factors such as noise attenuation due to distance, the number and type of equipment, and the load and power requirements to accomplish tasks at each construction activity phase result in different noise levels at a given sensitive receptor. The project's loudest activity phases would involve demolition, grading, and paving and would produce short-duration noise levels of 85 dBA L_{eq} at 50 feet. Since noise from

construction equipment is intermittent and diminishes at a rate of 6 dBA per doubling distance, ¹ the average noise levels at noise-sensitive receptors would be lower, because mobile construction equipment would move around the site with different loads and power requirements. The City of Manteca does not have an established criterion for construction noise. The FTA provides criteria for acceptable construction noise levels and recommends a daytime noise threshold of 80 dBA Leq for residential uses. For the purposes of this analysis, the FTA criterion is applied to nearby residences to determine impact significance.

The three loudest pieces of construction equipment for each construction phase were modeled using the Federal Highway Administration's Roadway Construction Noise Model (RCNM) and an equipment mix based on CalEEMod defaults. Construction noise modeling distances and attenuated noise levels at various receptors during various construction activities can be found in Appendix A to this Tech Memo. The closest residences from the project's proposed on-site improvements are single-family homes approximately 75 feet to the north across Mikesell Avenue (as measured from the façade of the new 10-classroom building to the receptor property line). These receptors would experience noise levels between 63.4 and 79.5 dBA Leq during various construction activities (e.g., demolition, grading, paving, building construction). The loudest estimated noise level of 79.5 dBA Leq at the nearest receptors would occur during building construction. This would be below the FTA criterion of 80 dBA Leq. Given that this would be the closest distance to nearby sensitive receptors, all other receptors would experience even lower (more attenuated) noise levels, also below 80 dBA Leq. Therefore, project construction noise impacts would be less than significant.

Project stationary Operational Noise

The proposed school would include new mechanical equipment for heating, ventilation, and cooling equipment (HVAC). The nearest sensitive receptor to the new 28-classroom building with HVAC equipment is approximately 95 feet to the west. Typical HVAC equipment generates noise levels up to 72 dBA at a distance of 3 feet. At 70 feet, HVAC related noise would attenuate to 45 dBA or less. This would be below the daytime and nighttime City noise standards of 55 and 45 dBA $L_{\rm eq}$, respectively. This would be a less-than-significant impact.

Project traffic Noise

With the planned school remodel, the proposed project would not result in an increase in students. Additionally, there are no planned roadway upgrades associated with the proposed project. Therefore, the project would not result in a significant change in long-term traffic volumes. Therefore, traffic noise increases from the proposed project on nearby roadway segments would be less than significant.

b. Generation of excessive groundborne vibration or groundborne noise levels?

As stated above, the City of Manteca has not established specific limits for vibration. However, the FTA criterion of 0.2 in/sec PPV is used in this analysis to evaluate potential construction-related vibration impacts. Typical construction equipment can generate vibration levels up to 0.21 in/sec PPV at 25 feet (FTA 2018). Vibration levels at a distance greater than 25 feet would attenuate to less than 0.2 in/sec PPV. The nearest structure to proposed construction activities are the residences approximately 40 feet north of the project site boundary across Mikesell Avenue. At 40 feet, construction vibration would attenuate below the 0.2 in/sec PPV criterion at nearby residential. Therefore, impacts would be less than significant.

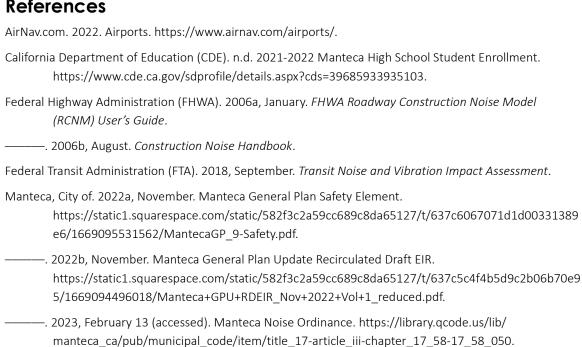

¹ The sound attenuation rate of 6 dBA is generally conservative and does not consider additional attenuation provided by existing buildings, structures, and natural landscapes around the project site.

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The nearest airport to the project site is Stockton Metropolitan Airport, approximately 5.95 miles to the north (AirNav 2023). Therefore, since no public or private airstrip is within 2 miles of the proposed project, the project would not expose people residing or working in the project area to excessive noise levels. No impact would occur.

Appendix A Definitions

Noise Fundamentals and Common Noise

Fundamentals of Noise

NOISE

Noise is most often defined as unwanted sound; whether it is loud, unpleasant, unexpected, or otherwise undesirable. Although sound can be easily measured, the perception of noise and the physical response to sound complicate the analysis of its impact on people. People judge the relative magnitude of sound sensation in subjective terms such as "noisiness" or "loudness."

Noise Descriptors

The following are brief definitions of terminology used in this chapter:

- Sound. A disturbance created by a vibrating object, which, when transmitted by pressure waves through a medium such as air, is capable of being detected by a receiving mechanism, such as the human ear or a microphone.
- **Noise.** Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
- **Decibel (dB).** A unitless measure of sound, expressed on a logarithmic scale and with respect to a defined reference sound pressure. The standard reference pressure is 20 micropascals (20 μPa).
- A-Weighted Decibel (dBA). An overall frequency-weighted sound level in decibels that approximates
 the frequency response of the human ear.
- Equivalent Continuous Noise Level (L_{eq}); also called the Energy-Equivalent Noise Level. The value of an equivalent, steady sound level which, in a stated time period (often over an hour) and at a stated location, has the same A-weighted sound energy as the time-varying sound. Thus, the L_{eq} metric is a single numerical value that represents the equivalent amount of variable sound energy received by a receptor over the specified duration.
- Statistical Sound Level (L_n). The sound level that is exceeded "n" percent of time during a given sample period. For example, the L₅₀ level is the statistical indicator of the time-varying noise signal that is exceeded 50 percent of the time (during each sampling period); that is, half of the sampling time, the changing noise levels are above this value and half of the time they are below it. This is called the "median sound level." The L₁₀ level, likewise, is the value that is exceeded 10 percent of the time (i.e., near the maximum) and this is often known as the "intrusive sound level." The L₉₀ is the sound level exceeded 90 percent of the time and is often considered the "effective background level" or "residual noise level."
- Maximum Sound Level (L_{max}). The highest RMS sound level measured during the measurement period.
- Root Mean Square Sound Level (RMS). The square root of the average of the square of the sound pressure over the measurement period.

- Day-Night Sound Level (L_{dn} or DNL). The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the sound levels occurring during the period from 10:00 PM to 7:00 AM.
- Community Noise Equivalent Level (CNEL). The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added from 7:00 PM to 10:00 PM and 10 dB from 10:00 PM to 7:00 AM. NOTE: For general community/environmental noise, CNEL and L_{dn} values rarely differ by more than 1 dB (with the CNEL being only slightly more restrictive that is, higher than the L_{dn} value). As a matter of practice, L_{dn} and CNEL values are interchangeable and are treated as equivalent in this assessment.
- Peak Particle Velocity (PPV). The peak rate of speed at which soil particles move (e.g., inches per second) due to ground vibration.
- Sensitive Receptor. Noise- and vibration-sensitive receptors include land uses where quiet environments are necessary for enjoyment and public health and safety. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, and nursing homes are examples.

Characteristics of Sound

When an object vibrates, it radiates part of its energy in the form of a pressure wave. Sound is that pressure wave transmitted through the air. Technically, airborne sound is a rapid fluctuation or oscillation of air pressure above and below atmospheric pressure that creates sound waves.

Sound can be described in terms of amplitude (loudness), frequency (pitch), or duration (time). Loudness or amplitude is measured in dB, frequency or pitch is measured in Hertz [Hz] or cycles per second, and duration or time variations is measured in seconds or minutes.

Amplitude

Unlike linear units such as inches or pounds, decibels are measured on a logarithmic scale. Because of the physical characteristics of noise transmission and perception, the relative loudness of sound does not closely match the actual amounts of sound energy. Table 1 presents the subjective effect of changes in sound pressure levels. Ambient sounds generally range from 30 dBA (very quiet) to 100 dBA (very loud). Changes of 1 to 3 dB are detectable under quiet, controlled conditions, and changes of less than 1 dB are usually not discernible (even under ideal conditions). A 3 dB change in noise levels is considered the minimum change that is detectable with human hearing in outside environments. A change of 5 dB is readily discernible to most people in an exterior environment, and a 10 dB change is perceived as a doubling (or halving) of the sound.

Table 1 Noise Perceptibility

Change in dB	Noise Level
± 3 dB	Barely perceptible increase
± 5 dB	Readily perceptible increase
± 10 dB	Twice or half as loud
± 20 dB	Four times or one-quarter as loud
Source: California Department of Transportation (Caltrans). 2013,	September. Technical Noise Supplement ("TeNS").

Frequency

The human ear is not equally sensitive to all frequencies. Sound waves below 16 Hz are not heard at all, but are "felt" more as a vibration. Similarly, though people with extremely sensitive hearing can hear sounds as high as 20,000 Hz, most people cannot hear above 15,000 Hz. In all cases, hearing acuity falls off rapidly above about 10,000 Hz and below about 200 Hz.

When describing sound and its effect on a human population, A-weighted (dBA) sound levels are typically used to approximate the response of the human ear. The A-weighted noise level has been found to correlate well with people's judgments of the "noisiness" of different sounds and has been used for many years as a measure of community and industrial noise. Although the A-weighted scale and the energy-equivalent metric are commonly used to quantify the range of human response to individual events or general community sound levels, the degree of annoyance or other response also depends on several other perceptibility factors, including:

- Ambient (background) sound level
- General nature of the existing conditions (e.g., quiet rural or busy urban)
- Difference between the magnitude of the sound event level and the ambient condition
- Duration of the sound event
- Number of event occurrences and their repetitiveness
- Time of day that the event occurs

Duration

Time variation in noise exposure is typically expressed in terms of a steady-state energy level equal to the energy content of the time varying period (called L_{eq}), or alternately, as a statistical description of the sound level that is exceeded over some fraction of a given observation period. For example, the L₅₀ noise level represents the noise level that is exceeded 50 percent of the time; half the time the noise level exceeds this level and half the time the noise level is less than this level. This level is also representative of the level that is exceeded 30 minutes in an hour. Similarly, the L₂, L₈ and L₂₅ values represent the noise levels that are exceeded 2, 8, and 25 percent of the time or 1, 5, and 15 minutes per hour, respectively. These "n" values are typically used to demonstrate compliance for stationary noise sources with many cities' noise ordinances. Other values typically noted during a noise survey are the L_{min} and L_{max}. These values represent the minimum and maximum root-mean-square noise levels obtained over the measurement period, respectively.

Because community receptors are more sensitive to unwanted noise intrusion during the evening and at night, state law and many local jurisdictions use an adjusted 24-hour noise descriptor called the Community Noise Equivalent Level (CNEL) or Day-Night Noise Level (L_{dn}). The CNEL descriptor requires that an artificial increment (or "penalty") of 5 dBA be added to the actual noise level for the hours from 7:00 PM to 10:00 PM and 10 dBA for the hours from 10:00 PM to 7:00 AM. The L_{dn} descriptor uses the same methodology except that there is no artificial increment added to the hours between 7:00 PM and 10:00 PM. Both descriptors give roughly the same 24-hour level, with the CNEL being only slightly more restrictive (i.e., higher). The CNEL or L_{dn} metrics are commonly applied to the assessment of roadway and airport-related noise sources.

Sound Propagation

Sound dissipates exponentially with distance from the noise source. This phenomenon is known as "spreading loss." For a single-point source, sound levels decrease by approximately 6 dB for each doubling of distance from the source (conservatively neglecting ground attenuation effects, air absorption factors, and barrier shielding). For example, if a backhoe at 50 feet generates 84 dBA, at 100 feet the noise level would be 79 dBA, and at 200 feet it would be 73 dBA. This drop-off rate is appropriate for noise generated by on-site operations from stationary equipment or activity at a project site. If noise is produced by a line source, such as highway traffic, the sound decreases by 3 dB for each doubling of distance over a reflective ("hard site") surface such as concrete or asphalt. Line source noise in a relatively flat environment with ground-level absorptive vegetation decreases by an additional 1.5 dB for each doubling of distance.

Psychological and Physiological Effects of Noise

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects the entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions, thereby affecting blood pressure and functions of the heart and the nervous system. Extended periods of noise exposure above 90 dBA results in permanent cell damage, which is the main driver for employee hearing protection regulations in the workplace. For community environments, the ambient or background noise problem is widespread, through generally worse in urban areas than in outlying, less-developed areas. Elevated ambient noise levels can result in noise interference (e.g., speech interruption/masking, sleep disturbance, disturbance of concentration) and cause annoyance. Since most people do not routinely work with decibels or A-weighted sound levels, it is often difficult to appreciate what a given sound pressure level number means. To help relate noise level values to common experience, Table 2 shows typical noise levels from familiar sources.

Table 2 Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
Onset of physical discomfort	120+	
	110	Rock Band (near amplification system)
Jet Flyover at 1,000 feet		took band (noor ampinoadon of took)
•	100	
Gas Lawn Mower at three feet

Vibration Fundamentals

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration is normally associated with activities stemming from operations of railroads or vibration-intensive stationary sources, but can also be associated with construction equipment such as jackhammers, pile drivers, and hydraulic hammers. As with noise, vibration can be described by both its amplitude and frequency. Vibration displacement is the distance that a point on a surface moves away from its original static position; velocity is the instantaneous speed that a point on a surface moves; and acceleration is the rate of change of the speed. Each of these descriptors can be used to correlate vibration to human response, building damage, and acceptable equipment vibration levels. During construction, the operation of construction equipment can cause groundborne vibration. During the operational phase of a project, receptors may be subject to levels of vibration that can cause annoyance due to noise generated from vibration of a structure or items within a structure.

Vibration amplitudes are usually described in terms of either the peak particle velocity (PPV) or the root mean square (RMS) velocity. PPV is the maximum instantaneous peak of the vibration signal and RMS is the

square root of the average of the squared amplitude of the signal. PPV is more appropriate for evaluating potential building damage and RMS is typically more suitable for evaluating human response.

As with airborne sound, annoyance with vibrational energy is a subjective measure, depending on the level of activity and the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Persons accustomed to elevated ambient vibration levels, such as in an urban environment, may tolerate higher vibration levels. Table 3 displays the human response and the effects on buildings resulting from continuous vibration (in terms of various levels of PPV).

Table 3 Human Reaction to Typical Vibration Levels

Vibration Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.006-0.019	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10	Level at which continuous vibration begins to annoy people	Virtually no risk of "architectural" (i.e. not structural) damage to normal buildings
0.20	Vibrations annoying to people in buildings	Threshold at which there is a risk to "architectural" damage to normal dwelling – houses with plastered walls and ceilings
0.4–0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

LOCAL REGULATIONS AND STANDARDS

Noise

Goal S-56

Protect the quality of life by protecting the community from harmful and excessive noise.

Policies

- S-<u>56</u>.1 Incorporate noise considerations into land use, transportation, and infrastructure planning decisions, and guide the location and design of noise-producing uses to minimize the effects of noise on adjacent noise-sensitive land uses, including residential uses and schools.
- S-56.2 Ensure that Downtown noise levels remain acceptable and compatible with a pedestrian-oriented environment and higher density residential land uses.
- S-<u>56</u>.3 Areas within Manteca exposed to existing or projected exterior noise levels from mobile noise sources exceeding the performance standards in Table S-1 shall be designated as noise-impacted areas. Figure S-3 identifies noise contours anticipated at General Plan buildout.
- S-<u>56</u>.4 Require residential and other noise-sensitive development projects to satisfy the noise level criteria in Tables S-1 and S-2.
- S-<u>56</u>.5 Require new stationary noise sources proposed adjacent to noise sensitive uses to <u>incorporate noise-attenuating measures</u> be mitigated so as to not exceed the noise level performance standards in Table S-2, or a substantial increase in noise levels established through a detailed ambient noise survey.
- S-56.6 Regulate construction-related noise to reduce impacts on adjacent uses to the criteria identified in Table S-2 or, if the criteria in Table S-2 cannot be met, to the maximum level feasible using best management practices and complying with the MMC Chapter 9.52.
- S-56.7 Where the development of residential or other noise-sensitive land use is proposed for a noise-impacted area or where the development of a stationary noise source is proposed in the vicinity of noise-sensitive uses, an acoustical analysis is required as part of the environmental_development review process so that noise mitigation may be considered in the project design. The acoustical analysis shall:
 - Be the responsibility of the applicant.
 - Be prepared by a qualified acoustical consultant experienced in the fields of environmental noise assessment and architectural acoustics
 - Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources.

Measuring Noise

Sound is a pressure wave that travels through the air. It is described in terms of loudness, frequency or pitch, and duration. The standard measurement unit for loudness is the decibel (dB). Changes of 1 to 3 dB are detectable under quiet, controlled conditions, and changes of less than 1 dB are usually indiscernible. A change of 5 dB is readily discernable to most people in an exterior environment. The human ear is not equally sensitive to all frequencies. In the context of environmental noise, the Aweighted decibel, or dBA, is used to adjust sound levels to reflect the way humans hear. Because people are more sensitive to noise during the evening and at night, state law requires additions to the measured noise levels during these times for planning purposes. Community Noise Equivalent Level (CNEL) averages sound over 24 hours, with 5 dB added from 7 pm to 10 pm and 10 dB added from 10 pm to 7 am.

9. Safety

- Estimate existing and projected (20 years) noise levels in terms of the standards of Table S-1 or Table S-2, and compare those levels to the adopted policies of the Noise Element.
- Recommend appropriate mitigation measures to achieve compliance with the adopted policies and standards of the Noise Element.
- Estimate noise exposure after the prescribed mitigation measures have been implemented.
- If necessary, describe a post-project assessment program to monitor the effectiveness of the proposed mitigation measures.
- S-<u>56</u>.8 Apply noise level criteria applied to land uses other than residential or other noise-sensitive uses consistent with noise performance levels of Table S-1 and Table S-2.
- S-56.9 Enforce the Sound Transmission Control Standards of the California Building Code concerning the construction of new multiple occupancy dwellings such as hotels, apartments, and condominiums.
- S-<u>56</u>.10 Ensure that new equipment and vehicles purchased by the City comply with noise level performance standards consistent with the best available noise reduction technology.
- S-<u>56</u>.11 Require the Manteca Police Department to actively enforce requirements of the California Vehicle Code relating to vehicle mufflers and modified exhaust systems.
- S-<u>56</u>.12 For new residential development backing on to a freeway or railroad right-of-way, the developer shall be required to <u>provide incorporate</u> appropriate <u>mitigation noise-attenuation</u> measures to satisfy the performance standards in Table S-1.
- S-<u>56</u>.13 It is recognized that the City and surrounding areas are considered to be urban in nature and rely upon both the industrial and agricultural economy of the area. Therefore, it is recognized that noise sources of existing uses may exceed generally accepted standards.
- S-<u>56</u>.14 Carefully review and give potentially affected residents an opportunity to fully review any proposals for the establishment of helipads or heliports.
- S-<u>56</u>.15 Recognizing that existing noise-sensitive uses may be exposed to increase noise levels due to circulation improvement projects associated with development under the General Plan and that it may not be feasible to reduce increased traffic noise levels to the criteria identified in Table S-1, the following criteria may be used to determine the significance of noise impacts associated with circulation improvement projects:
 - Where existing traffic noise levels are less than 60 dB Ldn at the

Noise-sensitive land uses include residential neighborhoods, places of worship, schools, and hospitals.

Manteca General Plan

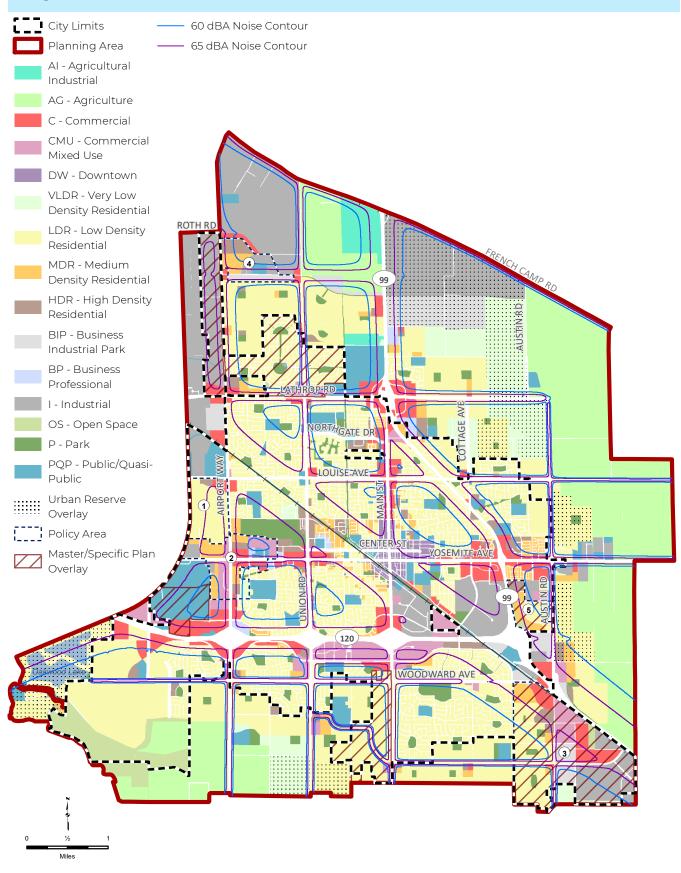

- outdoor activity areas of noise-sensitive uses, a +5 dB Ldn increase in noise levels due to roadway improvement projects will be considered significant; and
- Where existing traffic noise levels range between 60 and 65 dB Ldn at the outdoor activity areas of noise-sensitive uses, a +3 dB Ldn increase in noise levels due to roadway improvement projects will be considered significant; and
- Where existing traffic noise levels are greater than 65 dB Ldn at the outdoor activity areas of noise-sensitive uses, a + 1.5 dB Ldn increase in noise levels due to roadway improvement projects will be considered significant.
- S-56.16 Work with the Federal Railroad Administration and passenger and freight rail operators to reduce exposure to rail and train noise, including establishing train horn "quiet zones" and/or wayside horns consistent with the federal regulations.

Implementation

- S-<u>65</u>a Require an acoustical analysis that complies with the requirements of S-5.7 where:
 - Noise sensitive land uses are proposed in areas exposed to existing or projected noise levels exceeding the levels specified in Table S-1 or S-2.
 - Proposed transportation projects are likely to produce noise levels exceeding the levels specified in Table S-1 or S-2 at existing or planned noise sensitive uses.
- S-65b Assist in enforcing compliance with noise emissions standards for all types of vehicles, established by the California Vehicle Code and by federal regulations, through coordination with the Manteca Police Department and the California Highway Patrol.
- S-65c Update the City's Noise Ordinance (Chapter 9.52) to reflect the noise standards established in this Noise Safety Element and proactively enforce the City's Noise Ordinance, including requiring the following measures for construction:
 - Restrict construction activities to the hours of 7:00 a.m. to 7:00 p.m. on Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturdays.
 No construction shall be permitted outside of these hours or on Sundays or federal holidays, without a specific exemption issued by the City. No exemption shall be issued for construction within 200 feet of residential uses.
 - A Construction Noise Management Plan shall be submitted by the applicant for construction projects that exceed ambient noise levels by more than 12dBA or produce perceptible vibrations at any off-site structures, when determined necessary by the City. The Construction Noise Management Plan shall include proper posting

November 2022 9-18

Figure S-3: Future Noise Contours

of construction schedules, appointment of a noise disturbance coordinator, and methods for assisting in noise reduction measures, and shall establish allowed truck routes to access the site that minimize exposure of residential areas to heavy truck traffic.

- Noise reduction measures may shall include, but are not limited to, the following:
 - a. Equipment and trucks used for project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically attenuating shields or shrouds) wherever feasible.
 - b. Except as provided herein, impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction shall be hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used. This muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available. this This could would achieve a reduction of up to 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.
 - c. Temporary power poles or zero-emission power sources shall be used instead of generators where feasible.
 - d. Stationary noise sources shall be located as far from adjacent properties as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the City of to provide equivalent noise reduction.
 - e. The noisiest phases of construction shall be limited to less than 10 days at a time. Exceptions may be allowed if the City determines an extension is necessary and all available noise reduction controls are implemented.
 - f. Delivery of materials shall observe the hours of operation described above.
 - g. Truck traffic should shall avoid residential areas to the greatest extent possible feasible.

S-<u>6</u>5d In making a determination of impact under the California Environmental Quality Act (CEQA), a substantial increase will occur if ambient noise levels are have a substantial increase. Generally, a 3 dB

Manteca General Plan

increase in noise levels is barely perceptible, and a 5 dB increase in noise levels is clearly perceptible. Therefore, increases in noise levels shall be considered to be substantial when the following occurs:

Transportation Noise

- When existing noise levels are less than 60 dB, a 5 dB increase in noise will be considered substantial;
- When existing noise levels are between 60 dB and 65 dB, a 3 dB increase in noise will be considered substantial;
- When existing noise levels exceed 65 dB, a 1.5 dB increase in noise will be considered substantial.

Non-Transportation Noise

• An 5dB increase in noise will be considered substantial.

Construction Noise

• An increase in 12dBA in noise will be considered substantial.

Additional or alternative criteria can be used for determining a substantial increase in noise levels. For instance, if the overall increase in noise levels occurs where no noise-sensitive uses are located, then the City may use their discretion in determining if there is any impact at all. In such a case, the following alternative factors may be used for determining a substantial increase in noise levels:

- the resulting noise levels;
- the duration and frequency of the noise;
- the number of people affected;
- conforming or non-conforming land uses;
- the land use designation of the affected receptor sites;
- public reactions or controversy as demonstrated at workshops or hearings, or by correspondence; and
- prior CEQA determinations by other agencies specific to the project.
- S-65e Control noise at the source through use of insulation, berms, building design and orientation, buffer space, staggered operating hours, and similar techniques. Where such techniques would not meet acceptable levels, use noise barriers to attenuate noise associated with new noise sources to acceptable levels.
- S-65f Require that all noise-attenuating features, including soundwalls and quieter pavements, are designed to be attractive and to minimize maintenance.
- S-<u>6</u>5g Evaluate new transportation projects, such as truck routes, rail or public transit routes, and transit stations, using the standards contained in Table S-1. However, noise from these projects may be allowed to exceed

November 2022 9-20

the standards contained in Table S-1, if the City Council finds through the CEQA process that there are special overriding considerations ircumstances.

S-65h Work with the Federal Rail Authority and passenger and freight rail service providers to establish a Quiet Zone and/or Wayside Horns at at-grade crossings in the City. Where new development would be affected by the train and rail noise, require project applicants to fund a fair-share of: a) studies associated with the application for a Quiet Zone and/or Wayside Horns, and b) alternative safety measures associated with the Quiet Zone (including, but not limited to signage, gates, lights, etc.).

S-65i Work in cooperation with Caltrans, the Union Pacific Railroad, San Joaquin Regional Rail Commission, and other agencies where appropriate to maintain noise level standards for both new and existing projects in compliance with Table S-1.

S-<u>65</u>j The City shall require new residential projects located adjacent to major freeways, truck routes, hard rail lines, or light rail lines to follow the FTA screening distance criteria to ensure that groundborne vibrations to do not exceed acceptable levels.

Industrial	75	-	45			
Golf Courses, Water Recreation	70	-	-			

¹Where a proposed use is not specifically listed, the use shall comply with the standards for the most similar use as determined by the City.

²Outdoor activity areas for residential development are considered to be the back yard patios or decks of single family units and the common areas where people generally congregate for multi-family developments. Where common outdoor activity areas for multi-family developments comply with the outdoor noise level standard, the standard will not be applied at patios or decks of individual units provided noise-reducing measures are incorporated

Manteca General Plan

(e.g., orientation of patio/deck, screening of patio with masonry or other noise-attenuating material). Outdoor activity areas for non-residential developments are the common areas where people generally congregate, including pedestrian plazas, seating areas, and outside lunch facilities; not all residential developments include outdoor activity areas.

³In areas where it is not possible to reduce exterior noise levels to achieve the outdoor activity area standard w using a practical application of the best noise-reduction technology, an increase of up to 5 Ldn over the standard will be allowed provided that available exterior noise reduction measures have been implemented and interior noise levels are in compliance with this table

⁴Determined for a typical worst-case hour during periods of use.

November 2022 9-22

Table S-2: Performance Standards for Stationary Noise Sources, Including Affected Projects^{1,2,3,4}

Noise Level Descriptor	Daytime	Nighttime
Noise Level Descriptor	7 am to 10 pm	10 pm to 7 am
Hourly Leq, dBA	55	45

¹Each of the noise levels specified above should be lowered by 5 dB for simple noise tones, noises consisting primarily of speech or music, or recurring impulsive noises. Such noises are generally considered to be particularly annoying and are a primary source of noise complaints.

²No standards have been included for interior noise levels. Standard construction practices should, with the exterior noise levels identified, result in acceptable interior noise levels.

³Stationary noise sources which are typically of concern include, but are not limited to, the following:

HVAC Systems Cooling Towers/Evaporative Condensers

Pump Stations Lift Stations Emergency Generators Boilers

Steam Valves Steam Turbines

Generators Fans

Air Compressors Heavy Equipment
Conveyor Systems Transformers
Pile Drivers Grinders

Drill Rigs Gas or Diesel Motors
Welders Cutting Equipment

Outdoor Speakers _____Blowers

⁴The types of uses which may typically produce the noise sources described above include but are not limited to: industrial facilities, pump stations, trucking operations, tire shops, auto maintenance shops, metal fabricating shops, shopping centers, drive-up windows, car washes, loading docks, public works projects, batch plants, bottling and canning plants, recycling centers, electric generating stations, race tracks, landfills, sand and gravel operations, and athletic fields.
